82. *The Rev. H. J. Carter*, vicar.—A gang of 30 to 40 children was employed in weeding this spring on one farm, and under superintendence of one man. Many of the women in the parish are drawn off to the paper mills at Sawston (*i.e.*, from 16 years of age and upwards), where the immorality is probably greater, though more refined than in field work. The children go three or four miles to work, from 8 years and upwards. Cottages very bad. I know an instance of a father and mother and six children in one room. I consider the want of proper accommodation in the cottages to be the cause of much demoralization. There is no resident squire. The gangs are paid by the farm bailiff; there is no paying of wages at the public houses. I think it would be difficult at present to find a substitute for the children's labour. The women are much employed. I have a night school for lads in winter, which opens at 7 p.m. The parents are very indifferent about the education of their children. There is a good deal of emigration from this part of the country.

[N.B.—Says two men and a boy are the proportion to 100 acres. Number necessary must depend on soil and customs of husbandry.—E. B. P.]

83. *Extracts from Return made by Mr. Carter.*

There are two or three private gangs in this parish consisting of boys and girls. Very few of the children are under 8 years of age, and scarcely any over 18.

The usual hours of work are from 8 a.m. till 6 p.m., one hour being allowed for dinner. The sexes work together; the moral effect is bad, especially at meal-times and on the way home.

I should not say that the health is injuriously affected.

The young and females are not subject to ill-treatment.

The state of education is unsatisfactory. Field work and the indifference of the parents are both great obstacles to education. I have seen very little desire for education amongst the agricultural poor. The little that is learnt in the day school is soon forgotten, so that at the time of their marriage the majority cannot sign the register.

I think it desirable that the age of children employed in a private gang should be restricted; that the sexes should be separated, and that a certain amount of school attendance should be compulsory on all children from the time of their beginning to earn wages in a private gang; above all, care should be taken by the employers to select respectable men as gang-masters. I do not see how it would be practicable for those placed over private gangs to be licensed.

Under existing circumstances I do not see in what way female labour in the fields can be dispensed with altogether. No girl should be employed in agriculture under 13 years old, and no boy under 8.

Cambridgeshire.

Mr. Portman.

d.

I do not see any difficulty in adopting the principles of the Print Works Act to the case of children employed in farm labour. Each employer might be required to obtain a certificate from the school (whenever such school is within two miles of the residence of the child), that there has been an attendance of 100 days of three hours a day within the preceding six months.

School attendance is not affected by distance, nor by the pecuniary resources of the parents. The charge is merely 1*d.* and 2*d.* per week. It is only in rare instances, arising from the improvidence of the parents, that the money cannot be found.

I should say, from an experience of 12 years in different parishes in the county, that much of the evil, physical and moral, amongst the poor arises from insufficient cottage accommodation. I have not unfrequently seen 10 or 12 in a family living in houses with only two small bedrooms, the elder children at the time being over 14 years of age.

From three to four cottages per 100 acres are sufficient. Cottages are not conveniently situated. Men have to walk two or more miles to work.

Description of cottages.—One small sitting room and a small back room on the ground floor, with one bedroom, and sometimes two. Ventilation and drainage indifferent, with a fair water supply. Generally a small piece of garden and an outhouse. In most cases where the families are large the accommodation is totally insufficient. The landowners for the most part own the cottages. Rent on an average 4*l.* a year. Very little progress is being made towards increasing the cottage accommodation in any part of the county with which I am acquainted.

The question (*i.e.* of cottages) has always appeared to me to be a landlord's question. The rent received from a labourer for a good cottage might not be remunerative, but most tenants would be willing to insure 5 per cent. interest on any reasonable sum expended in making homes for the labourers near their work.

School Statistics.—National School.

In Summer.

	On Register.	Average Attendance.
Boys - - -	47	40
Girls - - -	46	33

In Winter.

Boys - - -	39	31
Girls - - -	54	41

I should say that at other elementary schools there would be an average attendance of about 15 little children in summer and 25 in winter.

There are about 50 males and 50 females growing up with insufficient education. Very few are found to be able to read and write fairly at the age of 18, although they may have attended the day school when younger. What they learn is seldom kept up.

There is an evening school for boys in winter months open for 16 weeks two nights a week, and one and a half hours per night. Average attendance 24 out of 40 on register.

The difficulties in maintaining an efficient evening school are the indifference of the young men about education, the fact that they are tired and worn out by the day's work; the distance some have to walk home from work before they come to night school, and the difficulty of obtaining competent teachers. I do not consider night schools suitable for girls at all.

84. *Edward Willis.*—8 years old. First went to field work last summer, keeping birds. Got no money myself; it was paid to my parents, but I don't know how much. Some children go out to work at 6 years.

85. *Emma Lofts.*—12 years old. Been in fields weeding for two years; worked for Mr. Jonas. We go about 20 in a body. They come and ask for us when we are wanted. Did not go weeding when corn was wet; if rain came on, we came home. Got 4*d.* a day. Mother sent me to field. I would sooner go to service. Work from 8 to 6; one hour for dinner. Man who looks after us uses bad language. My back has often ached, but I never had to be carried home.

Chrishall Grange—Mr. S. Jonas.

86. *Nathan Andrews,* ganger.—I have been 30 years at gang-work. I see no good in schooling; the children would go to school hungry, and to work hungry, and that's no good. I never give more than 6*d.* a day. The wages are better than they used to be.

[This man is utterly uneducated and fond of the public house. He receives the money for the children, but the payments are checked by Mr. Jonas.]

87. *Emma Hammond.*—12½ years. Working in the gang. I began at 9 years, but not regularly. I live at Mr. Jonas'. I can earn 3*s.* a week. I went to school at Elmdon, but have not been for two or three years. Can read a little. Mother can't read. I work most of the year.

88. *Louisa Andrews,* daughter of ganger, 16 years old.—Have been at work six years. Cannot read or write.

89. *Rebecca Law,* 11 years old.—Been at field work three years. Went to school at Chrishall, but only go to Sunday-school since I came to work. Go 2½ miles to work. Four in family.

90. *Ann Francis,* 12 years old.—Been one year at work. Go 1½ mile to work.

91. *Samuel Jonas,* farmer, Chrishall Grange.—Holds 4,000 acres, part of which is worked by his sons; they employ gangs, as follows:—

G. Jonas, Ickleton.—A mixed gang that has to come 1¼ mile to work.

Sam. Jonas, jun.—A mixed gang; 1½ mile to work.

S. Jonas, Home Farm.—Mixed; 2 miles to work.

92. *Wm. Jonas,* Heydon.—A gang of boys only. He holds under Lord Braybrooke, who puts clause in agreement forbidding the employment of girls. The cottages on Mr. Jonas' holding are very good, and conveniently situated for the work; the gardener and wife living in a cottage at the Grange, keep a day school in the summer for the smaller children, and a night school in winter for the older ones. Almost all the people about the place can read and write. Mr. Jonas gives to men 11*s.* a week, and small beer.

93. *Extract from Mr. Jonas' Return.*

The children are employed in spring in weeding the crops; in summer, in cleaning land and hoeing turnips; in autumn, in cleaning land, pulling mangold and turnips; in winter, in cleaning turnip and mangold for stock. Usual hours of work on the land about nine hours. Sexes work together. I have never seen any ill effects. I see no better plan for enforcing some amount of school attendance than encouraging evening schools.

We have lately erected a school by subscription, which cost about 500*l.*, in the centre of the village. I provide school and education for those living near me.

I have lately erected blocks of cottages of three each block, and all have three bedrooms, a plot of garden, and are in the centre of my farm. They all live rent-free, or 1*s.* a week rent. By the interest I pay my landlord, I lose 5 per cent.

94. *The Commissioners on the Employment of Children in Agriculture.*

"Gentlemen,

"I have returned your circular filled up to the best of my ability and the information I possess. At the same time I feel it my duty to address you by letter on the subject also.

"I am of opinion that no good will arise by the proposed interference of the Government in the employment of the children of our rural population in agricultural labour. I and my four sons, whose farms adjoin mine, employ all the children of our labourers who are able and willing to work, and this on arable land to the extent of 4,000 acres; but with the present improved system of farming, this can only be done by having them placed under the superintendence of a proper person, forming, as you term it, private gangs, which vary in number from 8 to 16; and we feel it would be an act of oppression on our part, and injury to the parents of large families, if we refused to permit the female children to participate in the advantages arising from the wages paid to those thus employed; and we are obliged to allow them to work with the boys, as there are but few girls; but I never saw any ill effects arising to the morals of those so employed; as they get older, they either get married or go to service.

"If the Government should unwisely carry out their proposed plan of interference, I fear great dissatisfaction and discontent would be created amongst our rural population; it would be the cause of lessening the capability of the parents of large families from providing sufficient food for their children; and this to a considerable extent, for we could not, nor should we employ as we do now all those children under any of the proposed restrictive measures, and this at a period of time when the deficiency of the wheat crop every where will cause prices to rule very high, and thus increase the calamity, and add to the misery of those with large families, whom the Government by unnecessary interference, an interference from which no good can arise, have thus caused. I go further, and add, I consider it an act of great oppression, cruelty, and injustice to interfere by legislative enactments with the manner in which every person, young or old, are willing and anxious to seek their own living, unaccompanied with crime! The independence of the subject is the great boast of Englishmen.

"In regard to education at the present moment, I believe few parishes can be found in which a school is not established and supported by the landowners and tenant farmers, and also by the parents of families by their penny per head weekly payments. I believe a more injurious step could not be taken than forcing education on the people, without causing them to participate in the natural duties and feelings of parents, by contributing in a small way to the funds providing such a blessing for their children.

"I do not think any practicable plan can be devised so beneficially adapted to educate the children who are earning wages as that of evening schools.

"In regard to cottage accommodation, great an advocate as I am for the advantages arising from proper cottages, I do not see how the Government can interfere. I have lately had several blocks of cottages of three in a block erected by my landlords, and which I let to my men at 1*s.* per week rent, or rent free, deducting 1*s.* per week wages; they have the one-eighth of an acre of land attached for gardens to each cottage, and three bedrooms in each. I lose 5 per cent. by the interest I pay landlords on cost of erection. I may add, such have been the conduct of the occupiers, that I have not had cause to change one of them. I have imported them from a distance, and they are all considerably improved in comfort, appearance, and general conduct. But I must add, they have no cursed beer shop within reach, but they have free access at all times to weak wholesome table ale.

"I am, &c.

"Samuel Jonas.

"Chrishall Grange, S. Walden,
" Nov. 4, 1867."

95. *P. H. Frere*, Dungate.—Employs children in gang under one of his own men. Does not consider that the practice leads to immorality between the ages of 8 and 14, so much as at a more advanced age. The health of the children is very good. Has a school on his farm kept by a labouring woman. Thinks that six months, being from October to March, when children are not so much wanted in the fields, might be devoted to education.

96. Fleam Dyke Cottages, the property of Mr. Frere.—Two rooms above, and one below, with small back room, warm and comfortable, and not overcrowded. Situated at the extreme of West Wratting parish, two miles from the village. A woman living in centre cottage told me "that the children go to field as "young as 7 years, a lot together, sometimes under "a girl, sometimes under a man. You may be sure "they get into mischief if they can." That the children do not "get much schooling, as it is too far "to send them. They talk of having a school at this "place, in a room called the school-room, where they "used to have preaching. The parents are glad to "get the money for the children's work. Man's "wages 11*s.* a week."

97. *Clement Francis, Esq.*, Quy Hall.—Owns a large part of the parish of Quy. Employs children in field labour, under one of his own labourers. The children so employed are healthy. He strictly forbids the taking in of lodgers in his cottages. The able-bodied labourers are much employed in coprolite diggings, but return to the farms for harvest. Women, but not children, are employed by one of his neighbours. Women earn 1*s.* a day; children from 4*d.* to 6*d.* a day.

[Mr. Francis is opposed to the employment of girls, except under certain restrictions. Says there is a great want of steady regular education and training for domestic service.]

98. *Extract from Return made by Mr. Francis.*

QUY.

Population, 400. Acreage, 1,900. Cultivation chiefly arable.

Children are generally employed in gangs, from 8 years to 13 years of age. Field labour is injurious to training for domestic service. Would recommend that boys should not be employed under 8 years of age. That girls should not work in fields after 12 years of age. The cottages, for the most part, belong to the landowners; have a fair amount of accommodation, gardens, outhouses, and allotments. The rent is moderate.

School Statistics.

In Summer.

	On Register.	Average Attendance.
Boys:		
Under 10	24	24
Over 10	None	
Girls:		
Under 10	20	20
Over 10	None	

In Winter.

Boys:		
Under 10	19	19
Over 10	4	4
Girls:		
Under 10	20	20
Over 10	18	18

I consider the state of education extremely low throughout the parish. There is no evening school.

BOTTISHAM.

Population, 1,600. Acreage, 5,581. Including Bottisham Lode. Part fen, part upland.

99. I visited the school in Bottisham Lode. The children work in the fields, and usually commence such work at 8 years of age; some few, however, under

Cambridgeshire.

Mr. Portman.

d.

7 years. Mr. King, a farmer in this parish, sends the children to their work, a distance of three miles, in a waggon. The education of these children is defective. The schoolmaster reported some amount of ill-health resulting from field work. Cottages not very bad except in cases of small owners, who let at the highest possible rent, and thereby compel the lessee to take in lodgers.—E. B. P.

100. *The Rev. John Hailstone*, of Anglesey Abbey, formerly vicar of Bottisham.

EMPLOYMENT OF CHILDREN, YOUNG PERSONS, AND WOMEN IN AGRICULTURE.

"DEAR SIR,

"In the extreme difficulty of obtaining such accurate information as would enable me to fill up the tables in your circular of July 8, 1867, I have ventured to send you the following remarks upon such points as have come within my experience (of 30 years) in the agricultural parish (entirely) of Bottisham, in the county of Cambridge, referring to numbers in page 1.

"1. Bottisham, near Cambridge.

"Rev. John Hailstone (formerly vicar), now a resident.

"Population about 1,600, and acreage near 6,000 acres, and with chiefly arable cultivation.

"6. 'Private gangs,' so called, *i.e.* a number of children from 8 to 12 years of age, employed by the farmers, under the supervision, generally, of some elderly labourer, for March, April, and May, in weeding, &c.—('queeching,' couching). If October is a dry month, more or less employed then for the same purpose. (Very difficult to thoroughly clear a field of weeds, when harrowed up to the surface, except by hand-picking, the threads of grass being so small, and so readily growing if left on the land.)

"10. Many of our children walk between one and two miles for their day work.

"11. From 7 to 5 p.m.

"13. Breakfast, 8 to 8.30; dinner, 1 to 2 p.m.

"14. Sexes work together.

"15. If 'young persons' of 13 to 18 years of age, which is very seldom with us, work together or with children, it is most destructive to morals.

"16. I have never observed any ill health arise, rather the contrary. Our school-rooms, if not well ventilated and looked to, have the effect of enervating our country children, and causing them to wish for and require a little more dainty food than the good 'hunch' of dry bread, which an out-door boy is well content with and fattens upon.

"17. In some cases there is ill-treatment, but very rarely. Our good farmers take care, and in one instance, under my notice, sends his children every morning in a waggon when over two miles for work.

"19. Upon the answer to this question hangs the whole matter. If we can get our girls to school constantly till 12 or 13 or 14 years of age, we do not fear for them; with a strict eye to their moral education, and a constant deprecating of out-door work for young girls, we can nearly get them all to go out to service, and feel the degradation of out-door dirt and half-male sort of occupation. If we cannot obtain this result, we see inevitably, in nearly all the growing girls who go out to field work regularly, the low and wretched condition of early bastardy or improvident marriage. Much depends upon the advice and anxious teaching of the clergyman's wife in this matter.

"No girl can go out to work in the fields, at all hours, in all company, and at all sorts of occupation, without certain depreciation of character and moral sense.

"The children of both sexes who regularly are employed in these small gangs at an early age, at certain seasons, before mentioned, of the year, grow up under a very small type of education; they learn and unlearn by regular turns, and eventually very little remains in their possession of what may be called knowledge, either secular or religious. We can do nothing for boys unless they are kept at school constantly till 10 years of age. A couple of years afterwards at school, even irregularly, is tolerable, for the want may be supplied by night schools, and the more so after that age. The first requirement is imperative, and may be well the subject of legislation. Something effective may be done by strictness in the boys asking leave for a given time, and its being recorded, to prevent the notion that when leaving in March (say) it is not meant that they are to keep away till harvest.

"20. The difficulties of legislating are very great. If the schools were free and no payment demanded of the children, the force of an Act of Parliament could apply to them, requiring them to go to school for a given time; but as each pays his own 2*d.*, say per week, out of their parents small earnings of 10*s.* or 11*s.* per week, some one would have to pay for them, if under compulsion to attend. The payment would be, in fact, a compulsory income tax, upon which serious difficulties would arise. Who to pay? who to enforce? who to punish if compliance be refused? not to say constant collision between clergyman, farmer, and labourer.

"Page 6. I think week by week is preferable to day by day, as more conformable to village habits and country school management.

"The want of proper accommodation in cottages, and the undue and unhealthy crowding in the dwellings of our poor, is a serious hurt to their morals and their health. All we can do at school is undone at home. The wonder is more immorality does not exist considering the undisguised habits of old and young, married and unmarried, sleeping together in crowded rooms. Legislation on this point seems more practicable and quite necessary.

"JOHN HAILSTONE."

LITTLEBURY, COUNTY OF ESSEX.

Population, 970. Acreage, about 4,000. Cultivation chiefly arable. Light soil.

101. *Frederick Hooper*, schoolmaster.—The children go to field work. I know one girl under 7 years who is at work singling turnips. Most girls after 9 years go to field. There is an evening school for boys; 19 out of 36 working boys attend on an average. Most children can read and write when they go out to field work. Respectable parents do not, as a rule, send their children to the fields. Childrens' wages, 2*s.* to 2*s.* 6*d.* a week. There is another school at Littlebury Green, which takes about 20 children belonging to the parish.

102. *J. Clayden*, farmer, holds 1,000 acres in Littlebury under Lord Braybrooke. Never employs girls. Mens' wages, 11*s.* a week. No dearth of labourers. Also holds land at Sewer's End, near Saffron Walden.

Extract from Mr. Clayden's letter to Mr. Portman.

"I really do not see that I can in any way fill up the Government paper, as really there is nothing like the gang system in work around here, nor are there any very young children employed in agriculture, except for a few weeks in the spring, when the charlock grows on some farms. Small children occasionally work with their parents, and where a man has from four to six little children no doubt they are an assistance to him.

"Most of our children go to school when young, and are very many of them able to read and write a little, but of course there are exceptions.

"Comfortable cottages, and, if possible, not grouped too nearly together, with gardens, lead to industrious and frugal habits, and, where these proper examples are set by the parents, I need not tell you it has a beneficial influence on the rising generation.

"Night schools for adults or large-sized boys are very useful, and ought by every means to be encouraged. I believe when properly conducted they are much appreciated.

"Yours very truly,

"JOHN CLAYDEN."

SEWER'S END, HAMLET OF SAFFRON WALDEN.

103. Mr. Clayden's bailiff says the children are employed; they come from school on Saturday to earn money to pay for the next week's schooling. The land here is heavy.

Evidence of schoolmistress.—79 on books; average attendance, 50. Boys are out at work from 9 years of age, from April to end of harvest; they come to school in the winter. Girls go out in charlicking time; very little ones go to that work. The parents are anxious to get them out. They are out about three weeks at a time. Girls and boys are mixed in fields under a man.

On a Farm near Audley End belonging to Lord Braybrooke.

104. *Henry Auger* was in charge of a number of women. Had been at that work for 20 years. There were 26 women, married and single, at work; four unmarried. The youngest 16 years of age. He said he only looked after them in hay time, but that sometimes a few were used for weeding. The women earn 1*s.* a day for ordinary labour. Wages for weeding, 4*s.* 6*d.* a week. Some of them could read and write.

105. *Extract from Return made by the Rev. Joseph Wix, Littlebury.*

Scarcely any gang system; though for weeding and stone picking several children are taken away from school.

There are two hamlets in this village, distant about two miles from the school. The attendance is undoubtedly in some measure affected by such distance, especially in the winter and in bad weather.

The girls are taught needlework. Generally the cottage accommodation is bad, and being so, has an injurious effect on the morality and health of the people. Most of the cottages are built of lath and plaster. A few only of the cottages have anything deserving the name of a garden, or outhouses. The owners are chiefly tradesmen or persons to whom rent is an object, which is therefore high, and beyond the resources of the tenants,—I mean in comparison with their wages.

I think something might be done by cottage associations formed for the purpose of buying up cottages at a fair valuation, which would be without pecuniary disadvantage to the tenant, but of immense advantage to him in point of health, comfort, and morality. New cottages also might be built by such associations.

Average attendance at school:—
In summer, 35 out of 49 boys.
" 41 out of 57 girls.
In winter, 44 out of 49 boys.
" 46 out of 57 girls.

There is a night school open from November to March for two hours on each of two nights in a week. The average attendance (all being over 12 years of age) is 21 out of 36. I do not consider that a night school adequately supplies the deficiencies of the day school. The principal difficulty in the way of maintaining an efficient night school is the want of teachers, which obliges boys of unequal attainments to be placed in the same class.

HILDERSHAM, NEAR LINTON.

Population - 227 Acreage - 1,499.

106. *Rev. R. Goodwin.*—The girls are hardly at all employed in the fields here; their names are taken off the school list if they go out except during harvest. Men's wages are from 10*s.* to 11*s.* a week; at piece work a man can earn 15*s.* a week. Piece work is much in vogue in these parts. Gangs come from Linton, two miles distant, to work for a farmer in this parish, but there is no gang in the parish. Many girls go to domestic service. The cottages are not overcrowded. A night school is open in winter, and is attended by 8 or 9 lads. There is also one in the neighbouring parish of Abington, which is attended by about 20 lads. I think it is necessary for boys to go early to field work, in order that they may learn their business as agricultural labourers, but a system of alternate days for school and work, or a necessary attendance at school for a given number of days in the week, would be of great advantage.

LINTON.

Population, 1,833. Area, 3,775 acres. Soil principally gravel and chalk.

107. This is a small town, formerly a market town, and apparently supplies a good deal of labour for the neighbouring small villages. The houses are bad, and thickly inhabited, and I was told that there is gross immorality among the lower class.

Mr. Mutimer, schoolmaster.—I have been master here for 27 years. The average number in the school is 170, boys and girls. The girls go to work in the fields, but I do not think there are many who go out under 8 years of age. Their work is principally weeding and singling turnips just before harvest. I think that high farming lessens the demand for juvenile labour. Boys go out in a gang to work at Hildersham, and have been out all the year. Labouring men go as far as Babraham, a distance of six miles, for their work. The houses are bad and crowded.

[The Rev. E. W. Wilkinson, vicar, also bore testimony to the bad state of the cottages.]

FULBOURN.

Population, 1,310. Acreage 5,221. Cultivation chiefly arable, about 200 acres of grass.

108. *C. W. Townley, Esq. Extract from Return.*

There are three private gangs in the parish, employing in all 15 males, 17 females—32 persons. They work at weeding corn and picking grass out of the fallows during three or four months, say, from beginning of April to July. Hours of work from 8 a.m., to 6 p.m., with a rest of half-an-hour at 10 a.m., and 1 hour for dinner. Distances to work half-a-mile to 1½ mile. The sexes work together. Their health is not injuriously affected, nor do I know of any cases of ill-treatment. All the children attend school when not at work.

Number of persons employed singly or with a few others:—

Males between 13 and 18 years - -		50
Females between 13 and 18 years	-	12
Over 18—Married - -	-	14
Unmarried - -	-	8—34

Are employed from April to July; hours of work from 7 a.m. to 6 p.m. The employment of females in the fields must be against their making good domestic servants. Labour is at times scarce, and the parents could not do well without the children's earnings.

I think it better not to employ females after 13 years, or before 10 years. I would not employ boys under 8 years. Needlework is taught in the National school.

The cottages generally have one sitting room, a kitchen, two bedrooms, and gardens, at 4*l.* a year. There are 229 cottages in the parish. There are four schools. 1, National, 1, endowed, and 2 dame schools. The average attendance at the National school is 100 boys and girls, and their average age is 7 years 7 months. The endowed school has 25 boys. The number of children neither at school nor at work is:—

In Summer.

Boys—25.	Girls—22.
Of whom 20 are between 8 and 10 years.	Of whom 16 are between 8 and 10 years.

In Winter.

Boys—22.	Girls—23.
Of whom 18 are between 8 and 10 years.	Of whom 15 are between 8 and 10 years.

Cambridgeshire.

Mr. Portman.

d.

There is sometimes a night school during November, December, and January, open for 1½ hour on three nights in the week. Number of scholars, 30 to 40; they are taught reading, writing, and arithmetic. There is a difficulty in getting teachers.

The bigger boys do *not* work in the gangs. The single women employed in field work are usually those who, on account of bad character, are unable to obtain places as domestic servants.

CROYDON.

Population, 508. Acreage, 2,665. Soil, clayey; subsoil, chalk and gravel.

109. Downing College, Cambridge, possesses most of the land in this parish. The cottages are much crowded, but the college has lately built some good ones at a rent of 3*l.* 15*s.* per annum. Some of the old cottages let for 1*l.* a year. There is a good schoolhouse. Here the children work in the fields; 4*d.* a day is the pay for young children. A women told me "she did not think it paid for wear and tear of "their things, but they must go out." Mens' wages in this part of the county were low, but are rising in consequence of the demand for hands in the coprolite diggings.

SWAFFHAM BULBECK.

Population, about 900. Acreage, 3000. Cultivation, chiefly arable.

110. *Mr. B. Giblin*, farmer, has farmed in the parish for 27 years. Employs in months of April, May, June, and July 10 children (five of each sex) in picking grass and weeding corn; in the autumn and winter, three boys in trimming turnips. Hours of work from 7 a.m. to 5 p.m., two hours being allowed for meals. The sexes work together; does not think their morals or health are injuriously affected by field labour. It is unnecessary to subject "private" gangs to legislative regulations similar to those applied to "public" gangs; does not think half-time could work. Considers 10 or 12 children quite a sufficient number for one person to have the control of, and that field work is beneficial if a trusty man is put over them; thinks it better to keep the sexes apart. Few children are employed under 12 years of age, nor many women except for hoeing; does not know of *any* at work between 15 years and 18 years. Mens' wages 11*s.* *stated*, most *earn* 13*s.* a week The state of the cottages generally tends much more towards immorality than any employment they are subject to in this neighbourhood, chiefly owing to the crowded state of the cottages. There is not a sufficient number of cottages with two or three bedrooms and a sitting room. The Union Chargeability Act is not causing an increase of cottages here. The cottage question is one for the landlords. The children might have six months' schooling in the year.

111. *Rev. W. Fleetwood*, vicar.—The parish is well off, and in a good state of education. There is a National school and two dame schools. The number of children employed singly, or with a few others, in the parish is from 75 to 102 between ages of 8 and 13. Hours of work 6 a.m. to 6 p.m., with allowance of 1½ hour for meals. Distance to work from 1½ mile to 4 miles. Health not injuriously affected by field labour, but it deteriorates their manners, impairs their morals, and unfits the females for domestic duties.

School Statistics.

Under 10	40	—
Between 10 and 13	17	—

There is a night school from October to March, open five nights a week for two hours per night. The average attendance of children above 12 years is 18 out of 21 on register; reading, writing, and arithmetic are taught. The night school does not supply adequately the deficiencies of the day school.

SWAFFHAM PRIOR.

112. *Return made by James Witt, Esq.*

Population, 1,300. Acreage, 6,107. Cultivation, chiefly arable. Field land, ⅓rd skirt land, and fen land.

There are two private gangs, employing 30 males of from 8 to 13 years of age, and 20 females of from 9 to 14 years of age; also some married women. They are employed in weeding and picking twitch in spring, summer, and autumn.

Their usual hours of work are ten, with an hour and half allowed for meals. The sexes should be separated. The education among the young and the adults is such as requires great improvement. A private gang should be under 20 in number. I would restrict the hours of labour for females, on account of their domestic duties. Boys might be employed from 9 years upwards. I agree with the proposed table of restriction of distance to work according to age, if ample time is allowed for walking. In agriculture I would have no half days, but should prefer the alternate whole day system.

It appears to me that the wet weather during the summer months, together with the period when employment ceases, would afford opportunity for school hours, if attendance could be insured during the winter months, thereby securing industrial education likewise. I would make compulsory on proprietors and occupiers in the rural districts the supply of schools, almost independent of the pecuniary resources of the parents.

There is not industrial training for girls to the extent there ought to be.

Two cottages are sufficient per 100 acres. There are not enough of the right description. Many of the cottages have small gardens, but the larger number belong to private individuals and the shopkeepers with whom the poor have to deal. Average rent, 3*l.* 10*s.* a year. I do not see how to provide good cottage accommodation on self-supporting terms, till such property will yield a better per-centage.

COTTENHAM.

Population, 2,415. Acreage, about 7,000. Cultivation, about 5,000 acres arable, 2,000 pasture. Soil, partly fen, clay, and loamy, called "Skirt Land."

113. *Extracts from Return sent by Rev. S. Banks, rector, and James Ivatt, Esq.*

The private gang system exists here. We cannot make any statement as to the numbers employed; there are many small owners in the parish who employ their own children. The work is, in spring, twitching, weeding, and setting potatoes; in summer, weeding till midsummer; autumn, twitching and getting up potatoes. In winter very few are employed. The distance to work is in some cases three miles. Hours of work 7.30 a.m. to 5.30 p.m., with an allowance of one and a half hours for meals. Sexe work mostly apart, in a few instances mixed; no complaint as to the effect on the morals. Gleaning

time is very bad for the morals. Health certainly not injuriously affected. No ill-treatment. State of education on the whole very good. Public legislation for such parishes as this would be injurious, oppressive to the labouring class, and unpopular. Perhaps a few young children go too far to work. Half-time system impossible; alternate days impossible. The use of hands must be learnt as well as the use of heads, and the one must be taught early as well as the other. The labouring class ought to have a sufficient amount of "school knowledge," but it must never be forgotten that they earn their living by their hands, and hands must be taught for the sake of the master as well as of the labourer. Labourers are paid well here, live well and dress well; the females in general too well. Some few complain nevertheless of paying for their children's schooling; the great majority pay, and perhaps most pay willingly. Efforts for the industrial training of girls are being made in the Church School of Industry, where none but useful work is allowed. The cottage accommodation is on the whole pretty fair; we have, however, some very bad cases. A few cottages are upon outlying farms; the village lies fairly in the middle. Cottages are chiefly brick, rooms from 12 to 14 feet square. Drainage of parish on the whole good; ventilation of houses doubtful. There are in the cottages three to four and even up to five and six rooms, with, in most cases, a fair allowance of outhouses, water, some gardens, and a large number of allotments. Small landowners and tradesmen are owners of the cottages. Rent about 5*l.* Union Chargeability Act has not increased the number of cottages. We believe there is more than one night school in the parish. The Church night school is held during November, December, January, and February, for one and three-quarter hours on two nights in the week, and was attended this year by 53 lads. Want of efficient teachers is the chief difficulty in maintaining efficient night schools.

114. *Rev. S. Banks.*—Children earn 6*d.* a day; are at work from March till the end of October. The wages are paid to the children themselves or to their parents, and not through the gangmaster. It would be preferable to half-day or alternate day system to have children prevented from going to work under a certain age, and then only for a given time in the year, the remainder to be devoted to school. I have established and supported a school, not under Government Inspection. The allotment system is fully carried out; there are at least 150 allotments. Men earn good wages at piece work and at drainage work. This parish is full of Wesleyans and Baptists.

115. *James Ivatt.*—Owns 500 acres. Employs children, about 14 at a time; some as young as 8 years. Does not employ girls. Cannot do without children's labour in weeding time. Does not consider that the practice leads to immorality. When children are wanted one of his men collects them. The children are sent about in bodies from one part of the farm to another, as required. Men's wages 12*s.* a week; children's 6*d.* a day.

WATERBEACH.

Population, 1,435. Acreage, 5,500. Cultivation, chiefly arable, with some market gardens.

116. *Mr. W. Smith Wiles.*—I am the owner of an estate in this parish, and was more than 30 years the occupier of it, as also of other lands. There are three gangs in the parish; No. 1, 18 male children, average; No. 2, 18 females, average; No. 3, mixed, in number about 15. The children employed in these gangs are the children of the labourers employed on the farms. Nos. 1 and 2 are employed on two large occupations adjoining each other, and by arrangement one occupier takes the boys and the other the girls. No. 3 is mixed, but still the children of the labourers on the farm. I cannot see any better arrangement; they are employed in spring, summer, and autumn in cleaning the land, not in cropping. In winter none are employed. Distances may vary from half to two miles. Hours of work from 7 a.m. to 5 p.m., with allowance of one and half hours for meals. I have never heard of any ill-usuage, and do not think the employment injurious to health. The state of education is such as is commonly found in agricultural villages, far better than it was in their parents' time. Those who work singly or with a few others are about 50 in number. In spring those over 18 years, married and unmarried, in hoeing corn crops; in summer, mostly in the fruit gardens. Hours of work from 7 to 5. During the period I have lived here at least half my domestic servants were girls whom I had employed in the fields, and I do not know that I had ever cause to regret so doing; of course I engaged those I thought best qualified. My opinion is that field employment has not necessarily any injurious effect upon the morals of females. No boys are ever employed at a less age than 8 years, and very few at that age, they not being useful. The employment of children in agricultural labour depending upon the state of the weather, it is manifest that the Act of 7 Vict. c. 15. ss. 31.–9. cannot apply. The season of employment extends from March till November. There is an endowed school which all the children of the labourers have the opportunity of attending, at an average rate of less than 1*d.* per week each child. The attendance is very slightly affected by distance. There is no special industrial training for girls. This being a fen parish most of the cottages are more than a mile from the farms, but as the drainage of the fen has been progressing for some years, many farm homesteads and cottages have lately been built for the greater convenience of occupation and cultivation of such lands. The cottage accommodation is good. Most of the cottages are brick and tile and slate. The drainage of the village has been materially improved within the last 12 years. The rooms are about 12 ft. by 13 ft., 7 ft. high; with outhouses, gardens varying from 5 to 20 poles; are mostly owned by the landowners. Rent from three guineas to five guineas per annum.

School Statistics.

In Summer.

	On Register.	Average Attendance.
Boys:		
Under 10	50	33
Between 10 and 13	18	8
Girls:		
Under 10	45	33
Between 10 and 13	26	15

In Winter.

Boys:		
Under 10	58	37
Between 10 and 13	20	No return.
Girls:		
Under 10	45	No return.
Between 10 and 13	33	31

As to those neither at school nor at work I have no correct data, but I should think there are but few, the general desire of the parents being that their children should have some education. The returns are taken from the endowed school. There are two or three other private schools, but the attendance is small and no accounts are kept. There are three night schools open for about 20 weeks in the winter half-year for one and a half hours on three nights in each week. Attendance, about 45 lads, all above 12 years of age. I think a night school in a great measure makes up for the deficiencies of the day school.

[Mr. Smith Wiles further said that he does not think many girls are employed in the fields under 12 years of age, and that after 15 years they are no good in a gang.

Cambridgeshire.

Mr. Portman.

d.

That he thought children under a certain age should not work in winter, and that, if possible, it would be good to place restrictions on the age to which children generally should go to work, but "he did not see how "it was to be done."

Men's wages average 11*s.* a week. Much more earned by piece-work. "Piece-work sharpens men's "wits, and educated men make the best labourers. "Still farm work must be learnt early in life."]

117. *Matilda Leech*, mistress of the endowed school.—The average attendance in winter is 150, boys and girls. The numbers begin to fall off in May. There is an infant school, with an average attendance of 60, of an age from three to six years; the children then attend day school, more or less, up to 12 or 13 years of age. Needlework is done by the girls. The state of education is fair, most can read and write, but the long absences for field work throw the children back in their learning. Some mothers keep the children at home. I think the attendance is slightly affected by the distance at which some of the homes are from the school.

BABRAHAM.

118. *Mr. Samuel Webb*, large farmer, aged 73.—There are no gangs in the parish. Children are employed with their parents, and earn 5*d.* and 6*d.* a day. Labour is very scarce, and is brought from distant parishes. There is a good school and good charities. There are not sufficient cottages for the acreage of the parish. In years past many cottages were pulled down, and the poor driven out; but Mr. Adeane talks of building new ones on different farms. I am anxious to have some, and think that farmers generally would pay a fair per centage to the landlord for money laid out in this way. I do not think that the half-time, or alternate day system, could possibly be worked, as the farming operations depend so much on weather, and in weeding time a day is of great importance. Education is low; many parents are very glad to get the earnings of the children, and will not send them to school. The night school is poorly attended. I think it a bad thing to employ girls at all in field work, and do not do so myself. I am thoroughly opposed to the public gang system.

[The population of this parish is 509, with an acreage of 2,143. It was formerly a "close parish," in the fullest sense of the words, and the supply of labour is drawn from Sawston, Duxford, and even from Linton [as previously stated in evidence], thereby creating a species of gang system, as men, women, and children come together in "groups," at certain seasons when a number of hands are required for the work of the farms.]

WITHERSFIELD.

Population, 640. Acreage, 2,468. Cultivation, chiefly arable.

119. *Rev. W. Mayd*, lord of the manor.—There are no private gangs; children, young persons, and women are employed in the fields in spring, summer, and autumn, and in collecting and burning weeds in winter. Boys only are employed in land-draining and driving plough. Distance to work, not more than half a mile. Men work from 6 a.m. to 6 p.m.; women and children from 8 to 1, and from 2 to 6. They all go home to dinner; time allowed for meals 1½ hours. Field work in winter is likely to produce rheumatism or rheumatic gout. I consider field work injurious to the morals of the females, inasmuch as they hear language and are exposed to indecent liberties to which otherwise they would not be subject. The demand for labour does at certain times require the assistance of females, but I think it very desirable that it should be restricted to married women. I think boys should not be employed under 9 years of age. I think two miles a sufficient distance for boys of any age to go to work; I would not allow girls to go at all. I would restrict the time of work for boys under 10 years of age to three days in the week, that they might attend school on the other days, as being more advantageous to the employer, and more conducive to the good education of the children. As regards my own parish, I should be very reluctant to introduce any mode of enforcing school attendance; there exists so good a feeling, both on the part of the employer and the employed, in favour of education, that I should be very unwilling to disturb it. I think the want of good cottage accommodation is more conducive to immorality among the lower classes than any other cause. It is by no means uncommon for the cottages in this parish to have only one bedroom for the whole family. Such a state has a bad effect on morals, health, comfort, cleanliness, and education. A large proportion of the cottages are built of clay, brick, and a thatched roof; they seem to have built on the waste ground lying by the side of the road, so that there is not room for the necessary conveniences.

[Mr. Mayd suggested, as a point for consideration, that it would be beneficial to obtain legal power for the lord of the manor to buy out cottages built on land originally "cribbed from the waste."]

No progress is being made towards increasing the cottage accommodation.

School Statistics.

In Summer and Winter.

	On Register.	Average Attendance.
Boys:		
Under 10 - -	39	29
Between 10 and 13 -	5	4
Girls:		
Under 10 - -	32	31
Between 10 and 13 -	9	7

There is a night school from October to March, open for two hours on three nights in the week. Average attendance (all above 12 years), 20. It does not adequately supply the deficiencies of the day school. The principal difficulty in maintaining a night school is disinclination to study on the part of the young men. Some do not like to mix with those younger than themselves, who are better scholars in consequence of having had an early education, which the older ones have not had.

Men's wages here are 10*s.* a week, with a quarter of an acre allotment. The girls are principally occupied in slop-work, which is served out to them from the factories in the neighbouring town of Haverhill, and this work they do at their own homes. The money earned is very little, if at all, in excess of that derived from field labour.

HORSEHEATH.

Population, 497. Acreage, 1,677. Cultivation, chiefly arable.

120. *Rev. Francis H. Annesley*, curate in residence.—No gangs. Persons employed singly, or with a few others:—

Males:		
Between 8 and 10 - - -	4	
„ 10 and 12 - - -	10	
„ 13 and 18 - - -	18

Unmarried - - - -	8	
		21

In spring, in picking stones off the land and in weeding corn. In summer, in weeding corn and harvest. In autumn, in picking potatoes and pulling mangold and turnips. They live near their work. Hours of

work:—Boys, 6 to 6; girls, 8 to 5, with 1½ hours allowed for meals. Health not injuriously affected. I do not know of any ill-usage. I think the employment of females in agriculture is certainly demoralizing and detrimental to their proper training for domestic duties. I would recommend that no boy under 8 years of age should be employed in field labour. There is no industrial training for girls. School attendance is hardly at all affected by the distance from the school, nor by the pecuniary resources of the parents. Three cottages per 100 acres are sufficient, and that proportion exists here. In some cases the cottages are crowded. The cottages in this parish are tolerably commodious, and belong to different owners. The landowner has only a small proportion, and a tradesman owns several. Rent averages from 2*l.* 10*s.* to 4*l.* 10*s.* per annum.

[In consequence of the destruction of cottages at Camps, this village is full of families who get work in the neighbouring parishes.]

There is a night school upon for 16 weeks, from December to the end of March, for one and a half hours on three nights in the week. Average attendance is 25. Reading, writing, and arithmetic are taught.

Mr. Annesley complained of the immorality in the parish.

121. *Mr. J. Webb*, farmer.—Does not employ children. A labourer cannot live and support a large family without the children's earnings, which vary from 3*d.* to 6*d.* a day. Does not consider that field work conduces to immorality so much as slop-work.

[Mr. Cook, farmer, employs a gang of boys and girls (mixed) all the year.

In this parish also the girls are much employed at home with the slop-work from Haverhill.

I ascertained that in this neighbourhood cottage rent averages 3*l.* a year. Many of the cottages having only two rooms, but usually with a piece of land attached, or in the allotment field. In the town of Haverhill, cottages of the most miserable description are rented at 5*l.* a year.

There is a considerable manufacture in Haverhill of corduroy and "white work" (as it is called), a coarse shirting.

These goods are then put out to the girls in the neighbouring villages, to be made up for the retail shops; and this kind of work, like the straw-plaiting in Bedfordshire, is said to have a most demoralizing effect on the girls employed.—E. B. P.]

SHUDY CAMPS.

Population, 330. Acreage, 1,332. Cultivation, mixed.

122. *Rev. W. Joy*, vicar.—A small and varying number of my parishioners are employed in a private gang in the adjoining parish of Horseheath, but there are no gangs in this parish. Very few women are engaged in field work. The boys from the time they can earn anything, till 14 or 15, are often nominally at school; but are so irregular in their attendance as to lower the efficacy of the school. This is becoming more the case with the girls also, since the introduction of slop-work. The hours of work are from 6 a.m. to 6 p.m., or during daylight, with 1½ hours allowed for meals. Slop-work (sewing) for the ready-made clothes dealers seems to me to be worse than field work for the girls, taking them earlier from school, keeping them from service, and exposing them to temptations. The women are sadly in want of proper training for domestic duties, but not through field work. The only training of this kind open to them is domestic service, from which the best of them seldom return to us. I should dread any new source of irregular attendance in our small village schools. Their chief want is efficiency of teaching power. There are almost as many classes to be attended to as in a large school, and we cannot afford extra teachers. My aim is to economise teaching power by improved method and regular attendance. If we could be sure of our children regularly up to a definite age, say 8 years, as a minimum, I do not see why we should not ultimately give them a better education than most of them have had now 2 or 3 years later. School attendance is scarcely at all affected by distance, except in the case of young or delicate children in bad weather; nor much affected directly by the pecuniary resources of the parents, "no shoes to come in," is an occasional excuse. It is not often that the parents have any real difficulty in paying the weekly penny, if they have, it is paid for them. Indirectly it is very much affected; their wages are too small for them to do without any little addition, which the children can earn or enable the mother to earn by helping her at home, hence irregular attendance at school. We do not see our way in small schools to provide for the industrial training of girls, though we should be glad to do so. There are 20 or 25 labourers employed in the parish, over and above those who can find houses in it. There are nearly enough cottages with two or three bedrooms. A large part of our cottages are old and badly built; not underdrained, accommodation moderate. Our wells are few and very deep. Garden ground and outhouses generally sufficient. Out-door provisions for decency sometimes sadly deficient. They are owned by non-resident landowners; rent 2*l.* to 3*l.* 10*s.* per annum. Two good new cottages have been built, and two old farm-houses adapted for four labourers' families.

School Statistics.

In Summer.

	On Register.	Average Attendance.

Girls:		
Under 10	18	10
Between 10 and 13	4	2

Scarcely any children of the labouring class who are well, are neither at school, nor at work either at home or in the fields. Nearly all the young men and lads about 15 or 16 are insufficiently educated, and some of the girls. There seems to be a great improvement in the younger ones. There has been a night school, but it has been discontinued for want of sufficient attendance. I have had difficulty in getting any one fit to help me in teaching.

The girls earn from 2*s.* 6*d.* to 3*s.* a week at slop-work. Men's wages are 10*s.* a week. Girls and boys as young as 6 and 7 years, are employed in the fields.

CASTLE CAMPS.

Population, 901. Acreage, 2,703. A large and straggling parish.

123. *Rev. J. E. Bode*, rector.—Wages 10*s.* a week for men, 5*d.* and 6*d.* a day for children. Children leave school early; they sometimes go out in masses in weeding time. The parents do not like to refuse the farmer if he wants them. Very few people in the parish can sign their names. Thinks that the farmers would be opposed to a compulsory system, though they are willing to admit the necessity of education.

Cambridgeshire.

Mr. Portman.

d.

124. [I subsequently received the following letter from Mr. Bode.]

"Castle Camps Rectory,
"Dear Sir, 31 December 1867.

"In answer to your letter received this morning, I am truly sorry to say that I have not been able to furnish the information desired. I fully intended to attempt to do so, but * * * *

"As an indication that my information would not have been important, I may add that there is nothing like an agricultural gang in this parish; there are very few girls or women employed in field work. I do not think there are half-a-dozen regularly employed in it. They all do what is called slop-work, for a manufacturer at Haverhill. I do not think this has any favourable result on their morals, or fitness for domestic duties. Comparing them with the girls and women in a parish in Oxfordshire, of which I was rector, where they were mainly employed in field work, I should say they are quite as immoral, perhaps a little less rude, but quite as bold.

"The girls are generally taken from school to this work at from 7 years to 9 years of age; the boys to farm work at about 7 or 8. Both sometimes return to day school at dull times in the year; the former not so often. Both usually attend Sunday school, the boys till about 15, the girls till about 17.

"The only peculiarity in this parish is, that we have nearly 30 families residing in it, belonging to the adjoining parish of Shudy Camps, owing to the paucity of cottages in that parish. The cottages here are generally deficient in accommodation, there being scarcely any with more than two bedrooms, but not many I think with less.

"Part of the parish is a mile and a half from the school, and I think this makes the attendance more irregular in the winter. I have taken the liberty of putting down these remarks here; they are not sufficient to enter in the formal paper, but may be better than nothing.

"I am, &c.,
"Hon. E. Portman. J. E. Bode."

[In this part of the county, containing the villages of Shudy Camps and Castle Camps, I found men's wages lower than in any part of Cambridgeshire.—E. B. P.]

WEST WRATTING.

Population, 777. Acreage, 3,440. Cultivation, chiefly arable.

125. *Edward Frost, Esq.*—There are no gangs in the parish; girls are not employed. The children sometimes go out singling turnips with their parents. This is a very large parish, six miles in length. The schools are good. All the children in the parish from 3 years of age up to 10 years in the case of boys, and 12 years in case of girls, attend school. There is a night school for six months in the winter season, open for two hours on three nights in the week, which is attended by 17 boys. Scripture, reading, writing, and arithmetic are taught. I consider the night school adequately supplies the deficiencies of the day school. Cottages are abundant; the worst belong to small owners.

[Wages in this parish for men, 11*s.* a week.]

BALSHAM.

Population, 460. Acreage, 4,400. Cultivation, chiefly arable.

126. *Rev. C. R. Dicken*, rector.—There is no organized system of agricultural gangs in this parish. In spring, when children are employed by the farmers in weeding, &c. a person is usually appointed to overlook them, but their wages are paid by the farmers. It is quite a matter of chance whether the same children are employed from day to day, so that the ages cannot well be ascertained.

CAXTON.

Population, 545. Acreage, 2,000. Soil, stiff and clayey.

127. *H. Mortlock, Esq.*, solicitor.—This is a very poor miserable district; there is little done for the poor people. Children do not go out to field work much, except in the spring for twitching and weeding, boys and girls together; they work from 7 a.m. to 6 p.m., and get very tired. The girls are quite spoilt by field work for domestic service. A man will not take charge of a lot of children in the field unless he has extra pay. The mothers take no trouble to get their children to service. If legislation as to the age at which children should go to work takes place, he does not think the provisions of the Act could be enforced, except by making the police public prosecutors. Wages are 12*s.* and 14*s.* a week for men. Cottages are very bad, mostly with only two rooms. The overcrowding of families is the root of the evil, and the cause of immorality. Thinks the children's labour is at certain times necessary to the farmer. Caxton Union is the worst in the county.

128. *A. J. Wright, Esq.*, medical officer.—Does not consider the health of the children is injuriously affected by field labour; their morals become much deteriorated; they go out as young as 6 or 7 years of age. The cottages are very bad and are disgracefully overcrowded, a state which leads not only to immorality but also to sickness. The moral state of the people of Caxton is very low. Should be very glad to see some legislation on the subject.

GREAT GRANSDEN, Hunts.

Soil, heavy clay.

129. *T. V. Webb, Esq.*—Women and girls work together in the fields wheat hoeing in the spring; girls of 14 years and upwards and married women together. The boys are mainly employed in the care of horses. The little children occasionally go out picking charlick in the spring, not in greater numbers than 10 together. The cottages are not overcrowded and are pretty good. Education must be compulsory. Thinks that a system of alternate weeks of work and school might succeed, but not half day or alternate days. The boys should not go to work till 10 years of age. The girls are sent to service at 13 years when possible; the mothers are growing averse to sending them to the fields. Thinks that a system of night schools with liberal support from Government in case of uncertificated master as well as of certificated, is very desirable. There is one in the parish which is well attended, the average age of lads attending being 16 years. To carry out this system an additional number of teachers would be required in every parish, as the attendance of lads earning wages up to 16 years of age for a certain number of evenings during the winter months should be made compulsory; in the case of those not earning wages, there should be a forced attendance at the day school up to a certain period, whereby you would secure a continuous education and keep up the standard. At present the people are deficient in reading and writing. Men's wages 12*s.* and 13*s.* a week.

LITTLE GRANSDEN.

130. *Rev. A. Newby.*—A very small parish. The same system of employment of labour in agriculture exists as in Great Gransden.

BASSINGBOURN.

Population, 2,213. Acreage, 4,245. Cultivation, chiefly arable.

131. *Rev. H. Freeman Bishop*, vicar.—Private gangs are employed by farmers in the spring in pulling charlock, and picking up twitch. The distance to work rarely exceeds a mile. Hours from 7 a.m. to 6 p.m., with an allowance of one hour and a half for meals. The sexes work together, but have their meals apart. The working together of the sexes gives the young girls

very rough habits, and does not conduce to morality. I understand that their language is at times very bad. The health is not injuriously affected, nor do I know of any ill-treatment. The state of education, both among the young and adults of both sexes, is low. The employment of females in field work interferes with their usefulness in domestic service. Boys should not be employed under 10 years of age. The over-crowding of cottages has a bad effect on the morality of the labouring classes. Most of the cottages have two bedrooms; a great many are owned by tradesmen. This is a poor parish, with no resident squire, and the parents are glad to get the children's earnings. I should be glad if something could be done to prevent the children from leaving school so early as they now do.

KNEESWORTH, near Bassingbourn.

Population, 280. Acreage, 970. Cultivation, chiefly arable.

132. *W. Ten Brocke Crole*, bailiff and farmer.—I employ on my farm four males and eight females, in a gang in spring and summer. [About three times this number are employed in the whole parish.] The males are between 10 and 13 years of age, females between 13 and 18 years. The work is pulling charlocks and picking up twitch. Hours, from 7 a.m. to 6 p.m., with 1½ hour alllowed for meals; they all live close to their work. They leave home at 7, and are at home again at 6 p.m. The sexes work together, but have their meals apart. Their health is not at all injuriously affected; they are playing about till 9 or 10 o'clock at night. The state of education varies, some read very well, some not at all. We have only "private" gangs in this parish, and the children are well cared for. I employ four males between 10 and 13 years of age not in the gang, in spring in bird-scareing; in summer and autumn, in driving hay-carts, dung-carts, and light jobs; in winter, in cleaning turnips and helping the shepherd. Hours from 6 to 6 in summer, from light to dark in winter. The morals of the girls depend on their mothers. I would not place any restriction on the employment of females in field labour, nor on the age at which boys should go to work. A boy of 12 years old will walk 10 miles every day, driving plough in wet dirty land and play hard all the afternoon. Certain kinds of work can only be done in fine weather. The half-day or alternate day might be very inconvenient; I would suggest night schools as preferable. We have a school in our parish close to the houses of the labourers, under the management of the squire. It is not unusual for the farmers in this parish to pay for the schooling of children when the families are large. No industrial training for girls is attempted. I conceive bad accommodation in the cottages, *i.e.*, having only one bedroom, to be the root of all immorality. I should say two cottages are sufficient for every 100 acres; we have that proportion. Almost all our cottages have four rooms, and all have a garden. Rent 1*s.* 3*d.* to 1*s.* 6*d.* a week.

Mr. Crole thinks that the weeding and charlick-picking cannot be done without "the small hands." The girls would be better if they did not go to field work quite so young. The parish and neighbourhood are much improved lately in point of morality, but there is still much immorality dating from "the Feast."

STEEPLE MORDEN.

Population, 913. Acreage, 3,820. Cultivation, chiefly arable.

133. Meeting at the vicarage.

Present:—Rev. W. Martin, vicar.
Mr. Strickland, „ Pain, „ Westrope, } farmers.

A large parish, and coprolite district. No school in existence when Mr. Martin came, but one has been open since January 1867. Mr. Martin expressed himself in favour of the half-day system of school and work, if it is possible to carry it out, if not then he would have alternate days. Children are employed in the fields as young as 6 years of age in charlick pulling, when they go 20 together with a man over them. The girls do not work much in the fields, as they are occupied with straw-plaiting at home. A child of eight years can earn 2*s.* 6*d.* a week in the field. Man's wages 2*s.* a day. 15*s.* or 16*s.* a week can be earned by piece-work.

134. *Return made by Rev. W. Martin.*

Children and young persons employed in agricultural labour:—

Males (constantly):	
Between 8 and 10 years	4
„ 10 and 13 „	19
„ 13 and 18 „	21
	44
Females (occasionally):	
Between 10 and 13 years	6
„ 13 and 18 „	7
Over 18 yrs. (married)	7
	20

They are employed in spring, in weeding, setting potatoes, &c.; in autumn, in dibbing wheat and beans. A few go two miles to work, but the greater part live on or near the farms. Hours, 6 a.m. to 6 p.m. in summer, 7 a.m. to 5 p.m. in winter; two hours are allowed for meals. I do not think the health is injuriously affected, nor do I know of any ill-treatment. While the employment of females is only on occasional emergencies, I do not think there is much harm to their morals.

I would not recommend any restriction on female labour. Boys should not be employed under 8 years of age. Distance must keep many away from school in bad weather, and prevent very young children from coming at all. Many parents keep their children from school to earn money by straw-plaiting. There is no industrial training for girls except in needlework. Owing to the coprolite works, the over-crowding of the cottages is a serious evil, and the effect of the mixture of sexes in the same sleeping room disastrous to morality.

There should be two or three cottages per 100 acres, for those employed in agriculture. There is not a sufficient number of cottages with two or three bedrooms. Rooms in the cottages are generally of sufficient area but too low, some barely six feet in height. Bedrooms badly ventilated. The ordinary cottage has two bedrooms, but some only one, scarcely any have three; some have no garden, and insufficient room for outhouses. More than two-thirds of them belong to landowners. Rent from 2*l.* 10*s.* to 5*l.* a year. There is no progress being made towards increasing the cottage accommodation. One chief mode of enabling labourers to pay a rent remunerative to the landlord is to attach to each cottage a sufficient piece of land.

School, only lately opened.

In Summer.

	On Register.	Average Attendance.
Boys:		
Under 10	58	35
Between 10 and 13	12	7

Girls:		
Under 10	47	28
Between 10 and 13	26	17
Total	73	45

Cambridgeshire.

Mr. Portman.

d.

There is a night school open for one and a half hours on three nights per week. The average attendance is 17, three of whom are under 12 years of age. I know of no better mode of supplying the deficiencies of the day school. The principal difficulty in maintaining a night school is, the want of a sufficient number of teachers to take different classes, and so secure sufficient individual attention to all.

GUILDEN MORDEN.

Population, 906. Acreage, 2,500. Cultivation, chiefly arable; soil very heavy.

135. Meeting at the house of the Rev. H. Thornton, curate.

Present:—Rev. H. Thornton.
Mr. Johnson, „ Chapman, „ Masters, } farmers.

There are two private gangs in the parish; they are only employed for two months in spring in weeding. The sexes work apart. Not many of the children are under 8 years of age. There are coprolite works about five miles distant. It was not thought necessary to interfere with the employment of children, as in force in this parish. Wages of children from 4*d.* to 7*d.* a day. It was thought desirable to secure a certain number of days' attendance at school for children below a certain age. Boys are employed horse-leading and ploughing throughout the year. The night school failed. It was thought that three cottages per 100 acres were sufficient for heavy land, but that a smaller number would suffice on the light lands. The middle-aged portion of the population are not at all educated.

136. *Return made by Rev. H. Thornton, curate.*

Numbers employed in gangs.

No. 1.

Males:	
Under 8 years	3
8 to 10 years	—
10 to 13 years	11
Total	14
Females:	
Under 8 years	2
8 to 10 years	4
10 to 13 years	3
13 to 18 years	5
Total	14

No. 2.—6 males and 6 females.

They are employed in weeding and twitching. Hours from 7 a.m. to 6 p.m., with one and a half hours allowed for meals. Their health is not injuriously affected; they only go short distances to work. Most of the young are capable of reading very fairly. As the gang system is only adopted in this parish to a very limited extent, and only during two months in the year, it is not necessary to subject it to the same restrictions as "public gangs." Of those who are employed not in gangs there are 20 young persons—20 children—but no women, employed in driving or leading horses. There are not sufficient cottages with two or three bedrooms; the accommodation is very defective, there being in many instances only one bedroom for a large family. Rent from 4*l.* to 6*l.* a year. The average attendance at the day school is about 100, and the numbers have not varied much in winter and summer, though there has been a greater number of elder children in winter and a greater number of younger in summer. All the children, however, in the school do not belong to the agricultural class, though most do. There are not many children in the parish who are growing up without any education at all. The night school is not efficient; there is a want of Government aid on liberal conditions in parishes that have no resident landowners or wealthy people.

DRY DRAYTON.

137. I found here some very good cottages belonging to Rev. W. Smith; also a row of fair cottages belonging to Mr. Warren, a grocer at Cambridge—two rooms on ground floor, two upstairs, at a rent of 4*l.* a year. There is an allotment field in the parish.

138. *Letter from Rev. W. Smith, of Dry Drayton, to Hon. E. Portman.*

"Dry Drayton,

"Sir, November 28, 1867.

"I have delayed writing to you on the subject of the gang system of employing women and children in agriculture in this county, in order that I might collect all the information I am able on the subject.

"In this parish we have neither public nor private gangs employed; women are employed to a certain extent in the fields, but in small parties of themselves, and occasionally a few children with them, but without any man. I am glad to say, the allowing children to work in the fields is generally disapproved in this parish, it being invariably the case that, where children are for any length of time employed in field-work, they become disinclined to go to service, and if they do go out to service they make very indifferent servants.

"In the adjoining parish of Lolworth private gangs exist for some portion of the year, and I regret to say some of our young people have been induced to join them.

"As far as I can learn, public gangs exist only in the fen districts; on our heavy clay land I believe there is not one. On the light lands of this county, that is, from Cambridge to Royston, and Cambridge to Newmarket, private gangs exist in some places in the spring of the year, and at the time of turnip-hoeing.

"My information, such as it is, has been obtained from farmers in various parts of the county.

"I am, &c.,

"William Smith."

LOLWORTH.

139. *Mr. Daintree*, farmer.—This is a small parish of heavy land, and labour is very scarce. We cannot do without the children's labour. I would employ a gang if I could get one, and do not consider it a demoralizing system, if under proper supervision, though I decidedly disapprove of the public gang system. Most of my work is put out by the piece. The cottages are good; some new ones have been lately built. There is a night school in the parish, and I think a good system of night schools would be very beneficial, as the children should be educated more than they now are. Steam plough is much used in this district. The use of steam machines does not do away with the necessity for hands.

STETCHWORTH, NEAR NEWMARKET.

Population, 671. Acreage, 3,739. Cultivation, chiefly arable.

140. *Charles Jillings*, Stetchworth Hall. — The private gang system exists in this neighbourhood. I employ in spring and summer about 30 males and 15 females; in winter, 12 males and 4 females. They are employed in spring in spudding docks, raking grass, cleaning roots, and in bird-keeping; in summer, in hoeing and weeding corn, picking grass, singling beet, turnips, carrots, &c.; in autumn, &c., in storing roots, keeping stock, bird-keeping, and picking stones. They usually work for 10 hours, with 1½ hours allowed for meals; their health is not injuriously affected, nor is there any ill-treatment. The state of education among the young is improving. It is not requisite to apply the provisions of the Gangs Act to "private" gangs. Of those not employed in gangs there are about 100, children, young persons, and women; I employ from 30 to 40 on my farm. I would not place any restriction on female labour, as their services are here much required, and the work could not possibly be done without them. I would

not limit the age for boys to go to work. School attendance for four months during winter is desirable. The school is conveniently situated. Cottages are conveniently placed on the farms, and are not crowded. I consider that an evening school adequately supplies the deficiencies of the day school; the night school is badly attended.

141. *Major Fryer*, Newmarket.—Children are employed in this district, though not in any great numbers together. Married women are much employed. There is not more immorality among the field women than among the idle ones. The gangs are not so much mixed as they used to be. The want of good cottage accommodation is the root of the evil state of morals. Schools are abundant. The state of education among the young is low, but is certainly improving. The lads feel the want of education, as they find the difficulty of getting places if they cannot read or write. The system of piece work, wherein a father is often assisted by his children, *e.g.*, in turnip hoeing and singling, would render it difficult to restrict the hours of work on the land. Thinks that all classes are now anxious to raise the standard of education, and that legislation might tend to retard instead of advance the cause, by checking the voluntary support now freely given. An extension of the provisions of the Labouring Classes Dwelling House Act (29 Vict. c. 28.) to rural districts might be beneficial.

Cambridgeshire.

Mr. Portman.

d.

YORKSHIRE.
EAST RIDING.

E. R. York.

BURSTWICK.

Population, 485. Acreage, 4,220.

142. *Rev. F. B. King, Mr. Mitchenson, Mr. Park.*—It was considered desirable that some system of enforced education should be adopted. That no child should go to work under 11 years of age, and that they should remain at school till that age. Mr. King would make it necessary to produce a certificate of three years education in an approved school before employment, and would place a penalty on the employer of any child without such certificate. Children are not much employed in the fields, sometimes 10 or 12 together, of both sexes with a man over them in weeding and potato picking, they are then paid by the farmer. Parents do not appreciate education, and make the children go out to earn something when they can. The health is injuriously affected by exposure to weather and hard work under 10 years of age, the children are stunted in their growth. Women when married go hoeing, but they are not so much employed now as formerly. The farm servants, male and female, are engaged at the statutes or hirings at Martinmas (the 23rd Nov.) for the year. They are lodged and boarded either in the house of the farmer or of his foreman, and are paid by the year. There are very few cottages attached to the farms and it would be a great advantage to master and labourer if there were more. The cottages are clean and in good repair and not overcrowded. Rent from 3*l.* to 5*l.* The greatest distance to work is two miles. The state of education is low, the children are not sufficiently grounded. Sunday school is well attended. Night school does not answer, the farmhouses are far apart and at a distance from the school, and the arrangements for "doing-up" the horses at 8 p.m. prevent the lads from coming to school. Wages of an ordinary labourer are 2*s.* 6*d.* to 2*s.* 9*d.* a day.

RYHILL, HAMLET OF BURSTWICK.

Population, 243. Acreage, 1,500.

143. *Mr. Leonard*, farmer.—I farm 700 acres. I never employ children and do not consider that children under 10 years of age are of much use to the farmer. To prevent children under 10 years from going to field work would be no hardship to the farmer, though in some cases it might be to the parents of the children. Wages of an ordinary labourer are 15*s.* a week. The younger portion of the population can mostly read and write. The rent of cottages with garden and pighouse is 4*l.* each per annum. More cottages are wanted and legislation on that point would be very beneficial. When farms are situated at a distance from the village the farmers would be too glad to pay a fair per-centage to the landlord for the money laid out in building cottages.

SALTHAUGH GRANGE, KEYINGHAM.

144. *Mr. Francis.*—I occupy 900 acres. Children are not much employed in field work. They go out bird-tenting and pulling "runch" for about six weeks in spring and summer. They go at 9 years of age, and are paid 8*d.* a day. Boys do not go with the carts. It would be no hardship on the employer to forbid children working under a given age, though it might be to the parents, as the children go out to earn money for clothes, &c. The state of education is pretty good. The plough lads are hired by the year; the foreman will get 30*l.* a year and keep; waggoners, 16*l.* to 20*l.* and keep; lads 10*l.* to 14*l.* and keep. When the lads are well looked after they become good and careful men and are able to save money. The wages of an ordinary labourer are 2*s.* 6*d.* a day, and 3*s.* for special work, such as thrashing; much work is done by the piece, and earnings larger than the weekly wage are made at it. I have three or four cottages on the farm, some men come two miles to work. One double cottage for general labour is sufficient for 200 acres under the system of yearly hiring of plough lads. Single and married women go out weeding. There has been a good deal of emigration and labourers have come from Norfolk and other counties.

PARISH OF KEYINGHAM.

Population, 639. Acreage, 1,890.

Keyingham School.

145. *Mr. Kendall*, master.—46 boys and girls on register; average attendance for year, 44 boys and girls. The children are away from school 9 or 10 weeks in spring and summer, bird tenting, singling turnips, weeding, &c.; they go as young as 8 or 9 years. I would recommend 11 years as the limit below which no child should go to work, a boy who attended regularly up to that time would be able to read and write and do arithmetic up to the rule of three. They lose a great deal of what they have learnt when they go out. Girls do not go much to field work except for band-making in harvest time. There is an Infant School in the parish, but no industrial training for girls. The night school did not answer.

[There were 16 boys present of different ages who had been out pulling runch.]

146. *Ness.*—12 years old, had been out pig-tenting in the autumn for 3 years, generally got 8*d.* a day.

147. *John Beal.*—I have been out pig-tenting and pulling runch; got 8*d.* a day, and 1*s.* a day for band-making. We went 12 or 14 together, very few girls with us. I have been five miles to work, pulling runch; walked there and back, got 8*d.* a day. My back was very tired. A ganger looks after us, and pays us the wages; he is employed by the farmer to get children for the job, and is paid 2*s.* 6*d.* a day; he does not make anything out of the children. He was a labourer belonging to the farm on which I worked.

PATRINGTON.

Population, 1,724. Acreage, 4,494.

148. *Mr. R. Lambert, Mr. Marshall.*—Children of 8 to 10 years of age are employed for singling turnips and bird-tenting; in the former work they usually go with their parents. Some are used for driving horses at that age. A boy of 8 years is no good for work.

E. R. York.
Mr. Portman.
d.

Women are mostly used for weeding. Parents would suffer in many cases if the labour of young children was forbidden. Schools in the district are generally good, but the parents are very indifferent about sending their children to school. Mr. Lambert quoted a case of a man at Easington earning wages at the rate of 150*l.* a year, who refuses to allow his children to go to school. It was thought that a system enforcing school attendance for six months in the year would answer better than half days or alternate days of work and school.

150. *Mr. Plumley*, master.—I have been here four and a half years. There is in the school now, one boy of 16 years of age, one of 15, several of 14 down to 7 years. Children of labourers usually leave school at 12 years of age; some come back a little in the winter. Children go out line-weeding in a sort of gang. Those who attend school regularly up to 10 or 11 years are well grounded in reading, writing, and arithmetic. The parents are quite uneducated and do not appreciate education for their children, consequently they do not care to send them regularly to school. There is no poverty sufficient for an excuse. The payment to the school varies from 1*d.* to 1*s.* a week. The health of the children is not injuriously affected by field work, but they are often wandering about the streets in the cold and wet from the closing of the school to the time (6 p.m.) when their mothers return from the flax mill, the house being locked up during the mother's absence. There is a night school open for three nights a week. Twenty males attend, varying in age from 12 to 28; they are mostly sons of tradesmen or lads employed in shops, and they come very willingly. Very few are of the agricultural labouring class.

151. *Wrigglesworth*, boy, 10 years of age.—I have been out line-weeding; we go about 20 together, boys and girls, some girls 15 years of age. The man who looks after us goes with us from the village. Some get 7*d.*, some 8*d.* a day. The manager of the flax works pays us at the works.

[There is here a large flax mill, employing about 150 hands.—F. B. P.]

152. Extract from Letter from C. Metcalf, Esq., to Hon. E. Portman.

Sir, Patrington, April 11, 1868.

I have not had an opportunity of sufficiently examining the questions issued by the Royal Commission as to be able to answer them at all correctly, but I may add in answer to your note that the children in this town and neighbourhood as a rule are sufficiently educated, and, excepting "the Rotary," no gangs of children or women are employed, excepting for a month or six weeks during the line weeding, and then sober steady overlookers have charge of every ten or dozen children. Women are mostly employed for pulling line for a short period during the end of August and beginning of September, but then they do not go in gangs, as each family has their own lots, though there may be a great number in one field.

Very few children are employed by the farmers in this district till the harvest commences, which only lasts a month or six weeks, and then the schools are closed for a month, at least it is so here.

I can scarcely think that this neighbourhood, being so thinly populated, requires much fresh legislation.

Your obedient servant,
R. C. Metcalf.

WINESTEAD.

Population, 173. Acreage, 2,570.

153. *Mr. Stephenson.*—I have two cottages with my farm for labourers, and have yearly men in the house besides. There is with each cottage one and a half acres of land, and on a 20 acre allotment field in the low land 10 cottagers have two acres a piece. Wages for ordinary labourers 15*s.* a week. Children are not much employed in field work except for runch pulling in spring and summer; then perhaps 8 or 10 together. A trusty man is sent to look after them. They earn 6*d.* and 8*d.* a day. I think 10 years would be a good limit to fix, below which children should not go to work; they should not be kept away longer than that as they must learn their work as agricultural labourers and the parents want the earnings. Some of the lads read and write very well. Some parents, though earning good wages, will not send the children to school. There are sufficient schools in the district. I should not approve of compulsory education.

154. Winestead School.

Mrs. Cotton, mistress, 20 boys and girls on books.—The children go out young to earn wages, and forget much that they have learnt. If they were kept *regularly* at school till 10 years of age, they would be able to read, write, and do a sum fairly. The Sunday school is not well attended.

[One girl in the school of 10 years of age had been out singling turnips last year, and earned 9*d.* a day.]

ROOS.

Population, 596. Acreage, 2,414. Cultivation, mixed.

155. Return made by Rev. R. B. Machell, Rector.

There are no private gangs here. Those employed in field work are,—

Males.		
Between 8 and 10	-	3
„ 10 and 13	-	19
„ 13 and 18	-	3
	Total	25
Females.		
Between 10 and 13	-	2
Over 18, married	-	17
	Total	19

The women are employed in spring with the thrashing machine; in summer hoeing, weeding, and singling turnips; in autumn and winter with thrashing machine. The children are employed in spring in bird-tenting; in summer in singling turnips, gathering stones, and picking thistles; in autumn in tenting pigs on the stubbles; in winter they go to school. A few walk occasionally two miles to a neighbouring village. The hours of work in bird-tenting are 12, in pig-tenting 9, with an hour or one and a half hours for meals. There is no injury to the health nor any ill treatment The field work has a bad effect on the morals of the females. I would restrict female labour to a defined age. I would not restrict the age for boys' labour.

School attendance by half day at school and half day at work would be the best plan educationally for the child, but an attendance for six months during the year would be most *convenient* for the employer and the child. The school attendance is not affected by distance. 19 per cent. of farm labourers' children cannot pay the school pence—2*d.* a week for one child, 1*d.* a week for each one after the first.

Good cottage accommodation is very necessary. Two would be sufficient per hundred acres. There is a sufficient number with two and three bedroons.

The cottages generally have two ground-floor rooms, a kitchen and living room, and two bedrooms; in this case they often keep the living room as a best parlour and live in the kitchen. The ventilation is imperfect; drainage fair. Two-thirds of the cottages have gardens. Rent without garden, 3*l.* 10*s.* a year. Rent with garden, 5*l.* a year. A few are owned by the landowners, the rest by tradesmen and others. There is no compulsion on tenants as to dealing with their landlord.

For providing good cottage accommodation I would suggest that three-quarters of the cost should be defrayed by public money, to be repaid in 40 years; one-quarter to be paid by the landlord, and no interest paid on it, in consideration of the cottages becoming his property ultimately.

SCHOOL.

In Summer.

	On Register.	Average Attendance.
Boys:		
Under 10 - -	17	17
Between 10 and 13 -	5	8
Girls:		
Under 10 - -	13	12
Between 10 and 13 -	7	5

In Winter.

Boys:		
Under 10 - -	11	5
Between 10 and 13 -	8	8
Girls:		
Under 10 - -	12	12
Between 10 and 13 -	8	5

Neither at school nor at work:—In summer, five boys between 8 and 10 years, and five between 10 and 13; in winter, one boy under 10, one girl between 10 and 13 years.

156. *Mr. Sykes,* farmer.—Children are not much employed here, and rarely under 10 years of age, then at bird-tenting and weeding. There are very good infant and day schools. Day-labourers earn 15*s.* a week. I do not think children would get enough education before 10 years of age, but the winter months might after that age be given to schooling till they go to farm-service. Plough lads who go by the year do not often begin till they are 14 years old. Of farm servants, a foreman will get 50*l.* a year and his keep; a waggoner 26*l.* to 30*l.* and keep; the lads of 14 years and upwards 12*l.* and 13*l.* a year and keep. These servants are now often boarded with the foreman, instead of in the farmer's house as formerly. It is very desirable to have cottages on the farms. The Union Chargeability Act is operating beneficially in many parts.

RISE.

Population, 188. Acreage, 2,012.

157. There are some excellent new cottages on Mr. W. Bethell's estate here, but he says that where they are placed at any distance from the village, he has found difficulty in getting the people to go and live in them, as they prefer living *in the village.* Wages are ordinarily 15*s.* a week, for thrashing work he has to pay 3*s.* and 3*s.* 6*d.* a day, according to the distance to the job. (E.B.P.)

158. EXTRACT from RETURN.—Rev. W. WHATELEY.

Children are employed in the spring in bird-tenting.

School attendance is not affected by the pecuniary resources of the parents.

The farms are cultivated almost entirely by servants boarding in the farmhouses. Labour is occasionally obtained from two villages at a distance of two miles, the number of cottages in the village not being sufficient to supply at all times the requisite amount of labour.

The cottages are nearly all recently built, are well-drained and ventilated with plenty of accommodation, having mostly three bedrooms, and a good supply of water, gardens and outhouses. They all belong to the owner of the parish; rent about 4*l.* a year.

SCHOOL.

In Summer and Winter.

On register:	
Boys and girls under 10 - - -	20
Between 10 and 13 - - -	5
Average attendance:	
Boys and girls under 10 - - -	15
Between 10 and 13 - - -	5

There is no night school.

The system of yearly farm servants is very bad for the morals, the lads become very rough. The cases where they are carefully looked after are exceptional.

I do not know of any gangs or of much employment of children except in bird-tenting.

SKIRLAUGH.

159. *John Ford,* relieving officer.—Children go out to work as young as 10 years. We do not take children off the relief list till 13 years of age. Sometimes in spring eight or nine children will go together for weeding, where they are overlooked by one of the farmer's men. Children go with their parents for singling turnips. There is a great deal of work done by the piece; the fathers who earn good wages at it do not send their children to work young. The union generally is well supplied with schools. Night schools have not answered. The people are well off, cottages not at all overcrowded. I do not suppose you can find two families in one cottage in the union.

WITHERNWICK.

Acreage, 2,700. Cultivation, arable.

160. RETURN made by Mr. W. SIMPSON, farmer.

There are no private gangs.

I employ two lads between 13 and 18 years of age, and one girl between 13 and 18 years, and one unmarried woman over 18 years. They live on the farm, and are employed in all kinds of work.

We have no female children who go to work in the fields, except in harvest-time when they go with their parents.

Poor children pay 2*d.* a week for their schooling.

A few labourers have to walk about a mile to their work. The cottages stand airy, are well ventilated, and have good drainage, usually with two ground-floor rooms, and two chambers. Rent from 3*l.* to 6*l.* a year.

There are always some cottages untenanted.

There is no night school.

WITHERNWICK SCHOOL.

161. *Peter Atkin,* master.—There are on the books 75 boys and girls; average attendance, winter, 70; summer, 40. Some children go out at 10 years of age, some not till 12 or 13 years. The boys are employed in spring and summer in stone picking, twitching, and picking runch. I have known some children who are employed with their fathers in draining become quite stiffened up like old men before they are 15 years old. We take children into the school at 4 years. I should like to see 12 years fixed as the limit below which they should not leave school; they would then be well grounded. There are two sisters who come alternate weeks who get a long way behind in their class. I once kept a night school; 14 or 15 farm lads came from the houses, but I could not keep it on, as it did not pay. I should like to see forced attendance at night schools. The farmers take no interest in the school.

162. *C. Fox,* 13 years old.—I went out picking stones and twitching at 10 years old, and was out nearly six months in the year. We went about 20 together, some younger than me. There were two or three girls from

E. R. York.
Mr. Portman.
d.

8 to 14 years with us. I have been three miles to work, left home at 7 a.m., worked on land from 8 a.m. to 6 p.m. The foreman or a labourer looked after us. Master paid the wages, 8*d.* or 9*d.* a day. I forgot my reading and other things.

163. *Wm. Harsley,* 9 years old.—I have been out one year in two farmers' places. Did little jobs about home, and looked after the cows. I got 1*l.*

ALDBOROUGH.

164. *Mr. Sherrington,* schoolmaster.—This is an endowed school, called Tory's Charity; 70 on the books; 60 to 65 average attendance in winter; 45 in summer. Children go out to field labour at 11 and 12 years of age, return to school after harvest, and attend pretty regularly from Martinmas to March. They are employed in bird tenting, in pulling quicks (twitch), and singling turnips. Are paid 9*d.* to 1*s.* a day; they work about six together, and are looked after by a labourer. Some boys go draining with their father, who takes the work by the piece; this is very hard work for them. I think 10 years too young an age at which to fix the limit; if it were put at 12 years children would be well grounded; before that age they forget very quickly what they have learnt. Their knowledge is imperfect, even if they come to school in winter, when working in spring and summer. A night school has been started this winter; it is badly attended. One farm servant comes, the rest are chiefly apprentices. The farmhouses are too far from the village to allow the lads to come, under the present regulation of hours for work. There are 13 acres of allotments belonging to Tory's Charity, which are let out to labourers in portions of 1 rood and 1 rood 20 perches to each man. Most of the cottages have gardens. The labouring class is very well off. The women work a little in the fields in spring time. Parents are tolerably earnest in sending their children to school.

165. Extract from Letter from Rev. F. Margetts to Hon. E. Portman.

"Sir, Aldborough, Hull, April 29, 1868.

"We have no gangs employed in this parish, and I am not aware that there is anything peculiar to be observed. Most of the work on the farms is done by the farm servants, who live in the farmhouses. The young people both boys and girls generally go out to service at 14 or 15, and this relieves their parents' houses from overcrowding.

"The evils attending the agricultural employment of young people in this neighbourhood are not in the fields, but in the farmhouses where several servants of both sexes live together. No doubt much depends upon the master and mistress as to the ordering of their large households, and I think a higher tone is beginning to be observed both among masters and servants, but there is room for improvement. We have a good day school in the village, and an evening school in the winter, which is yet in its infancy.

"Yours faithfully,

"Francis Margetts."

HORNSEA.

Population, 1,041. Acreage, 3,160. Cultivation, mixed.

166. *Rev. W. L. Palmes,* rector.—Children leave school at 11 or 12 years of age to go to farm work or to beach work, gathering stones with their parents. I think the system of farm lads in the farmers' houses, as at present conducted, very degrading and brutalising to both sexes.

Extract from Return, Rev. W. Palmes.

No private gangs.

Each farmer hires one or more boys and girls by the year to live with him on his farm. Very few boys or girls are employed under 13 years of age, and but few girls between 13 and 18 years.

The boys are employed in agricultural work and about horses and sheep, the girls in household work and with the cows.

The sexes are thrown together too much, and the master and mistress generally take little or no charge of the morals or religion of their inmates. A hard feeling has grown up between the classes. The life of a farm servant does not seem to be conducive to purity, and the tone is coarse and bad as a rule. Except at hay and harvest times, the females are not hereabouts employed in field work.

I would not allow boys to be employed under 14 or even 15 years of age, they go into farm service too early, and soon forget all that they have learnt at school.

As far as the health is concerned, no restriction as to the hours of work is necessary, and I fear the farmers would oppose any arrangement to enable their servants to attend school for part of the day.

The half day or alternate day system for school and work, could not be applied on account of distance from school, &c. But attendance for a certain number of hours during six months of the year might be arranged, when the labour is less required on the farm. I should prefer a compulsory attendance up to 14 or 14½ years of age.

Distance from the outlying farms affects the attendance at night school in the winter.

Our labourers could quite well afford to pay the small weekly payment of 2*d.* or 3*d.* which we charge, but they do not value education as much as they ought. Almost all our girls go into farm service at 13, or are apprenticed as dressmakers.

In the cottages the people huddle together in one sleeping-room, even when they have others, from habit and ignorance.

We have ceased to be an agricultural village, and Hornsea is becoming a town, owing to the railway bringing the families of business-men in Hull to be residents here.

School.

In Summer.

Under 10 - -	68	36
Between 10 and 13 -	20	16
Girls:		
Under 10 - -	26	18
Between 10 and 13 -	23	11

In Winter.

Boys:		
Under 10 - -	75	50
Between 10 and 13 -	25	17
Girls:		
Under 10 - -	45	18
Between 10 and 13 -	15	12

They for the most part soon forget all that they have learned at school, and when they come to be married cannot write their own names.

We had an evening school for some years, but the farm servants could not or would not attend.

The farm servants, who would be most benefited by a night school, cannot well attend on account of distance, bad weather, and the objection made by their masters.

LEVEN.

167. *Rev. Geo. Wray,* rector.—Children go out as young as 8 years of age to potatoe-planting and picking, to weeding and making bands in harvest. Some boys of 10 years go to farm service, and do not return to school. The parents are uneducated, and prefer getting the children's earnings to sending them to school. The farm-servant system is very demoralizing, the servants are not looked after, and rarely come to church. Wages, 2*s.* 6*d.* a day. There are

18 women, two girls, and 23 boys in the parish employed in field labour at harvest and other times. Their hours of work are 10, with one hour allowed for meals. The half day and alternate day scheme for school attendance are inapplicable for farming which requires continuous labour. Rent of cottages, 4*l.* to 5*l.* a year.

REMARKS.

The inquiry involved in this Commission is scarcely applicable to the parish of Leven. There are no women or children constantly employed in field labour. A few engage themselves at particular seasons for short terms, but that depends on the weather and circumstances. Wages are good and work is plentiful, but the men for the most part do the work. House accommodation is good, and would be amply sufficient for the wants of the parish if a considerable number of men who dwell in the village did not take employment in the adjoining parishes. The township of Leven contains much copyhold property, which facilitates speculation in building cottages, and these are chiefly held by retired petty tradesmen and others who have saved a little money. There is a much larger population than the township requires, and yet labourers are scarce, because so many are employed in neighbouring parishes. The adjoining parish of Routh, which contains, I believe, 2,300 acres, has very little cottage accommodation, but is supplied with labourers chiefly from Leven, a distance between two and three miles. That whole parish is the property of one nobleman. What is chiefly wanted around us, and this probably applies more or less to England at large, is cottage dwellings for married men, which would give them a local interest and check the propensity to seek a new place every returning Statutes.

Boys generally go to farm service from 13 to 14 years of age. They hire for the year. Their home is broken up and they never attend school again. It would be a great advantage if farmers were prohibited from hiring boys under 14 years of age, and without a certificate from the clergyman of their parish that they can both read and write. Farmhouses are so scattered, and farm servants so separated from the rest of the world, that early neglect cannot be overcome in maturer life, but the mind becomes more and more callous and debased from frequent intercourse with evil, and the want of sound principles leaves it a prey to every vicious incentive. Where, as in the East Riding of Yorkshire, the farms are large and very detached, the farmer's house is like a barrack with a long chamber full of beds, one of which the foreman commonly occupies to keep order and rouse the men in the morning. The great moral evil from this species of farming arises from the necessary mixture of the sexes, there being many men in a house and commonly two women servants at most. Bastardy cases are consequently numerous.

There is a large number of men in this village who work in the drains. These are called bankers. The drainage here is extensive, and the cleansing takes place once or twice a year. It is done by contract. One man takes a contract and engages other men to work with him. It is severe labour but well paid.

The difficulty of dealing with the agricultural population will be found far greater than that of the manufacturing, the one being scattered over a wide area and the other grouped together by the nature of their employment.

Wages in the East Riding of Yorkshire will be found higher than in most parts of England.

GEORGE WRAY,
Leven, March 27, 1868. Rector of Leven.

ELSTERNWICK.

168. *J. Dickinson, Esq.*—I have four or five cottages on a farm; the system of attaching cottages to the farm ought to be extended. It is not often the case in these parts that there are any so attached. The labourers live in the villages. There are plots of ground of one acre with the cottages. Most of the cottages have two bedrooms. Cottages, on an estate should not all be the same size; you should build some with two and some with three bedrooms, to meet the wants of large and small families; in many cases the third room would not be used, and when people have cottages larger than they want they are apt to become uncleanly and slovenly. Rent with land is usually 4*l.* a year. The cottages at Humbleton pay 4 per cent. If money could be borrowed on easy terms from the Government for cottage building people with small sums to invest might take up enough to make up the requisite amount, on repayment in 40 years. At present the machinery for borrowing money for this purpose is cumbrous and expensive. In this district the properties are for the most part small, say three to 400 acres; there are only three large properties. Labourers' wages are 2*s.* 6*d.* a day. There are plenty of good schools, and the parents send their children regularly. Boys do not go out to work young, they generally stay at school till 13 or 14 years of age. Till they can plough they are not of much use to the farmer. Farm servants do not attend church with any regularity, and "the farmers can't make them."

169. *Mr. Marsden*, Dunthorpe, Humbleton.—Very few children are employed at all. When a few hands are wanted for weeding we get some Irish; they do more work "by take" than "by day," and are paid in money and milk. Women are not employed in field labour. I have four cottages and a hind's house on my farm. There is a rood of garden to each cottage; if they paid rent it would be 3*l.* to 4*l.* a year. My four farm lads are lodged and boarded in the foreman's (hind's) house. In a large business farm lads are necessary for the horse work, and they must live on the premises, it would not do to have them scattered about in cottages at a distance from the farm premises; but you should also have cottages for the labourers on the farm. The statutes are a great evil; I should like to substitute register offices for hiring these lads. I think it would be difficult to fix a limit of age, but a sound and simple education should be secured for the children of the labourer.

COTTINGHAM.

Population, in 1861, 3,131. Acreage, 9,252. Cultivation, about 5,000 acres arable, 3,800 grass, 350 garden land.

The population has increased much since 1861.

170. *Rev. C. Overton, Mr. E. Witty, Mr. Jameson*, schoolmaster.—The school is now (24th February) full. Children are taken away for casual work at 6 years of age, altogether at 10 and 11 years. They leave at an earlier age every year. They are employed in the gardens; boys earn 1*s.* and 1*s.* 6*d.* a day, girls about the same wages, but do not go to work before 8 years of age. Parents take work by the piece and take the children with them.

There is no regular system of ganging, perhaps five or six children work together. The pea harvest is the time when most money is earned here, the children then are very much employed. School attendance is very much affected by the field work. A very small proportion of the population come to school at all, and of those who do come some only attend for two months in the year. The parents are very indifferent about education. If children could be *compelled* to attend school from 5 to 10 years of age, they would be well grounded in reading, writing, and arithmetic, and from that age they might be allowed to go to work for two or three months in the year, and have to produce a certificate of attendance at school for so many days in the year before permanent hiring. Encouragement of night schools by Government would be valuable and popular. The farm lads are the most ignorant class, and they might often be induced to attend night school. The statutes are the cause of much immorality, but have lately fallen into disuse here.

Cottages are in some cases crowded, there is a want of new ones. There are two sets of allotments adjoining the parish:—

1. Belonging to the church (12 acres, 32 poles). The land was given to those who had large families

E. R. York.

Mr. Portman.

d.

old holders pay 22*s.* a year for half an acre, new ones about 5*l.* for same quantity. Occupied by 20 tenants, of whom 18 have built cottages for themselves on the property.

2. A piece of land (25 acres, 37 poles) set out by Mr. Ringrose, let by the half acre to any one who will take it at 2*l.* half an acre per annum, occupied by 30 tenants.

The rent of garden land is 4*l.* to 5*l.* an acre. Ordinary labourer's wages, 2*s.* 6*d.* and 3*s.* a day. Women are much employed in field work, girls seldom go out weeding. There are only one or two large farms in the parish. Soil of all sorts, from wold land to strong warp, bog, &c.

171. Extract from Return sent by Rev. C. Overton, Vicar, Cottingham.

There are no gangs.

The number of persons employed are about, as follows:—

Males:	
Under 8	30
Between 8 and 10	20
„ 10 „ 13	60
„ 13 „ 18	120
Total	230
Females:	
Under 8	30
Between 8 and 10	20
„ 10 „ 13	40
„ 13 „ 18	50
Over 18:	
Married	100
Unmarried	30
Total	270

They are principally employed in gardening in spring, summer, and autumn. They do not go more than one mile to work. Their hours of work are nine, with one hour allowed for meals.

Young females are likely to be corrupted by contact with the older ones, but there is no ill-usage or injury to health.

I would recommend that boys should not be employed in field work under 10 years of age. It is not necessary here to place restrictions on the hours of work.

I think alternate whole days at school, and whole days at work, the best scheme for securing school attendance. I think no boy or girl under the age of 14 years should be allowed to go to agricultural labour during the months of November, December, January, and February, which season might be devoted to education.

Distance from school affects the attendance most seriously in winter, but not in summer. A good many parents avail themselves of the labour of their children to the disadvantage of the latter, in the matter of school attendance.

Girls are taught sewing and knitting.

It would be extremely desirable that those who have capital should invest it in building model cottages at a moderate rent, for the accommodation of the labourers who have families.

One cottage per hundred acres is sufficient here, there are two to 300 acres. Some of the cottages are too crowded. Cottages here are generally two stories high, a room about 12 feet square, and smaller kitchen below, two bedrooms of the size of lower story upstairs. Ventilation is neglected, the drainage is good. There are but few cottage gardens. No compulsion by tradesmen when owners of cottages. Rent, 4*l.* to 6*l.* per annum.

There is no progress being made towards increasing the cottage accommodation. I think cottage improvement should be left to private enterprize.

Average Attendance in Winter.

Under 12	2
Above 12	15

The night school is very popular, and if a master had a stipend, say 20*l.* a year, and were assisted by six or eight voluntary lady teachers, I think a very large proportion of the adult population would attend.

The free school in the church yard, as conducted at present, interferes with the National school, without making education more general. The children taught there would be better taught in the National school, if this were made a school for a higher grade, or even if it were made a night school for adults, it would not impede the operations of the National school, and would do much more good.

WAGHEN or WAWNE.

Population, 322. Acreage, 4,160.

172. Extract from Return by Francis Jackson.

There are no private gangs.

No boys under 10 years are employed—

	Boys.
Between 10 and 13	8
„ 13 „ 18	38
Total	46

No females employed, except in hay-time and harvest.

The boys are employed in spring in ploughing and the general work of the farm, in winter in attending to the cattle.

The hours of work are 10 hours per day, with two hours allowed for meals.

I would recommend that females should only be employed in hay-time and harvest. No restriction on boys' labour is necessary; nor on the hours of work, as agricultural labour is not constant or excessive.

I have great pleasure in stating that the feeling of parents generally is that parental duty is not fulfilled if their children have no education. It appears to grow with those parents who have not had that advantage; and in this part of the East Riding of Yorkshire, the children generally attend a day school about nine months in the year.

I think no cottage is proper or comfortable without two bedrooms and two low rooms, well ventilated. One cottage per 100 acres is sufficient. The cottages in our parish have a low room 16 feet square, a small kitchen with dairy, and pantry; two good bedrooms about 12 feet square, a yard with a good supply of water, a garden of not less than one rood of land. Rent 4*l.* a year. The cottages are conveniently situated for farm work. All children of sufficient age are either at school or at work. About one in eight can neither read nor write. These persons are farm servants whom we have thus returned as parishioners, but who have in many cases been brought up in other counties and parishes. Children go out to work with their parents, but not under 10 years of age. The weeding, at which they work, is usually taken by the piece, and they go band-making in harvest. Women and children are not employed generally in this district.

Wages for an ordinary labourer are 15*s.* a week and "not a broken day." The distance to work is not more than a mile. Cottages contiguous to the farms would be an advantage, but they should be in the hands of the landlord and not of the tenant.

Payment to the school is according to age; 3*d.* a week is the highest price. There was a night school, but it did not answer for long. The statutes are very bad, but better than they were a few years ago. This parish may be taken as a fair sample of the neighbourhood.

Miss Calvert, schoolmistress.—The spring quarter gives the fullest attendance. There were then 35 on the books; from harvest to December, 26 on books. The highest age of boys attending is 9 years; of girls, 12 years. The older boys go to school at Sutton, where there is a master, three miles distant.

Rev. J. L. B. Henslowe, curate.—I think that if a certificate is required before hiring it should be one of attendance at school in preference to one of acquirements.

[I give the following instances of cottages:—

1. One ground floor room and back places, such as dairy, &c.; two bedrooms, garden, and cow paddock. 8*l.* a year.
2. One room ground floor, back premises, and garden. 4*l.* a year.
3. One room ground floor, one up-stairs, and garden. 2*l.* 10*s.* a year. A widow's cottage.

All these cottages were very tidy and comfortable, and provided with a kitchen range in the lower room. Before the cattle plague most of the labourers here had a run for a cow in the lanes.

Meaux, a hamlet of this parish, is not so well off for cottages.—E. B. P.]

BEEFORD.

Population, 808. Acreage, 4,200. 700 acres of grass; 3,500 arable.

173. Extract from Return by George Angas, Esq.

There are no private gangs. There are about 30 children and women employed in the parish. I employ six women for 10 weeks in spring and summer. There are 10 boys between 10 and 13 years of age employed, and 20 married women over 18 years. Their work is weeding from the middle of April to the middle of June, and then a fortnight's turnip hoeing. In the winter they are scarcely at all employed, perhaps a day in a week dressing turnips. They work from 8 a.m. to 5.30 p.m. with an hour allowed for dinner. Their health does not suffer nor do I know of any ill-treatment.

Young women employed in field labour doubtless indulge in greater freedom of words and in a rougher phraseology than those in household service, and some deterioration of morals is very likely to take place.

Farmers employing hands more than two miles from home will generally fetch them in his waggon; I would therefore modify the proposed table of distances. There should be no restriction on the hours of work; they are never long, and in broken weather very short indeed. The rule is to pay every boy or woman for half a day if they put in an appearance at all in the morning, and for a full day if they stay beyond the dinner hour.

It would doubtless be better that children should be kept wholly at school for a certain number of months, and then wholly released for field work for a given time.

School attendance is to a certain extent affected by the pecuniary resources of the parents. I am told 14 or 15 per cent. are absent partly in consequence of poverty, partly of indifference on the part of the parents.

Girls are taught knitting and sewing.

The cottage accommodation in Beeford must be considered good, few standing unoccupied, and those probably the worst. Many of the cottages are exceedingly good.

In this parish I find that one inhabited labourer's cottage represents about 45 acres of arable land. There are about 80 tenanted and 10 untenanted cottages in the village.

The occupier of every cottage is free to deal where and with whom he chooses. Drainage and ventilation are both attended to. The relieving officer has power to give all requisite orders.

Attached to the village is a field of 17 acres laid out in 68 allotments of one rood each, for the exclusive benefit of the labourers at the rent of 8*s.* 6*d.* each, including all charges. This is or might be most advantageous. It, however, sometimes operates injuriously with men who dislike farm work. They have the gardens to fall back upon as an excuse in a busy season.

School.

In Summer.

Wages for ordinary labourer 15*s.* a week. The occupations in Holderness are not much above 400 acres each.

Savings banks are better for the poor than benefit societies.

A compulsory system of education will probably come by degrees.

[On the question of Lands Improvements Acts, Mr. Angas suggested that the tenant when willing should be allowed to build cottages at his own expense, the

E. R. York.
Mr. Portman.
d.

cost to be spread over 12 years, and compensation to be given for the unexpired term if the tenant quits the farm. If the tenant completes the term of 12 years the cottage to belong to the landlord. In many instances landlords cannot afford to build or to borrow money for the purpose, and the above arrangement might obviate the difficulty.]

174. Letter from G. Angas, Esq., to Hon. E. Portman.

Dear Sir, Beeford Grange, April 17, 1868.

Your inquiry appears to me to embrace two subjects requiring separate replies. The first is as to the desirability of prohibiting children under a given age being employed in field work, and the second as to the propriety of enforcing a certain amount of education, or at any rate an observance of a certain routine of attendance at school by the children of agricultural labourers before going out into the world. I think I may safely answer your first inquiry by stating my belief that in this district no objection would be raised against an enactment forbidding the employment of young children, say under 10 years of age, in field labour. You cannot admit of exceptions or qualifications, or I should suggest *continuous field labour* because it does sometimes happen in this fitful climate that a single week's work by a number of children might be most valuable. However to prevent the possibility of abuse or encroachment I do not think we should ask for much modification or exemption save in harvest when all who *can*, should work. If such a scheme were adopted and fairly carried out I think it would obviate in a very great measure your second inquiry and the compulsory measures to which it points, because when parents are forbidden to send their children to any work, the almost natural tendency would be to send them to school. In our rural parish schools, supplemented as they are by Parliamentary grants and also by voluntary aid, the children of our workpeople may receive a useful education at almost a nominal rate, and this small sum I think few parents would object to pay, if it were even for no higher motive than getting rid of the children for a few hours daily. Therefore I think I may venture to embody the collective opinion of the agriculturists of this part of East Yorkshire in a few words and state that while repudiating the existence of any palpable evil here from the employment of young children in field labour, they are quite ready to acknowledge that in other counties much evil has been engendered and that for the sake of example, and in order to guard against possible contingencies, they would be willing to agree to a minimum standard of age in receiving children as field hands, but at the same time they would feel strongly opposed to any coercive educational measures being put in operation, believing not only that the feelings of the parents would revolt from what they would certainly construe into an arbitrary law, but that, left to the dictates of their own consciences and free will, with the example and assistance of those a little higher in the social scale, the education of our young rural population would surely and steadily progress. This is my own opinion stated as briefly as I can possibly condense it, and I feel persuaded it represents in substance the sentiments of the district. It would be difficult if not impossible correctly to fill up the printed queries issued by the Royal Commission. If you think proper I will endeavour to give some approximate answers most applicable to the parish, but any information I could supply would scarcely I think be a safe basis for guidance. Statistics of course might be furnished as to age and numbers, but other questions as to the moral and social condition of the parish would perhaps receive from different employers replies as conflicting as the varying shades of human belief. . . . . I assure you I shall myself and I have no doubt in common with the large body of Yorkshire ratepayers, take a great interest in your movements.

Yours most respectfully,

Geo. Angas.

175. Another Letter from the same.

Beeford Grange,

Dear Sir, April 25, 1868.

I supplied the best answers I could to the several inquiries contained in the printed circular you left with me, but the information you receive through such a medium must always be more or less vague and inconclusive. However, I suppose by striking an average you will not in the end be very far from the actual state of things as at present existing in the rural districts of the East Riding. In the best parts of Holderness there is really not much call for the services of women and children, no potatoes or line being grown, and in the better class of farms not much weeding (the land is not subject to ketlocks), therefore apart from haytime and harvest the work of the farm consists very much in the heavier operations of draining, banking, hedging, &c. in which women and children are of no service; on the high wolds it is widely different, the soil there is very subject to brassacks or ketlocks, turnips are most extensively cultivated, and on the other hand villages are very thinly scattered and farmers are very glad to avail themselves of any extrinsic aid they can procure when field work is pressing. This state of things would speedily be obviated if landed proprietors could but be induced to build cottages around their several farm homesteads; tenants at will are hardly likely to do it unless under some special written agreement to protect them from loss, but I think most sensible business men would under a 14 years' lease meet their landlords half way, and it is astonishing if both sides would but apply their shoulders willingly to the wheel how expenses would be reduced, and difficulties would vanish. There need be no government subsidy I am quite sure; if a landlord begins single-handed he will be robbed on every side, but let there only be a pleasant and equitable understanding and adjustment between him and a tenant and expenses are reduced one half. I am confident my bailiff's house, which you saw, if done in the ordinary way would have cost 300*l.* at least, but by employing a builder in whom I had full confidence, by working to an approved and economical plan, by constant supervision and by the assistance of a few kind-hearted neighbours in team work, the actual cost in money was 170*l.*, of which I paid 110*l.* and my landlord 60*l.* I just give this illustration to show that where things work harmoniously improvements are easily effected, and therefore the corollary seems to be that it is most important in a very comprehensive sense that landlord and tenant should if possible be united, and that tenure should be of an enduring kind. . . . . Another year your work would be much facilitated, we have all thought the matter over more fully and carefully and could better enter into and discuss the subject than when it was first presented.

I remain, yours, &c.

Geo. Angas.

176. *Rev. C. Smith*, Beeford.—I do not think a limit of age for field work would have any beneficial result, unless a certificate of school attendance for a given period were required before hiring. The young children are not much employed in this parish.

NORTH FRODINGHAM.

Population, 837. Acreage, 2,975. Cultivation, chiefly arable.

177. Extract from Return.

Rev. Heny West, vicar.—From 15 to 20 are employed in private gangs in spring and summer, but I only heard of one child and one young person being so employed.

Their work is weeding and stone picking. The distance to work is from two to four miles. Hours 10, with one hour allowed for dinner. The field work is dangerous for morals. I do not think the health suffers, nor do I know of any ill-treatment, though there is rough usage.

I think it desirable that the sexes should be separated, and that a certain amount of school attendance should be compulsory on children earning wages.

Nearly all the able-bodied women go to field work, weeding, harvesting, and pulling mangel and turnips.

Those employed are chiefly married women who neglect their families in pursuing out-door occupations. I would prohibit field work to those women with families. I would not allow boys to be employed in field work under 9 years of age, and from that age to 13 require six month's attendance at school.

Children who begin work at 8 a.m. should not work later than 4 p.m.

My parish supplies neighbouring parishes with labour, some of the labourers have long distances to walk to their work.

School.

In Summer.

—	On Register.	Average Attendance.
Boys:		
Under 10 - -	47	39
Between 10 and 13 -	44	15
Girls:		
Under 10 - -	32	23
Between 10 and 13 -	20	12

In Winter.

Boys:		
Under 10 - -	54	38
Between 10 and 13 -	59	43
Girls:		
Under 10 - -	32	22
Between 10 and 13 -	24	15

Those neither at work nor at school in summer, five boys and five girls.

A night school was tried and failed, in consequence of the indifference of those who should have been interested in it.

North Frodingham is an open parish, a centre of labour and supplies the neighbourhood for five or six miles with men's and children's labour.

Draining is done by the piece, but children are not employed at it.

I would recommend that half the week should be devoted to school by those children who are earning wages.

North Frodingham School.

178. *Mr. Geen*, master.—Some children leave school as young as 8 years for casual work in the fields. Girls do not go to field work. I think 10 years as a limit would be too young for children to derive any real benefit from their education.

179. *George Etherington.* — Went out leading horses at 9 years old; worked 12 hours a day at 1*s.* a day; father is a "hind." Farm lads lodged in his house, they never read in the evening.

180. *William Foster*, 9 years old. Went out brassacking last year, 14 boys and some girls together. I got 8*d.* a day, was paid by the man who looked after us in his house. The man was not in the employ of the farmer as a labourer.

181. *James Hasdale.*—I was 9 years old when I first went out to work; got 8*d.* a day for bird tenting and brassacking; 1*s.* a day for leading horses.

182. *Bilham*, labourer.—A ganger. I take a gang of children out brassacking. I take the work by the piece, and pay the children myself. The farmer gives me so much for the job, and knows nothing about paying the children. There is a bit of profit in it. I have had them both ways, paid by the farmer and paid by myself.

WEEDLEY, SOUTH CAVE.

Population, 900. Acreage, 4,000.

183. *John Danby.*—In spring 20 males between 10 and 13 years of age, are employed for a month for weeding, and in July, ten males and five females between 10 and 13 years of age for singling turnips. They go half a mile or one mile to work; the hours of work on the land are nine, with usually an hour for meals. The health and morals are not injuriously affected. The young can read and write, most of them attend school the greater part of the year. We have no mixed gangs of adults. There is no need to apply the provisions of the "Agricultural Gangs Act" to private gangs. There are no moral evils or hardships in our private gangs. None of the proposed methods of enforcing school attendance are needed, the children attend during three-quarters of the year when they cannot get employment. The parents can all afford to send the children to school. The cottages generally are good. Two cottages per hundred acres are sufficient for the farms, as we hire young men to live in the house. Eighty children, boys and girls, attend the Government schools during nine months of the year. There is no night school. Wages for children, 9*d.* a day, weeding, 1*s.* a day, singling turnips; men's wages, 2*s.* 6*d.* a day; women's, 1*s.* a day. My foreman gets 31*l.* a year and cottage free of taxes, &c. The occupations are large; it is a thinly populated district. Allotment fields are common, too large an allotment makes the men indisposed to turn out to field work. Ten years would not be a bad limit for children's work. The parents cannot do without the earnings.

BRANTINGHAM AND ELLERKER.

Population, 572. Acreage, 3,410. Cultivation, mixed.

184. *Rev. Thomas Westmorland*, vicar.—I have been here 10 years. There are no private gangs. Children are now more employed in the fields than they were formerly. Eight or 10 go together with a man to look after them; they are employed in weeding, potatoe-planting, and turnip singling, in spring and summer; in autumn, in gathering potatoes, taking up mangel and turnips. And at all times of the year in tenting birds, pigs, and cows. They are paid by the employer. Boys are more employed than girls. Girls who have been regularly employed out of doors, rarely settle down into good domestic servants. I would recommend a restriction on the employment of females in field work, limited to a defined age, and that boys should not be employed at all before 10 years of age, and for half time up to 12 years. The distance to work is short. I would enforce school attendance by alternate days, or perhaps, to suit the employers, by alternate weeks. The children of the labourers go out to work when work is to be had, otherwise they attend school very well. Two or three cottages per hundred acres are sufficient. In one part of the parish [Ellerker] there is a sufficiency of accommodation, in this part [Brantingham] not; in several cottages there is but one bedroom where five or six children sleep with their parents; there is a prospect of some improvement being made in this matter of accommodation. The cottages belong mostly to the landowner. Rent from 4*l.* to 5*l.* a year, with, in most cases, an allotment or garden. The allotment is one-eighth of an acre (half a rood). There are not many outlying cottages on the farms. Children's wages are 1*s.* a day for weeding.

E. R. York.

Mr. Portman.

d.

SCHOOL.

In Summer.

—	On Register.	Average Attendance.
Boys:		
Under 10	17	14
Between 10 and 13	15	6
Girls:		
Under 10	29	18
Between 10 and 13	8	3

In Winter.

Boys:		
Under 10	20	18
Between 10 and 13	20	12
Girls:		
Under 10	28	24
Between 10 and 13	16	7

I tried an evening school about four years ago, but was not successful; the farmers did not co-operate, as they considered it interfered with the evening work of the lads for whom I principally intended it. I think the requiring of a certificate of a certain amount of knowledge, say reading, writing, and four first rules of arithmetic, before hiring, would be a good plan; the penalty for non-compliance to be put on the employer. The Statutes are improving, instead of standing out in the streets, the lads and women are taken into a covered place in separate rooms; hitherto they have led to much immorality, but a move is being made to put them on a better footing.

HESSLE.

Population, 1,750. Acreage, 2,695. Cultivation, mixed.

185. *Rev. H. Newmarch.*—No private gangs. School attendance is slightly affected by the pecuniary resources of the parents. Girls receive industrial training at the national school. The cottages are good, the ownership various, and the rent rather high. There are also two schools, a national and an old parish school, quite adequate to the educational necessities of the parish.

[This village is rapidly becoming a suburb of Hull.]

WELTON.

Population, 863. Acreage, 2,674. Cultivation, chiefly arable.

186. *Rev. T. B. Paget*, vicar.—There are no private gangs. About 30 children in the parish are employed in the fields, not more than three or four women. They are employed in bird tenting, weeding corn, and in planting and picking potatoes. Young persons are usually hired by the year and live on the farms. The hours of work vary according to the season and the weather, and are not unreasonably long. There is no injury to health. Young females are not employed in field work with us. I do not recommend any restriction as to the age at which boys may be employed; but I think if a certificate of attendance at school for a given time during the year up to 13 years of age were required from all children earning wages before hiring, it would be a good plan. The parents send the children out to work as soon as they can, as they cannot afford to lose the earnings. In this parish all the children can attend school, and generally do for six months in the year. School attendance here is not affected by the pecuniary resources of the parents; the very few whose parents are least able to afford the school pence are paid for by myself or other persons. The girls do the school in turns, making the fires, &c. Our cottages are generally good, with two and three bedrooms. Wherever there is a third bedroom a lodger will if possible be taken. Rent of a good cottage with two rooms below and two above is 5*l.* or 6*l.* Almost every boy and girl who ought to be at school attends in winter, though many of them irregularly, from various excuses, such as minding the baby, going errands. I have found the threat of turning the mothers of children who attend irregularly out of the Clothing Club succeed in making the attendance more regular. There is a night school open for two hours on two nights in the week during three or four months, attended by 18 scholars, who are taught reading, writing, and arithmetic. Farm youths cannot conveniently attend; the scholars are chiefly boys who have recently left school to work on the land, or apprentices.

[Mr. Paget read me a letter from the parish doctor stating that within his experience no injury had resulted to the health of the children from early field labour.]

187. *W. Harrison Broadley, Esq.*, Welton.—Is building cottages on the farms on various parts of his estate. He has endeavoured in the new farm-houses to secure more complete separation of the lads and female servants by building a room for the lads connected with their sleeping-room and apart from the rest of the house, but finds that the farmer prefers having them all together in one large kitchen.

WELTON SCHOOL.

188. . *Gill*, master.—Number on register of day school, 97; average attendance in winter, 72. In the night school out of 18 on register there are two boys of 9 years, the rest of various ages up to 16 years. Some boys went out this year early in February for bird tenting, occasionally for that work on Sunday. They mostly go ketlocking.* When they get to 13 years of age they go to service. If boys were compelled to attend school regularly up to 10 years of age, they would learn enough for agricultural work; if up to 11 years they would be fitted for better places, and in both cases they would probably learn enough to give them a wish to improve themselves by attendance at night school. Some of the girls go out tenting and weeding as young as 8 years, and are absent about a fortnight at a time, sometimes longer; they earn 6*d.* a day tenting, 8*d.* and 9*d.* weeding. They seem to prefer weeding to tenting, though it is harder work. They go six or eight together, *all girls*, and are looked after by one of the farmer's men.

BEVERLEY.

189. In the three minster schools, *i.e.* the infant, the boys, and the girls' school, there are in all 600 children receiving education, but of these, very few indeed are the children of agricultural labourers. The master stated that the indifference of parents was the greatest obstacle to school attendance with which he had to contend.

190. MINUTES taken at an interview with a Deputation from the EAST RIDING CHAMBER of AGRICULTURE.

Beverley, Feb. 20th, 1868.

Half day at school and work or alternate days are not practicable in agricultural districts.

The age of 10 would be a good limit to fix as the one below which children should not go to work, and from that age to 12 years they should attend school for a certain number of months in the year. At 12 years of age the strongest lads are fit for farm service. Private gangs exists in the neighbourhood; both boys and girls from 9 years of age are employed together in the spring, in ketlocking, as many as 20 together under the supervision of one of the farmer's labourers.

A girl's wages are 8*d.* or 9*d.* a day.

* "Ketlocking" is "pulling charlock."

The children's earnings are necessary to the parent for the maintenance of the family, but six months' schooling between the ages of 10 and 12 would be no injury to the parents.

There is a growing desire for the education of their work-people on the part of the employers.

There would be no objection to the requiring the production of a certificate of a certain amount of school attendance when the lad comes to be hired.

The statutes were admitted to be bad for the morals of the people.

Cottages on the farms are very much wanted, as in many cases the distance from the village to work is too great. Many cottages also are overcrowded.

Education will not produce good effects without decency in the homes; but good cottages on the farms would create good feeling and sympathy between the master and the labourer. All cottages should have three bed-rooms. Tenants would, as a rule, willingly pay a fair per-centage for cottage improvements.

[The feeling on the subject of cottages was very strong, and it was wished that this feeling should be recorded.—E. B. P.]

191. Meeting of East Riding Chamber of Agriculture at Beverley.

W. Bainton, Esq., Chairman, said.—He thought the children might be sent to school till they were 9 years of age, and after that from 9 to 12 years for half their time, and when they had completed their twelfth year they might be set at liberty. He believed that cottage accommodation was a most essential question for consideration, whatever amount of education you give a child, unless there were decency and propriety at home, would be of little value. He believed that many tenants would pay a good per-centage for the erection of buildings which would improve the accommodation for their labourers. He considered the present system in many places was cruel, the distance at which labourers resided from their work rendering it impossible for them to see their children more than on the Sunday. His opinion was that girls should not be employed at field labour at all. It was in domestic matters that they should be engaged, and in that alone, and they should be taught something of the management of small households.

Mr. D. Bradley, Etton.—With respect to the cottage accommodation he might say, that for a Christian country, they had in England very bad cottages indeed. He could name instances where there were no chambers at all, but where the rooms were divided by a temporary screen to separate the sleeping places. In others there were only two rooms and a smaller one lighted only by a square of glass, substituted for a tile and where the only entrance of air was the open door. In such places a man, wife, and a large family were huddled together. He thought if the Government was to turn its attention to this matter, it would, indeed, be a great benefit. He did not say anything against education. If it could be obtained without inflicting any injury upon the parents, all well and good, and he would assist it, but he thought that matters that so materially affected the social condition of the poor should be first looked at. In common lodging-houses the law interfered, and stated that no more than a certain number should occupy one sleeping apartment, yet in private cottages the law took no cognizance of them, and no restrictions were imposed to uphold even decency.

Mr. Edmund Riley, Kipling Cotes.—Thought it was very difficult to deal with the question of employing women and children without interfering with the right of the parents, and he did not think any legislative measure could affect this locality. None of the farmers hereabouts employed children under 9 years of age, and between that age and 12, more than half the year. * * * * He thought with Mr. Bradley, that Government ought to pay more attention to the subject of cottage accommodation. Alluding to the inconvenience of the present unsatisfactory condition of the labourers' dwellings, the speaker said he employed one man who had not seen his children in daylight during the whole of the winter. As his duties lay with the cattle, he had to be on the farm on Sundays, and his residence being three miles away, he had to go to his work early, and return late. Mr. Riley stated that he did not employ girls; and that he found labourers more serviceable than boys, if the cottage accommodation was such that the former could be employed.

Mr. R. Whiteing, Beverley Parks.—They all knew that two out of every three of their servants could not write at all. He had a lad in his employ who had just sent away a letter that had taken him three months to write. They could scarcely get a lad to sign his name when they hired him.

The Deputy Mayor of Beverley (T. Cussons, Esq.)—The principal thing in the discussion that had struck him (the speaker) was the erection of more suitable dwellings for the labourers who worked on the farms. It would be a great advantage, he considered, to the employer, to have the residences of his labourers as near the farm as possible. It would also be doing a great deal towards bettering the labourers' condition, if to such residences were attached a plot of land or garden ground, where he might have his children around him, and give them at the same time a moral and physical education. The speaker deprecated the system of taking labourers into the country from towns, inasmuch as the wages of the latter being better than the former, the farmers were sure to get the worst class of men, both morally and physically. It applied more especially to boys taken from towns, who were often bad when they went away, and, he was afraid, returned no better. * * * In his opinion night schools, with the aid of farmers and parents of children, might effect a good deal of good, and prevent the necessity of Government interference.

The Secretary read a communication from Mr. R. Norfolk (Beverley), who regretted his inablity to be present. As to the existing class of adult labourers, the "right hand" of the British farmer, the fathers of future tillers of the soil, upon whose labour so many depended, little could be done for them, and that little useless in elevating their moral *status*, so long as those who alone had the power to provide suitable dwellings, were content to herd them like swine, and knowingly permit a state of things to exist which was a disgrace to civilization and to England as a nation.

The following resolution was carried:—"That this "Chamber recognises the necessity of providing im- "proved education for the agricultural labourers, but "defers passing any resolution on the subject till some "definite scheme is before them."

BISHOP BURTON.

Population, 498. Acreage, 4,259. Cultivation, mixed.

192. *Francis Watt*, Esq.—There are no private gangs. There are eight males between the ages of 8 and 13 employed on an average for three months in the year bird minding. Twenty-four lads between 13 and 18 years. In summer they are employed in singling turnips, hoeing, and weeding. Those who mind birds do not walk more than a quarter of a mile to their work, and are at work for 11 hours. Times allowed for meals are from 6 a.m. to 6.30 a.m., from 12 to 1 p.m., 6 to 7 p.m. Those who do not live on the farms leave for home as soon as they have finished their supper. Females are employed in field work in this parish only in haytime and harvest. I would recommend that boys under 12 years should attend school alternate days. Either the half day or alternate day system would be most suitable if it is found absolutely necessary to enforce attendance, but in this parish the people appreciate the efforts made to secure a good elementary education. The cottages here are not large, but are clean and healthy. Rooms will average in size 15 ft. by 13 feet., and 10 ft. high; some cottages have two bedrooms, some three. Every cottage has either a garden attached or a piece of land at a nominal rent, large enough to grow vegetables for consumption of the family. Rent, 2*l.* to 3*l.* 10*s.* per

E. R. York.
Mr. Portman.
d.

annum. Wages for ordinary labourers living in the village, 8*s.* and 9*s.* a week and meat. The average earnings for the year, including special work in lambing time, turnip hoeing, and harvest, would be 11*s.* a week (and meat found). Boys wage for bird tenting, 8*d.* a day. On Sundays the bird tenting boys are relieved by lads living on the farm.

193. *Benjamin Swann*, master.—There is no night school. There was one two years ago, but the attendance was so small and irregular that it was closed at the end of three months. The adult population of this parish is small and migratory. The hours for night school, from 7 to 9 p.m., are objectionable to the farmers, as they like their servants to be about the place; though not actually at work they are ready in any emergency, and they are expected to be in bed at 9 p.m.

DALTON HOLME.

Population, 506. Acreage, 3,090. Cultivation, almost wholly arable.

194. EXTRACT from RETURN by Rev. T. F. SIMMONS.

Women and children are employed all through the year in weeding, tenting, singling turnips, and picking flints.

Hours of work, 6 a.m. to 6 p.m., with one hour allowed for dinner.

I am inclined to think that occasionally the health is injuriously affected.

The women who work in the fields are without exception married. They work alone or with other women. Young girls never work except with their mothers, or at turnip singling with their fathers. I know that it is the opinion of many industrious women who never work in the fields that they would lose more in the long run by the wear and tear of clothes and shoe leather than they would gain by the wages.

I would prohibit any girl working apart from her father or mother, or other natural guardian, and I would prohibit associated female labour except at harvest.

No boy should be employed at all under 8 years, nor any, except at light work, for more than 6 months under 10 years.

I think that except at harvest it would practically have the effect of limiting the distance children were allowed to walk, if it were provided that the day's labour of children should be calculated from and to the time of leaving and returning home. As it is, in many cases in this part of the country women and children working for daily wages do not commence work till 8 a.m.

I would adopt forced school attendance for a certain number of hours during six months of the year.

I think it desirable that the cottages should continue to be massed near the church and school. As regards education, morality, advantages in sickness, &c. labourers living in villages, and not on the farms, are less likely to be hardly used or to have a pressure put upon them in respect of wages and the labour of their wives and children.

Cottages — house 12 ft. by 12 ft., back kitchen 12 ft. by 8 ft., small pantry or dairy; the better ones have a best bedroom on ground floor, two or three bedrooms upstairs in most of them, and generally a garden.

Rent of new cottages (Lord Hotham's), 6*l.* a year; of old ones, 2*l.* to 4*l.*

Most of the cottages in this part belong to large landowners.

There is a night school in winter for two hours on two nights per week for four months. Number of scholars, 25; average attendance, 23; all above 12 years of age. It is working well.

DAY SCHOOL.

In Summer.

Boys and girls:—	
On register - - - -	50
Average attendance - - -	45

In Winter.

On register - - - -	70
Average attendance - - -	65

I may mention that a few days after Mr. Portman's visit to this parish a small boy, not 7 years old, who had been bird tenting for some weeks, volunteered the remark to the mother of some boys who were sent to school, "I wish t'law would come that boys wasn't to "work *while* they was ten."

195. *Rev. T. F. Simmons, Mr. C. Wood, Mr. Riley.*—It was suggested that forced attendance at school for five days a week during six months of the year, up to 9 years of age, with reduced number of attendances up to a further age (say 13 years), might be fairly required, and that a certificate of such attendances should be produced to the employer before hiring. Wages, 2*s.* 6*d.* a day for ordinary labouring men, 3*s.* a day for machine work. Allotments of one rood, 10*s.* a year rent. Many labourers keep a cow. Mr. Riley was much in favour of having more cottages on the farms, on account of the distance married men have to go to and from their work.

ETTON.

Population, 501. Acreage, 3,790. Cultivation, chiefly arable.

196. *Rev. Canon Musgrave.*—There are about 10 males and 10 females employed in private gangs in the parish in cleaning corn and flint gathering. They are usually paid according to the number of flints gathered, and not by the day. When the mothers are regularly employed the families no doubt suffer by their absence from home during the day; very few are thus employed in this parish. I would not allow a boy to be employed under 9 years of age. There is no necessity for regulating the distance to work. The children are never wanted for field work in the winter. If their attendance at school could be secured for eight or nine months in the year it would fully answer the requirements of the occupiers of land here. Half time would not suit them. The children are within easy reach of school. Cottage accommodation in this parish is on the whole sufficient. Two cottages per hundred acres are more than sufficient, because several servants who are hired by the year live in the farm houses. From two of the farms the cottages are distant two to three miles. Some cottages are crowded; few have more than two bedrooms. Average rent, 3*l.* 10*s.* per annum.

There is a night school for two hours on two nights a week in the winter months attended by eight scholars, one of whom is under 12 years. The difficulty in maintaining the school is uncertainty of the lads remaining in the same place, in consequence of the present system of hiring. Query whether compulsory attendance at night school between the ages of 12 and 15, when the education is considerably deficient, would be desirable. Regular attendance at school is the thing needed. The statutes are very demoralising in their effects. The farm servants on distant farms rarely if ever come to church, and as the lads remain in the same place only for one year, as a rule, they do not become acquainted with the clergyman, or take any heed to get a good character in the parish. The farmers do not sufficiently consider the *character* of the lads they hire, but look more to their physical strength. A piece of the glebe land is let out in allotments; the system is working well and is very beneficial to the labourer, as in the street of a village there is rarely sufficient garden ground attached.

Etton School.

197. *Alfred Witty*, 9 years old.—I went out ketlocking last year, for four weeks. There were 13 boys and girls together, we had our meals together. I went two miles to work, got 8*d.* a day, and have had 6*d.* a day for "tenting."

198. *Francis Morlow*, 9 years old.—I have been out tenting cows, Sundays and all, got 6*d.* a day. Four brothers and one sister in family, father is foreman to Mr. Whipp, and "meats" at his house.

Girls' School.

199. *Elizabeth Johnson*, 13 years (oldest girl in the school).—I have been out ketlocking in the same gang with boys. Many other girls go. I got 8*d.* a day. My father looks after the gang. I have been out for three years. I go singling turnips as well as "ketlocking." Farmer pays me, one of the farm labourers goes round village and collects children for ketlocking, when they are wanted.

WARTER.

200. *Mr. Clark*, schoolmaster.—Children go to field work as young as 8 years in summer, for weeding and picking stones. They are at school from October to the beginning of May. Regular attendance at school is the thing needed. Children should be at school for five years, in order to be well grounded. They should remain till they have passed a certain standard, and a certificate of such attainment should be required before hiring. Parents, being themselves uneducated, are indifferent about the education of their children.

201. *Mr. Smith*, farmer.—Children's wages for weeding are 1*s.* a day, or 6*d.* a day and three meals. 20 or 30 children of both sexes will go together for "ketlocking." In some cases a man takes the job at a fixed price per acre, and finds the children.

202. *Mr. Storey*, schoolmaster, Nunburnholme.—I would not allow children to go to work before 12 years of age. Many go ganging at 8 years. The system of taking the weeding by the acre prevails in this part. The ganger finds the children.

203. Extract from Return by Rev. S. Wilson, Warter.

Children of 8 years to 14 years of age are employed in weeding corn. They go distances of half a mile to four or six miles, when the latter, they are conveyed to and from their work. The hours of work from the time of leaving home are 7.30 a.m. to 6.30 p.m.; on the land, 8 a.m. to 5.30 p.m., or 9 to 6. When the number is small, the sexes work together, when large, they are separated.

The state of education is improved. Cottages all belong to the landowner, they are not conveniently situated for the work of the farms.

MILLINGTON.

Population, 340. Acreage, 2,750. Cultivation, chiefly arable.

204. *Rev. H. Ellershaw*, vicar.—There are 25 males and 15 females, all between the ages of 10 and 13 years, employed in private gangs; in spring in weeding, in summer in pulling charlocks and singling turnips. The usual hours of work on the land are 10, with one hour allowed for meals. The sexes work together, the effect on the morals is not good. The state of education is very indifferent, both among the young and the adults. Compulsory education in agricultural districts would in my opinion be an excellent thing, though the farmers generally would not advocate such a measure. Females employed in agriculture become exceedingly dirty in their habits, and indifferent as to domestic duties. I would certainly restrict their employment, except at hay time and harvest, as men's wages average from 14*s.* to 18*s.* weekly. Distance to work does not affect those above 14 years of age; I would not place any restriction, as they all take good care of themselves. Four school days per week for 20 weeks in the year, would be the best scheme of enforced school attendance for this locality. The school is in the centre of the parish, the parents have the means, but many of them not the *will* to send their children to school, even when taught gratuitously. The cottage accommodation is in many instances disgracefully bad, and injurious both to health and morals. From two to three cottages per 100

E. R. York.
Mr. Portman.
d.

acres are considered sufficient. There is that proportion. The cottages are crowded, there is usually one sitting-room about 14 feet square, a small scullery, one bedroom, even for a family of 10 or 12, generally a small garden, few with outhouses. They belong to landowners living at a distance from the village. Rents vary from 3*l.* to 7*l.* a year. There is no night school. The vicious morals of the cottagers, and their utter aversion to education, are obstacles to maintaining one, and the farmers themselves will not encourage either religion or education among their servants or dependants. The day school is closed for want of a master, their being no funds sufficient to pay one; there is a small endowment of 13*l.* a year, with house and garden, and a small donation from St. John's College, Cambridge.

POCKLINGTON.

Population, 2,671. Acreage, 2,520. Cultivation, mixed.

205. *Rev. J. Crosland*, vicar.—There are no gangs. About 20 children and young persons are employed occasionally, between the ages of 10 and 18, in spring in drilling corn seed, and in summer in hoeing turnips. The usual hours of work are from 6 to 6, with two hours allowed for meals. Very few females are employed here, and under the present system no restriction is needed, though they would be better employed in domestic service. I would not allow boys to be employed under 11 years of age. No restriction as to distance to work is practicable. Compulsory attendance at school during the winter months is more practicable than half days or alternate days at school and work. A few children are away from school on account of the poverty of their parents. Overcrowded and badly-built cottages are a great evil, and injurious to the health and comfort of the labourer. Some of our cottages are crowded with lodgers. The rooms are small, but fairly ventilated, and the drainage is good. Gardens may be had in allotments near the town, of which nearly every cottager rents a small portion; they belong mostly to small tradesmen, but there is no restriction as to dealing.

There is a night school for 24 weeks in winter, open two hours on four nights a week, there are 24 scholars. The attendance is irregular, owing to the carelessness of the foreman in getting the lads off to school. There are about 30 male and 20 female young persons growing up with insufficient education; and 30 boys and 21 girls between the ages of 8 and 13, who are neither at school nor at work in summer.

206. Meeting of Farmers and others at Pocklington, February 29.

It was agreed that 10 years should be the limit below which no child should go to work.

At 13 years they go to service, and between the ages of 10 and 13 they could have six months' schooling. A certificate of such attendance might be required before hiring, but it was thought that in times of pressure or scarcity of labour there would be a difficulty in enforcing such a regulation.

The carelessness and indifference of the parents are greater obstacles to education than want of money.

There is a private gang system, "ketlocking" is taken by the acre, but the master pays the children's wages and the railway fare, when they are so conveyed to their work.

The weeding lasts for three weeks in the year, women are employed before they send for gangs of children, it would be difficult to find a substitute for children's labour at that time.

Average wages for men, 14*s.* a week.

It was stated, that at turnip-hoeing, which is taken by the acre, a man and a singler may earn 6*s.* 6*d.* a day, but that was said to be a very rare case.

The statutes were stated to be very bad for morality. It is very difficult to get men to sign a contract for hiring; the younger lads can mostly read and write.

Men do not remain in farm service, except as foremen. When they reach 30 years of age, they marry and like to live in a cottage, and then become day labourers, taking work by the piece or otherwise. It appeared that an increased number of cottages on the farms would not do away with the necessity for farm lads, or get rid of the hiring fairs.

Pocklington Schools.

207. *Infant School*, Miss Atkin, mistress.—Average attendance in summer, 84; in winter, 45. They are taken at 2 years old and remain till 7 or 8 years. Weekly payment is 2*d.*; there are two assistants.

208. *Mixed School*, J. Ross, master.—The children go out to work about 10 years old and come back to school in winter. If they attended regularly they could pass the fourth standard at 11 years of age. Women and children are much employed in potatoe picking and hoeing.

209. *Brighton*, boy, 13 years old.—I went out to work at 10 years old and earned 8*d.* a day. 10 boys worked together; were looked after by the foreman and paid by the employer. I have been two and three miles to work on the Wolds, ketlocking; last year I earned 10*d.* a day; then we went boys and girls together; mostly have to walk to work, but have been carried in a waggon; we work in wet weather but not in wet corn.

210. *Ann Manners*, 14 years.—I went ketlocking two years ago; 12 boys and girls together; had a man over us: got 8*d.* a day; at meals boys and girls sit separate.

211. *Mary Pegg*, 13 years.—Went out twice last year ketlocking; boys and girls together; we had our meals together; got 10*d.* a day; I never was ill from the work.

BARMBY MOOR.

Population, 537. Acreage, 2,471.

212. *Rev. R. Taylor*, vicar.—There are gangs of Irish employed here in potato picking which is taken by the piece; women and children are in these gangs; the married women are also much employed in potatoe setting and picking and in weeding corn. The hours of work are from 8 a.m. to 6 p.m. with one hour allowed for dinner. I would not permit boys to be employed under 10 years of age. I think a fixed amount of school attendance for six months in the year would suit best for agricultural children; that a certificate of such attendance should be required before hiring, and that Government aid should be given for attendances less than 200 as now required.

The school attendance is greatly affected by the resources of the parents; we have found the following payments secure the largest attendance; 3*d.* and 2*d.* a week; when three children in a family attend the third is at half-price, making 6*d.* a week. For four children the fourth goes free. In this parish to secure all the chil-

dren, 17 are charged 1*d.* and four go entirely free. These 17 and four are entirely independent of the third and fourth child in large families. The four entirely free include orphans.

The cottages should have three bedrooms; in large families where this is not the case the children turn out badly. Barmby has always been an open parish, and we have a sufficient number of cottages. Most of the cottages have two bedrooms and a garden. None are attached to the farms, but are owned as small investments. Rent 3*l.* 10*s.* to 5*l.* per annum. The 5*l.* cottage has an excellent garden.

At Fangfoss, my other parish, cottage accommodation is not good; the rents are high and the cottages not always healthy; these we are endeavouring to improve.

SCHOOL.

	On Register.	Average Attendance.
Boys:		
Under 10	39	28
Between 10 and 13	15	12
Girls:		
Under 10	34	26
Between 10 and 13	9	7

There is no night school.

There is a want of schools in the plain district between here and Howden, and there are not many resident clergymen. Farm lads are very irregular in their attendance at church, and the farmers say "they 'cannot press them."

EVERINGHAM.

Population, 321; Acreage, 2,979; Cultivation, about 2,000 acres arable, 800 grass.

213. *Lord Herries*, Everingham Park.—There are no private gangs. There are 18 males and nine females between the ages of 10 and 18 employed at different seasons of the year in topping turnips, planting and picking potatoes. Hours of work are, in winter, from 7 a.m. to 5 p.m.; in summer, 6 a.m. to 6 p.m., with 1½ hours allowed for meals. I have never heard or found by my own knowledge that the females employed in agriculture were otherwise than good and moral. I would not place any restriction on their labour.

Boys should not be employed under 10 years of age, I think one to three miles quite far enough for any one up to 18 years to go to work, and would commence at one mile for boys of 10 years. I should object to compulsory education, it would tend to check the eagerness of parents to send their children to school. The children here are educated *gratis*. For families there should be three sleeping rooms in the cottages.

Under 10	20
Between 10 and 13	16
Girls:	
Under 10	15
Between 10 and 13	10

Some few attend from neighbouring parishes. The attendance varies little throughout the year. There are three male and five females grown up with little or no education when young.

[This is a Roman Catholic school, but is attended by some Protestant children who do not have religious instruction. The master is uncertificated but a good teacher, and takes boys out with him measuring land and instructs them in practical agriculture.—E.B.P.]

214. COTTAGES.

Set No. 1. Two ground-floor rooms and dairy; three bedrooms, outhouses and cow-house; a rood of garden. Cost about 140*l.* a piece. Ornamental.

Set No. 2. Row of seven. Two ground-floor rooms, three bedrooms, outhouses, &c. Cost something under 100*l.* a piece. Rent 2*l.* a year with a garden only, if with land for a cow, 1*l.* or 2*l.* additional according to extent.

BURNBY.

Population, 126. Acreage, 1,700. Farms from 300 to 400 acres.

215. *Rev. J. Williams.*—There is no gang system. Women are not much employed except in harvest. I should prefer their not being employed at all, as field-work is most injurious to them for domestic service and for their future as wives and mothers.

Children leave school too young. The farm lads are much neglected, rarely come to church, and in consequence of the yearly change of place are not under the influence of the clergyman. The farmers do not sufficiently consider the character of the lads when they hire them. Much might be done if the landlords would use their influence in this direction.

HAYTON.

Population, 210. Acreage, 1,760.

216. *Mr. Appleton*, farmer.—Wages for labouring men 8*s.* a week and meat, or 15*s.* a week, no meat. Foreman 20 to 30 years of age, on farm, gets from 20*l.* to 30*l.* a year, board and lodging. Waggoners, 18 years and upwards, 16*l.* to 18*l.* a year, board and lodging. Plough lads, 10*l.* to 12*l.*, board and lodging. The weekly expense of keeping lads is reckoned at 8*s.* Harvest wages, 1*l.* a week and meat. Children go out tenting at 8 or 9 years of age, get 6*d.* a day and meat; they will be out five or six weeks in the year bird-tenting before harvest, and pig-tenting in fields after harvest. Most of the villagers have a cow; pay 3*l.* a year for cow-gate. Cottages with gardens are rented at 3*l.* and 4*l.* a year; one-third of an acre allotment besides the garden, 13*s.* 6*d.* a year. The people are well off.

217. *Mrs. Binnington*, wife of a farmer, and for 12 years mistress of the school.—I would place the limit below which no boy should go to work at 10 years, and I think that by that time they may be well grounded in reading, writing, and arithmetic. Children go out at 8 or 9 years of age for weeding corn and singling turnips, and are away from school for five or six weeks for that work in June and July, and for four weeks in autumn for potatoe gathering. Boys and girls go a dozen together for potatoe work from farm to farm, and are hired by the farmer; a woman usually goes with them. Six months' attendance at school during the year for children between 10 and 12 years would be a very good thing, and would not cause much trouble to the teacher in "making up lee-way." I once had a night school in summer, which was well attended by lads varying from 18 years to 30 years. They learnt quicker than children of 8 and 9 years. A library has been established. Farm lads come from every farm to get books; they ask for "Travels," and books of that description; 40 lads came in one evening. They take the books home, and pay ½*d.* a fortnight. Most of these lads were educated at Hayton School. The farmhouses are close to the village.

In 1867 and 1868 - -	51	40

218. *Miss Knowlson*, mistress.—There would be no hardship in fixing limit for work at 10 years. I have kept some boys up to 13 years at school; the girls leave younger, being kept at home to look after the little ones. Children from 8 to 10 years learn quickly if in regular attendance. There is a list kept showing the progress of each child from year to year. We have sewing-classes for the girls in the afternoon.

219. *Mr. Thompson*, farmer, Hayton.—I farm 150 acres. A child of 9 years would get six weeks to two month's work in the year in tenting and singling turnips. I would not employ children under 10 years; such a limit would be no hardship to any one. Girls are employed in the fields, and are often the best workers; I do not think such work injures their morals. Where two-thirds of the farm is arable two pair of of horses are necessary for 100 acres; fewer will do on light wold lands. I have one labourer at 7*s.* a week and meat three times a day. I think a certificate of six month's attendance at school up to a certain age is desirable, and might be enforced at hiring.

[W. Rudston Read, Esq. built this school of Hayton, and takes great interest in the working of it. Much pains are bestowed on the instruction of the girls in sewing, shirtmaking, &c., to fit them for domestic service in preference to field work. He has established a system of prizes for regular attendance at school.

Most of the cottages belong to Mr. Read. They have as a rule two bedrooms, good ground-floor rooms and accommodation. No lodgers are allowed. The rates have much increased since Union Chargeability Act came into force. This district is one of good land, different in quality from the Wolds on the one side, and the potatoe-growing district towards Elvington and Howden.—E.B.P.]

MARKET WEIGHTON.

Population, 2,179. Acreage, 4,000. Cultivation, chiefly arable.

220. *Rev. Joseph Foxley*, vicar.—Private gangs exist here. They are employed in spring in weeding corn, and in summer in singling turnips. The distance to work is from one to three miles. Hours of work on the land from 8 a.m. to 5 p.m., with one hour allowed for dinner. The sexes work together, but the number of girls employed is comparatively small. The morals are bad enough. I should say half the young women lose what should be their honour before they are married. The mischief is too deep for Act of Parliament remedies. There is a general drifting away from all fixed moorings. No respect for authority, whether of parents, teachers, pastors, or masters. The church is not believed in, and other forms of religion are taken up and laid down as readily as fashions in dress. Practical infidelity is at the bottom of it all. Few, if any, of the children of the labouring class, are without some amount of education at our national schools. It is not necessary to apply the provisions of the Gangs Act to the system existing here. I do not see how attendance can be enforced unless the schools are free, and then you remove part of the parent's efforts for his child's welfare. There are only five cottages in this township beyond half a mile from the school; but a better school is wanted at Skipton, two miles distant; several of the children from there come to this school. In times when work is scarce parents with large families are often unable to send their children to school. There is great irregularity in attendance from this cause, work plentiful and work scarce both affect the attendance. The cottages are mostly unfit for their purpose through the old law of settlement; we want fewer cottages here, but better ones, and more in the neighbouring parishes. Parts of the parish are three miles from the town, and many labourers have to go to other parishes for work with great hardship to themselves. There are certainly not enough cottages with two or three bedrooms. One opposite my garden lately had but one bedroom (say 12 ft. by 16 ft.), and the family consisted of a grandmother bedridden, father and mother, adult daughter and child, sons and daughters of all ages. The cottages are chiefly owned by persons unconnected with the land. Sites are under the paralysing influence of manorial fines at death or sale. Several of a better kind have been built lately. I would suggest as a means of improving the cottage accommodation the commutation of manorial fines for known or fixed annual payments, redeemable, on a plan like that of the tithe commutation. The school registers do not make the distinctions asked for. We have a night school open for 20 weeks between October and February, for two hours on three nights a week. We have on the register 25 boys above 12 years, average attendance is 15. More funds are wanted for providing teachers. Volunteers can be had, but to produce efficient teaching you must have the same class taught by the same teacher night after night, and for this volunteers are not obtainable. The master of the boys' school has taken the night school, under my superintendence, at much inconvenience to himself; but we could not take boys under 16 years, as they would require quite different treatment from young men of 16 to 25 years of age. There are allotment fields let by Lord Londesborough and Mr. Langdale, and a field at Skipton by myself, usually in portions of one rood to each man. There is apparently a sufficient supply for the population. It would be very beneficial if the owners of isolated farms would provide a room for service and teaching where the clergyman could occasionally visit, the hired farm-servant system being a more important feature with regard to the land than even the cottage system.

221. *Osler Hall*, ganger.—I live in Market Weighton. I do not work regularly for any one. In the ketlocking time in June I take out children of both sexes from 10 years; most of them are 12 years old. I have had as many as 20 together. The farmer leaves the number to me. I do not take the work by the piece, but am paid 3*s.* a day. I pay the children and take the account to the farmer every Saturday night. My brother, *Hepton Hall*, takes weeding by the piece, gets so much an acre, according to the quantity of weed, some 7*s.* an acre, some as low as 3*s.* He would usually take 15 children, who could do two acres of bad weeding in a day at 7*s.* an acre, or 10 acres of light work. He pays children 10*d.* a day; they work for 10 hours on the land. He does not render any account to the farmer. He pays the children at his own house. Their ages will vary from 9 years to 12 years.

222. *Superintendent Long*, County Constabulary.—Hepton Hall is a thoroughly bad drunken fellow, not fit to have charge of children, he would let them do anything they liked. He swears and uses very bad language among them.

[A boy in the school said that he got for "ketlocking" 1*s.* a day from the farmers for whom he worked, but only 9*d.* a day from Hepton Hall.]

NESWICK.

Population, 66. Acreage, 980. Cultivation, chiefly arable.

223. *John Wheatley.*—There are 12 boys employed about four weeks in spring and summer in weeding corn. They go about two miles to their daily work. The hours of work on the land are nine. No girls are employed; I should say that the boys should be separated from the girls especially if they exceed 12 years of age. The health is undoubtedly injuriously affected if they are over-worked or allowed to stay after becoming wet. I am happy to think that in this

parish the education of both sexes is quite equal to what is really needed, school attendance is very fairly carried out, and as they begin as infants at 2½ years and then pass to the school the children have every advantage. The education of the adults varies very much, and I have amongst my yearly servants occasionally those who cannot read; when this occurs I arrange his or their being taught, and hitherto with good success. I should condemn public gangs altogether and where private gangs are employed I would restrict the number to 15 in any one gang; children not to be employed under 10 years of age, the sexes to be separated, an elderly labourer to have the charge and that the best man in the farmer's employ. I should say that where unmarried females are employed on a farm up to 18 years of age they would be improperly trained for domestic duties. I would not allow any girl above the age of 13 to be employed in a gang; no boy under 10 years, better still under 11 years. No child should be allowed to walk more than two miles to work; the hours should be from 8 to 12 and from 1 to 5.30, or not in any case exceed 9 hours at work. I should say that in this parish school attendance is not the least affected by the pecuniary resources of the parents; it is next to a Free School and all the labourers are fully employed and earning good wages. There is nothing calling for greater inquiry than the present cottage accommodation generally. A farm of 600 acres should have four double cottages. This parish is well provided with cottages which are in good order and chiefly belong to the squire; wherever there is a small owner he puts on the screw, but I recommend that each farm should have sufficient cottages upon it to meet its requirements, and the rent in no instance should exceed 1*s.* per week charged to the labourer whatever the tenant may have to pay. The tenant would amply receive his portion by the interest supplied in the extra labour given by the labourer. Money might be borrowed under government for the erection of cottages and charged to the tenant at 7 per cent. to be paid off in 22 years. I built some cottages on a former farm, a double cottage with four sleeping rooms 128*l.* Most of my labour is supplied from a distance of three miles. I provide beds for the men if they want them, they usually go home on Wednesday and Saturday. I think it a bad system, men should live with their families. Wages for ordinary labourer 16*s.* a week.

224. Letter from John Wheatley.

"I most strongly condemn large gangs, and further, decidedly girls beyond the age of 13 being employed in them at all, for I consider it has a most injurious effect on their after life of domestic habits, unfits them for service, for who would have a rough uncouth uncultivated girl as a servant, which habits must grow with them if employed in outdoor labour. I should say the education general in this district is fully equal to the requirements of the children and I believe that the attendance in the various schools is fairly and regularly carried out. Much may be done in the improvement of the adults who unfortunately sometimes are found unable to read or write. I myself take especial care never to allow an adult to leave my service without his being taught, and I am further glad to say how grateful they have been for it. Cottage accommodation, sufficiency of rooms, and a garden attached upon each farm will do more towards the morality and general good character of the labouring classes than all the legislative enactments that can be suggested, and I for one do most earnestly hope to see a general move towards the accomplishment of this great boon.

BAINTON.

Population, 465. Acreage, 3,280. Cultivation, chiefly arable.

225. *The Rev. G. T. Clare*, rector.—There are no private gangs, a certain number of boys occasionally work for the farmer, they go from one farm to another; they are superintended in their work by a foreman of some sort. Boys are employed in bird keeping, turnip singling and brassack* pulling. The distance to work is about two miles, and the hours from 8 a. m. to 5 or 6 p. m., with one hour allowed for meals. The women work together, girls do not go out to work, but are allowed to help their parents at home. The mixing of males and females in work is sure to produce more or less bad effect; weeding in wet weather injuriously affects the women; although the effects do not appear at the time, the health suffers eventually, at least in most cases. Excess of field work in a measure seems to unsex the females and act injuriously on their morals and on their fitness for domestic duties. There are not men enough in this parish for farm work, without the assistance of female labour, at certain seasons. A rule was made at the parish school some years ago that ten should be the earliest age for boys to go to work. I do not see any necessity for applying the provisions of the Factory Acts in this parish. Deficient cottage accommodation especially in regard to bedrooms is productive of most mischievous results, both as to health and morality, it neutralizes in a great measure the efforts of school, both to train to good and to educate in knowledge. Decency is taught in vain at school while it is utterly disregarded at home. One cottage per 200 acres is considered sufficient for the requirements of the land, we have that proportion, and they are conveniently situated for the work. The cottages generally have a kitchen, pantry, and two bedrooms; in a large house three bedrooms. They average 13 feet square. Most of them have gardens.

School.

On the Register, 17 Girls and 26 Boys.

The attendance here varies very little in winter and summer. There is also an infant school. Almost every child in the parish attends school. The main cause of insufficient education is the early age at which children are taken from school and sent out to service. We tried a night school, but with little success. A great deal I think depends on the person who conducts such school. Many of the labourers are so tired with the day's work that they have no inclination to attend school at night, and some are ashamed to go to school. There are two allotment fields in the village at a rent of 5*s.* per portion, which is about a rood. There is also a pasture field for cows and a right to feed cows in the lanes. The system works well and is a great help to the poor.

NORTH DALTON.

Population, 486. Acreage, 4,600.

226. *The Rev. J. B. Bryant.*—This parish is somewhat peculiar. I am the first resident clergyman since the reformation. The children are away from school, from April till after harvest; they are employed in flint-picking, brassacking, and singling turnips, &c. In the winter the oldest boy in the school was 12 years old. In the summer we have none but small ones, out of 70 on the books only 43 attended 200 times. The payment for schooling is 2*s.* a quarter, 1*s.* only for harvest quarter. Children go to field as young as 7 years. I would fix 8 years as the limit below which no child should go to work, and require a certificate of attendance to be produced before hiring with a penalty on the employer in case of non-requirement. The children would get schooling in winter. Wages for an ordinary labourer are 15*s.* a week, or 8*s.* and 9*s.* and their meat.

SLEDMERE.

227. Meeting of Farmers, 11th March.

Present 16, including the Rev. Mr. Cole, of Wetwang, and Mr. Tiffin, Agent.

Private gangs are used in the brassacking season, to the number of 20 or 30 in a gang. In Garton,

* "Brassack" is another name for "charlock."

E. R. York.
Mr. Portman.
d.

there is a ganger who takes a piece of work and provides the children, but probably at the current price of child's labour and goes from farm to farm. The ages of the children vary from 8 to 12 years, and the girls and boys go together, it not being thought necessary to separate the sexes. It was thought that it would be difficult to fix a limit of age for children's work, as at certain seasons they are all wanted; you might however put the limit for brassacking at 8 or 9 years of age, and for singling turnips at 10, in this way the children might get eight months' schooling in the year. The women go out hoeing turnips, children are as a rule pretty well educated, that is they can mostly read and write. There was no objection to the requirement of a certificate of school attendance for a certain number of weeks or days during the year. There are schools in most of the villages, but in some places they are not well supported by subscription. Night schools are not practicable in this district, as the houses are in many cases very far from the village. There are also some cases where the poverty of the parents prevents them from sending their children to school. Some farms are situated at such a great distance from the villages that it is the custom for the farmer to provide beds for his labourers, if they like to use them, but generally the labourers prefer to go home. The labourer goes to work, and returns, in his own time. The cottages have for the most a rood of garden attached to them, which was generally considered sufficient for the labourer. Statutes,—Martinmas, was considered to be the most convenient time for the hirings in the Wold district. It was considered that more mischief was done in farm-houses than at the time of the statutes. It was not thought that an increased supply of cottages on the farms would alter the system of yearly farm servants, at any rate not for the present. This district is very thinly populated and the supply of labour is fully taken up, so that bad and good are equally hired.

[The farmers attending this meeting fairly represented a large portion of the Wold district in the neighbourhood of Sledmere.]

228. *Robson Wilson*, carrier, Garton.—I have managed groups of children for many years for ketlocking. I take 16 or 18 with me, but 18 is as much as a man can manage properly. I receive 3*s.* per day for myself and pay the children 10*d.* a day. The farmer gives me the money to pay the children with. I set down the number of children and the number of days I have had them when my work is done. I get the children in the village of Garton. We sometimes go three miles, but I take them in my cart. I never take any weeding by the piece.

229. *Mr. Tiffin*, agent to Sir Tatton Sykes.—There is a want of new cottages in the district. Schools are plentiful and have always been kept up. In this district there will be a difficulty in enforcing school attendance in consequence of the distance at which many of the cottages are situated from the village. Wages average 15*s.* a week for an ordinary labourer. Women and children are occasionally employed. Turnip hoeing is usually taken by the piece, and the children go with their parents for singling. I think that gardens attached to the cottages are better for the labourer than allotments, which, perhaps, may be half a mile or more from his cottage; such a distance makes it an effort for the man to turn out after his day's work to attend to his allotment, whereas when the garden is close to the cottage he and his children can do an hour's work, after his return from the farm, without any inconvenience. I also think it desirable that the labourer's cottage should be close to the employer's house, if placed on the farm, so as to create an interest between the master and the man. The statutes are a bad system, but there is a desire for improving the labourer, and I have known some cases of lads staying on for some years with one master. There are benefit societies and clothing clubs in the district, which the poor are very willing to avail themselves of.

WETWANG.

Population, 623. Acreage, 3,900. Cultivation, chiefly arable.

230. *Rev. Mr. Cole.*—There are mixed private gangs in this parish from 12 to 30 in number; of these there are from eight to ten males between the ages of 8 and 10, and four to five females. They are employed in spring and in summer in pulling weeds and singling turnips. They do not go more than a mile to their work. The hours of work are from 7 a.m. 5·30 p.m., with one hour and a half allowed for dinner, at noon. The sexes work together, but they are too young for this system to cause much harm. They attend school regularly a great part of the year. In this parish one gang suffices for the different farms in turn, and it would be undesirable to interfere by legislative regulation as to the times or hours during which it should be employed, the district being peculiarly dependent on the weather. I would not place any restriction on the age at which children should be employed, nor on the distance to which they should go. When young persons or children are engaged on one of the outlying farms the farmer sends a cart or waggon to fetch them, and sends them home in a similar manner; in some cases they are taken by railway. The regulations of the Print Works Act might be applied in this and similar agricultural parishes without injury to the agricultural interests, provided there were schools within a reasonable distance. In this parish the houses are compact, and there is a very good attendance of children at school; the parents can afford to send their children, the school fee being only 1*d.* up to 8 years of age. Most of the cottages have a small lean-to by way of a back kitchen, and generally two rooms upstairs with communication from below by means of a ladder. The rooms are small, some without fireplace or ventilation, and there is no drainage to speak of. The accommodation is limited, where but more is provided lodgers are often taken. Many cottages have a small garden. the rent varies from 3*l.* to 6*l.* per year.

SCHOOL.

In Summer.

	On Register.	Average Attendance.
Boys:		
Under 10 - -	50	36
Between 10 and 13 -	30	12
Girls:		
Under 10 - -	49	41
Between 10 and 13 -	12	7

In Winter.

Boys:		
Under 10 - -	50	44
Between 10 and 13 -	30	23
Girls:		
Under 10 - -	49	40
Between 10 and 13 -	12	9

We tried a night school but it failed. After leaving work in the fields the farm lads have to get their supper and fodder the horses, &c. and are too sleepy and tired from the effect of out-door work to do much in school. They go to bed soon after eight. The apprentices work till nearly eight, and it seems a general opinion among the farmers that if they excuse their lads to go to school, and break the ordinary hours, they would have great difficulty in getting the work done properly and within reasonable time.

FOX-HOLES.

Population, 319. Acreage, 2,600.

231. *Rev. R. H. Foord.*—We have a night school here pretty well attended. The children are employed

young in bassacking, but only for a short time. The farm lads do not come well to night school, and I think that there would be great difficulty in enforcing a system of certificates of school attendance to be produced before hiring. The farmers do not care sufficiently about the character of those they hire, but look more to the physical power. The children are much overworked in harvest when harvest is taken at a price. The cottages are mostly belonging to small owners, and are rather crowded. There is an iron foundry in the parish.

DRIFFIELD.

232. Meeting of Farmers—about 30.

It was agreed that nine years would be a fair limit to fix, below which no child should go to work. Private gangs are common in the neighbourhood, they are usually mixed, of a number of 15 or 16. Their usual hours of work are 10, with one hour allowed for rest. No one hires a farm lad under 12 or 13 years of age. There are plenty of schools in the districts, but the parents are very indifferent about education. Schooling can always be had for the children in the winter, or even during nine months in the year. It is the exception, if a lad of 12 cannot read or write. The question of the production of a certificate of school attendance before hiring was discussed, it was considered that it would be no hardship to require the production of a certificate of such attendance for six months during the year, between the ages of 9 and 12, inasmuch as they *do* go to school as a rule between those ages. The school payments throughout the district are generally a penny or twopence a week. It was suggested that a free education would be an inducement to the parents to send their children to school, but that if such advantages were given them a penalty should be put on the parent who neglected to send his child.

With respect to the cottages, it was considered that there is great and ample room for the improvement of them, the great need is a sufficient number, with three bedrooms. A good labourer will not come to a farm unless he can have a cottage, and some will not walk a great distance to their work, and if the cottages were placed close to the farm, the farmers would pay more attention to their labourers than they do now.

The parishes in this district were said to be well off for gardens and allotments, and it was considered that a garden of one rood attached to the cottage would be more advantageous to the family than the allotment. The present rate of wages is 15*s.* per week, a man can earn by piece-work at turnip-hoeing 3*s.* 6*d.* a day.

It was not thought that any alteration in the system of hiring was at present practicable.

233. *The Rev. R. Nares*, curate, Driffield.—The system of ganging exists here, and is winked at by the farmers, for the sake of cheapness. There are large cake works, but I do not think that any girls are employed in them. Driffield is an agricultural centre, "the metropolis of the Wolds;" some parts of the town are very bad.

Boys' School.

234. *Mr. Slater*, master.—150 on the books; about 50 over 10 years; and 100 under 10. From the middle of May to the end of July, children of ages varying from 8 to 14 are employed in the fields, brassacking; during this time they lose most of the knowledge which they have acquired previously at school. They go out to the fields in April for potatoe planting, they are also employed in potatoe picking in the autumn, thereby losing nearly half the year, and both girls and boys come back rough and demoralized. I think that the boys learn more between 10 and 12 than before 10, those children who attend for six months only, after 10 years of age, are not doing much at school.

235. *Daniel Towse*, 12 years of age.—I have been out brassacking with a lot of boys and girls together, and was paid by the farmer's man.

236. *John Hopper*.—I have been out weeding with "Nottingham Jack," he paid me 5*s.* a week, and always at his own house at Driffield. "Nottingham Jack" only works for farmers when he has the job by the piece.

237. *Robert Staveley*.—I have been out for a fortnight weeding at 10*d.* a day. I was hired by John Adams, and paid by him. John Adams, I know, is not a regular labourer for any farmer where I have worked for him.

Girls' School.

238. *Miss Cook*, mistress.—126 on books; average attendance through the year, 100; about 36 above 10 years of age; and 90 under 10. The girls used to go out brassacking a great deal, but do not go so much now.

[There is also a mission or ragged school, chiefly attended by girls, all above 6 years of age. It has only been open two months, and the average attendance is 40. This school is in the worst part of Driffield, and is intended for the benefit of the children of bad parents.]

239. *John Adams*, ganger.—Said that he had taken out 30 or 40 children at a time, that he gave the list to the farmer for whom he worked, and that he was paid so much a head for the children, and that he paid them afterwards.

240. *Mrs. Ferguson*, wife of a ganger.—My husband takes brassacking by the acre, and pays the children so much a day; he will take 40 or 50 together, and I have often been out to look after the girls while he looks after the boys, and the girls are a deal the most trouble. Father used to take out 100 boys and girls by the train; the little ones under 10 or 11 years are not much good, as they cannot do a good day's work. The hours of work are from 7 to 6, with an hour allowed for dinner. Children take their own meat. Ferguson does not work regularly for any farmer, buts gets his living at certain seasons by taking out gangs.

BOYNTON.

Population, 128. Acreage, 2,509. Cultivation, chiefly arable.

241. *Miss Mary Simpson*, the vicarage.—About 50 little boys are employed for four weeks in the summer, but hardly any girls. Of these 12 are between 8 and 10 years, and 38 between 10 and 13. Their work is brassacking. Those that do not live in the parish come from Bridlington, about three miles off. These are sent for in waggons and taken home in the same way. The hours of work are from 8 a.m. to 6 p.m., with one hour for meals and ten minutes for rest or refreshment once or twice in the day. In the few cases in which girls have been employed they have worked apart from the boys. The health is not injuriously affected, nor have I heard of or seen any ill-usage in the fields. In this parish married women only ever work in the fields, and that to such a small extent that it does not amount to much of an evil. The worst effect of the young children going out to work is that the elder children are kept at home to take care of the little ones instead of going to school, and home duties are neglected. If the employment of females exist in other parishes to such a small extent as in this, it can hardly require legislation. The school attendance is scarcely at all affected by distance in summer, and not much in winter, as there is a winter infant school for those little ones that live far from the parish school. Neither is it affected by the pecuniary resources of the parents, as a penny a week is the payment for schooling; but in some degree it is by the mothers of large families going out to work, and the elder children having to take charge of the little ones. There is no industrial training for girls, but surely the gradations of domestic service after leaving school are the best industrial training. The cottages in this parish are sufficiently roomy, and there is no particular fault to be found with them. One cottage per 100 acres is considered sufficient for those employed on the land. We have that proportion, but

E. R. York.
Mr. Portman.
d.

most of the labourers are employed by Sir George Cholmley in his woods and stables, so the farmers have to get their labourers from a distance, which is a sore evil. The cottages have four good-sized rooms and generally a small scullery, are well drained and ventilated, and have good garden and other conveniences. N. B.—The above accommodation is amply sufficient in this part of the country, as children are removed from home, being hired into farmhouses at from 12 to 14 years of age. The rent of the cottages, including garden, is usually five pounds.

There are no children who are neither at school nor at work throughout the year. There are about 36 males and 14 females growing up with insufficient education. Very few can read long words with ease or spell correctly. About one-fourth cannot read at all, and about one-third more can read very little. None of these belong to the parish; all leave home young; but about 50 between 13 and 18 are hired for the farmhouses every year from other places. There is an evening school for males; it is open for 28 weeks in the year, in the months of December, January, and February, and from the middle of May to the end of August on three nights a week for two hours in summer, and one hour in winter. There are none under 12 attending the school, but 26 in the summer and 10 in the winter on the register, of whom six attend in winter, and 14 in summer. In summer the evening school is at Carnaby, where there are seven farmhouses; in the winter at Boyton, where there are only three farms. In winter, owing to stable work, the time available for teaching is usually from 7 to 8 p.m., and in summer from 7 to 9 p.m. They are taught reading, writing, knowledge of the Bible, rudiments of geography and history, with a very little composition and no arithmetic. A night school can never supply the deficiencies of a day school while there is neither compulsory rule nor any inducement beyond love of learning. Love of the teacher is almost the only real inducement that tells now. Few boys naturally love learning; the most untaught have almost invariably the least love for it, consequently the greater the prevailing ignorance the greater the difficulties while there is no sort of compulsion.

242. Extracts from Letters from Miss Simpson to Hon. E. Portman.

"Something of continuous teaching is the more necessary, because when a child was little he could not exercise his mind much on what he learned, and having no real grasp of it, it is the sooner lost before he is of age to know the real meaning of anything. Any knowledge, whether religious or secular, acquired in early childhood, if it is not kept up fares too inevitably in most cases like the seed that fell by the wayside. If, then, we cannot hope to add greatly to the small stock of knowledge gained before the age for working begins, let us at least aim at keeping it together till the mind is capable of retaining and applying it."

"I see that at Beverley one of the speakers said that boys who had been working in the fields all day are unfitted for the mental labours of the night school. I think that observation can hardly have been the result of experience. To anyone accustomed to teaching working lads in a night school it reads rather like nonsense. Night schools ought to succeed, and will, perhaps, be found the best means that can be devised for keeping up and supplementing the insufficient education of children in agricultural districts. I see that a well-known farmer of those parts was strenuous in his resistance to compulsion. I think there is some misapprehension on that subject. Who are those we should have to compel?—Not the parents. In the East Riding working boys are very generally quite separated from their parents, being hired into farmhouses in another parish. Parents would be the last to object to their boys who are "off" getting some schooling of a night. Is it the employer? I dare not say what proportion of these could be brought willingly to take the trouble to provide education for the lads they employ; but I hope and believe that very few would be unwilling that they should be taught if others would be at the trouble of teaching them. I believe also that there is hardly a parish in which the clergyman and schoolmaster would not provide night school teaching, if they could be assured of a demand for it. It is then only the boys themselves who need any compulsion; happily not all these are, or (as things now are) instead of having a few night schools scantily attended, we should have none at all. I think when it is rightly understood few will be found to object to some compulsory rule for ensuring the attendance of untaught boys, say under 15.

"Of course I think a rule similar to the Old Church rule (Second Rubric at the end of the Catechism in the Prayer Book) is the best, if that is insufficient something else must be provided."

A clergyman of 11 years' experience in night school teaching wrote to me, "One thing I hope "government will do, discourage boys going to the "night school at so early an age. If we do not take "care the night school may easily be made an instru- "ment for making our boys greater slaves to work "than they are now." I begged for an explanation, telling him that I had just written to you, that I wished there might be a compulsory rule for all working boys under 15 to attend a night school.

He replied, "What I mean is this: the Earl of "Shaftesbury, in a Bill that he proposed last year, "would not allow boys to be employed in gangs until "they are 8 years old. Now suppose this bill made "law, and also government grants to be made for boys "in our night schools as young as 8, I fear the result "will be that in many districts it would come to be "taken as a matter of course, that a boy should leave "the day school at 8 to work in the fields and carry "on his education in the night school. What his edu- "cation would be worth under such a system I think "we can pretty well guess. I have no wish to run "down night schools; these are as yet in their in- "fancy and they have, I believe, a greater work to "do than most men think. I have worked hard at "ours now for 11 years. But there is great danger "now of making them supplant instead of supple- "ment the day schools. Speaking from what I know, "I should say that it most probably will prove against "the children's interest for government to make grants "to our night schools for boys under 10."

Mr. Barugh, wrote, "If we are to have com- "pulsory education there would be great difficulty "with regard to the support of children in large "families. At present parents solicit employers to "take children into service when so young as to be "worthless; without higher wages, I do not see how "the labourer can support a numerous family and "send part of them to school. The competition for "farms causes a constant advance in rents; the com- "petition for employment keeps down the price of "unskilled labour; the landlord and the tenant have

"benefited by the recent improvement in agriculture, "but the labourer has benefited very little."

It would be a blessed result of legislation if it puts a check on mothers going out to work, and children kept from school, and along with that tends to increase the agricultural wages. If some such half-time system as you seem to contemplate is not applicable to agricultural districts, that can only be, I think, because agricultural wages are too low. It would doubtless be as great an advantage in agricultural as I believe it to be in manufacturing districts. As regards boys above 13, doubtless "inducement" and "aid" are far better than compulsion, and would cause the idle and refractory to punish themselves by deprivation.

BRIDLINGTON.

243. Chamber of Agriculture, 14th March.

The Rev. H. F. Barnes, incumbent of Bridlington.—Thought the difference between 9 and 10 years of age a very serious difference, and that the one year more was of incalculable importance in laying the foundation both of bodily and of mental power. If an education certificate was required of every boy before he could enter farm service, especially if such certificate represented the actual amount of attendance at school it would be the best of all guarantees that something had been done to raise the boy in a social scale and fit him for the future duties of life.

Mr. Joseph Barugh, advocated education strongly. He had had considerable practice amongst servants, and always found the educated were the best and most obliging and most attentive. Many persons undervalued education and did not send their children to school, but preferred having them employed so that they reap some profit by them. He would not have boys under 12 years of age, he considered them worthless. The cottage condition he strongly deprecated. Formerly it was a principle with both landlords and farmers to prevent their servants and labourers belonging to or having houses in villages, and they endeavoured to throw them into the towns so as to escape the poor's rate. But since the passing of the present Poor Law Act, the case was altered, and he hoped that a better accommodation would be provided for the agriculture classes.

On a division the following resolution was carried "That in the opinion of this meeting the age of 10 years is the proper time for commencing work."

Mr. William Smith dwelt at considerable length on the education of the labouring classes, the desirability of separating the sexes when employed in the field work, the immorality of children when left to themselves, and the vast importance of youth on entering permanent service to be subject to the control of master or foreman.

A discussion here took place on the desirability of altering the present system of hirings, and some opinions were expressed to the effect that it would be desirable to have the males and females hired at different periods.

Bridlington.

Population, 5,767. Acreage, 2,500.

This is a large Ecclesiastical parish.

Boys' School.

244. *Mr. Thomas Messenger*, master.—Two hundred on the books, 170 in attendance. I rarely keep boys till 14 years of age, some boys are now sent out tenting at ages varying from 9 to 13. In brassacking time 30 or 40 go out; a man comes to fetch them; they are taken in waggons and are paid 8*d.* and 9*d.* a day. They go as soon as they can do any work. After this season the boys return to school, and for three months in the winter those boys who are earning wages attend school very well. I know of 14 or 15 boys who never attend school at all. There is no great unwillingness on the part of the parents to send their children to school; but a large portion of the year is taken up by field work, such as brassacking, picking and singling turnips, and those who are employed then only come to school in the winter. The payment is 1*s.* a quarter, all found, except copy-books, and much voluntary support is given by means of private free-lists for the school. If boys attended regularly up to 10 years of age, they would be up to the fifth standard. I have been here 14 years; when I first came the number on the books was 100. The population has decreased, but the number of children on the books has nearly doubled. I am of opinion that a grant for a number of attendances smaller than that now required by the committee of council, would be a great benefit to small agricultural parishes.

Girls' School.

138 on the books. 131 present, March 17.

The girls go out brassacking and are away for three weeks at a time; when they go a long distance they are taken in carts. One girl of 13 earns 6*d.* a day, another of 13, 11*d.* a day; one of 11 years, 9*d.* a day, and one of 8 years, 8*d.* a day.

Infant School.

150 on the books. 120 in attendance.

In summer, there have been as many as 195 in school, they pay 1*s.* a quarter. They leave this school for the day school between 6 and 7 years of age.

There are no allotments in Bridlington.

245. *C. Grey, Esq.*, clerk to the Board of Guardians.—The union is well off, we have extremely few cases of pauperism, and the payment for the schooling of children of parents which are on the parish, is ordered by the Board of Guardians throughout the union, and the sum amounts to a very little per annum.

N.B.—The same system prevails at Driffield Union.

HUNMANBY.

Population, 1,387. Acreage, 6,472.

246. Meeting.—Present, the Rev. M. Taylor, Mr. Awburn, agent to Admiral Mitford, and some farmers.

Women are very little employed. Private gangs are used for brassacking in the spring; the children are got from the village. Boys and girls are employed of the ages of 8 to 12. Their average wages are 8*d.* a day. One or two women generally go to look after them, and a man will manage 20 children.

The greatest distance to work from here is three miles, when they are taken in waggons.

Wages for an ordinary labourer, 15*s.* a week. It was thought that nine years would be the fair limit to put for children's work, that the amount of time devoted to field work by the children during the year was about three weeks, and that such work was no injury to the child, and of great benefit to the parents by reason of the earnings; further, that this labour is necessary to the employer. The hours of work are usually from 8 a.m. to 6 p.m.

Boys of 10 years of age go out bird-tenting, at which they earn 6*d.* a day, and have very long hours. It would be desirable that all children between the ages of 9 and 12 or 13, should attend school for six months during the year, it was thought that a certificate of such attendance might be enforced, but there was a difference of opinion as to putting the penalty on the parents or the employer.

The district is fairly supplied with schools, but the parents are indifferent about education.

In the Wold district the necessity for certificated masters is a serious drawback to the success of schools in small parishes. And it was thought that a capitation grant might be given to small parishes on the requisition of the clergyman and churchwardens, that

E. R. York.
Mr. Portman.
d.

such a school was wanted, and that the parish was unable to provide funds for a certificated master.

The farm lads are very rough in their manner, half of them cannot write, and they very seldom come to church; the girls perhaps are a little better educated. It was thought that great alteration and improvement was required in the system of hirings, and more particularly that the farmer should attach more weight to the character of the lads.

The cottages are conveniently situated with regard to the work and the village, and they are generally good and not overcrowded; two families in one cottage not being allowed. There are some good cottages with an acre or an acre and a half to each in addition to two acres of tillage and of cow-grass in a large paddock; the rent of these varies from 15*l.* to 18*l.* a year, and the occupiers of them are not generally ordinary labourers but will sometimes do a day's work at thrashing. There are thirty cottages with gardens, a small number of small freeholds, and 12 acres of allotments in the parish. More cottages are required on the farms and it would pay the tenant to pay his landlord a good per-centage for the outlay. They are much wished for and some cases were quoted where the tenants have built the cottages for themselves. There is a savings' bank in Hummanby which is working most successfully.

246. Letter from Thomas Awburn, Esq., to the Hon. E. Portman.

Hummanby,
Sir, 25th March 1868.

In reply to your letter of the 19th inst. asking for information on the questions of savings banks, clubs, or benefit societies, I beg to say on going into the matters thoroughly I find a divided opinion. Upon the whole, from the sources on which I have based my inquiries, we, the majority, fully believe that the savings banks are far more advantageous to the labouring classes than benefit societies, although the latter are the means of rendering assistance in many cases. The benefit societies are compulsory inducements, and if not carried out according to the certified rules, members are at once debarred, and all monies paid are forfeited. Savings banks bring you the provident, and independent Englishmen of the labouring class who have the courage to depend on self help. This savings bank was established on the 1st of December 1862, and up to 31st December 1863 we had 168 depositors. Up to the present time 257 depositors in all, whose names have been on the bank books, of whom about 30 do not belong to the labouring class. Since its formation several very improvident persons have come under my especial notice, who since the system of savings banks came into operation, have availed themselves of its advantages and I can assure you there have been pleasing results.

Yours truly,
T. Awburn.

KILHAM.

Population, 1,200. Acreage, 8,173. Cultivation, chiefly arable.

247. *John Staveley*, Dotterill Park Farm.—I employ a private gang of 12 boys averaging 12 years of age on my farm of 850 acres. I also employ six lads between 13 and 18, and 20 over 18 throughout the year in the general working of the farm. The gang is employed in hoeing corn and gathering quicks, &c., and in the summer in pulling ketlocks, they go about two miles to work and work on the land for eight hours with one hour allowed for dinner. I do not employ any females in the gang, I do not think that any injury is done to their health when above 10 years of age. With a few exceptions all the young are able to read and write, many of them can do simple sums; the adults as a rule are not so well educated as the children of the present day. I think children should not be employed earlier than 9 years of age, and it would be very desirable to separate the sexes in gangs. In private gangs the labourer is often entrusted with from 15 to 20, but has no private interest in their labour beyond his daily wage. The children return with him to their homes in the village at the end of the day, in fact they are rarely out of his sight. I think it would be desirable to limit the age of girls employed in field work from 9 to 12 years. Up to this period I should not consider that it would injure them for domestic service. In my opinion the Factory Acts are not at all applicable to an agricultural district. In our own parish the children are employed in field work about three weeks in summer and one month in harvest, gleaning, &c., and can attend school the rest of the year. There is no doubt that much improvement might be made in many of the cottages, and it would be conducive to health and morality if there was an additional bedroom where there are now only two. I should think two cottages per 100 acres quite sufficient. In this parish we have a superabundance of cottages in the village; but in a large parish like ours of 8,000 acres it would be an accommodation if some were erected on the outlying farms. There are farms two miles off from the village and there is land available within one mile; I think that would be a proper place for a number of cottages as it would divide the distance for men to walk to their work and the children to school.

248. *Rev. E. Fellowes.*—There are allotments for the cottagers; 33 acres, let in portions of from one quarter acre to one acre, at 3*l.* or 4*l.* a year per acre. There are also 12 acres belonging to the parish, which are let at 10*s.* an acre, in portions of one rood to each man. Many of the cottages have good gardens and do not want a share in the allotments. This is an open parish and suffered much in the old times. There is an endowed school where the children are taught free; there are also four or five dame schools, but the school is in want of support. It gets no government grant as it has not a certificated master. It is very difficult to get children to attend regularly. There are several small farms, varying from 100 to 150 acres each.

249. *Thomas Cook*, schoolmaster.—On the books, 87; average attendance in winter, 63; in summer, 42. This school is managed by a committee. Most of the first class, from 9 to 12 years of age, go out to work from the middle of February throughout the spring. The boys will attend in winter up to 13 years of age. Many of the parents are extremely indifferent about the education of their children. This winter many have been kept away from school by the dearness of provisions.

250. *Jonathan Nicholes*, 8 years old, went out brassacking at 6, was at work from 7 a.m. to 6 p.m.

KIRBY UNDERDALE.

Population, 338. Acreage, 5,000.

251. *Rev. Thomas Monson.*—There are no private gangs. Twenty-five children, young persons, and women are employed in the parish in bird tenting, potatoe gathering, weeding, and turnip topping. From Martinmas to Lady-day the hours are from 8 a.m. to 4 or 5 p.m.; from Lady-day to Martinmas 7 a.m. to 6 p.m., with one hour allowed for meals. There is no necessity in this parish to put any restriction on female labour. I would not allow any boy to go to work under 10 years of age. The school attendance is much affected by distance in the winter, but not by the pecuniary resources of the parents. The labourers in this parish are hired by the year for the most part, and are lodged and boarded in the farm houses. There is a sufficient number of cottages with two or three bedrooms. The accommodation of the cottages is generally good; they belong to the landowners and are rented at 3*l.* a year. The school is a mixed one, and boys and girls are entered in the same register. The

number of each sex is nearly equally divided. The attendance, however, is much better during the summer months than in the winter. At the present time there are 41 boys and girls on the register; the average attendance for the year was 25. There is no evening school. Classes of farm servants and older boys are held for three nights during the week in the winter months in the clergyman's house.

252. *Rev. W. Simons*, curate.—The occupations in this parish are small—up to 400 acres. There are no cottages on the farms, but the farm lads live in the house. There is not a sufficient supply of labour in the village for any extra work. When extra hands are wanted the farmers often have to send to York. The parish extends three miles on to the Wolds. There are no poor children in the village. There are only three labourers' cottages; most of the cottages are inhabited by farmers and tradesmen, whose children come to the school. There are three or four families in one cottage, three girls and three or four men sleeping in one room. Education is at a low ebb; not four out of ten farm lads can read. These lads will not come to church, as they say "it is not the "custom." Wages for an ordinary labourer, 13*s.* a week.

STAMFORD BRIDGE.

253. *C. A. Darley, Esq.*—There is no gang system here except in the case of the Irish from York at times of potatoe setting and picking. The children are not much employed under 10 years of age. I think that a limit of age might be fixed. The occupations are here generally small, in some cases even to a farmer working his land with one plough lad. The great want is an increased number of cottages on the farms for labourers and in the villages, labour now having often to be brought from a great distance. The farm lads are under very little control; they do not go to any place of worship. They are well fed by the master, who gets as much work as he can out of them. The system pursued in farm houses is very bad for the morality of the female servants. There is not much assistance given for the education of the poor by the Board of Guardians, except in cases of widows with large families. The average wage for a good labourer is 2*s.* 6*d.* a day. I think that the whole money per week given to the man is a better thing for the family than 8*s.* or 9*s.* a week and meat, as is sometimes the case.

The system of allowing young women and young men to work together without proper attention certainly tends to immorality and to a want of knowledge of domestic duties. I think some restriction on female employment might be beneficial. When hired by the year by small occupiers the girl is often put to work unfitted to her sex, *e.g.*, stacking corn, and in thrashing also. Boys should not be employed under 10 years of age. Boys under 12 years who are employed in spring, summer, and autumn should attend school from November to February, and by this arrangement their earnings would enable the parents to provide for more education when unassisted by charity or otherwise.

The want of proper accommodation in the cottages leads to much immorality, parents and children sleeping often in the same room, and more especially at Martinmas, when the children, grown to men and women, return home from service.

Very few cottages have three bedrooms; the upper room is often very low and badly ventilated. Rent about 4*l.* a year. A good cottage cannot be built to pay above 3 per cent., and unless repairs are done by the landlord it soon becomes dilapidated.

There are usually 60 to 70 in attendance at the school, of whom 12 boys and 6 girls are free,—paid for by an endowment.

Allotments.

From my experience an allotment not exceeding one rood is a great boon to the labourer. Nearly 30 years ago I provided the poor of this township with them. They had no garden, no pig, and used to be standing in summer evenings after work smoking and talking in groups, some tempted to the alehouse. This is now done away, and it is a very cheering sight to see them and their children in spring and summer evenings busily and happily employed cultivating their allotment. Nearly the whole of them keep a pig, which provides them from 18 to 25 st. of bacon at Christmas, and have great pride in possessing a good one. They have vegetables for their family. In order that the allotment should prove beneficial to the labourer and not interfere with his regular employment, the allotment should be as near his home as circumstances will permit. The ground should be favourable for spade culture, and the quantity not exceed one rood. This quantity of land he can manage with the aid of his family without interfering with his usual work, taking, perhaps, a day in getting in his crop of potatoes. The cultivation on my allotments is strictly confined to the spade, about half the rood potatoes and a few other vegetables, the remainder barley or rye, the straw from which provides bedding for the pig and manure for the next crop, aided by small portions of rough grass cut from the sides of ditches, &c., which the farmers readily give them for clearing away. The rent is 8*s.* per rood, payable half yearly. The landlord keeps the gates and fences in repair. If any occupant wilfully damages the same the landlord repairs and charges the cost on the offender. During my experience this has never happened. I have only had one defaulter, and very rarely have had occasion to remark on the want of proper attention to the culture of the ground. The rent is paid very regularly, and the occupants express their gratitude for the advantages conferred on them by the possession of the allotment.

Savings Bank.

I am of opinion that this might be productive of good if great facility for deposit, combined with confidence in the security, and liberty to deposit any sum however small, could be carried out. I am led to this conclusion by the good effects of a well-conducted clothing club. Some years ago one was established in this township. The members contribute weekly any sum from 1*d.* to 6*d.* or more as their circumstances will permit. At the end of the year a small bonus is added, and the result has been most satisfactory and the payments well sustained.

SCRAYINGHAM.

Population, 387. Acreage, 4,729.

254. *Thomas Walmsley.*—This parish consists of three hamlets, viz.:—Scrayingham, Howsham, Leppington. In Scrayingham all the cottages have about one rood of garden land attached to each cottage; besides the cottage garden those who wish can have one or two allotments of half a rood each for 4*s.* 6*d.* a year. Three acres here are divided into allotments. Most of the cottages have land attached to them sufficient with the aid of a cow pasture to enable the cottager to keep one cow. An extra payment is required from the cottager per year who sends his cow into the common cow-pasture. This common-pasture is a privilege allowed by the squire, who permits a portion of his land to be used for the purpose. One of our farmers occupies from 50 to 60 acres, the rest of them from 150 to 300. Leppington has two acres of land in allotments of half a rood each, at a rental of 7*s.* each. Every cottage there has its garden and about one half rood, as well as an allotment. The rent of the cottage and garden is about 2*l.* a year. The farmers here occupy from two to 400 acres each. Howsham has no land in allotments but each cottage has its garden of about one-half a rood. The farms vary from 200 to 400 acres. The whole of our farmers procure their male and female servants at the

E. R. York. Mr. Portman. d.

yearly statute hirings. The demand for the services of our younger children for farm work has lately much increased. There are some five or six children above the age of 10 who come to school when not engaged in farm work. Some 15 or 16 from the age of 6 to 10 years who attend school, but of these the elder ones are often at farm work. Girls are not usually engaged on farm work excepting during harvest. The paucity of children in our village obliges the farmers to take their own children early to work. Most of the farmers and all the poorer parishioners send their children to our school. I think it is not advisable that women should work in the fields amongst the men unless the father, or brother, or husband, or some near relative be working with them. The rector's wife gives some industrial training to girls at the rectory for a few months. We have occasionally a night school in winter when we can induce the farm lads to come.

[I met a bookseller or hawking man at Stamford Bridge station who had been at his trade for eight years in that neighbourhood; he said that the people could not read and write better than when he began. The class of books that he was most able to sell was not the best for the morality of the people.—E. B. P.]

ESCRICK.

Population, 856. Acreage, 4,300. Cultivation, partly arable and partly grass.

255. *John Coleman, Esq.*—There is no private gang. Extra work such as potatoe setting, harvesting, and sorting is done by the Irish from York. These Irishmen and women frequently walk five miles each way to their work; sometimes a farmer provides a room or allows them the use of a barn to sleep in. The hours of work on the land may be from 8 to 5 with an hour for dinner. Sometimes the sexes work together but often apart. The gang of Irishwomen always has one man to overlook them. In this parish we have about 30 to 35 women, and from 20 to 30 boys and girls employed in agriculture. I think field labour undesirable for young women. The independent kind of life renders them unfit for the restraints of domestic service. Mothers with young children are better at home. 10 hours work is quite as much as any children and young persons should do. The half-day system would not answer, alternate days would be preferable. The school attendance is not affected by distance or by the pecuniary resources of the parents. An industrial school for eight pupils, preparing them for general service, is kept up by Lady Wenlock. The girls are also taught sewing and cutting out in the national school. [This school is most admirably managed and has produced excellent results.—E. B. P.] There can be no doubt that herding males and females in one room in the cottage tends to destroy the protective influence of modesty; no predisposing cause of vice is more active than this. Every cottage intended for a family should have three bedrooms, with a separate approach from the landing. One cottage per 100 acres is considered sufficient for the requirements of the land—we have a larger proportion than that. Most of the cottages are situated in the village and generally not more than one mile from the work; they are not crowded, as the rules of the estate never allow lodgers without leave. We have a considerable variety of cottages; widows' cottages consisting only of one room; but ordinarily they have down stairs a good living room and wash-house, sometimes two down rooms, and ordinarily two bedrooms and sometimes three. They have gardens or allotments, and the rent is from 1*s.* to 1*s.* 6*d.* a week. The best mode of providing an increase of cottage accommodation would be by requiring a fair payment for the landlord's outlay from the farmer who requires the labour and derives the benefit from it. The allotments are one rood to each labourer, at the average rent of the land. Some cottages also have a cow-gate and keep a pig. The ordinary wages of a labourer 14*s.* a week; women, 1*s.* 3*d.* a day. The farmers' sons go very much to the same school as the labourers'. There are many small farms in the district; 300 acres is considered a large one. A farmer holding 200 acres would have two hired lads in his house and would only employ one labourer. There is an infant school where children are taken in as young as 18 months; they go on to the day school at 5 or 6 years old.

School.

In Summer.

On Register.

Boys:	
Under 10	27
Between 10 and 13	20
Girls:

Fs. Carr	Elvington, 138 acres	—	—	12	1s. 3d.	Particular seasons.
Art. Lottey	Kexby, 120 acres	—	—	10	1s. to 1s. 6d.	Potatoes.
Mary Ann Robinson	Do. 130 acres	—	—	12	1s., 1s. 6d.	Do.
Js. Blanchard	Do. 258 acres	—	—	12	9d., 1s. 3d.	Nearly all the year.
Anth. Lottey	Do. 107 acres	5 (children.)	5	10	1s. 3d.	Spring and autumn.
Th. Bulmer	Riccall, 98 acres	10 (children.)	2–12	9	Children, 6d., 1s.; women, 1s., 1s. 6d.	At certain seasons.
J. Stead	Do. 130 acres	2–10 (children.)	4–12	10	1s.	Potatoe.
Isc. Swimbank	Do. 220 acres	4–12 (children.)	4–20	9	1s.	Potatoe, &c.
W. Swimbank	Do. 133 acres	—	3–10	—	1s.	Do.
Mary Middleton	Do. 207 acres	—	—	12	8d. to 1s. 3d.	Particular seasons.
Rich. Moat	Kexby, 149 acres	—	—	12	1s. to 1s. 6d.	
Th. Romans	Riccall, 40 acres	—	10	—	1s., 1s. 6d.	
Sam. Thompson	Skipwith, 297 acres	—	20	—	Boys, yearly; 1s., 1s. 3d. women.	Potatoes.
W. Silversides	Riccall, 86 acres	10 (children.)	2	9	Children, 6d., 1s.; women, 1s.	Do.
Robt. Leaf	Stillingfleet, 137 acres	3 (children.)	3	11	1s. 6d.	Do.
J. Silversides	Riccall, 146 acres	10 (children.)	2	9	Children, 6d., 1s.; women, 1s.	Do.
J. Banks	Kexby, 123 acres	6–10	—	10	1s.	Various seasons.

Of these (63 in all) 53 consider children's and women's labour of importance to farming operations, three consider them unnecessary; 23 prefer educated, six uneducated labourers; 21 say there is no difference between educated and uneducated; and one says he could dispense with the children, but not with the women.—E. B. P.

E. R. York.

Mr. Portman.

d.

ELVINGTON.

Soil, sand and stiff clay, and some moorland adjoining.

257. *Rev. A. Clarke.*—Children are very little employed here in field labour, the girls hardly at all; few, if any, go out under 10 years of age; perhaps a few for bird tenting; the potatoe picking is done by Irish gangs from York, a distance of seven miles. Sometimes they sleep in the barns. I think a limit of 10 years for children's work would not affect this parish. I think it very desirable to secure a more regular attendance at school. We have allotments, a mile from the village, of land at a low rate; the system is working well, and there is a great demand for them.

In this parish very few of the young women become agricultural servants; it is decidedly better for them to go into respectable domestic service. The talk in field work is apt to be coarse, and the girls become indisposed for the restraint of domestic service.

There is little or no real poverty. In the case of large families of young children there may be some difficulty as to school payments. Most of the children are within easy reach of the school, about 10 bring their dinner with them, a fair test.

Without being a large landowner I have had a good deal to do with the cottages in this parish. The total number is about 62; over more than 40 of these I have jurisdiction. I do not think there is one very bad cottage in the parish. A few have three bedrooms; a good many have either two good sized bedrooms or one bedroom and an available landing room (but not partitioned off). Some are decidedly badly off for sleeping accommodation.

Almost every cottage has a garden. Most are in my hands, a few go with the farms and two are attached to a brickyard.

Rents vary from 3*l.* 3*s.* to 5*l.* 9*s.* per annum, including local rates. Payments are monthly.

As regards allotments, I may say that when I became rector of Elvington I found part of the glebe broken up into allotments. The land so used is at a good distance from the centre of the village, which is a compact one, but though it is a mile or even more from the centre of the village there is no difficulty in letting the land; it is for the most part divided into roods and half roods (dividing the roods is an innovation of my own adopting). The roods let at 5*s.* per annum. The value of land in that part of the parish is only about 20*s.* or 21*s.* per acre per annum.

I understand that one rood of arable land is enough for a man in regular work; if he has much more he may over tire himself on it at night, and so unfit himself for his master's work next day (thus he may give the farmer a handle against the plan). Of course if he breaks time or hires labour he loses so much of the gain he might otherwise secure. We may allow that a smaller patch of "workable" land, for this allotment land ought certainly to be well worked and well manured, is better than a larger area cultivated in a slovenly fashion, and the manure from one pig, which might serve well for a rood, thereby sprinkled over half an acre or more.

Perhaps the testimony of a very trustworthy and I think judicious foreman in my employ may be of some value. He is not a very old man, say 50 years. He tells me that he has had a horse and has had four acres of land, and has found it out to be no better but rather worse than working at 2*s.* 6*d.* a day regularly for a master.

Supposing a man could obtain a couple of acres of grass land and so keep a cow, this would I believe be a desirable boon for an industrious working man.

DUNNINGTON.

258. *Rev. E. J. Randolph.*—I think there would be a difficulty in carrying out any law for the restriction of age for children's work. The penalty, if any, should be put upon the employer, and not on the parents. Girls are not employed here in field work. There is chicory grown at Dunnington; gangs of Irish from York are employed in its cultivation—but in these gangs there are not many children. There are no large occupations in the parish, but many small freeholders; there are allotments on land belonging to the church. It is very desirable that increased cottage accommodation should be provided in order to obviate, by an increased supply of labour near the farms, the necessity for the statutes and hiring system. There are too many lads living in the farmhouses under no control of the clergyman or the farmer. I think it very desirable to do away with the hiring fairs by means of register offices, by an increased number of cottages on the farms, and by providing a substitute of amusement in lieu of the week's holiday at hiring time. At present there is no attachment between the master and the servant, as for the most part the servants change places every year.

HOWDENSHIRE.

259. *T. Clarke, Esq.*, of Knedlington says:—More schools are wanted in the district. He would have no objection to some kind of compulsory rate for education. Cultivation in this neighbourhood is very varied — potatoes, flax, and gooseberries in large numbers are grown in addition to the ordinary crops.

BARMBY MARSH.

Population, 437. Acreage, 2,000. Cultivation, grain and potatoes, chiefly latter.

260. *Rev. G. W. Robinson.*—There are in the parish about 66 children, young persons and women employed in agriculture; some of them are under 8 years of age, and vary from that up to 18. The number of males is 25, females 41, of which 22 are married. They are employed in potatoe planting, gathering and preparing for market, and in topping turnips. The hours of work are from 8 to 6, with one hour allowed for dinner. I consider field labour highly prejudicial to the morals of the women, and also to their capabilities for home work; the infants and very young children are neglected in consequence, and I think a married woman with a young family would be far better employed in minding her domestic duties. I would certainly restrict female labour in the fields, excepting at harvest time, which in this district includes potatoe harvest. I think 10 years should be the minimum age at which boys should go to work. The regular attendance at school for six months appears to me the most preferable mode of enforcing school attendance as being best calculated to "fire" the parents and their children to gain the most profit from education. Our school is free to all children of the inhabitants who choose to be taught. There is sufficient house accommodation in the parish; the cottages have mostly two bedrooms; they are built of brick with slate roofs, tiled floors. Size of rooms 12 ft. by 9 ft. The ventilation and drainage is good. They are held under different employers and landlords at an average rent of 1*s.* 6*d.* a week. They mostly have gardens. The wages for men are 2*s.* 6*d.* a day, and for women 1*s.* a day; a boy of 8 years 6*d.* a day; of 13 years, 1*s.* a day. They are out at work in spring and autumn. The number on the books of the school is about 60, and the average attendance 45 in summer and 57 in winter, the larger proportion being under 10 years of age. There is also a sacking factory in this parish. A night school has been attempted here in the winter, but did not succeed.

Women in this district are very largely employed in field work, probably first on account of the cheapness of their labour; and, secondly, as being capable of doing harder work than the children. Line pulling is hard work, and beyond the capabilities of children. One of the results of this employment of women is that the elder girls are kept away from school to mind the small children. The Irish gangs come out of Howden for potatoe work, and it is said that one man

takes a piece of work and provides the hands; but they are not children as a rule. Immorality does not prevail among the Irish gangs.

BUBWITH PARISH, including the Townships.

Population, 1,452. Acreage, 10,299.

BUBWITH.

Population, 554. Acreage, 1,465.

This parish includes the townships of Spaldington, Willetoft, Gribthorpe, Breighton, Harlthorpe, and Foggathorpe. There is a school in Bubwith and one in Spaldington. There is also a school in Horton parish, a distance of a mile and a half.

In Bubwith there is no church Sunday school. There are two dissenting Sunday schools and two dame schools to teach reading, writing, and sewing for girls.

261. *Mr. Christie*, schoolmaster.—On the books, 39 boys and girls. Average attendance, 35. The school payments are 4*d.* and 6*d.* a week. I can only make 25*l.* a year, out of which I have to pay 4*l.* for rent of my house. I get no assistance from the esquire or clergyman, and I cannot make the school pay. The children are employed at an early age; one boy of 8 and another of 9 years were away all last summer. Some are employed with their parents in line dressing. Those boys who are out in the summer come to school in winter, but the attendance is very small and irregular. Most of the parents can read. The children are generally employed in potatoe picking, weeding, &c. Many women also are employed in potatoeing.

HOWDEN.

Population, 2,504. Acreage, 2,607.

262. *Rev. W. Hutchinson.*—The children go to work very young; there is great mortality among the young and the women. I should like to see a limit of age fixed for children's labour, but I do not think that the labouring classes themselves would approve of it. Women go out very much to work, those who have small children leave them in the charge of some woman, and much mischief is done by the use of Godfrey's cordial which is given to the children to keep them quiet.

263. *Mr. Green*, clerk to union.—There is not much pauperism in the union; widows mostly are on the lists. The children are sent out to work as soon as they can earn anything. The Howden district is full of potatoes and of flax culture. Women are very much employed, and the children are left in the charge of a woman.

264. *Mr. Hutchinson*, ironmonger, secretary to the savings bank.—The bank is very flourishing and is largely patronized by the poor of the neighbourhood as well as those of the town and very much by agricultural labourers; we pay three per cent. to depositors. There has been a night school all the winter attended by 50 scholars and much appreciated; this school was supported by all religious denominations. Parents do not value education for their children; they say, "they "got on very well without it themselves," and will not take the trouble to send their children to school. Children go as soon as they are able to field work.

HOWDEN UNION.

265. Letter from H. Tireman, Medical Officer, to the Hon. E. Portman.

"Gentlemen, Howden, May 18, 1868.

"In reply to the inquiries addressed to me by the Royal Commission respecting the employment of children, or young persons, and women, in agriculture, in the district of Howden, I beg to report as follows:—

"1st. That the effect of such field labour or employment is not injurious to the health and constitutions of the women themselves.

"2nd. That the said labour or employment has not any tendency to increase the mortality returns of infants, except in those instances where very young children are put out to day nursing, as is sometimes the case, particularly the children of young unmarried females, and that even such instances are not of frequent occurrence.

"3rd. That the state of the cottages, generally speaking, is satisfactory, and that overcrowding only occasionally prevails, and that amongst labourers with large families, great improvements having been effected in cottage dwellings, during the last 20 years. "I have, &c.

"Henry Tireman."

266. Meeting at Howden, April 4th.

Present about 30, including the principal occupiers of the district of Howdenshire.

The system of yearly farm servants is the same here as in other parts of Yorkshire. It is considered that two pair of horses, equal to two lads, is the quota for 100 acres of arable land.

Children are employed at an early age for bird tenting but not much in potatoe seasons. When they go out for weeding or for potatoeing they usually go with their mothers, and many would take two small ones who count as one for payment.

The farmers will not employ children under 10 years of age.

The decreased attendance at school at this time of the year is to be accounted for by the women going to work in the field and withdrawing bigger girls from school to take care of the little ones at home.

Men's wages 15*s.* a week, women 1*s.* a day. There was no objection to 10 years being fixed as the limit below which no child should go to work, nor to the requirement of six months' schooling for two years following, that is, up to 12 years of age, provided the time might be taken at any period of the year. The fixing of a limit would inflict no injury on the farmer, but it was thought that some parents might suffer by the loss of the earnings. The proposal of the production of a certificate of such school attendance for six months during the two years previous to hiring, with a penalty on the employer, was not approved, and it was suggested there would be great difficulties in enforcing such a system, "one farmer would employ "them if another would not."

The opportunities for learning in the greater part of the district are ample, though in some places schools are scarce and at a distance from the homes of the labourers. Parents are somewhat careless about sending the children to school after they are old enough to earn any money. Farm lads would not read at nights. A suggestion that the farmers might take some trouble to provide instruction for the lads in their houses in the evenings by means of books or by establishing a custom of reading aloud during the long evenings, was ridiculed.

The occupations are small, very few cottages are attached to the farms, but the district is thickly populated and there is not much need of cottages on the farms as the labourers are near their work.

Most of the cottages have gardens excepting in the towns or large village.

The rent averages 3*l.* a year for cottage without land, 5*l.* with a rood of land.

BLACKTOFT.

Population, 4,001. Acreage, 2,187.

267. *Rev. E. Ward.*—This is a long straggling parish; about 30 children, young persons, and women are employed in this parish in agriculture, but none under 10 years. They are employed in weeding and hoeing corn, bird tenting in spring and summer, and in pulling turnips and picking potatoes in the winter. The usual hours of work on the land are from 8 a.m. to 6 p.m. with an hour allowed for dinner. It would be much better if field work for females was done away with, especially in the case of young girls. The plan which suggests itself to me as the best is to enforce school attendance for a certain number of

E. R. York.
Mr. Portman.
d.

weeks during the year, leaving to the parents the power of choosing those weeks. The school payment here is so low as to bring it within the reach of all. The farm lads are not well looked after and do not come to church. I think that the state of education is better than it was a few years ago. Most people who come to be married are able to sign their names.

LAXTON.

Population, 327. Acreage, 1,230.

268. *W. Lawler*, schoolmaster.—This is a mixed school. On the register in winter, 107; average attendance for the year ending February 1868, 55. The boys go out to work from 7 years and upwards in the month of March. Girls leave school to attend to the children at home while the mothers are away in the fields. In May and June the school fills again. The children are employed in line-pulling in May, and corn harvest, then in potatoeing and pulling turnips till November; altogether nearly six months in the year. Mothers will take their children to work to earn 1*s.* a day, though I believe that the farmers do not care to have the small ones. The women all go to the fields. I would place the limit for children's work at 10 years. Boys who go bird-tenting do not attend Sunday school. The morals of the district are bad, and the language used by the women in the field is also very bad. The wages for bird-tenting are 6*d.* a day, and the hours from 6.30 a.m. to 6.30 p.m. I have some children here at school from Yokefleet, a distance of two miles.

YOKEFLEET.

Population, 190. Acreage, 1,458.

269. *G. Ayre.*—I am often employed to look after the people who pull line. I get so much a day from the farmer; when the work is done I get it measured, and pay the people according to what they have pulled. I do not collect the labourers; those who come are generally Irish of all ages, but the little ones are not much good at this work.

270. *Mrs. Collinson*, dame school.—I get 4*d.* a day for children, and more for babies. Girls go out to field work at 7 or 8 years of age. I think it a very bad thing for them, as they get into bad habits. I teach the children to read and to sew, but I cannot write myself. Parents do not send their children so much to my school now, as the other schools are cheaper.

271. *Mr. Pepper*, farmer.—I think it very desirable that some steps should be taken for improving the education of the people, but I should not like to have a tax put on for that purpose. I think there should be some inducement to parents to send their children to school, and facilities should be given. Many parents are very indifferent about it. Wages for men 15*s.* a week, 1*s.* a day for women; they have constant work through the winter. Most of the cottages have a rood of land attached to them, and are rented from 3*l.* 10*s.* to 5*l.* a year. Night schools as a rule in rural districts do not succeed for long; the farm lads are unable to attend in consequence of the duties they have to perform at the farms in the evenings. I think that it would be a good plan to have an itinerant schoolmaster to visit dame schools and farmhouses where remotely situated from the villages.

272. *Mr. Empson's* cottages.—Two down rooms, two bedrooms, and dairy, pigstye, and privy, one rood of land attached, 5*l.* a year. (In one of these cottages I found a girl of 13 years of age who was working in the fields who could neither read nor write.)

YORKSHIRE.—WEST RIDING.

W. R. York.
Mr. Portman.

SELBY.

School.

273. *Mr. Oxley*, master.—On the books 120 boys, 133 girls. Average for the quarter, January to March, 105 boys, 104 girls. For the summer quarter 100 each. In the months of July and September the attendance is the smallest. The children go out to the fields in the potato seasons as young as 9 years of age. There does not appear to be any gang system here. There are large flax mills in Selby. The line pulling and potato cropping are principally done by gangs of Irish, and by women who live in the town.

274. *William Rawling*, schoolmaster.—The children go out young to the fields for potato setting and picking. The "roperies" take the boys away young. Most of the girls go to the flax mills. Children of both sexes leave school altogether at 13 and 14 years of age.

275. *Jane Morley*, 13 years of age.—I have been out one year potato picking. I went a mile and a half to work for a farmer; about 20 boys and some women went together, one boy as young as 10 years. We worked from 8 a.m. to 5 p.m. at 1*s.* 6*d.* a day. Boys and women were looked after by the foreman and paid sometimes by him and sometimes by the master.

276. *George Lowther, Esq.*—Children are employed in weeding corn and flax, and in turnip hoeing. Irish do most of the potato picking and turnip pulling and the harvest work. School accommodation in Selby is very good; in the surrounding villages also there is generally a day school and always a Sunday school. I think that a certificate of school attendance for a certain number of months during the year should be required and would be beneficial. The farms vary in size from 50 to 350acres. The farmers have lads living in their housesand frequently they dine with them. I think that the immorality of the statutes and the evils of the hiring systems are overstated. The morality in the district is pretty good. The number of bastard children is small, and great pains are taken by the ministers of all denominations. The cottages want improvement in the district. The farmers would be willing to have more on their land and pay the landlord a fair per-centage for the necessary outlay. There are 13 acres of allotments turned into gardens in portions of one rood each, rented at 1*l.* 10*d.* a rood free of rates. Lord Londesborough has also let 11 acres to the Odd Fellows, at 30*l.* a year, which are divided into allotments; there are several other plots belonging to the town. The wages for an ordinary labourer are 13*s.* a week all money.

We have in the town a system of benefit societies called "free gifts." There is no fund for sickness but money is collected for members in each case on the doctor's certificate. The payment is threepence each member. There is a burial fund out of which 10*l.* is given on the death of the husband and 6*l.* of the wife. The meetings of the "free gifts" are never held at public houses, but in a school room. There is no expense of management. The allowance during sickness is 10*s.* a week. There is also a society called the "Mariners' Society" which was established at the time of the French war.

There are about 200 females and 100 males in Selby, employed in agriculture. The greater part of these women and young persons of both sexes are Irish, settled in the town. The field work, taken in connexion with rapid child-bearing, produces premature old age among the married women. The effect of this employment is to render the women comparatively unfitted for domestic service.

I would not place any restriction on the employment of females; boys should not be employed before 13 years of age; in which case the existing facilities for education would give this class ample opportunities for a fair amount of school attendance.

The children of the farmers and of the better class of farm labourers often walk two to three miles to school. Their attendance is not affected by the pecuniary resources of the parents, on account of the great number of schools now accessible to the children of the poor on easy terms; it is more affected by the ignorance of the parents and by their non-appreciation of the importance of education.

Cottage accommodation in this district has been very defective, but is, I think, improving. Where the family lives in comfort and decency its members have more self respect and the moral tone is higher. The cottages are sometimes four miles from the farm where the labourer works. They are built of brick and tiled, with a living room 12 or 13 feet by 12 feet, a small back kitchen, and two bedrooms above—four rooms in all to a family of probably seven persons—usually with a garden and outhouses.

The annual rent from 4*l.* to 5*l.*, payable quarterly or half-yearly by the settled labourers, and weekly by the migratory.

As regards the education, in the school *sense*, of the agricultural labouring class, I would remark that in this town and district it can hardly be regarded as insufficient. It is very rare now for a young couple at their marriage to be unable to sign the register.

Night schools are not regarded with much favour in this district; at the same time they are not wholly discarded, but their operation is very limited.

Wesleyan School.

277. Infants 100 on books. They attend from 3 years and upwards, and remain in the school till 6 or 7 years of age. Bigger girls come down twice in the week for needle-work in the afternoon. Payment 2*d.* or 3*d.* a week.

Mixed School.

Number on the books 141. Average for quarter ending February 110. The majority are town children; the town boys remain till 13 or 14 years. The country boys are less regular in their attendance.

278. *William Smith*, 13 years of age.—I was out potato "scratching" in the autumn, and earned 1*s.* 8*d.* a day at one place and 1*s.* 11*d.* at another by "the take." I worked with the women.

279. *John Stead*, 10 years of age.—I have been out potato scratching and weeding turnips for 3 years, in July and the autumn, I was away perhaps two months from the school; I worked with the women and got 1*s.* 3*d.* a day. The boys worked in a row with a man to look after them; we were hired and paid by the farmer. Some little girls worked with us; we were taken in a cart, and we went two miles to work.

280. *Ann Elizabeth Stead*, 13 years old.—I have been sent out two years weeding turnips and potatoe scratching, I was paid 1*s.* 6*d.* a day by the farmer, always had kind treatment and did not work in wet weather. I took victuals in the same bag as my brother. Boys and girls work together.

281. Selby Chamber of Agriculture.

Meeting, April 6th.

It was stated that the wages in the district were 2*s.* 6*d.* a day. It was agreed that the limit of age for boys work might be fixed at 10 years, for girls at 12. Women are very much employed in this district and children with them at the potato seasons. It was agreed that prior to the age of 10 education should be compulsory and that between the ages of 10 and 13 6 months out of the 12 should be spent at school, and that no employer of labour should be allowed to engage a child at the age named without a certificate that such child had been to school the requisite period. Parents would not be seriously injured by the loss of earnings under 10 years of age. Though compulsory education was unanimously approved of by the meeting, Mr. S. Hutchinson observed that it would be preferable if the education of the children of the agricultural labourer could be secured by attraction rather than by compulsion. The average rent of cottages without gardens is from 3*l.* to 4*l.* Allotments of a rood or half a rood are much appreciated by the cottagers and are sufficiently large for him to manage properly. There is a great scarcity of cottages on the farms and on an average labourers would have to walk about a mile to a farm for their work. As a rule the cottages in the district do not possess sufficient accommodation. The meeting was favourable to the erection of cottages on the farms as tending to lessen the necessity for hiring servants at the statutes. The system of hiring servants into the farmhouses was considered beneficial for the young men themselves, as they were taken care of, being placed under a certain amount of restriction and were protected from the influence of evil example. It was suggested by Mr. Hutchinson that it would be most desirable to put a check on married women going to field work with a young infant at home, that is they should not go till the child is a certain age to be fixed by law. Infant mortality is much increased by this practice.

HUMBLEDON.

Population, 550. Acreage, 2,245.

282. *John Rawlins*, schoolmaster.—On the books, boys 61; average attendance, winter, 50; summer, 20. The children go out weeding and pulling peas at 10 years of age. Women and children go together to the number of 30 or 40. They are looked after and paid by the man who owns the pea crop. The children return to school in the winter; and we can hardly secure six months school attendance for them after they are 10 years of age. If the children would attend regularly up to 10 years, they would be well grounded in reading, writing, and the four first rules of arithmetic. The wages for potato cropping are 1*s.* a day; for pulling peas, 1*d.* per peck, for both women and children.

The payment to the school is 7*d.* a week, for reading, writing, and arithmetic; small children pay 3*d.* a week. We have an endowment of 9*l.* for six free scholars. The rest of the money is made up by subscription, and by the pence. There is no Government grant. We tried a night school, but it did not succeed. Cottage rent 4*l.* to 4*l.* 10*s.* per annum; some have gardens, but there are no allotments.

MONKFRYSTONE.

Population about 1,100.

283. *Mr. Hargraves.*—Of the population, 227 are children, and of these 103 go to the National school; 74 do not go to school, but run about the streets or do occasional work. Besides this, there are 53 young persons of both sexes from 13 to 18 years of age, growing up imperfectly educated; 20 males and 33 females. There are many of the parents who are very imperfectly educated, and four whole familes where neither father or mother can read or write at all; they take no interest or pleasure in their children's school work and neglect their homes in every respect. George Hill, formerly a labourer, is now one of the largest employers in this village or neighbourhood in pea time and potato gathering, having 60 to 80 boys, girls, and women at work at once in one field, having also a number of women and girls sorting potatoes nearly all the winter through. At the close of the potato harvest, this man can and does afford to make annually what is called a "potato feast" held at a publichouse for all who have pulled peas or gathered potatoes for for him. All this is defrayed at his own cost. After tea, drinking and dancing, and singing are indulged in till an early hour the next day. Mothers and children are too frequently intoxicated on this occasion, and many of the children absent themselves from school

W. R. York.

Mr. Portman.

d.

the next day in consequence of the effects of this revel.

A village news-room, held at the school or anywhere, except at inns, well supplied with daily papers and periodicals, to create a taste for reading and for general information, and to draw young men from the publichouse is greatly needed, but I despair of ever establishing one single-handed. The school attendance is principally affected by the pea-pulling which last year began on the 1st of July. Pea growing has been for many years, and is still greatly on the increase, and as the peas are all ready or nearly so at one time, there is a complete drain on the schools. The pulling generally takes place on Monday, Wednesday, and Friday, for the purpose of supplying the markets of Leeds, Manchester, Bradford, and others.

The children are disengaged on Tuesday and Friday, and might be at school on those days, but they very seldom or ever attend on those days, if absent on the Monday. Mothers and young persons can earn 3*s.* 6*d.* to 4*s.* a day. Though all earn from 6*d.* to 1*s.* 6*d.* and 2*s.* a day, yet they grudge to pay 2*d.* for two days' schooling; these two days in the week would afford us an opportunity for counteracting the evil received on the other three days when at work. Children commence pea-pulling at 6 years of age.

On the school register, 138 boys, 117 girls. The summer average has been 50. The winter average 150, and over, for the past 10 years. Only 73 boys and girls over 6 years of age attended 100 days up to 1st April 1868. The only thing in my opinion to secure the attendance of the children here is a compulsory act to which people would meekly bow, nothing else would suffice. I would recommend a compulsory attendance from 6 to 10 or 12 years with compulsory attendance after 10, to 13 or 14, at a night school, that the evening school should be taught by a properly qualified pupil-teacher or assistant master, and that the grant should be given for such teacher uncertificated.

The work of pea pulling and potato planting where much stooping is required is very injurious to married women. Many children are prematurely born, some being dead at birth, or dying soon after. This is brought on by severe bodily exertion. The cottages are crowded generally, and mostly by the family and lodgers. No cottage has more than two bedrooms, and none have three. They are mostly built of stone. The size of the room is about 14 ft. by 14. One room downstairs, one room and a piece upstairs. They are not well supplied with water, and very few have gardens. Rent 3*l.* to 5*l.* a year.

I condemn the system of statute-hiring. All well-disposed masters and mistresses are against them. All the farmers hire at statute fairs their servants, both men and women. I tried a free register office for servants; it succeeded very well for a time, but I was obliged to discontinue it. Every schoolmaster might undertake an office at his house, which would tend much to crush the system of statute gathering.

I have some children from Birkin and some from South Milford in the school. The number of girls in the school has lately increased in consequence of the fear of the working of the Gangs Act, and of the inquiry now going on. Boys are more in demand than girls for farm work.

284. *James Hester* (9 years old).—I was at potato planting last year. I have also been out pea pulling; I can pull 12 pecks of peas a day, equal to 1*s.* I get 9*d.* a day for potato planting. We go 19 or 20 together. A man will buy a field of potatoes and hire lads to pick them.

[A girl told me that she could pull seven pecks of peas a day at 1*d.* a peck; they go out at 7 in the morning to 6 in the evening, breakfast before they go and stop an hour for dinner.—E. B. P.]

285. *B. Hemsworth, Esq.*—The school is almost entirely supported by me. I have held the benefit society money for some time past; the deposits have increased considerably. We pay 10*s.* a week in sickness; in case of death 10*l.* for a man, 7*l.* for a woman. I should like to see a hospital for contagious disorders attached to each union, to which the sick should be sent to save the parish from the spreading of disease. I think an education rate would do away with voluntary aid.

PECKFIELD, near South Milford.

286. *W. Paver, Esq.*—Pea cultivation takes children out as early as 8 years of age; there is also a large cultivation of potatoes at which they are much employed. We have the same system of farm lads living in the houses as in other parts of Yorkshire; the proportion is two lads to 100 acres. This district is under Gilbert's Act, and is not affected by the Union Chargeability Bill. The restriction of age would in the case of pea pulling produce hardship to the parents of children who earn as much as a woman in a day; sometimes they will work 100 in a field. There are gangs from Kippax and Brotherton for potato picking. A man buys the crops and brings a lot of women, girls, and children to pick them. The three systems with regard to the potato crops are:—

(1.) The farmer does all the work.

(2.) The farmer sells the crop, ploughs it up and lets the buyer bring the gang to pick the potatoes.

(3.) The buyer does all except the horse work, he will even sometimes plant the crop, in that case the land is let to the buyer of the crop who puts in the potatoes, does the manuring, in fact is sub-lessee.

Women and children have individual engagements. A 200-acre farm is a large one, anything over that is exceptional. There is a want of more cottages on the farms.

In Sherburn there are 80 males and 90 females employed in agriculture. Of the males 20 are between 8 and 10 years, 25 between 10 and 13 years, and 35 between 13 and 18 years of age. Of the females, 10 are between 8 and 10 years, 15 between 10 and 13 years, 30 between 13 and 18 years; over 18 years, 15 married and 20 unmarried.

In South Milford 20 males and 44 females. Of the males, nine are between 10 and 12 years and 11 between 13 and 18 years of age. Of the females, two between 8 and 10 years, five between 10 and 13 years, 11 between 13 and 18 years; over 18 years, 22 married and four unmarried.

The employments are, in spring, sowing beans and planting potatoes; in summer, weeding and tending corn, and gathering peas; in autumn, in gathering peas and potatoes; in winter, in sorting potatoes to a small extent.

The greatest distance to work is 2½ miles. Hours of work on the land are nine, with one hour allowed for meals.

Physically this work is not injurious to the females, but those who go in large companies are generally rougher and less respectable than those employed less regularly.

From some villages in the neighbourhood women are taken in large numbers for potato getting and sorting, and for willow-peeling. This system is bad for their morals and unfits them for domestic service. In these villages it would be very desirable if this work could be performed otherwise than by women. The probable substitute would be gangs of Irish living in barns and crowded into low lodging-houses, as is now much the case.

I would not restrict female labour for sowing beans, weeding corn, &c., which girls can do without injury, and which it would be difficult to get done in some cases without their help.

I do not think distance to work is a serious question as far as this district is concerned. The hours of labour in agricultural work are not such as to require restriction. There is such a demand for labour as to enable the labouring class to make such terms for themselves as to avoid being over-worked.

A certain number of hours during six months of the year would be the best mode of enforcing school attendance. Half-days or alternate days would be very inconvenient to the farmer, there are not suf-

ficient available children to have two relays, besides, greater progress would be made by the children if continuously at school.

The schools are conveniently situated, and wages are quite high enough to enable the labourers to send their children if they are so disposed.

The better the cottage accommodation the better the morals, and the higher the tone of self respect among the cottagers. In good cottages the children are better brought up than in bad ones. The villages are near the centre of the township, but some of the labourers go from two to three miles to work. Many are employed in lime quarries and brick-making, and on the railways.

The cottages are built of brick or stone with slate or tile roofs. Those more recently built have generally good-sized windows. The size of the rooms varies very much; in the better cottages they are 12 or 14 feet square and eight feet high, in others much smaller.

There are generally one room on ground floor with wash-place and pantry, and two bedrooms above. Water from limestone rock is good and plentiful. Most cottages have gardens, pigsties, and privies. There are many small freeholders in both places to whom the cottages belong. Rent varies from 5*l.* a year downwards. Both parishes are under "the "Gilbert Act." The great difficulty in providing good cottages is the cost being so great as to cause them to pay a low rate of interest, unless the rent is higher than an agricultural labourer ought to pay.

SHERBURN SCHOOL.

In Summer.

	On Register.	Average Attendance.
Boys:		
Under 10 - -	57	32
Between 10 and 13 -	33	13
Girls:		
Under 10 - -	35	25
Between 10 and 13 -	10	5

In Winter.

Boys:		
Under 10 - -	57	45

Girls:		
Under 10 - -	20	9
Between 10 and 13 -	9	8

There is no night school.

BIRKEN.

Population, 176. - Acreage, 2,064.

W. R. York.
Mr. Portman.
d.

287. *John Mollett*, farmer.—The cultivation is two-thirds arable, and one third pasture. We have about 30 children, young persons and women employed occasionally in the parish, none under 10 years of age; they are employed in planting potatoes, weeding corn and in gathering potatoes.

The hours of work on the land are eight, with one hour for meals; I do not think that the work injuriously affects their health. The morals of the women are as good as those who are not employed in out-door labour, and I consider that it does not interfere with their proper training for domestic duties. I would not place any restriction on the employment of boys or women. The only practicable mode for enforcing school attendance would be a certain number of days during the six winter months; one-third of the children are partly prevented by the distance from attending school.

The cottages are good, healthy, and low-rented, but we require double the number we have. Every cottage has a garden varying from 10 perches to one acre with suitable outhouses for convenience. The rents 2*l.* 10*s.* to 3*l.* 10*s.* The principal landowner has not a single cottage in the village. If each landlord would erect from one to two cottages per hundred acres on each farm there would be a sufficient supply.

There is no day school in the village; but we have a Sunday school and a night school, kept by the clergyman's daughters. Some of the children go to day school at Beal, others to Monkfrystone two miles off. Parents are very careless about sending their children to school. I think that 10 years might be fairly struck as the limit for work.

288. *Miss Green.*—The night school is open all the year round, average, four nights in the week and on Sunday from 7 till 8.30. There are about 20 scholars above 12 years of age who are all farm servants with the exception of three. They come to school at different hours during the time that the school is open, according to the hours which are fixed by the farmers for foddering the cattle and stabling and doing the horses. They will drop in and stay for an hour or so, according to the work they are required to do. They are taught reading, writing, and arithmetic.

HADDLESEY, WEST, and CHAPEL.

Population rather more than 400. Acreage, 2,290.

289. In these townships there are rather more than 40 children, young persons, and women, employed on the farms. Of the 20 boys:

Under 10 - - -	4
Between 10 and 13 - -	12
„ 13 and 18 - -	4

Several of these boys go to school three or four months in the year. Of the 20 women 8 are between 13 and 18 years; 12 are married women over 18 years, and 4 are unmarried. Many of the women are constantly at work, they are employed in sorting and planting potatoes, in hoeing corn and turnips, pulling peas and in gathering and sorting potatoes. In the winter a few are employed in cutting turnips. The hours of work on the land for women and girls are from 8 to 6, with an hour at noon for rest. For the boys from 6 to 6, with rest for breakfast, and at noon; their health is not often injured unless they get their clothes or feet wet. The effect upon their morals is generally extremely bad and girls who have got once used to field work can seldom be induced afterwards to stay in domestic service. It is doubtful whether the mothers of families really gain anything pecuniarily by going out to work, so much is wasted at home for the want of proper cooking, of attention to the children, their clothes, &c. I would not allow boys to work under 10 years of age. I think that the half-day system and alternate day system seem quite impracticable in agricultural districts. Possibly attendance at school during six months of the year might be enforced here. A certificate of adequate reading

W. R. York. Mr. Portman. d.

and writing might be required before a boy was allowed to go to work. The school attendance is not much affected by the distance, except in winter with regard to the girls, and even then perhaps it is more the dirt and darkness which keeps them away than the distance. There are plenty of cottages in the townships for the labourers who are required; there is not a sufficient number of them with three bedrooms. The cottages altogether are very fair, most having two bedrooms and gardens; most of them belong to small holders, but no unfair advantage is taken of this to interfere as to the shops at which they deal. Average rent 4*l.* a year.

SCHOOL.

In Summer.

	On Register.	Average Attendance.
Boys:		
Under 10 - -	12	8
Between 10 and 13 -	5	2
Girls:		
Under 10 - -	16	8
Between 10 and 13 -	10	6

In Winter.

Boys:		
Under 10 - -	18	10
Between 10 and 13 -	8	4
Girls:		
Under 10 - -	10	7
Between 10 and 13 -	10	6

There are in summer two boys and 10 girls neither at work nor at school, and in winter eight boys and 15 girls.

In all these figures an approximate estimate only could be given. There is no night school in these townships. I do not think a night school adequately supplies the deficiencies of the day school, it may prevent children forgetting what they already know, and the intelligent lad may improve himself considerably, but dull boys who cannot read will seldom learn to do so while in a night school. The difficulties of maintaining a night school are the interference and opposition of the masters and landowners for whom the lads work, the awkwardness and variety of times at which they fodder the horses; to this must be added, in some cases, apathy and carelessness on the parts of the lads themselves.

290. *Mr. Parkin*, schoolmaster.—The school has 45 on books in summer, the attendance about 25; in winter much larger. I keep children at school up to 13 years of age, they are not much employed, except for bird tenting, singling turnips, and weeding at certain seasons of the year. There is no poverty in the parish, there being always an abundance of work by the river side, if the agricultural employment fails. The parents are rather inclined to make their children earn something as soon as they are able.

291. *Mr. Samuel Laverack*, farmer, Chapel Haddlesey.—I am now paying 16*s.* and 17*s.* a week for an ordinary labourer, and people (with the exception of drunken folk) are very well off. Most of the cottages have gardens. The children are not employed directly by the farmers, but they go out as young as 9 for turnip singling and weeding in company with their parents, who take the work by the piece whenever it can be so done, and require the help of the children.

Turnip hoeing would be taken at 7*s.* 6*d.* to 9*s.* an acre, and a man will earn 3*s.* a day at it. Some few men can hoe three roods a day.

BRAYTON.

292. *Mr. Smith*, farmer.—Farms 350 acres. There is a Sunday school in the parish, and a dame school in the day, for girls mostly; the bigger boys go to school at Selby. Children are not much employed, except with their parents at turnip and potato times. People are well off.

SWINFLEET.

293. *Rev. J. Heaney.*—From Goole to Trentfall wheat and potatoes are grown in large quantities. The district is called Marshland. Children are away from school from April till nearly harvest. The school on the 9th of April was nearly empty. The education in my district is at a very low ebb, and the morals are bad. The farmers, being themselves very badly educated, take no trouble about their labourers or farm servants, and do not send them to church.

There are no large proprietors, and consequently no influence is brought to bear upon them, and the character of the labourer is not inquired into. Any system of certificates of school attendance, character, or the like would be evaded if it was possible to evade it. Strict compulsion is the only chance of success with this class of man. The occupations in Marshland are not large, but the occupiers are mostly rich men, as potato farming requires a great deal of capital per acre. The land is very good, and is principally what is called warp land. I have known as many as 300 women go out from Swinfleet in the morning to work. The children go out young, but with their parents. There is no gang system.

GOOLE.

294. *Edward Deyes*, schoolmaster.—Number on the register, boys, 155. Attendance, in winter, 94; in summer, 82. Children go out as young as 8 years for hoeing corn, picking potatoes, and pulling line, and are out for seven or eight weeks. The seasons of the year at which their labour is mostly required are the harvest times (wheat and potatoes). They lose a great deal of the knowledge which they had previously acquired while out in the fields, and very few remain at school after 12 years of age. From 10 to 12 years of age they might perfectly well attend school in winter. We tried a night school, but it was given up on account of the irregular attendance. There are 200 children running about the town who do not come to school at all. It would be necessary to have some compulsory school attendance besides fixing an age at which no child shall go to work.

A woman and a boy will get 2*s.* a day between them at potato work.

The hours are generally from 8 to 6, and the distance varies up to two and three miles.

RAWCLIFFE.

Population, 1,645; acreage, 4,000; cultivation chiefly arable.

295. *C. N. Lake, Esq.*—There are 150 children, young persons, and women employed in this parish in potato planting and weeding, in harvesting and sorting potatoes. Some go as far as two miles to their work. The hours of work are from 9 to 5, with an hour allowed for dinner. Field employment is injurious to the morals of the females, and prevents them from entering domestic service.

I would not allow boys to go to work before 12 years of age, and I would provide for their school attendances by alternate whole days at school and whole days at work. The school attendance is much affected by the distance, but not by the pecuniary resources of the parents.

There should be two cottages per 100 acres for the requirements of the land; we have that proportion, and the cottages are of themselves good in construction, with generally two low rooms and two or three chambers. Rent, 3*l.* 15*s.* a year.

School.

—	On Register.	Average Attendance.
Boys:		
Under 10 - -	17	14
Between 10 and 13 -	36	20
Girls:		
Under 10 - -	38	28
Between 10 and 13 -	14	10
Boys:		
Under 10 - -	22	18
Between 10 and 13 -	43	23
Girls:		
Under 10 - -	32	27
Between 10 and 13 -	15	15

There is no evening school in the parish.

296. *Rev. R. Turner.*—The principal crops in this district are wheat, potatoes, flax, and beans. The land is for the most part warp land. The women are much employed, but children I think not before 10 or 11 years of age. The hours of work on the land are from 10 to 12 hours. There is also in the place a flax mill.

I think the physical condition of the labourer should first be improved, and that there would be then less difficulty in getting the children to school. When a man is a little better off, he sends them regularly to school; but the farmers are at certain times anxious to get all the hands they can, and the parents cannot afford to lose the earnings. Field labour demoralizes the girls and makes them unfit and disinclined for domestic service. A boy who has got a little learning up to 11 or 13 years of age soon loses it. Night schools do not answer on account of the distance and fatigue after a day's work. This township is part of Snaith, which formerly extended to the Trent.

In considering the question of education by the State, it would be well to consider, first, how far it is advisable to put the State in *loco parentis*, and do away with parental authority; and, secondly, in what way funds are to be provided for the supply of a sufficient number of schools and free education of the people, the feeling against increased rates on the land being at present very great.

DONCASTER UNION.

Returns to Circular of Questions issued to Guardians.

ROSSINGTON.

Population, 400. - Acreage, 3,051.

297. *James Brown, Esq.*—Children, young persons, and women are employed in agriculture in this parish at 8 or 9 years of age. I do not consider such employment injurious to their health or morals; but I think no child should be permitted to work on the land till he is 12 years old. All children should attend school pretty regularly from the beginning of November till the latter part of March, till they are 13 years old. In April, May, and June they can be usefully employed in field labour; in July they may again attend school until harvest.

I think it would be desirable to require the production of a certificate of a certain amount of school attendance before hiring. It is not desirable to apply the half day or alternate day system to agriculture.

Education is generally good. The cottages are good, but the number is not quite sufficient for the requirements of the land; they have gardens.

The present system of hirings is most objectionable.

CONISBOROUGH.

Population, 1,655. - Acreage, 4,558.

W. R. York.

Mr. Portman.

d.

298. *Basville Milward.*—Children, young persons, and women are employed here, but not injuriously to their health or morals. They go to work at 8 to 10 years. No restriction is in my opinion necessary; parents do not allow their children to be overworked nor do they let them work in the fields at too tender an age. I would require seven or eight months' school attendance in the year from children earning wages. The half day or alternate day systems are not desirable. I would not require a certificate of school attendance before hiring. The state of education is good. I believe the cottages are sufficient for the wants of the land; they are generally good and in most cases have gardens, which are a great advantage to the labourer.

WADWORTH.

Population, 656. - Acreage, 3,133.

299. *G. Marshall.* — Children are to a certain extent employed here in agriculture at 10 years of age and upwards. I do not think such employment in any way injurious to them, and I would not place any restrictions on it. They might attend school half the year, but I would not require the production of a certificate of such attendance before hiring.

The cottages are pretty good, are sufficient in number, and have gardens, which I consider a great advantage to the labourer.

BRAITHWELL.

Population, 422. - Acreage, 1,948.

300. *William Law.*—Children are employed here but seldom under 10 years of age. I cannot state any age desirable as a limit for such work. We have one day school attended by 47 in winter, 35 in summer; and two Sunday schools where the attendance is about 83. Half-day or alternate day system could not be worked.

Cottages are sufficient in number but some are too small. About 20 of them are without gardens. I consider a garden advantageous to the labourer.

FRICKLEY.

Population, 312. - Acreage, 1,589.

301. *William Aldam, Esq.*—So far as I know, the employment of very young children is too occasional to be injurious, and if combined with some educational test may be advantageous. A longer attendance at school should be required from young children than from older ones whose labour is more effective and in more demand. I would suggest for children,

	Weeks of 5 days each.
Below 10 - - -	175 days = 35
Above 10 and between 11 years,	150 days = 30
Between 11 and 12 years, -	125 days = 25

The principal of education embodied in the Factory Acts might be conveniently carried out in agriculture by requiring each child, as the condition of his being allowed to be employed, to have a certificate of the requisite school attendance in the previous year, such certificate being necessary up to 13 years of age, so as to secure school attendance up to 12 years. I should consider the half day or alternate day systems inconvenient if not impracticable.

In the two parishes with which I am most connected, viz., Clayton in Frickley, and Warmsworth, there are good schools; the same is the case in other townships where I have property. Parents are not always careful to send their children to school, and I think the stimulus of a certificate would be useful.

More cottages are required in many places though perhaps not to a great extent. The rent in purely agricultural villages is so small comparatively to the cost of building that there is no inducement to build them.

W. R. York. Mr. Portman. d.

I have always considered gardens an advantage, they enable a labourer to utilise much of his spare time, conduce to steady habits, and add to his comfort. It is not desirable that the allotment be so large as to make the labourer a small cultivator. I believe three-quarters of a rood is about what should be given.

BARMBY DUN.

Population, 544. - Acreage, 2,386.

302. *Arthur J. Smith.*—Very few women and children are employed in this parish, about 6 of each, and no young persons: they go out to work between 10 and 12 years of age. Children are of no use on a farm before 10 years of age, and then only to tent crows; from 12 to 14 years they are useful for general purposes.

Women and children are not hired, but are employed from time to time as occasion requires, and frequently only at long intervals, so that children have plenty of opportunity to go to school.

Certificates are not necessary, but I have no objection to them. Females from 15 to 21 years of age are much better in service than working in the fields.

The parents of children in this parish do not avail themselves of the opportunity of sending their children to school as much as they might. The children of working parents go to school better than others. The half days or alternate day system it not desirable.

The cottages are sufficiently numerous but rather small and not in good condition; most of them have garden allotments. I consider these an advantage to the labourer, but they should not be larger than 20 or 30 perches each.

I disapprove of register offices for farm servants. The statutes are not so bad as represented; but I should much approve of a system of certificate of good conduct from the last employer.

OWSTON.

Population, 269. - Acreage, 1,815.

303. *George Townend.*—There are six or eight children of 10 years old employed in this parish. I do not think such employment injurious to their health, and would not place any restriction on it, except in the case of girls under 14 years. Children earning wages should have six months' schooling in the year. It would be desirable to have a written testimonial from last employer required from lads at hiring time.

SPROTBURGH.

Population, 339. - Acreage, 2,732.

304. *Thomas Wood.*—About half a dozen children of 10 years of age are employed here. They ought not to work before that age. I would require 100 days' schooling in the year up to 12 years of age. Half days or alternate days could not work. More cottages are wanted, most have gardens but no allotments. "Statutes" are thoroughly bad and demoralising for girls.

BARMBROUGH.

Population, 462. - Acreage, 2,125.

305. *Joseph Lockwood,* overseer.—In the summer season the employment is healthy and not injurious to the morals. Perhaps not more than 20 children are employed in the parish and seldom any before 11 years of age. It is not desirable to place any restriction on such labour. It would perhaps be beneficial to parents and children if the latter could all be educated (up to Standard II. at least) before being hired. Children earning wages should attend school at least half the year. Half days or alternate days would be very inconvenient to employers, and often a loss both to them and to the employed. The cottages are good and sufficient in number. There are some gardens and a few allotments. If the garden or allotment be not too large for the requirements of the workman's family they are advantageous, if too large, they are not well attended to and take up too much time.

ALMHOLME.

306. *R. C. Workman.*—About eight children of about 10 years of age are employed here. I would not allow any to work under 10 years. Children earning wages should attend school for six months during the year. The cottages are good and have gardens or allotments.

ASKERN.

Population, 379. - Acreage, 849.

307. *William Townend.*—Some children go out very young. I would not allow any to go under 10 years of age. They should attend school for six months in the year, and produce a certificate of such attendance before hiring. There is a good National school here, having yearly good reports from the Government Inspector. The cottages are good and sufficient in number; some have gardens, which are a great advantage to the labourer. It would be better if statute fairs were abolished, though it would be a work of time, so many people being opposed to a change.

308. *F. B. Frank* (*ex officio* guardian).—Children, &c., are employed in agriculture, but I do not consider such employment injurious either to health or morals. I would forbid such employment under 10 years of age. Regular attendance at school during the winter months, or for six months in the year, would be preferable to half days or alternate days at school and work. The present system of statute hiring is most objectionable and conducive to great immorality; in my opinion it ought to be abolished by law.

HICKLETON.

Population, 127. - Acreage, 1,060.

309. *Robert Brooks.*—No children or women are employed here. The Sunday school attendance is sufficient for those earning wages. Half days or alternate days at school and work are not desirable. The cottages are very good but there is not a sufficient number.

BURGHWALLIS.

Population, 226. - Acreage, 1,607.

310. *Rev. Francis W. Peel.*—Young children are employed but not in great numbers. They go out tenting at 7 or 8 years of age. I do not think field-work injurious to the health or worse for the morals than any other employment. Ten years of age is quite soon enough for "work," but I do not include "tenting" under the term "work." Children earning wages should attend school for six months during the year, and if it could be enforced, the requiring the production of a certificate of such attendance before hiring is desirable. I think the half-day system would be best, but perhaps most difficult to carry out. The upper end of the parish is well off for education, at the lower end being far from a school it is indifferent.

The cottages are middling; few have two sleeping rooms, but there are sufficient for the agricultural work of the parish. Most have small gardens, which are an advantage to the cottagers.

The system of hiring female servants at the statutes is degrading and demoralizing, and is only worthy of a country in the lowest state of barbarism. It might easily and very advantageously be changed for the system of hiring at register offices, if it were not for the pig-headedness of people who are averse to changing a bad system for a good one, and for the immorality of the females, who know that if the system were adopted they would have to conduct themselves with propriety so as to insure a character.

BALBY WITH HEXTHORPE.

Population, 1,058. - Acreage, 1,613.

311. *P. M. Middlemess.*—Women and children are occasionally employed in agriculture. Such employ-

ment is not considered injurious in any way. Children should not work before 10 years of age. Half days or alternate days at school and work are not desirable. Those children who are earning wages should attend school for six months in the year, and the production of a certificate of such attendance is desirable at hiring. There are plenty of cottages and they are in good condition, with both gardens and allotments. The present system of statute hirings is decidedly bad.

CADEBY.

Population, 165. - Acreage, 1,234.

312. *C. T. Ward.*—Children of average age of 10 years are employed in agriculture, and I do not consider such employment injurious, either to health or morals. As a rule it is not necessary to place any restriction. Half days or alternate days at school and work are impossible. Six months' school attendance during the year might be required, but it would not be desirable to require the production at hiring of a certificate of such attendance. The cottages are tolerably good and in sufficient number; most of them have gardens. Servants should be led to place a higher value on their character.

CAMPSALL.

Population, 349. - Acreage, 1,775.

313. *Ch. Chapman.*—Children of about 11 years of age are employed in this parish, but I do not think such employment injurious to their health or morals. There is not a sufficient number of cottages for the requirements of the land; most of them have gardens.

314. *W. Walker, Esq.* (*ex-officio* guardian).—Children and women are all more or less employed in the fields, but not, I think, to such an extent as to be injurious to either their health or their morals. They are employed in bird-tenting at a very early age, probably at 8 years, and in any other light work, such as "dibbling wheat." Assuming that they do commence at too early an age in some few instances the evil is not, in my opinion, sufficient (so far as this neighbourhood goes) to call for the placing of any restriction thereon. The half-day or alternate day systems are not desirable, for in some seasons of the year there is ample employment in the fields for many consecutive days, at other seasons none at all, and I do not think it desirable to take children away from work in the fields for more than half their time in the year. I should be disposed to require that all children should attend school for about half of each year, *i.e.*, for about 180 days (Sundays included) of five or six hours each, or for 360 half days of three hours each, or say, perhaps, 150 and 300 respectively from the age of 6 to 12. It would be difficult to work a rule requiring the production of a certificate of such attendance before hiring, at all events great care would be required in working it. It must not be retrospective beyond a year or two, it would not do to prevent a lad of 15 years from being hired because he had not attended school properly at 8 years; but it might be well to enact that a person should not be hired in any year till he or she had made up the deficiency (if any) in the number of days' attendance in the year immediately preceding. The state of education is better than the average of agricultural villages, but there is ample room for improvement. In Wadworth there is a good National school. At Tickhill both a National and infant school, both good, but not so well attended as they ought to be. The cottages are as good as in most other villages, and much better than in the south of England, but here again there is ample room for improvement both in numbers and in quality. Many of them have gardens, which, if not too large, seem to be clearly an advantage to the labourer, but they should on no account be larger than half a rood to each cottage. The statute fairs are an undeniable evil, but it is most difficult to find any remedy. My more immediate knowledge is of the parishes of Wadworth, Tickhill, and Stainton.

CUSWORTH.

315. *W. B. Wrightson, Esq.*, Chairman of Board.—The number of children employed is not very great, and there is no injury to their health or morals; they are probably not employed before 10 years of age, and it is only a little dibbling that is done by them at a very early age. It does not appear to me desirable to place any limit or restriction as to age. I should think the half-day or alternate day system desirable in many cases, but I have great doubt whether any such system should be enforced by authority. As much school attendance as can fairly be had without preventing the earning of wages is desirable. I would not advise the requiring of any certificate before hiring. I do not see the necessity of any restriction on female labour, though the companionship of elder and respectable women ought to be looked for by the relations of young persons. The education of the children is well attended to. The cottages are in very many cases inferior to what is to be wished both in goodness and in the number of rooms. They are also much further from the farms than is desirable, but an improvement is gradually going on in this respect as well as in the accommodation afforded in the cottages. Gardens also are increasing, and are a great advantage when not too far from the dwelling. Public opinion has introduced of late a great improvement in the system of hiring, and it appears capable of further improvement.

THURNSCOE, near ROTHERHAM.

Population, 196. - Acreage, 1,672.

316. *Rev. T. W. Simpson.*—In this small parish children are employed occasionally to watch the corn crops, to tend cattle, &c.; women in weeding and picking turnips, &c. No child should be sent out to work on the land before 14 years of age. No young girls go to field work. The children who attend National schools obtain instruction but very little education. Almost all religious truth is taught at the dame's and the Sunday school. Cottages are good and sufficient in number. Farmers prefer hiring lads as servants to employing resident able-bodied labourers. Most of the cottages have gardens, which are of immense use in mining districts when cultivated by hand. Statutes are simple abominations. An age being fixed for the hiring of boys and girls every farmer should require a written character, either from previous master or the incumbent of the parish, with possibly a certificate of attendance at some competent school.

SKELLOW.

Population, 185. - Acreage, 932.

317. *Rev. G. R. Davies Cooke*, vicar of Owston.—The children begin to work at certain easy tasks at a very early age, *e.g.* "willow peeling," when 4 or 5 years old, but they are not hard worked at it. I do not think a restriction of age necessary. As a rule the work is not excessive. I think that every child under 10 years should be required to have attended 200 times in the year, and I believe that every girl and boy under 12 years might easily attend that number of times without inconvenience to the parent, but I would only make it compulsory under 10 years. About one in nine of the population are at school. Half days or alternate days at school not desirable. Cottages are perhaps sufficient in number, but a better class is wanted, too many having only one bedroom. There are many gardens and allotments, and when not exceeding a rood they are of great advantage to the labourer. Those with four or five acres for the keep of a cow are of no benefit.

The best mode of obtaining a change in the hiring system would be to raise the tone of the small-farmer class by education. They are now often more ignorant than their labourers, and inclined to oppose education as well as any other scheme for the improvement of the labourer.

R. York.
Mr. Portman.
d.

MEXBRO.

Population, 2,461 - Acreage, 1,292.

318. *Henry Bolsover.*—This parish has large potteries and glassworks, where women and children are employed in large numbers, and but few are employed in agricultural labour. Children should not go to work under 10 years of age. I think it very desirable that the children of agricultural labourers should receive as much education as possible. I advocate the half-day system, and that half-day in the morning; 150 or 200 attendances should be the number during the year, and I think a certificate of such attendance desirable. No females of any age, but more particularly young girls, should go to field work. The labour field is, I am convinced, not a bad school for immorality. The state of education is fair. The church school has an average attendance of 174 (mixed). There are several other schools in the place. Cottages occupied by the labourers are not in as good a state as they should be; in some cases gardens are attached.

LOVERSALL.

Population, 175 - Acreage, 2,171.

319. *Rev. Robert Banks.*—Children to the number of 15 or 20 are employed in the fields in this parish. They begin to tent crows at 7 or 8 years of age. School attendance during the year amounting to half-time would be sufficient if night schools received more distinct Government aid and sanction, the attendance at one established in the parish being made compulsory on all children under 12 years of age working during the day, and not able to produce a certificate of proficiency in reading, writing, and arithmetic. The cottages are fair, but not sufficient in number; most have gardens, which are of great advantage if of such a size that a man can keep them in order in his overtime. The statutes, though fast falling into disrepute, should be officially discouraged, and register offices for this class of servants encouraged as much as possible; and a character of some sort should be considered requisite.

KIRK BRAMWITH.

Population, 216 - Acreage, 2,110.

320. *George Hatfield.*—Children are employed at about 8 years of age, but not in any numbers except in harvest. I do not think such employment injurious to their health or morals. It is not desirable to place any limit as to the age for work. As a rule the parents will take care that their children are not overworked. At the periods when children's labour is required the supply is not sufficient to admit of the half day or alternate day at school and work. I would require 200 attendances at school during the year, and the production of a certificate before hiring unless the school attendance came within the knowledge of the employer. The state of education among the girls is better than among the boys, as the former are less employed in the fields. Cottages are moderate in accommodation but sufficient in number. Most of them have gardens, which should not be too large. There seems no probability of suppressing the statutes without the hearty co-operation of the employers of labour.

Parish.	
321. Carrhouse	- No women or children employed.
322. Elvington	- Children employed at 10 years. No school.
323. Long Sandall	- Employed at 10 to 12 years singling turnips.
324. Fenwick	- Employed at 9 years.
325. Marr	- „ at 8 or 9 years. About 30 occasionally.
326. Norton	- Employed at 8 to 10 years.

[Returns were sent in from 10 other parishes in the union unsigned, and consequently useless.—E. B. P.]

327. Industrial School, Doncaster.

Under the superintendence of Mr. Vaughan.

The object of this school is to receive motherless and other friendless or distressed girls to prepare them for domestic service. They are boarded and clothed, instructed in the Holy Scriptures, and taught reading, writing, arithmetic, knitting, needlework, baking, washing, ironing, kitchen work, and house-cleaning, under the care of a matron and a schoolmistress.

Twenty girls are now in the school, 13 of whom, having no means of paying, are admitted free of charge; these are Doncaster girls only. For those not belonging to the town a payment is required of 3*s.* a week, with an entrance fee of 2*l.* towards their outfit. The annual cost is calculated at not less than 330*l.*

Girls belonging to Doncaster are allowed to go out for a job in the town, the places being carefully selected. Part of their earnings are given to the girls, the rest goes towards the support of the school.

The house is airy and has plenty of rooms.

328. Letter from the Rev. Scott Surtees, of Sprotburgh, to Hon. E. Portman.

Sprotburgh Rectory, Doncaster,
May 15, 1868.

Sir,

In answering the queries you were kind enough to send me, I shall take the liberty of doing so in general terms.

First, as to the employment of women and girls in field work. The girls, almost without exception, go to domestic service. The women who work in the fields are mostly widows, and some few of the labourers' wives. You might mark them out by the general untidiness of the home, the less well-to-do appearance of the children, and the discomfort of the cottages. The "wicking" * and potato-setting and ingathering is mostly done by Irish women and girls who come from Doncaster.

All our most intelligent boys and the sons of the more intelligent and better off labourer are, speaking generally, put to a trade or brought up to other occupations. They do not bring up their sons to field-work. They have an honest pride in not taking parish relief even in cases where I know it is needed. I have seldom had a labourer die without leaving a certain sum of money, say from 50*l.* to 150*l.* I could give numerous instances; in fact it is the rule, not the exception. Recently a labouring man died who had brought up and started in life a family, and yet left 350*l.*; he began life as a farm-servant. Another I knew who had been brought up in the Union, and also had never been anything but an agricultural labourer, who died at 35 years leaving 170*l.* They do not marry until both parties have been out at service and got a little money together. The labourers come and go, and change masters and parishes frequently. I think this a great advantage, also in respect of marriages. In Norfolk I had a large parish, and running my eye over the register book for 100 years I found that hardly ever a marriage took place with a person from another parish; here in Yorkshire it is just the contrary. There the bride was generally in the family way; here, where they do not work in the fields, it is different. In Norfolk, if sick they went at once to the parish and sent for the parish doctor; here they never think of such a thing, and their hardest struggle in life is paying the doctor's bill. There is an old man in this parish, an agricultural labourer, who has during his life paid for himself and family 120*l.* in doctor's bills. The main grievance of the agricultural labourer in this part of the world is that he has to walk often so far to his work, as many villages have not sufficient cottage accommodation in proportion to their acreage, and if he has to walk three miles to his work, still he has to be on the spot at 6 a.m. with the others. The land improvement societies have done much to facilitate the erection of

* "Wicking" is picking twitch or couch.

W. R. York.

Mr. Portman.

d.

cottages, but the term of years over which the repayment is spread is much too limited.

With regard to the education of boys, there is no disinclination of parents, quite the reverse, to have their children taught, nor do the farmers set themselves against it; we must study the case before we attempt to prescribe remedies. In the education report for 1861 on agricultural districts in Yorkshire, the Rev. G. Hedley, arrives at the following conclusion, p. 145, Vol. II. :—"Children usually commence to "attend school about 5 years of age, they begin to "leave about 9, and few are found above 13. The "average period of school life is about 6 years." Mr. Watkins, who has been H.M. Inspector of schools in Yorkshire, for a quarter of a century, states in his evidence, Vol. II. p. 149, "that the average age at "which they leave school is 10½ years; of children at "school 39 per cent. are under 7 years of age; 74 per "cent. under 10; and only 26 per cent. over 10 years "of age." Now bearing these facts in mind, how large a proportion of the child's school life is made up of the years from 3 to 5 or 4 to 6. This important point is lost sight of by Committee of Council and educationists. If there is no dame's or infant school within reach, he loses 2 or 3 years of his short school life. If he goes to the National school and they teach him the alphabet, &c., it is only a secondary part of the school work, and is done carelessly and grudgingly by some child master. You must make up your mind that what you do must be done before 12 years of age or not done at all, and you may depend upon it that the effort should be made in the earlier years of childhood. It is the fashion to lay considerable stress upon adult and evening schools for educating farm lads. I wish to express in the strongest terms my disbelief of such bosh and bunkum; they who write such nonsense write about what they do not understand and have not tried. It may answer for a time, when the novelty wears off it will have to be given up. I never knew an evening school in a purely agricultural district hold its own for a term of years, I never knew an employer of labour who believed in it. Boys of all classes and all ranks dislike school and learning of any sort, of course there are some exceptions.

They become practically their own masters when they begin to earn their own livelihood. They have had a long day's work, often are wet, oftener tired, and it is an exertion they are not inclined to make, to go to an adult or evening school. The farming lads in farm houses have to fodder the horses, at 8 p.m., get their supper and go to-bed. There is no allowance made for human nature or rather "hobbledehoy" nature by the advocates of evening schools as the one remedy for the evils of neglected education in earlier years. Take our own rank of life, a boy is taken away from school for some cause or other at 15 or 16, he is sent to a private tutor—who that has much experience of life does not know that he then does nothing—there is at that age generally a disinclination and a determination not to learn. What are half the sermons in the great and good Arnold's second volume taken up with but addresses to endeavour to persuade boys to learn. How frequent are such instances as "The cultivation of your understanding is irksome to "you. Irksome as the studies of the school are to "many." "But here on the contrary idleness is with "many rather a glory, and industry considered a "reproach."

Then again, he goes to college, his future advancement and prospects in life depend upon his reading, he has the dread of being plucked before him and yet he will not learn, and the attendance of lectures or "lessons" has to be enforced upon the majority by punishments. Why expect the agricultural labouring youths to be of a different mould? He has not the incitement the other has before him.

Let there be an educational census to see that a school is provided within reasonable reach, encourage by every means in your power infant and dame's schools, up to 12 years of age require the boy to be at school a certain number of days per year, and by that time he should be able to read, write, and cast accounts, more than that you will not accomplish if you aim at it. Well for us if this is done and done thoroughly.

Now as to the comfort and well-being of agricultural labourer, where a landlord is non-resident, the state of things is generally unsatisfactory, where he is resident little enough is done to improve their condition. The old English country gentleman, spite of model villages, weighed in this balance is found terribly wanting. Seldom are there enough cottages for the acreage of the farm; existing cottages are often in wretched repair; some have only one, few three bedrooms. Nuisances which they cannot help are not looked to and removed. If there is one trait to be admired in the English labourer, it is a love for flowers and a garden. He has not always a garden, often a very small one up in a corner by the road-side, under trees, a bit of waste ground anywhere. If there are allotments, it is not the most convenient and best land in the parish, *oftentimes the worst*, and far off from the mass of the cottages which takes away half its value. I am not speaking of individual cases, but of the general state of affairs which I have noted in various parts of England where I have been located. A cottager does value a cow pasture. I wonder how many cow pastures a census of England would show. Now I will speak of a case I know. A clergyman had a field of 30 acres near a river, rich good pasture. It was fenced off into two parts, each acre was staked out. Alternate years, one-half was mown, one-half pastured. Each labourer hoped to get a cow pasture, and saved up money to buy a cow. The rent was paid twice a year, and regularly. The indirect advantage to the parish of 15 cow-owners retailing milk, was no mean gain. Another case of successful allotment of ground is this: near the centre of a large agricultural parish a field of 11 acres was hired. It was first-rate land. It was divided into 44 divisions, up the centre was marked out a road 10 feet wide. The divisions were planted with a beech hedge. This first-rate land was let for little more than a farmer would have given, 14*s.* the quarter acre included rates. taxes, and tithes; 10*s.* was paid after harvest, 4*s.* after Easter. There was hardly ever a defaulter, The value it was of to the occupier was extraordinary, and the accounts I heard of the money made out of it almost fabulous. A great part of the cultivation was done by the women and children. On summer evenings and Sundays the whole population almost within reach would be found walking there and comparing the different crops, &c. Why will not landlords try these simple means of attaching the labourer to his home, and why will the farmer begrudge him a few acres of land?

My residences have been in many counties, my experience extends over many years; I give you the results.

Yours faithfully,
SCOTT F. SURTEES.

JOHN WELLS, ESQ.

329. Booth Ferry House, township of Armin.—I employ regularly on my farm throughout the year three to five males and 30 to 34 females, but in the potato season I employ for a month double this number; these are strangers who come from the manufacturing districts seeking work. I employ no males under 10 years of age. Of the females, three are between 10 and 13, and 30 between 13 and 18. In winter they are employed in picking and sorting old potatoes, in planting the new crop, weeding wheat, storing potatoes, weeding line and spring crops. In summer, in hoeing turnips and weeding potatoes up to hay time. In autumn, after harvest, in taking up potatoes. In winter, in picking over potatoes and sorting them for market. On my Booth Ferry farm the average distance to work would be one mile, on the pasture farm two miles. They leave home at 8 in the morning and get back at 6 p.m.

W. R. York. — Mr. Portman. — d.

with an hour allowed for meals. The sexes work together; the overlooker who is employed keeps the boys right and I should think the girls cannot be better cared for, as they work with their own mothers.

I urge attention to school from 5 to 10 years at all seasons, and in the winter season up to 13 years. I advocate all boys and girls being sent out to service at 13; boys to agriculture and girls to domestic service, except when the parents possess the means of sending them as apprentices to tradesmen.

I have had no experience whatever of public gangs, and I think the expression "private gang" conveys a meaning that does not exist; the women and children employed only come when they think proper, never more than five days in the week, and only when the weather is fine, excepting when the potatoe cropping season is on, at that period they have sometimes rough weather to experience, but they earn high wages. A woman and girl, 10 years of age, get 2*s.* 6*d.* a day. My opinion is, that the private gangs as they exist in this country ought not to have any legislative interference, except that under no circumstances would I allow a child under 10 years of age to be employed in field pursuits; and I would put the penalty on the employer. I find that if girls are allowed to work in the fields at 13 years of age, they become demoralized; but I consider that this does not arise from field employment, but from not having any proper supervision after work hours.

I should think it exceedingly hard for a poor man with six children varying in age from 5 to 13, if he were debarred from the assistance he would receive by the wages of those above 10 years employed at certain seasons in the fields, the work also prepares the children for their future part in life. I will never as an employer have a child under 12 years of age; but knowing the privations a labourer with a large family must suffer, if those above 10 were debarred from labour I submit. The half-day or alternate day system would not answer no farmers would so employ the children; they would rather be without them, and the parents as before stated would suffer.

I would have the children attend school regularly under all circumstances, from 6 to 10 years of age, and from October to March, till 13, and as much oftener as they could be spared; but that would fit them well for the ordinary duties of life.

School attendance is very much affected by the distance; and here arises another great difficulty, farmsteads are now generally erected in the centre of the lands, distant perhaps two miles from the villages, two or three cottages are erected for the convenience of the labourer, but all complain of the drawback to their children's schooling, and would rather live in the village than walk to their work. The school attendance is not affected by the pecuniary resources of the parents; the farmers give 20*l.* a year, and the proprietor 30*l.*, a school-house and master's-house. The school payment is 2*d.* a week for one child, but in the case of a family, only 1*d.*; though they enter them, they will allow them to idle about without making them attend punctually; there are sewing classes at the school under the mistress, and examined by the ladies of the village.

No cottage, with a family to provide for, should have less than three bedrooms and a kitchen. All teaching is vain, if parents and children are huddled together in one sleeping apartment. The want of self-respect is engendered at an early age, and frequently never eradicated. I have an average of two and a half cottages for each 100 acres on my farm, but I should say the average of the parish is below that. I believe all employed in the township with three or four exceptions, have cottages in the village and on the outlying farms. No lodgers are allowed where a family exists. The cottages are of various construction. Some have two, some three, and others four rooms each, but the size is apportioned to the families. One low room 12 feet by 14 feet, and the same above; a smaller one behind, 10 feet by 12 feet; or 10 feet by 14 feet; a smaller room above in the newer cottages. The older ones have been repaired and added to. The drainage is fair, every cottage has a good garden, generally attached, varying from 15 to 20 perches. I do not advocate more than 20 perches, it is an amusement to the labourer to cultivate that in his leisure hours; if you make them larger he breaks a day's work, and this leads to unpleasantness with the employer. The landlord owns all the cottages and the rent is 1*s.* a week with a few exceptions, but never more than 1*s.* 6*d.*; the cottages have been greatly improved since 1835. I do not think that the necessity for three bedrooms in a cottage is so clear as alleged, the third room is often unused and becomes dirty and untidy. It is impossible, in my opinion, to make cottages remunerative *per se* for the agricultural labourer. The owners of estates should see that proper cottage accommodation is provided to each farmer, including the rent in the price of the land, and the tenants should not be allowed to exact more than 1*s.* a week from each cottager as rent; in too many instances I have seen the farmer actually making a profit out of the labourer's cottage. Agreements should be drawn up by which the labourer would be prevented from taking advantage of his cheap residence against his employer, and the employer from gaining pecuniary advantages from the labourer. No lodger should be allowed.

There is one school supported by the ratepayers, the average attendance in summer, 19 boys and 13 girls; in winter, 20 boys and 18 girls. We have no night school in the parish. Agricultural labourers are too tired with their days work, they fall asleep immediately they leave the fresh air.

I should say from experience one-half of the boys hired into the farm houses can neither read nor write; in my service they have the opportunity of instruction three nights a week; some readily embrace it, but others will not attend. I never engage a farm servant unless they will sign a contract at the time of hiring; I had great difficulty at first in getting this done. I also hire them to attend divine service once on Sunday. I once got the farmers to agree not to take lads without a character, but they did not stick to it. I see very great difficulty in getting farmers to carry out any scheme of education dependent on certificates of school attendance unless they are compelled by law.

There is great difficulty in getting domestic servants. The girls are so fond of the liberty attendant on field work that they object to the restraints of service. The farmers' sons want education quite as much as the labourers. I believe the system of farm lads living on the premises is essential to the operations of the farm, especially as to the care of horses; one lad looks after four horses.

THORNE.

Population, 3,381; Acreage, 12,400; Cultivation, chiefly arable.

330. *Rev. George Jannings.* — The private gang system exists here; the children are employed in hoeing wheat and dibbling beans, planting and sorting potatoes, and in the autumn in gathering potatoes. In some cases they go three miles to their work. The hours of work on the land are from 9 till 5 with an hour allowed for meals, and the sexes generally work together which must, I think, have an injurious tendency on the young females. They attend the parochial school during some parts of the year when there is less to do in the fields. I scarcely think it would be desirable or practicable to subject private gangs to legislative regulations. There can be no doubt that females who are in the habit of working in the fields acquire a disinclination for domestic service together with a certain carelessness of manner. I would not place any restriction on the employment of females in field work.

I find that parents generally are anxious to give their children as good an education as possible, and

they make a point of sending them to school during slack time, that is, in the winter and just before harvest. The school attendance is not affected here by the pecuniary resources of the parents, as the school has large endowments.

The parish is three miles each way from the parsonage. I would put a limit on childrens' work at 10 years, and require three months school attendance during the year till 12 years old. Many go to permanent service before 13.

The wages are 2*s.* 6*d.* and 3*s.* a day for a man. The majority of the occupations are from 150 to 400 acres; there are, however, some very small holders, as there is a growing desire among labourers and small tradesmen to possess bits of land. There are a great many allotments for the cottagers which are eagerly sought after, and are let in portions of a rood or half an acre. The waterside population here are very bad and inaccessible to the clergyman, as they spend much of their time on board the barges and shut up their cottages. I have lately established a girls' school here; the payments are 3*d.*, 4*d.*, and 6*d.* a week, and I do not find many complaints by the parents of inability to pay.

STAINFORTH.

Population, 751; Acreage, 2,920; Cultivation, about three-fourths arable.

331. *John Bladworth, Esq.*—There are 12 young persons and women employed in field work, four boys between 10 and 13, and one between 13 and 18. Seven widows or married women over 18. Their work in the spring is dibbling beans and picking couch grass. In summer, in hoeing and singling turnips, and in autumn in potato gathering. They live near the farms on which they work. The maximum distance would not exceed one mile. The hours of work on the land are eight, with one hour and a half allowed for meals, and there is no injury to their health. There are no girls above 15 years of age who go to field work; but I am of opinion that in cases where this prevails their morals do not suffer by it. I would not place any restriction on female employment; the work they perform is easy and healthy, but the bulk of the women are widows, who would be deprived of a great aid to their means if prevented from working.

No boys should be employed under 10 years of age. Half days or alternate days for school would not work at all, the farmer must have them altogether or not at all; the winter months might be devoted to education. The school attendance is affected in some cases by the pecuniary resources of the parent, and a man with a large family cannot spare the elder ones for school as he requires their services for the support of the family.

The accommodation in the cottages is good and there are a sufficient number of them. There should be two cottages per 100 acres. The rooms are 10 to 12 feet square, the ventilation is good, and on an average there would be two low and two bedrooms, with pantry and out-buildings, and most of them have a garden attached; they are owned by landowners or small freeholders.

The surrounding district is well off for schools with endowments; in Fishlake parish there is a well endowed school with free education, but the population is the most ignorant in the district.

Most of the farms are from 300 to 400 acres; mine is 700. It is very difficult to get women or children to work. The wages for a man are 3*s.* 6*d.* a day, for women and boys 1*s.* ordinarily, 1*s.* 3*d.* in potato time. There are no large landowners. The poor people have cows; they pay 1*l.* for a summer run in the lanes, and they have also a small field of from three to five acres which is rented by themselves. The farm servants as a rule live in the farmer's house.

The district from Stainforth to Doncaster is sand; north of the river Don is clay. The district called the Levels was reclaimed in Charles the Second's time.

[Mr. Bladworth lately offered to send his shepherd's child to school free, (the boy at the time earning 5*s.* a week in light work, feeding the turnip cutter,) the shepherd declined, saying bread was better than learning; when told that the law would soon compel him to send his children under a certain age to school, he said he hoped it would not be for two years. This shepherd was earning 16*s.* a week and had a large family.]

Appendix to Report on the Labour of Women and Young Children in Agriculture.

This township, with a population of 751, has one-third the number engaged in maritime pursuits, while of the other two-thirds the labouring male population are so fully employed that their wives and children will not as a rule go out to work.

A man's wage is 2*s.* 6*d.* per day, but in hay time and harvest this is considerably exceeded, as also at thorough draining and other contract work they earn a larger sum.

Thus the women that go out to field work are principally widows who have little or no other means of subsistence, and the children belong mostly to men with large young families.

We have neither public nor private gangs, but in the neighbouring villages I have observed occasionally, say half a dozen women at work with some old man to superintend them and keep them at work, and as their tongues are more likely to be in motion than their hands this is a necessary and a proper precaution. His presence will neither cause them to overtax their strength nor be detrimental to their morals. I should myself prefer seeing more women and children at work in the fields, both for their own and the farmer's interest. They are never called upon to do work unfitted to their strength and the fresh open air is conducive to their health. It consists mainly in hand picking couch grass, weeding corn, singling and hoeing turnips, bird tenting, &c., and a wife who can add 6*s.* to her husband's store at the end of the week, or if they have a boy 11 years of age bringing in 5*s.* more, would surely not only be a handsome addition, but might with a little providence form the nucleus of a store which might in after days keep "the wolf from "their doors" and themselves from the workhouse. But it is, I regret to say, a rare case, in which a man, no matter how small his family, ever thinks of laying by a penny. As regards morals I have never been able to draw a comparison unfavourable to those who work in the fields; neither does it in any way encourage illegitimacy. I cannot point to a single instance in this village in which a girl who has stayed at home has committed herself, though there are many who have done so while in service. In farmhouses in which servants of both sexes are nightly brought into immediate contact, and perhaps with an insufficient attention to the position of their dormitories, seduction is of frequent occurrence.

The labour of women and children is the most economical the farmer can employ, for in work which requires suppleness of finger, or activity rather than strength, they will do as much as a man.

With respect to the education of children, the plan suggested in your circular of alternate days at work and school would never do, as the farmers in most cases could not obtain relays of children to fill up the time; and a day off and a day on would not be tolerated and could not be practically carried out.

Children might be prohibited from working under the age of 11 years; or they might be restricted from work for five months in the year, say from September to the end of February.

The working classes, generally speaking, do not properly appreciate education, and the man with large family cannot afford, even if he felt inclined, to send his children to school. And unless some provision was made to meet the latter case, and a compulsory attendance at school for a given time on all classes of the poor, any prohibitory labour enactment with a view to education would be inoperative, and fail to secure the object aimed at.

Jno. Bladworth, J.P.

Stainforth, near Doncaster.

W. R. York.

Mr. Portman.

d.

WARMSWORTH.

Population, 361. Acreage, 1,074. Cultivation chiefly arable.

332. *Rev. C. E. Thomas*, rector.—There are no private gangs in this parish, and those otherwise employed here are about 60.

Boys :

Under 8 - - - -	4
Between 8 and 10 - - -	6
Between 10 and 13 - - -	6
And between 13 and 18 - -	8=24

Females :

Under 8 - - - -	2
Between 10 and 13 - - -	6
Between 13 and 18 - - -	1
Over 18 - 12 married and one unmarried	=22

Their work in spring is bird tenting, picking twitche, dibbling beans, and hoeing corn. In summer in weeding and singling turnips. In autumn, in potato picking. In winter, in cutting and pulling turnips and tenting. None go more than 2½ miles to their work. The usual hours of work on land are from 6 a.m. to 6 p.m., with 1½ hours allowed for meals. In the quarries in summer they work from 4 a.m. to 4 p.m. There is no injury to the health, unless perhaps in the case of very young children and in wet weather. They are employed very young in the quarries. I have known them suffer but not at other work. Quarry work is in my opinion too laborious for boys under 14 years of age, and unfit for females altogether. Where women go out regularly to field work it has the effect of making them dirty and slovenly in their homes, careless of the comforts of their husbands and families, and coarse in their manners, their children go about neglected in appearance, and their husbands for want of home comforts are drunken. On the other hand where they are occasionally so employed, as for harvest, stone picking, and such like, it makes them industrious, tends to healthiness, and rubs off that finery and pride which is apt to grow among our cottagers and to make them think they are not to soil their hands with work. I would restrict females under 12 or 13 from going to work, and certainly during the winter months females should not work, as many go out poorly clad and worse shod and so get into bad health.

Turnip cutting and pulling in winter is a cruel employment for women. Moderate summer work, where there are not very young children left at home, is of use both to the women and also to the bringing up of the children in industry and domestic habit. I would not allow boys to go to work at all before 8 years of age, and not regularly before 13. I do not think that any person of any age ought to go four miles backwards and forwards to work daily ; it must in the end tell upon the workmen as well as upon the employer very disadvantageously. No child under 13 should work more than eight hours a day. I would recommend that an endeavour be made to enforce attendance at school during the six winter months, *i.e.*, from October to March. Distance, except in deep snow or in very bad weather, does not affect the school attendance. We have no industrial training school, but we encourage it in various ways.

I consider good cottage accommodation most essential both to health, comfort, and morality. I have known the finest and naturally healthiest children waste away through so many sleeping in too confined a space, also decently brought-up families turn out ill and bear bastard children owing to the crowded state of their home apartments, which must destroy all sense of decency. Three cottages for 200 acres are considered sufficient for the land. We have not above one to 100 acres. There are not enough cottages with two or three bedrooms, but improvements are being made. The cottages are limestone houses with tile roofs. One down-stairs room and one or two up-stairs rooms about 14 or 15 feet by 15 feet, about 7 feet 6 inches in height, bad ventilation, and tolerable drainage, bad accommodation for families by not having separate rooms for parents and children. Most of the cottages have gardens, privies, and pig-styes; they are in the hands of landowners, and are rented from 3*l.* to 4*l.* a year. A kitchen often forms the sleeping apartment for one of the family. I am of opinion that in these parts, where work is plentiful and labour well paid, cottages could be constructed, good and comfortable dwellings, with every necessary, at a cost which would repay the landed proprietor, taking into consideration how much he and his tenants are losing by labourers coming from a distance even of two miles to their work, and if the houses were comfortable the labourers would gladly pay 5*l.* or 6*l.* a year.

School.

In Summer.

	On Register.	Average Attendance.
Boys :		
Under 10 - -	20	12
Between 10 and 13 -	4	2
Girls :		
Under 10 - -	15	10
Between 10 and 13 -	8	2

In Winter.

Boys :		
Under 10 - -	25	15
Between 10 and 13 -	6	4
Girls :		
Under 10 - -	18	12
Between 10 and 13 -	10	5

There are seven boys and six girls neither at school nor at work in summer and winter. Those who do not send their children regularly to school are persons of very insufficient education themselves, many of whom can neither read nor write. We had a night school from October to January open for 13 weeks for an hour and a half for three nights a week. This year we had only seven scholars above 12 years of age ; other years we have had from 10 to 20. It is impossible that a night school should supply the deficiencies of the day school unless kept up regularly all the year round, and in summer it would never be attended. The difficulties of maintaining one are the want of scholars of that class which are able to attend, the distance of some who do not like to come so far in the dark, wet and dark nights, bad roads, &c. This year the attendance was so bad we closed the school, and supplied the few who were willing to come with books to read at home.

As to the system of hiring at statutes (as is the custom here), we long to see it changed, as it is a most demoralizing system ; but, so far as my own parish is affected by it, we experience very little of the evil results.

For 20 years I have made it my business to discourage, as far as possible, parents taking their children to be hired at statutes. I have a list of those males and females who want places, and at different tradespeople's shops in Doncaster where we deal, I have left lists of boys and girls wanting such and such situations, in this way it has become known that I interest myself in getting servants places, and I am applied to by many farmers and tradespeople for servants ; and I believe if this were done in each parish we should have an end of hiring at statutes. The farmers like it, and I have been successful in most cases in finding good servants, and comfortable places for them (which has given mutual satisfaction), and they have in many instances returned to me at the year's end to ask me to find them another. Even if this were carefully carried out with respect to the young women, the

great evil of statutes would be removed. For the young men, when left to themselves behave tolerably steadily, but it is the young girls of 14 or 15 years of age who have not been out before, who, if they have attended school, have left it 2 or 3 years and have been employed either at home or elsewhere as girls of all work, these having lost all sense of control go to the statutes and in the most shameful and brazen way lead the young men into all sorts of misbehaviour. There is, I am thankful to see, a growing wish on the part of the parents and the farmers to see this kind of thing abolished, and we shall abolish it in time if we act together and are content to lead and not to drive; for the Yorkshiremen of all people of the world are the last that will bear driving. There are some farmers here who have an opinion that if there were more cottages on the farms, it would tend to diminish the number of youths hired at statutes as in that case they would work on the farms with their parents.

I have tried very many different kinds of schools since I have been here. A school under an uncertificated mistress to begin with; then under a certificated mistress and pupil-teacher; then under a certificated master and sempstress, and now under a certificated master and uncertificated mistress. I find it now answer thoroughly, the people begin to value education and to send their children to us in preference to sending them to Doncaster schools. We find an evening sewing class for girls in summer work well, one reads in turn, whilst the others sew; two girls and two boys take the cleaning of the schoool every day and more thoroughly on one evening in the week, and this is done under the inspection of the master, which makes them handy and cleanly.

We encourage every kind of domestic and agricultural work, as tending to make the children useful and intelligent, so long as it is not carried to excess to interfere with their studies.

Flower and root shows for the cottagers with prizes for the best kept garden and house front, and prizes for sewing, all conduce to make them take a pride in the neatness and respectability, and comfort of their homes as well as making them more industrious, sober, and contented.

BARNBROUGH.

Population, 562. Acreage 2,000. Cultivation, mixed.

333. *George Wordsworth*, assistant registrar.—There are 45 males and 10 females employed here in private gangs; they are employed in gathering stones, and weeding and turnip cutting.

The men work 12 hours and the women 10 hours; they do not go far to their work, and two hours a day are allowed for their meals.

One man usually goes with two or three women. The state of education among the young is very indifferent.

Females going out to work for farmers when young are generally not wishful to remain in their situations when they have obtained one. In my opinion females would be better at home and the young ones at service.

Boys should not be employed under 12 years old. Regular attendance at school for boys under 12 years of age during the winter would be the best plan.

We have about 100 houses for 560 inhabitants giving five or six to each house, the cottages generally are small, one low room and pantry and one bedroom; the tenants are obliged to deal with the landlord. In our parish there are several freeholders. I do not know the exact number at school but it is about 50 boys and girls. There is a night school open twice a week, for two hours a night during three months of the year attended by about 10 scholars; they are taught reading and writing.

Boys who go out to work young get their minds engaged with other objects and are careless about their education.

Wages for an ordinary labourer 12*s.* and 13*s.* a week. Women 1*s.* a day. Boys 6*d.* and 8*d.* a day.

I had a school for six years, taught several children for nothing, and they were the worst attendants. Compulsion is necessary to make parents send their children to school, a limit of age for work alone would not be sufficient. I think that half time might be worked in agricultural districts. Mexbro is in my district where there are large works.

W. R. York.
Mr. Portman.
d.

There are fewer children born dead in agricultural than in manufacturing districts.

The young married women earn 6*s.* a week while they leave their children with someone to take care of, and pay 2*s.* a week for them. The neighbouring village of Melton is very short of cottage accommodation. This having been an open parish for many years supplies labour for the adjoining parishes.

HEMSWORTH.

Population about 1,000.

334. *The Rev. A. Wrightson.*—The farmers here keep very few lads in their houses, the system has been much given up, they get labourers instead from the village. The women and children are only occasionally employed, children very seldom, and only at odd times such as potatoe planting, bird-tenting, singling turnips, and dibbling wheat. The women go "looking" (weeding) corn with a thistle-spud. The children attend school in winter.

I would not advise any legislation as the age for work; there is no gang system, men and women do not go together to the fields.

Men's wages are 15*s.* a week and allowances. Coals are led for them, and milk is given. The women get 1*s.* a day for machine work; and tenpence a day for ordinary work. The earnings in harvest are very large and there is no poverty in the parish. We have a clothing club. The money is always ready for the payments. There is an endowed grammar school, a parish school and National school.

The farms are small with a fair proportion of grass. The cottages are sufficient in number and well situated for the work of the farm.

TADCASTER.

335. *Alexander Shaw*, schoolmaster.—I have been here 12 months; the number on the books is 120, average attendance for 1867, 68. The women and children go out in great numbers in April and May for willow-peeling, which is very easy work, and children go as young as 7 years of age. They are also employed in potato planting and gathering. The wages for an ordinary labourer are 14*s.* and 15*s.* a week. Many of the parents are indifferent to education, many children are running about the streets who never come to school. In one case, I offered to teach a child who had been paying and had left the school free, but with no effect. There are also in Tadcaster an Irish Roman Catholic school, a church girls' school and a grammar school.

HEALAUGH.

Population, 262. - Acreage, 2,981.

336. *Rev. E. H. Brooksbank.*—There are no private gangs here. There are 22 males and females employed in agricultural labour.

Of the males:—				
Between 8 and 10	-	-	-	2
„ 10 „ 13	-	-	-	4
„ 13 „ 18	-	-	-	1
Of the females:—				
Under 10	-	-	-	1
Between 10 and 13	-	-	-	4

Over 18 years, nine married and one unmarried.

They are employed in tenting seed-corn, and weeding; in summer and autumn in the hay and corn harvest; in the winter they are not employed at all. The hours of work on land are from 8 a.m. to 5 p.m., with an hour allowed for meals; this employment is beneficial to their health. I would not allow boys to work under 9 years of age; but I see no necessity for

W R. York.
Mr. Portman.
d.

placing a restriction on female employment. I would restrict work in the winter to the following hours :— From half an hour after sunrise to half an hour before sunset ; in summer, to 10 hours a day.

We have about one cottage per 100 acres. The cottages are generally very good, each with a garden and privy, coal shed, and pigstye, and not high rented. [These cottages have been repaired and re-built by Mr. Brooksbank, and are now very tidy and comfortable, and mostly with two or three bedrooms ; besides the garden, they have a few acres of grass-land for a cow.] One labourer with a large cottage, garden, and cow pasture, pays 16*l.* a year.

The occupations are mostly small, and there is a good deal of grass land.

The women earn 10*d.* and 1*s.* a day. Wages for an ordinary labourer 14*s.* and 15*s.* a week. The farm servants living in the houses are generally two or three lads per farm, or two lads and a man and two girls. I have some doubt as to the evil of women's field-work, except on the point of neglecting their home duties. I do not think any compulsory system would answer.

[The cottages on Mr. Montague's property in the neighbourhood are very bad.]

A large portion of this district is under Gilbert's Act.

ABERFORD.

Population - - - 1,500.

337. *T. Johnson Fox, Esq.*—I have managed the estates of Lord Ashdown and Mrs. Gascoigne for many years. I think that an age should be fixed for children's labour, and that some system of compulsory school attendance would be very beneficial. Children's labour between 10 and 13 years of age is necessary for farm operations at certain seasons ; the women also are much employed.

Wages for a man 14*s.* and 15*s.* a week ; but there are instances of 12*s.* for old men.

The hours of work are shorter than they used to be, and some kinds of work, such as flail-thrashing and mowing are almost given up.

There is no real poverty among the labourers, but great apathy and indifference as to education. Forty years ago hardly a man could sign his name ; it is now rare to find one that cannot do so.

The farms in this neighbourhood have been much enlarged of late, and many cottages have been built on them. An additional number of cottages on the farms are much wished for by the farmers, and are doubtless advantageous to him and to the labourer ; but the distance from school and church is a drawback for the children. The farm lads hired by the year are now usually boarded in the house of the hind instead of in the farmhouse as formerly.

ABERFORD SCHOOL.

338. *Arthur Capper* (9 years old).—I have been out for three years weeding and bird-tenting. We went eight together, but no girls; we were looked after by the master, and the money was paid to my parents. I am usually out four weeks at a stretch.

339. *William Spinks* (10 years old).—I have been out for three years bird-tenting and pea-picking. At bird-tenting I get 6*d.* a day; at pea-picking 1*d.* a basket, and I can earn 1*s.* a day.

340. *Abbot.*—I earn 1*s.* a day at pea-picking; hours from 6 a.m. to 4 p.m., with one stop in the day. More than 22 children will go together. The hours of pea-picking are sometimes from 3 a.m. till 11 a.m. I have walked 2½ miles to work, and was once taken in a cart with a lot of others. I go to plant potatoes in October and November, and earn 1*s.* a day.

341. *James Todd*, master.—The attendance in the spring and autumn is very irregular; in winter it is better. The children leave school very young; if they could be kept in regular attendance up to 10 years of age they would be well grounded in reading, writing, and the first four rules of arithmetic.

The weeding of corn is principally done by women and older boys.

342. *Mrs. Robinson*, mistress.—Very few girls under 10 years of age go out either for pea-picking or potato-planting; the weeding is usually done by women with a spud. The children are employed with their parents in singling turnips ; one of the elder girls stays at home when the mother goes to the field. I am a Norfolk woman and well acquainted with the gang system ; there is no such system existing here.

ASTON.

Population, about 1,700. Acreage, 2,915. Cultivation, chiefly arable.

343. The *Rev. A. R. Campbell*, rector.—Women and children are not employed in agriculture in this parish or neighbourhood, except occasionally ; the young persons so employed are servants in the farm-houses. They are employed in bird-minding, turnip-singling, and gathering couch-grass. The hours of work for women are from 8 a.m. to 6 p.m., or till dusk, with an hour allowed for dinner. I do not think that their health is injuriously affected, but I believe the effect is injurious on the morals of the women from additional occasions of temptation, and from the tendency to produce a certain wildness of character, and with regard to their proper training for domestic duties there is a want of practice in household duties. I do not think that any restriction on female labour is required in this neighbourhood, but boys should not be allowed to work under 10 years of age. My opinion is that school attendance at considerable intervals is worthless, that, to be of any use, it must be for a certain number of hours in each week ; I am inclined to give the preference, where practicable, to alternate whole days at school and whole days at work, and I hope to see the principle of compulsory attendance extended to agricultural children under proper restrictions. The labouring classes here are very well off. Poverty, from whatever cause, affects the regularity of school attendance. Any poverty here is the result of improvidence and bad habits.

Adequate accommodation in the cottages, if possible three sleeping-rooms, is most necessary to the comfort, self-respect, and morality of the people. The cottages are, generally speaking, old and bad, the accommodation inadequate, the water supply bad, and the drainage imperfect. They are owned chiefly by landowners and by coal companies. The cottages of the latter are better in point of size and convenience, but are over-crowded. Rent varies from 2*s.* 6*d.* to 1*s.* 6*d.* a week, but the latter sum is now very rare. The cottage accommodation is increasing. We have on the register of the school 20 boys and 22 girls in winter and summer. The bulk of the labouring class here is non-agricultural, but mining. Very few of the agricultural class are neither at school nor at work ; but in the parish there are 97 children between 4 and 13 years of age of the labouring class in all kinds of labour who are in this state. There is a night school in Aston, and one in Aughton from the middle or end of October till March, open on three nights a week for two hours each night. There are 45 on the register and 27 in average attendance. They are taught reading, writing, and arithmetic. The difficulties of maintaining an efficient school are the unwillingness of the lads to attend, and the difficulty of separating adults and boys for want of competent teachers.

ULLEY.

344. *Mr. Moss*, farmer, and the *Rev. W. S. Evans.*—This parish is chiefly agricultural, but there is coal within three miles.

[Mr. Moss farms 411 acres of his own, and superintends 600 of his brother's at Whiston.]

The children go out for about a month singling turnips with their parents at 8 years, and earn 8*d.* a day. It would be desirable to fix the limit for children's work at 10 years of age. The lowest wages

for an agricultural labourer paid by Mr. Moss are 16*s.* a week. The regular wages in the district are 15*s.* a week, but very few work for that.

The parents are very indifferent about education, being themselves for the most part very ignorant. The attendance at school even in the winter is very irregular, owing to the employment of the boys in cattle-feeding. The weekly payment to the school for children is 2*d.* The mothers go to the fields for work and leave their children in charge of a girl, and the houses are consequently untidy, domestic duties are neglected, and the husband goes to the public house. We think half time would be very beneficial for educational purposes. Mr. Moss paid for the schooling of five families by the quarter, and could not get the children to attend regularly. Mr. Evans thought a certificate of acquirement up to a given standard would be beneficial, and might be required before hiring. Lads cannot go into the pits under 13 years of age, and on the farms they are not of much use before 12 years of age.

The cottages are sufficient in number, but need improvements in quality; some have allotments, some small gardens; those belonging to small freeholders let at 2*s.* 6*d.* and 3*s.* a week, are very poor and bad. There is a night school. The farmhouses being either in or close to the village, the attendance should be good, but the lads are indifferent about it, though some come up to the age of 18.

Cottages.

(1.) One low room and two bedrooms 2*s.* 6*d.* a week. A pitman, wife, and three children; garden not large enough to grow food; expenses for flour and vegetables this year have been very great, they have had no meat for weeks. Cottage very tidily kept. Rent 2*s.* 6*d.* a week.

(2.) One low room and one up-stairs room, 1*s.* 6*d.* a week, very untidy, belonging to a pitman. These are adjoining cottages.

(3.) One low room, two bedrooms and no garden at all, occupied by an agricultural labourer with a large family, at a rent of 1*s.* a week, to be raised to 1*s.* 6*d.* The agricultural labourer is better off than the pitman in consequence of his work and pay being more regular throughout the year. The agricultural labourer here with harvest and turnip hoeing by the piece, and his regular wages, will earn on an average 1*l.* a week. The women work by the piece at turnip topping and tailing, which work is taken at 8*s.* and 10*s.* an acre; they can earn about 1*s.* 6*d.* a day. The girls do not go out to field work at all.

HAREWOOD.

345. Consists of the townships of Harewood, population, 830; East Keswick, 470; Weardley, 170, and part of Wike, 126. Total population, 1,596.

At Harewood there is a mixed school.

At Weardley a dame school, but no National school; at East Keswick, a mixed school under a mistress, and at Wike, a small endowed school, not under Government.

Harewood School.

346. *Mr. Brooke*, master.—The eldest boy in the first-class is 14 years of age, and the eldest girl is also 14. There are some of 10. The boys are mostly sons of tradesmen, some are sons of farmers, but of men who employ labour. The children of those who hold a work 40 or 50 acres of their own, are now out at work. There is a night school in the parish, but farm lads will not attend. Children are admitted to the day school at 5 years of age.

Industrial School.

This school is an adjunct to the ordinary school. There is a washing room and kitchen, and a room for sewing in the afternoon, which is used as a class-room at other times. This school is for seven girls, of whom six wash, and one cooks one day and a half in each week. These girls are over 10 years of age, and go once in five weeks, or according to the number in the school, to the industrial school, usually on Tuesday for a day at washing and cooking. The girls are not lodged here as at Escrick or Doncaster.

347. *C. R. Moorsom*, Esq., agent to Lord Harewood.—The cottages are substantial and clean, but many are not very convenient in the upper-floors, having sleeping roofs and ventilation. There is generally one sitting-room, bedroom, and pantry below, and two bedrooms above, and the average rent is 1*s.* a week. Cottages are frequently, when let with the farms, sublet by the tenants to persons not being their own labourers, and at a rent higher than what other labourers are paying. In this district the villages are for the most part so near the farms that there is no urgent demand for more cottages on the farms. Labour is not abundant owing to the proximity to manufacturing towns, which draw off the young men at a rate of wages higher than is paid for agricultural work.

There are allotment pieces of half a rood for almost every cottage in the village. There is a class of small occupiers living on the edge of the Moors, their land is well cultivated, and if this class of farmers ceased to exist, it would not be easy to get a tenant for such places. They usually do the work of their farm with their own hands and those of their children.

348. *Meeting of farmers and others*, Harewood.—Present, the Rev. Miles Atkinson, Rev. C. Wyberg, of Weeton, C. R. Moorsom, J. Parker, farm bailiff, and farmers representing the townships and parishes of Harewood, East Keswick, Wike, Weeton, Dunkeswick, Arthington, Wigton, Weardley and Eccup in the parish of Adel.

It is a very rare thing for women and children to be employed in field work in this district. The women will not go out to work even to charring. No boys under 14 go to the field; the question therefore of fixing a limit of age for such work does not affect this district. The attendance at school throughout the district is not good, there is a sufficient number of schools, but some of them are very poor and have bad masters; there is great need of further Government aid for these poor schools. The parents are very indifferent about the education and schooling of the children. An instance was quoted where a farmer at Weeton had paid for a boy's schooling for a year, during which he only attended three times. They will attend better when the parents have to pay for the schooling. Most of the people, the young and the middle aged, can read and write. The ordinary rate of wages 14*s.* a week; much of the labour is supplied by the Irish, many of whom live on the spot. Harvest pay is 1*l.* a week and meat, for good workmen. Cottage rent 1*s.* a week on an average. Some farmers have lads in their houses, some not, but all go to statutes. The system of statutes was universally condemned, but no suggestion was made as to the possibility of altering it.

There is a savings bank in Harewood where the agricultural labourers from the neighbourhood freely deposit their money. The occupations are from 100 to 250 acres, yearly tenancy, and cottages are let with the farms. There are some small holders who employ no labourers but work the farms by themselves and their children; they are the worst educated class and are in many cases worse off than a good labourer. If their children were forced to go to school and they had consequently to hire labour they would probably be ruined. An instance was however quoted of one of these who has five boys who have been all taught to read and write at school and worked on the land besides. The children of these small holders go out to service but do not go into the factories. The usual pay for foremen on a farm varies from 20*l.* to 24*l.* a year and their board.

W. R. York.

Mr. Portman.

d.

WETHERBY.

349. *Mr. Stephenson*, bailiff to Mr. Cundy, lives at Wighill.—Children are not employed under 13 except person for bird-tenting. Boys of 14 or 15 go out weeding ; women also go to that work in the spring but not in any number, they are generally married or widows. The children at Wighill go regularly to school ; Mrs. York has a school there for the young and they go thence to Walton school. The education in this district is in a good state. Half-time would not answer in agricultural districts ; a regular attendance at school during winter months might be enforced. There is more grass than arable in this district. A strong boy would be employed in thistle mowing in the pastures in July and August. A night-school was tried but it did not succeed. The wages are 14*s.* and 15*s.* a week. Most of the farmers have lads in their houses. Mine are always shut in at 9 p.m. I would willingly do without them if I could get labour conveniently from the village. The cottages are rented at 2*l.* to 3*l.* 10*s.* a year with a garden or allotment ; but the allotment system is gradually dying out, it has not been found to answer so well as a garden attached to the cottage. Some cottages are let with the farms ; all farms are held on yearly tenancy.

350. *Mr. Forrest*, late schoolmaster at Wetherby. —Boys leave school from 10 to 12 years of age ; the attendance in school was very irregular in consequence of running errands, &c. on market days. The attendance at Spofforth was more regular. I used there to keep lads up to 16 years of age, but now they do not stay so long. Up to 10 years of age boys could be well grounded in reading writing and arithmetic, if the attendance is regular. I do not think that half time or alternate days would answer in an agricultural district on account of the distance to work. If the grant was given for 150 attendances in the year, and government aid to small schools with uncertificated masters, it would materially assist education. The payment at Wetherby school for the labouring classes varies from 1*d.* to 4*d.* a week. There is also a Wesleyan day school in the town well supported and three Sunday schools. The women and children work very little in the fields and a great deal of the labour is done by Irish.

KIRK DEIGHTON.

This includes also the Township of North Deighton.

351. *Dr. Geldart.*—The attendance at school is regular ; we have 60 scholars on the books. There is a charity for education ; but the school was built by me, and I pay the schoolmaster partly myself and partly by money out of the charity funds.—The occupations on an average are 120 acres but there are one or two of 300 acres ; the smaller farmers employ labourers and keep lads in their houses. The women go out weeding and turnip hoeing. The cottages here are pretty good. We are under the "Gilbert Act" which I consider most beneficial, as the poor are kept at a much cheaper rate than under the new poor law.

BICKERTON.

In the parish of Bilton in Wetherby Union.

[The land here principally belongs to Mr. Montague and the dwellings of the poor are very indifferent ; but some slight improvement is being made.]

352. *Mr. Newman.*—I farm 400 acres and employ very few women or children, one boy under 9 years is in my employ. There are 30 children attending the Sunday school. The parents are very indifferent about education even when their children can go for nothing. I think some compulsion is necessary. There is a good deal of flax grown here which requires weeding ; this work is principally done by the Irish. At certain seasons we are very short of hands for weeding purposes. If the cottages were put in a better state, children would attend school more regularly. Many of our children go to Walton school.

WALTON SCHOOL.

353. *Henry Burgum* (master).—Number on the books up to April 1868, 63 ; average attendance, 32 boys and 14 girls = 46. Of these, 25 boys and 13 girls are under 13 years of age ; 17 boys and 8 girls are between 10 and 13 years of age. The day school at present has some farmers' sons attending. The falling off of attendance begins in June and lasts over harvest. The children of the labouring class leave as soon as they can earn anything. At 9 years of age or under the small ones go cow-tenting, some go "looking," and potato planting. The women also go to work very much in the fields.

Wages for an ordinary labourer 13*s.* a week. For a woman 1*s.* a day ordinary work, and more for machine work. Small children earn 8*d.* a day ; bigger ones 1*s.* a day. The children who work in the fields might well have 30 weeks' schooling in the year. The irregular attendance causes the children to go back in their studies and to forget what they have learnt.

There is to a certain extent a pressure put on the labourer by the farmer, that is to say, as a condition of regular payment and employment throughout the year the labourer is expected to let the farmer have the benefit of the work of his wife and children when occasion requires.

The night school here has been most successful this year. I have had 24 in attendance, out of which number 16 were farm servants. The school is open three nights a week, free of payment, from October to March, for two hours a night. The principle on which we have endeavoured to conduct this school is to make it as little like a school as possible, that is, when the lads first attended they were allowed to do such work as they wished ; and after a time we found that they fell into a routine of instruction. They are also allowed to play drafts and chess. The farmers have expressed themselves as being very thankful for the benefit done to the lads.

The distance from the farmhouses to the school is very slight. The school has been open for four years, and I do the work myself. The average of those attending is 16 years. We have 12 of 18 years of age, and one of 26 years. The occupations in Walton average 200 acres. There is one farm of 500 acres. This school receives great care and attention from Mrs. York, of Wighill.

LONG MARSTON.

School.

354. There are several Bilton boys at the school. The small children go out singling turnips at 8 or 9 years of age, both boys and girls. Sometimes they are paid by the farmer, and sometimes they go with their parents, who take the work by the piece. At Bilton the children also are employed, and there is a small school there for about 10 scholars. In Rufforth there is no school open now, but boys do not go out much to field work there under 10 years of age. Girls are very seldom employed before 10 or 11 years of age. The wages in harvest for children are 1*s.* a day, without meat but with two drinkings.

Charles Dickinson, of Angram.—I went out at 9 years of age singling turnips and driving carts in harvest, and potatoing. I got 6*d.* a day and meat. The hours of work at singling is from 6 a.m. to 6 p.m. I live close to my work. I have been half a day to farm work, and have come to school afterwards in the afternoon. I was not too tired to attend to my lessons. I came two miles to school. I think that the farmers would be glad to employ boys in the afternoon for work at certain seasons in the year sooner than not have them at all.

355. *Cottages, property of Mr. Montague.*

(1.) One room, rent 2*s.* a year. Upper chamber not in repair. Inhabited by a widow.

(2.) Two rooms on ground floor. Chamber not fit for use. The roof in bad order. Pigstye falling down. No privy or garden.

(3.) Kitchen and bedrooms on the ground floor, chamber not used, a good garden, rent 1*l.* a year.

These cottages were all very clean and tidy. They are let at a low rent, and the landlord refuses to do any repairs. The repairs and whitewashing amount frequently to 2*l.* a year or more, thereby raising the rent above the real value of the cottage. No steps are being taken to build fresh cottages here when the old ones tumble down.

356. *Mr. Coates*, farmer.—300 acres is a large farm, the average size of the farms is from 100 to 300 acres; the cultivation here is nearly as possible half grass and half tillage. Children under 10 years of age do not work, a few between 10 and 12 go out singling turnips, but among these there are very rarely any girls. Women are difficult to get for ordinary work; they go out much for teasle cutting which they take by the piece and at which they can earn 5*s.* a day. Women and children do not go out at all in the winter. I have never heard of any case of a bargain being made by a farmer for the work of the wife or the child of a labourer. I prefer getting labourers from the village for the farm work, to having a number of lads in the house. I should much like to see characters more frequently required at hirings; then I do not think it would be necessary to have a certificate of school attendance for a certain number of months during the year produced at hiring.

I think that an increased number of cottages would do away with the necessity for having so many lads in the farmhouses if they were placed conveniently for the work of the farms.

The cottages are not good, but are kept wonderfully clean.

357. *Rev. A. St. John Mildmay*, rector.

Population, 580. - Acreage, 4,310.

There are, exclusive of farm servants, 40 males and 30 females employed in agriculture; of the males about 25 are between 10 and 13, and 15 between 13 and 18 years. Of the females, very few are ever employed under 13 years except for "looking" [weeding], about eight between 13 and 18 years, and above 18 years 20 married and 10 unmarried, but only for hay and harvest as a rule. The distance to work is from one to two miles, and the hours are for men from 6 a.m. to 6 p.m., for women from 8 a.m. to 6 p.m., with an hour allowed for dinner.

I think that the mothers of little children necessarily fail in their domestic duties when in constant employment in the fields. Children should not be employed at all under nine years of age, for the purposes of education not under 10 years, and then only occasionally. Half day at school and half day at work would be the best mode of enforcing school attendance, the school half should always be in the morning, but the farmers object to this system.

I believe the prevailing custom of parents and older children of both sexes sleeping in the same room to be one of the chief causes of immorality. In farms especially little attention is paid to the separation of the lads' sleeping-room from that occupied by the women. I allude to the latter point from facts that have come under my notice.

One cottage per 100 acres is sufficient (including farm servants) for the requirements of the land, we have about one to 250 acres. The cottages are in some cases overcrowded, but the cleanliness of the people seems to counteract the physical evils of such cottages. They have mostly ground floor rooms both for sitting and bedrooms; one sitting room, one bed room, and a lean-to with beds in it. Gardens are good.

Hutton and Angram, the two townships of Marston, have cottages for the most part comfortable and not crowded. Mr. Montague is the landlord in Marston, Lord Wenlock in the other townships. This parish is under the Gilbert Act.

The plan of setting apart a building with dormitories for young men, under the superintendence of a master and matron where practicable, would remedy one of the evils in cottages. I believe it has been tried with great success on Mr. Sotheron Estcourt's estate.

School.

In Summer.

	On Register.	Average Attendance.
Boys:		
Under 10 - -	35	20
Between 10 and 13 -	32	9
Girls:		
Under 10 - -	22	16
Between 10 and 13 -	11	9

In Winter.

Boys:		
Under 10 - -	35	Much the same as in summer.
Between 10 and 13 -	32	
Girls:		
Under 10 - -	22	
Between 10 and 13 -	11	

There has been an unusually large number of absentees this summer. There is no night school.

In a scattered parish, the distances men have to go after a hard day's work, and the early hour of returning required by the masters, prevents the working of a night school, and when the long days begin the school is closed; there is also difficulty in getting teachers.

YORKSHIRE.—NORTH RIDING.

358. Meeting of North Riding Chamber of Agriculture.

Malton, 15th Feb. 1868.

Education of the Labouring Classes.

In reference to this important subject the paper contained the following resolutions for discussion:—

The education of the agricultural labourer, upon which question the Scarborough, Pickering, and other chambers have expressed no opinion, but have deferred the full consideration of the subject to the Malton meeting; but, as to which, these resolutions have been proposed:—

The Ripon Resolution.

That this meeting recognises the necessity of providing efficient means of education, where such do not already exist; that where voluntary efforts are inadequate, and recourse to public funds is necessary, this meeting is strongly of opinion that a rate, based on the present poor-law assessment, would be partial and unjust in its operation, because an enormous amount of the wealth of this country is not liable to be rated, and would therefore bear no proportion of the expense of any scheme of education, founded on the present system of rating; that this meeting con-

N. R. York.

Mr. Portman.

d.

siders compulsory interference with the parents in the management of their children undesirable and unnecessary, at least in agricultural districts, and that any coercion would be deemed by them as repugnant to that liberty of thought and freedom of action which all Englishmen so much appreciate; that in the carrying out of any scheme which may be adopted, it is expedient that a local board of supervision be established to co-operate with any Government official who may be appointed in the management of the schools situated in the respective localities of such boards.

THE THIRSK RESOLUTION.

This chamber, recognizing the great importance of the question of education, desires to express its opinion against any undue haste in the decision of the question; but records also its opinion that any additional facilities required for the education of the labouring classes should be provided by an increased amount of State aid, and the application of local funds, together with such local rates as may be necessary; those local rates being in smaller proportion to the aid granted by the State. And this chamber concurs in approving of the principle of the establishment of educational districts co-extensive with poor-law unions, with local boards of management composed of poor-law guardians, the present managers of schools, and other fit and proper persons, and of the enforcing of attendance by making educational certificates a condition of hiring and employment.

Mr. J. Smith, of Riseborough, did not think they should accomplish all that was necessary in the way of education unless they provided not only for the education of the labouring classes, but also for that of the children of small farmers, tradesmen, and mechanics throughout the country. As to the age up to which children should go to school, he might state that the practice throughout the county of York was to employ children at very light labour indeed, and only very occasionally. There were here no such "gangs" as were usual in the county of Cambridge, in the south, and in the midland counties. If Government passed an act that no children should be employed at any labour until the age of 10 or 11, it would interfere very much at one season of the year with harvesting operations.

Mr. Smith said, that as to the half-time system, it would not work, as the farmer must have the lad the whole day or not at all. The resolution he had to move was—

(1.) That commodious and healthy school-rooms, with efficient teachers, should be provided where necessary.

(2.) That Government grants be made for the erection of school rooms, and for the payment of teachers.

(3.) That a Board of Education be formed in every poor-law union, composed of all the guardians, with an additional elected member from every 5,000 of population in every poor-law parish.

(4.) That grants in aid still be made to all denominational schools, and all establishments for training teachers which now receive them, or hereafter make application for them.

(5.) That it is not necessary that teachers employed by the Board of Education should possess a certificate of ability from any training establishment, it being sufficient that the board consider him suitable and efficient.

(6.) That grants in aid be made only to those schools and to the amount recommended by the board.

(7.) That as of necessity such schools as are under the management of this Board cannot be sectarian in their character, therefore grants must only be made on condition that the Holy Scriptures be read and taught thereat.

(8.) To induce attendance at those schools, the charge for education must be as low as possible, the board having power to exempt from payment altogether those whom they consider unable to pay; and rewards for attendance may be given, as the board may direct.

(9.) That all children of paupers be educated free of charge, and the parents be compelled to send them, upon pain of forfeiting their weekly allowance.

Captain Copperthwaite, expressed himself in favour of compulsory education, especially with regard to pauper children.

North Riding Chamber of Agriculture,
Malton, Feb. 29, 1868.

It was resolved that "no child ought to be sent out "to work under the age of 10 years, harvest time "excepted, and that from that age to 12 years he "should have attendance at school during the winter "months."

359. *Superintendent Harper*, E. R. Constabulary.—I find that 50 boys and 12 girls go up the Driffield line to Wharram and Birdale, every morning from about the 3rd of June to the middle of August, for weeding and hoeing. The rest of the year none leave Malton by rail, nor have I heard of any by road.

FLAXTON.

360. *James Palmer, Esq.*, surgeon.—Children of 8 or 9 years of age go out to work singling turnips in spring, and are absent from school three or four months in the year, including the harvest. I do not think that the health of the children is at all damaged by field work, neither do they go any great distance to work, perhaps two miles. The wages for labourers is usually 8*s.* and 9*s.* a week, and meat. They get 1*l.* in time of harvest, and there is a great deal of "take" work. Women earn 1*s.* and 1*s.* 3*d.* a day. They for the most part do work which is done in other places by children. They are always out at potato seasons, and are employed in spreading manure and such like. The largest farms here are 200 acres. The 50-acre farmers send their children to school pretty well, though they are rather worse off than the labourers.

The state of education is fairly good; most can read and write; hardly any females in the district, perhaps not one per cent., are destitute entirely of education. The best educated farm lads go off to the towns or to the railways, even after they have become foremen on the farms. A lad on a small farm will get to be foreman at 18 or 20 years of age, and then get 20*l.* a year and his board. The education among the farmers in this district is very low, and worse in proportion than among the labouring class. Farmers' children go to the village school for a time, and then perhaps for a few months to a boarding school. Compulsory education would not add five per cent. to the educated numbers, and would be most unpopular. I see no objection to placing 10 years of age as the limit for children's work, and such limit would not inflict any injury on the majority through the loss of earnings. Night schools have been tried, but have not succeeded. The farmers do not take any trouble about the education of the servants in their houses.

In the cottages the bedrooms are badly constructed and ill-ventilated; many are overcrowded, big boys and girls sleeping together in the same room, and consequently a great number of illegitimate children are born in the district.

[Mr. Palmer speaks of Flaxton, Bossall, Strensall, Claxton, and Foston.]

361. *Rev J. Griffith* says that Government aid to small schools in the rural district is very much needed. There is also a great want of proper bedroom accommodation in the cottages.

SCHOOL.

362. *J. Mitchell*, master.—There are 40 children on the books; a very thin attendance in spring and summer; the children are away three or four weeks in the spring potato-setting, weeding, and leading drill-horses. As a rule they do not go out before 10 years of age, and their ordinary pay is 6*d.* a day and meat. Men's wages are 2*s.* 6*d.* a day.

Cottage rent from 4*l.* to 5*l.* with a garden, and there are allotments of half a rood each, which are, I believe, let at 10*s.* a year. The girls do not go much to field work, but are taken away from school to nurse or look after the children when their mothers are in the fields. Row of six cottages, four rooms in each on the ground floor; garden under half a rood; rent 3*l.* 10*s.* a year each.

STERNSALL.

363. *Rev. J. Hodgkinson.*—There are many small farmers in this parish holding from 12 to 50 acres, and very few holding more than 50. These only occasionally employ labour, and if children were forbidden to work under a certain age it would, I think, press hard on these men. There are many copyholders in the village; these small properties have "fronts," and each front has a right of run for cattle on the common. The ordinary wages are 2*s.* 6*d.* a day, but more can be earned by draining either by the day or by piece. There is a tannery in the village, which employs many people. The women go out to work a good deal, and Irish also come from York in gangs at certain seasons of the year.

The school is supported by endowments, by the school pence, and by a donation from Mr. Leonard Thompson. There are 63 on the books; the oldest boy in school is 13 years of age. The attendance in spring and autumn is very small. Many farmers' children come to the school. The boys go out setting potatoes, and the girls also, but not for hire, only to assist their parents. I do not think that half day at school and half day at work would succeed in rural districts.

The cottages here are much improved. There used to be muck-heaps opposite the doors, which have been removed, and the village altogether is much tidier. There are a few "poor" cottages for widows of one room only, but very tidy and comfortable, and with a small piece of garden attached. There is a piece of land belonging to the poor, which is now increased in value to 60*l.* a year.

364. Anchor-Plain Allotment,

in the parish of Sutton, the property of Admiral Duncombe. The size of this piece of land is 48 acres 1 rood and 8 perches, and the annual rent is 48*l.* 6*s.* It is divided at present into 19 portions, of which six are 4 acres each, two of 3 acres, seven of 2 acres, two of 1 acre, and one of 2 roods.

SHERIFF HUTTON,

a large village; most of the land and cottages belong to Mr. Meywell Ingram. There are a few freehold cottages and some built on land cribbed from the waste; these last are now being allowed to go out of repair. There is also an allotment field divided into 33 portions, 32 having half a rood each, and one having a quarter of a rood; 32 pay 6*s.* and one pays 3*s.* a year, the total amount of rent per annum being 9*l.* 15*s.*

School.

25th May 1868.

365. *Joshua Illingworth*, master.—Number on the books 89. There are to-day absent over 30 boys, mostly labourers' sons, who are and have been employed in the fields for some weeks. The attendance from October to April is generally good, and six months regular attendance between 10 and 13 years years of age would be sufficient to get the Government grant. I think that parents are often forced by poverty or by the want of the earnings to keep the children away from school, but the parents of those children who are admitted free by endowment are the most careless about sending them to school. The parents themselves are very ignorant, and the small children get no encouragement at home to keep up that which they learn at school. We had a night school but it failed. The farmers will not allow their lads to come. At first we had big lads of 20 years and upwards, but when they found how difficult it was to regain the knowledge which they had lost since they left school, they gave it up.

366. *Joseph Lundy* (10 years of age).—I have been out two years bird tenting, singling turnips, and potato setting; we went six together, with one girl, and were looked after by the farmer and paid by him. I have been away for seven or eight weeks together. Wages for tenting, 6*d.* a day; for weeding, 1*s.* a day.

[This boy could read and write well and do the four first rules of arithmetic, and had attended the necessary number of times for the grant of last year.]

In the girl's school sewing is taught four afternoons in the week; girls go out to service at the farmhouses as young as 9 years of age, and are often absent from school for nursing. Some few go weeding, and, with their parents, potato setting and picking. They earn 1*s.* a day at weeding. The oldest girl in the school is 14 years of age.

367. *Mary Saville*, 10 years of age. I have been out with men and boys singling turnips; at dinner time we all get together; the master goes home to his dinner and we were left without anyone to look after us.

368. *Rev. O. Flowers.*—Population of the parish 1,223.—There are no private gangs in this parish. About 200 persons are employed in agricultural labour; of these there are 12 males between 8 and 10, and 26 between 10 and 13, and 15 between 13 and 18; of 88 females, six between 8 and 10 years; 18 between 10 and 13 years; 36 between 13 and 18 years; over 18, 40 married; 12 unmarried=112. They are employed in tenting corn, in planting potatoes, in weeding corn, hoeing and singling turnips, and gathering potatoes. None live on the farms, but some near. Some go two and three and even four miles to work. The hours of work on the land are 10, but those who live at a distance are out 11 or 12 hours. One hour is allowed for dinner, which they take with them, and they do not get their evening meal until they return from work. I do not think their health is injuriously affected. All employments where women and children are engaged together act very injuriously upon the morals of the younger ones from the filthy and disgusting language and conversation which they are constantly in the habit of hearing, and these remarks apply not only to young females, but also to the lads working with them. During the time that provisions are dear, it is necessary that females should be employed in field labour in order to obtain sufficient money to maintain the family. I do not therefore recommend any restriction on them, but I would not allow boys to be employed under 12 years of age.

If any mode of enforcing school attendance were attempted, I should recommend alternate whole days at school and whole days at work. I do not know that the attendance is affected by the pecuniary resources) of the parents, although one or two families make no effort to have their children educated, but this does not arise from want of means. There are about 26 children in the parish, who ought, but who do not attend school. We constantly employ a girl out of the school at the Vicarage with the view to prepare her for domestic service; this plan has met with success. The cottages are all in the village, and the farmhouses are from a distance of one to four miles. They usually have two or three bedrooms, but there are some large large families that have not sufficient accommodation. Many of the cottages are in a dilapidated state, and several have been allowed to become so bad as to become untenantable; this, together with the fact of the smaller holdings being absorbed by the larger farms, has brought about a considerable decrease in the population during the last few years. Most of the cottages belong to the landowners, and great improvement has been effected in the drainage of the village. There is a sufficient supply of water. Most of the cottages have a garden and outhouse attached to them. The rooms are generally about 12 feet square. Private individuals who have built cottages in this village have hitherto found them pay.

N. R. York.

Mr. Portman.

d.

ALNE.

Township, population, 453 - Acreage, 2,100
Parish „ 1,589 - „ 10,000

369. *Rev. W. Braithwaite.*—There are no private gangs. Potato picking and turnip hoeing are taken by the piece and all the family go out; the women are much employed. There are about 100 males between the ages of 13 and 18, and 45 married women over 18 years of age now employed in the parish. Boys under 13 years and unmarried women are very rarely employed in farm labour, except as domestic servants. The hours of work are from 8 a.m. to 6 p.m., with one hour allowed for dinner. The state of morality among the women is low, but necessarily so in consequence of the field work. I do not see any necessity for restriction, except for educational purposes. I would not let any child go to work before 12 or 13.

There are six townships in the parish, comprising about 10,000 acres; it is purely an agricultural district with a few farms of 400 acres, and many small men who employ their own children.

I think that enforced school attendance for a certain number of days or hours during so many months in the year is the system most applicable to an agricultural district. Small farmers' children should come under the same provisions as the labourers' children, as they really do work for hire, inasmuch as they save their parents from hiring labour. School attendance is considerably affected by distance, but very slightly by the pecuniary resources of the parents.

The cottages are for the most part fair; but there are a number belonging to the parish wholly unfit for habitation—perhaps one cottage per 150 acres would be sufficient. A cottage ordinarily contains a kitchen about 10 feet square, a back kitchen, and two bedrooms; they are too often crowded, and generally owned by small proprietors. Rent about 4*l.* a year.

The number of children on the books of the school 260; in average attendance in summer 220, and in winter on the register 280, average attendance, 250. We are fairly well off for schools, and there is a desire for education growing up among the parents. The statute hirings are most injurious to the morals of the labouring classes. At Thirsk the hiring is at May day; at York at Martinmas; and on market days for three weeks at Easingwold.

370. *Mr. Weddell*, farmer.—The wages here are 2*s.* a day and meat for casual labourers; an ordinary labourer earns 3*s.* a day and no meat. Women earn 1*s.* a day; turnip-hoeing is taken by the piece at 8*s.* or 9*s.* an acre. A man and his wife can hoe half an acre a day or more. Wages are more than doubled within the last 10 or 20 years.

EASINGWOLD.

Population, 2,147. - Acreage, 6,923.

371. *Rev. H. Ainslie.*—At certain seasons of the year the schools are quite emptied through all hands being required for field operations, such as weeding, potato-planting, &c. This is a large parish, full of bad characters, who have collected from the other villages.

We have an endowed school under a master, and a girls' and infants' school kept by myself. Children go out to work at all ages; the women do all the cleaning in the fields. There are 300 Irish living in the town, who are fully employed. There is great employment for children and women in the nursery gardens here.

372. *Mr. Bensley*, under master, Free School.—The children go out to work at 8 or 9 years of age. They return to school during a portion of the year, but the average absence is 10 or 12 weeks throughout the year. They will leave the free school at any time they please, but not the Wesleyan school, where they pay so much a week for their schooling. The children at the free school are mostly of an agricultural class; the parents are very indifferent about their education. If a prohibition was placed on children's work up to 10 years of age I do not think that there would be any perceptible loss of earnings to the parents. From 10 to 12 or 13 it would be quite possible to get continuous and regular attendance from the beginning of October to the end of February in every year, or at any rate 150 attendances might be fairly required.

[This town is in a most dilapidated state, the school is apparently almost useless under the present master, and the influential persons in the town are averse to any inquiry into or legislative interference with the present state of things.]

Castle-Howard Reformatory.

373. *Rev. J. Fish*, superintendent.—Boys go out from here in lots under an officer to work for the farmers at weeding time and in such other employment as they may be able to give them. They are also allowed to go out to farm service on a ticket of leave. The earnings are kept for them, and a portion is given them while out at service, and if a lad has a good certificate he will get all his earnings when he leaves school. They are much sought after for field work by the farmers in the district.

APPLETON-LE-STREET

Contains the townships of Amotherby, Swinton, Broughton, amd the hamlet of East Thorpe.

374. Swinton.

Infant school, 44 on the books from 2 years old up to 7; 2 girls as old as 11 in the school. The payments are 1½*d.* per week for one, and 1*d.* a week when there are two children out of one family. This is rather a poor parish. There are quarries and lime-kilns, in which a man earns 3*s.* a day. The women also are a good deal employed in the lime-kilns, and are paid so much by the kiln; they will get 9*d.* for a large kiln, which takes 5½ hours to fill. The wages for agricultural labourers are 9*s.* a week and meat, or 2*s.* 6*d.* per day. Girls are very rarely employed, but some children of both sexes of 9 years and upwards are sent out brassacking. The occupations are not under 100 acres, and several are from 300 to 400.

375. Amotherby Boys' School.

On the books, 30; average attendance on the 28th May, 22. This is the thinnest time of the year. There were three boys of 13 years of age in the school, and several out in the fields employed in brassacking and singling turnips; their wages are 8*d.* a day. The children are absent from school whenever they can get a job, though the parents are not badly off, yet they are anxious to get all the earnings they can.

There are gardens attached to the cottages, and allotments of a rood each for almost every one in the parish. The allotments are let at 10*s.* a rood.

Girls' School.

376. *Miss Ellis*, mistress.—There are about 90 on the books. Children from all parts of the parish of Swinton, and some from other townships, come to this school. I have two children who come 3¾ miles, but that is the greatest distance. I take in boys till they are 7 years of age. Girls do not go to field work so much as they used to do. The school payment is 1½*d.* a week for free scholars, and the payments range up to 6*d.* a week. The children begin at 3 years of age; those of the poor people leave generally at 12 or 13 to go to service. There is no complaint of poverty as an excuse for not sending the children to school.

[This is an excellent school. The cottages also in this village, belonging to Mr. Thelluson, have lately been re-built, and the village much improved.]

BURNISTON.

Population, 350. Acreage, 1,504. Cultivation mixed.

CLOUGHTON.

Population, 450. Acreage, 2,130. Cultivation mixed.

377. *Tindall Sleightholm*, schoolmaster.—I have been here 31 years. Private gangs are not known here. No females are employed in these two parishes in agricultural labour except at hay time, harvest, and potato picking in the autumn, and these are generally the wives of agricultural labourers living not a mile from their work. The hours of work are 6 to 6 with an hour allowed for meals.

Children do not go to work under 10 years of age. This is a free school, well supported by voluntary subscriptions, so that the children of the labourers are educated free and seldom leave school under 10 years, more frequently remain till 12 years. There are 75 children attending this school, and the attendance is very regular. There are dames' schools in both parishes where the children go till 6 years of age. A night school is not wanted. The adjoining parishes have excellent schools, and all the young persons have been attendants at a day school.

The cottages under the duchy of Lancaster are bad and dearer than others which are let at 3*l.* to 4*l.* 10*s.* a year. Most have garden, some of an acre in size; I think one rood is enough for a cottager.

Wages for agricultural labouring men are 9*s.* and 10*s.* a week and meat; for a quarryman, 16*s.* and 18*s.* a week.

WHITWELL.

Population, 200. - Acreage, above 2,000.

WELLBOURN.

Population, 600. - Acreage, 1,500.

BULMER.

Population, 345. - Acreage, 1,430.

378. These parishes were represented by Rev. F. D. Legard, Mr. Denison, and Mr. Ellerby, farmers.

The children are very little employed; a few go bird tenting, and sometimes with their parents for singling turnips. The young women do not go to work in the fields, the older ones do sometimes. There would be no objection to putting the limit for work at 10 years of age. Half time or alternate days are not practicable in agricultural districts, but between the ages of 10 and 13 six months of the year might be freely given to schooling; it would be difficult to enforce the requirement of a certificate of such school attendance before hiring, but it was thought more desirable to provide that no child should be permanently hired under 13 years of age.

Wages for a man 15*s.* and 16*s.* a week, for a woman 1*s.* a day, and for children bird tenting, 6*d.* a day.

The cottages are scarce and much wanted on the farms; men have to come two miles and more to their work. It was thought more desirable to have cottages not immediately on the premises but still on the farm, the tenants being willing to pay a fair per-centage for the outlay. Mr. Ellerby pays 5*l.* a year for a cottage on his farm. One cottage per 100 acres is enough where the land is partly grass and partly arable. It was suggested that Government might prepare cottage plans to be adopted by such persons as are desirous of building cottages under the terms of the Lands Improvement Act, and that some alteration might be made in the borrowing terms provided under that Act.

The farmers object to night schools for farm lads, as causing much inconvenience to the farmer's arrangements in his house and farmstead. In Bulmer, however, there is a good night school throughout the winter for lads, but in this case eight out of ten of the farmers live in the village, so that the distance to and from the school is so slight as not to interfere with the hours for work at night. It was suggested that in the case of children who are neither at work nor at school, an extension of the provisions of the Industrial Schools' Act might operate most beneficially in securing some amount of school attendance and education for those neglected children.

There are allotment fields in Wellbourn and Bulmer in portions of half a rood and one rood, at a rent of 10*s.* a rood. It was thought that half a rood was sufficient for labouring men.

The Reformatory boys are much employed here on the farms for weeding; they come 12 or 14 together, with one of the officers to overlook them.

379. Extract from Letter from Rev. F. D. Legard to Hon. E. Portman.

Whitwell, 15th July.

* * * * I think we should all stand compulsory education up to nine years old; the difficulty of some parents who would not pay might be met by an extension of the Industrial Schools Act, of those who could not, by some arrangement with parish overseers. Till 9 there should be no work, after that till 12 years there should be full attendance for the year, less some temporary employment to last no more than six weeks or two months (of course harvest always excepted); then from 12 to 15 years I would make all village schools open in the evening for two hours (giving the master some additional pay), and give a certificate to all who attended regularly for four winter months, this to be of a paid capitation value. * * *

HOVINGHAM.

380. *W. C. Worsley, Esq.*—Cultivation is mixed. There are no private gangs. About 30 children between the ages of 10 and 13, and 20 or 30 women are employed in summer and autumn gathering stones, weeding, singling turnips, and in harvest work. The hours of work upon the land are from 8 a.m. to 6 p.m. with an hour allowed for dinner. I do not think that such work injuriously affects their health. A woman servant in a farmhouse works hard, but is well cared for as to food; she, however, often runs risks in respect of character, more so, I think, than in field work. I would not place any restriction on female labour, but no boys should be employed under 10 years of age. No restriction is necessary upon the hours of work.

In winter and spring the children should be sent to school—under an Act such as the Factory Acts—regularly, and for full time in summer and autumn. Some latitude should be allowed to parents as to sending the children to school. I do not think the school attendance is affected much, if at all, by the pecuniary resources of the parents.

The cottages are capable of improvement, which is going on by degrees. The servants' accommodation in the farmhouses is often badly arranged; the sexes are not sufficiently separated. This remark does not apply specially to this place. On the whole the cottages are good and sufficient; the old and bad ones are being replaced. The parish belongs mainly to one landlord. There is no under drainage, but the privies are in connexion with ash-pits or heaps which are from time to time removed on to the land. Cottage rent is moderate.

With respect to the Lands Improvements Acts I think more would be done in building cottages if greater latitude were given as to the style of work. You cannot build cottages to pay, save incidentally; they are as necessary to the farm as barns, or drains, or stables.

N. R. York.

Mr. Portman.

SCHOOL.

In Summer.

—	On Register.	Average Attendance.
Boys:		
Under 10 - -	34	18
Between 10 and 13 -	16	10
Girls:		
Under 10 - -	28	18
Between 10 and 13 -	12	8

In Winter.

Boys:		
Under 10 - -	38	24
Between 10 and 13 -	20	14
Girls:		
Under 10 - -	31	20
Between 10 and 13 -	16	12

There is a night school for young men, open from November to March for 1¼ hours on three nights a week. The number of scholars last winter was 13. Reading, writing, and arithmetic are taught, and if there was a sufficient attendance in number I think it would supply the deficiencies of the day school. There is a difficulty in getting the young men to come.

381. LETTER from Mr. WORSLEY to Mr. PORTMAN.

DEAR SIR, June 11, 1868.

I HAVE filled up the circular of inquiries you sent me as well as I can.

I have drawn attention to an evil which does not exist here so much perhaps as on the Wolds, and in places where there are large farmhouses in which numbers of hands live as yearly servants. I allude to the sleeping accommodation and the separation of the sexes being faulty. I can hardly say that I know of my own knowledge the truth of this evil, but I know it by others, and I have no doubt of the fact; I believe, however, that it is not so great as it used to be.

We have no gang system here, the village populations which are resident here do the work, and there is no difficulty as to distance or accommodation.

Women old and young, when able, like to work in the fields, especially at hay and corn harvest. I believe it to be good for them in all respects.

As to school, I think the parents are as a rule supine about the education of their children, and it is the duty of the State to see that it is not neglected. In winter and spring there is no excuse for non-attendance at school; though compulsory attendance would be unpopular at first.

Yours truly,

W. C. WORSLEY.

THORNTON.

MIXED SCHOOL.

382. — *Taylor*, master.—103 on the books; average in February, 77. Lowest average in the first week after harvest, 12.

Boys go singling turnips, potato planting, and picking, and are away for nearly six months in the year. There was only one boy in the school of 10 years of age. The boys' wages are 1*s.* a day for potatoing, 6*d.* a day and meat for singling turnips, 1*s.* a day for tenting. Men's wages 2*s.* 6*d.* a day; women's 1*s.* a day. Payment for schooling 2*d.* a week. 65 children were presented to the inspector this year with the full number of attendances. We rarely take children younger than six years of age as there is an infant school in the village. There is also a grammar school and a private school, consequently there are very few children who do not go to some school. There is no night school. Many parents are extremely careless about education, but I think compulsion will be opposed.

The population of Thornton and Ellesburn parishes combined is 1,300. This parish is at the foot of the dales bordering on the vale of Pickering.

383. *Mr. Boddy's* farm, four miles from Thornton. Part under the Duchy of Lancaster, part under Mr. Hill. Is a dale farm far removed from any village where work is done almost entirely by the lads living on the farm. Women here are hardly at all employed except a chance day for turnip hoeing by the piece. This farm like other large dale-farms on the edge of the moors is partly arable and partly sheep-run.

384. *George Ward*, relieving officer to the Pickering Union. The employment of children in this district is confined to a few boys who may go six or eight together for brassacking and a few also are employed in bird-tenting. This is a large straggling union.

Ryedale, or the Vale of Pickering, reaches nearly to Seamer Junction on the east. This district contains nearly an equal proportion of tillage and pasture. There are large sheep farms in the Dales.

Many labourers here are paid 8*s.* or so per week, and their meat, which I consider a very bad system for the families.

There is a bit of land attached to most of the cottages, and many cottagers have a cow.

We have not had more than one able-bodied labourer in the workhouse for 10 years.

The education in the district wants improvement; there are plenty of means, but the people themselves are careless about it, and nothing will be done with them without compulsion.

There is no fear of a farmer losing anything by boys and girls being kept out of field work up to 12 years of age, if a certain time is allowed at certain seasons in case of emergency. Those small farmers who employ their own children to cultivate the land are very indifferent about their attendance at school as soon as they are capable of doing any work.

The cottages in the union are improving as the old ones tumble in. The class of small freeholders is rather on the increase near Pickering; the small tradesmen buy a bit of land, but I do not know of many instances of a labourer having raised himself and become an owner of land; there may be some few who have saved money when at service.

The system of statutes and farm servants exists here as in other parts of Yorkshire.

PICKERING.

Population, 3,000. - Acreage, 15,000.

385. *J. Kitching, Esq.*, Chairman of the Board of Guardians.—No boy should go to field work under 10 years of age, and they may fairly go to service at 12 years of age. Girls are not hired here for singling turnips; one may occasionally go with her parents. The women go out corn hoeing, &c. There is very little employment for boys.

There is a district four miles from here called "Pickering Moors," which is joined to Newton parish. There are 500 inhabitants who have from 10 to 40 acres apiece, partly moor and partly cultivated, mostly grass. They keep cows and hardly one of them will ever hire a labourer. They break up the moor and have a cottage to live in, and will pay for, say 20 acres, taken out of the moor and a house, 5*l.* a year. They are well off for Sunday schools, kept by the dissenters, and there are two chapels, but there is no day school nearer than Newton, which is from two to four miles from different parts of the district. In other parts near Pickering there are some large farms. My farm is close to the town, and I prefer having married men as labourers to lads as they are

more careful in their work. I employ married men to look after my horses and stock, and have but one lad in the foreman's house. I pay them their wages in full money and do not approve of the system of "meating," as I think it much better for the families that they should have the whole weekly money. I employ one boy under 8 years, six between 10 and 13, and one between 13 and 18 years; 10 married women and two unmarried over 18 years of age. The boys are employed in singling turnips, the women in hoeing corn.

Boys from 12 to 14 years go to school in winter. The school accommodation is good except at the "High Moors."

One cottage per 100 acres is sufficient for the requirements of the land. The cottages are not crowded; rooms are usually 15 ft. × 12 ft.; they belong to people of all classes. The rents vary from 50*s.* to 5*l.* a year.

Eighty per cent. of the children in Pickering attend school in the summer, and 90 to 95 per cent. in winter. There is a night school open for 20 weeks in winter, for two hours on five nights a week. There are about 20 scholars who receive instruction in reading, writing, and arithmetic. In my opinion it supplies the deficiencies of the day school.

386. *Mr. Nelson*, farmer, Sinnington.—I have a farm 400 or 500 acres in Sinnington and Marten. I pay an ordinary labourer 2*s.* 6*d.* a day and do not approve of the "meating" system. The people here with a few exceptions are very well off. No children are employed under 10 and very few under 12 years of age.

There is a good school at Sinnington and at Marten, and they are both well attended. I think that 10 years would be a good limit, below which children should not be allowed to go to work. The children may be wanted for perhaps three weeks in the year, at weeding time on the wolds, but not much in this part. Cottages on the farms are desirable in cases of large occupations.

There is no large landowner in this neighbourhood, but very many small holdings. The farm lads are boarded in the house and not the labourers. Some of my lads can read and write and some few take pains to keep up their education. I formerly farmed on the Lincolnshire wolds.

387. *J. H. Phillips, Esq.*, Beadlam Grange, Helmsley.—Children of both sexes as young as 8 or 9 are employed in singling turnips; the foreman goes with them and looks after them; they are sometimes taken to distant farms in waggons. They would be absent from school for three weeks at a time. An ordinary labourer's wages are 15*s.* a week, perhaps a little less in winter.

The cottages are in a very bad state in some of the parishes. They all have gardens, and the rent of the dearest is 3*l.* to 3*l.* 10*s.* a year. The labourers will sometimes pay 8*l.* a year for three or four acres of grass for their cows. They make their profits out of the butter, and it is a great benefit to the children of the parish that there should be a good supply of milk.

It would be very beneficial if Government aid were more liberally given for the support of small schools, as in many parishes there are no funds available for paying a good and efficient master.

388. *W. McLauchlin, Esq.*, Helmsley.—A regular labourer gets 13*s.* 6*d.* a week. Some of them keep cows and have a run for them in large pastures, of which in Helmsley there are two; one which feeds from 50 to 60 cows, and another which feeds 13 cows. There are gardens to almost all the cottages in the country villages, and allotments belonging to many that are situated in the town. The farms in this district are for the most part small. The children of both sexes are employed in the fields at 9 years of age, though girls are not often so employed. The parents send them to school pretty well at other times and I think a certain amount of school attendance might be required without specifying the months during which such attendance should take place. A certificate of such attendance might be required before hiring, and such certificate should be registered in some public office for reference.

"Runch" is hoed by men and not pulled by children. The Dale farmers mostly feed stock, but grow enough corn, &c. for the use of the farm; work the land themselves, and very rarely employ a labourer or even have a lad in their house.

In Bilsdale there is a school at Chopgate near the head of the Dale. In Farndale the population is scattered. There are two schools in the Dale; for one of these a school-rate of 2½*d.* is levied in the Dale for the support of a certificated master. The farmers send their children to this school. At the other school there is an old-fashioned master. There was very little opposition to the school rate.

In Helmsley there are good schools and some good new cottages with three bedrooms each.

There is much difficulty in preventing cottagers with small families from taking in lodgers when they have a third bedroom unoccupied by themselves.

[Throughout Bilsdale the farms are very small, and are with a few exceptions worked by the occupier and his family without any labourer. There are however in the Dale a few cowkeepers who are labourers and hold a few acres of grass and a cottage.]

Chopgate School, Bilsdale.

389. *J. Johnson*, master.—June 1866 to June 1867. On the books in summer, 44; in spring, 54.

Average attendance.

In Summer	24
In Spring	35
In Winter, on the books	52
Average attendance	32

The oldest boy in the school 14 years of age, the oldest girl 13, and the youngest child 5½ years of age. The children of farmers, labourers, and mechanics living in the Dale attend this school, they come a distance of 2½ miles from down the Dale, and three miles up the Dale over rough roads. The boys attend more regularly than the girls, and the parents seem to care more about the boys' education. The field work in summer keeps them from school. Sewing is taught, but many girls are obliged to be forced to bring their work. I find the boys very stupid and bad to teach. The school payments are 6*d.*, 4*d.*, and 3*d.* a week for children of farmers and mechanics; 2*d.* for labourers; half-pay up to seven years of age, and the pay is only for 40 weeks in the year. At times there is a great scarcity of labour in the Dale. There has been of late a good deal of jet work. I shall present this year 30 children who have attended 200 times. The average attendance last winter was 36.

EGTON.

390. Meeting, June 9th.

Townships represented: Egton, Goathland, Grosmont, Sleights, Sneaton, Danby, Glaizedale, Lealholm.

The Rev. I. Fish (incumbent of Egton) and the Rev. F. Callabert (Roman Catholic priest) attended.

This district is called Eskdale. It appeared that only two really efficient rural schools at present exist in Eskdale, namely, at Danby and Grosmont, and that the education of the poor is rather declining than increasing in efficiency.

Children are employed to a small extent at 10 years of age. The schools are badly attended in summer, and more than half the children are away at times of potato planting and picking. The distances to school in the district are very great, sometimes three or four miles, the average may be taken at a mile to a mile and a quarter.

The educational state is less satisfactory than it was; the proportion attending school is very small. The older persons can read better than the rising generation, and the deterioration of education was

N. R. York.
Mr. Portman.
d.

said to be owing to want of funds to provide good teachers. The carelessness of parents about sending their children to school was said to arise from a want of good masters, as where there is a good master the attendance is pretty regular.

The population consists chiefly of small farmers. There are not many who are purely labourers whose children go to school.

The wages for children are 6*d.* a day and meat; the men, 9*s.* and 10*s.* a week and meat. This "meating" is the custom of the country.

The largest holdings are 120 acres. All farmers of 50 acres and upwards have lads living in the house.

The system of statute hiring exists here, and there appears no probability of a change at present.

It was thought that half time or alternate days at school and work would not answer, but the farmers were anxious to have an improved system of education, and said that a certificate of a certain amount of school attendance for two or three years previous to hiring might perfectly be worked, and that the penalty for non-production of such certificate should be placed on the parents of the child as well as on the employer. It was thought that such certificate would be a great inducement and spur to the parents, but that increased assistance from Government to these small schools was very much needed, so that the payment might be reduced to 1*d.* a week. It was agreed that some compulsion is necessary in the matter of education, more especially for the children of parents who were either indifferent about, or averse to, education. There is a night school at Grosmont which is fairly attended by farm servants and the children of agricultural labourers, but as a general rule these schools have not succeeded.

The dwellings are very bad and very old. They are held under the landlord, and most of them have gardens. There are not many freeholders but several cowkeepers.

The rent of a bare cottage varies from 2*l.* 10*s.* to 4*l.* a year; cowkeepers holding four or five acres pay 7*l.* to 8*l.* a year.

The people are physically well off.

It is a common practice among agricultural servants to save money and to take bits of land. There are benefit clubs which are extremely popular with the people.

[I visited some farmhouses on the estate with wretched sleeping accommodation, thatched roof, a thin ceiling to room, with no chambers above; the cottages are rather worse; the estate of the principal landowner being in chancery. There is a good reading-room in the village. This is a large and straggling parish, as are most of the parishes on the edge of the moors. There is here a large Roman Catholic population. The funds for the schools at Grosmont and Danby are provided by Messrs. Bagnall and Viscount Downe.]

ORMESBY.

Acreage, 2,882. Cultivation, three-fourths arable.

391. *J. S. Pennyman, Esq.*—There is no private gang system here. There are very few children, young persons or women employed in agriculture, but the few that are so employed go out hoeing corn. The hours of work on the land are from 7 a.m. to 5 p.m. They breakfast before going to work, and are allowed an hour for dinner; their health does not suffer. The effect of field work on females is generally not good. I do not see any necessity for a restriction over such work. It is very difficult to get any women for field labour; the custom is dying out, as the labourers being well off the women stay at home and attend to their domestic duties. There is no necessity for any restriction on boys' work. A few boys of the age of 14 go out.

I think a system of alternate whole days at school and whole days at work, would be the best for enforcing school attendance. The distances are not sufficient to affect attendance at school, and the parents can well afford to send their children. Needlework is taught in all the schools.

Cottagers will some times take in lodgers when they have no proper accommodation for them, thereby breaking into the decency of the family. Landed proprietors can stop this by a clause in the agreements. I think one cottage per 100 acres is sufficient for the requirements of the land; we have more than that proportion, and the cottages are conveniently situated with respect to the farms. The cottages are very various in construction, usually one living-room and one or two bedrooms, the size of the rooms being 11 feet by 10 feet, or 12 feet by 12 feet; they are made of brick with tiled roofs, they mostly have gardens, a good supply of water, and good drainage; they are chiefly owned by the landowners, and leased at a moderate rent. I believe that the cottage tenants can afford to pay for good accommodation if they choose.

SCHOOL.

In Summer and Winter.

	On Register.	Average Attendance.
Boys:		
Under 10 - -	20	17
Between 10 and 13 -	6	5
Girls:		
Under 10 - -	14	9
Between 10 and 13 -	6	5

There are a few children in summer and winter who are neither at work nor at school. There are ten males and seven females growing up with imperfect education, and forgetting what they have already learned. We have a night school for three months in the winter open for an hour and a half or two hours for three nights in the week, but it is not attended by the agricultural labouring class. In winter the farmers will not spare the boys from foddering the cattle, the boys are not wishful to attend, and for young girls it is not desirable that they should come to school in the dark with the lads. There is a reading-room in the parish which is well supported and much appreciated.

In many of the cottages there are two rooms, one on the floor with a sort of cupboard beds in the same, and the space is not even partitioned off into two rooms.

392. *Hardy*, labourer, with a family of nine children, lives in one of them; has brought up his children well, he says that there is very little employment of children under 20 years of age and that most of the weeding is now done by horse-hoes, his boy of 14 is now "looking" in the fields at 1*s.* a day.

393. *Mr. Harrison*, Cleveland.—The occupations here are from 50 to 400 acres two-thirds to one-third grass. The children are hardly employed at all, not even for ketlocking; the youngest that goes out would be from 10 to 12 years of age. The women hardly ever go out; singling turnips is done here with the hoe without a child to follow.

Wages for an ordinary labouring man 16*s.* a week, women 1*s.* a day, and a boy 8*d.*, and 9*d.* a day. If the limit of age for work is to be placed at 10, it would not affect this district, and from the ages of 10 to 13 the children might perfectly have six months' schooling. A certificate of such attendance previous to hiring might be required, but I think there would be some difficulty in enforcing the system.

I would rather have lads living in the house than in a cottage close by, even if they were sons of the hind; it is more convenient for the operations of the farm.

394. *Mr. Deacon*, agent.—The agricultural labourer as a householder hardly exists, they have gone to the iron works. The work on the farm is done by farm-servants and by the Irish, and we have also had to

import a good deal of labour from Norfolk and other counties.

No children of either sex are often employed in the fields except with their parents. Boys of 11 and 12 years of age will earn 2*s.* a day driving horses at the works. The servant girls from the farm go to work in the fields with the farm lads which does not improve their morality; they are employed for hoeing thistles, weeding, &c. This applies to a farm of 120 acres or so where only two lads are kept; on the larger farms where more lads are kept, the girls do not go out. The largest occupations about here are 250 acres.

The wages for a man are 2*s.* 6*d.* a day to 16*s.* a week for constant employment. Women 1*s.* a day, and the hours of work 7 a.m., to 5 p.m. The cottages are generally good with two low rooms and three bedrooms above, and the rent 1*s.* 6*d.* to 2*s.* a week, usually with a garden or allotment. The allotments in Skelton parish called "Spring Gardens," are from an eighth to a quarter of an acre, let at 15*s.* per quarter acre.

The state of education among the older people is bad, they can seldom read or write much; the younger men are better educated, but are more ignorant of the skilled work, such as "weeding, banking," &c. Draining is usually taken by the piece, men will then take their own boys to help them, and they can earn from 2*s.* 6*d.* to 3*s.* a day when the days are short and broken, and 4*s.* a day in good weather.

The calculated cost of a man on the farm is 40*l.* a year including piece work; and a farm lad of 16 to 18 years of age will cost from 14*l.* to 16*l.* a year. 1*l.* in harvest, and 20*l.* keep for the year = 35*l.* to 37*l.* a year. The state of morality is very indifferent. The farm girls go off to live with the men at the works. A system of school attendance by half-days or alternate days would not work; I think compulsion would not be acceptable to the employers, or to the parents on account of the loss of earnings. In this district there is great competition for labour on account of the iron-works and the number of agricultural labourers is in a minority.

395. North Ormesby School.

This school was built and is managed by Mr. J. S. Pennyman. North Ormesby is a suburb of Middlesbro', and the children who attend this school are those of people who are employed in the works, consequently the attendance does not vary with the seasons.

Number on the books	- -	156 boys
Average attendance	- -	105 ,,

Only one agricultural labourers' child in the school and a few half-timers. School payments, 4*d.* each for the elder ones, 3*d.* for others; 2*d.* each when there are three or more of the same family.

Girls' School and Infants' School.

Number on the books	- -	143.
Average attendance, about	- -	93.

There are here two children of an agricultural labourer, sisters to the boy in the other school. The girls leave school young.

MARTON-IN-CLEVELAND.

Population, 587. Acreage, 3,436. Mixed cultivation, chiefly arable.

396. *Rev. C. Bailey.*—There are, properly speaking, no gangs whatever, the field work being chiefly done by Irishmen, or the farmers' own servants or children, and in two or three cases by the hinds' wives. The hours of work for women are from 8 a.m. to 5 p.m., and men from 7 a.m. to 5 or 6 p.m., one hour being allowed for dinner. The young farm lads and girls are in many cases deficiently educated, owing to the parents sending them too young to service. The remedy I should propose is compulsory education until the children can pass Standard V. at least. This end might also be attained by no child being allowed to be employed until he or she can produce certificates of having passed this standard, signed by one justice and the school inspector. There are about 18 small farmers in the parish, of these about eight or nine employ servant girls partly in field work, and about 18 boys under 18 years of age and five married hinds. I do not find their health injuriously affected. The effect of the employment of females in agricultural work, is, in my opinion, to lower very much their moral tone and unfit them for being domestic servants. This result is owing to their being thrown so much with men in the fields and stack-yards, and also to the loose and coarse kind of jesting prevalent in such places. No boy should be employed before he had passed Standard V., or was 12 years of age. I think that school attendance for a certain number of hours for six months in the year would be the most practicable scheme for securing school attendance in agricultural parishes. There is a great difficulty in inducing parents to keep their girls at school beyond 11 years of age, owing to their being employed in helping at home.

The cottage accommodation in many cases is not good, and where there is over-crowding there is a corresponding looseness of morals. The cottages in this part have been over-crowded with lodgers, mechanics, &c. Most of them have a living-room and pantry on the ground floor, two bedrooms upstairs; some only one room near the roof next to the tiles. The water supply and the ventilation are for the most part good; they belong to the landowners, and are rented at 4*l.* 10*s.* and 5*l.* a year. Some improvement is being made in the cottages.

Average attendance at school does not vary much in winter and summer. There are seven or eight males and females, who will neither go to school or work. Many through the indifference of their parents are kept away from school to do odd jobs; some girls are taken too young from school for service, but the small farmers are the most indifferent about education. The attendance at a day school is from 70 to 80, and the Sunday school about the same. Last year there was no night school. We have had night schools attended by a few grown-up lads, but for the most part these schools are impracticable for farm lads, owing to the distance from the farmhouses and the bad roads; it was open twice a week for two hours, and those employed in agriculture are generally too tired to learn at night, and it interferes with the feeding time of horses. In this district one of the great evils we have to contend against is the little interest the farmers take in the education, religious improvement, or even moral conduct of their servants; so long as their work is done, they seem to care for little else.

The system of public hiring does away with the necessity for a good character in order to obtain a place. The public hirings are a great evil. Neither landlords nor farmers will second the efforts of the clergy to do away with them.

FIELD HOUSE, HUTTON-LOW-CROSS.

Population of parish, 251. Acreage, 1,526.

397. *Ralph Robinson.* — There are no gangs. Turnips are generally let to people at 6*s.* an acre to weed, or to hoe at 6*d.* per every 100 yards in length. There are 10 males and 6 females between the ages of 13 and 20 employed here in planting potatoes and spreading manure for turnips, weeding, and gathering potatoes, and occasionally in assisting to thrash. The hours for women are eight, for the men from nine to ten hours a day, with one hour allowed for meals. The sexes do not work much together, and I do not think that their health is injuriously affected. I do most of my work by machinery, and my married men are paid 15*s.* a week in money, and have house, garden, and potatoes free of cost.

Parents should be compelled to send children to school. They are altogether to blame in this district for the morals of their children, as education is free or nearly so.

N. R. York.

Mr. Portman.

d.

There is no particular time for work in our district. The men have 3*s.* a day for nine hours, and the women 1*s.* a day for eight hours; in harvest the women have 2*s.* a day for eight hours. I would prohibit females working in the fields at all times under 13 or 14 years of age, and at that age let them go out to service.

Every farm of 300 acres should have three cottages attached to it for labourers. I have four cottages, with two bedrooms each, and every other convenience. These cottages have on the ground floor one room 14 feet square, another 8 by 14, and a pantry, two bedrooms up stairs, and every accommodation necessary for the comfort of the labourers. They are let to the tenant along with his farm, and he pays all rates and taxes, so that the labourer lives entirely free of charge. Every cottage is worth five per cent. to the farmers. The property here is owned by Mr. Pease and by the Crown.

Our school is attended by about 20 boys and 23 girls. We have also an evening school in the parish, which is open at any time in the year.

The farm-buildings here are large and new. There are two good cottages adjacent, where the hinds live with some lads and two girls in the house. They all work in the fields and milk cows when wanted. Women and children are not employed for hoeing, as I should have to pay them 1*s.* a day each, and I can do it much cheaper by horse-hoe.

[Mr. Robinson farms 420 acres, mostly under the Crown. Has only of late taken to farming.]

GILLING.

Population, 985. Acreage, 4,730. Cultivation, mixed.

398. *H. J. Turner, Esq.*—The private gang system should consist of those regularly employed upon the farm under the superintendence of the farmer himself, or a responsible person appointed by him. In this parish there are 20 males between 13 and 18, and one girl between 10 and 13, and 20 married women over 18, employed in agriculture, in weeding corn crops and cleaning the land, in hoeing turnips, and in winter in helping to feed cattle and to work the thrashing machine. The distances to work vary from half a mile to two miles, and the hours of work are usually from 8.30 a.m. to 5 p.m., and the health is not injuriously affected. A very great change has taken place in the habits of the children of the farm-labourers within the last 25 years. A large proportion of the girls go into the towns, first, perhaps, as nurses, and then as domestic servants, and in general only the dullest children remain wholly for farm service. I think females should not be allowed to work on farms until 14 years of age; after that I would put no restriction; and boys should not be employed till 12 years of age. All attempts to define distance in such matters would fail. I let some farms that are two miles in length; how could distance be defined in such case?

If boys are kept at school till 12, and girls till 14, they will require no further schooling. If this cannot be accomplished, then I would prefer half a day at school and half a day at work. Distance has very little to do with the children's attendance at school, and the rate of payment is fixed so low that the children of all parts can be sent to school if the parents are so inclined.

There are no special efforts being made for the industrial training of girls.

The cottages here are not overcrowded, but the effect of overcrowding is most pernicious to the morals of all, especially of the young. The cottages are chiefly in the village, but sufficiently near the farms. They are built generally with stone walls, and the roof covered with tiles or gray slates. There are in most of them a sitting-room of about 12 ft. by 15, a small scullery, with two bedrooms above, and in some cases three small bedrooms. Many of them are owned by large landed proprietors, but some also by small owners. I know of no instance of cottages being owned by tradesmen who compel their tenants to deal with them. I think no ordinary farm labourer with a family can afford to pay more than 3*l.* to 4*l.* annually for rent, and such rent would not include common interest on the cost of the erection of suitable cottages, hence I think cottages could not be provided on self-supporting terms. There are many objections to building the cottages on the farms at a distance from the village and the school. The women who live in these isolated places become uncivilized and hardened, and rarely attend a place of worship, and are unable to send their children to school; added to this, the labourers themselves much prefer living in villages. The labouring classes are in a more flourishing state and better educated than the small farmers.

399. Gilling School—Mixed and Infants.

On the books, 115; average attendance, about 95, the attendance in summer being greater than that in winter. Children are taken as young as 2 years of age. The boys of 10 years go off to the grammar school a mile off, where schooling is free with the exception of payment for books. The attendance here is pretty regular, as there is not much work for children to do. The mothers go to the fields and leave the small children in charge of some person during the day. I should say that the average attendance is one out of seven of the population. The payment for one child, 2*s.* a quarter; for two or three in the same family, 3*s.* a quarter. There is no night school.

400. *Rev. James Wharton.*—I would suggest that when the farmer wants a young boy for field work he should apply to the schoolmaster, who will apportion him two lads to work, either half weeks or alternate days or weeks, as might best suit the work of the farm and the school.

401. *Mr. Moscrop*, agent to Lord Zetland.—This neighbourhood is more grass than arable; the farms average 200 acres. Boys under 10 are very seldom employed on the farms, and girls of any age are very little employed. There are not more than two or three grown-up people on the estate who cannot read nor write. There is one boy who cannot write.

I would place the limit for employment of children in the fields at 10 years. The loss of earnings if a prohibition were put between the ages of 10 and 13 would be very serious to the parents. The winter months might without any difficulty be given entirely to schooling, but half time would not answer. The district is well supplied with schools, and the working classes send their children pretty regularly. The hinds' wages are 14*s.* a week and a cottage; an ordinary labourer 14*s.* to 16*s.* a week. Cottage rent is 3*l.* or 4*l.* a year, with small gardens, and there are some allotment fields divided into portions of half a rood, which I consider quite sufficient for any man to work properly. There is a savings' bank in Richmond, which is well supported by the agricultural classes. Interest paid on deposits 3 per cent.

Manfield Parochial School.

402. *Amos Haughton*, master.—The number on the books—

In summer	74
Average attendance	47
On books in winter	68
Average attendance	48

Girls leave school about 14 years of age, and go to field work and service. The oldest girl in school is 13. None had been out to field work, and they attend pretty regularly. I do not think that compulsion would have a good effect. The girls are taught sewing four afternoons in the week, and the payment is 3*d.* a week, except for a few free scholars who are sent under an endowment. The boys stay here till 12 years of age, though there are two boys of 13 and 12 in this school. They remain longer at school here than they did in Gloucestershire, where I formerly was, in consequence of the wages here being higher.

403. *Robert Herring*, 13 years, son of a market gardener.—I have been out gathering fruit and vegetables for markets on Wednesday and Thursday every week. Attended during the past year 193 times; writes well and reads fairly, but said "he forgets the "sums."

Allotments are let by the quarter acre at 10*s.* a piece.

BARTON, NEAR DARLINGTON.

Population of the parish, 592.

404. *Samuel Rowlandson.*—We do not know the meaning of the word gang in this district as relating to agricultural labourers. The sexes are never intermixed except in such cases where it is perfectly impossible in farm operations to keep them distinct. The system is quite different in those districts where the farms are much larger and the villages farther apart. The labourers here are now earning such high wages that a great portion of the work formerly done by females is now done by Irishmen. There are in the parish 53 males and 30 females employed in agriculture, from the age of 13 upwards. They are generally hired to places for a year and live in the farmhouse. Those men above 24 years of age are employed partly in draining and other "take" work until they marry, and then either engaged as hinds for the year or continue in the same kind of work, earning from 3*s.* to 4*s.* 6*d.* a day. The wages of a hind are 15*s.* a week, a house and garden at 1*s.* 6½*d.* a week, coals led from the pit, 6*d.* a week; 20 bushels of potatoes, 1*s.* 6½*d.*, two bushels of wheat at Christmas, 3*d.* a week, total earnings for the week, 18*s.* 10*d.*, to which you may add a few minor privileges.

There are very few females employed to what there were 12 or 14 years ago; the husbands are better off and are earning such high wages, that they will not go to work. Ten years ago I employed from 12 to 15 women on this farm, I now am not able to get more than four to six, or at a chance time seven. There are a very few unmarried women who go out to field work; those who do are mostly aged spinsters; the younger ones will go out gathering potatoes sometimes. The hours of work for men, are from 6.30 to 5.30, for women from 8.30 to 5.30. If they have to go any great distance, they generally receive an extra wage, and an hour is allowed for dinner in winter, and one hour and a half in summer. Their health is not injuriously affected, and the per-centage of immorality amongst the female population is not to be compared with that in populous towns; but each separate case is brought more fully before the public.

The greater portion of the young can read and write well; there are quite as many cases of neglect in sending children to school among the artizan as among the purely agricultural labourers. Among the male labourers here employed all can read and write well, except one old man.

If you either restrict the hours of female labour in this district or abolish it altogether, you would very soon reduce the produce of the soil and cripple the farmer to a great extent; if you limit the hours, how are you in a critical time of turnip season to get turnips sown without working over hours. (This being here our staple crop, the question is a serious one to us). I would not allow boys to go to work below 10 years of age. The farmers would not employ children under the half-day or alternate day system. There are certain seasons during the year when boys can be spared to go to school. Regular attendance at school up to 10 years might be enforced, but previous to making education compulsory, attention should be paid to the assessment of the poor's rate. In this district there are good schools in every village, probably from two to three miles apart. The parents are all able to send their children to school, and most of them attend pretty regularly.

The cottage accommodation on the estates in this neighbourhood is very insufficient, and in my opinion is a subject requiring legislative interference much more than the education question. The labourers have in many cases to walk one or two miles, whereby much labour is lost to the country, and the accommodation in many of those cottages on the estates is very inadequate to the requirements. There ought to be cottages on each farm for the number of male labourers required upon it. One cottage to every 50 acres of arable, and one to every 200 acres of grass, is about the necessary quantity. There are probably half that number on the farms, when there are cottages in the village for which the tenant farmers have to pay rent if they take them. The proportion of farm labour depends very much on the briskness of the large ironworks in the adjacent towns, many of the men go for the week to work there when the trade is good. The cottages generally have two rooms, one a sitting-room and bedroom, and the other a bedroom; some have only one room which acts for a sitting and bedroom, and some have three rooms, and in rare instances four rooms. Many of them are crowded to a disgraceful extent, ventilation in many cases is bad, but this is often due to the neglect of the occupiers. Improvement is being made in the drainage. There is usually a garden to each cottage and outhouse. Rent from 3*l.* to 5*l.* a year. Taking into consideration the rents at which farms are let in this neighbourhood compared with many others, the landowners ought to find cottages for their tenants rent free, in the proportions I named before.

At the National school the average attendance in summer is 52, and in winter, 72 boys and girls. There are two others, dame schools. I know of four boys and five girls who are neither at school nor work, but there may be a few more, as it is a disjointed parish, partly outlying and intermixed with another parish. I very rarely meet with a young person who cannot read and sign their agreements in a good legible hand. There is no night school in the parish.

CATTERICK.

405. *John Outhwaite.*—I employ on my farm 12 men, 2 boys, and 10 women; one boy between 10 and 13, and no women under 18; they are employed in gathering quicks, hoeing turnips, and in winter in pulling turnips and helping with the cattle. The hours for the men are 10 and for females 7½ hours, with an hour allowed for dinner, and I am not aware of any injury being done to their health. I would not recommend any restriction on female employment nor on that of the boys, but as a fact, in this township no boy is employed under 10 years of age.

The wages for an ordinary labourer are 14*s.* a week, from 7 a.m. to 5 p.m., with payment for extra hours. They get 2*l.* for the harvest, and other help; women earn 10*d.* a day from 8.30 a.m to 5 p.m., 1*s.* a day and a pint of ale from 7.30 a.m. to 5 p.m.

I think that there is no occasion for enforcing school attendance in this township, as the labourers are anxious to obtain suitable education for their children; with very few exceptions all are able to read, and write, and cypher. There is a free school in Catterick, to which every parishioner is allowed to send his or her child on a payment of 1*s.* a quarter in advance; all books and slates are found for each child for that sum.

The farms average from 200 to 300 acres; they are about one-third grass and two-thirds tillage, and few of them have cottages on them. The cottages are clean and in good repair, and have sufficient size and accommodation. Tenants have for the most part to deal with the landowners. The rents vary from 1*l.* 10*s.* to 4*l.* 10*s.* and 5*l.* a year. The labourers' cottages are as a rule within reach of the school. There are 16 boys and 14 girls in attendance at the school without much variation in winter and summer. There is no night school.

406. *J. B. Booth, Esq.*, Killerby Hall.—I am two miles from any village. I employ on the farm four males and 11 females from 13 years of age and upwards. Two of the boys are between 10 and 13; they are employed in planting and taking up potatoes,

N. R. York.
Mr. Portman.
d.

and in winter in threshing, and most of them live on the farm. Some come two miles to work, and the hours are from 8 a.m. to 5 p.m., with an hour for dinner.

The females as a rule are a steady and respectable class, and I do not find that field work has any injurious effect upon their health or their morals, or their training for domestic duties. If the women were not allowed to work in the fields it would be a loss of capital to the family; there is no other employment in the neighbourhood for them. Very few boys are employed in agriculture under the age of 8, and those only in harvest time, when they can earn 1*s.* to 1*s.* 6*d.* a day. They are a help to their parents and their schooling is not affected by it. As a rule they are not employed under 12. I would not place any restriction on the distance to work nor on the hours of work.

Wages for a hind are 15*s.* a week, a cottage and garden free, a cow kept, and 20 bushels of potatoes. I have five men at present on my farm earning that sum. A few years ago wages were 9*s.* and a cottage. Women earn 10*d.* and 1*s.* a day. Wages have been raised in this district by the ironwork, and the people are very well off. Though the wages are higher the expenses of cultivation per acre are not increased, as, owing to the use of machinery, fewer extra hands are wanted at certain seasons.

There is no occasion for any mode of enforcing school attendance in this district; the parents are anxious that their children should attend school. In the townships of Catterick, Tunstall, Brough, Bolton, and Hipswell there are five schools and a Roman Catholic school at Brough. Distance, therefore, does not affect the school attendance, except with the very small children.

The cottages are good, healthy, and comfortable. The proportion depends on whether the land is grass or arable, and on the number of people in each cottage. On a farm of mixed cultivation one house to a 100 acres would be sufficient. The cottages have two bedrooms and a sitting-room, with pantry, washhouse, &c., pig-houses, and outbuildings. They are owned by the landlord, and generally held rent-free by the labourer as part of his wages.

BEDALE.

Population, 2,800. - Acreage, 11,327.

407. *Rev. J. G. Beresford,* rector. — Returns received from 37 farms out of 44 shew the employment as follows :—

Boys :		
Under 8 - - - -		9
Between 10 and 13 - - -		11
Between 13 and 18 - - -		43
Total of boys -		63
Females :		
Under 8 - - - -		2
Between 8 and 10 - - -		1
Between 13 and 18 - - -		13
Over 18 :		
Married - -	33	
Unmarried - -	17	
		50
Total of females -		66

They are employed in spring in cleaning the land and preparing turnips. In summer in hoeing turnips. In autumn in potatoing; and in winter in getting up, topping, and tailing turnips. The hours of work on the land for men from 7 to 5, women 8 to 5, with an hour allowed for dinner. The work does not injuriously affect their health, but I think that the comfort of their homes is injuriously affected thereby, and in the cases of married women, the habits of the husband and the welfare of the children. I cannot recommend any restriction on the employment of women at the present time in this parish, since, owing to the difficulty of obtaining male labour, the farmers would be at a loss to know how to get the necessary work done without the employment of women. Boys should not be employed under 12 years of age.

With regard to obtaining a prescribed amount of school attendance, a restriction in regard to the age at which a child may be employed seems to me preferable to any other mode. Combined with this, it might be desirable that a certificate of attendance up to the stipulated period signed by the master or mistress, and countersigned by the managers of some licensed school, should be required by an employer before engaging the children for the first time, and such certificate should be registered at some appointed place or office at the time of hiring; this if feasible would have a great effect in securing a regular attendance of those at school. School attendance is in the case of 12 or 14 children living a mile and a half or two miles from school affected by this distance and slightly by the pecuniary resources of the parents though such excuse is often made without any foundation; the charge for schooling is twopence a week.

Two cottages per 100 acres are considered sufficient for the requirements of the land; we have that proportion and the greatest distance from the farms is a mile and a half. The cottages vary, but in the most populous parts of the parish are small and badly constructed, ventilated and drained; there is a sufficiency of water and the principal proprietors are large landowners. And several tradesmen possess cottages, but I have not heard of any system of compulsion in regard to their dealings. There are 184 allotments of land let for the most part to agricultural labourers residing in the parish averaging a quarter of an acre each, and let at a rate of 2*l.* 10*s.* per acre inclusive of all outgoings. The children are found first to absent themselves from school between the ages of 8 and 9, and are employed by their parents in the allotments when not old enough to obtain work from the farmers.

There are a number of young persons growing up with insufficient education, that is to say about equal to the second standard in the National schools. The night school was kept up for three years in connexion with the National school, but ceased last year in consequence of the indifference of the lads after the novelty had worn off.

408. *Mr. Morton,* guardian.—There is no pauperism to any extent in this parish. Relief is given to widows having large familes, on condition that the children are sent to school. Very small boys are sent out for tenting.

409. *G. Serjeantson, Esq.* (Camp-hill).—It is very desirable to secure a certain amount of school attendance for children between 8 and 13 years of age, who are earning wages. I would not allow boys to be employed under 10 years of age; the girls are not employed at all in this part of Yorkshire. I think it would be desirable to limit the hours of work for boys and girls. Most of the children have been to school for a short period during their lives.

The deficient state of education among the young is frequently caused by the insufficiency and neglect of the clergy and occasionally by the poverty of the parents. I do not know of any pressure put upon the parents by the employers to induce them to allow their children to go to work at so early an age. Except in the cases of large families the labouring classes are generally able to pay for the schooling of the children. The cottages are very rarely overcrowded in this district.

Carthorpe School Mixed.

410. Under Government inspection, was four years ago a dame school with about 20 scholars, it now has from 60 to 80, and a Government grant of 46*l.* There is a night school in winter for boys only, out of 11 on the register the average attendance is 10, of ages varying from 12 to 17 years. There is also a reading room open three nights a week, excepting in the summer, supplied with books and writing materials and newspapers gratis; lectures also are occasionally given there.

THIRSK.

British and Foreign Boys' School.

411. *Mr. Ashman*, master.—The number on the books, 80; average attendance 62. The highest attendance is from November to April. The school is composed partly of agricultural children from the outlying parishes, there are also some farmers' sons. There are at this moment (the 15th of June) 40 agricultural children absent at work on turnips and other crops, they begin to leave school at 11 years of age, and rarely come back even in the winter months; I would forbid their going to work up to 10 years of age, and require six months attendance at school up to 13, and a certificate of such attendance to be required before hiring. There is no lack of schools in the district, the great difficulty is to secure continuous attendance, and I am sure that nothing but compulsion will have any effect upon those parents who are utterly indifferent about the education of their children.

At the girls' school it was said that there was no withdrawal of the girls for field employment.

Church School.

412. *J. Walton*, master.—Number on books, boys 87; average attendance in summer, 80; in winter, 65. This is a new school and has been under Government since September 1866, and the numbers are increasing. Three parts of the children are those of agricultural labourers; the boys go out for occasional work at 10 years of age, and some are away now for turnip hoeing. Payment for a quarter 2*s.* The attendance is pretty regular. I do not think that the limit for work at 10 years of age would affect the attendance here; boys are able to get more than six months' schooling, if they choose between the ages of 10 and 13. Lads go out to service at 12 years of age and never return to school; there is also a large number of children in the town who never go to school at all. There is no night school. If the boys attended regularly up to 10 years of age, they would be well-grounded in writing, reading and arithmetic.

Girls' National School.

413. On the books 101; average attendance in summer 60, and in winter 47. The mistress has been here only six months. The attendance is very irregular, the children are absent for trivial reasons. Very few girls are employed in the fields.

414. *Sarah Flint*, 13 years of age, went out turnip singling with her stepfather, believed she got 1*s.* 6*d.* a day.

415. *J. Rob, Esq.*—Calton near Thirsk, 827 acres, two-thirds arable, one-third grass. There are no private gangs. I employ 8 married women, but no children in raking and gathering twitch in the spring; and in summer, in turnip hoeing; they live within a mile of their work. Their health is not injuriously affected.

I do not think it would be necessary to place any restriction on the employment of women. There would be no objection to fixing an age for boys' work at 10 years; they are in this district very rarely employed before that age.

The cottages are conveniently situated with regard to the farms where the men have to work; they have usually two and sometimes three bedrooms, and are not at all crowded. The labouring class is better off than the class of small farmers.

The wages for a man are 14*s.* and 15*s.* a week, occasionally, but very rarely, 8*s.* and 9*s.* and their meat. Women earn 1*s.* a day at turnip singling and potatoing, but more in harvest. There are allotments for cottages of half a rood each.

The district is fairly supplied with schools, but the people are in some instances indifferent about the education and attendance of their children.

416. *Mr. Brooks*, farmer.—Formerly lived in North Lincoln. I have several regular labourers living in cottages on my farms; they are very well off and many of them keep cows. I am in favour of fixing a limit of age below which no child shall be employed in the fields, but I do not think that any legislation will secure regular attendance at school except downright compulsion.

417. *B. Wilson*, Brawith.—The children are employed at turnip hoeing and other jobs. Education is not much thought of, the parents say they cannot afford to pay for the schooling and are very indifferent about it. Wages are 14*s.* a week. My men are in cottages on the farms, but some way from the homestead. I give them 8*s.* a week and their meat. Knayton is a small village and I do not get my labour from it. There is not much distress among the labouring classes. I think if the schools in small rural parishes received more aid from Government the children would attend more regularly.

TOPCLIFFE, near THIRSK.

418. *George M. Lomas.*—The cultivation is mixed but the greater proportion is arable. There is no gang system is this neighbourhood. I employ on my farm of 200 acres three married women and one young person, and I believe that that is the proportion on most of the farms. They are employed in spring in raking and gathering couch grass; in summer, in hoeing turnips, beans, &c.; in autumn, after harvest, in collecting turnips and mangel; and in winter, occasionally in barn work. They all either live on the farm in cottages or in the adjacent villages. They leave home at 8 a.m. and return at 12 p.m., and then work from 1 to 5; but if they remain in the field they have a full hour allowed for dinner. The work does not injuriously affect their health, and it is not the custom to put the women to any unseemly or oppressive labour. I have found that the morals of the females in agricultural districts are decidedly of a higher standard than those of a manufacturing locality, and they are eminently better qualified for domestic servants. There are no women employed under 16 or 17 years of age; of these very few, excepting at harvest. Very few boys are engaged below the age of 13. It would not interfere with the convenience of the farmers to limit the age of boys for work in the field to 12 years, excepting at harvest. There is no necessity for placing any restriction on the distance to which they go to work, and these observations will apply not only to our own parish, but as far as I can judge to the whole of this important agricultural district.

N. R. York.
Mr. Portman.
d.

Generally speaking, I might almost say invariably, in this portion of Yorkshire, there are ample means of education provided by either private or public beneficence for the children of the agriculturists; that there is nothing to interfere with them availing themselves of it every day in the year until the age of 12 or 13, excepting at harvest, and that it is very rare to meet with a child that cannot read his Bible and write, and who has not a good elementary idea of general useful subjects.

The cottage accommodation is generally, and with very few exceptions, sufficient in number. Most of them have good gardens attached.

Ainderby Steeple Parish.

419. *Mr. Booth*, of Warlaby. — There are 100 children at school in the week and 199 on Sunday. The average age at which children leave school is 12 years.

There is very little employment of young children except at harvest. Placing the limit for children's work at 10 years would hardly affect this district. Women are employed at different seasons of the year, but as little as possible in winter. Girls from 12 to 13 are employed in the summer in stubbing the thistles; they usually go to service at that age and work in fields, milk, and do housework besides. Labourer's wages 14*s.* a week; a hind will have 14*s.* a week, a cottage and garden free. Women earn 10*d.* a day, and 2*s.* a day in harvest. Boys under 12 years of age, 6*d.* and 8*d.* a day.

There is generally a school in every parish, but those in small rural parishes are much in want of more Government aid. I do not think that compulsory education would be generally acceptable; the parents would feel the loss of the earnings which their children are able to bring in. Last year they complained a good deal of the difficulty of finding money for the school payments. It might be possible to enforce a certain amount of school attendance during the year for boys earning wages, and to require a certificate of such attendance to be produced before hiring; but what are you to do with those that do not attend school, and so cannot get employment. The cottages in many places are very bad and have only one or two rooms, there is, however, I think a tendency to improvement; still the state of the labourers' dwellings is the worst feature in the present condition of the agricultural class. I consider that a double cottage costs 200*l.* to build.

The labouring class in this district spend a great deal on their living; the butcher's cart goes round the village every Saturday, and the women are also extravagant in dress. There are many benefit clubs which give to their subscribers 7*s.* and 8*s.* a week in time of sickness, and pay the doctor.

The district east and north-east of North Allerton towards Stokesley, is the worst part of the North Riding. It is a district of poor clay land. The farmers are a poor class of men and very often worse off than the labourers.

Kirby-Wiske School.

420. *J. Smith*, schoolmaster.—This school is not under Government inspection. The attendance for six winter months is pretty regular, and the rest of the year very irregular. Boys go out at 9 years of age for bird tenting, and children of both sexes at that age for singling turnips and potato planting; they begin to go in April. We have one boy of 13, and two or three girls of 13 in the school. The girls are taught sewing in the afternoon by a woman. The school payments are 3*d.* a week for boys, 3*d.* and 4*d.* a week for girls.

The parents are very indifferent about education, still they make rather a favour of letting a child go out tenting for a farmer. I do not think that the loss of earnings of children under 10 years of age would seriously affect the parents. Half a day at work and half a day at school would be the best for education, but the fear is that it would not be practicable in an agricultural district. There are allotments belonging to the parish, in portions of about a rood, which are in the township of Newsan but close to the cottages of this parish. The district is with the exception of Sandhutton, well off for schools. I have here six children from Sandhutton.

HUTTON CONYERS, near RIPON.

Population, 160 - - - Acreage, 3,052.
Cultivation, chiefly arable.

421. *Henry Morton.*—There are no private gangs. Lads under 10 years are not employed, nor any unmarried women. Men work for 10 hours a day, women for 7 to 7½ hours. There is no need of any restriction on the employment of women or boys, the latter are not put to any hard work till they are 14 or 15 years old.

I think that no cottage should be built with less than three bedrooms, and that there should be a fire-place in each room as well as good light, and the windows to open. The lower rooms should not be less than 9 feet high, nor the upper ones less than 8 feet to the ceilings. One cottage per 100 acres is sufficient for the requirements of the land. We have about one to 150 acres. There are some exceedingly good cottages with three bedrooms, recently built by Earl de Grey and Ripon, two good ones built 30 years ago, and three or four good ones on the different farms; but the rest are old and low, badly ventilated, some without chambers, and the water supply bad. There are good gardens to all. Rent from 10*s.* to 60*s.* a year. Earl De Grey is improving his cottages by degrees.

An attempt was made a few years ago to establish an evening school, but it did not succeed.

Hutton Conyers is in the ecclesiastical parish of Sharow, and the school is close to Sharow church. This township is in the North Riding, Sharow is in the West Riding; and there are other townships within the same district whence the children go to Sharow school.

EVIDENCE ACCOMPANYING MR. NORMAN'S REPORT.

SYNOPSIS OF CONTENTS OF EVIDENCE.

No. *General Evidence.*

1. Meetings of boards of guardians.
2. Meeting at Brixworth.
3. Do., Islip.
4. Northampton Chamber of Agriculture.
5. Circulars of inquiry.
6. Answers received as to requiring some account of school attendance.
7. Do. as to cottage accommodation.
8. Do. as to numbers in attendance at day schools.
9. Do. as to night schools.
10. Educational return as to Northamptonshire militia.
11. Letter from Mr. J. J. Graves, secretary to the Northampton School Teachers Association.
12. Account of income and expenditure of an agricultural labourer's family.
13. Do. of a single man.

13 b. Total amount of average annual earnings of a good labourer.

14. Dr. Paley, Peterborough.
15. Dr. T. Walker, do.
16. Letter from Dr. Barr, Northampton.
17. Rev. R. P. Lightfoot, vicar of Towcester.
18. Earl Spencer, Althorp.
19. Letter from Mr. J. Beasley, Chapel Brampton.
20. Albert Pell, Esq., Hazelbeach.
21. Paper by Alfred Hughes, Esq., Brampton Ash.
22. Mr. W. Higgs, Stamford.

Local Evidence.

NORTHAMPTONSHIRE.

1. During my visit to Northamptonshire I attended the ordinary meetings of the boards of guardians at Northampton, Wellingborough, Kettering, Oundle, and Towcester. In addition to these I attended a meeting of a few guardians of the Hardingstone union specially convened for my benefit. The following is

a brief abstract of the opinions arrived at by these boards upon the most important questions submitted to them.

[NOTE.—The opinions here recorded are those given on the more general questions only. It is thought more convenient that the opinions given upon questions of minor importance should be collected from the evidence given by individuals.—F. H. N.]

Place.	Should female labour be restricted by law.	Age at which boys' labour commences.	Effect of labour on boys' health.	State of education among the children engaged in agriculture.	Up to what age could the labour of boys be dispensed with.	How could education be best provided for after work commences.
Northampton -	No	8 to 10	Not injurious	Defective	Not named	Day or night school
Hardingstone -	No	Not named	Do.	Do.	10	Night school.
Wellingborough	No	8 to 10	Do.	Do.	10 with certain exceptions in summer.	Day or night school
Kettering -	No	8 to 10	Do.	Do.	9	Night school in winter.
Oundle - -	No	8 to 10	—	Not defective	Any restriction seriously inconvenient.	—
Towcester -	No	7	Do.	Defective	8, and in winter 9	Night school.

2. I attended a meeting of landowners, clergy, and farmers specially convened for my convenience at Brixworth; about 25 attended.

It was resolved, that the employment of women in agricultural labour, excepting in hay and harvest, and in spudding or rooting up thistles on pasture land in summer, is undesirable and unnecessary, and should not be permitted.

That no boy under 8 years of age should be employed in agricultural labour, and that boys above that age should not be so employed unless they can produce satisfactory evidence of previous education.

That the difficulties necessarily attendant upon compulsory education, as respects the class of agricultural labourers, preponderate over the uncertain benefits expected from it, and that indirect influence is more expedient than compulsory education.

That the allotment system, understanding thereby the letting to farm labourers a plot of land not exceeding a quarter of an acre in each case, for the exclusive purpose of garden cultivation, and the produce thereof to be consumed by the labourer and his family, has been found advantageous, and is a great moral as well as material benefit to the labourer.

3. At a meeting held at Islip, present about 12 (clergymen and farmers), it was stated in answer to my questions,—

1. That few females were employed in that district in agricultural labour, and generally only from April to August.
2. That boys generally began to work about the age of 8, and that the labour was not injurious to them.
3. That the state of education was defective.
4. That young girls were not wanted for field labour; that boys between the ages of 8 and 10 were wanted from March to November, and that after the age of 10 they were wanted during the whole of the year.
5. That education could only be provided for children after they begin to work by night schools.
6. That cottages in this district were generally insufficient in number, frequently inconvenient in position, and quite insufficient in accommodation, principally in bed rooms; it was also thought desirable that a public officer should be appointed upon a system analogous to that provided by the Building Acts in towns, to see that cottages were provided with necessary accommodation.
7. It was stated that the allotment system prevailed generally in the neighbourhood; it was thought that gardens were greatly preferable; that the amount of an allotment should not exceed one rood; that it became very inconvenient if more than half a mile from the labourer's cottage; but it was thought unnecessary that the mode of cultivation should be regulated when the amount of the allotment did not exceed one rood.

4. I also attended a meeting of the Northampton Chamber of Agriculture at Northampton, where the following resolution was proposed by Mr. W. Shaw and seconded by Mr. H. Little:—

"That in the opinion of this meeting the employment of children in field labour may be postponed until 10 years of age, without seriously increasing the expenses of cultivation."

In moving this Mr. Shaw said, "If wrong had been "done at all, it had been done in ignorance. The "farmers did not wish to keep their labourers in "ignorance, nor would it answer their purpose to "do so."

The following amendment was proposed by Mr. Blott and seconded by Mr. Adcock:—

"That in the opinion of this meeting the employment of children under 8 years of age is unnecessary, and that having respect to the requirements of the parents, and the education of the children, the employment of children in farming pursuits in the winter months may be dispensed with, without any material increase in the cost of production, between the ages of 8 and 12."

Mr. Blott in moving this amendment is reported (in the Northampton Herald, March 7) to have said, "They are all agreed that they could dispense with "the labour of children up to 10 years of age, for it "would be an easy matter to get a boy at 10½ years "old for a shilling a week more. That would not be "any material loss to them, therefore, if the resolution "was adopted. The question, however, really was, "how could the education of children be accomplished "without interfering with the interests of the agricultural labourer. He would suggest a course which "appeared to him to be the only practical one. It was "generally agreed that under 10 years of age children "were of little or no use in agriculture, but from 10 "to 12 they were of great service in the summer "months."

Northamptonshire.

Mr. Norman.

c.

The amendment was negatived and the original resolution carried.

The following resolution was then moved by Capt. Rickett and seconded by Mr. J. Gee :—

"That this meeting is of opinion that the present state of education is defective, but that the extension of the present system of national education will meet the requirements of the agricultural population, and that compulsory rating for the purposes of education, beyond providing school accommodation where it is absolutely necessary, would be highly objectionable."

The latter part of this resolution which refers to compulsory rating was objected to by several gentlemen present, principally on the ground that there was not sufficient time to discuss the whole question of rating that day. It was therefore omitted and the first part of the resolution, as far as the word "population," was put and carried.

5. While making inquiries I distributed between 80 and 90 copies of the printed circulars of questions with which I was provided. Of these 38 have been returned to me more or less fully answered.

The following is a summary of the information contained in the papers so returned.

In 19 parishes, containing a total population of 8,975 (census 1861), the following is the number of women, young persons, and children employed in agricultural labour.

Males.

Under 8.	8 to 10.	10 to 13.	13 to 18.	Total.
8	80	248	285	621

Females.

Under 8.	8 to 10.	10 to 13.	13 to 18.	Over 18.		Total.
				Married.	Unmarried.	
—	10	36	30	80	34	190

In seven of the parishes comprised in this table no females at all are returned as being employed in field labour.

In answer to question 22*c*, 24 answers were given, from which it appeared that in 12 cases the labourers had to walk less than one mile to their work, and in the other 12 cases some of them had to walk more than that distance to work.

In answer to questions 22*g*, *h*, *i*, it was stated that the usual times allowed for meals were half-an-hour at 9.30 or 10 a.m., one hour in the middle of the day for dinner, and, in a very few cases, half-an-hour at 4 o'clock. In no case was it thought that the health was injuriously affected in consequence of the labour, or that the young and females were subjected to any ill treatment.

In answer to question 22*l*, 21 answers were given; of these 15 were opposed to any restriction on female labour, five were in favour of prohibiting it altogether, and one was in favour of permitting females to work alone but not with males.

In answer to question 22*m*, 25 answers were given; of which eight were opposed to all restriction upon the age at which boys should be permitted to be employed, and the remainder were in favour of restrictions up to the following ages: two in favour of restriction up to the age of 12, nine up to the age of 10, one up to the age of 9, four up to the age of 8, one up to the age of 8 or 9.

In answer to question 22*n*, 22 answers were given; of which 19 were opposed to all restriction upon the distance to which children and young persons should be permitted to go to work, two were in favour of a restriction up to two miles, and one in favour of the plan laid down in the printed table.

6. In answer to question 26, asking advice as to the best mode of enforcing some amount of school attendance, 20 answers were given; of which seven were opposed to all compulsion, four were in favour of prohibiting labour up to the age of 10, in order to give an opportunity for attendance at school, three were in favour of some examination before permitting a child to go to work, four were in favour of some modification of the Printworks Act, chiefly by means of night-schools, one was in favour of the alternate day system, and one in favour of compulsion when a child was not at work (*i.e.*, employment in field labour was to be the only excuse for non-attendance at school).

[*Note.*—The answers to this question were so various that it is impossible to summarize them more concisely than I have done. The different plans suggested are all inserted in the evidence given by individual witnesses.—F. H. N.]

In answer to question 27, 26 answers were given; from which it appeared that the school attendance was not affected by the distance the children had to go to school in 24 cases, and was so affected in two.

7. In answer to questions 33, 34, and 35, asking particulars as to the cottage supply in respect of number, situation, and accommodation, 24, 25, and 26 answers were respectively given, the result of which may be collected from the following table :—

—	Number.	Situation.	Accommodation.
Good	17	21	8
Fair	6	4	13
Bad	1	—	5
Total number of answers given	24	25	26

And in 11 cases it was stated that the cottage supply was improving, and in six that it was not.

8. The tables asking for returns of the numbers on the register and in average attendance at school, were filled up in the case of 21 parishes, containing altogether a population of 11,939. From these statistics it appeared that the following is the total number of children on the register and in average attendance at these parishes.

In Summer.

—	On Register.	Average Attendance.
Boys :		
Under 10	524	403
10 to 13	110	81
Total	634	484
Girls :		
Under 10	587	420
10 to 13	191	124
Total	778	544

Total on register 1,412 = 1 in 8·45 of the population.
Do. in attendance 1,028 = 1 in 11·61 „ „

In Winter.

	On Register.	Average Attendance.
Boys:		
Under 10	507	419
10 to 13	131	100
Total	638	519
Girls:		
Under 10	548	440
10 to 13	194	142
Total	742	582

Total on register 1,380 = 1 in 8·65 of the population.
Do. in attendance 1,101 = 1 in 10·84 „ „

The returns for winter do not include the night schools, the results of which are given in the following table.

9. In 12 parishes, with a population of 7,302, the following numbers are on the register and in average attendance respectively at the night schools.

In Winter.

	On Register.	Average Attendance.
Under 12	69	61
Above 12	236	176

I have met with no case of a night school being kept open during the summer months.

10. Northamptonshire Militia.

Table showing the Number of Recruits enrolled each Year who could neither read nor write, compared with the total number of those enrolled.

	Number Enrolled.	Number who could neither read nor write.	Per-centage.
1 Oct. 1860 to 31 March 1861	275	129	46·999
1 April 1861 „ 1862	344	170	49·418
„ 1862 „ 1863	316	138	43·607
„ 1863 „ 1864	236*	116	49·152
„ 1864 „ 1865	161	64	39·751
„ 1865 „ 1866	289	128	44·2907
„ 1866 „ 1867	247	111	44·931
„ 1867 „ 1868	474	210	44·303

* The return of this year is not complete. In the case of many of the recruits no entry is made in the educational column of the roll book. I have therefore included in the total number enrolled only those recruits who have these particulars respecting them given. The total number of those enrolled is therefore incorrect; but the proportion of those who can neither read nor write (116) to the whole number enrolled (236) is correct.

11. To F. H. Norman, Esq., Assistant Commissioner for inquiring into the Employment of Children, Young Persons, and Women in Agriculture.

Lamport Endowed School,
May 15th, 1868.

Sir,

The four questions which you sent to me, and on which you desired the opinion of teachers of Northamptonshire to be given, I submitted to the two associations of schoolmasters in this county: to the East Midland at Wellingborough on April 25th, and to the Northampton Association on April 4th and May 2nd, and to other teachers at various times. The result I now send you in as brief a form as possible.

I. Question 1. "At what age do the children of agricultural labourers usually leave school, and what progress has a child of average ability, at an average school usually made in reading, writing, and arithmetic, when he leaves?"

Most teachers agree that, for the most part, boys cease to attend regularly some time before leaving; that they go to work for the summer season for a year or two years before they leave school for good. From the returns I have received, and the opinions that have been expressed, the general opinion of teachers here is that the age at which boys thus begin to leave school is about 8, when, under ordinary circumstances, they could pass Standard II.—very few Standard III.—of the Revised Code; and that the age at which they leave school altogether is 9, when they could pass Standard III. well. Exceptional instances are given where boys stay at school till 10 or 11 and can pass well in Standard IV., but they are in such parishes as are in the hands of only one or two proprietors, and where the labourers as a class are better cared for than in more open parishes.

II. Question 2. "What progress would you expect a child of average ability who attended school regularly to have made in reading, writing, and arithmetic when he arrives at the age of 10 years?"

The progress made would depend on two things:—

1. The age at which the child began to attend school regularly; and,
2. The kind of school and teaching it met with.

A good infant school materially aids the progress of children, and where there is one, children that go to it usually get further advanced than in places where there is none. The general opinion is that children can usefully begin to attend school at 5 years old, and that their attendance, to be called regular, ought to be at least 200 days in the year. The school is taken to be an average school, by which is understood a school equal to the generality of those under a certificated teacher, and being fairly supplied with books and other apparatus.

Then, beginning regular attendance at 5 years old, and under the condition of good teaching—*i.e.* such teaching as the supposed average school would afford—the general opinion is that at 10 a labourer's child would fairly reach Standard V. of the Revised Code. There is a singular unanimity of opinion on this point.

III. Question 3. "Do you think that the deficiency (if any) in the amount of education usually possessed by a labourer's child when he goes out to work can be adequately supplied by his subsequent attendance at night school while at work during the day?"

The first consideration here was what might be understood by a sufficient education. The estimate you mentioned, viz., "the reading of a newspaper "with ease and fluency; the writing of a letter to a "friend without effort; and the understanding, so as "to be able to detect mistakes in, an ordinary bill of "a tradesman," was considered to give considerable latitude in its interpretation, and might be taken to mean more than was intended. But, to fix a standard to the meaning, it was taken to be equivalent to Standard VI. of the Revised Code, as, for several years, it seems to have been the opinion of the Committee of Council that that standard was a sufficient education for the working classes from their not giving grants for anything beyond it.

Northamptonshire.

Mr. Norman.

e.

The question may then be stated thus: Can a child, leaving school at 8 or 9 and being able to pass Standard III., by subsequent attendance at night-schools be made to reach Standard VI.? To this question, under present circumstances of night schools, a most decided "No" is the answer. Night schools, as found in most country parishes are deemed of very little use. Yet many think that this might be accomplished by a regular attendance at night schools for three evenings per week for the greater part of the year after a child has been to the day school regularly from 5 to 10 years of age, as supposed in Question 2.

IV. Question 4. "What are the chief difficulties you encounter in carrying on night schools; and can you suggest any practical remedies for the purpose of rendering them more useful than they at present are?"

It is much more easy to point out difficulties than to mention practical remedies for them. The difficulties encountered in carrying on night schools arise from two main causes:—

1. The indifference to education prevailing among the labouring classes in villages; and
2. Want of encouragement and support.

Each of these brings others with it. The former begets—

(1.) A scarcity of scholars; children please themselves about attending the school;
(2.) Irregularity of professing attendants; and
(3.) In some degree, aided by the fatigues of the day, inattention and sleepiness.

The latter results in:

(1.) A want of good and sufficient teaching power; the only remuneration too often given being the few pence the scholars pay, which barely find the fire and lights;
(2.) A mixture of young boys with their elders; and
(3.) A very meagre programme of subjects taught.

Other causes may help to produce some one or more of these difficulties, all of which stand in the way of making night schools efficient and popular. The small fee usually charged seems not to affect the attendance in most instances; though in a few it does.

The evils engendered by the first of these main difficulties may be partially, though not wholly, removed by the removal of the second cause. With a more generous support, more teachers might be found, more divisions made in a school, and a more attractive list of subjects supplied, all of which would more or less tend to decrease the bad attendance, inattention, and sleepiness complained of. To render night schools valuable there must be a radical change in them. The result of my inquiries and experience brings out the following as being the principal practical remedies for the existing evils of night schools:—

1. A generous pecuniary support as a *sine quâ non*.
2. A more attractive list of subjects and method of teaching; the instruction must be varied, and more entertaining than a continuous attention to reading, writing, and arithmetic alone can possibly afford.
3. A larger and efficient staff of teachers to give vigour to the school, say one teacher to every 20 scholars.
4. A small library of instructive books; travels, history, &c., with some periodical publications.

Evening schools cannot be said to have been fairly tried; they have not received the attention they deserve; as speculations they have at best only partially succeeded; they have never been, except in a few rare examples, fully developed so as to show what they are capable of, and under present circumstances they cannot accomplish what might be expected from them.

Such, sir, is the result of my inquiries among my fellow teachers in this part of Northamptonshire. I have been as brief in my remarks as I could be compatible with clearness and fulness; I may have failed to express myself so clearly as could be wished, in which case I shall be glad to give any additional information or make any explanation which I may be able to furnish.

I have, &c.

JOHN J. GRAVES.

12. The following account of the income and expenditure of J. G., an agricultural labourer, at Haselbeach, and of a single man in the Isle of Ely, were collected by Mr. Albert Pell of Haselbeach. He has kindly given me permission to publish them.

[These particulars were collected in July 1867.—F. H. N.]

The family consisted of—

J. G. - age 55, ill and earned nothing.
Mrs. G. - „ 44, average earning 2*s.* 6*d.* per week, and food one day per week.
Elizabeth „ 23, absent from home.
Henry - „ 18, do.
Daniel - „ 15, earned 8*s.* per week.
Sarah - „ 13, absent from home, but cost in clothes.
Kate - „ 10, earned nothing weekly.
John - „ 7, do.
Annie - „ 5, earned nothing.

13 (b). Total amount of the *average* annual earnings of a *good* labourer. Supplied by Albert Pell, Esq.

When the ordinary wages for six days work are 12*s.* (winter weeks included); if an able man and good workman be put to task work, such as draining, hedge-cutting, ditching, hoeing, throwing up dung, raising stone or clay, he would earn 15*s.* a week, and he ought not to work for these wages for more than 10 hours exclusive of meal times. If he is mowing by task he ought to earn at least 24*s.* a week, and anything under 30*s.* would not be excessive; but much of these wages will be spent in tools and beer, and the hours of labour are very prolonged, say, from 5 in the morning to 8 at night, with three hours' rest in the heat of the day. During harvest the wages with me would be 25*s.* to 27*s.* a week, and the hours of labour indefinite and dependent on the weather; this will last for four weeks, to be followed by a fortnight's labour at about 21*s.*; but during the harvest work a labourer will require 5*s.* to 6*s.* worth of beer weekly, which he has to pay for.

Northamptonshire.

Mr. Norman.

e.

For the whole year the account will be thus—

		£	s.	d.
20 weeks at 12*s.* - - - -		12	0	0
*4 „ (mowing) at 25*s.* (less 5*s.* beer) -		4	0	0
4 „ harvest at 27*s.* (less 6*s.* beer) -		4	4	0
2 „ „ 21*s.* (less 5*s.* beer) -		1	12	0
22 „ at 15*s.* - - - -		16	10	0
	£	38	6	0

= 14*s.* 8¾*d.* per week, and beer given also=in cash 1*s.* 1¼*d.* per week.

Total 15*s.* 10*d.* per week out of the master's pocket.

14. *Dr. W. Paley,* Peterborough. — I am an M.D. of the University of London, and have practised here about 30 years. For 26 years I have been physician to the hospital, where nearly 2,000 cases go through my hands every year, and those cases are principally from the agricultural districts. There are many agricultural gangs here. I may say generally that the labour performed by women and children in the fields is not injurious to them. I think that the benefit they receive from being out in the open air more than counterbalances some few ill effects which arise from exposure to wet, &c. Rheumatism affects men principally and not children. I have never seen cases of rheumatism in children which I can trace as the result of exposure in fieldwork, and I do not think that rheumatism occurring late in life can be said to be the result of exposure in early life. I think that the foundation of bronchitis is more often laid in infancy than in childhood; very few of the cases of bronchitis which are brought to the hospital appear to me to be the immediate result of fieldwork; I wonder that it is so, but that is the result of my experience. There is no question that the poor (women especially) are insufficiently fed, and many of the diseases which they are subject to might be avoided if they had better food; but the field labour cannot be said to be the cause of these diseases, but rather tends to diminish them, by supplying the poor with better wages, and therefore better food than they would otherwise have. Flat feet arise not from field labour, but from the thickness of the soles of the boots, which won't bend. Cases of varicose veins and curvature of the spine are very rare. I sometimes advise delicate children to go to light, easy, out of door occupation instead of going to school, as being far more healthy for them. Most of the field work for children, such as weeding, &c., is very light, and not injurious; it requires no severe muscular labour. Even in the cases of weak circulation without absolute disease, gentle exercise in the open air is one of the most effective remedies. I am a magistrate here and approve highly of the Gangs Act, but I don't think it should be extended to private gangs, because I don't think there is any decided evil existing in the management of private gangs. I have frequently seen much good arise to the poor from the air and exercise they get in the out of door work.

[Dr. Paley was kind enough to furnish me with a statistical account of all the cases which had come under his treatment in the hospital; the total number was 36,243. The diseases which attacked the agricultural population most frequently were:—(1.) Rheumatism, of which there had been 593 cases = 1 in 61 cases. (2.) Inflammation of air tubes (bronchitis) 1,034 cases = 1 in 36. (3.) Asthma (with bronchitis) 690 cases = 1 in 52.

* There will not be four weeks' mowing on most farms, but I suppose the mower to do the thatching; and if not this, to single turnips or do some skilled work in the weeks preceding harvest, which will bring his earnings up to my quotation.

Northampton shire.

Mr. Norman.

e.

The following table will show the ages at which these diseases occurred :—

	0 to 1	1 to 2	2 to 5	5 to 10	10 to 15	15 to 20	20 to 30	30 to 40	40 to 50	50 to 60	60 to 70	70 to 80	80 to 90	Unknown.	Total.
Inflammation of air tubes.	239	148	137	48	23	16	54	58	77	75	73	48	21	17	1,034
Asthma (with bronchitis).	4	4	10	17	16	21	60	125	153	152	95	26	3	3	690
Rheumatism	—	—	—	17	36	61	130	96	96	79	41	11	4	—	593

[It will be observed from this table that although in the case of inflammation of the air tubes the number of infants attacked was very numerous, children between the ages of 5 and 15 (which may be taken as the limits within which children are engaged in field work) were decidedly healthy.—F. H. N.]

15. *Dr. T. Walker.*—I have been surgeon to the hospital at Peterborough for five years. On the whole I think that the agricultural labour is healthy. The poor may suffer from want of food, but not from diseases contracted in consequence of field labour. A few children who have been injured by accidents occurring in field work are brought to the hospital every year, but not many; horse accidents are not so frequent as accidents arising from machinery; and the latter usually occur to children about the farm-yard carelessly playing with machinery. My impression is that the per-centage of those injured is very small. I hear of almost every severe accident that occurs in the neighbourhood; I have several times met with cases of bad accidents causing loss of limb, and occasionally loss of life, to boys intrusted with fire-arms for scaring. The diseases which come under my notice as surgeon most frequently are strumous diseases of the bones, glands, eyes, and skin; these are very common and are caused rather by bad food than exposure, although if there is a tendency to these diseases, exposure to cold and damp would be likely to foster it, more particularly when the food is insufficient. Where the women go to work, as in the fen districts, the infants suffer, and sometimes have drugs given to them. On the whole I think that the field work is rather healthy than otherwise.

16. Letter from Dr. Barr, M.D., of Northampton, Surgeon to the Northamptonshire Militia.

Sir, Northampton, April 8, 1868.

In reply to your letter of the 22nd ultimo, requesting information as to whether field labour is physically injurious to the women, young persons, and children engaged in it, I regret to say that I am not in a position to give any very decisive opinion on the subject, as the number of persons connected with agriculture, who come under my medical observation is but small, my experience among the labouring population being almost entirely confined to the inhabitants of Northampton, who are all engaged in the manufacture of shoes. I have a few agricultural recruits to examine for the militia, and I have frequently to reject some of these lads for curvature of spine and flat feet; I consider these defects are generally caused by carrying heavy weights at an early age. I may mention that these recruits are extremely deficient in intelligence compared with those from the town; they are generally destitute of any education, it being quite the exception to find one who can either read or write.

I am, &c.

W. R. Barr, M.D.

17. *The Rev. R. P. Lightfoot*, vicar of Towcester.—I have been here one year, but have lived in Northamptonshire all my life. I have been diocesan inspector of schools since 1860. I think it would be desirable to prohibit children from going to work until the age of 8, and to compel them to attend school a portion of the year up to 9. The state of education is decidedly defective, especially in arithmetic. I am opposed to all compulsion after the age of 9 as regards agricultural labourers. The two causes of the want of education among labourers are indifference and unwillingness on the part of the parents to forego the weekly earnings of the children. The second of these causes would be in some measure obviated by restricting the age at which the children might go to work. After they begin to work night schools are the only means of education. I have returns relating to night schools from almost all the schools in the diocese of Peterborough; they show that in the opinion of more than half the clergy the night schools, as at present conducted, are either unsuccessful (*i.e.*, few attend them), or unsatisfactory (*i.e.*, those who do attend are indifferent). By far the best thing the Privy Council could do would be to enable the managers of schools to provide efficient machinery for the management of night schools. This might be done if the Privy Council paid for results without requiring certificated teachers, and at the same time increased their scale of payments. Country parishes, as a rule, cannot support certificated teachers, but they can provide sufficient teaching power for night schools. My experience teaches me that you can do much more by inducement than by compulsion. The results of day schools are on the whole satisfactory, and I think that if the same inducements were held out to maintain efficient night schools as are now held out to maintain efficient day schools the results of the night schools would be nearly if not quite equal to those of the day schools. Night schools require much more delicate management than day schools, on account of the age of the scholars who generally attend them. I am convinced that education is making considerable progress in the rural parts of this county; that applies to day schools only; they have increased in number and efficiency. I have formed that opinion as a diocesan inspector. I think that the superiority of assisted schools over others is far more marked now than it was five years ago. I was a guardian in the Hardingstone union for five years. I was then appointed one of the Nuisances Removal Committee nominated by the guardians. I visited almost every cottage in every village in the union, and acquainted myself with the sanitary condition of them. I found in numberless cases very insufficient drainage and privy accommodation, and the water supply in many cases bad and unwholesome. I found that the powers now conferred by law upon inspectors of nuisances were perfectly sufficient to remedy all evils; but the powers conferred by ss. 19 and 20 of the 29 & 30 Vict. c. 90. are not generally understood or effectively carried out.

18. *Earl Spencer*, Althorp.—I am much opposed to the general employment of women in agriculture, excepting perhaps at hay-time or harvest; it is bad for their morality, and, under certain circumstances, for their health, and prevents them learning when young, and afterwards attending to, domestic duties which are of immense importance to the comfort and prosperity of a labourer and his family. In this neighbourhood they so rarely do field work that there seems to be no call for parliamentary interference. In Norfolk, however, where I have property, the evil is greater, and the employment of women and girls in the fields could be regulated by Parliament with advantage. The difference of custom appears to arise

from this not being a purely arable county, and there is not so great a demand at all times of the year for boys' and women's labour. In Norfolk I have heard it urged that women are necessary for certain kinds of work, such as twitching, turnip cutting, &c. This work is generally done by men here, and might be equally well done by men in Norfolk, if there were a sufficient supply of them. The state of education amongst the agricultural labourers seems to me at present decidedly defective. Much as the present system has done, it is not complete enough in its operation for a national education. It cannot meet the wants of the poorest village schools struggling for existence, because they cannot fulfil the Privy Council regulations, and it leaves in other places a large number of the young inadequately educated. The first remedy is to ensure there being a sufficient number of efficient schools within reach of every cottage. The next to secure regular attendance of the children under a certain age. My individual inclination is in favour of compulsion, but great opposition would be raised to it at the present day, and I don't think it could be carried out. I believe, however, that public opinion may so change as to render some scheme of compulsion practicable. It would be desirable to try some indirect means, somewhat on the principle of the Factory Acts; boys might be kept away from work until they are 10 without serious loss to the parents or inconvenience to the farmer. After the age of 10 they should be compelled to attend a certain number of hours a year. I cannot name a specific number. I am alive to the different circumstances of the agricultural and manufacturing communities; the residence of labourers being at best some way from their work, and the work itself being scattered over many acres, creates difficulties which do not exist where the factory is in a town and all the work done within a small space. The work, too, varies at different seasons of the year. The principle, however, of the Act which has been so successful in the factories could, I feel sure, be applied with modifications to agriculture, and with great advantage. I think the principle of an education rate perfectly just; the rate would be borne partly by landlords and partly by farmers, the latter of whom, with few exceptions, give hardly anything towards the expenses of education, and are benefited by it. The clergy at present contribute far more than their proper share. The rate should be supplemented out of the Consolidated Fund in proportion to the efficiency of the school. A system of better education could only be gradually enforced. I am in favour of the scheme which in the first instance gives all parishes an opportunity of improving their own condition, and calls in parliamentary interference on their failure to attain certain results in a given time, somewhat in the nature of the University Commission. I think that by education the labourer ought to be and could be so raised as to enable him to engage in other than in agricultural labours, and the farmer would then have to compete with other employers of labour. The result would be a rise in agricultural wages, and with the improved labour cultivation would be improved, and the farmer and landlords benefited as well as the labourer. I do not see why a rate should stop voluntary efforts of a pecuniary kind, and still less those which take the form of personal interest and care. The clergy would still be the most active and intelligent members of a rural parish, and would not lose their interest in education because others were brought to take part in it. Relief would be given to the few who now bear more than their share on their shoulders, and a larger number of persons would become interested in the matter.

The supply of cottages in this neighbourhood may be sufficient for the labour of the district, but labourers often come from distant parishes to their work, and their homes are inconvenient in accommodation; this has arisen from the old state of the law favouring parish instead of union chargeability. A change has set in since the Act of 1863. I think it necessary that a labourer should have a cottage with three bedrooms to bring up a family respectably; therefore, in building cottages, I always build more with three rooms than with two. My tenants as a rule are anxious to have cottages near their land, and some of them are willing to pay 5 per cent. on the outlay. Cottagers themselves are willing to pay an increased rent for a good cottage. For instance, at Theddingworth I removed some squatters on the wastes who only paid a nominal rent of 1*s.* a year for a cottage with one bedroom to new cottages with two and three bedrooms at a rent of 2*s.* a week, with small gardens. My agent has never had any difficulty in collecting their rents; I have never heard any complaints. This occurred in three or four cases. The average of my cottage rents is 40*s.* a year, but I consider that too low, and now they can well afford to pay 70*s.* or 80*s.* a year for a good cottage with a garden. A landlord should make his cottages, as far as possible, profitable, for the sake of example to others. I permit no lodgers without special permission, and I think that all labourers should, with scarcely an exception, rent their cottages directly from the landlord, as it makes them more independent. I am, however, usually ready to let cottages attached to what in this country is called a lodge or isolated farm to the nominee of the farmer. I think it desirable that cottages should be put under inspection, and that guardians should be able to indict the owners and occupiers of cottages which are overcrowded or unhealthy; and if necessary to do the repairs required for rendering such cottages wholesome and decent; the expenses so incurred should be charged to the owner, and on failure by him to pay I would give the guardians power of selling the cottages. They should remunerate the union in the first instance for the outlay, and hand over the surplus, if any, to the former owner. Were such a principle adopted machinery no doubt ought to be constructed, in the form of some appeal, to protect the landlord from arbitrary and vexatious use of the power thus given to boards of guardians. A clause in the Act of 1866 gives considerable powers for this object, but I believe its powers might be increased, and its enforcements and application should be compulsory.

I think it very desirable for the Government to give facility to proprietors who have no capital to raise money for the purpose of building cottages. I consider allotments of great importance, as tending to raise the independent character of labourers; they should be limited to a rood or thereabouts within easy reach of the village. Occasionally corn is necessary as a change of crop. On the whole I am in favour of allowing these labourers to manage as they please; allotments become objectionable when so large as to detract from the labour which the employer has a right to expect, and not large enough to support independently the labourer.

Co-operative stores have been generally established about here, and have done an immense deal to raise the character of the labourer.

19. Letter written by Mr. J. Beasley, of Chapel Brampton.

Chapel Brampton, Northampton,
17th Feb. 1868.

As the questions contained in the circulars you placed in my hands will be filled up in detail by farmers in this and the adjoining parishes, I will endeavour to answer the inquiries you made of me more generally. I am not now in the occupation of any land, but for half a century I farmed largely, having for many years occupied a thousand acres of land. I have directly and indirectly been an extensive employer of labour, and have now under my management and superintendence about 57,000 acres of landed property, all belonging to two noblemen, and the greater portion in this county. In speaking hereafter of the cottage accommodation for agricultural labourers, the properties to which I have alluded must be excluded. Upon these estates a great deal has been dome to meet the crying evil of bad cottage

Northamptonshire.

Mr. Norman.

accommodation, and with most beneficial results, and though not sufficient to meet the want, yet far above the average of what has been done in the county as a whole.

The system of public or private gangs is all but unknown in this district; in some cases a number of boys and young persons are employed in weeding corn, and one adult labourer engaged to look after them to keep them at their work and see they do it properly; but they are all employed and paid by the farmer, and no evil arises from this practice.

Women are scarcely employed in this district except in haytime and harvest, and from what I have seen of the result of their being employed I should not hesitate to prohibit their employment altogether in agricultural labour except in haytime and harvest. The mother of a family must neglect her children and her home duties, and her husband's comforts cannot be attended to, and it is very doubtful whether her earnings are a sufficient compensation for the wear and tear of clothes and the want of good and economical management in her household. Upon young women the effect is most demoralizing; they get into loose and disorderly habits, and are rendered unfit for domestic servants and badly trained for labourers' wives.

I think no boy should be employed in agricultural labour under 10 years of age, and I should like it to be rendered illegal for a boy to work at that age unless he had been at school six months in the previous year. I would make it illegal to employ a boy of 11 years of age unless he had been three months at school in the previous year, and illegal to employ a boy above 10 years of age unless he could read and write. In this latter opinion, if not in all the others, I should no doubt be in a great minority, but what would be considered a great hardship would soon find its own remedy. If you are to have compulsory education at all, you must make it the interest of the employers and the parents of the children to see that the children go to a parish day school, a night, or Sunday school.

In an economical point of view I do not think there is any advantage in employing young boys and women in agriculture. I believe the cheapest labour is an able-bodied skilled labourer, and I should not anticipate any scarcity of them.

It is not many years ago since the great cry was, What is to become of the surplus labour of England? The question was answered by the passing of the Poor Law Bill of 1832 and subsequent action upon it, especially the test of the union workhouse. There might be some inconvenience during the time of transition, but it would soon be met by improved cultivation of the land and improvements in agricultural machinery.

It would have been thought a short time ago a most tyrannous act to forbid many kinds of manual labour which are now entirely superseded by machines, such as threshing corn, &c. There is certainly no scarcity of labourers in this neighbourhood, and some of them find it difficult to get employment without walking an inconvenient distance to their work. The only difficulty, however, arises from an unequal distribution of labour, caused by the old law of settlement, and which I anticipate the Union Rating Act will remedy in a short period. The greatest improvement to the condition of the agricultural labourer would be increased cottage accommodation near the scene of his employment.

In many parishes there are not half as many labourers residing as are required for the proper cultivation of the land, and in some not more than one-third; and in many cases they have to walk two, three, and four miles to and from their labour. This is not only a great hardship upon the labourer, but a great waste of time and strength, alike injurious to the employer and employed.

The crowded state of cottages is very demoralizing, as may be easily conceived when families of five and six children are brought up in a small cottage with only one sleeping room. I have known cases of one, and sometimes two, married daughters living with their husbands in a small cottage with their father and mother and grown up brothers and sisters. I was in a cottage a few days ago, which measured 16 feet by 18 feet, in which lived an old man 84 years of age, his son and son's wife, and 11 children. There was no office attached to the house, and the mother of the children was washing linen for her family in the only living room.

I do not think any Act desirable for enabling proprietors to borrow money from the Government for building cottages. I find most of the tenants upon the farms under my management willing to pay 5 per cent. upon the outlay necessary for building. I think, however, as a general rule it is very desirable that the labourers should hold their cottages directly from the proprietor. Taking the average of farms, I think there should be three labourers' cottages for every 100 acres of land.

The average cost of the last 17 cottages I have built has been 154*l.*; most of these have three bedrooms. The cost includes offices, a supply of water, fencing, levelling the ground, &c. They are built very substantially, and have more room than cottages in general, but not more than is needful for health and comfort. They would, perhaps, cost a private individual 10 per cent. more; we have no builder or architect to pay. Some of these cottages are let at 2*s.* per week, and none under 1*s.* Of course they are not directly remunerative to the proprietor, indirectly I believe they will be.

The farmer gets a better labourer and more work done for his money, even though he may pay higher wages; his land is better cultivated, and he can afford to pay a higher rent. A good labourer is worth and gets from 1*s.* to 2*s.* per week more living upon the farm than if living at a distance. That the habits, character, and temper of the cottage labourer is improved by a good cottage I have no hesitation in saying from my own experience and observation. If you wish to improve the moral and religious condition of the agricultural class, you must lay the foundation by improving their physical condition. A clean cottage and a well-kept garden creates a feeling of self respect, and gives to the occupant that spirit of self-reliance so necessary to the well doing of this class.

Whenever a cottage is vacant there are many applications for it, notwithstanding the increased rent, and the rents are always paid to the day. I think it very desirable a public officer should be appointed with power to inspect labourers' cottages, and when out of repair or unwholesome from deficiency of accommodation, want of ventilation, or drainage, to order the necessary alterations and improvements to be made and charged to the owner, if, after proper notice, he refuses to do them himself.

Power of sale should be given to the officer on failure of the proprietor to pay the sum thus necessarily spent on his property, and the money arising from such sale should, after paying all necessary expenses, including the expense of alterations, be handed over to the proprietor.

A cottage allotment or garden under proper regulations is a great boon to an agricultural labourer. It should consist in all cases of one rood, or the fourth part of an acre. It should be near his home, if possible good land, and should be let at the same rent as the adjoining farm land. If he has less than a rood it will not admit of a variety of crops, if he has more it may improperly take up time from his daily labour, and give dissatisfaction to his employer.

I could adduce innumerable instances in which these gardens have been the means of improving not only the comfort, but the character of the tenants The satisfaction and contentment which the occupation of this small piece of land gives to the occupier is immense. It is too a great pecuniary benefit; the labour costs him nothing, it supplies him with vegetables through the year,—especially that important article of consumption in the family of a poor man, the potato,—and it enables him at a little cost to keep a pig.

I have about one thousand of these tenants under

my management; they pay their rents most punctually, and at this moment I have not a single arrear. So great is the advantage, that it enables them to pay a higher rent for their cottages with greater ease to themselves, and with greater cheerfulness. That the plan is not generally popular I am perfectly aware, but where it has failed I am convinced it is because it has not been properly managed, that the plan I recommend as to quantity, nearness, &c. has not been adopted, and perhaps there has been no supervision. That it may be made a powerful lever for good I have no doubt.

I attribute the deficient state of education amongst the agricultural labouring class to the indifference of the parents and the employers. Neither the one or the other are willing to make any sacrifice to obtain the least education for the children, and no legislative enactment will be effective which will not make it the interest of the parents and employers to secure this desirable object by some such stringent regulations as those to which I have alluded in a former part of these remarks.

That so little education is received by children in agricultural districts is not for the most part owing to the want of schools, for these are to be found in most parishes; it is not owing to the poverty of the parents, for their child can generally be sent to school by paying a penny a week; it is not because the earnings of the child are an object, for they seldom equal the cost of extra clothing and food required for a child thus employed; it is not for want of funds to support the schools and sufficiently qualified teachers, for these are generally forthcoming; but it is because the children, and especially the boys, are sent to work before they can even read. It is seldom you will find a boy in a village school above 10 years of age, not many above 8. If a child of 10 years of age had receved the smallest portion of education, or if he were not allowed to labour until he had received this modicum, both the parents and the employers would have an interest in encouraging it, and when a boy could read and write the night and Sunday school might afterwards be all that was necessary, but a boy who cannot read at this age will neither attend the one or the other; he grows up into manhood in the greatest ignorance, and is as indifferent to the education of his children as he was to his own.

JNO. BEASLEY.

20. *Albert Pell, Esq.*—I farm 685 acres of land in Leicestershire and Northamptonshire; half arable; soil variable, but very little light. I have farmed land in Middlesex, in the fens of Cambridgeshire, as well as here. Have been a farmer since I was 21. I am also a landowner in Leicestershire and Cambridgeshire, and own, or partly own, between 30 and 40 cottages. Boys' labour is useful for driving horses. I don't think a boy would be fit to have the charge of horses unless he was early accustomed to them. I have only one boy working for me under 10 years of age, and I am employing seven under 16 years of age at present (March). One of them is scaring, and he will return to school when the corn is up. In my opinion birds could be kept off the corn by agencies other than that of boys, and in some instances I know them to be so. As a fact, many children under 10 years of age are employed with advantage in singling turnips, and I think that their labour, although not indispensable, is very convenient for that purpose. As a rule juvenile and female labour is employed on light more than on heavy land. As a farmer I could usually dispense with boys' labour up to the age of 10; but there are exceptional occasions when the labour of boys under that age is very valuable. For instance, when a forcing time comes with young turnips and they have to be rapidly singled, and during the hurry of harvest Between the ages of 10 and 13 boys are usually employed with the team. Their labour is constant; I could not wholly spare them at any particular season of the year. From the beginning of November to the beginning of March I could spare the boys after half-past two, as my horses come in at two. At other seasons I could not spare them. I don't think that the state of education in Northamptonshire is defective; the boys are much better scholars than their fathers were, but I do not find that they are more skilled or better farm labourers on that account. My bailiff, who has many thousands of pounds pass through his hands yearly, is illiterate; so is one of my foremen, who has the sole management of 245 acres of land; but both these men regret their want of education, and believe that they would have filled a higher situation in life if they had been better taught. I have introduced the use of machinery extensively on my farms, and I do not find that my present labourers are unable to use or take charge of such machinery. I think there is immense room for improvement in the school education among the labourers, *i.e.*, I should like to see their reading, writing, &c. taught better, because I think it would be more useful to them as men. But the technical education which is necessary for farm labourers can only be acquired by long experience at farm work and practice in the particular employment to which their life is to be devoted. I think that for the purpose of giving them an opportunity of obtaining a better education it is desirable that the poor children should be restrained from going to work at all before the age of 10 years. I think that any system of education founded upon the alternate day or half day principle would be extremely inconvenient when applied to agriculture, and I therefore think that a longer period should be wholly devoted to education by agricultural children than by children engaged in factories before their regular labour begins. I don't believe that the night school can be made a substitute for the day school, though it may be a useful supplement after the age of 10 for those who choose voluntarily to attend it. I have taken great interest in the education of the lower orders in London and the country, and have myself taught many of my labourers. Cottages are wanted in two of the parishes where I farm; those cottages which do exist are extremely good. This village (Haselbeach) has been wholly rebuilt since I have been here. I think that the net earnings of a child up to the age of 10 are of very little value to the parent, having regard to the fact that it depresses the wages of the children above 10. I do not think that there is any present defect in the law to operate against cottage building. The old law of settlement certainly did so. I do not see the need of any additional encouragement being afforded by the Government or Legislature for the purpose of building cottages in the way of lending money or facilitating the borrowing of it on settled estates. I believe that such a vast number of houses in the country have been built with a disregard to, or in ignorance of, arrangements essential to the health of the inmates, that the establishment of a State department with plenary powers and instructions to make such structural alterations as would render the houses wholesome would, in many instances, lead to changes not much short of demolition. Whole villages or portions of villages are built in situations entirely inconsistent with health; in some cases subject to flooding, in others with no natural or accessible supply of good drinking water; and it is just in these unhealthy spots that the cottages of the poor, in contradistinction to the houses of the classes above them, are found. I have long thought it desirable that some provision should be made by Legislature to prohibit the building of houses in situations and under conditions known to be detrimental to health. The sanitary laws, though somewhat numerous, have proved of hardly any advantage hitherto in rural parishes, being for the most part permissive and the object of constant amendments. Few care to be meddlesome in these matters and to put the law in operation; and when this has been attempted little (as far as my experience goes) has come of it, except the intermittent expenditure of money upon no fixed principle, and often with

Northamptonshire.

Mr. Norman.

e.

Northamptonshire.

Mr. Norman.

e.

no commensurate return. An officer or ministry to direct public action, to take the initiative in legislation, and to have the control over public sanitary works in the country would, I think, be desirable. With regard to allotments, I consider them almost indispensable in a manufacturing district, where the out-of-door work becomes a relaxation to a man who has been confined for the day at factory labour, and is of as much, if not more, value to him than the crop which is to accrue from it. There is not this double advantage in the allotment to a field labourer; but there is still a positive profit to his family in the occupation of a small allotment, say, not more than one rood. The value of the allotment depends materially on its situation in reference to the cottage; the nearer, of course, the better, as opportunity is thus afforded for the wife and children occasionally employing themselves in its cultivation; and where a pig is kept the manure and the food are not distant from each other. When the allotment is far removed from the cottage and placed, as it often is, on inferior land in the outskirts of the parish, the exertion and time devoted to walking to and fro, and the cultivation of an ungenerous soil, deteriorates the value of the labourer as a hired servant, and interferes with the proper and honest fulfilment of his duties to his employer. When I have built new cottages I have as far as possible placed them so that they might have the allotment adjoining, with the pigstyes on the allotment a little distance from the house. I build from two to four houses in a group, none with less than two bedrooms, the others with two and a large landing for the boys' sleeping room; and the houses are so arranged that as a young family grows up in a house with two bedrooms, and the children who may be grown up in the adjoining three-chambered house go out to service or marry off, the third room upstairs may be shut off the one house and opened into the other, the tenants remaining in other respects undisturbed.

[The following are extracts from a paper addressed to me by Alfred Hughes, Esq. of Brampton Ash. Mr. Hughes is now the occupier of a large grazing farm of about 800 acres. He previously occupied a farm in the Isle of Wight, and before that a farm in Norfolk. His experience, therefore, is very extensive.—F. H. N.]

21. I would abolish the employment of females on the land altogether, except for a short time at the harvesting of hay and corn; on moral grounds it is very objectionable, and it incapacitates them for domestic duties in their own homes or for service in gentlemen's families.

From my own observation, and from evidence taken from the most reliable sources, I believe that, be the necessities of the family what they may, or the demand for labourers ever so great, that there is in the end, or in fact, no real economy in employing boys in farm work under 12 years; they eat more, wear more, tear more, learn nothing, and earn next to nothing. Take for instance the case of "scaring;" a lad paid 1*s.* a day, with a gun at 3*d.*, will keep the birds off a large farm as effectually as possible, whereas two little boys at 6*d.* a day would certainly do no such thing; after the age of 12 the boy will walk to his work as far as the man can or ought to walk, say, one mile.

So far as the boys' health and strength is concerned, I see no reason why they should not do the work usually allotted for as many hours as the grown-up labourer; but if the education of the young is to be kept up by means of night schools (which I consider most important), I would have all lads between the ages of 12 and 15 leave work at 3 p.m., provided they regularly attended and contributed towards the said night school. As a farmer, I see no reason why such an arrangement could not be provided for.

I consider the most advantageous system of educating the agricultural poor to be to afford them every facility and the means to attend school regularly up to that age; that they should then pass an examination qualifying them for employment of any kind; that failing in that examination they should return to the day school for three months, but contribute to the night school as if they had passed; and that failing a second time their case should be referred to the inspector. That boys who pass the day school examination should have a certificate qualifying them to obtain employment at any trade or labour, and that certificate should also procure them the privilege of attending the night school established in any neighbourhood in which they might find employment up to 15 years of age on their contributing the usual subscription towards its support.

I have never yet lived where cottage accommodation was so disposed as to provide for the requirements of the land, or sufficiently good to provide for the comfort of the poor; where there has been an excess of cottages the tenements themselves have been so small as to occasion crowding; and where improved cottages have been erected, in all the cases I have yet met with, more have been pulled down than have been rebuilt, and in too many instances comfort and convenience has been sacrificed to external appearance or whimsical contrivance. As a rule, the poor do not like modern cottages; the reason, I think, is that their notions are not sufficiently consulted, the circumstance of their limited time and limited means not sufficiently considered. Among their reasonable objections the following are to be found in the majority of modern cottages: the sitting room too large; back kitchen too small; staircase cramped; and a lack of closets and cupboards above and below.

Few poor people can afford two fires; consequently either the principal room should be adapted for cooking, or the kitchen or wash-house sufficiently large to allow of the family getting their meals there occasionally.

Cramped and difficult staircases are very objectionable with the poor—their reason is always the same; it is not the inconvenience to the living, but the difficulty and distress entailed in the removal of the dead; most housewives have a real liking for old fashioned closets and cupboards, and with the poor they save furniture.

I am of opinion that a kind of barrack on a small scale would be found very convenient in every village, where the young men could board and lodge themselves under the management of a married couple.

This would be a great relief to the cottages, would facilitate the "night school movement," and deter many young men from leaving the country altogether when their homes become crowded.

Under the direction of two or three of the principal inhabitants such an establishment ought to be entirely self-supporting, and afford the best means for the young men to provide economically for themselves.

In my opinion this question of improved cottage accommodation is the first and most important we have to deal with in seeking to raise the character and condition of the agricultural poor, and to stay the increasing emigration to the sources of skilled labour.

The artisan is paid in proportion to his skill or qualifications for positions of responsibility; the agricultural labourer is paid by the week, and to a very great extent good, bad, and indifferent receive the same reward.

Education with such a system of wages will necessarily increase this drafting of the best men in the country to the manufacturing towns, railways, &c. All the employers can do to stay this is to be more scrupulous and liberal in rewarding good services. All the landlords can do is to provide healthy, comfortable, and attractive homes for the labouring poor.

Regular employment throughout the year, a comfortable cottage and good garden to render it self-supporting, will go a long way towards obtaining the object we have in view. As to whether these cottages should be held directly under the landlord or should be sublet by the tenants of the land, is a question upon which I do not give a positive opinion; indeed, it must be an open question with the landlord; but I do think that where the occupation exceeds 300 acres

a certain number of cottages should be let with the farm at fixed rentals with a special condition that the value of the cottage, garden, &c. is by no means to enter into the arrangement of wages between master and man.

I think it better to base the estimate for cottage accommodation on the amount actually paid in wages in each district than on the average. We can, however, arrive at the answer required and adopt that mode of calculation.

Suppose the average wages per annum paid to a family on account of work done on the land is 80*l.*

My wages here on a farm chiefly grass amount to 20*s.* per acre, so that here it would appear that a cottage would be required for every 80 acres, but if we take into account the extra hands of a migratory character employed at certain seasons and the bachelors lodged in villages, I think that in our district we should be well off with one cottage for every 100*l.* actually paid for labour, or for every 100 acres.

On the whole our cottages are conveniently situated for the workmen, but in some cases this point has been carried too far, the man walks 100 yards to his work, but all the family must walk one mile and a half to church, and the children two and a half to school; the consequence is in such cases that both parents and children are very ignorant and heathens.

I don't think isolated cottages are desirable in the country; they don't get visited by those who are inclined to take an interest in them; the assistance which neighbours receive from each other in sickness and absence from home is very valuable among poor people, and they are more expensive to construct.

On the last farm I occupied a very large sum was laid out in farm buildings, drainage, and cottages, the plans approved by the Commissioners were in no way adapted to the requirements of the place, and the work passed by their surveyor simply scandalous; the result of this lavish, ill-considered expenditure has been the ruin of the property.

In order to carry on a day school and a night school in an agricultural village I think some such arrangement as this should be adopted: First, that the school-house should be as central as possible. Of course there is much in the internal arrangement of a school that cannot be entered into in this inquiry, where, judging from the space left for answers, we are not expected to be troublesome with suggestions. At the same time the questions asked raise the whole question of the amendment of the character and condition of the agricultural labourers, and I am anxious to press these points, which I consider most important, to bring about so desirable an object.

1. Simple, comfortable, and attractive dwellings. Simple in construction, comfortable in arrangement, and attractive in situation and garden ground.

2. The prevention of the employment of women and girls in agriculture, except in hay time and harvest, and of boys before 12 years old, or until they are provided with a certificate from the inspector of schools.

3. In addition to the day school a night school permanently established, conducted by the master of the day school, and contributed to by the scholars.

4. It would be most desirable that farmers should combine to come to some better arrangement in the rate of wages, either by a more systematic adoption of piece work, or by paying the men in some proportion to their usefulness.

In order to establish permanently a night school, I believe it to be quite necessary that the teacher in the day school should undertake it; to accomplish this where there is only one teacher the work in the day school must be curtailed, and from my own experience I believe this may be done without loss to the scholars generally in this way: I would assemble morning school at 8.30, all the scholars who can read and write should be kept to secular instruction only. The little ones, in addition to their usual employment, to receive some simple lessons in religion.

Afternoon school from 2 till 4, where only one teacher is kept. No scholar should attend afternoon school but those that can read and write. That one hour should be devoted to reading from the Bible and in religious instruction, the remainder of the time to writing from dictation and in questionings on the different subjects taught in the school, to finish off with singing. The girls should sew in the afternoon.

(If there are two teachers and a class room there is no reason why the little ones should not re-assemble in the afternoon). The clergyman and visitors should be especially invited to assist in the afternoon school, not only to relieve the teacher as much as possible, but to interest the scholars.

It is a great question, in my mind, whether in our national system we have not too much hard teaching. The teacher goes ahead far quicker than the learner, and answers are extracted from the common voice of the class without the mind of one-third of the scholars being engaged in the subject.

As regards religious instruction to little children, except of the simplest kind, the advantage gained by our present system may be ascertained by selecting and examining those who are able to read and write; their absolute ignorance, or the extraordinary answers they will hazard, sufficiently prove the necessity for a more patient system, and for less hard teaching.

Form an upper and a lower school out of morning and afternoon, and you will do much to emulate and interest the scholars and preserve the energy and skill of the teacher. We should not cram the exceptionally intelligent children quite so fast, but the milder treatment and refreshing school will do far more in the long run towards giving a sound and useful education to the children of the agricultural poor.

Northamptonshire.

Mr. Norman.

e.

22. *Mr. W. Higgs*, Stamford.—I have lived here 33 years. I am agent to Lord Exeter, and during the last 28 years I have had the entire management of the estate. I am well acquainted with all this country as far as Peterborough in one direction, and King's Cliffe and Wakerley in the other. I have also been a farmer myself, but not in this district. What I am about to state applies to the whole of that district. The cultivation is mixed, but chiefly arable. Women and children are very little employed about here. In haymaking the women and children turn the hay, and during harvest they rake, &c. I know no district where the poor are as well off as they are here. The ordinary wages for men are 12*s.*, that is the lowest, many earn more, as much as 15*s.*; besides which a great deal of work is done by the piece. Women earn from 8*d.* to 1*s.* a day. There are no gangs; very few boys are employed. The little boys are paid 6*d.* a day for scaring, and are wanted three or four months a year for that purpose. They are also employed a little in weeding and picking stones, &c. They are all well treated. If I were to hear of any one of Lord Exeter's tenants ill treating a boy I should be the first to speak to him. I don't think a boy is of any use to guide the plough under 14 or 15. They are also very useful at that age in helping to feed stock, &c. They are useful to drive horses at the plough at the age of 9 or 10. The ordinary hours of work are from 6 to 6 in summer, and during day time in winter. The horsekeepers come early in the morning, but I don't think the boys come with them. The supply of labour is plentiful. There are many young boys not employed about here. I don't think the alternate day system would be feasible. Parents would not agree to it, because they want the whole week's wages. The supply of schools is ample; and there is a greater desire for education among the poor than there used to be. The supply of cottages is fairly good. The cottages are improving both in quality and quantity. The men rarely have to go more than 1½ mile to work. The rent is from 20*s.* to 80*s.* a year; the cottages are usually let direct to the labourers, some with and some without gardens; the average rent is about 30*s.* I have had good opportunities of observing the allotment system, and approve of it highly, provided the allotment is near the house. If this is the case, a labourer who comes home tired from work

Northamptonshire.

Mr. Norman.

e.

is able to go out and walk about his allotment with his children and do a little work. He could not do that if his allotment or garden was at a distance.

When the parish of Easton was enclosed five pieces of land of about 20 acres each (four arable and one pasture) were set apart for the labourers in five different parts of the parish. The most distant were two miles apart. Each cottager who has an allotment has an acre in each place. There is also a piece of land of 29 acres reserved as pasture, upon which those cottagers who hold portions of the five pieces of land may turn out a cow. One man with five acres, a house, and pasture for a cow pays 12*l.* a year rent; another with the same, except the house, pays 9*l.* a year; that is about the average amount of rent. I think that arrangement is very bad; the labourers have not enough work to do on their own land to employ themselves constantly, and they become too independent to work regularly for the farmer. The best of the labourers who have holdings of this kind get their employers to work it for them. I don't approve of land being let, except as a garden, or if for agricultural purposes, in pieces of not less than 20 or 30 acres. It pays them best to grow vegetables, and growing corn is a temptation to them to steal. There is no Sunday labour here, except what is absolutely necessary, such as feeding the horses, bird scaring, the shepherds' work, and milking. Some of the cottages are much crowded; I usually prohibit lodgers.

23. *Mr. Beecroft*, Eye; *Mr. H. Little*, Peterborough; *Mr. Wright*, of Helpstone; farmers and guardians.—The county about here is mixed, but principally arable; private gangs are employed, but not generally; when they are employed the sexes are generally mixed. Some of those who work in the gangs work all the year round, but the gangs are most numerous from the beginning of April until July. The children begin to work at about the age of 8; and it is usually only the larger boys, and rarely the girls, who work in the winter. The ordinary hours of work are from 7 a.m. to 6 p.m. Few live more than two miles from their work. The poor usually had rather live at a distance from their work than from the village. A little concession is made for the distance they have to go to and from their work. Sometimes half an hour each way; 1½ hours are allowed for meals, and if they work overtime, as in hay time, they have an additional half an hour. They are subject to no ill treatment. We do not think that parliamentary interference is necessary to regulate private gangs. It is the interest of the employer to manage his labourers well. Private gangs usually work by the day. Women earn 1*s.*, and boys 6*d.* to 10*d.* a day. Men's wages about here are 14*s.* a week. The plough boys are from 12 to 14 years old, and they work with the gangs on those days when they do not go out with the horses. There are plenty of cottages; they are of all sorts, but all the new ones are good. That is the first step towards making a man respectable. The rent varies from 50*s.* to 120*s.* a year. The dearer cottages have gardens; and in many cases allotments of about 20 poles are given gratuitously. We think that some public officer should be appointed to inspect cottages. The number of cottages necessary per 100 acres must vary in different districts, and we cannot fix upon any definite number as the correct one. The education of the poor is decidedly defective, but it has improved recently. There are plenty of schools, and they are usually well attended during the winter months. We think that the boys should not be employed under 8, and girls under 10. School attendance should be enforced up to that age, but not afterwards. There are not enough children in this district to make it possible to organize two gangs to work on alternate days.

24. *Mr. J. Hopkinson*, Dogs Thorpe, Peterborough.—I farm 350 acres of land belonging to the Bishop of Peterborough. I have been here about 10 years. I very rarely employ women; I have not employed above three since I have been here; besides that, they sometimes come to help their husbands when their husbands are working by the piece. I don't think little boys are of any use to farmers. I rarely employ a boy under 9 years old, and I think farmers could easily do without them up to the age of 10. At the worst, it would only cost a farmer 6*d.* a week more to get a boy over 10 to do the work which is now done by a boy under 10. In the winter, when the boys go out to drive plough, they come in at 2 o'clock. They then have their dinner, which lasts until 3, and I often send some of the little boys home at that hour, because I have really nothing for them to do. I cut chaff by horse-power. Even if I did want them, I should have to make a very small sacrifice to let them go at 3 o'clock. They earn 6*d.* a day, *i.e.*, ½*d.* an hour; so I should only have to sacrifice ½*d.* for every hour they were absent. They would certainly be more useful to me if they were better educated. I hire 13 cottages with my farm; most of the farms about here have cottages let with them. I think three cottages per 100 acres is the proper number for the cultivation of the land. Farmers about here hire some of their men, such as horsekeeper, plough, and milk boys by the year. They receive a portion of their wages weekly, and remainder at Michaelmas. That is done to give the farmer a greater hold upon them.

25. *John Beeby.*—I am foreman to Mr. Hopkinson at Dogs Thorpe. My wages are 14*s.* and a house. I have five children; the eldest is aged 7. I have lived here seven years, and been engaged in farmwork all my life. Boys are of very little use younger than 9 and only the biggest of them then. Farmers would not be put to much inconvenience if no boys worked until the age of 10. I don't think that that restriction would stop the farmwork at all. Boys are wanted to scare, but not under 9. It would be impossible always to get old men to scare. I don't think that any child under 9 earns more than 15*s.* a year. I think it costs more for victuals and clothes when they go to work than when they do not. I intend my boy to go to work about 9, if he is strong and well. I think that boys employed in the fields should be bound to go to school three times a week at 4 o'clock for three hours each day, except in hay and corn harvest. The farmer should send them. They should do that up to the age of 14. They could be very well spared from the farms. If you had a night school, and they were not obliged to go, they would none of them go, they would play truant. The farmer must be bound to make them go. If they went from 4 to 7, the farmers would lose two hours, because they are now bound to work for him until 6, and the boys themselves would lose one. A boy who has been taught is much more useful on the farm than one who has not.

26. *Thomas Adams*, age 14.—I work for Mr. Hopkinson; I have worked for him for two years. I began to work at 8. I first went to scare for two years, and then worked in Jackson's gang for two years. I worked in the gang about seven or eight months a year. I went to school from the time I was 4 until I was 8, but have never been since, except sometimes on Sunday. I earn 4*s.* 6*d.*; I have only one brother and one sister; they are both younger than I am, and go to school; they can both read and write. I cannot read.

MARHOLM.

Population - - 172.

27. Extract from the return sent in by Rev. R. S. Blacker, of Marholm.

I think it would be inexpedient to attempt to enforce attendance at school after the age of 10. All the objections against compulsory education would have to be met, and I do not see how teaching power is to be regularly supplied for evening schools in addition to day schools.

I am opposed to all compulsory education, an enactment that no child should be allowed to go to work

until the age of 10 (I should prefer 12, but this is hopeless) would under the new Government scheme be a sufficient aid to the present voluntary efforts of educationalists. In this small parish all under 18 can read, write, and cipher fairly; as a rule all above 25 have grown up with very insufficient education.

28. *Mrs. Griffin*, Marholm.—My husband is a labourer, and earns 15*s.* a week. I have nine children living. We pay 56*s.* a year for our cottage with a garden. My eldest boy is nearly 9; he is bird scaring; he went to work rather before he was 8. Boys are usually older than that when they first go to work. Since last May [this being April] he has only been out of work about three weeks; but Mr. —— is very kind, and employs him as much as he can on account of my large family. I think my boy has been rather more regularly employed than boys of his age usually are. He has been very healthy since he has been at work; more so than he used to be; his hours are from 6 to 6; he earns 2*s.* and sometimes 2*s.* 6*d.* a week, according to the work he does. I think he eats twice as much when he goes to work as when he goes to school, and he certainly wears out more clothes. I now pay 12*s.* for bread, and 1*s.* 4*d.* for flour per week. My younger children go to school; but my husband is not much of a scholar, and my eldest boy does not often do a lesson. I think every mother who is a mother wants to have her children taught. My girls have never been to work in the field. I should not like to send them out, though I used to go myself; they learn what they ought not to learn, and it is bad for their constitution. My children picked up two sacks of barley and two of wheat gleaning last year. The youngest of those who went to glean is only just 4.

EYE.

Population, 1,375.

29. *The Rev. T. Tomlinson.*—I am minister to the Free Methodists' Church at Eye. I have resided here 1½ years. I think there is a very decided want of education among the agricultural poor in this district. I think that on an average labourers' wages are about 13*s.* or 14*s.* a week here. I attribute the want of education here to a disinclination on the part of the parents to forego the earnings of their children. I don't think the poor are indifferent about education. There is a considerable dissenting interest in this parish, but as a rule the dissenters are unwilling to send their children to the national school. There are two private schools to which they do send them, but these schools are not good, and we want either an undenominational school or a school for dissenters. There is nothing in the mode of teaching at the national school to which we object, but we find that our children do not stand on an equal footing with the other children.

30. *Mr. J. Harris*, schoolmaster, Eye.—I have been here five years. At present in the first class there are only three boys and three girls who are the children of labourers; they are all above 11. Children usually begin to leave about the age of 7, but some continue to attend for three or four months in the winter up to the age of 14. Last winter, out of a total of 90 children in the school there were 24 between the ages of 10 and 14. I think it would be a good plan to compel children to go to school until they are 10. I do not think that the cultivation of the soil would be seriously interfered with if children were not employed before the age of 10. I think there are a sufficient number of children in this parish to form relays of children to work on alternate days, but many children go from here to work in other parishes, and I do not think that there are enough children in this parish to form relays for other parishes. I find that when children return to school after having been at work eight months they have forgotten most of what they knew. There is a night school here, but we could only keep it open from the beginning of October to the end of March; at that time there were only seven in attendance. None would attend a night school in the summer months, because they go to work in their own gardens. It would be impossible to keep night schools open throughout the year with the present staff of teachers; the labour would be too severe.

31. *Joseph Headland*, labourer.—I have lived at Eye for 20 years. I work for Mr. Beecroft. I have seven children alive. My wages are 14*s.* a week. I have never earned less than 12*s.* a week since I was a boy. I know nobody in the parish who pays as little as 13*s.* My eldest child, a daughter, aged 17, is in service; the second, aged 15, a boy, works for Mr. Beecroft; he goes to school on Sundays; he only went to night school one winter; I could not keep him there; I had to pay 3*d.* a week for him. I should have liked to have kept him there if it had not been for the money. My third child is a girl, aged 11; she went out with the gang for about a year. The gang is not at work now, or she would be at work with them. She earned 5*d.* a day. She does not go to school because I cannot afford to pay for her. I have one son, aged 8, who has never been to work; he is at school now; he is not strong enough to go to work. I shall let him go to school all the summer if I can any way spare the money. The children get about 4*d.* a day in the gang when they first go out. I think it would be better for him to go to work, because he is sickly. If women are a little poorly about here they usually say they would be better if they could get out into the fields. I think no girls go out to work in the gang as young as the boys. I think it costs rather more to feed and clothe children when they are at work than at school. I have an allotment of one acre and a half. I have employed two men one day each and lost one day myself to work in it since last Michaelmas. None of my children but my eldest boys work on it. I pay 12*s.* 6*d.* for it. I think it pays me. Grow vegetables.

32. *John Franklin*, aged 10.—I live at Newark, and work for Mr. ———. I have worked for him since last harvest. I worked in a gang a short time before that, but I never worked before I was 9. There were not many boys in the gang smaller than I was. My father is dead. I have three brothers (younger than I am) and four sisters at home; only one of my sisters works in the field; she is 16. None of us go to school. There is no school at Newark. There was a dame's school there, but the mistress was taken ill and had to give it up. I cannot read.

[This was a very small boy. When I saw him he had a horse and iron roller under his sole charge, and was engaged in rolling a meadow; he could only just reach the horse's bridle. He told me that he was often sent out alone in charge of horses.—F. H. N.]

WITTERING.

Population - - 235.

33. *Mr. John Hockney.*—I farm 255 acres. I employ no females, except a few women in weeding. I employ no boys under 18 years old, because I cannot get them; they are all employed. I could not get a boy to scare this year. Some farmers employ little girls, but they are no use. There is no school at Wittering; there is one at Thornhaugh, about one mile off. None of our labourers' children go there. The labourers are indifferent, and will let their children play in the streets instead of sending them; the least shower will stop them. The school is kept by a dame. The little boys earn 4*d.* to 6*d.* a day when scaring, and work about 10 weeks a year. The educated labourers are the worst we have. I object to legislation as regards education.

DEENE.

Population - - 540

34. *The Rev. E. T. Sylvester*, of Deene.—This parish, with the hamlet of Deene Thorpe, is 400 acres. All except the rector's land belongs to Lord Cardigan. Lord Cardigan always provided a suit of clothes every year for each child between the ages of 5 and 14, whether at school or not; but if they did not come to the night

Northamptonshire.

Mr. Norman.

e.

school, or were guilty of gross misconduct, the clothes were immediately stopped. The school was provided gratuitously. The cottages are let for 1*s.* a week, with gardens; the cottages are some old, but all in good repair and comfortable. There is a clothing club to which the labourers subscribe 2*d.* a week, and Lord Cardigan adds 6*s.* 4*d.* at the end of the year, and a coal club. Each family is allowed one ton of coals, and Lord Cardigan pays one-third of the price of the coal, besides carting it home; that amounts to about 12*s.* per ton. All the winter each child under 14 and each of the parents is allowed one pint of soup per week; 100 lbs. of beef is converted into soup every week for this purpose. All the widows and old men have pensions, young widows 1*s.* 6*d.*, old widows 2*s.* 6*d.*; this is only to supplement the parish allowance. Every man under 50 has a woollen jersey once a year, this costs 4*s.* 6*d.* On Christmas day every man and woman has 1 lb. of meat and 1 lb. of bread, and 1 pint of ale, and every child ½ lb. of meat, ½ lb. of bread, and ½ pint of ale. The women go to work in the fields whenever they can, and boys rarely attend school after 10. In the parish in which I formerly was I had a night school; a man of 60 attended it; he could not read or write, but learnt to read by the end of the first year, and to write by the end of the second.

[Notwithstanding the vast sum given away annually in this parish, the labourers did not keep their children at school longer than elsewhere. Can they be said to value education?—F. H. N.]

35. *Mr. R. Parker.*—I am bailiff to Lord Cardigan. I have been here 11 years. I am well acquainted with this district as far as Oundle and Kettering. Women are employed here at certain times in twitching, picking stones, and breaking manure. About Glapthorne they are employed more in winter in cutting turnips. If they were not employed about here at all it would not seriously increase the expense of cultivation; it would be more loss to them than to the farmers. A good many of the women who work are under 20. A few old women work all the year round. Boys are employed as soon as they can hollow; they then hoe, &c., and as a general rule as soon as you get a boy away from home, you usually find something for him to do all the year round. I don't think it would be a serious loss to farmers if boys were not employed before the age of 12. All the labourers here have allotments; they manage them as they please. I think it is very desirable that the labourers should be better educated; I think an Act of Parliament is wanted. Children should not work until the age of 10; it would not create much inconvenience if they did not work until 12. If we knew we could not have them, we could do without them. The wages here are 12*s.* The people are not good labourers; they are discontented and difficult to satisfy.

BRAMPTON ASH.

Population - - 107.

36. *John Pipe*, foreman to Mr. Hughes.—I think an allotment of a quarter of an acre within half a mile is the best plan. It does not pay to grow corn. If I had that amount I should grow 30 poles of potatoes, that would occupy me three whole days in spring and four in autumn, besides odd times before and after work. I should grow at least 15 sacks of potatoes (each sack containing 3 bushels of 80 lbs. each) worth 10*s.* a sack. I should grow turnips, or mangold, or cabbage on the other 10 poles, which would be worth, perhaps, 1*l.*; the labour for the whole at odd times would cost 10*s.*, and three loads of manure at 4*s.*, 12*s.*

The expense and receipts would be as follows:—

Payments.	£	*s.*	*d.*
Seven days' labour - -	0	14	0
Extra labour at odd times - -	0	10	0
Rent (at 2*l.* an acre) - -	0	10	0
Manure (3 loads at 4*s.*) - -	0	12	0
	£2	6	0

Receipts.	£	*s.*	*d.*
Potatoes on 30 poles, (producing 15 sacks at 10*s.*) -	7	10	0
Produce of 10 poles - -	1	0	0
	£8	10	0
	2	6	0
Net profit -	£6	4	0

You might grow potatoes on three-quarters of the land every year. It does not pay to grow corn. Many men are so situated that they cannot keep a pig, and then they have to sell the corn straight off the land, and that does not pay. There is more waste on an allotment than on a farm, and when men are employed at harvest they ought to be getting in their own corn, and then the birds eat it. There are many men out of work here in winter, and they are always the worst educated and the most immoral.

MARKET HARBOROUGH.

Population - 2,302.

37. *Mr. E. K. Fisher*, land agent, Market Harborough.—I am well acquainted with Northamptonshire. I understand the mode of cultivation necessary for the grass country. Women and children are scarcely at all employed upon it. There is nothing for them to do except in haymaking and harvest. As a rule on farms in the grazing district not more than one-third is arable. It is quite as necessary to have skilled labourers on grass land as on any other, because the work they have to do is of a character requiring intelligence, viz., care of stock, draining, hedge cutting. Wages here are about 12*s.* I should think that a good labourer in the district would earn from 13*s.* to 14*s.* a week throughout the year, including his extra wages earned in piece work. From January to the end of May there is really no work for women and children on the grass lands. In June, July, and August they are employed in hay and harvest, and occasionally in spudding or drawing thistles, and after harvest there is no work for them to do during the remainder of the year. The work for women and children on the arable portions of the pasture is of course the same as on the arable farms elsewhere.

There is a sufficient supply of cottages on the grass country, but not always most conveniently placed; the alteration in the rating law is gradually having the effect of remedying this evil. The usual rent is 50*s.* to 80*s.*, generally a garden with the house; a cottage per 100 acres for grass land is amply sufficient, and 2½ for arable is sufficient. In most parishes there is a certain amount of allotment; but I object to any labourer having more than a rood. I think there is no harm in their having a rood; I object to the system of growing corn; but I think that by restricting the quantity of the allotment the growing of corn is virtually prevented. I don't think boys are of any use until they are 10. I think sending them to scare is the worst thing for them; whenever I go about boys employed in scaring are constantly asking what "o'clock it is," as if the employment was wearisome. I think that the object might be effected by an old man or big boy with a gun more effectively and as economically as by employing little boys. It seems curious that some means of scaring by mechanical means could not be found out. I think there are four months in the year (November to February) when boys under 13 could be generally spared from the farm altogether, *i.e.*, very few are required during these months for general field labour. No labour is performed on Sunday except what is absolutely necessary, such as feeding stock, &c. There are co-operative stores in most of the large villages. I don't approve of them in small parishes, because I think they interfere with legitimate trade, and in order to work them well a manager should be found who understands several different trades, which is impossible; and it is difficult for labourers to exercise a proper supervision over the manager.

MARSTON RUSSELL.

Population - - 219.

38. *Maria Wright*, labourer's wife.—I have a son at work aged 12. He has been at work two summers before the present year, but this is the first whole year he has been at work; June, July, August, and September are the busiest months. The first summer he worked he earned 2*s.* a week, now he earns 4*s.*; he has been to school whenever he has not been to work. I think it costs me one-fourth more to have to feed and clothe him now than when he goes to school. I think it would be a good thing to say that no child should go to work before the age of 10.

39. *Mrs. Crisp.*—My husband is a labourer. I have five children; the eldest is 12. He has been at work ever since he was 7, except for three months, when he was injured by an accident. I have been very sorry he went so young; although he has been healthy. He has been to school at odd times, but not regularly. Few boys go to work as young as 7; I think 12 is quite young enough for them to go. I think it would be very fair to prohibit boys going to work until the age of 10; I don't think it would be any loss to the parents, for the boys do need so much when they go to work. We have an allotment of one-third of an acre, and grow about 15 bushels of wheat on it, and consume three stone of flour a week.

[They expect to get three stone of flour from one bushel of wheat. Therefore they grew 15 bushels=45 stone flour, or a sufficient amount of flour to last 15 weeks.—F. H. N.]

COTTINGHAM.

Population - - 1,139.

40. Extract from return sent in by the Rev. William Yates, of Cottingham.

I think an educational test would be best; no boy should be employed, nor girl enter service, unless they had passed an examination in reading, writing, and arithmetic, until the boy was 13 or the girl 14 years of age.

Bad cottage accommodation is certainly injurious to modesty and morality; of these the poor are quite sensible themselves, and I think the feeling is growing; the effect on health does not seem so injurious as I should have expected, but when there is sickness in a house I think it increases infection and retards convalescence. Out of a confirmation class of 16 boys, one did not know the Lord's prayer, and five could not say two consecutive articles of the Apostles Creed. The girls can most of them read, but not write.

We find that what is learned at night school in the winter is to a great extent forgotten in the summer, and we can seldom bring any of them above Standard IV. The indifference of the young people themselves to education and the dislike to return to school after they have once left it are the chief difficulties; those who do attend are for the most part made to do so by their parents, those who do not, ridicule those who do; of course it must be allowed in extenuation that after a hard day's work it is natural they should be more disposed to play than study.

41. *The Rev. W. Yates*, Cottingham.—Very few children attend in the school here after the age of 10. The mass of the children are in the 4th Standard, when they go to work. When they come to the night school after one or two years of work they are about the 2nd Standard. By attending the night school from November to March they would just about regain what they had previously forgotten. The cottages are very bad in this village; in one place there are seven cottages with only one privy, and in another 12 with only two. The seven cottages belong to a publican and are let for 65*s.* They are tolerably well built and comfortable in other respects, but they have no gardens. The parishes all round here are close; some men go three or four miles, and one boy five miles to work. I think there would be a difficulty in putting cottages under a building inspector; it would probably increase the expense of building and might, therefore, reduce the number of cottages.

42. *Charlotte Ward.*—My husband is a labourer, and earns 12*s.* a week; he gets 18*s.* a week with beer for four weeks in harvest. I have seven children, six of whom are at home. I have one son aged 16; he went to work when he was 7, but only for a few weeks a year; he did not go regularly until he was 10. He earned 2*s.* a week at first; I don't think he worked for more than two months a year. He cost me more in food and clothes when he went to work than when he went to school. I think he would eat at least a loaf a week more. I might have saved 6*d.* a week out of his earnings. We have three pieces of allotment; one piece of one rood 1½ miles off, another of 10 poles three-quarters of a mile off in the same direction, and another of 10 poles close by. We pay about the same rent as is paid for the surrounding land. My husband cannot manage all. When he employs other men he pays them 2*s.* a day with beer. We usually grow about 13 poles of wheat; we get about one sack from that with what we glean. It costs 2*s.* 6*d.* a sack to grind, and supplies us with bread for three weeks or more. I pay at least 10*s.* a week for bread and flour now. I think it would be a very good thing if no child went to work until the age of 10; I would make all the sacrifice I could to send them to school. It is no saving to keep a child at home rather than at school, because it costs at least 2*d.* a week more to feed him, and that is the price of the schooling.

BARTON SEAGRAVE.

Population - - 199.

43. *William Maycock*, labourer.—I live at Barton Seagrave, and work for Mr. Wallis. I have worked for him altogether 15 years, but not consecutively. Most of his men come from Barton Seagrave (half a mile) or from Burton (one mile); one comes from Kettering (two miles), but he is a Kettering man. Mr. Wallis employs no women, nor any boys under 12; he employs three or four who go with the horses, also a few to clean turnips; but that work does not last above two weeks altogether. He also employs about four scaring, but they are the same boys who clean the turnips; they are employed in scaring from now [February 26th] till May, and a little in October. A man is employed to scare with a gun when the corn is ripe, because a boy is not tall enough. There are plenty of boys about, and the parents are quite willing to get the boys out; they are anxious for their children to go to school; they think it would be better for them if they got a little more learning. I don't think any parents are prevented sending their children to school by having to pay the 1*d.* a week; the older children are sometimes useful to the mothers at home, when she is washing and wants somebody to take care of the younger children. It would be a very good thing to say that no boy should go to work unless he could read and write. I never heard of a farmer saying to a man, "Unless you bring your boy you shall not come yourself." Most of us could go to school for two hours in the evening during winter, and should like to. The cottages at Barton are good; I pay 30*s.* for mine. It has only one bedroom and no garden. There are allotments up to 40 poles; I should like to have half an acre. We are not allowed to plough. The boys who are employed in scaring have to come on Sundays. The men who are employed on Sundays are, (1) a man to look after the horses, who comes twice in the day, for one and a half hours each time; (2) a man to feed the beasts, who comes twice for three hours each time; and (3) the shepherd; his work would occupy him all day, but another man usually does a portion of it for him.

BURTON LATIMER.

Population - - 1,158.

44. *The Rev. F. Newman*, curate of Burton.—Women are not employed here. The children remain at school up to about the age of 10½, but are absent at certain times of the year before that. The half-time system would not answer here. The education

Northamptonshire.

Mr. Norman.

e.

of the poor is at present insufficient. I attribute the insufficiency to the indifference of the parents and farmer, and to the demand for the children's labour. Some children we cannot get to school; I think some such plan as demanding a certificate of a certain amount of proficiency before allowing the child to go to work, would obviate this difficulty. The irregularity of attendance is the great difficulty; they come for a fortnight, and stay away for a month on frivolous excuses. I think the field labour takes them away earlier than the shoe trade. I think that the field labour is objectionable, because it prevents the children from growing up as strong as they might; it is bad upon moral grounds, because the boys are mixed with men and learn bad language, and are exposed to temptations before they are old enough resist. There is a night school here, but it is not so well attended as it might be; the men won't come with the boys, so this year we had two nights a week for the men and two for the boys, and then the boys would not come because they would not be ticketed as boys. This is an endowed school, and we never thought it advisable to apply to Government for a grant for the night school, because our grant would have been subject to a considerable deduction, on account of our endowment. The night school is open for three months; nobody under 12 may attend. I think there is a growing desire for education here; it arose very much from starting a store, when it was discovered that nobody except the tradespeople could keep the accounts. The store works well. We are too well off for charities; people depend too much upon them, and they bring in outsiders from other parishes. Cottages are sufficient in number, but the sleeping accommodation is insufficient. Labourers do not have to go far to work.

WARKTON.

Population - - 315.

45. *Rev. H. Stobart*, Warkton.—I think that the early labour in the fields is physically injurious. The state of education among the young is defective; I attribute that to the fact that children attend school irregularly, and are taken away too early. Mine is a free school, and that is a bad thing; the parents keep their children away on insufficient grounds; owing to want of education themselves they have no tact in managing their children. The most powerful cause of the insufficient state of education is the desire to have the child's earnings. I don't complain of the girls, they stay long enough; there are no lace schools here. I think that a system of prizes for good attendance at schools would be desirable. I think the plan of giving a certificate of proficiency would be difficult to work, it would be so invidious to have to give the certificate. The night school is well attended; held twice a week, during four months. There are 27 on our books, and 20 usually attend; they behave well. I have no help, and I cannot pay special attention to bad cases. If there was any master to teach them on Sunday to read and write, they would probably come and do well; they do not go to work, and are not tired; and I do not see any objection to their learning on that day. I have a choir here of 27 men and boys; they like it, and come to be taught twice a week; they are common labouring lads; it keeps up their reading. I think additional help should be given to night school, but I cannot suggest the best mode. We are badly off for cottages; the labourers often tell me that they would be willing to pay more rent if they had better cottages. They pay about 40*s.* or 50*s.* a year, and get two dinners on the two rent days. There are allotments which I approve highly of, and think a great boon. One little boy in my parish was killed by being run over in 1865; he had the charge of the horses when it occurred; his brother subsequently had his foot severely injured by a harrow.

RUSHTON.

Population - - 484.

46. *Rev. A. Hawkes*, Rushton.—Women do not work in the fields here; they glean for themselves. Girls work at harvest a little, occasionally in scaring and picking up stones, but scarcely at all. The boys go to work so early that we cannot keep them at school; the work does them no harm physically. All the people are well off here; all the people are respectable, if they were not they would be turned out, as all the village belongs to Mr. Clarke Thornhill. As a general rule, the poor do not value education as highly as they ought. I am totally averse to compulsion; I think it interferes too much with the liberty of the subject and would create opposition. A system of rewards for attendance would be better than compulson. The dissenters gain many adherents by saying that the people are oppressed by the upper classes, and if compulson were introduced the Government would be identified with the upper classes. There are 400 people in the village, and there are no children either at work or at school; we look them up. Night school is well attended; we take them as young as 10. This year I adopted the plan of getting several of the chief people in the village to take the school in successive weeks with the schoolmaster; the scholars are pleased at seeing that others take an interest in them. Cottages are sufficient in number and well placed as regards the work; but this is a respectable place; people are always coming here from the surrounding villages, and we have great difficulty in preventing lodgers being taken in. Most of them have gardens and allotments; gardens I consider under any circumstances very preferable, because the allotments are half a mile off, and the men have to pass a public house to get there.

PILTON.

Population - - 144.

47. *The Rev. R. Hodgson*, rector of Pilton, Oundle.—We put every spur on we can to keep the boys at school. They pay 1*d.* a week. We have a boot club; the boys put in a certain sum per week, and sacrifice it all unless they attend school a certain number of times, and if they do attend we add something to the sum and give them each a pair of boots. They cease to attend day school about the age of 11. At that time they can read and write so as to be of use to them, and know as much arithmetic as they would ever have any use for. The school here is for the parishes of Pilton and Achurch. There is a night school every year at Achurch, and when it is wanted here; there are only 140 people here, and that is not enough to make it worth my while having one always. We have a village library, which is kept up by a subscription among the farmers. We have 300 books; the poor like it very much. I don't think the farmers value education at all; they think it necessary to have boys young so that they may be enured to their work; that is injurious to the boys' physique. All the old men are crippled and rheumatic. I think it very desirable that the Factory Acts should be extended. The half time would not do; we might have the plan of working three days in succession in the week if there were enough boys to form relays; but there must be a little hardship at first. Sometimes in the case of illness it is necessary for the mother to keep the elder children at home to look after the younger ones, but I don't think that necessary in any other case. Field labour is injurious to the morality. We never like to take back to a mixed school (boys and girls) a boy who has been out to work with men. We are badly off for cottages. There is a small property in the village which belongs to a man who won't sell. His cottages are very bad, I would not keep a pig in them. Lord Lilford's are good, and his rents are merely nominal, about 40*s.*, with a dinner every rent day. The cottages on the other property are about 70*s.* a year. The labourers generally have not far to go to work; a few as much as two miles.

BARNWELL.

Population - - 240.

48. *Mr. A. Tate.*—I am agent for the Duke of Buccleugh at Barnewell Castle. I manage 8,000 acres, and have been here 35 years. The property includes parts of 10 parishes in this county and Huntingdonshire. No women are employed on this property except in hay time. Hoeing corn is done by contract, and a man brings his wife to help him; but I don't think that men ever bring anybody except their wives and children to work with them. Boys are employed here with the horses, bird-keeping, &c. Women also pick stones by the load, but that work is not general. I have frequently known a girl go bird-keeping with a gun, but more in Huntingdonshire than here. We are well supplied with cottages; the smaller ones let for 20*s.* to 30*s.* All the duke's cottages are let directly to the labourers. The farmers all want cottages, and when they get a man into their cottages they make a slave of him. All the boys about are employed as soon as they are able to work. I think that if you educate them you must pension them. I have been here 35 years, and I find that when they have been taught much they become too independent. If kept at school until 12 or 14 years of age I would not engage them. We occasionally have men from Oundle come to work here, but not often. There are schools in all the villages.

POLEBROOK.

Population - - 488.

49. *Mr. S. Deacon.*—I live at Polebrook. I farm 400 acres of land at Hemington, and am a land agent besides. I employ no women or girls as a general rule; they are not nearly as much employed as they used to be, and are employed less every day, owing to the use of machinery. I am a tenant right valuer, and know that to be the case. Little boys are employed a little in weeding and picking stones, but very little. I don't think the farmers ever put pressure upon the parents to induce them to send their boys to work. Some of the parents of the boys ask me to give them leave to go away in the winter to go to school. Some of the best taught are the worst labourers. I pay my men 13*s.* 14*s.* and 15*s.* Not much lace or shoe trade here. There are plenty of cottages, and the labourers have not far to go to work; the rent per cottage is about 50*s.* or 60*s.* with a garden. I don't like allotments; I like a garden not exceeding 20 poles near the cottage, but not small farms. Some of the allotments here are half acres. They grow corn, and the farmer ploughs for them. I think it would be a good thing if all could read and write, but progress is gradually being made; I object to all interference by Parliament.

50. *Samuel Milburn*, age 16.—I live at Polebrook. I am stable boy to Mr. Deacon. I have been in the stable one year, and was at field work up to that time. I first went out scaring when I was about 6; I went out scaring for about two years. I went to school for about three or four years on and off, partly before I began to work, and partly when I was not actually employed. I cannot read or write now; I am sorry I cannot. I don't hear the boys about say that they wish they could; most of them can. I am the eldest of seven; all my brothers and sisters go to work now, except two, who are too young. Father can read and write, but mother cannot much.

GLAPTHORN.

Population - - 396.

51. *Mr. H. Kirby.*—I farm 457 acres of land belonging to Lord Cardigan at Glapthorn (120 are grass). I usually pay 12*s.* a week. I employ seven women now, and shall have another to-morrow; four of them are old widows, and two girls, one 14 and the other 13. I employ women from about February until November, but they never work on wet days. They are now gathering stones; they sometimes twitch; in summer they hoe corn and turnips; they sometimes work together and sometimes singly, but never in a gang. I pay the women 7*d.* a day and the girls 6*d.* In hay time and harvest the women have 1*s.*, and girls 10*d.* I never have girls to work younger than I have now; I usually have no work for them between November and February, and some of them have to fall back upon the rates. I have lived here 38 years, and been a guardian ever since the Poor Law was passed. I have four boys always with the teams, aged about 13 or 14, to whom I pay 4*s.* They are no use to me before they are 10. I always employ one or two boys scaring, at 2*s.* 6*d.* a week. I usually employ a bigger boy or a man with a gun to scare when the corn is ripe. I don't want any child before the age of 10 or 11. All my boys can read and write. I don't ever have boys to scare on Sunday; they only get other boys with them, and do mischief. Men are wanted to look after the horses and stock, and this time of the year the shepherd must stay with the sheep all day, because of the lambing. All my men live in the village. [The farm was in the village.] There are three times as many labourers here as are wanted for the parish; they have to go four or five miles to work. There is a great deal of extra-parochial land about where there are no cottages. The parents never ask me to let the boys go away from work to go to school. I have sometimes gone to the night school myself to teach them. I had two (twin) boys here about 15 years ago; my daughter taught them to read and write, and now one is a gentleman's coachman, and the other occupies land in Australia; they have saved a great deal of money. There is no question that the men would be of more use to us if they were better educated. I have an engine, and the men are useless with that, unless they can read and write. There is no question about it, it is worth a farmer's while to make a sacrifice to have his men better taught; they can't read the indicator of the engine. It is the parents' fault, we cannot get the men to send their children to school. I used to have machines broken, not from ill-will, but simply because the men were uneducated, and could not understand them. I think that the persuasion of landlords, &c. is more useful than Parliamentary interference. It is a Christian duty. If I were Lord Cardigan's agent here, I would not allow any man to occupy a cottage who did not send his children to school.

52. *George Leveret*, labourer.—I work for Mr. Kirby. I have worked here nine years. I have three children. The eldest, a boy, aged 11, has been at work three years. He has never been to school, except night school, during that time. He can read and write a little. He first went to scare; that occupied him about three months, and he went to school the rest of the year. He has been to work regularly about two years, and during that time he has never been to day school, and only a little to night school. The reason I sent him to work was because I wanted the money. The boys who go out young get a little rheumatic. My house is bad; it has but one bedroom. I pay 30*s.* a year for it, with an allotment of 40 poles. It takes me all my time to manage my allotment without losing time. Most of the men here have an allotment of 20 poles, for which they pay 3*s.* 4*d.*

53. *Mrs. Peach.*—I live at Glapthorn. I have four children. The eldest is 9; he has gone scaring, and earns 2*s.* a week. He has only been at it a week; but bread is so dear that I could not pay for it. I shall send him to school again when he has done his scaring. My husband works for Mr. Kirby, and earns 13*s.* Last Sunday afternoon my boy went to church, and his father went to scare for him. I don't think it hurts my son to go out scaring; I did not let him go at all until the weather took up. We eat 10 loaves a week, at 8½*d.* a loaf, and ¼ stone of flour, which costs 9*d.* [7*s.* 10*d.* spent in the week on bread and flour alone.—F. H. N.] I dare say it will cost me 1*s.* a week more to keep my son when he scares than when he stays at home, because he eats more. If bread had been cheaper he should not have gone out at all.

Northamptonshire.

Mr. Norman.

e.

[Cottage consisted of one sitting-room, two bedrooms, all very small and bad, and a ground floor; no scullery or pantry. Rent, 30*s.*, with garden.]

54. *John Underwood*, labourer.—I work for Mr. Kirby. I have four children at home now. I have others; one (a girl, aged 10) goes regularly to school now. I have always sent my boys to school. They can all read and write. I cannot; I wish I could. I could not send my two eldest girls to school; I could notafford it when they were young. There was no school here when I was a boy; we got up schools since that time. I usually sent my boys to work when they were about 10. I am sure it would have been better for them if they could have been kept longer at school. My children used to cost me 9*d.* a week for school; 1*d.* a week for three at a day school, and 2*d.* a week for three at night. I think the parents ought to do all they can to have their children taught. Sometimes one of the elder children must be kept at home to help the mother. It is hard work for a woman when she has five or six little children to take care of. They are no use at work, except for scaring, until they are 11 or 12. If I could keep them at home, I should like all of them to leave; but they won't be any better than they are now, I know.

55. *James Ingram*, age 10.—I live at Glapthorn. Father is a labourer. I have two brothers and one sister at home now. I have been out scaring four times. I first went out three years ago.

[This boy was lame from birth. He read well.]

56. *Charles Hostead*, age 15.—I work for Mr. Kirby. I have been at work many years. I milk and look after the cows. I have been at night school since I have been to work. I did not go last winter, but went the winter before. Father is no scholar, but can reckon anything in his head. I have two brothers older than me, who can read and write. [Read well.]

57. *Mary Ann Cottingham*, age 14.—I came to work for Mr. Kirby, on and off, last summer; always work with mother. [Her mother was working with her at the time I saw her.—F. H. N.] I was stone-picking, twitching, and haymaking; mother reaped and I helped. I never went scaring. I have always been to school since I was 3 or 4 years old. I went last winter. [Read very well.]

58. *Susan Whittingham*, age 12.—I have been at work in the fields a year; I go to school in winter. I live with my aunt here; my relations live in Bedfordshire. I go to Sunday school. [Read very well.]

[These two girls were picking stones when I saw them, in a field, with three women, all apparently healthy; the only women I have seen at work in Northamptonshire during more than three weeks travelling in the county.—Feb., F. H. N.]

COTTERSTOCK.

Population - - 211.

59. *Capt. Rickett*, landowner, and agent to Lord Melville, at Cotterstock.—I have lived here 26 years. I don't farm myself. We are badly off for schools. If a woman takes up an infant school she is satisfied with the pence she gets from the children; but if we take it up she is not satisfied with that, and then the expense is thrown on us. There is no school here; but there is a National school at Oundle [one and a half miles], and Lord Cardigan's school at Glapthorn [about one mile]. There is no building for a school here; we had one in the church, but that was objected to and stopped. There are 204 people in the parish; a few of the children go to Oundle to school, but none to Glapthorn. I think it very desirable that no boys should go to work until they are 12, both on physical and moral grounds. It might be done without too great interference with the cultivation. My idea is that the exposure of young boys must affect their vigour and growth. You are obliged to keep your calves and horses warm. I think that the attendance at school must be optional; interference would provoke opposition. I don't think that the parents are indifferent to education here. If there is a want of education it is due to the fact that there is no convenient school. I have had to borrow money for the improvement of land; I did it through the General Land Drainage and Improvement Company. That institution is very useful, but the expenses made necessary by Acts of Parliament are so great that it is not worth while borrowing less than 500*l.* If these expenses were diminished, small holders and proprietors might borrow money for building cottages. I see no objection to the advertisement. The chief expense is caused by the inspector from the Inclosure Commissioners. My own experience tells me that anything that would improve the dwellings of the people would be of the greatest value. The poor people themselves value good cottages immensely; I have had the most convincing proofs of that. I receive for some new cottages I have built, with one rood of land, 100*s.* and 110*s.* per annum; the men cheerfully pay the additional rent, in order to have a more comfortable house and save the doctor's bill.

FOTHERINGHAY.

Population - - 246.

60. *Mr. R. Barlow.*—I farm 300 acres at Fotheringhay. I employ no women or girls as a general rule; two women occasionally. Also one boy scaring, age 9, and five ploughboys; the youngest is 12. I don't think they are quite well enough taught; but the parents want the money. I don't think the Government can do any good by interfering. Most of my men have allotments, and take a day or two to to work on them. If they have no allotments I give them a piece of land.

61. *Thomas Peach*, labourer.—I work for Mr. Barlow; I have worked here 24 years. I have 11 children. I have eight at home; one aged 12 and another 9; the rest are younger. The one of 12 has been at work here two years; he went to school for two or three years before he came to work. There is no night school here. The boy of 9 has just come to work. If it was not for what they earn, and my large family, I should like to give them a little more schooling. I never hear the men about here say anything about education. I have a good cottage with three bed-rooms and two other rooms downstairs, besides brewhouse; I pay 2*s.* a week for it.

62. *Seth Peach* [son of 61].—I am 11. I think I have been here three years. I used to come scaring and keeping sheep at first. I used to go to school, and go now on Sunday. [Read a very little, could not write.—F. H. N.]

WARMINGTON.

Population - - 724.

63. *William Atkins*, Warmington, age 12.—I work for Mr. ———. I have been at work five years. I have never been to school since I first came to work. I have five brothers at home with my father and mother. There is only one bed-room; father and mother and six sons sleep in that. [Could read a little, but not write. The cottage in which this boy lived with his parents was only separated by the high road from the house of the farmer for whom he worked. From a conversation I had with the farmer I ascertained that he was quite ignorant of the boy's want of education, and also of the utter want of cottage accommodation from which his own labourer and immediate neighbour was suffering.—F. H. N.]

CASTLE ASHBY.

Population - - 183.

64. *Mr. Scriven.*—I am land agent to Lord Northampton, at Castle Ashby. My experience extends over the parishes of Castle Ashby, Yardley Hastings, Denton, Easton Maudit, and Great Doddington. The wages here are from 12*s.* to 15*s.*, perhaps a few are as low as 11*s.* Women are only employed very occasionally at hay time; it is quite the exception even then. No girls are employed, except occasionally

when a woman brings a couple of girls (probably her own) to help make hay. Boys are generally employed. There are schools in all the villages; the supply of cottages is not quite sufficient, but if the shoemakers were taken away there would be ample. As a general rule the cottages are fairly distributed; there are not sufficient in Castle Ashby for the work to be done, and the supply of labour has to come from Yardley and Denton, each one and a half miles distant. We have tried building cottages at the farmers' lodges, but we cannot get people to live in them although the farmers want them to come. The rent varies very much; some are let very low, because Lord Northampton does not like to raise the rent of old tenants; but when new tenants come, he charges about 10*s.* a room. Almost all have good gardens; some have allotments besides; they have from 20 to 40 poles, and pay rent at the rate of from 20*s.* to 30*s.* an acre. We make no stipulations as to cultivation; most of the labourers grow corn and consume it themselves. I like the allotment system; I don't think it interferes too much with the labour due to the farmer; the wives do a good deal of the work. I have no objection to their growing corn. Perhaps some of the men in the villages I have mentioned may have to go two miles to work, but very few. The cottages which do not belong to Lord Northampton are not so good, and are higher rented than his. A statute fair is held every Michaelmas at Northampton; men and maid-servants are hired, but for the house only; I think the same fairs are held in all the market towns. All the villages have clothing clubs, and some coaling and blanket clubs as well. We don't allow lodgers in the cottages, and I don't think they are taken in without my knowledge. When the cottages are let with the farms, the farmer puts into them whoever he likes, but he generally comes and asks me about it before selecting a man.

65. *George Brawn*, labourer.—I work for Mr. White at Castle Ashby; I have worked for him for three or four years; I live at Yardley. I have two boys aged 8 and 15 and one daughter at home. The eldest boy has been at work since he was 9, and has never been to day school since that time, but he goes to night school at Castle Ashby; the night school goes on until about Whitsuntide. I think it is a good thing to let boys go to work, because poor people cannot keep them unless they do. If I keep well my youngest boy shall not go to work until he is 14; if he does he is sure to have a depraved nature, and catch up all that is bad. My eldest boy has always been pretty hearty since he has been at work. The youngest boy is at school now, and I often think that if I could get a place for him where he would not get all manner of mischief, and catch all manner of ugliness, it would be better for him to go out in the summer because he has sick headaches. Master keeps a bull, and the farmers round send all the small boys with the cows, and I think it a very bad thing for them. There are three boys at work on this farm, and when they are altogether their language is very bad; they want somebody with them; but then it is miserable to be with them, and difficult to keep them in order. Master generally employs six boys all the year round; two with the team, two cutting chaff, bird keeping, &c., and two doing little odd jobs. The boy who scares comes on Sundays. On Sundays a man has to be here for two hours in the morning and one in the afternoon with the horses; another man all day long with the sheep in the lambing season, but after that about 3½ hours in the day. I look after the stock, and I come on Sunday from 6 to 10 a.m., and from 2.30 to 5 p.m. from September to May, and about 5 hours on every Sunday during the remainder of the year. There are no poor people but what would be glad if they were prevented from sending out their boys until they were 14, if they had the means of keeping them up to that age; an Act would do no good unless the poor are paid. The farmers never press the parents to send their boys to work. I have 13*s.* shillings a week and some milk every morning. The usual wages are 11*s.*

66. *Charles Underwood*, age 11.—I work for Mr. White at Castle Ashby; I live at Yardley. I don't know how long I have been at work. It is a good while since I went to any school, except on Sundays. [Read a very little; could not write.]

ISLIP.

Population - - 626.

67. *John Jervis*, labourer.—I have seven children, five boys and two girls; eldest boy 19; girls 2½ and 8½. One of my sons at shoemaking, two at field work now, and I have had two more at field work. The eldest began before he was 8; had 1*s.* 6*d.* at first; had constant work from that time, and never been to school since; he is now at shoe work. The next began to work after he was 9, and went to school once again for a few months, and then to work again; he got 2*s.* at first. The third was not 9 when he went to work; he has been at work ever since; he got 2*s.* a week at first. The fourth went to work before he was 8, but has been to school three or four different times since between times. I earn 13*s.* now; the usual wages in this parish are 12*s.* I always felt myself better off for my children's wages, even when they only earned 1*s.* 6*d.* a week. It did not cost me the whole of their earnings to provide additional food and clothing for them when they went out to work. If I had to bring them up again I should send them to work as young as I did before. I have one son who, I think, has been injured by going out to work; he always seemed well before he went to work. I think all boys should be taught; all boys are sharper and more useful in the field if they have been taught. I am not sure whether a man would be worse off if his children did not go to work until the age of 10; they would be better taught, and would probably earn higher wages after the age of 10, although there would be a loss before that age. A great many women work about here; it is a very bad thing. I have known 10 or 12 belonging to this parish at work at once. The children are left at home with nobody to take care of them, and more than the mother's earnings are thus wasted. They might make hay and work in harvest, but twitching and weeding may be done by men just as cheaply as by women. I think the labour of women and girls should be stopped by law. I have known them work when there are plenty of men to do the work. I have 30 poles of ground a quarter of a mile off; rent 7*s.* 6*d.* I have to lose about three whole days a year to work on it. I grow 15 poles of wheat every year and rest potatoes. I grow 4 bushels of wheat; get 13½ stones of flour. That would last me nearly three weeks. My bread bill is 10*s.* a week. I should get seven sacks of potatoes, worth about 10*s.* a sack. I am horsekeeper, and can sometimes get away early; if I did not I should have to lose six days, and I have about the best piece of ground in the field.

SUDBOROUGH.

Population - - 321.

68. *Ann Jackson.*—My husband is a labourer. I have four sons, aged 18, 16, 13, and 11. All can read and write a little, but not much. Could not read the "Cornhill Magazine" [which I saw in the cottage.—F. H. N.]. Some of them went to work at 8, and all before 10. They earned 2*s.* or 2*s.* 6*d.* at first. They have had work all the year round since they began to work. Some of them drove plough at the age of 8. If I was going to have my time over again I would not send them so young to work. I think it is money in pocket for a parent to keep small boys at home; it costs so much to keep them at work. They ought not to go to work until they are 10 at least. I think it ruins children to go to work too young; they don't grow as they should. We have an allotment of 20 poles; we keep a pig for manure. It would not pay to keep a pig if we had no allotment.

Northamptonshire.

Mr. Norman.

e.

BRIGSTOCK.

Population - - 1,159.

69. *George Edwins*, age 16.—I work for Mr. Attenborough. I went to work when I was 9. I have never been to school since, except a little on Sundays. Most boys about here have been to school more than I have. My father is Mr. Attenborough's foreman. I cannot write.

[Could not spell "house" or "church;" says that 6 taken from 17 leaves 10.—F. H. N.]

70. *George Richards*, age 9.—I work for Mr. ——. I have only been at work four days. Father is a labourer. I have been keeping sheep. I have one brother older than myself. He cannot read as well as I can. My mother never goes to work in the fields. I like work better than school

[Reads fairly. Does not know what month it is. Says that his birthday is in July, but does not know whether that is a month.—F. H. N.]

DENFORD.

Population - - 429.

71. *Mr. H. Gale.*—I farm about 650 acres here; more than half is arable. I have been here about 30 years. I employ women in spring and summer, from about February to June. They are employed in bean setting, twitching, weeding, and haymaking. I employ none in winter. Perhaps I employ more women than my neighbours. I pay them 8*d.* to 10*d.* a day, and have no difficulty in getting them. Three or four of them are the wives of my labourers, and, I think, have children. Last week they did not come to work because it was wet and rough. The work they do cannot be done in wet weather. About a month ago I had 15 boys picking twitch together in one place, and eight girls in another. That was in consequence of my taking a new farm which wanted weeding. I only employed them for a few weeks, and don't often have as many as that; I paid them 4*d.* and 5*d.* a-piece. I generally employ a few children in that way for a few weeks in the spring. The boys I employ all the year round are about 11 to 15 years old. Most of my labourers come from Tichmarch [about two miles]. I pay 13*s.* a week. I am not put to much inconvenience on account of the distance my labourers live from my farm. I don't think I should be put to much inconvenience if I employed no boys until they were 10 years old. I don't like small boys for scaring; I employ a big boy with a gun.

STANWICK.

Population - - 669.

72. *Mr. Aris.*—I farm about 500 acres in Northamptonshire. I could dispense with boys' labour altogether until they were 10 years old; but they are convenient for eight or ten weeks in the spring under that age, although I don't employ them now that I can get women, whom I pay 10*d.* or 1*s.* instead of 8*d.* as formerly. I have found great inconvenience arising from the large allotments held by labourers; the labourers go to work early in the morning for themselves, and are tired when they come to work for us. There are many shoemakers here, and the labourers not only work on the allotments for themselves, but they are employed by the shoemakers to work for them at the busiest times, as the shoemakers find it pays them best to continue working at their own trade. I found that my labourers wanted to go away to work for themselves so frequently in spring and autumn that I found it difficult to carry on the work of my farm, and I do not now permit them to go away. They never want to go away except in fine weather, when the farmer has most work to do, and never in the winter months. If a man only had one rood of ground, I would let him go away whenever he pleased, because I think it would be a benefit to him. If a man has more than one rood, he is obliged to keep a pig, and most of the cottages have no sufficient accommodation for pigs, and nuisances are thus created. I find I cannot feed a pig at a profit myself.

73. *The Rev. J. H. Gandy*, rector of Stanwick.—I have been here four years; the land is chiefly arable. I have 15 acres of land let in allotments of a quarter of an acre each at the rate of 4*l.* per acre; and 12 acres more in allotments of two acres at the rate of 3*l.* 10*s.* per acre. I will not let the latter to day labourers; they are usually taken by tradesmen. I find that it does not answer to let land in pieces of two acres; the land deteriorates in value from want of capital, and the occupiers neglect their regular business. I have found the allotments of quarter acres answer very well. My only restrictions are spade cultivation, and only half grain crop. I also make mine dependent upon attendance at some place of worship, honesty, and sobriety. There are several other pieces of allotment in this parish, but let at a higher rent than mine. I think it would be desirable that children should be prevented going to work up to the age of 10. Some compulsion to attend a day school up to that age, and a night school between the ages of 10 and 14, would be necessary. I think that the present staff of teachers, if more highly paid, could and would be willing to undertake the night schools. Our co-operative store has been in operation two years; the sales amount to 120*l.* to 130*l.* per week. We have four branch stores in four other villages. The schoolmaster keeps the accounts.

74. *James Marriott*, labourer.—I have half an acre of ground. I can manage that with my regular work; I would not have so much if I could not grow half wheat; I feel a better man for having that; I could not manage more; I think a man is better off as a labourer with that amount than with two or three acres. I have belonged to a co-operative store for two years. I get better goods than I did before, and pay less money for them. It also acts as a savings bank. I hold one share, for which I paid 1*l.* 1*s.*; I have drawn out 2*l.* 6*s.*, and have now 3*l.* standing to my account. If I had not dealt with a store I should have spent all that money more. I think there are more men out of work in winter than there used to be. There are two or three men who are always out of work and do odd jobs on the allotments. Very little work is done by the women and children; it does not interfere with the attendance at school. I have had eight sons. I sent them out to work when they were about 8 or 9; but if I had my time over again I would not send them out until they were 10 or 12. I think that the mother of a family is best at home, she loses at home what she earns in the fields when she goes out to work. There are some men who do not belong to the store who are better off than those who do; because some men never pay their bills; they owe as much as 10*l.* If they come to the store they must pay.

WELLINGBOROUGH.

Population - - 6,382.

75. *Thomas Simmons.*—I am one of the relieving officers for the Wellingborough Union. I have 13 parishes under my direction; they are all agricultural, except the town of Wellingborough. All applications for relief have to come through me. I have no reason to suppose that in this district the agricultural labour performed by women and children is injurious to them. I recollect no applications for parish relief which I can trace to excessive labour; nor do I recollect any cases in which diseases have been developed by agricultural labour. The agriculturalists are more healthy than the shoemakers.

HARROWDEN.

Population - - 804.

76. *Mr. T. A. Somes*, Great Harrowden.—I farm over 700 acres, 300 of which are grass, besides 130 acres of wood. I have been a farmer all my life. I generally employ 25 men. My lowest wages are 12*s.* a week from Michaelmas to March, and 13*s.* the rest of the year. My horsekeeper has 16*s.*, and

shepherd 15*s.* I generally employ about six boys; the youngest boy I have had lately is 11. I pay them from 2*s.* 6*d.* to 6*s.* a week. A good workman who works by the piece will earn about 1*l.* I keep 12 horses, and four of my boys are at work with them all the year round; two boys are also employed in pulling and dressing turnips from October to April. I employ one or two old women in the summer to pick thistles, out of charity; I don't like them. I think boys are better off the land altogether until they are 10 years of age. We don't want them, and if it were not for their parents they would be better at home. I very rarely have extra boys. I sometimes set them to break clots, or do any small job if they are out of work. I employ men to pick twitch, and never employ a gang. I have two girls now at work for a few days setting beans; I only employ them to help the family, otherwise I never employ girls. None of my men live more than one mile from parts of my land, though the distance from their houses to the farthest part of my land may be more than that. I have four cottages in different parts of my farm. The men are very willing to take them, because I let them rent free. All the boys go to the free school before they come to me. The shoemakers' boys are not so well off as the agricultural boys. My head man engages all my boys; they are well conducted and trustworthy. In summer they work from 6 to 6; in winter they come when they can see, and return home at 5. It would not signify to me if they left one hour earlier all the year round, except in busy times; I would allow them to do that if I thought they were doing good. The cottages are sufficient in number and well situated, but many have only one bed-room; rent from 1*l.* 10*s.* to 5*l.* a year. Landed proprietors let them at moderate rents, but speculators charge high. They hardly ever have gardens, but most of them have allotments which are let at the rate of 1*l.* 12*s.* an acre; the allotments do not exceed one rood in extent. I approve of the system. The great difficulty about education is interfering with the earnings of the family. I think you would interfere too much if the children were not allowed to work until they were 10 years of age unless they had acquired a certain proficiency before that time. After the age of 10 they might attend at least one hour a day without inconvenience to the farmers, except in hay and harvest. I should not object to the above scheme being carried out, although a little inconvenient to me. My boys are perfectly healthy, and I have no difficulty in getting plenty to come to work. I think three cottages per 100 acres is the proper proportion. I should like to have more cottages on my land. I think farmers would usually be willing to pay a per-centage on the outlay if landowners would build; I would myself pay four per cent. The Union Rating Act may be just, but it acts hardly upon some of us. Our rating has risen very much. The Act has filled the workhouses. I have frequently given men work, because if they went to the house I should have to pay as much as their wages in rates. I farm my land in the same way as my neighbours.

77. *Frederick Page*, age 10.—My father is a labourer. I have one brother [a little child whom F. P. had been sent out to take care of when I saw him.—F. H. N.] I first went to work in harvest when I was 7; I "frit" crows. I went to school before that, but have never been since, except on Sundays. I get very cold keeping crows, but I go to play in the village when I come home. I have not been to work for three weeks. I like school better than work, but work better than nothing. [Could read a little.—F. H. N.]

78. *Rev. W. C. Roughton*, vicar of Harrowden.—I do not think any compulsion would do, but I think there might be a scheme for making boys go to school when they are not earning wages. The evil which I want to remedy is, the children being kept from school by the parents without sufficient cause. The attendance is not sufficiently regular. The children are kept away from school for many purposes besides earning wages, *e.g.*, to collect acorns, and nurse the baby. I think the only excuse for keeping children away from school should be the necessity of earning money, and that arrangement should continue so long as the parent is responsible for the maintenance of the child under the Poor Law. The parents are not sufficiently alive to the importance of education. The expense does not operate here, as the children only pay ½*d.* a week, and that only in winter, for firing, &c. No pressure is put upon the children by the farmer to induce them to leave school, but our farmers are a superior class. I have not much faith in night schools, as now established; the work falls too much on the clergy. Provision might be made for the supply of teachers, which would render night schools effective. I have a night school. Many do not attend who might; they don't come because they object to discipline.

79. *G. Chaplin*, age 8.—Went twitching two months ago for Mr. Walker. There were four boys and four girls at work; the eldest was 12 years old. Thompson looked after us; did not make us work hard; he was kind. I was paid 2*s.* a week by Mr. Walker. We worked from 6 a.m. to 5 p.m., and stopped half an hour at 10, and one hour for dinner. I like going to school better than to work, because I ain't so tired. I have three sisters, and no brother. Father is a labourer. I read sometimes when I go home to amuse myself. [Read well.—F. H. N.]

80. *Mrs. Smith*, Harrowden.—My husband is a labourer. I have six children at home (four boys and two girls). The ages of my sons are 23, 18, 7, and 4. I send the young ones to school; I send them to work as soon as they can go, generally about nine. I never let them be idling about. The only reason I do not keep them at school longer than I do is, because I want their earnings. The boys usually go to work between 7 and 8; they earn very little before 10. They work a number together; I don't object to that, the parents are always paid, and the boys not beaten. My eldest son gives me 7*s.* a week for his board and lodging.

80(*b*). *T. A. Walker*, Little Harrowden.—I farm 180 acres (75 grass); the farm has been held by my family for 60 years. I employ a few women in summer, three or four, and two or three girls, from 10 upwards; they are employed in haymaking and picking twitch. I have two boys constantly at work, aged about 12; They are no use to farmers until they are 10. I have extra boys for bird keeping and weeding. When I want a field weeded, I get two or three women, girls and little boys under 10; they usually come to seek a job. Sometimes I have to send to them; I can get as many as I want without pressing them. When the boys and girls go out together, one of the women looks after them. I would not send them out without some one to look after them; I have not observed any harm from boys and girls being sent out together at the age I have mentioned. My neighbours do their jobs of weeding in the same way as I do. I have never employed a public gang. I always pay the boys and girls myself; women 10*d.*, boys 4*d.* I don't employ them above three weeks or a month throughout the year. I think they would be more useful if they were better taught. I want men of trust; I think there are many children about the streets who ought to go to school. The boys are employed younger than they used to be. I don't think a law prohibiting the boys from going to work until they are 10 would be unpopular among farmers.

FINEDON.

Population - - 1,840.

81. *Mr. W. Bearn*, farmer and land agent.—I farm 300 acres at Finedon (220 arable and 80 pasture); I have farmed it for 35 years. My general staff of labourers is ten men and two boys; the men have 12*s.* to 16*s.* a week, and boys 3*s.* to 4*s.* The boys are from 10 to 14 years old; they are principally employed with the team. They are also employed in twitching

Northamptonshire.

Mr. Norman.

e.

and weeding. No women are employed except in hay time and harvest, and then chiefly married women, the wives of my labourers. My farm is a "pair-horsed farm" [capable of being ploughed with two horses.—F. H. N.], and therefore I do not employ as many boys as I otherwise should. All my workmen come from Finedon [two miles]; one man has been here 39 years, and has walked to and from Finedon every day, except Sundays, [four miles a day=48,828 miles in 39 years.—F. H. N.] That is too far; I lose the time occupied in the walking; it amounts to half an hour night and morning. We do "dibbling" by the piece; I pay so much an acre, and the man finds the boys. So in harvest, a man contracts to cut the corn, and he brings his wife and child to help. The boys are also sometimes employed in draining, which is contract work; the boys carry and lay the pipes. I would pay 5 per cent. on the outlay to have cottages on my farm; and I should think it a great boon. I think the Rating Act is likely to have a good effect; the question of cottages is entirely a money question. I think there is a lack of education, which arises from the poverty of the parents. I don't think they are indifferent about it. I don't think the expense of cultivation would be increased, if we did not have children until they were 10 years old. Arrangements might be made to enable a boy to leave work at 3 o'clock at times, to go to the night school; it would not be a great inconvenience to us. In some cases the loss of the money earned by boys under 10 would be a serious loss to the family; but it would not be so if the boys were allowed to go to work during the summer months. I think on the whole that it is best for the Government to leave it alone. I think a law restricting labour would be unpopular among farmers, and would be resisted by the people.

ROTHWELL.

Population - - 2,285.

82. *Benjamin Coleman*, labourer.—I have lived all my life at Rothwell. I have worked here for 20 years. When master [Mr. C. Brown, of Rothwell Lodge,] wants weeding, or any job of that sort done, he sends two or three boys or girls to do it, with a man to look after them. Sometimes he employs girls to scare birds; they are 12 or 14 years old; I don't know how old. There is never a girl now at all at work here. There are four or five boys employed here now. I have seven children; they are all grown up. My girls did not go out to work much. I have a granddaughter aged about 11; she went out singling turnips last summer; she got 5*d.* or 6*d.* a day. Singling turnips is usually done by the piece; then the man engages the children; no man would take more than two or three children. Three or four men would work in a field together, and each would have a girl or two working with him. The girls are not made ill; they are healthful out of doors. My boys never went to scare and sich work till they were 9 or 10. Some doant go to scare on Sundays, and some do and some doant, just as it happens like. The school is good. I sent my children; they never went much to night school; most of them can read but not write. I think it is a good thing to learn if they make a good use of it; some make a bad use of it. My cottage costs 70*s.* a year without a garden. I have 10 poles of allotment; and I never do nothing there without interfering with my regular work. I never grow corn; potatoes are better. It would be a bad job for a poor man not to let the boys go to work until they could read and write. If you have a strong family you want them to nurse and wash in the house. I have never heard of a farmer saying to a man you shall not go to work unless you bring your boy.

THORPE MALSOR.

Population - - 251

83. *William Essam.*—I don't know how to spell my name; I don't know how old I am. I've been scaring two or three times before. I live at Thorpe. I come to scare at half-past 6, and leave at half-past 5. Sister brings my dinner and breakfast. I went to school before I came to scare. Father is a labourer. I have no brother at home, only one sister. She is 11, and is a year older than me; I know by that that I am 10. I never went to any work except scaring and keeping pigs. My sister went to scare for Mr. ——; she only went once; Mr. —— sent for her. Mother goes to work in harvest; she makes bands for father when father works by the great. Sometimes eight or nine boys and girls go to work together here. A foreman looks after them. I never heard them say whether they liked working that way. I can read a little but not write. I like to go to school better than to scare; I think it is better. Father wants me to learn. I get tired and wet scaring, and have to remain out all day in the rain.

[I found the boy scaring in a field of spring wheat, He was very small, but ready in his answers, and intelligent.—F. H. N.]

84. *The Rev. G. E. Maunsell*, of Thorpe Malsor.—Women and children are very little employed here. I object to all field work for women, except in hay time and harvest. The boys begin to work at 8; they generally scare all Sundays. After they begin to scare, they come very irregularly to school. From 11 they are employed regularly in the fields, and they don't attend even Sunday school after they are 15 or 16. What they have learnt before they begin to scare, they forget when they go to work. I should be very glad to get something done about education. At 15 or 16 boys have forgotten everything they ever knew, and are perfect savages. Many of the parents are indifferent. I think the suggestion that the children should not go to work unless they have learnt a certain amount is good. The root of the whole matter is the insufficient cottage accommodation; boys and girls herded together leads to great immorality. We clergy know of many things which others do not. There is no night school here, but I have the boys up to teach myself. We are in a good state in comparison with our neighbours as regards cottages. The rent varies from 25*s.* to 80*s.*, but chiefly about 40*s.* or 50*s.*, and usually with gardens. There are allotments for all who like to have them. That system works well. We let them grow what they like.

85. Extract from Return sent in by the Rev. G. E. Maunsell, of Thorpe Malsor.

Twitch or stone picking is bad physically for girls approaching the age of puberty; also the necessary exposure to bad weather. I would prohibit female labour in the fields altogether, except at hay or corn harvest. Twenty-five years' experience in a country parish has shown me that where the labourer has good cottage accommodation education is more appreciated, and *vice versâ*. The agricultural labourer's cottage must always be a charge and not a pecuniary advantage to a landed estate, unless an exorbitant rent is charged. The landlord must reap his profit from good cottage accommodation through his farm tenants, who will have superior labourers, and from his decrease in poor rates, above all in the decrease of petty crime, and in improved morality. I have no evening school. I find in my small parish that I can work more efficiently by having the children singly. In 12 boys about nine make fair writers. In 12 girls, about 11. The balance fail either from distaste or inability.

IRCHESTER.

Population - - 1,168.

86. *Mr. J. Cowper*, of Irchester.—I farm 408 acres, 80 of which are grass. I employ no women. I employ from 8 to 12 boys and girls, according to the season of the year, of ages varying from 7 to 13. They are employed from Februaryuntil July, in picking stones and weeding. The rest of the year I do not employ them. [I saw three boys at work weeding under an old man; they seemed quite healthy and

contented, and said they went to play in the village directly their work was over; therefore, not overtired.—F. H. N.] I invariably put about six boys and girls together, under the direction of a steady old man whom I can trust. They earn from 2*s.* to 3*s.* My regular staff of ploughboys is five; they earn from 4*s.* to 5*s.* They are with the team almost all the year. They are about 14 years old. Another boy goes with the shepherd; I pay him 3*s.* Some of the little boys are also employed in scaring, but only one or two. That should occupy them on Sundays, but we sometimes allow them to go. I have no difficulty in getting boys. I sometimes employ more than I want for the sake of the parents. There are a good many children in the parish, and they are employed more generally in field labour than in other places. My man engages the children; I do no work by the great with them. I do contract with a man to single turnips, and he brings a boy with him, whom he pays. All my men come under one mile to their work. I pay 12*s.* 6*d.*; the extra 6*d.* is in lieu of beer. The extra money they earn in harvest adds at least 1*s.* a week to their wages throughout the year. The education among the young is very defective, but is improving. One of my ploughboys left me to go to a situation on a railway, and has now been promoted, and gets 50*l.* a year. There is a desire for education among the agricultural class, if they had only an opportunity of improving themselves. I think an Act of Parliament compelling fathers to send their children to school instead of to work would be objectionable, because you could only enforce it by fining the father if he disobeyed; and if he could not pay he must go to prison; and it would never do that a man should be branded as a convict because he sent his sons to work.

The cottages here are sufficient in number, but the accommodation in many cases bad. The rent is about 60*s.* to 100*s.* [I found one in the village, small but clean and comfortable, let at 39*s.*, with a garden.—F. H. N.] I have no cottages on my farm; I wish I had. I am willing to pay interest on the necessary outlay. I feel satisfied that if I had men living on my farm I should see that they were educated, and that they behaved well; but now, as they live at the village, I have no hold over them. I should not be put to serious inconvenience if I employed no children until they were 10. The employment before that age is of more benefit to the families than to the farmers. We don't expect the children before 7 o'clock in the morning; and if it is wet, we send them home. I should not like to have labourers living in my house.

[This gentleman was good enough to show me round the village of Irchester, about three-quarters of a mile from his house. The school good and well attended. Some of the cottages good, but many very bad. He showed me one, the door of which opened into a narrow passage leading to a court-yard, in which a father, mother, and five children live. Only one room upstairs and one down, the latter used as a shoemaker's workshop.—F. H. N.]

87. *John Brudenell*, labourer.—I have worked here (Irchester) for eleven years. I have only one son, aged 30. There used to be no school here. I used to teach them in the winter. They did not know where to go, and they wanted some learning, so I said, "I'll "teach you." That was 28 years ago. About six came to my cottage to be taught. That went on for two winters. I took it up again about three years since, because there was no school. The boys' friends asked me. I let them come to my house. Seventeen was the most I had; I had no room for more. I might have had many more if I had had room. They paid me 1*d.* per week, and found their own lights. They each brought a candle in turn. I taught them to read, write, and spell. They came very regularly for about four months. They were all boys. I took it up like out of pity for them. Their friends wanted them to learn. They used to come from 7 to 8. They got on uncommon well some on 'em. Many of them did did not know how to make a stroke when they came, and could write their names fair when they left. There are a good many now who want to learn, but they don't like to go to the school, because there are not enough people to teach 'em. A man cannot manage more than a score; 30 or 40 go to the night school now. I think it would be a very good thing if a law said you shall not send your boy to work unless he can read and write. It would sometimes be a hardship on the families, but I think he could learn enough between the ages of 7 and 10. At the age of 6 or 7 a child can take care of the younger children, so that the mother can go about the housework. It would be rather inconvenient if the child were taken away at that age. I believe much of the children's time is wasted; that is because they ain't made to go to school. It looks as if the parents had no care about their children as they should have. I have an allotment of one rood, for which I pay 12*s.* 6*d.* I could not manage more than that without neglecting my regular work. I grow a little corn. It is expensive work growing corn with spade labour, but I don't mind that. I sell a few potatoes and wheat, but never anything else. There is nobody at home but my wife. I sometimes engage a man to dig for me. I pay him 3*d.* a pole; he can't do it under. It will take him all his time to earn half-a-crown a day. A great many cottages here have only one room above and one below, with man, wife, and five or six children. I go out to look after the boys and girls twitching, &c., with about six of them; they are ready and willing to work. We work from 7 a.m. to 6 p.m., with half an hour for lunch and one for dinner. They don't appear tired. They are better when they have been out a fortnight or three weeks than when they begin. They had rather work than sit indoors. It does not hurt them a bit; but they wear out more clothes at work; but only put on old ones. If there were cottages on the farms, away from the public-houses, the men could not go there so much. I live in the village now, but I had sooner live near my work than in the village, even if I had three or four children. The children don't get any good from running about the village; and they are very handy to send for supplies if you live away from it.

[This man was a common farm labourer. His education, which was self-acquired, was very small; but he was evidently a thinking and very intelligent man, and answered my questions with great readiness. The demand for education in the village was evidently limited to a few, as appears from the preceding and following (schoolmaster's) evidence.—F. H. N.]

88. *J. P. Jones*, schoolmaster, Irchester.—The boys begin to leave this school when they are 8; they attend irregularly from that age until they are 10; a few continue until they are 12. There are 40 names on the book for night school, about 30 usually attend; they pay 2*d.* a week, and are generally very attentive. The night school lasts two hours every evening. None come from a distance. About half the children in the village who might come to the day school do come. I have as many as I can manage; more would come to the night school if I had somebody to help me teach. Children are not prevented coming to the day school by having to pay 1*d.* a week; but I think that the 2*d.* a week paid for the night school is an impediment.

PYTCHLEY.

Population - - 536.

89. Extract from Return sent in by the Rev. C. Heycock, J.P., Pytchley.

In rural districts many young females are employed away from home in service, and continue so till they marry, generally with good effect to their moral characters, where they acquire a beneficial training for domestic duties far better than those who seek employment at home. Here the employment of females [in agriculture] is by no means regular. They are almost solely employed in weeding, hay getting, and harvest; and the quantity engaged and-

Northamptonshire.

Mr. Norman.

c.

the time of their employment is regulated by the season; whether wet or dry. By this their morals are not prejudicially affected. I would not prohibit field labour for women, as they prefer out of door labour which is suitable for them, and at times their aid is very essential in busy seasons. I should recommend no restriction on the labour of boys after 8 years. Children do not undertake work here at a long distance from home. It would be vexatious to the employer and to parents to have the distance defined. The every day evidence afforded in our streets, after the hours of labour are over, and the amusements so joyously carried on, are a convincing proof that the energies of the young have not been overtaxed. No compulsory restraint to enforce education would be attended with a good effect. Inducements to attend at school, such as rewards given for regularity, entertainments given during the summer at the houses of the squires or the chief farmers are great incentives to join the school. The industrious and obedient obtain in public the favour of their superiors to the great incitement of the rest. If at all seasons of the year children above 8 years old were confined at school, their parents would become paupers without the assistance of their children. From 5 years old to 8 this inconvenience would not affect them; above that age it seems a night school might succeed. A few years since the cottages were too confined for room either to preserve health or to prevent evils. Happily this state of things has been much remedied, with the prospect of still further amelioration. Every year develops a disposition to improve the comfort and accommodation of the cottages. All [young persons] both males and females can read, but out of this number a great proportion write imperfectly and know little of arithmetic. The evening schools are maintained by weekly payments from the scholars; the usual charge being a halfpenny a head per night. The want of pecuniary means among the class of persons who would attend [is the principal difficulty in the way of maintaining an efficient evening school]. The only objection being not the unwillingness of the young people to attend, but the inability alleged by their parents to make the requisite payments.

90. The following is an extract from a letter addressed to me by the Rev. C. Heycock.

"When you ask me how many weeks in the year children from 8 to 10 years old gain employment, I reply for 10 or 12 weeks, partly in bird scaring and weeding in the spring, and again in the hay season and harvest to drive carts, and to help their parents in gleaning during the autumn. Deprive the parents of their aid only for a few weeks, and the deficiency is sensibly felt. The wages given by farmers for children [boys] at these seasons are 2*s.* per week. So that each child above 8 will earn towards shoemaker's and tailor's bill from 20*s.* to 25*s.* during the year. Again, in reply your inquiry whether in food and clothing there is any perceptible difference when at work, rather than when at school, I am instructed to say that there is no apparent difference."

91. Extracts from Return sent in by J. B. Robinson, Esq., of Cranford [as to the state of education].

One boy aged 16 told the rector that *he had never heard of Jesus Christ;* this happened in 1868; the boy was not particularly dull. An evening school is only a question of money; a good master and books supplied, the lads and young men would attend readily, as they did some years ago when a night school existed here.

BOZEAT.

Population - - - 955.

92. *Rev. F. Pizey*, Bozeat.—I have occasionally seen girls working in the fields here in summer weeding wheat, and in winter twitching. They are usually 12 to 16 years old. For medical reasons girls should not be employed at that age. I object to the employment of little boys as carters; I have known them injured by the horses; they should not be so employed until 12 or 13. The sexes work together when at work in the field. There are many illegitimate children, but the lace work causes that, not the farm work. Too many that I marry have had one (or more) children; there is also a falling off in the number of marriages. Some of our cottages are awfully bad, not fit to house a pig; they are very old; usually one room downstairs and one or two up. The school is entirely dependent on the exertions of the parson. I can only pay an uncertificated mistress, and therefore it is not under inspection. Boys leave about 9, girls at 7 as a rule, but boys go bird keeping and twitching before that. There are as a rule no gardens to the cottages; there were allotments, but they have been taken away. Wages about 11*s.* Many men walk three or four miles a day to work elsewhere. I am in favour of an extension of the Factory Acts; I have lived in Lancashire and know how they work. I do not think a boy can do much good at school after he has been at work all day. Farmers sometimes insist on the boys going to work with the father. In my opinion families would lose nothing if children were restricted from going to work up to a certain age. On the whole I consider the boys are well treated and fairly paid, but they have no sufficient opportunities of becoming educated. Girls in these parts labour under great disadvantages; they are put to the "lace trade" at the early age of 6 or 7 years. The lace making is the prolific source of bad health and bad morals, and produces no pecuniary result worthy of the sacrifice. Lace makers as a rule are unfit for domestic service and for the duties of a wife and mother; hence the low condition of parishes in which such trades are carried on.

93. *Mr. W. Fancott.*—I have lived at Bozeat 38 years. I farm 145 acres (50 of which are grass). I never employ women; I employ two or three boys and four or five men. The lowest wages for men are 11*s.*, and for boys 2*s.* 6*d.* I sometimes employ young boys of 7 or 8 at twitching and picking stones in spring and summer, but not in winter. For these jobs I send out half a dozen boys with one of my men to look after them.

94. *William Dredge*, aged 17.—I have worked for Mr. Fancott [93] eight or nine years. I came for 4*d.* a day; I now get 7*s.* a week. I used to go to day school, and I go on Sundays now [read fairly].

95. *F. Dredge*, aged 12.—I have been at work six or seven years; I drive plough. I go to school on Sunday, but have not been much at day school since I have been at work. [Read a very little; could not write.]

96. *Mrs. Johnson*, schoolmistress, Bozeat.—I have only just come here. I was schoolmistress here formerly for three years, but I left seven years ago. There are now 60 names on the books; I have had 110 names formerly, and the population has rather increased during the last seven years; I intend to open a night school next week. The Sunday school is well attended; there are between 60 and 70 usually present.

97. Extract from letter written by Mrs. Johnson, schoolmistress, Bozeat.

"I find that from the age of 3 to 7 years they are tolerably regular; but from that age to the age of 10 they are very irregular, and generally consider they have finished school; some of them can scarcely read a word of two or three syllables correctly; few of them have so far advanced as to write in a book, and but few have gone beyond the third simple rule in arithmetic when they leave the school."

98. *Edwin Robinson*, age 6.—I have been out twitching once for Mr. ——. That was last week. I worked all the week; seven boys were at work. I have never been to work before. J. Surridge looked after us; we worked from 6 to 6. Mother sent me. Mr. —— paid me 1*s.* 1*d.* We had half an hour for lunch, and one hour for dinner, for which we came

home. It rained part of the time, and we came home then. J. Surridge did not beat the boys. [Read fairly.]

99. *Arthur Chambers*, age 7.—I went to work last Monday for a day and a half for Mr. Fancott; I went twitching. There were seven boys at work. Mr. F. gave me 5*d.* Mother sent me to ask Mr. F.. for work. We had half an hour for breakfast, and came home for one hour for dinner. G. H. looked after us; he cut a stick off the hedge, and gave it to some of them if they did not work; he gave it to me sometimes. [Could read a very little, but not write.]

[This boy and the previous one, No. 98, were examined in the school at Bozeat. They were both extremely small, but were the oldest boys in the school, and the only boys in the school on that day who had been to work.—F. H. N.]

100. *Mr. J. Harrison.*—I farm 460 acres at Bozeat. I employ three women and one girl twitching and stone picking. I have had them at work about a fortnight. None of the men go more than one mile to work from here. I come from Durham, and have only been here six months. I think the men here are very good labourers. It would do the boys good to have a bit more schooling. If any man has a bit more tact than the rest we all want him.

101. *John Dredge.*—I have nine children, eight at home (five boys and three girls). I have a good cottage with two good bed-rooms; I pay 60*s.* a year without a garden. Three of my sons are at work, aged 16, 14, and 11. There are also two young ones not at work; they go to a woman's school. I am no scholar, but I think it is a good thing to learn; none of my children can write, but they can read a little. I often hear people say they wish they could read and write. I send my boys out to work as soon as I can; they go out twitching when they are 7 or 8. I think they go to work half their time between the ages of 8 and 10. I have heard my wife say that they eat more when they are at play than at work.

SYWELL.

Population - - - 241.

102. *Thomas Bands*, master of Sywell school.—I have been here five years. We have at present 35 scholars on our books. I have never known more than 42 on our books. The average number who attend now is 33 on week days, and from 45 to 50 on Sundays. We have 58 names on our Sunday school book; about the same number attend the Sunday school both in summer and winter. The children of eight years old can usually read and write pretty well, and understand the simple rules of arithmetic. There are only five children in the village who do not attend school at all. Between the ages of 8 and 10 the children attend the day school about six months in the year, and between 10 and 12 about three months in the year. After 12 they only attend on Sunday and the night school. There is a night school three nights a week, from the beginning of October until the end of March; it lasts one and a half hours each evening; 15 attend at present; they are chiefly boys. The girls are employed in making lace. Fifteen is a large proportion of all the young persons who live in the village. The scholars at the night school read write, and do arithmetic. They read instructive books for the purpose of getting information. I sometimes read to them.

103. Extract from Return sent by Mr. Bamber.

Morals are not more affected by employment in agriculture than by the same number of persons being collected for any other purpose unrestrained by the presence of superiors. With respect to the proper training of young persons for domestic duties, the absence of this is a manifest evil, and a distaste for the necessary restraint imposed upon in-door servants is acquired (?) by the liberty of obtaining a livelihood in the fields. It is objectionable for women having families to be taken too much from home; but as labourers are not plentiful, and the time that women work in the fields so short, viz., a few months in the year, it is not advisable to place any restriction upon the employment of women. In agricultural districts the parents are rarely so inhuman as to force their children to do more than is consistent with their age and strength. The picture of health that most children are who work in the fields sufficiently attests this. As much might be done by any well organized system of evening schools, any interference with attendance at work is less necessary; indeed, evening schools might be made a very important way of obtaining education, and some means should be adopted of making them as efficient as possible, and as encouraging to the scholars. I should recommend compulsory attendance at day schools (such schools to be supported by the State and voluntary contributions) whenever employment cannot be obtained; the parents being less able to bear any portion of the school expense when the children are unemployed, it is reasonable for this to be borne by others if compulsory attendance is required.

104. *Mr. George Robinson.*—I occupy Sywell Lodge Farm, 180 acres. I have been here seven years. I require four men, one lad (age 15), and three boys to cultivate my farm. I work myself besides. I pay 12*s.* per week to the men, 6*s.* to the lad, and about 2*s.* or 3*s.* to the boys. My men live either at Sywell (one mile distant) or at Holcot (one and a half miles). In consequence of the distance the men live from home, they come half an hour later and leave half an hour earlier than they otherwise would do. In harvest they sometimes knock up a place to sleep in. I contract to get my threshing done by machinery, otherwise I should have to keep more men. I allow all the men who do not go home to dinner one pint of small beer; that costs me 4*d.* per gallon. The boys have half a pint. I never employ a boy under 8, usually not under 10. I give 2*s.* per week at first, and raise it gradually; when they are at the plough they have 3*s.* They are usually the sons of my labourers. The parents wish me to employ them. The boys are employed as follows:—

In January and February, draining (the boys place the tile beside the furrow ready to be put in, and help to fill in the furrow after the tile has been placed).
March to end of July, ploughing (on heavy land, where three horses are required, the boys lead the horses).
August, harvest (boys make bands and tie up).
September, October, and November, ploughing.
December, draining.

My lad can direct a plough. I never employ women; they are very little employed in this neighbourhood; sometimes they work where there is a cottage on the farm. I always pay the boy's father if he works for me, otherwise I pay the boy. I allow one hour for dinner (1 to 2), and half an hour for lunch (9.30 to 10). The boys become stronger from the work they do; it is not injurious to them. My farm is managed in the same way as the other farms in the neighbourhood. If I did not employ any boys until they were 12 I should be short-handed; the expense of the cultivation of my farm would increase. Where the land is heavy (as here) the plough must be drawn by three horses in line, and a boy is wanted to drive them. On light land two horses may be driven abreast with reins. Before I came here I had a farm at Kettering. The boys I had there were better educated than those I now have. I did not find that the boys who were better educated did their work better than those I have at present. The parents of my boys never ask me to let them go to school. Some of my men have allotments; those who have generally stay away for a day or two to dig potatoes after harvest; they ask leave to go; I do not pay them wages when absent. I think a quarter of an acre is the proper quantity for an allotment. A man can attend to that without giving up his ordinary employment. They grow barley, wheat, and vegetables at Sywell. I sell them seed; I don't think they steal seed. They generally have their crops ground and use them themselves.

Northamptonshire.

Mr. Norman.

e.

105. *John Parker*, age 12.—I work for Mr. Robinson; I never worked anywhere else. I have three sisters and five brothers. My father and mother live at Holcot; I live with them. I have never been to school except on Sundays. There is no evening school at Holcot. I have been at work here about three years. I learnt to read a little at the Sunday school; can't write.

106. *Samuel Parker*, age 10, brother of last.—I have been at work here one year; used to come with father a year before that. Never been to school except on Sunday. I never learnt to write; can read a little. [Very badly.—F. H. N.]

[The father of these boys told me that he could not send his boys to school, because he wanted all the money they could earn for him.—F. H. N.]

107. *Joseph Barker*, age 15.—I work for Mr. Robinson. I live at Sywell. I have been at work six years. Went to school before I began work. I go to a night school now three times a week. I can read well, and write and sum a little.

108. *Mr. James Siddons*, Sywell Grange.—My farm is 409 acres in extent, 250 being grass. I have been here 17 years. I employ regularly five men at 12*s.*, four boys at 3*s.* 6*d.* to 8*s.* One or two of my sons also sometimes do a little work. I give no allowances as a general rule. I employ no females except in hay time, when I employ one or two women. Two of my boys come from Sywell, which is one mile distant; three men from Walgrave (three miles) [they were temporarily employed in draining.—F. H. N.]; the rest come from Holcot. I have had men occasionally from Moulton (four miles).

I employ my boys as follows:—

January and February, serving the cattle in the yard and the sheep in the field.
March to May, ploughing and seeding.
June to September, hay and harvest.
October, ploughing and seeding.
November and December, looking after stock.

The youngest boy I now have at work is 11. I have had them under 9. Parents are always anxious to get their boys employed. The hours of work now are half-past 6 to half-past 5. I allow them half an hour each way, on account of the distance they have to come. I pay the boy's father if he works for me, if not, the boy himself. I employ my boys all the year round, and increase their wages gradually. When the boys are at plough they go out from half-past 6 until 2; they then have half an hour for lunch, and do various little jobs about the yard after that. I could not spare them after they come in from plough without inconvenience. We are very short handed. The older boys of a family usually come to work for me here, because of the distance the farm is from their homes, and I can employ them all day long. My boys can usually read and write. I desire them to go to the Sunday school. I think boys ought to learn to read and write; they would be more useful as farm labourers if they could. Their moral training is not well attended to; they are not trustworthy; I attribute that to their not being well brought up. Formerly it was the practice for the younger labourers (*i.e.*, the labourers from 16 to 24 years old) to live at the farm houses; there they received a sort of training. That ceased some time ago, and the present generation had no such training as that. It is quite exceptional for the labourers to live at the farmhouse about here. I could spare the boys up to 9 years of age without serious inconvenience, but not up to 10. After they come to me I could not spare them at all without serious inconvenience. Young men don't like to live with the farmers now because of the restraint. The use of machinery rather increases than diminishes the demand for labour.

I should like to have all my labourers within about one mile of their work. I have one cottage which I rent with my farm. I would willingly pay at least four per cent. upon the sum necessary to build two more cottages, if I could have them. Mr. Beasley wishes some of the labourers to live in my house. I approve of that plan, but the labourers won't do it. I think one cottage to every 100 acres sufficient for my farm. My cottage has a garden of 20 poles. I approve of allotments; they should not be more than 30 poles. More than that would interfere with the labour which the employer requires, or if it does not the labourer must hire somebody to work on his allotment. As a general rule 20 poles would produce as much as a family would require.

Although I find a difficulty in procuring labour the vagrants are constantly increasing in number; they won't work. I am a guardian of the Wellingborough Union.

109. *Mrs. Deeley.*—I live at Mr. Siddons's cottage. I have five sons; three work for Mr. Siddons. [The two others were too young to work.—F. H. N.] I always send my boys to work as soon as I can; how are we to live if they don't work? I would sooner live here than at Sywell. [One mile.] The baker brings me my things. My husband is a scholar; he teaches the boys who don't go to work. Our garden is useful; I wish it was larger.

110. *Richard Deeley* (12 years old). [Son of last witness.]—I went to work when I was 7. I was at school before that; I have not been since. Don't go to the evening school. Father teaches us on a Sunday; we read the Testament. My brother writes rather better than me.

OVERSTONE.

Population - - 206.

111. *John Lucas*, age 9.—I have been at work 2½ years. I work for Mr. Britten at Overstone. I have one brother and four sisters. We live at Moulton, nearly one mile off. I went to school before I went to work; go to a Sunday school now; can read a little.

112. *George Barber*, age 17.—I came to work seven or eight years ago. I went to school before I came to work. I have been to school one winter since I have been at work. Can read a little. Live at Moulton. I have two brothers and three sisters. Live with father. I have never been ill since I have been at work.

113. *Edward Horne*, age 11.—I live at Overstone; work for Mr. Britten; worked here four years; never worked anywhere else. I go to school on Sundays, and used to go to school before I came to work. I have never been away from work since I began.

114. *William Horne*, age 13. [Brother of last witness.]—I came to work here (Overstone farm) when I was 7 years old. I like work. I only go to school on Sundays.

115. *William Chown*, age 9.—I live at Moulton. I have been to work for two years. I have two sisters and one brother. I like going to work, but like going to school best; I go to school on Sundays, but on no other day. Can read a little; cannot write.

116. *Thomas Chown.* [Grandfather of last witness.]—I live at Moulton; I have worked on this farm (Overstone) for nine years. I contract to do work for Mr. Britten. I make as much as I can out of it. I work with boys of from 10 to 14 years old. [He was, when examined, at work in a field with about seven or eight boys under him. The above witnesses Edward and William Horne and W. Chown were at work with him. I may add that the boys appeared to me to be healthy and contented, and the gang in every respect well conducted.—F. H. N.] When I want more boys, I tell my boys that I want five or six, and they bring them next day. No difficulty about getting them. I pay each boy 6*d.* to 8*d.* a day. The boys are easy to manage. They are all ready to work. I never use a stick. I was asked by —— to use a whip; "I said no, you cannot drive an Englishman, much more a boy."

117. *Henry Lucas.*—I live at Moulton; I have worked on this farm [Overstone] near 20 years. I have two boys and five girls. I earn 12*s.* a week, and 1*s.* extra when I come on Sundays. I send my boy (111) to work, because I want money. My boy is not

strong; but he is better when at work than at other times. He does not wear out more clothes when at work than when at play. Two of my girls work at the lace pillow. I pay for my cottage and allotment (10 poles) 4*l.* 6*s.* a year. I grow vegetables on my allotment; use all the produce myself. I should like to have a quarter acre. I have enough time to work at my allotment after my regular work.

118. *John Stephenson.*—I live at Moulton; work at Overstone. I have six boys and one girl; eldest boy is 13. Two of my boys work at Overstone. I send them to work as soon as they can work; I cannot keep them unless they work. Some of my children have been to school regularly, some very little. That is because their mother is sometimes out, and the children are obliged to stay at home; "the big uns to keep the little uns company." I can read, but not write. I want my children to be taught. I know a man is a fool now if he cannot read and write. If I could read and write I could earn 2*l.* a week. My boys are in better health when at work than at school. I pay 1*d.* a week for them at school; I do not mind that, but I cannot afford to lose their earnings. If I had my choice, I would rather live on the land where my work is. I have lived in lone places; I then had to walk two or three times a week to the nearest village to get provisions; that is inconvenient; I think it best for my wife and children to live with company. I pay 4*l.* 10*s.* for my house. I have no allotment.

119. *George Britten*, of Overstone farm, 390 acres.—I have had this farm for two years. My father is a farmer, and I was brought up to it. My regular staff is 11 men, two lads, and five boys. I pay the men 12*s.*, the lads 7*s.* to 9*s.*, and the boys 3*s.* per week. When they come on Sunday they have 1*s.* extra. No allowances. The men live at Moulton [about a mile off.—F. H. N.] or Overstone [half a mile]. I allow them half an hour for breakfast, and one hour for dinner. The youngest boy I have ever employed was aged 8½ years; I should not like to employ boys younger than that. It is not usual to employ them under 10. I could do without boys' labour up to the age of 10 without increasing the expense of cultivating my farm. When they are set on under 10 it is usually at the wish of the parents. I never employ women or girls, except in hay time or harvest. If the boy's father works for me, I pay him the boys wages; if he does not, I pay the boy himself. Wages are usually paid weekly about here; I pay every Friday fortnight. I think I get turnips pulled, stones and twitch picked cheaper by Chown's gang than I otherwise could. The gang works from Michaelmas until spring. Boys are always ready to work in it. I think that the uneducated make better farm-labourers than the educated; they are more contented and better satisfied. There is no work to be done on a farm which cannot be done by uneducated men. No sort of machinery could be used to supply the place of the boys' work.

I think two cottages per 100 acres the desirable number on this farm, which is mixed land. My men live chiefly at Moulton (one mile); there are no cottages on the farm. I should like half my men to live on the farm; their having to walk from Moulton is loss to me; not on account of the walk, but because they would be more under my command here. If I had cottages I could give them to whom I liked, and so secure good men. I think an allotment is very convenient to labourers. I think 20 poles sufficient. Those of my men who have allotments ask my leave to go to work for themselves, and are not paid when they go away. Their system is to grow half white corn and half green vegetables, and change the crop each year. As a general rule they consume everything they grow. There are very few cottages on the farms in this neighbourhood; they are all let with the farms. The ordinary rent for cottages is from 1*s.* to 2*s.* per week.

120. *Rev. E. J. Birch*, rector of Overstone. Population about 200. Been here 10 years. I think there is no need of any legislative enactment to restrain the employment of women and children in field labour in this district, because there is very little of that work done by them here. Some boys are employed on every farm. I don't think that farm labour is physically injurious to them. Some boys are employed at limekilns and in brickmaking in the neighbourhood, but not in my parish; and I think that that work is physically injurious. The work is too severe; they have to carry heavy weights. I think it is desirable that the age at which children begin to work in the field should be fixed; I should say 9. As a general rule, the boys in this neighbourhood do not commence regular work until they are 9 years old; but they go out to occasional jobs before the age of 9, and that occasional employment is a great interruption to their education at the most critical time. I think that some restriction should be placed on the number of hours boys are permitted to work, so as to enable them to have some spare time to go to school. I am inclined to think that they should not continue at work after two o'clock between the ages of 9 and 13. That is on the supposition that the attendance at school is made compulsory. I think that the education of the boys is fair up to the time at which they first go out to occasional work but they are apt to deteriorate very soon; and at the age of 15 their education usually is defective. We have a night school in my parish three times a week about three months a year, chiefly in the autumn and winter; any boys may attend it who are out at work. The night school is difficult to work, and the attendance of the scholars cannot be depended upon for long together; I do not attribute the defective state of the education among boys to any indifference on the part of parents; I attribute it to the fact that the parents cannot do without the children's earnings, *i.e.*, they will not make the necessary sacrifice. I think that if the education were made compulsory, the expense should be borne by a Government grant, otherwise the ratepayers would have the control of the school.

I think three cottages per 100 acres desirable for the proper cultivation of the land. There is not that number in the parish, but more are being built. The rent of the cottages in this parish is extremely low, much lower than the neighbourhood. The best are 1*s.* 6*d.* per week, but only a few new ones. I think it desirable that the labourers should reside near their work; but the cottages should be so placed as to be easily accessible from the village. The cottages are not crowded here.

I think it a great advantage to a labourer to have a good garden of about 30 poles of land, a quarter of an acre is the extreme, not too far from his cottage. The produce of the allotment is generally consumed by the family, or by the pigs. One of the pigs is sometimes sold. Almost all the boys in my village attend school up to the age of 8, and fall off after that.

GREAT BILLING.

Population - - 425.

121. *William Perrott*, schoolmaster, Great Billing.—I have been here seven years. I find that the attendance of girls falls off about 6—7 years of age; they are then employed in lacemaking. The boys cease to attend at 8 or 9 years of age; some never come again after that; others (about one-fourth) come back for five or six months in the winter; rarely any attend after the age of 10. I do not think there are many boys under the age of 8 years who do not go to school at all. The evening school is badly attended; about nine attend only in the winter months.

122. *George Willet*, age 8.—It went to school regularly up to last autumn [at school when I saw him, Feb. 11th.—F. H. N.], then went to work. I like going to school better that to work. Mr. Britten wanted me to go to work; father worked for him last year. I worked at the harvest, and minded the pigs afterwards. I worked up to November; worked sometimes from 7 a.m. to 5 p.m. Made the bands to tie up the corn. When I was with the pigs I shut

e.

them up to go to breakfast and dinner. I have only one sister. [Read well.—F. H. N.]

123. *Philip Pilbrow.*—I worked for Mr. Britten last harvest; I kept the pigs. Father is a shoemaker. I have two brothers and two sisters. I like going to work best. The boys tell me there is work to be had, and then I go. I like work best, because I get money. I have 2*d.* a week out of my wages. The farmer gives me the wages; I give all to mother, except 2*d.* [At the school when I examined him. Read well. Feb. 11th.—F. H. N.]

124. *James Dunn.*—I farm the glebe, 290 acres. I could spare the boys up to 9 years old; not at all after that. We are badly off for cottages. There are plenty, but they are not good. There are allotments to all the cottages of about 20 poles. That is a good arrangement. The squire does not allow corn to be grown on the allotments. The cottagers usually consume all they grow. They sometimes require a few days to dig potatoes, but their ordinary labour is not otherwise interrupted.

125. *Mrs. Somerfield.*—I have five children (three boys). The eldest boy went to school regularly until he was 9; he is now at work. He earns half-a-crown a week. My husband is a shepherd; he earns 13*s.* 6*d.* a week. My boy either works with the plough, or looks after the sheep. Mr. Dunn was willing to take him, and I wanted a little money. He reads and writes every night when he comes home. I think it is a good thing to learn to read and write, but it sometimes brings people into bad habits.

LITTLE BILLING.

Population - - - 76.

126. *Mr. William Pell*, of Little Billing.—My farm is 300 acres; my family have occupied it more than 100 years; one-third of it is pasture. My regular staff is about eight men and three boys; the boys plough and do odd jobs; I contract with a man to pull turnips for me at 10*s.* per acre; I have always got these sort of jobs done by the piece; I could not get turnips pulled unless I did that; he gets boys to do the job for him. All the farmers in the neighbourhood get these jobs done in that way. The worst class of labourers do that job; perhaps they do not always pay the boys. Only employ boys for that purpose from about October to February; I do not think that the boys who work in that way are under 8 years old. In hay and harvest the number of boys I employ regularly is not increased. I do not usually take my labourers' boys; the fathers no not look after them as well as other men. The boys usually come to ask for work. My men have 12*s.* and boys 3*s.* 6*d.* or 4*s.* a week. I very rarely employ women and girls. My boys average about 12 years of age; I don't think we ever have them under 10; I don't know whether they go to school in the evening; they are all quite healthy. The hours of work for men and boys are from 6 to 6 in summer and 7 to 5 in winter; they usually come from Moulton [1½ miles]; I make no allowance on account of the distance, but am obliged to give way a little. I have two cottages now on my farm; I should like to have two more, I should have a greater control over my men. I am not sure whether I should be willing to pay interest on the outlay necessary to build them. There is no difficulty about getting provisions; the bread is brought by the baker, and the wife goes to market once or twice a week. The cottages have gardens of 30 poles; there they grow vegetables; they consume all they grow. I do not allow them to grow corn, they are not honest over it, and it takes too much of their time. I think the Union Chargeability Act will have the effect of encouraging building.

MOULTON.

Population - - - 1,840.

127. *William Barker*, Moulton.—I farm 160 acres, one-third pasture, of my own land. Until the last three years I farmed 400 acres. As a general rule I do not employ females. I employ six men and three boys all the year round. The men's wages are 12*s.* a week, besides one quart of small beer in winter, and three pints of small beer and one of ale a day in summer; the boys have 5*s.* to 3*s.* 6*d.* a week, and one pint of small beer a day. Then they never go away for their dinner, and I never allow them to buy beer and drink it here. I do not often employ a boy under 12 years of age, I can do without them up to that age. They are employed chiefly at plough or in attending to the sheep; [they dress the turnips before they are put into the machine to be cut.—F. H. N.]. When they go to plough they come in at two o'clock, and they then help to clean the horses or cut chaff; they are at work all the day long, I could not spare them in the afternoon. We want a night school in this village, there would be plenty of scholars; many lads from 10 to 14 don't go home after their work is done, but stay about the village and demoralize one another; they do that from 6 to 8 p.m. They might attend school from November until the end of January. They then get home early enough to wash, &c. before school. This month [February] they work on their allotment after they get home; they would be much more useful to me if they were a little educated; I could send them to Northampton on errands. They should be able to read, write, and know the first three rules of arithmetic. My boys usually are educated to that extent; I know how they have been brought up before I take them. I arrange my work so that they may go to school on Sunday; my only law is that they go to some place of worship on Sunday, I don't ask where; but if they don't go there, they don't stop here. The best school is a good home.

All cottages should have allotments, not more than a quarter of an acre. They employ the minds and bodies of the labourers when they would otherwise be idle; if the allotment is more than a quarter of an acre the labourer is apt to get away from his master. There are a great many cottages in this village without any allotment; there should be none. They sometimes sell part of the produce; I don't approve of that. There are 2,000 inhabitants in the village; not more than one-third are shoemakers. If the labourers have cheap and good cottages they behave properly, so that they may keep their cottages. Many cottages here are not fit to live in; it is impossible to live decently in them, and the rent for many is 4*l.* 10*s.* or 5*l.* The cottages are built by speculators, who don't care what inhabitants they bring provided they get their rent; thus all sorts of characters are introduced into Moulton; I don't think the want of good cottages is due to any defect in the law. The Union Rating Bill is a good change. The speculators get six or seven per cent. for the money they spend on cottages. The labourers ought to grow on the allotments just as much as they can consume. I think they might grow a little corn, so as to have straw for their pigs, and thus they get manure. It is difficult to buy straw. Speculators let land for allotments at as much as 5*l.* per acre; that is very hard on the poor, but they would sooner pay it than have no allotment. I never have heard an oath on my farm except once last harvest when one man swore before me and the other men; I never said anything, but turned and walked away; he stood condemned, and came and begged my pardon afterwards; if he had not, he knew what would have happened. The poor about here are generally very comfortably off, although provisions are dear. I think that a good and comfortable house is essential as an inducement to a man to be respectable. A benefit club is very desirable; after they have paid some subscriptions they don't like to forfeit all, which they do if they are convicted. The more we can get men to depend on themselves the better.

128. *Rev. Thomas Sanders*, vicar of Moulton.—I have resided here since 1840. Women are very seldom employed in the field here, they are in lacemaking, which is very sad; girls work at lacemaking very long hours, and cannot go to school, and when they go to service their hands are sometimes so cramped that they cannot

use them properly. There are several schools for lace-making here. There are many small proprietors here who run up cottages as a speculation; they don't mind what tenants they get, and they often get men who have been turned out from other villages. The boys in the village attend the school well, I don't think they could attend better if there was compulsion. As a rule none but the children of respectable parents come; if all other children were compelled to come, the respectable ones would leave. Boys attend from about 4 until the age of 8 years; at about 8 the attendance becomes irregular, and at about 10 they cease to come at all. The corn on the allotments is often sown "by dibbling." Farmers could not do without little boys at certain times of the year. Education is progressing rapidly; men see the necessity of it. When I came here there was nothing but a Sunday school. I do not think that any legislation is is necessary. I am very anxious to get the labourers on. I have assisted eight or nine in fitting themselves for various situations in the police and elsewhere. I think it would be a good plan if the boys of the best character and attainments in the different schools were to meet in the county or large towns at stated times, and compete by examination for Government appointments, such as excise, &c. The prospect of obtaining places of that kind would be an inducement to them to attend school, and would prevent their being discontented. The half day and alternate day systems are bad for agricultural labourers; it may be fine when a boy goes to school and rain when he goes to work. The principle of the Print Works Act would be more convenient. I don't think it would be any hardship to require boys to pass an easy examination before they went out to work at all. When the boys leave school they can read and write fairly, and know the common rules of arithmetic. There is no night school here; I cannot attend to it, because from ill health I am unable to go out at night, and the Government inspector will not allow the master to attend to it.

The cottages here are not much crowded; those built by the proprietors are good, those built by the speculators are bad. There are at present [Feb. 12] about 40 empty cottages in this village; the people have left them to go where they can get better wages. The rent of each is about 4*l.* or 4*l.* 10*s.* The cottages belonging to the neighbouring proprietors are not so dear. None of the labourers go inconveniently far to work, or if they do they have time allowed them for it.

I let nearly 20 acres in allotments to four men, who sublet to the cottagers. I make no stipulations, except that they shall not work or bring produce home on Sunday. Each allotment is about 20 poles. The cottagers usually sell a few of their potatoes. They grow corn; I don't object to that. My tenants pay me 75*l.* for the 20 acres; I pay all the rates and taxes. My tenants reserve a portion of the land which they cultivate themselves, and sometimes work for the other men to whom they let portions of it. I would not place any restriction upon the extent of allotment, I would let the cottagers have as much as they like. I attribute great importance to a man's having a good cottage; I think each ought to have a cellar. Some of the cottagers (the best) usually buy a nine gallon cask of beer; that pays them very well, better than going to a public house for their daily wants; the publican's beer is very generally adulterated, and produces a fictitious thirst.

[I may mention incidentally that I visited one of the lacemaking schools referred to above. It was kept by an old woman, who lived in a tolerably good cottage in the middle of the village. There were 13 girls at work when I saw it, about 8 to 14 years old, all except one sitting so close together as scarcely to be able to move. The schoolmistress told me she had kept it for 46 years, that each girl paid her $\frac{1}{2}d.$ a day and earned 3*d.* or 4*d.*, or rarely as much as 6*d.*, a day by her work; they had to provide the materials themselves; this money the girls or their parents kept. They worked from 7 a.m. to 5 p. m., and were absent half an hour for dinner. I observed a hazel stick, about as thick as my first finger, within easy reach of the mistress.—F. H. N.]

129. Extract from Return sent in by the Rev. T. Sanders, Moulton.

The boys who work in the fields from 6 to 10 years old do so at stated busy times and come to school when these times are over. Hence left alone by the legislature their voluntary attendance is perhaps equal to what the compulsory might be. Compulsion would be very unpopular with the labouring poor of this parish.

130. Extract from Return sent in by Mr. H. J. Little, Moulton.

Half days alternately at school and work would simply be impossible; alternate whole days at school would be very distasteful to farmers, and I think they would sooner do without the children than employ them under such restrictions; some certain amount of school attendance during the winter months up to a certain age appears to me the preferable plan. If you restrict the age at which children should be employed, education must be compulsory. For this purpose encourage night schools, make a lower standard of education to make schools eligible for grants from the Privy Council, and be satisfied to make every child read, write, and do a simple arithmetical sum well.

131. *George Tanner*, age 8.—I went to work last summer with Chown (No. 116). We were picking carrots. We worked from 6 to 6. I took my dinner with me. I earned 4*d.* a day. I have five brothers and sisters at home. My mother sent me to work. I come to school now because there is no work to be done. [Read well.—F. H. N.]

132. *John Burditt*, age 8.—I went to work for Mr. Jones; I trimmed the turnips ready for the machine. There is no work to do now, and therefore I go to school. Mother sent me to work. [Read well.—F. H. N.]

BUGBROOKE.

Population - - - 935.

133. *Rev. Harwood Harrison*, rector of Bugbrooke.—The supply of cottages here is sufficient; some cottages are built by speculators and let for 3*l.* 10*s.* to 4*l.* a year, without any land; other cottages belong to the neighbouring proprietors, and are good. I say every cottage ought to have three sleeping rooms, most cottages have only two; they all take in lodgers if they can get them. It is difficult to prevent them taking in lodgers; I built a cottage, but I felt that I could not interfere with my tenant's liberty. Allotments are very beneficial. Several cottages in the village are empty now. There are some iron works in the village; trade was slack, and therefore people left. Trade has now become more active again.

If a boy leaves school to go to work, and then comes back to school, we always charge him 1*s.* before we allow him to be re-admitted. We get a good many shillings that way. If a boy can only return for a few weeks, his parents will not pay 1*s.* in order that he may be re-admitted. There is a night school; only about 16 have attended this winter; last year there were at one time 24, and I have had 30. They pay 1*d.* a week. I attribute the falling off this year to the high price of bread. One man told me his bread bill was 9*s.* a week; he had five or six children, all young. His wages were about 1*l.* per week. Four cottages stood together in this village, near a malt-kiln. They had gardens. A speculator bought them. He turned the kiln into six cottages, and built five others on the ground which had been used for gardens.

134. *Mrs. Davies* [this witness lived in one of the cottages which had formerly formed part of the malt kiln referred to by the last witness.—F. H. N.] I have lived here a few months, my husband is a labourer. I have six children, the eldest son 19, second son 16, and third son 14, besides three little children. The three eldest go to work at Cold Higham [three miles]. We

Northampton shire.

Mr. Norman.

e.

used to live there, but the cottage is now pulled down, and my boys go to work where they did before; they leave at 5 a.m. and come back at 7 p.m. My husband earns 12*s.*, and my sons 5*s.*, 3*s.* 6*d.*, and 2*s.* 6*d.* We all sleep upstairs, there is only one room. [I was told that this was an exceptional case. The cottage was a very bad one, only one room besides wash-house downstairs and one room upstairs. Children very dirty; did not go to school.—F. H. N.]

KISLINGBURY.

Population - - - 723.

135. *Charles H. Watts*, Kislingbury.—I farm 360 acres, chiefly my own and brother's land; two-thirds are pasture. They work from 6 to 6 in summer, and from 7 to 4.30 in winter, and they have half an hour for breakfast, one hour for dinner, and half an hour in the afternoon. When at plough they go out at 7, they stop to bait the horses in the field at 11 for half an hour with nosebags, and come in at 3, then the boys have dinner, and after that do odd jobs. I think it would be inconvenient to spare them in the afternoon. There is always plenty for them to do. I always hire my boys in the village, and know whether they have been to school; they are more serviceable to me when they have been to school than when they have not, although I very seldom have a job for them to do which it is necessary that they should be able to read. I have between 60 and 70 cottages; the rent is from 52*s.* to 70*s.* a year, with gardens. I have three better cottages at 80*s.* They have allotments besides; they pay 12*s.* a rood. All the people belonging to the village who apply for them have them. They may grow what they like, but they may not plough. They grow corn; that is a mistake, because you cannot tell whether it comes out of your own barn; it is a temptation to them. My private opinion is that 20 poles close at home is better than a rood a mile away. I think that in summer I don't get as much work out of my men as I should, because they go to work for themselves. There are generally a few idle men about who do jobs on the allotments in the winter; they dig by the pole. I don't think any legislation is wanted in the district. Progress is being made. There are sufficient cottages, except in the close parishes. I expect the Union Rating Act will have a good effect.

136. *James Killingbeck*, schoolmaster at Kislingbury since 1857.—Almost all the boys in the village attend school up to the age of 8. They then fall off in the summer months. Almost all who have attended regularly up to the age of 8 attend subsequently from November to March. In the year 1867 13 boys left the school altogether; their average age was 10 years 10 months. The girls go to the lace school; 17 left last year; their average age was 8 years 11 months.

HARPOLE.

Population - - 833.

137. *Rev. R. B. Dundas.* — I have held this living for 20 years. Attempts have been made in this village to set up a training school for girls; that died away, because the girls found they could get places among the farmers and tradespeople without any training, and so it was not worth their while to go to school. They get very little when they first go out, 50*s.* or 60*s.* a year, but they are kept. This is an open village, and the cottages are very dear and very bad; they are built as a speculation; the supply is sufficient. Most of the work is near at hand, though some of the men go two miles to a place where the supply of labour is deficent. There is not much lacemaking. I let 30 acres in allotments; I could let 20 more if I had them. Half an acre is what the men like; I think that is too much for a labouring man; I am obliged to give way, because if I don't others will. Farmers dislike allotments, because they say that they take the labour out of the men. My only rules are, that the allotments must be dug up by December 31 in each year, and that the allotment must be divided into two equal parts, one part to bear a grain crop and the other a green crop. I don't think a grain crop is likely to make a man dishonest; if he wants to take corn he will take it whether he has an allotment or not; if they are not to have an allotment for that reason, they should not be allowed to feed a horse or a pig. Some of the labourers sell the produce of the allotments; that is because they want the money, not because they grow more than they can consume. The allotments should be placed close to the cottages; they are only placed in a field because there is not room near the cottages in this village. The village is crowded, and there was a fever here last year. I think people go too far about compulsory education; it will be the end of the voluntary system.

WOOTTON.

Population - - 837.

138. *John James.* — I am a labourer, but am ill now and cannot work. I have four sons at home, aged 16, 14, 11, and 8. None go to school, but they used to go before we came to live here; I cannot send them, because I cannot afford it; I think it best for them to learn. My two eldest sons go to work; they earn 4*s.* and 3*s.* a week. They work from 6 a.m. to 6 p.m., and are strong and healthy. We pay 1*s.* 6*d.* a week for this cottage, with a small garden and no allotment.

[This was a very bad and dirty cottage, only two rooms, one up and one down stairs; in the former the whole of the family slept. I calculated the size of the rooms was 8 feet by 14.—F. H. N.]

139. *Thomas Williams.*—I farm 150 acres; one-third grass. I am also a maltster, and have a brick-yard. I never employ females. I employ two boys generally all the year round; they are about 13 years old; I pay them 4*s.* a week. I occasionally employ boys about the age of 10 for bird-keeping, stone-picking, &c.; I pay them 2*s.* a week. I could do without boys up to the age of 10 without serious inconvenience. I can always find something for my boys to do, unless the weather is very bad; but I could spare them a little in winter until they are 12 years old. When they go out to plough they come in at 2 p.m., and do simply nothing after that; I could spare them to go to school if it was wanted. I think if they have nothing to do they ought to be made to go to school; I think they would be more useful as labourers if they were a little educated.

LITTLE HOUGHTON.

Population - - 578.

140. *W. Smyth, Esq.*, J.P., Little Houghton.—I farm 700 acres of my own land; one-third grass. I employ no women or girls as a rule.

The cottages are sufficient in number; they belong to me; many are old-fashioned, but they are good; the rents range from 1*s.* to 2*s.*; very few at the latter price. I take care to have a certain number of cottages with two, three, and four rooms. I have a few small cottages let as low as 9*d.* a week. All the cottages in the parish are in the village, except a few which I have built on my own land at a distance. Sometimes wives will not let their husbands go away from the village, because it is melancholy work living away from the village. I know of no changes in the law which I think it desirable to make as to the building of cottages, it is so palpably every one's interest to build cottages on his own land. It is rather difficult to get the labourers to live away from the village, but it gives the employer a moral control over them to have them near him. I make no allowance in point of time for the distance my men have to come to work. Most of my cottages have gardens attached to them, and allotments besides. I think allotments desirable; about 20 poles is sufficient for a herb garden, a man can dig that. I gave one man 40 poles, and saw a plough and pony at work on it. The employer loses nothing if the man has only 20 poles.

Corn is not grown on the allotments here. It would be impossible to send the boys engaged at work to school here; they are so scattered that you could not collect them until the day's work is over. There is no great want of education about there; there has been a great improvement in that respect, but there is a want of a moral tone among the young men. I think it would be a good thing to restrain them from going to work until 10 or 11 years of age; I don't think you could compel boys to go to an evening school after they once begin to work, you must induce them to go. An examination before going to work would be of no use, as some boys are quite incapable of reading and writing. There are usually benefit, clothing, and coal clubs in all the villages about here. I think as much is done here without legislation as could be done with it.

COURTEEN HALL.

Population - - 162.

141. *William Thomas Haskins*, schoolmaster of Courteen Hall Grammar School.—Been there 12 years. There are 41 boys at school, two-fifths are sons of labourers. I do not take them until they can read an easy book (monosyllables). I have had sons of labourers who can do that at 6, and some not till they are 9 or 10. They pay 2*s.* a quarter; that provides all materials; the instruction is really free. I have had them from 15 parishes, but since certificated masters have been appointed in some of the parishes, many have ceased to come from those parishes. They attend regularly up to 9; then they attend about six to nine months in the year up to the age of 12. At 12 they cease to attend altogether. When they leave me they can write a letter, read the newspapers, know enough of figures to understand a bill. They come long distances to my school, from two to four miles. One boy I have now who came from an infant school; he is 9, and has been with me going on for six months. After giving him a lesson on the map of England, I asked him what county he lived in; he said "February;" being told he was wrong, he said " 1868." The boys are attracted away from my school to go to work. The boys who go to work are very healthy; it is a wonder we get them to school at all, they are never so happy as when they are in the fields.

BRAFIELD.

Population - - 494.

142. *Rev. W. L. Collins*, of Brafield.—I have been five years in this parish and 15 in the neighbourhood. Almost all the boys in the parish are either at school or at work, all except three or four. The boys leave at about the age of 9 years to go to work; at the present time there are only two or three in the school out of a total of 45 boys, who are over 9 years of age. Now and then, when a boy gets a job at pig keeping or bird minding, he comes back to school again when it is over; but as a general rule, when they have once left school they do not come back. When they leave finally, they can usually read fairly and write imperfectly. I should not wish them to stay at school after they are 11; *i.e.*, I do not think it would be practicable with reference to the fact that they are the children of poor parents; besides which, I think we could teach them all they would require by the time they arrived at that age, if their attendance was regular. It might be sufficient if they devoted their time exclusively up to the age of 10, and a portion of their time up to the age of 11 to education. The only plan which I think practicable for the education of boys after they go to work is by night schools. I don't like the notion of cumpulsory education, but I think you might prevent them from being employed up to a certain age. I don't think it necessary. I think things will right themselves with a little management. I think it would be very desirable and very practicable to enact that no boy should be employed in the fields until he is 9 (I should prefer 10), unless he has obtained a certificate of proficiency before that age. I should like to have a night school every night in the week, three times for boys between the ages of 10 and 15, and three times for lads over 15. I used to have a night school for four months in the year for two hours a night; I had it last year, but the attendance became irregular and I gave it up. We have only a schoolmistress, and she cannot teach big boys. At one time 30 boys used to attend the night school (the population of the parish is 500); but they became irregular, and I said I would not have a school unless 12 attended, and I had to give it up, but if I remain here I shall resume it next year.

The cottages here are very bad as regards accommodation, although they are not deficient in number, nor inconveniently situated as regards the land to be cultivated; few have more than two bed-rooms; some of them belong to small proprietors. The people are healthy. I am not aware that the crowded state of the cottages leads to actual immorality, although it produces an immoral tone; the rent varies from 50*s.* to 80*s.* a year. There are some cottages which belong to small proprietors, and have been built as a speculation; they are not worse than others, but are rented higher, and usually have no garden. I do not think that the present state of cottages is due to any defect in the law; perhaps a law might be introduced enacting that no new cottage should be built without two bed-rooms. The accommodation here is growing worse, because the population is becoming more numerous. I do not think that the Union Rating Act has had any effect, and no advantage has been taken of the Labouring Classes Dwelling-house Act. I do not think that the poor are at all indifferent to education; the only reason they do not send their sons to school more regularly is, that they want the earnings of the children, and while they are at school they do not see the advantage of regular attendance. I highly approve of allotments; about half of the cottagers here have them—more than half; they answer extremely well. We make it rather a a favour to the cottagers to let them to them; they usually have from 40 to 10 poles, and they pay rent at the rate of 3*l.* per acre; they may grow what they like, and many of them grow corn, which they usually sell. I think it best to let the men manage their allotments as they like, although I used to think differently. I think they can manage 25 poles without depriving their employer of the best of their labour; their boys and their wives work for them. There are many shoemakers here who have allotments, and the work is very good for them.

143. Extract from a letter written by the Rev. W. L. Collins of Brafield.

"I have tried to make out for you as you wished the average age at which children leave school in the agricultural villages in this county. Judging from my experience as diocesan inspector, I should say that the great majority of the children leave the school before they reach the highest class. I have taken the returns of 85 village schools which are under inspection in this county, and I find that the average age in the second class, taking the first as the highest, is 8 years and 9 months. This would coincide with my own impression as to the age at which boys commonly leave for field labour. The girls might fairly be put a year higher. They, in the majority of cases do reach the highest class in the school."

144. *William Bailey*, age 10. I live in the village and work for Mr. ——. I have been at work two years; I drive the plough and clean the stable; I go to work at 6.30 and get home at 6. I have four brothers and three sisters, all at home except me; Father works with the engine. I earn 3*s.* a week. I go to school on a Sunday; I can't read much, and never learnt to write. Only one of my brothers goes to school; he is older than me. We sleep three in each room at home. I like going to work better than to school; father is not much of a scholar.

[I was told that this was the most "unlicked cub" in the parish; none of his family can read. The case was quite an exceptional one.—F. H. N.]

Northamptonshire.

Mr. Norman.

e.

SPRATTON.

Population - - 1,086.

145. *Rev. J. L. Roberts*, vicar of Spratton.—There is no trace of private gangs in this district. I never heard of such a thing about here, and it could not exist in the neighbourhood without my knowledge. As a general rule women and girls are not employed in agricultural labour. Agricultural labour interferes with boys' education by making them leave school early. I think the education is insufficient in quality when they leave, and apt to be forgotten. They forget how to read and write when they go to work, but they pick up practical knowledge and shrewdness. There is no more intelligent class than the better class of agricultural labourers. I think the deficiences I have mentioned might be supplied by the attendance at day school of children under 10 years of age during the winter months, and by attendance at night school after that age. I object altogether to compulsion; I think the remedy will come of itself. People gradually begin to see the necessity of education. Some time ago people emigrated from this place, and then arose the necessity of letter writing; now every boy wants to write. So stores have been established, which necessitate calculation, and they wish to learn arithmetic. Resistance would follow compulsion. The labourers too are becoming more ambitious than they were, and they know they cannot get on without education. The school here was formerly inefficiently conducted, it was then neglected by the poor; it is now better managed and is proportionately valued. A night school is the only mode of educating boys after they go to work; the early education must be supplemented by night schools, and the Government should make provisions which would give support to them. It should be so arranged that the certificated teacher can conduct the night school efficiently without a feeling of oppression; probably this would involve an alteration of the work to be done in the day school, and greater liberality in the grants. There are a few children in the village who don't go either to school or to work; that is due to the immoral character of the parents. The Government grant should be given to boys who attend the night school over 10 years of age, and not over 12. All the boys go to work at 10. Cottages in number are more than sufficient; that is because the people have gone to the manufacturing districts, on account of the long distances they had to go from here to get work. In accommodation the cottages were formerly infamous, but are gradually improving because the worst are uninhabited. The cottages are well situated as regards the work to be done in this parish, but this is an open village and supplies labour to the neighbouring parishes where there is a scarcity of cottages, and some of the labourers have long distances to walk to their work in those parishes, from $2\frac{1}{2}$ to 5 miles. Many cottages are built upon the waste, and the cottagers have enclosed portions of the land. These cottages are beyond all control. Those of them which belong to respectable men are good, the others bad. Rent is from 1*s.* to 2*s.* a week without gardens. Most of the agricultural labourers have allotments. I think I approve of allotments, but gardens are preferable; each allotment should not be more than a quarter of an acre, and there should be no restriction as to cultivation. There is a store in the village; it works well and respectably. I never ask the people to support it, they support it of themselves. The villages about here are large and the people independent. The agricultural labour is not physically injurious within reasonable limits as to distance; but I have known men who were insufficiently fed break down under it, or diseases developed.

146. Extract from Return sent in by the Rev. J. L. Roberts.

The third mode (Print Works) is the only practicable mode of enforcing school attendance; but even in this case compulsory action is undesirable. The school attendance is importantly affected by the pecuniary resources of the parents. The question resolves itself really into the provision of the school on the one hand and the rate of wages on the other. The effect of cottage accommodation upon morality is direct and extreme; upon education indirect and powerful through morality. Controlling powers similar to those in corporate towns are needed grievously in villages. The present sanitary Acts are tolerably effectual as to external arrangements, but wholly fail as to the interior. There ought to be some limit as to the tenement which a speculator or pauper proprietors can offer for human habitation; poor people literally convert pigsties and out-hovels into cottages and let them to each other to the great detriment of their neighbours' property and persons. The course of events points clearly to a rise in agricultural wages, and cottage accommodation will form a proper item in these wages, enhancing, of course, the cost of production. The thing will work itself out.

147. Extract from a letter written by the Rev. J. L. Roberts in explanation of his oral evidence.

1. My opinion is founded primarily upon my own experience, and this experience is not derived from villages purely agricultural.

2. But in my own parish, and others similarly situated, the development has been gradual and is progressive, and I am of opinion that, owing to the vastly increasing habits of communication amongst all classes of the poor, the wave will spread eventually over the whole country, reaching the most neglected districts at the latest period.

3. The external circumstances of this parish have not greatly altered in 20 years. The character of the people has altered most perceptibly in 10, and notably in this respect.

4. There is indifference in a certain class of parents arising, as I stated in conversation, from demoralization and utter absence of affection beyond the mere στοργή which really subsides after the infancy of the child; with reference to this indifference I would say, (1) compulsion will raise it into hostility; (2) it will baffle all legislative measures; (3) the compulsory attendance of such unfed, unclothed, uncared for children at school will produce very small and valueless results in their case; and (4) will tend to lower appreciably the results of voluntary attendance in others.

5. I would call your attention to a difficulty in management arising out of exclusion from labour at a proper age on account of non-attendance. Practically it will remove from the managers the power of expulsion. There would be in this place, and in others, instances of positive uncleanliness of person and utter indecency of conduct which ought I think, in justice to the children, to bar attendance; I have felt the difficulty very seriously in the case of Sunday schools.

6. I would draw a clear distinction between restraint from labour on the ground of age (which I would look upon as protective), and restraint of children capable of labour on the ground of non-attendance at school, which I should look upon as penal.

7. I think that if Government are to interfere by direct legislation with education, they must control three elements in social life simultaneously to produce any result of real value, viz., education, cottage accommodation, and beer shops, &c.; and that the single treatment of every one of these will be nugatory; and of the three I believe beer shops and the public house question to be the master one controlling the other two.

8. The other two I believe to resolve themselves really and ultimately into that of wages; and that the wages question will settle itself, especially as it shall become more customary to pay different labourers at varying rates, and so to encourage superiority of work, which implies superiority of intelligence.

The real reason for indifference to education among the agricultural poor is to be found, first, in their

poverty, secondly, in their want (to use a somewhat cant expression) of a "career;" the moment that they see the world open to them, that moment they will appreciate the education which enables them to avail themselves of the opening, and this will be the case as soon as the intelligent farmer sees the superior value of an intelligent labourer, and the intelligent (*i.e.* the educated) labourer commands a better rate of wages.

The effect of direct Government interference is to reduce everything to a uniform level, to raise perhaps the lower line but proportionately at least to depress the higher, and to discourage all higher culture and the development of individual talent. The effect of the Revised Code eminently illustrates this. I apprehend a great deterioration in the tone and interest of school education under direct Government management or direct compulsory system.

148. *J. Griffiths*, schoolmaster, Spratton. — I have been here two years. The boys may enter the school after the age of 6. Some never attend regularly, *i.e.*, they only attend during three of the 12 months of the year; that is owing to the demand for field work. Those who attend regularly attend until they are 12 years old. When they leave, they can read so as to amuse themselves; they can write fairly, and know enough arithmetic to understand a bill. About one-third of the whole number of boys who come here attend regularly; but they are not of the agricultural classes. The attendance had increased last year 25 per cent. as compared with previous years. I think the increase is likely to continue at the same rate, because the school is better managed than it was. We have not enough money to keep up the night school well. I have to be in the day school five hours and a half five days a week; and in the night school two hours two or three days a week. I could not even pay the expenses of the night school from the money I get from the night school, aided by the grant. Every boy who gets anything gets on an average, 2*s.* That would not pay the ordinary expense of keeping up the school, *i.e.*, lights, &c.

149. *Mrs. Balderson.* — I have five children:—1, boy (age 11); 2, a girl (age 10); 3, a boy (age 6); and two other girls. My husband works for —— [within one mile]. My husband has been at work for three weeks, but he was out of work for five or six weeks before that. My eldest boy goes to work; he earns 2s. 6*d.* a week. I wish my children to go to school. My husband can read and write. There is more schooling now than there used to be. My second boy, who is 6, goes to school.

150. *Richard White*, age 10.—I used to go to work for Mr. ——, who lives close by. I used to work from 7 a.m. to 7 p.m. I had one hour for dinner, which I took with me; half an hour for lunch, and half an hour at 4 p.m. I earned 2*s.* a week. I was not very tired in the evening when I came home. I first went to work two years ago. My father is a postman at Northampton.

[Read well; an exceptional case; few so good.—F. H. N.]

151. *Henry Martin*, 8.—I go out to frighten birds for Mr. ——. I go out at 7, and return home at 7. My father is a labourer. I have four brothers and two sisters at home; we all sleep in one room with father and mother. I went to work because Mr. —— came to fetch me. I like coming to school better than going to work. [Read fairly.]

RAVENSTHORPE.

Population - - 701.

152. *Mr. Edward Lantsbery.*—I live at Ravensthorpe, and farm 400 acres (half pasture) of my own land. I don't employ women; they are very seldom employed about here, except in spudding thistles, turning hay, taking in harvest, shocking barley, &c. I don't think anybody employs above two or three of them, and they are the lowest of the low. My regular staff is eight men and five or six boys (aged from 14 to 18.) Besides them I employ little boys to keep off birds. I pay the men 12*s.*, and boys 4*s.* to 8*s.*, besides beer every day (that is not usually allowed about here). All my labourers live close to my land. I have no difficulty in getting boys; they are generally my labourers' boys. I never employ a boy under 10 years old. Their chief work is driving the team. In December and January they attend to my beasts, and one of them is always with the shepherd. They are always healthy. Ploughing lasts until the middle of July, and then they hoe turnips. I think all my boys have been to school. I think everybody ought to be able to read and write. I find all my boys trustworthy. When they go to plough they return home at three; then they have their dinner, clean the horses, and do odd jobs. It would be inconvenient to me to let them go away [illegible] in the afternoon. I should prefer my men living in the village, if sufficiently accessible from their work. In my parish the cottages are sufficient in number, and good. The parish is special in that respect. I have seven or eight cottages let with gardens and allotments; the rent is usually 1*s.* a week. We have allotments in this parish. The land was left as a charity to be so used. Some men have as much as an acre. If they have that quantity, they will go to work for themselves two or three weeks together. Allotments are a great help to them. I don't object to their growing corn. I think half an acre is ample. I do not think it would be a hardship to say that nobody should go to work unless he could read and write; but I object to coercion.

Northamptonshire.

Mr. Norman.

6.

153. *Rev. W. A. Strong*, Ravensthorpe.—Almost every family in this parish has an allotment; they are one or two roods each; there are in the parish 47 or 48 acres let under 2*l.* an acre; we make no stipulation as to cultivation; we make them cultivate with spade, but they don't dig deep, and they grow wheat and vegetables; they seldom employ men to assist them, and seldom send their wives and children to work; they all wish to have as much land as we will let to them. The education here is decidedly defective; I think a compulsory scheme would be desirable if practicable, and that the expense should be met by a rate charged on all ratepayers. All the children, boys and girls, go to work in the fields from 7 upwards; some of them come to school at certain times of the year after that age, and go to work at other times. I have reason to believe that the field labour is very injurious to the health; a girl died here lately in consequence of a cold caught while bird scaring. There are no resident gentlemen here, but there are 16 farmers. I have been here three years and have never received any pecuniary assistance from the farmers for the school.

154. Extract from the Return sent in by the Rev. William A. Strong, of Ravensthorpe.

1. I believe that the allotment system has the effect of preventing wages from rising, for the land which the allotees work is let at a low rent, and this with the produce is evidently supposed to make up for low wages.

2. I have known farmers say that a man cannot throw his best strength into his master's work, for he naturally keeps himself more or less for the evening hours of the work, or perhaps before going to his regular employment he has had an hour on his allotment.

THORNBY.

Population - - 252.

155. *I. S. Lovell, Esq.*—I farm 240 acres (160 being grass). It is chiefly my own property. I employ one woman pretty constantly; she is an old friend and comes for her own sake, not for mine. I employ a few women and girls (aged about 10) in haymaking, and sometimes one or two more in spudding thistles. The women are not generally employed about here; they are employed a little in haymaking, and they glean in harvest for themselves. The boy I employ

Northamptonshire.

Mr. Norman.

e.

is almost always with the team. There are no gangs, either public or private. I think that in this neighbourhood the education of the labourers is sufficient; it is gradually improving. The children are better educated than their fathers were, and they know enough for all the duties they will have to perform. I don't think they would do the work better for me as an employer, if they knew more. There is a night school here; there was a difficulty in obtaining a regular attendance, but that difficulty has been met by refusing to receive the scholars at all unless they come regularly. There is neither club nor store here; the parish is too small to maintain them, but most of our men belong to clubs in the adjoining parishes. The population is purely agricultural. I object to women going to field work; but it is better than lace work, it is more healthy, and when they return home in the evening, they remain at home. We are well off for cottages, none of my men come more than one mile; most of the cottages have gardens. There are 24 acres of land here left in the hands of trustees to be allotted at their discretion to the most deserving of the poor, at the rate of 2*s.* 6*d.* an acre; that works well. Each family (married couple) has half an acre, and six of the most deserving families have a portion of the land together, on which they can keep six cows. They can manage half an acre a piece if conveniently situated, without seriously interfering with their ordinary labour. Some of the farmers do object to their having that amount. They have to leave their work (for their employers) occasionally, chiefly in spring and autumn, and they ask leave to be absent. There are a few young and idle men about, who are employed on the allotments. We make no stipulation as to what they may grow, most of them grow corn. I think it would be a good thing if boys did not work until they were 10; but I object to State interference.

COTON (Hamlet of Ravensthorpe).

156. *Mr. W. Biggs*, Coton, near Guildsborough.—I farm about 950 acres. I have 400 here (mixed), 330 at Stanford Hall (all grass), and 200 at Cold Ashby. I never employ women or boys if I can avoid it; I never do it except at Stanford for a few days among the hay. I would not do it if I could get men. Women's labour is very expensive. I employ six or seven boys; I cannot do without them. I seldom employ a boy under 11 or 12 years of age; they cannot drive a team younger than that, and most of them are older. My ploughs are always double, and a boy of 14 or 15 can direct a plough with two horses. Ploughing and harrowing occupies the boys in spring, summer, and autumn, and they clean turnips in winter. There is rather a scarcity of boys here, but I don't have to hunt about after them; they come to me if they want work. I employ little boys of 7 or 8 to frighten birds, but for no other job; they are obliged to go out on Sundays. That occupies them from about 20th February to first week in May, for about three weeks before harvest, and also for three weeks after the wheat is sown in October. I have a difficulty in getting boys for that; I sometimes want seven or eight. If we had no boys we might as well not sow the corn, and I am obliged to send about the villages to get the boys. I never employ little boys in any other ways. I employ one man always in winter with two or three boys cleaning and cutting turnips in the field with the flock, but I engage the boys. Most of my men go about one mile to their work. The cottages are some good and some bad; the rent without a garden is 1*s.*, and with a garden 60*s.* or 70*s.* There are no cottages at Stanford. In every village empty cottages are to be found now; they are generally the worst. The supply of labour is diminishing; the worst is that only the old and useless men remain. I don't want boys under 10 except at the times I have mentioned. At Ashby some of the best educated men were the worst for us; but they have a better chance of getting on if they are educated. I think it right to make boys learn, but I don't think there are enough schools about the country now to compel them to go; that is the only objection I see to it. Allotments are very good for gardens, but growing corn is a bad system; a man cannot cultivate corn with spade labour so as to get a profit. At Ravensthorpe, where there are above 50 acres of allotments, the labourers sometimes want to leave their work for a fortnight together to work for themselves. I think an allotment should be one rood in extent, and confined to vegetables. Growing corn encourages dishonesty, and even if honestly worked it is no advantage, because no profit can be made from small farming like that. They don't work for us as they do for themselves; they go home as soon and as fast as they can to work on their allotments.

157. *R. Ward*, age 9.—I frightened crows for Mr. Biggs (56) last Michaelmas, and frightened one spring before. I have been at work regularly since last Michaelmas. I went to school at Guildsborough before I came to work. My father is waggoner for Mr. Biggs. I have two brothers and one sister, all younger than me. I like frightening crows better than regular work, because it is not so hard. I had as soon go to school as to work. I live at Coton [close by]. I go to the Sunday school at Guildsborough. [Read a little.—F. H. N.]

HOLDENBY.

Population - - 184.

158. *W. Painter*, of Holdenby.—I farm 95 acres arable, and nearly 300 pasture. I employ women and girls in weeding corn in May and June, and in hay time; they sometimes spud thistles or cock barley when people are busy, but I do not employ them at other times of the year, and never under 17 or 18 years of age. That sort of work is occasionally valuable to me at a pinch. I generally employ four boys from 10 to 16, chiefly with the team. There are no private gangs about here. I have no employment for boys until they are 10, except to frighten crows and keep pigs, &c. This is a close parish, and there are no cottages in it. There is a prospect of having cottages built since the change in the law. My men come from Spratton or East Hatton [2 miles each]. My men have to be here punctually, notwithstanding the distance they come. I would not pay my landlord a per-centage on the outlay necessary for building cottages. There is only a dame's school here, but the boys are as well educated as they can be under the circumstances. They leave work at 5.30 this time of the year. I don't think they would be more useful to me if they knew more.

159. *George Page*, age 10.—I live at Holdenby. My father is a labourer. I have only one sister. I live with grandfather. I go to night school four months in the year; I went to day school before I came to work. I went one year to frighten birds for Mr. ——; the crop was beans. I used to get cold and wet, but not tired, frightening birds. [Read fairly. —F. H. N.]

LAMPORT.

Population - - 350.

160. Extract from Return sent in by the Rev. R. Isham, of Lamport.

There is not a person above 8 years old who cannot read and write in either Lamport or Hanging Houghton.

161. *Charles Howard.*—I live at Hanging Houghton. I am 13 years old. I work for Sir C. Isham. I have been at work off and on since I was 6. I have been to night school, and occasionally to day school during that time. I could read and write a little when I came here a year ago, but have learnt nearly all since.

[Read well.—F. H. N.]

HASELBEECH.

Population - - 180.

162. *Mrs. Griffin*, labourer's wife.—I think no boy should go to work under 10. I have a son, aged 8,

who scares for Mr. Pell; he earns 3*s.* a week, and has been scaring seven weeks now; he was so employed six weeks last autumn, and about seven weeks last July and August with the peas. He helps in harvest with me, and earns about 6*s.* at it altogether. My family (four in number) obtained 17 stone of flour by gleaning last year. My son of 8 is a very sharp boy, and lives close to his work, and he may earn 80*s.* a year. [The cottage was in the centre of the farm where the boy worked.—F. H. N.] Most boys under 10 would never be able to earn more than 40*s.* a year. It would cost me more to keep him than it does if he had his meals in the field, but living near his work he can come home and get a warm comfortable meal, so that there is no waste. I keep beer in the house. We have a nine gallon cask every six weeks, it costs 13*d.* a gallon; and I find it answer better than spending all that money in meat. My eldest son pays me 8*s.* a week for his board and washing. My two biggest boys go to night school, and I have two girls at the day school, and my youngest son goes to the day school when he is not at work; and when he is at work we give him a lesson to do when he comes home in the evening. If he earned only 40*s.* a year, I would send him to school regularly, and sacrifice his wages. If he were to get a good education he might get on the railway, or get a foreman's place, or some work other than that of a farm labourer. I think it is the duty of every man to educate his children, both for this world and the next. We hope both our boys will get something better than mere labourer's work soon. We had an offer from a blacksmith yesterday, to take my boy Dan (age 16) as apprentice without any premium, but we refused it because we did not like the man who made the offer, and Dan was not anxious for it. I think no boy ought to go to work until he is 10 years old, or can read and write. I think it costs 20*s.* a year more to keep a boy when he goes to work than when he goes to school.

CLIPSTON.

Population - - 877.

163. *Mr. J. R. Wartnaby.*—I farm 460 acres (120 arable), chiefly my own land. I employ females in hay time only. I employ about 10 boys; about three go with the teams; the other seven scare birds, clean turnips, pick stones and twitch, &c.; two or three of them together do that sort of work. I had rather not have any boy to work for me under 9 years of age, and they are only useful at that age to scare. My teams usually come in to be fed at dinner time, and then go out again and remain out until 4 o'clock. That is the usual plan in the Midland counties. There are plenty of men and boys here; we supply a few to other parishes, such as Kelmarsh and Oxenden [two miles each]. We have an old grammar school here, where a free education is given to the boys belonging to six surrounding parishes; there are only 10 boys belonging to those parishes now at the school. [I was subsequently told that two of these 10 boys were the sons of the schoolmaster.—F. H. N.] Boys belonging to other parishes are taken in, but have to pay for their education. The master receives 100*l.* a year and a house; he must be a clergyman, and is bound to teach reading, grammar, and Latin. I attribute the small attendance entirely to the indifference of the parents. Dissenters may and do attend, and most of the labourers here are dissenters. I am so amazed at this state of things that I think some measure is necessary. I should not object to the children being compelled to go to school up to the age of 10, except during the time when they are wanted for scaring. We are well off for cottages; the usual rent is about 1*s.* There are about 80 acres of allotments in this parish; that is too much by half. [I ascertained that the amount was 82 acres.—F. H. N.] I think they tempt the men to rob us of our time night and morning, and perhaps of other things. They come to work for us when they are tired, and don't give us their full strength. The women and children help to work on the allotments. The wages are usually 12*s.*; no allowances except in harvest. I can recollect wages at 9*s.* about 20 years ago; and there were very few allotments at that time. When the enclosure took place here, 10 acres of land were set apart for the church, and 13 for the poor. That land is let in allotments of one rood each. The churchwardens are bound to spend the rent coming from the poor land for the benefit of the poor, but need not let the land in allotments. It is often extremely inconvenient to me to allow my men to go and work for themselves; but I cannot refuse. I don't know how many men I can depend upon for a particular day. I do not object to allotments, if near home, and not exceeding one rood for a family. I would not restrict them as to the mode of cultivation. This village is almost purely agricultural.

164. *Mr. Smeaton,* Clipston.—I am a dissenter; we maintain an open school here, about 40 or 50 children attend throughout the year. They are principally the children of dissenters, but other children attend as well. The boys stay at school up to 7 or 8, and the girls up to about 12. There are only the grammar school and an infant school besides ours. I don't think dissenters object to send their children to the grammar school. I am most decidedly opposed to compulsory education, because I think that no measure would be introduced which did not make religious instruction, which dissenters object to, compulsory. I should approve of restricting the children from going to work until they are a certain age. I don't think you would find any village about here where the people are better off than they are here; there is a store which is well supported, and which injures my custom as a grocer.

165. *Rev. E. Thompson.*—I have about 45 acres of land let in allotments. I have one allotment over three acres, three between two and three acres, 18 between one and two acres, six between half and one acre; the remainder under half an acre.

The allotments are in three pieces of land; one piece is let at 3*l.* an acre; that is under half a mile from the village. Another piece is let at 2*l.* an acre; that is 1¼ miles from the village; the third piece is let at 1*l.* 15*s.* an acre; that is 1½ miles from the village. The labourers like the allotments very much; when one is vacant there are many applications for it. Many of my allotments are cultivated by hired labour.

166. Extract from the Return, sent in by the Rev. Edmund Thompson, of Clipston.

About March 20th, in fine weather I found 15 men without any work. This would be an intolerable state of things if there were no allotments.

The allotment system certainly has the effect of raising wages; the farmers think too much so in harvest time. I know it keeps many of our labouring men from idleness and poverty, and I think fosters a desirable spirit of independence. It works well here.

GUISBOROUGH.

Population - - 730.

167. Extract from Return sent in by Mr. T. E. Lovell.

Any restriction would be useless; the mutual interests of employer and employed are the best for both parties. I think young boys are very much pleased when they can begin to work on the farms.

The competition for labour by farmers prevents any young persons being overworked, but I would make it illegal to have boys at work under 10 years of age.

After boys begin to work they seldom go to school except on Sundays, nor do I see how their parents or guardians can afford to maintain them without work after 10 years old.

In many or most villages the cottage accommodation is very bad, it is bad for the moral as it is for the

Northamptonshire.

Mr. Norman.

e.

health. There is a general improvement in the last 20 years.

Close parishes are those in which the cottages belong to the owners of the land; these are the best for this reason, the worst labourers are sent to live in open parishes (or those belonging to small proprietors), in these the cottage accommodation is very bad indeed; labourers ought to live as near to their work as possible. Time, interest, and the union rating will remedy that evil.

I occupy land in five parishes; in four of these every possible exertion is made for the instruction of children, in the other I am sorry to say the children are sadly neglected.

CHAPEL BROMPTON.

168. Extract from Return sent in by Mr. J. N. Beasley, of Chapel Brampton.

In some parishes near this I have observed that where women are constantly employed in field labour the cottages are invariably dirty, the children run half wild, and the money which they earn seems to do no good; in fact they are generally the poorest families in the place. No farmer will ever employ a child spending any portion of his time at school out of the usual 12 hours.

BRINGTON.

Population - - 806.

169. *James Bramley, Thomas Haynes, Bernard Dunkley,* and *Richard Judge.*—[These were four labourers whom I examined at Althorp; I recorded no answer which was not assented to by all.—F. H. N.] A labourer can manage a rood of land without interfering with his ordinary work, but he cannot manage more. We all have allotments. A man and his wife would consume what comes from one rood of land, but if they have no family they would grow a little more corn than if they had a family. Twenty or thirty years ago wages were 9*s.*, but then the women and children worked and earned money, now they earn nothing, but it is much better for them to stay at home; besides which, formerly, they had parish allowances. There were no allotments then, or very few. As a general rule the women and children do not work on the allotments, and it is best they should not. The net profits of a rood of land would be about 50*s.*, but that depends so much on the season and on the land. If the allotment is conveniently situated a man can cultivate a rood without losing more than two days in the year. We should like to have an acre, and would be glad to lose time for the purpose of cultivating it, besides which there are always men out of work to help. Some men won't cultivate half a rood, they don't care about it and don't deserve to have it. I don't think there is any desire among labourers to hold land except for the sake of what they got from it. They do not think they rise in position from holding land. If we had a little more land our boys might go to school usually, and to work at their leisure time; at present if they go out to work they cannot go to school at all; work must occupy them all day. Wages here at 12*s.* No labourer can afford to pay more than 1*s.* a week for rent. A good cottage is essential for the health and comfort of a man and his family. Boys about here usually go to work at the age of 9, and as a general rule they don't go to school after they have once been to work, although they may be out of work a good many weeks in every year. They get at most 2*s.* a week when they first go out. They may want a little more food when they are at work than at school, but not much, and it saves a great deal in clothes. A boy may perhaps be at work six months in the year before he is 10. We don't think that a boy who is regularly at work could attend a day school without interfering with the labour due to his master. As a rule the parents do like to have their children educated, but some don't care at all about it. We think it would be best to compel boys to go to school until they are 10; some parents would never send their children without compulsion.

WATFORD.

Population - - 450.

170. Extracts from Return sent in by Lord Henley.

There are probably about 30 boys employed in agriculture in this parish.

There are very few women so employed; not more than six regularly.

The boys are between the ages of 10 and 14. There are no young girls employed in agricultural labour.

There are so few females employed in this neighbourhood that it is not possible to form an opinion as to the effects of such employment on their morals; the employment of females with machines, which is occasionally seen, may be considered objectionable.

Boys should not be employed under 10 years of age.

I should consider it rather hard upon the agricultural labourers (none of whom have any voice in making the laws or choosing representatives) to be forced to send their children (especially those who are earning something) to school. It must be a difficult matter for a labourer to maintain a family upon the wages which are given here (about 12*s.* weekly), and it would be hard to interfere with the weekly receipts of the family.

The school is in the village, and the children are not generally kept away by distance. There are some outlying cottages in the parish, at a distance of a mile or so from the school, the attendance of the children belonging to which is sometimes affected by the weather.

There are about 56 cottages for about 3,400 acres of land—that is insufficient; we have to hire labourers for the farm and from neighbouring parishes.

A considerable number of cottages here belong to myself; many of them are newly built, and are, I trust, healthy and commodious. The rent of the best is 3*l.* a year; I have, however, some very bad ones, which I hope to be able to pull down and replace.

There are some belonging to small proprietors which are let I believe at 4*l.* or 5*l.* yearly. There are a few small freeholds. I do not know any case in which tradesmen are the owners who oblige tenants to deal with them.

I think it very difficult, almost impossible, to build good cottages for labourers which shall pay anything but a very low interest on the money expended; the simplest cottage can hardly be built under 100*l.*, and the rent of this, if taken at 3*l.*, would produce but a very low interest upon the capital outlay. But if a good sized piece of ground, say from a quarter to half an acre, could be let with the cottage and immediately adjoining it, I believe that the labourer could afford to pay a very much higher rent, because his wife and elder children could assist in cultivating it, which they have difficulty in doing with allotments a mile from their home. If a labourer were to pay 7*l.* a year for a cottage with a quarter of an acre of land, worth ordinarily 10*s.* a year, this would almost make the original outlay upon the cottage remunerative.

The young persons are unable to read or write tolerably.

The older children are the principal attendants at the night school, some adults attend, the younger children do not attend.

There are no special difficulties in maintaining the night school; of course it would be satisfactory if the attendance were larger, but as this entirely voluntary on the part of the pupils, it is a difficulty which hardly admits of a remedy.

FLOORE.

Population - - 1,138.

170 (*b*). *The Rev. J. P. Johnson,* Floore.—I think that the state of education here is defective, but I don't think that there is any such a substantial evil existing as to require an Act of Parliament to remedy it. The

school here has been endowed for 20 boys who pay nothing; the rest pay 3*d.*, or if more than one of a family attend the others pay 2*d.* and 1*d.* each. If you had compulsion you must admit all the worst children, and it would be impossible to maintain discipline if you could not turn out the black sheep. There are particular families who invariably go wrong. There is no school or labourers' cottages at Brockhall, which is 2½ miles from here. The population of this parish supplies Brockhall and in part other parishes with labour. Some of our men may go two or three miles to work. The rent of the cottages here is about three or four guineas a year without gardens; about 19 cottages have been built upon the waste, they pay nothing; and the cottages are always kept in one family. I have examined the register of our school, and I find that the 20 children who are educated free attend only half as many times as 20 other children chosen at random who pay. Almost all the labourers who wish for allotments have them. They are some 1 mile and some 1½ miles from the cottages. The men grumble at the distance, but would rather have the land there than not have it at all. They are let at the ordinary rent. I think the allotments take the children away from school a great deal, though the main work is done by the men. The people who live in the bad cottages on the waste are not as a rule worse than other people in the parish, but as a rule the worst of them live in the worst cottages.

71. *Mrs. Rogers.*—[This witness, the wife of a shepherd, was living in one of the best cottages on the waste mentioned by Mr. Johnson in his evidence.—F. H. N.]—My husband built this house 14 years ago; it cost 70*l.* We had to borrow part of the money, but it is all paid off now. The repairs last year cost 3*l.*, but they don't often come to that. Our rates are 4*s.* 6*d.* a year. We have two bedrooms, that is enough for us with three children. My husband is a shepherd; he earns nearly 1*l.* a week. My eldest son is a clerk in an office at Liverpool; he was educated partly here and partly at Weedon. My second son is aged 16, and he is at work with my husband. My husband has an allotment of half an acre; it is one mile from here; he could not manage it if it were not on the road home from his work. Mr. ——, his master, ploughs it for him. We consume everything we grow, and pay 2*l.* a year for the half acre. My husband has always earned as much as he does now, or we could not have built this house. He is no scholar himself, but he tried to give his son a good education.

LONG BUCKBY.

Population - - 2,500.

172. *Rev. C. A. Yate.*—I have been here 12 years; the population of the parish is 2,500; they are principally shoemakers. Girls don't work in the fields at all, and women very rarely. Most of the boys stay at school up to 11 years of age. [The schoolmaster placed the age at 10, saying it was chiefly a town population.—F. H. N.] There is a National school for boys and another for girls, besides several dames' and private schools; the latter are chiefly for infants, but there are one or two for children who might go to the National school. Most of the boys who leave can read and write fairly, and do a little arithmetic. I think that the education has been defective up to the last three or four months, owing to our having a superannuated master, but he no longer has the management of the school, and at present I don't think the education is defective. Since the present master has been here the attendance has increased 50 per cent. I have never been able to put my school under inspection; the master and mistress are not certificated; and there is an endowment of 20*l.* a year for the master which would have to be deducted.

I am not in favour of compulsion. I think it would be impracticable; you would require an army of police to carry it out, and it is contrary to the existing love of independence. Knowing what I do of the nature of the place, and of the independent character of the people, I think that any pressure would be strongly resisted. I am not opposed to restricting the age at which children should be permitted to go to work. There used to be a night school here, but it has not been carried on for two years. It is about to be resuscitated, as some of the younger men want to learn to read and write. They are shoemakers. A store has been established here during the last nine years. The sales now amount to about 9,000*l.* a year; they have not materially increased during the last three or four years. A class has been formed for the education of adults in a room which has been built for the purposes of the store. We have more than sufficient labourers for the work to be done in this parish. The cottages are insufficient in accommodation; I think there are none with three bedrooms, and some have only one. The rent is 1*s.* 4*d.*, in some cases with a garden. A few have allotments. I have 31 acres of land which I let in allotments of from a quarter to one acre; half an acre is the usual amount. The cottagers plough their allotments; they either hire a plough or in some cases their employers plough it for them. I let them grow what they like. They pay 3*l.* or in some cases 3*l.* 10*s.* per acre, and pay tolerably punctually. I have a great many applications for my allotments whenever any are vacant. The farmers have not complained to me about the allotments. I have forbidden boys working on the allotments lately; they only get into mischief. The men's wives work a little. I think the allotment system has a very good moral effect on the men, and I don't think it tends to keep down wages. I think the Government aid should be extended to all schools, whether the master and mistress are certificated or not.

173. Extract from a Letter written by Mr. J. Howe, Secretary to the Self-assistance Industrial Society of Long Buckby, established 1858, showing the progress of the society since its commencement.

	£	*s.*	*d.*
Amount of business the first year -	2,809	11	8

Profit on the same - -	856	19	6½

We started with 70 members, and have now 283; have paid the sum of 4,233*l.* 0*s.* 5*d.* in interest and dividend on members' purchases; we have spent in building 837*l.*, and in other fixtures 506*l.*

COLD HIGHAM.

Population - - 349.

174. *Smith.*—I live at Cold Higham. I don't know what my Christian name is. I have never been baptized. I live with my mother. My father is dead. I am 12. I don't know whether I was 12 last year or this. I don't know when my birthday is. I have never been to school or to any place of worship. I have five brothers and sisters at home; one of them can read. There is one bedroom in the cottage.

[This boy was at work with a horse hoe when I saw him. There was no school at Cold Higham, where he lived, but there was one at Pattishall, about three-quarters of a mile off.—F. H. N.]

EYDON.

Population - - 576.

175. Extract from the Return sent in by the Rev. A. J. Empson.

No child under 8 years of age should be employed at all.

All boys over 8 years of age and up to 13 years of age should be compelled to attend an evening school at least 40 nights every year, and produce a certificate

Northamptonshire.

Mr. Norman.

e.

of such attendance every spring before they are allowed to be employed for the ensuing year.

The number and average of boys [at school] is the same in winter and summer, as the few boys who return in winter are balanced by extra infants in summer.

All boys, immediately on leaving the day school, should be admitted to the night school, and be allowed to be presented for examination in the various standards as fast as they can be prepared. If a boy attended only the minimum of 40 nights [mentioned above] he would possibly require two years preparation to pass from one standard to another.

Assuming him to have passed three standards before going to work he would have reached the fifth standard by the time his compulsory attendance at night school was ended.

WELFORD.

Population - - 1,099.

176. Extracts from Return sent in by Mr. John Gee.

The women are not employed in the winter, except in stone picking, which is done by the load. The girls work at the bead trimming for Coventry.

The demand upon the physical powers does not injuriously affect their health or constitution, but the old men are subject to rheumatism.

Neither females or the young are subject to ill-treatment.

I believe scaring the crows has a bad effect on the boys, more particularly on Sundays.

I believe it would be better for the boys to be at school until 10 years old.

The work done by young persons is not laborious, and I do not think they are at all injured by it, and I believe legislative restriction would be very unpopular.

If the boys attended the day school regularly until they were 10 years old and then had an opportunity of going to a night school four or five nights a week at a cheaper rate than a penny each night for an hour and a half I think they might receive education enough for their position.

The girls are taught to sew and knit by the schoolmaster's wife, who is paid for doing it by the clergyman's family.

I believe in many cases two cottages could be built for 200*l.*, and by putting half of an acre of land to the two cottages, say worth 30*l.*, these might be advantageously let for 5*l.* 10*s.* each, which would pay nearly five per cent., but the land should be adjoining the cottage.

The principal difficulties in the way of maintaining an evening school are want of good teachers to assist the certificated master, want of attention on the part of the boys, and when they almost all leave the day school at 10 years old they are not allowed by the Privy Council to attend a night school until after they are 12, when many become ashamed of their ignorance, and they will not come; and 3*d.* a week is too much for them to pay besides buying books.

WHITFIELD.

Population - - 265.

177. *Mr. J. Bartlett.*—I have lived here 33 years. I farm about 900 acres, about 620 of which are arable; I employ about 40 men and boys in winter, and about 50 in summer. My wages amount to from 25*l.* to 28*l.* per week. Boys are sometimes handy at the age of 9, but of no real value until the age of 10; they give so much trouble before that age. I employ an old man with a gun to scare at 10*s.* a week; I am sure that is economical on large farms. Young boys do more harm than birds do. My land requires three horses to plough, and therefore I want boys to drive. I have been a guardian of the Brackley union for 20 years and I find that the greatest number of cases of bastardy occur in those parishes where the cottages are most crowded. There are none from this parish, where the cottages are good. I think that the state of education is defective. I attribute the defect here to the fact that the the schoolmistress is inefficient. I am opposed to compulsion; I feel certain that the parents would take advantage of the opportunity if they could send their children to a good school.

FARTHINGHOE.

Population - - 392.

178. *The Rev. F. Litchfield.*—I have been of this parish for 51 years. I think that the education would be sufficient if the conditions upon which the Privy Council would grant money were less exacting. We have only an uncertificated mistress here, and therefore are not under inspection. I think that no provision should be made for educating children after they begin to work. As far as this place is concerned, I am opposed to restricting the age at which they may go to work. I am opposed to night schools, because I object to everything which brings people out of their houses at night. The nuisances in cottages and streets require compulsory inspection; it should be in the power of any person to make complaints to the magistrates in cases of nuisances. Inspectors of nuisances should have direct communication with the magistrates without the intervention of the boards of guardians, and should be fined if they neglect their duty. Guardians have so much interest in cottage property that they are not likely to enforce efficient inspection. I also think the construction of cottages should be put under superintendence; preventive measures are better than remedies. I would never have more than two bed-rooms in cottages, because more than that offers an encouragement to the sons and daughters when married to remain living in their parents' cottage, and it is impossible to have sufficient superintendence by land agents. I introduced the allotment system here in 1826, and have been satisfied with it ever since. I give 20 poles to each family. I also established a clothing club in 1826; and no person who misbehaves is allowed to share in either the allotments or clothing club. Wages about here are 11*s.* per week.

WICKEN.

Population - - 529.

179. Extract from a letter written by the Rev. H. J. Barton, rector.

On my coming here 30 years ago there was no girls' school, and the parents being appealed to said they could not afford to lose the lace money, and therefore could not send their children (girls) to school. Finding that the so-called lace schools were little dens of iniquity, in which not only vile talking was heard, but vile books were read aloud (and such they are still), we determined (1840) to set up a lace school, which so far succeeded by the help of a first-rate lace mistress and reduced payments, that by degrees the old dens were broken up and all the girls came to us, and have continued with us ever since. This, of course, implies the necessity of two mistresses, but it has proved much more, I hope, than worth the money. Only one school in the deanery (Easton Neston) followed the example, but it is now given up. We began with two days in the fortnight for regular school, now increased to three days, the remainder of the fortnight being given to lace, except for children from 5 to 6 or 7, who are always in regular school. The lacemakers whilst at their pillows say their hymns, sing, say their tables, and receive religious instruction from the schoolmistress, besides writing three times a week. The result has been not only a very much improved state of morals, ... but the girls now get out to service, many of them into good places.

Before referring to the school farm or school gardens, I will only express once more my own strong conviction, that if in legislating for agricultural

schools you omit the agricultural element you will do but little good. . . . . When we began in 1854 we had only four acres, on which we employed 12 boys from 8 to 10 off and on for seven months in the year; the other five months were entirely given to the school. The net profit upon the land was about 15*l.*, the value of the produce being about 53*l.*, and the cost of labour, tools, seeds, &c. about 38*l.* This may serve as an approximation. The method of cultivation of the grain crops was upon the Lois Weedon plan; but this, though perfect in theory, was found not to answer. Of late years we have added one more acre, and adopted a modification of the Lois Weedon plan, which answers well. But instead of 12 boys we can only keep six or seven, the farmers running away with the rest. The profits, however, are greater than when we had less land and more boys, the value of the crops varying from 50*l.* to 60*l.*, and the cost of the cultivation from 30*l.* to 35*l.* This is a very rough statement, but it will, I hope, give you some idea of the plan. As far as it goes it answers; and I believe it might be so modified with the two masters as to provide for the teaching of the night school, if Government assistance were given so as to fill up the gap between 12 and 16 years of age. I must remark that instead of causing the boys' attendance at the school to be lengthened, it has, it fact, shortened it, as they become handy lads at an earlier age, and though they get 4*d.* a day with me for four hours' work, many go to the farmers for 3*d.* a day for 10 hours, which means that the parents dare not refuse the farmers when their children are required.

[Note.—There is a more detailed account of the working of this school farm in the Journal of the Bath and West of England Society for the Encouragement of Agriculture, &c., Vol. V., p. 307.]

HARDINGSTONE.

Northamptonshire.

Population - - 1,915.

Mr. Norman.

180. Extract from Return sent in by Mr. W. Shaw, of Far Coton.

e.

I always employ all the boys belonging to the labourers who live in my cottages, of which I have eight, placed by my landlord at my control, in which my labourers live rent free.

The field labour is the making of the boys. They are the picture of health, and eat and drink enormously; too much, I often think.

They have all been to school except one, who positively refuses, and I think he is the steadiest working boy of the lot. All the family have always refused to go to school, but I think it is to their disadvantage, not mine.

I lived in Cambridgeshire, where 100 children at least where employed in two gangs; they were very young. I saw no immorality nor impropriety, beyond the fact of the poor children walking so far to and from their work. I often thought, as they were only wanted at special seasons, it would have paid the employer to have sent some one-horse light vans or waggons for that purpose.

The shoe trade absorbs all female labour, so much so as to make domestic servants scarcely obtainable. If education is to be made compulsory, I should say 10 years is the age to limit it to.

In my opinion cottage accommodation is the most important question of the day, both morally and pecuniarily. Situate as I am, if I had not the full control of my cottages, I could not carry on my farming with any degree of comfort or satisfaction, and now, night or day or on Sundays, my labourers serve me with satisfaction and willingness.

The following answers are collected from 90 circulars returned from 55 parishes in the county of Bedford.

26 circulars from 16 (*i.e.* all the parishes in Woburn union).
39 circulars from 19 parishes in Bedford union.
12 circulars from 10 parishes in Ampthill union.
7 circulars from 5 parishes in Biggleswade union.
6 circulars from 5 parishes in Luton union.
36 circulars being returned by clergymen of parishes, and 54 by owners and occupiers of land.

I. As to Employment in Private Gangs.

The system of employing persons in agriculture in private gangs scarcely exists in the county of Bedford, and where it does exist, is confined to the employment of children under a foreman, who is the servant of the employer. Only five returns under the head of private gangs were given in answer to the circulars of inquiry. In only one of these cases are the children employed throughout the year, viz., in the Woburn Park gang composed of children between 10 and 13 years of age, of whom there are 16.

The Melchbourne Park gang consists of 10 children employed from March till October; these children were all between 8 and 10 years of age at the time the return was made.

The other returns under this head apply to the occasional employment of children in spring, chiefly in picking up twitch or stones.

In answer to the questions under this head,—*Mr. C. Stephenson*, assistant agent, Woburn Park farm, says, "There are 16 boys employed throughout the "year in this gang. They are employed in spring, "in assisting shepherd and feeding cattle, picking "stones and spreading soil, cleaning roots, &c. In

" summer, in cleaning fallows, hoeing roots, destroying thistles, &c. In autumn, in picking and forking twitch, pulling and storing roots, &c. In winter, the same as in spring. They go from one to two miles to their daily work. Their usual hours of work upon the land are 9 hours in winter, and 11 in summer; out of which half an hour for breakfast, and one hour for dinner is allowed. I am inclined to think that where boys have been employed under 10 years of age the demand on their physical powers may have injured their health. Females are not employed here in farm labour, though I should advocate such employment as decidedly preferable to straw plaiting or lace making, *i.e.* viewed in a physical and moral light. It is a condition that all boys must be able to read and write before joining this gang (every facility is afforded in this and the neighbouring parishes towards this end), this condition and the example set here must have a good effect elsewhere. The man having charge of the gang is a skilled labourer, able to read and write and keep a daily journal, detailing the nature of the work and the amount due to each boy for his work; he is chosen not only for his manual but for his intellectual fitness."

In answer to the question "Have you any observations to make as to its being desirable or practicable to subject 'private gangs' to legislative regulations, together with 'public gangs,'"

Mr. Stephenson says, "This is a difficult matter to express an opinion upon, but I should be inclined to recommend that boys be able to read and write before being employed; that they should not be employed under 10 years of age, nor girls under 12; that the working time for children under 13 years of age be restricted to nine hours per day. It would not be proper to lay down any harsh line as to distance to travel, *e.g.* a village might furnish more workers than the land required within a certain radius. Rather compel landowners to build cottages within an easy distance than visit the labourer with restrictions which it is not in his power to remove."

Mr. Edward Campion, agent to Lord St. John, and manager of Melchbourne Park farm, says:—"A gang of 10 boys between 8 and 10 years of age is employed on this farm, during spring, summer, and autumn, they work under a foreman, and are employed in our pasture land, in twitching, weeding, singling turnips, and cutting thistles, &c., they go from ½ to 1½ miles to their work, the hours of work are 11 hours, including 1½ hours for meals, the demand upon their physical powers does not affect their health injuriously, nor are they subject to any ill-treatment; some of the boys can read and write, others only read. Children under 10 years of age ought not to work in the cold wet winter months, and it is during that time that children's education should be attended to. No moral evils or hardships attend the employment of such a gang as is employed on this farm."

Mr. W. W. Kilpin, occupier, Bickerings Park, Woburn, says, "I employ a gang of 14 boys, in spring and early summer in twitching, picking stones, singling turnips, &c., their ages are,

" 6 between 8 and 10 years.
" 8 „ 10 and 13 „

They work under one of my own labourers. They have to come from 1 mile to 1½ miles to their work and their hours of work on the land are from 6 a.m. to 6 p.m. in summer, and from 7 a.m. to 5 p.m. in spring, including 1½ hours for meals; they are in no way injured by their employment; the state of their education is not good. Private gangs such as mine need no legislative interference."

Mr. T. T. Hine, Knotting Green, Bedford, says: "I employ for almost a fortnight at a time in spring, summer, and autumn, a gang of boys and girls, they are at work now, and their ages are:—

Boys.	Age.	Girls.	Age.
" 2 between	8 and 10	5 between	10 and 13.
" 3 „	10 and 13		

They are employed in twitching, weeding, hoeing, and singling turnips. They come half a mile to work, and they work from 8 a.m. to 6 p.m. including 1½ hours for meals, they are not overworked, and are too young to be immoral. They can read and write a little, and require no legislative interference."

Mr. John Blundell, Woodside, Luton, occupier, "For about a month in the year I employ a gang of from 20 or 50 boys, between 6 and 12 years of age. They are employed in weeding, and I pay them each 6*d.* per day."

Onion Peeling.—Another kind of employment in gangs which cannot strictly be called employment in agriculture is the employment of women and children in peeling onions in sheds in the market gardens in the neighbourhood of Sandy and Biggleswade (see general evidence from Biggleswade) of these gangs.

Rev. John Richardson, of Sandy, says: "The following is the number and age of women and children employed in two gangs by market gardeners in Sandy parish:—

" Females:		
" Under 8 years	-	29
" Between 8 and 10	-	54
„ 10 and 13	-	55
„ 13 and 18	-	42
" Over 18 years { married	-	93
{ unmarried	-	66
" Total females so employed in Sandy		339

A few little boys are sometimes present, but no men are employed, they work from 7 a.m. till 6 p.m., and take their own time for meals; some few of them come three or four miles to their work."

In answer to the questions as to whether the young or females are subject to any ill-treatment or whether any special employment injuriously affects them, Mr. Richardson answers "No."

CIRCULAR QUESTIONS.—II. § 2. *a. b. c.*

II. As to the EMPLOYMENT of CHILDREN, YOUNG PERSONS, and WOMEN not in GANGS, either "PUBLIC" or "PRIVATE," but individually or in company with a few other PERSONS.

22. Inasmuch as on every farm there will probably be children, young persons, and women both permanently and occasionally employed, not in gangs either "public" or "private," but individually or with a few other persons; and as these could not be omitted from any protective legislation which might be thought desirable and practicable on behalf of those employed in "public" or "private" gangs, if the circumstances of their employment should be found to require it, be kind enough to answer, as fully as you are able, the following questions:—

(*a.*) What is the number of children, young persons, and women employed in agricultural labour singly or with a few others

In your parish?

On your farm?

Bedfordshire.

Mr. Culley.

f.

(*b.*) Give as nearly as you can the following particulars as to the number and age of such persons so employed.

Males.					Females.						
Under 8.	Between 8 and 10.	Between 10 and 13.	Between 13 and 18.	Total Males.	Under 8.	Between 8 and 10.	Between 10 and 13.	Between 13 and 18.	Over 18. Married.	Over 18. Unmarried.	Total Females.

(*c.*) In what kinds of work are they employed during the different seasons of the year?

In spring, in
In summer, in
In autumn, in
In winter, in

The following summary will give the substance of answers to these questions from 90 circulars returned to the Assistant Commissioner as described in the first page of the "Summary of Answers to the Commissioners' Circular Questions."

Nature of the employment in farm labour of children, young persons, and women individually or with a few other persons in the county of Bedford.

From 50 answers.

In Spring
- "Field keeping" or "Bird scaring."
- Picking twitch.
- ,, stones.
- Cutting and cleaning roots.
- Hoeing and weeding.
- Potatoe setting.
- Bean dibbling.
- Driving teams.

In Summer
- Picking twitch.
- Spudding thistles.
- Weeding.
- Hoeing and singling root crops.
- Haymaking.
- Driving carts and teams.

In Autumn
- Harvesting.
- Picking and forking twitch.
- Pulling and storing roots.
- Driving carts and teams.

In Winter
- Forking twitch.
- Cleaning roots.
- Feeding cattle and sheep.
- Driving manure carts and teams.

Returns of ages and numbers of persons so employed.

With the exception of 11 girls under 13 years of age, of whom five are under the head of private gangs, the only return of females as employed in farm labour is by the Messrs. Howard, occupiers at Clapham, and amounts to—

9 females,	between	8 and	9 years
6 ,,	,,	10 ,,	13 ,,
4 ,,	,,	13 ,,	18 ,,
6 married females		above	18 ,,
5 unmarried ,,		,,	18 ,,

Total, 30 females "occasionally employed;" further, in answer to questions, the Messrs. Howard say, "Females are not employed in farm labour in this district except in hay season."

This unusual employment of females no doubt arises from the proximity of the town of Bedford.

The same gentlemen return 43 males under 18 years as regularly or frequently employed.

TABLE A.

Gross returns of numbers and ages of children, young persons, and women employed in farm labour from all circulars, giving these particulars—

Males—	
Under 8 years	1
Between 8 and 10 years	55
10 ,, 13 ,,	204
,, 13 ,, 18 ,,	241
Total males under 18	501
Females—	
Under 8 years	0
Between 8 and 10 years	11
,, 10 ,, 13 ,,	10
,, 13 ,, 18 ,,	4
Above 18 married	6
Above 18 unmarried	5
Total females	36

TABLE B.

RETURN of Males (no Females are employed) under 18 years employed in eight parishes in Woburn Union.

PARISH.	Nature of Cultivation.	Population.	Acreage.	Females.	Males. Under 8.	Males. 8 to 10.	Males. 10 to 13.	Males. 13 to 18.	Total Males under 18.
Holcut and Salford	Mixed	335	1,780	0	0	5	12	10	27
Husborne Crawley	Chiefly arable	535	1,520	0	0	0	0	12	12
Tilsworth	Mixed	348	1,510	0	0	0	2	9	11
Tingrith	Mixed	226	946	0	0	0	12	14	26
Hockliffe	Chiefly pasture	416	1,021	0	0	2	11	14	27
Ridgmont	⅔ arable	1,029	2,248	0	0	10	32	26	68
Milton Bryant	⅓ arable	345	1,480	0	0	7	10	7	24
		3,234	10,505	0	0	24	79	92	195

Table C.

Woburn Union.

Return of males under 18 (no females are employed) employed on nine farms in Woburn Union, containing,
2,623 acres arable.
1,150 „ pasture.
Total 3,773 acres.

Farm varying from 270 to 600 acres—

Males under 8	0
„ between 8 and 10	14
„ „ 10 „ 13	48
„ „ 13 „ 18	47
Total males under 18	109

Including 14 boys employed in private gang.

Farms worked in four-course husbandry and requiring according to average of union from 120 to 140 adult men.

Table D.

Bedford Union.

Return of children, young persons, and women employed on 16 farms in Bedford Union; 6 in Luton Union; and one in Biggleswade. Farms varying from 200 to 950 acres.

23 farms containing 6,764 acres arable.
2,838 „ pasture.
Total 9,602 acres.

Males.		Females.	
Under 8	0	Under 8	0
Between 8 and 10	28	Between 8 and 10	2
„ 10 „ 13	79	„ 10 „ 13	9
„ 13 „ 18	65	Above 13	0
Total males under 18.	172	Total females	11

Of these 11 girls, 5 are included in return of private gang for Knotting parish.

These farms would probably employ about 300 males over 18 years.

Comparative ages of males employed on two farms in Luton containing 850 acres.

Males under 10	2
„ between 10 and 13	9
„ „ 13 „ 18	4
„ over 18	36

Table E.

Return of persons employed on 10 farms in the adjoining parishes of Cople and Willington, in Bedford Union, farmed in four-course husbandry, and containing
2,030 acres arable.
695 „ pasture.
Total 2,725 acres.

These farms find regular employment for—
10 males between 8 and 10 years
21 „ „ 10 „ 13 „
26 „ „ 13 „ 18 „
90 „ over 18 years
147 males of all ages and no females.

Nearly 3½ males over 18 to every 100 acres, and a probable requirement of over three cottages to every 100 acres.

Table F.

County of Bedford.

Taken throughout the county where the acreage of farms was given to the Assistant Commissioner.

42 farms containing 11,417 acres arable.
4,683 „ pasture.
16,100 acres.

Employ—

Males.		Females.	
Between 8 and 10	52	Between 8 and 10	2
„ 10 „ 13	148	„ 10 „ 13	9
„ 13 „ 18	133	Above 13	0
Total males under 18	338	Total females of all ages	11

Probable adult males 500.

Circular Questions II. (*d.*)

(*d.*) Do they live on or near the farms on which they work?
If not, how far have they to come from their homes to their daily work.

46 circulars give no answers.
29 „ answer "yes" or "near."
6 „ „ "under a mile."
3 „ „ "one mile."
4 „ „ "½ to 2 miles."
2 „ „ "1½ to 2 miles."

Circular Questions II. (*e.*)

(*e.*) What are their usual hours of work upon the land?

35 circulars give no answer.

55 circulars from 41 parishes establish the fact that the ordinary hours of work in farms in Bedfordshire are from 6 a.m. to 6 p.m. in summer, and from 7 a.m. to 5 p.m., or from light to dark in winter; in some cases instead of beginning work at 6 a.m. and stopping for breakfast at 8, the workers come at 7 a.m. and are not allowed to stop for breakfast. These hours, that is to say, about 10 hours work in summer and eight in winter, exclusive of time allowed for meals, applies to all persons employed in farm labour of whom returns were sent to the Assistant Commissioner, except the children employed in Woburn Park and Knotting parish, whose hours of labour are shorter.

(Answers to Question *f.* are omitted totally.)

Circular Questions II. (*g.*)

(*g.*) What are the times allowed for meals?

35 circulars give no answer.
Of 55 circulars from 41 parishes—
31 circulars say 1½ hours.
5 „ say 1¾ hours.
17 „ say 2 hours.
1 „ says 2 to 2½ hours.
1 „ says 2 hours, but in hay time and harvest they have "baver" at 11 a.m. and 4 p.m.
1 „ In summer they come at 6 a.m. and have from 8 to 9 a.m. for breakfast, in winter they come at 7 a.m. and have from 10.30 to 11 a.m. for luncheon, and in both winter and summer 1 hour for dinner.

[Note.—The time allowed for meals varies from 1½ to 2 hours, and at certain work a quarter of an hour is allowed about 11 a.m. and 4 p.m., at least for those who have only half an hour allowed for breakfast or who come at 7 a.m. and have no time allowed for breakfast.]

Bedfordshire.

Mr. Culley.

f.

CIRCULAR QUESTIONS II. (*h.*)

(*h.*) Does the demand upon their physical powers injuriously affect their health and constitution ?

33 circulars give no answer.
53 „ say "No."
4 „ say "They are decidedly the better for outdoor work," or words to that effect.

CIRCULAR QUESTIONS II. (*i.*)

(*i.*) Are the young or the females whether young or grown up, subject to any ill-treatment ?

34 circulars give no answer.
56 „ answer "No."

CIRCULAR QUESTIONS II. (*j.*)

(*j.*) Do any special employments injuriously affect females or the young generally ?

59 circulars give no answer.
21 „ answer "No."
3 „ „ "Straw Plaiting."

Others answer as follows :—

WOBURN UNION.

Rev. J. M. Hamilton, Chalgrave, says, "Straw "plait not only in the plait schools, but in certain "cases in private houses."

BEDFORD UNION.

Mr. Charles Howard, Biddenham, occupier, says, "None as it regards the boys as a rule, but to my "mind the employment of lace making so common in "this country is injurious to the health of the girls "and the proper development of their frames."

Mr. John Thomas, Bletsoe, occupier, says, "Yes, "I believe growing girls are injuriously affected by "being put by their parents to the lace-pillow, which "from the stooping position has a tendency to con-"tract the chest and bring on pulmonary disease."

Rev. A. J. Coleridge, Bromham, says : "They are "principally employed in lace-making which is cer-"tainly not a healthy pursuit, as it keeps them so "many hours confined to the house and leaning over "the pillow."

Rev. B. Trapp, Thurleigh, says, "Girls from 6 to 7 "years of age are taught lace-making, which seems to "affect injuriously their physical development. They "are usually employed 10 or 12 hours per diem."

AMPTHILL UNION.

Rev. H. H. Birley, Cranfield, says, "Young girls "are often crowded together in what they call a lace "school."

Rev. A. Browne, Flitton, says, "Not generally, but "the straw plaiting business, which is the staple em-"ployment of women and young persons of both sexes "in this country is by some considered to be un-"favourable to delicate or consumptive constitutions, "from its tendency to contract the chest and hurt the "free use of the arms."

CIRCULAR QUESTIONS II. (*k.*)

(*k.*) Have you any observations to make as to the effect of the employment of females in agriculture on morals and on the proper training for domestic duties ?

85 circulars either give no answer, or answer that women are not employed in agriculture.

Others answer as follows :—

BEDFORD UNION.

Mr. Charles Howard, Biddenham, occupier, says, "There are no females employed except occasionally "in hay time and harvest, in my opinion more might "be beneficially employed, to the advantage of all "parties at these seasons."

Messrs. J. and F. Howard, occupiers, Clapham, says, "Females are not employed in this district in field "work, except in the hay harvest, even this, through "the general use of machinery, is on the decrease."

Rev. B. Trapp, Thurleigh, "lace making prevents "the proper training of young women for domestic "duties, so that when married they cannot mend their "husbands' clothes or make a pudding fit to eat."

BIGGLESWADE UNION.

Rev. R. F. Scott, Arlesay, says, "The females are "employed at straw plait which I consider as a rule "unfits them for domestic service. No females are "employed in agriculture."

LUTON UNION.

Rev. A. Bloomfield, Barton, says, "The females in "these parts are employed in straw plait, the effect "of which is to keep at home ALL the females, hence "a good deal of immorality in the young, and morality "held little in esteem. I consider morality at a low "ebb in South Beds."

CIRCULAR QUESTIONS II. (*l.*)

(*l.*) Taking into consideration the demand for labour in your parish and neighbourhood, and the pecuniary resources of the agricultural labourers, are you prepared to recommend that any restriction should be placed on the employment of females in field work.

If so, would you limit the restriction to females of a defined age, or would you prohibit female labour in the fields altogether, excepting at hay and corn harvest.

87 circulars give no answer as it is not the custom to employ females in farm labour.

BEDFORD UNION.

Messrs. Howard, occupiers, Clapham, say, "We "would not allow girls to go to work under 12 years "old. We would not prohibit the employment of "females."

Rev. R. N. Durrant, Risely, says, "I would re-"strict the employment to married women or women "over 40 years of age, and to girls between 10 "and 13."

Rev. B. Trapp, Thurleigh, says, "The employ-"ment of females in field work is so rare that no "inconvenience would be felt if it were prohibited "altogether except in hay and corn harvest."

CIRCULAR II. (*m.*)

(*m.*) 1. Taking into consideration the demand for labour in your parish and neighbourhood, and the pecuniary resources of the agricultural labourers, are you prepared to recommend that any restriction should be placed upon the age at which boys should be permitted to be employed in farm labour ?

(*m.*) 2. If so, please to state the age below which you would recommend that boys should not be so employed.

(*m.*) 1. 71 circulars give no answer.
9 „ answer "Yes."
9 „ „ "No."

(*m.*) 2. 45 circulars give no answer.
2 „ answer 8 years.
6 „ „ 9 years.
22 „ „ 10 years.

Others answer as follows:—

WOBURN UNION.

Rev. J. G. Bulman, Potsgrove, says, "The supply of "labour appears to me to exceed the demand; wages "are low in consequence, which of course is an induce- "ment to parents to utilize their children, as soon as "and whenever they can get them employed. It "would be for the good of the children to be "kept at school till they are 10 or even 12 if "practicable, but the poverty of the parents is the "difficulty."

Rev. B. C. Smith, Hulcot Rectory, says, "If a "restriction is made, it should not affect boys over 9 "years of age, or at most 10."

Rev. T. Tanqueray, Tingrith, says, "Parents are "glad to get 1*s.* 6*d.* or 2*s.* per week as soon as they "can. I think 10 years is early enough."

BEDFORD UNION.

Mr. John Brimley, Cople, says, "10 if the parents "can spare them."

Mr. Thos. James, Cople, says, "10 for the sake of "education."

AMPTHILL UNION.

Mr. George Street, Maulden, says, "8 years. I "should have said 10 years, but find on inquiry that "with one exception my best and most skilful "labourers began when about 8 years old, and have "worked here ever since, on a farm where the "occupiers have the choice as labourers are "abundant."

CIRCULAR QUESTIONS II. (*n.*)

(*n.*) Do you see reason for recommending that the distance to which children and young persons should be allowed to go to work in farm labour should be restricted according to age?

If you should think some restriction of distance in reference to age desirable, do you approve of the following, which assumes that boys under 8 years of age would not be allowed to be employed at all?

No boy of 8 years of age and under - - - 10 No girl under the age of - 13	To be taken to work beyond a distance from his or her home of			1 mile.
No boy of	10 years of age and under 11	To be taken to work beyond a distance from his or her home of		2 miles.
	11 „ „ 12			
	12 „ „ 13			
No young person of	13 „ „ 14	To be taken to work beyond a distance from his or her home of		3 miles.
	14 „ „ 15			
	15 „ „ 16	To be taken to work beyond a distance from his or her home of		4 miles.
	16 „ „ 17			
	17 „ „ 18			

Have you any modification to propose in the above table?

74 circulars give no answer.
6 „ answer "No."

Others as follows:—

WOBURN UNION.

Mr. J. Foll, Harlington, says, "I think the above "table suitable as it would not be beneficial to em- "ployers for young people to walk a greater distance "to their work."

Rev. J. G. Bulman, Potsgrove, says, "I should "say that 3 or 4 miles is too great a distance for "any young person to be compelled to go to "work."

Mr. Z. Philips, Birchmore, says, "It would in my "opinion be a very difficult matter to legislate upon. "It is an important matter for a labourer to be near "his work, but often they must go to a distance to "seek employment."

BEDFORD UNION.

Mr. John Thomas Bletsoe, occupier, says, "1½ miles "is the greatest distance a boy would have to go to "his work in this parish; my farm is close to the "village, but I think boys should not be sent to "general employment before 10 years old, but they "may be of use for a few days, occasionally weeding "during summer months. I do not employ women "except in hay time, and then only 2 or 3.

Messrs. J. and *F. Howard*, Clapham, say, "No "such scheme could be enforced, even if the police "force were doubled."

Rev. R. N. Durrant, Risely, says, "No girl or boy "under 13 should go more than 2 miles; no young "person more than 4."

AMPTHILL UNION.

Rev. J. A. Frere, Shillington, says, "My impression "is that owing to the labourers' cottages being pretty "evenly dispersed over the parish few lads have in "this parish any unreasonable distance to walk to "their work, otherwise I should consider this table a "fair one."

BIGGLESWADE UNION.

John Harvey, Esq., Northill, says, "I think 4 miles "is too far for any labourer to go to his work, but of "course no restriction can be placed on grown up "persons."

LUTON UNION.

Rev. A. Blomfield, Barton, says, "In this parish "as stated before, work being handy, no one is over- "tasked in walking to and fro, or overworked."

Lionel Ames, Esq., East Hyde, says, "No, inas- "much as the matter will adjust itself."

CIRCULAR QUESTIONS II. (*o.*)

(*o.*) Do you see reason for recommending that any restriction should be placed upon the hours of work for children and young persons employed in agriculture; and if so, what amount of restriction would you propose?

52 circulars give no answer.
20 „ answer "No."
4 „ 10 hours exclusive of meal hours.

Others answer as follows:—

WOBURN UNION.

Mr. Z. Philips, Birchmore, says, "Certainly not; "my boys always enjoy a good game after leaving "work, under such circumstances they cannot in any "way be exhausted."

Rev. H. Cobbe, Milton Bryant, says, "Yes, but "chiefly for the sake of education."

Rev. Truman Tanqueray, Tingrith, says, "They "are never overworked except during hay time and "harvest, when the number of hours is sometimes "very great; I do not see how the fillers of corn "can work without the boys."

BEDFORD UNION.

Rev. R. N. Durrant, Risely, says, "The hours of "work should be restricted to the intervals between "6 a.m. and 6 p.m for summer, 8 a.m. and 4 p.m. for "winter."

Rev. W. B. Russell, Turvey, says, "No restrictions "seem to be required in agriculture, but I think "the hours of work for young girls in the lace "school excessive, and decidedly injurious to their "health."

Messrs. J. and *F. Howard*, Clapham, say, "No; "when they are allowed to go to work it is impera- "tive they should work the same time as the men; "break a link in the chain and the whole routine of "the farm is thrown out."

Rev. A. Coleridge, Bromham, says, "I should say "that 10 hours per diem is ample work for children "under 13.

Bedfordshire.

Mr. Culley.

f.

Mr. Edward Campion, Melchbourne, says, "No boy "under 11 years of age ought to be employed above "10½ hours exclusive of meal times."

Rev. E. J. Hillier, Cardington, says, "Boys "from 10 to 13 years of age should leave work at "2 p.m."

Mr. Thomas James Cople,—"You cannot have "different hours of labour for boys above 10, and "the carters and ploughmen withdrawn from their "work."

Ampthill Union.

Major J. H. Brooks, Flitwick,—"All children under "10 should attend day school, and from 10 to 14 "night school."

Mr. G. Street, Maulden, says, "No, they must be "taught regular habits from the commencement, or "never have a regular plan of work."

Rev. A. J. Frere, says, "I think lads ought not to "be employed more than 12 hours (including meal "times), as they sometimes are I believe in bird-"keeping, shepherding, and the like; I believe such "cases however in this neighbourhood to be very "rare."

Biggleswade Union.

Mr. Samuel Bailey, Southill, says, "Less hours "would be desirable, but I do not see how it could "be done."

Circular Questions.

III. As to requiring some amount of School Attendance in the case of Children earning Wages by Employment in Farm Labour.

23. The Commissioners being instructed to inquire to what extent, and with what modifications the principles of the Factory Acts can be adopted in reference to children employed in agriculture, "especially with a view to the "better education of such children," your opinion is invited on the following points:

24. The three modes by which the prescribed amount of school attendance of children employed in trades and manufactures is obtained are—

By the Factory Act (7 Vict. c. 15. ss. 31–9).

1. By half day at school and half day at work.
2. By alternate whole days at school and whole days at work.

By the Printworks Act (10 & 11 Vict. c. 70. ss. 2, 3, 26).

3. By school attendance for a certain number of hours during the preceding six months.

26. You are requested to state which of such modes of enforcing some amount of school attendance would seem most applicable to the circumstances of your parish and neighbourhood; or whether a combination of one or more of them would better meet those circumstances; or whether any other mode that you might wish to suggest appears to you preferable.

Of 90 circulars returned from Bedfordshire 45 give no answer to this question.

Woburn Union.

Mr. C. Stephenson, Woburn Park farm, says, The half-day system does not appear feasible for "an agricultural parish. I think it is a work which "would answer best in a gradual rather than a "compulsory change; if the men would give up beer-"drinking as a habit, no legislative interference would "be necessary; encourage industry and economy, and "then you have an antidote to vicious and idle "habits."

Mr. W. L. R. Freeman, Speedwell, says, "The "winter months for school."

Mr. Kilpin, Bickerings Park, says, "Of these "modes, No. 3 is the only one at all applicable to "farm labour."

Mr. James Crouch, Ridgmont, says, "I do not "think the Factory Acts principles applicable, but "I think it desirable that boys between the ages of "10 and 12 should attend a day school for at least "four months in the year."

Mr. Platt, Ridgmont, says, "The only one of these "three modes applicable to farm labour is the 3rd. "I have no objection to boys under 13 being sent to "school for four winter months."

Mr. R. Checkley, Ridgmont, says, "Quite inappli-"cable to farm labourers; boys under 10 could be "dispensed with for four winter months."

Mr. H. Readman says the same as Mr. Checkley.

Mr. Morris, Ridgmont, says same as Mr. Checkley.

Rev. J. S. Neumann, Hockliffe, says, "No 2 seems "to be the best arrangement."

Rev. V. S. C. Smith, Husborne Crawley, says, "I "would by no means advocate or countenance any "mode of enforcing school attendance; it would in "my opinion be an unjust and undesirable stretch of "authority."

Rev. H. M. Erskine, Aspley Guise, says, "No. 1. "This would hardly be practicable in the country.

"No. 2. This, if practicable, would be the best "mode, but it is doubtful whether employers would "readily fall in with it.

"No. 3. This mode seems the most practicable, "but not the best, as a six months' vacation is too "long, and would undo much of the work of the pre-"ceding six months, as there is no general unwilling-"ness on the part of parents to send their children "to school, I do not see that any compulsory system "is necessary."

Rev. Truman Tanqueray, Tingrith, says, "The "first mode is useless; the second is worse; still, "any instruction to be satisfactory must be con-"tinuous. The third mode is more feasible, but not "likely to act. It is my opinion that farmers con-"sider that continuous instruction in agriculture is "as necessary as it is in other branches of edu-"cation."

Rev. H. Cobbe, Milton Bryant.—"No. 1 would be "most useful to the children, but No. 3 most con-"venient to the farmers and sufficient for the "children if they remained at school up to 10 years."

Bedford Union.

Mr. Charles Howard, occupier, Biddenham, says, "There is no necessity for any compulsory system, "so far as this parish is concerned; if the boys were "prohibited from working they would in all proba-"bility remain at school. As will be seen by the "return, there are only six boys employed under 10 "years of age, and these are mostly the children of "widows, or whose parents are badly off, in some "cases through their own seeking."

Mr. Ulysses Payne, occupier, Goldington.—"1st. "Two modes impossible in agriculture. 3rd might "apply in winter. It appears to me that an evening "school from 6 to 7.30 for boys over 9, all the year, "would keep up what they had learned, and if quick "and apt would make them good scholars."

Mr. Edward Turney, occupier, Souldrop, says, "Say winter schooling for four months.

Rev. A. J. Coleridge, Bromham, says, "I think "that any of the above plans would be most unde-"sirable and impracticable; it would seriously in-"terfere with the cultivation of the land, and I "think would lead to no educational advantages. "The only plan I think is to keep children at school "as long as possible, and then provide a night "school."

Mr. John Thomas, occupier, Bletsoe, says, "I "think all that is necessary might be done by using "kind and persuasive measures to induce parents to "send their children to school; it would be in my "opinion unnecessary and injudicious to enforce it."

Mr. John Wallis, Renhold, says, "After 10 years "of age a night school for the winter months, "say from 6 o'clock till 8, would be a good thing, "as our boys are wanted as much in winter as in "summer."

Mr. Thomas James, Cople, says, "I think compulsory school attendance after 10 years of age is "not necessary; boys can attend Sunday and night "schools."

Rev. E. J. Hillier, Cardington, says, "Forbid the "employment of children under 10 years, and compel "children from 10 to 13 years of age to attend "school half the day."

Mr. W. Islip, Melchbourne: "Alternate days work "and school would be objectionable, and on my own "farm could not be carried out. Evening schools "should be open during winter months."

Mr. Charles Street, Cople, say, "I do not think it "necessary to interfere after 10 years of age."

Messrs. J. & F. Howard, Clapham, say, "No such "scheme would do in agricultural parishes, we do "not think any compulsory enactment would work, "such provisions have invariably broken down in "America. We think if it were made illegal for "boys to go to work until they are 10, it will "suffice."

Rev. J. H. Williams, Kempston, "I should think "the proposed number, 3, the most suited to the "case: the attendance, commencing Nov. 1st and "lasting till March 1st, the half day or alternate day "system could not be carried out in agricultural "districts."

Mr. John Smith, Risely Grange, says, "Some boys "might attend school during 4 winter months."

Rev. R. N. Durrant, Risely, says, "2nd mode, "with the option of being kept entirely to work for "2 or 3 weeks in busy times."

Mr. William Golding, agent to Lord Dynevor's trustees, Biddenham, says, "I think that any one of "these modes, if made compulsory, would most seriously interfere with the employment of children "of more than 10 years of age, and injure the pecuniary resources of the parents."

Mr. John Brimley, Cople, says, "Whole days at "school and whole days at work."

Mr. H. Purser, Cople, "All these modes totally "inapplicable to farm labour."

Mr. Jas. Eaton, Risely, says, "Some boys might "attend day school in 4 winter months. Boys driving "teams could attend night school."

Revd. B. Trapp, Thurleigh, says, "The 3rd mode "by school attendance for a certain number of hours "or days during preceding 6 or 12 months, or daily "during 4 winter months would interfere least with "the employment of boys in agriculture."

Mr. John H. Bodger, Cardington: "Government "should extend its aid to boys of 10 years of age "attending night schools."

Mr. Edward Campion, Melchborne, "Boys from "10 to 13 years of age might attend school during "4 winter months from 4 to 7 p.m., and boys below "10 years of age might attend regularly in 4 winter "months."

Mr. John Horrell, Oakley, says, "By school attendance for a certain number of hours during preceding six months."

Revd. R. P. Bent, Melchborne, says, "I should "be glad to see an age fixed by legislature below "which boys might not be allowed to perform any "agricultural work. I am not quite prepared at "present to suggest a minimum age, but I think 12."

Ampthill Union.

Revd. John A. Frere, Shillington, says, "No. 1 "will not work, nor No. 2; No. 3 is more feasible, "the slack time being from October to March or "April. I think it might be made the interest of "the parents to keep their boys at school regularly "by fixing 11 years as the term below which (ordinarily) no lad should go to farm work, but that if "he could at 10 obtain the inspector's certificate that "he can read and write and sum fairly, he might go "to work at 10."

Revd. J. W. C. Campion, Westoning, "I do not "approve of compulsory education in any shape."

Revd. George Renaud, Silsoe: "The 2nd mode "best. Say Monday, Wednesday, and Friday at "school: in my opinion the educational acts now applied to mines and factories might be applied to "agricultural populations; no work under 10 and "none from 10 to 12, unless a certificate that the "boy can read and write, failing that, half time."

Major John Brooks, Flitwick, "I think the farmers "here would not tolerate any sort of half time "system, which is also at the same time found to be "very prejudicial to education."

Revd. Charles Ward, Maulden, "1st mode for "plaiters: 3rd mode for boys employed on land; I "should not have thought it desirable to enforce attendance at school, but that I am informed that "children are set to learn plaiting sometimes at 4 "years of age, and that they are kept too long at "work in the plaiting schools, which as a rule are "badly ventilated."

Mr. George Street, Maulden, says, "Boys might be "sent to school during the winter up to 10 years "old, any interference after that time would be injurious to parents."

Revd. David Wheeler, Pulloxhill, says, "The "conditions of work are so different in the case of "agricultural lads, that I do not see how regulations "very suitable for factory boys can be made to apply "to them; the agricultural boy's work is fixed by "the season and the weather, according to these will "there be an amount of leisure, or a continual run "of work."

Biggleswade Union.

John Harvey Esq., Ickwell Bury, Northill, says, "I have seen no plan comparable to that suggested "by Mr. Baker of Hardwicke, a copy of which I "enclose."

[Note.—This is an educational examination recommended by Sir J. K. Shuttleworth. *See* general evidence.]

Revd. Charles Baldock, Southill. "Far better if "possible to insure constant regular attendance at "school up to a certain age, say 10 years."

Charles L. Lindsell, Esq., Biggleswade:—"No "interference is necessary as the boys employed in "agriculture cease work at sunset in winter and "most of them attend night schools."

Luton Union.

Lionel Ames, Esq., East Hyde, says, "Were parents "made to send their boys to school until they were "10 years old, two or three attendances at a night "school per week, until the age of 14, would be "amply sufficient for an agricultural labourer."

Circular Questions.

27. How far is the school attendance affected by the distance that the children have to go to school?

35 circulars give no answer,
37 „ answer "Not at all,"
9 „ „ "Very little,"
Others answer as follows:—

Woburn Union.

The Rev. Joseph Simpson, Tilsworth, says, "There "is no efficient school."

Bedford Union.

The Rev. B. Trapp, Thurleigh, says, "Not much "except in outlying parts of the parish."

Mr. John Smith, Risely, says, "There is no school "in Swineshead parish, nor any resident clergyman, "and both are very much wanted."

Mr. G. Hine, Knotting, says, "A very good "school, but no master or mistress for two years."

Rev. R. P. Bent, Melchbourne, says, "In this "parish it is not affected by distance in the slightest "degree, a few children who live furthest from "the school are about the most regular in their "attendance."

Bedfordshire.

Mr. Culley.

f.

Ampthill Union.

Rev. J. A. Frere, Shillington, says, "A good deal, "this being a scattered parish, there is a hamlet "of 22 cottages at Pigsdon, near no school, that "can be made available for the children, although "there are two schools in the parish."

Rev. D. Wheeler, Pulloxhill, says, "Not affected "except in the case of children under six, who live "about one mile off."

Rev. H. H. Birley, Cranfield, says, "In the case "of a small hamlet, two miles from the school; but "it is in contemplation to build a school, which will "meet this difficulty."

Luton Union.

Lionel Ames, Esq., East Hyde, says, "It is difficult "if not impossible to get children to school who live "more than a mile or a mile and a half from the "school houses."

Circular Questions.

28. How far is the school attendance affected by the pecuniary resources of the parents?

41 circulars give no answer.
9 witnesses, say, "Considerably," or "Very much."
9 „ say, "Very little," "Somewhat," or "Slightly."
10 „ say, "Not at all."

Others answer as follows:—

Woburn Union.

Mr. C. S. Stephenson, says, "The attendance has "no doubt been greatly affected by the poverty of "the parents, a more satisfactory state is however "daily appearing. School accommodation is much "increased, and expenses of management liberally "responded to by subscription."

Rev. V. S. C. Smith, Huxborne, Crawley, "Very "slightly the parents make great efforts to send "their children."

Rev. Truman Tanqueray, Tingrith, "If the wages "all went home, instead of in part to the beershop, "parents would be able to pay for their children's "schooling."

Rev. H. M. Erskine, Aspley Guise, "Considerably; "some are unable to afford the pence for their "children's schooling, others for the sake of the "small gains of their children will send their boys "early to bird-keeping, &c., and their girls to plaiting "or lace schools."

Rev. W. S. Baker, Eversholt, "Where the family "is large, some of the children are obliged to be "taken from school to earn."

Rev. J. G. Bulman, Potsgrove, "There is not one "boy in our school 10 years of age, they are sent to "work as soon as they can earn anything."

Rev. J. M. Hamilton, Chalgrave, "As a general "rule, the parents can well afford to pay for their "children's schooling."

Rev. B. C. Smith, "In only one or two cases."

Bedford Union.

Mr. John Thomas, Bletsoe, says, "Not at all, "except in larger families where parents are anxious "to get their children out to work."

The Rev. R. P. Bent, Melchborne, says, "It is "certainly affected by this cause, inasmuch as boys "are taken from school as soon as they can earn "anything in the fields."

Mr. Wm. Islip uses nearly the same words.

Mr. H. Purser, Willington, "Very considerably, "boys from 9 to 10 years of age having 2*s.* 6*d.* "per week."

Mr. Thomas James, Cople, says, "Poverty of "parents compels children to leave school early."

Messrs. J. & F. Howard, Clapham, "When "parents are too poor to clothe their children de- "cently, absence is the result; we incline to the "opinion that help from the school fund should be "given in very urgent cases."

Rev. B. Trapp, Thurleigh, "Girls are put very "early to the lace pillow, at about 6 years, and boys "taken with their parents to work on farms as soon "as they are strong enough to earn anything, the "little money they earn is too valuable to their "parents to be sacrificed for education."

Ampthill Union.

Rev. J. A. Frere, Shillington, says, "Very much, "the wives of the labouring poor say they cannot "spare the produce of their children's plaiting, and "though plaiting is allowed in the school at fixed "times, this does not meet the difficulty, as the whole "of a child's time from very early years is generally "appropriated to plaiting, the dames plaiting schools "I look on as nurseries of evil, the children learn "next to nothing, but plaiting (though reading and "writing is said to be taught there) and boys and "girls are mixed together in a way that tells mis- "chievously."

Biggleswade Union.

The Rev. Charles Baldock, Southill, says, "Nor "do I think that money or the want of it rather has "much to do with the matter generally speaking."

Rev. G. C. Douton, Biggleswade, "So far as this, "that parents withdraw their children at a very early "age from school that they may get the benefit of "their earnings."

Luton Union.

Lionel Ames, Esq., East Hyde, says, "The pe- "cuniary resources of the parents materially affect "the attendance of their children, also the straw- "plaiting business at which children of 7 or 8 years "of age can earn something."

Circular Questions.

29. Are any efforts being made for the industrial training of girls, in connexion with elementary education, with especial reference to preparing them for their domestic duties?

33 circulars give no answer.
39 „ answer "No."
7 „ „ "Sewing in school."
4 „ „ "Yes."

Others answer as follows:—

Woburn Union.

Rev. H. Cobbe, Milton Bryant, says, "Yes, the "elder girls clean the school, brighten the grates, &c."

Bedford Union.

Mr. Thomas James Cople, says, "Yes, under care "of Mrs. Barnard, of Cople House."

Rev. A. J. Coleridge, Bromham, says, "Yes. The "Hon. Miss Rice Trevor has a school especially for "this purpose: needlework and knitting are also "taught in the day school."

Rev. E. J. Hillier, Cardington, says, "There is an "industrial day school here for the training of 30 "girls for domestic service." (A report of this school will be found in the General Evidence of Bedfordshire.—G. C.)

Ampthill Union.

Rev. J. A. Frere, Shillington, says, "We have "tried training for domestic service, but they very "seldom stay in it, the complete liberty which they "have from 14 onwards, if they remain at home, as "plaiters, indisposes them to it."

Rev. Charles Ward, Maulden, says, "The elder "girls are trained in housework and all in needle- "work."

Luton Union.

Lionel Ames, Esq., East Hyde, says, "Needle- "work is taught three afternoons a week to the "girls, who also by turns sweep and clean the school- "room."

CIRCULAR QUESTIONS.

30. Have you any remarks to make on the subject of cottage accommodation in regard to its effect on morality or education; or on the health and comfort of the labouring poor?

67 circulars give no answer to this question.

WOBURN UNION.

The Revd. B. C. Smith, Holcut, says, "My firm "conviction is that you may preach what you please, "and educate as you please, but will never make "people value morality, education, or religion who "are condemned to live in homes a decent farmer "would be ashamed to put his beasts into. Good "cottage accommodation is the first requisite."

Revd. H. M. Erskine, Aspley Guise, "Defective "cottage accommodation is decidedly injurious to the "moral condition of many of the inhabitants, and "also, I should say, to their health and comfort."

Revd. W. S. Baker, "The cottage accommodation "is good for the most part. Where it has been improved a marked change for the better has taken "place in the cleanliness, order, and self-respect of "those who inhabit them."

Revd. John Clegg, Toddington, says, "The dwelling houses are many of them in a most lamentable "state and totally unfit for human habitation. I "consider that the insufficient accommodation in "them must have a very bad effect on morals and "health."

Mr. C. Stephenson, Woburn Park farm, "Good "cottage accommodation is necessary for the amelioration of the working classes. It is primarily "of as much importance, if not more, than education: a great improvement has taken place in this "and neighbouring parishes, and in some places "little more is required. I would suggest what is in "a measure being carried out, that each farm have a "certain number of cottages attached to or near to "the buildings. Nothing could add more to the "labourer's health and comfort than this."

BEDFORD UNION.

Mr. Charles Howard, Biddenham, says, "The "cottage accommodation in this parish is certainly "not good, but I think I may truly say that it is "much beyond the average of the county. There "are a few illegitimate children, attributable doubtless to our proximity to Bedford; in other respects "the morality of the village is good. New cottages "are being erected, and there is a growing disposition "to remedy the present state of things. When we "get an improved education, men will not consent to "live in such hovels as are to be found in many parts "of this county."

Revd. R. N. Durrant, Risely: "Health and comfort and morality would be promoted by improved "cottage accommodation, but education might be "lessened by the increased rents required."

Mr. Ulysses Payne, Goldington: "Morals and "health are affected by short accommodation."

Revd. H. J. Williams, Kempston: "I consider "the subject a very important one as bearing on the "health and moral character, and where there is "insufficient accommodation the effect of education "is much impaired."

Revd. A. J. Coleridge, Bromham, says, "I have "no doubt that deficient bedroom accommodation is "not only injurious to the health and comfort of the "poor, but that it is a fertile source of indecency and "immorality."

Revd. W. B. Russell, Turvey: "The good state "of the cottages in Turvey has been one means of "improving the morality of the parish; certainly, "the comfort, and I doubt not the health of the "labouring poor."

Mr. John Thomas, Bletsoe: "I believe the want "of cottage accommodation seriously affect the "morals of the young."

Revd. B. Trapp, Thurleigh: "The wonder is that "they are as moral as they are when from early to "adult age both sexes are frequently herded together "in one bedroom, and that very small."

Mr. Thomas James, Cople, says, "The cottage "accommodation is good, and the good cottages teach "decency."

Mr. Edward Campion, Melchborne: "Good cottages generally make good labourers. The men "from good cottages are more sober, industrious, and "superior workmen; their health is better, they attend work more regularly. Education is useless "without good cottages."

Revd. R. P. Bent, Melchborne, says, "I am convinced that cottage accommodation has a great deal "to do with the questions of morality and education "of the working classes."

Mr. Wm. Islip, Melchborne: "There wants great "reform in many parishes in cottage accommodation, "or the morality of the inmates will not be improved "by further education."

AMPTHILL UNION.

Revd. J. A. Frere, Shillington, says, "Every "cottage ought to have three bedrooms; most of those "belonging to large proprietors have or are occupied "by small families."

Major John Brooks, Flitwick, says, "The miserable "cottage accommodation is no doubt very prejudicial "to morality, but as a rule the people are healthy "and the population steadily on the increase."

Rev. G. Renaud, Silsoe: "It is of immense importance."

BIGGLESWADE UNION.

John Harvey, Esq., Ickwell Bury, says, "It is the "most serious question of all, and I fear until something like decent accommodation is provided, all "efforts to educate or lessen the habits of intoxication will, to quite one half their extent, be frustrated."

Rev. R. F. Scott, Arlesey, says, "When families "are large and bedrooms not sufficient, the consequence too often is gross immorality."

LUTON UNION.

Lionel Ames, Esq., East Hyde, says, "No cottage "where a family is intended to live should have less "than three bedrooms."

CIRCULAR QUESTIONS.

31. How many cottages per hundred acres are considered sufficient for the accommodation of persons employed on land in your parish?

36 circulars give no answer.

Where the cultivation is described as chiefly arable,—

1 witness says	2
2 witnesses say	2½
2 „ „	2½ to 3
5 „ „	3
3 „ „	3½
9 „ „	4
1 witness says	4½
1 „ „	5

Where the cultivation is described as mixed, or half arable,—

2 witnesses say	2
1 witness says	2½
6 witnesses say	3
4 „ „	3½
9 „ „	4
1 witness says	4½
2 witnesses say	5

Bedfordshire.

Mr. Culley.

f.

Where the cultivation is described as chiefly pasture,—

1 witness says - - - - 2
1 „ „ - - - - 2½
3 witnesses say - - - - 3

Circular Questions.

32. Is there that proportion of cottages in the parish ?
33. If not, what is the proportion ?

40 circulars give no answer.
36 „ answer "Yes," or, "Yes, and more."
4 „ „ "Nearly so."
9 „ „ "No."

Rev. J. Clegg, Toddington, says, "Toddington is "overcrowded with cottages."

Circular Questions.

34. Are the cottages conveniently situated with respect to (*i.e.* not more than a mile from) the farms on which the work is to be done ?

38 circulars give no answer.
40 „ answer "Yes."
6 „ „ "Generally."
4 „ „ "No," or "Not generally."

Circular Questions.

35. Is there a sufficient number of cottages with two bedrooms, or three bedrooms, and a sitting-room, for the larger families ?

36 circulars give no answer.
30 „ answer "Yes," or "Nearly."
19 „ „ "No," or "Certainly not."

Others answer as follows :—

Woburn Union.

Rev. B. C. Smith, Hulcot and Salford, says, "Most "of the cottages have two bedrooms, scarcely one has "three.

Rev. H. Cobbe, Milton Bryant, says, "Hardly : "eight or nine require a third bedroom for decency."

Ampthill Union.

Rev. A. Browne, Flitton, says, "Few cottages have "more than two bedrooms, some with one one, but "the number of all sorts appears to be adequate to "local wants."

Rev. A. J. Frere, Shillington, says, "There is a "want of three bedroom cottages for the larger "families."

Mr. Henry Trethewy, Silsoe, says, "Most of the "cottages have three bedrooms."

Circular Questions.

36. Are the cottages crowded, either with members of the family or with lodgers ?

40 circulars give no answer.
27 witnesses say "No."
6 „ „ "With members of the family."
5 „ „ "Yes."
4 „ „ "Some are."
2 „ „ "A few of them."
1 „ „ "Not as a rule."
1 „ „ "Not generally."
1 „ „ "Very rarely."
1 „ „ "A considerable portion of "them."

Others answer as follows :—

Bedford Union.

Mr. William Golding, Biddenham, says, "No "lodgers are allowed ; after all the children are "grown up or have finally left the cottage, the "parents are allowed to take as lodgers one of their "married children."

Biggleswade Union.

John Harvey, Esq., Ickwell Bury, says, "Hamlets "of Upper and Lower Caldecote very much crowded "with both."

Circular Questions.

7. Give a general description of the cottages in your parish in respect of,—1. Construction (including size of rooms, ventilation, and drainage). 2. Accommodation (including number of rooms in proportion to the family, water supply, garden, outhouses, &c.) 3. Ownership ; *i.e.*, whether by landowner, or by tradesmen with whom the tenants are obliged to deal, or by other person or persons. 4. Rent.

The answers to this question will be found in the general evidence at the beginning of the evidence from each parish. The following summary will however indicate the bearing of the evidence.

1. Rooms in old cottages are small and low.

Cottage rooms vary from 10 ft. by 8 ft. to 12 ft. by 12 ft., for both old and new.

Ventilation is generally stopped by the occupier.

Artificial drainages very unusual.

2 & 3. In about half of 55 parishes the cottages are described as good, fairly good, or generally good, in all of these, except one, in which the cottages belong to small proprietors, the cottage property belongs, either altogether or in part, to chief landowners. In the remaining half of the parishes described the cottages are either mixed bad and good, or generally bad, and in these cases the ownership is generally described as, various, or, chiefly small proprietors, or it is said that many cottages are built on the waste, and belong to occupiers, in which last case they are always described as bad.

The water supply is only described as bad in four parishes.

Except where they belong to chief landowners, and in some cases then, the cottages are generally described as lacking accommodation necessary for a family. Where the cottages belong to chief landowners sufficient outhouses are generally provided, but not always ; the cottages built on speculation belonging to small proprietors very deficient in outhouses. In only two cases are the occupants of cottages supposed to have to deal with the owners who are tradesmen. Gardens will be found dealt with in general evidence under the head of allotment system. Where gardens do not exist many landowners provide allotments at moderate rents, even where the cottage property does not belong to them in some cases. Gardens, however, are much required in some of the larger villages.

4. Rent varies from 1*s.* to 2*s.* 6*d.* per week, being highest in such towns as Biggleswade, and lowest, in proportion to the accommodation, where the cottages belong to the chief landowners.

Circular Questions III.

38. If there is deficient accommodation, is any progress being made towards increasing it ?

72 circulars give no answer.
4 witnesses say "No."
1 „ says "Some progress."
1 „ „ "Little or none."
2 „ „ "Better cottage accommodation is being provided."
2 „ say "Cottages are being built, but not such as should be built."

Others answer as follows:—

Woburn Union.

The Rev. H. M. Erskine, Aspley Guise, says, "A "number of cottages have been built during the last "two or three years."

Mr. J. W. Foll, Harlington, "Some cottages in "course of erection."
Mr. W. W. Kilpin, Bickerings Park, says, "Replacing old by new."
Rev. James M. Hamiton, Chalgrave, says, "All the "cottages recently built have been by a tradesman "and a farmer."
Rev. H. Cobbe, Milton Bryant, says, "Yes. Seven "cottages recently built; five enlarged; and two "about to be built."

BEDFORD UNION.

Rev. R. P. Bent, Melchborne, says, "Of late the "number of cottages has decreased."
Mr. Thomas James, Cople, says, "The Duke of Bedford is replacing old cottages by new yearly."

AMPTHILL UNION.

Rev. H. H. Birley says, "The cottage accommodation is decidedly in course of improvement."

CIRCULAR QUESTIONS 39.

39. Is the Union Chargeability Act (28 & 29 Vict. c. 79, March 1866) having any effect in causing an increase of cottage accommodation?

68 circulars give no answer.
16 witnesses say "No."
2 „ „ "None at present."
1 „ „ "To some extent."
1 „ „ "This will doubtless cause improvements to be made."

Others answer as follow:—

AMPTHILL UNION.

Rev. H. H. Birley, Cranfield, says, "It is more "likely in this parish as many of our cottagers go to "their work in other smaller parishes."

BIGGLESWADE UNION.

John Harvey, Esq., Ickwell, Bury, says, "not at "present, but having had two close parishes adjoining "has greatly tended to cause the present want of "cottages."

CIRCULAR QUESTIONS.—40.

40. By the Act 27 & 28 Vict. c. 114., July 1864, the Enclosure Commissioners are authorized to advance public money for the improvement of land, including, by s. 9, "The erection of "labourers' cottages, * * and the improve- "ment of and addition to labourers' cottages." Have you any remarks to make upon this Act in regard to any additional facilities, or any reduction of cost, that might cause greater progress to be made in supplying the want of good cottages?

Of 90 circulars returned for Bedfordshire 86 give no answer.

Others answer as follows:—

BEDFORD UNION.

The Rev. R. N. Durrant, Risely, says, "The same "scheme as that adopted in the administration of "'Queen Anne's Bounty Fund' for the erection of "Parsonages might aid to provide better cottages. "The Commissioners should advance to labourers "themselves and others the amount needed for the "erection of good cottages, plans of which should be "submitted for their approval. The loan to be by "30 annual instalments with interest at 4 per cent."
Mr. William Golding, Biddenham, "I consider "this a most beneficial act for the improvement of "landed property."

AMPTHILL UNION.

Mr. Henry Trethewy, Silsoe, says, "I am of opinion "that the act referred to may be of great use in some "localities."
The Rev. W. C. Campion, landowner, Westoning, says, "Where entails exist it is desirable that power "should be given to raise money with as great facility "and upon as easy terms as possible, a loan should "not be hampered with many conditions."

CIRCULAR QUESTIONS 41.

41. Can you suggest any mode by which good cottage accommodation could be procured on self-supporting terms and involving no disadvantage to the tenant?

77 Circulars give no answer.
4 witnesses say "No."
1 witness says "Impossible."

Others answer as follow:—

WOBURN UNION.

Rev. B. C. Smith, Holcut and Salford, says, "My "own case in Salford is hopeless as long as the pro- "perty continues to be leasehold; the lessees cannot "be expected to build new cottages without the help "of the college (All Soul's, Oxford), or some guarantee "from the college as to tenure, which the college can- "not or will not give; the only plan would be for the "lessees and the college to work together."
Rev. Truman Tanqueray, Tingrith, says, "Cer- "tainly not; I look upon cottage property as a "necessary encumbrance upon the land, and so I am "sure will all find who build cottages as an invest- "ment."

BEDFORD UNION.

Rev. R. N. Durrant, Risely, says, "By the addition "of ½ an acre of garden to each cottage."
Rev. H. J. Williams, Kempston, says, "One mode "of the labourer getting the ownership of a cottage "is by means of the building clubs, under which "several have been built here."
Mr. Edward Campion, Melchbourne, says, "Let "cottages be built of a more simple and plain design, "study economy in the building, attend to comfort "and convenience, and look less at the outside "appearance."
The Rev A. Browne, Flitton, says, "This is a diffi- "cult question, as building materials have to be "brought from a distance, and a cottage worthy the "name cannot be built for much short of 130*l.*, while "5*l.* rent without a garden is quite as much as the "ordinary farm labourer can conveniently give."

BIGGLESWADE UNION.

John Harvey, Esq, Ickwell Bury, says, "It is, I "fear, at the present rate of wages a simple impos- "sibility to build cottages which will pay directly "without charging an exorbitant rent, but I think "the indirect benefits make it worth a proprietor's "while, and that he will be repaid by the increased "value of the labourer's services. An allotment of "a rood of land, not too far from the cottage, is an "incalculable benefit of the cottager, having tried it "for 30 years I maintain, in spite of the dislike of "farmers, that it has no drawback."

LUNTON UNION.

Lionel Ames, Esq., East Hyde, says, "Cottage "property is not remunerative except in obtaining a

" permanent and respectable wo rk man whose family " can be properly brought up. "

CIRCULAR QUESTIONS IV. 42 and 43.

IV. As to the NUMBER of CHILDREN at SCHOOL and the NUMBERS EMPLOYED in FARM LABOUR.

42. It would be of great assistance towards forming a correct judgment upon the question of requiring some amount of school attendance in the case of children earning wages by employment in farm labour if you could furnish the Commissioners with precise information, or with an approximate estimate, relating to the points embodied in the following tables.

43. Approximate Number of Children of the Agricultural Labouring Class in attendance at Elementary Schools.

The following tables will give a summary of the information given to the Assistant Commissioner in answer to this question. The expression " Agricul- " tural Labouring Class " was always pointed out by the Assistant Commissioner, and the returns asked for as of that class only. In order to arrive at the age at which the labourers' children are usually withdrawn from school it will be necessary to use only the returns from thinly populated rural parishes, or such other parishes as are stated in the notes as having the school returns confined to the agricultural labouring class, as in some cases the school return is a return of the whole school, a considerable proportion of the elder children belonging to a class somewhat better off than the agricultural labouring class.

[a] In this parish the return is confined to the children of farm labourers.
[b] In these six rural parishes the return may be taken as confined to the agricultural labouring class. The returns were all asked for as of the agricultural labouring class, but some of them certainly represent returns of the whole school.
[c] This is only an approximation (one school putting boys and girls together, and the other only separating them as returned " on the register ").

Husborne, Crawley, and Salford being new schools could only give return for one half-year, and Milton Bryant, Potsgrove, Tingrith and Woburn are returned in summer and winter as having very much the same attendance, and are here entered as being the same in winter and summer.

B. SCHOOL RETURN.—AVERAGE ATTENDANCE in 19 PARISHES in BEDFORD UNION.

Name of Parish.	Population, Census 1861.	Acreage.	Summer. Boys. Under 10.	Summer. Boys. Between 10 and 13.	Summer. Girls. Under 10.	Summer. Girls. Between 10 and 13.	Winter. Boys. Under 10.	Winter. Boys. Between 10 and 13.	Winter. Girls. Under 10.	Winter. Girls. Between 10 and 13.

[f] Kempston -	2,191	5,160	45	32	74	80	45	32	76	83
[e] Knotting - -	185	1,724	Has been no teacher for 2 years.							
[b a] Melchbourne -	251	2,574	8	1	13	11	8	1	13	11
[b a] Oakley - -	443	1,740	18	0	13	2	18	0	13	2
[c a] Ravensden -	477	2,160	19	1	9	2	30	2	6	2
[b a] Renhold - -	513	2,165	15	11	18	18	15	11	18	8
[a] Risely - -	1,026	2,980	28	1	24	3	31	1	21	3
[a] Sharnbrook -	872	2,880	24	2	26	6	31	5	32	7
[b a] Souldrop - -	276	1,290	15	2	25	9	15	2	25	9
[a] Thurleigh -	666	3,480	20	0	8	0	20	0	8	0
Turvey - -	1,093	3,944	8	3	5	1	16	7	3	1
[d b a] Willington -	290	1,648	13	0	5	0	13	0	5	0
	12,501	49,536	415	64	384	173	428	72	366	182

[a] In these 15 parishes there is no other school.
[b] In Clapham, Melchbourne, Oakley, Renhold, Souldrop, and Willington the winter attendance is taken as the same as summer attendance.
[c] In Ravensden and Souldrop the schools are new, *i.e.*, recently erected.
[d] In Willington a new school has been erected, but is not yet opened.
[e] In Knotting there is a school, but has been no teacher for 2 years.
[f] As to Kempston, the Rev. Hy. Williams says, "In giving the number of girls in attendance at elementary schools I have "included in the return the number belonging to two schools, which meet two days a week each at different parts of the "parish. The whole number in the registers of these schools is 163 girls; they remain up to 16 or 17 years of age in some "cases. There is also an infant school under Government; No. in register, 80 boys and 50 girls; average attendance, 64 boys and 31 girls. There are three Sunday schools, Church, Wesleyan, and Independent."

(The total number of children and young persons in average attendance at day and night schools, exclusive of Sunday schools, is therefore in Kempston. (See night schools.)

Summer, Males - - 141 } 326 Winter, Males - - 198 } 388
Females - 185 } Females - 190 }

In several cases infant schools are included in these returns, as in Goldington and elsewhere.

C. SCHOOL RETURN.—RETURN of 7 PARISHES in AMPTHILL UNION.

Northill—Males, about 250.
„ Females, about 250.

Luton Union.

East Hyde—"About half."
[Note.]—*i. e.* 17 out of 55 parishes answer as above.

Circular Questions IV., 46 to 53.

46. Is there any evening school in your parish?
47. How many weeks in the year is it open?
At what periods of the year?
48. How many nights per week?
49. How many hours per night?
50. What is the number of scholars?

On the Register.		In average attendance.			
		In Summer.		In Winter.	
Under 12.	Above 12.	Under 12.	Above 12.	Under 12.	Above 12.

51. What are the subjects of instruction?
52. Do you consider that the evening school adequately supplies the deficiencies of the day school?
53. What do you find to be the principal difficulties in the way of maintaining an efficient evening school?

County of Bedford.

Out of 50 parishes in the county of Bedford for which school returns were sent to the Assistant Commissioner, 27 have evening schools, in all of which reading, writing, and arithmetic are taught; in 3 or four there is religious teaching, and in one geography is taught. In 2 parishes there are evening schools in summer for girls, viz., in Eversholt and Tingrith.

Of the 27 evening schools—
6 are open for more than 20 weeks per year.
16 are open for 20 weeks per year.
5 are open from 10 to 20 weeks per year.
2 are open for 4 nights per week.
15 „ „ 3 „ „
9 „ „ 2 „ „
1 „ „ 1 „ „
13 are open for 2 hours per night.
14 „ „ 1½ „ „

In 24 out of these 27 returns of evening schools the numbers and ages of the scholars on the register and in average attendance are given, and are as follows:—

On register.		In average attendance.	
Under 12 years	134	Under 12 years	78
Above „	722	Above „	468

On the register of the remaining three schools there are 96 scholars, with an average attendance of about 60.

Of the 23 parishes which are returned as having no evening schools, 5 have had such schools, which are now discontinued from the want of available teachers.

In answer to question 52, "Do you consider that "the evening school adequately supplies the defi- "ciencies of the day school?"
17 witnesses answer "No."
1 witness says, "No, though of great use."
2 witnesses say, "Would do if they would attend."
2 „ „ "In a great measure."
4 „ „ "Yes."

The other answers to this question are given at length.

In answer to question 53, "What do you find to "be the principal difficulties in the way of maintain- "ing an efficient evening school."
10 witnesses say, "The want of a suitable teacher."
5 „ „ "Weariness of children after work."
4 „ „ "Indifference of parents."
2 „ „ "Indifference of youths."
1 witness says, "The great number of public houses."
1 „ „ "Want of encouragement from em- "ployers."
1 „ „ "Distance they have to come."
1 „ „ "Want of money."
1 „ „ "There is no difficulty."

The other answers to this question are given at length.

Woburn Union.

Eight out of the 16 parishes in Woburn Union have night schools.
The number and age of scholars as follows:

On register.		In average attendance.	
Under 12 years	30	Under 12 years	24
Above „	219	Above „	141
Total on register	249	Total average attndce.	165

These are all the evening school scholars out of a population of 11,682 in Woburn Union.

County of Bedford.

The aggregate of 546 scholars in average attendance at evening schools for 50 parishes, of which 27 have such schools is for a population of 44,378.

Woburn Union.

The following are the other answers to questions 52 and 53.
Revd. H. M. Erskine, Aspley, says in answer to

Bedfordshire.

Mr. Culley.

f.

question 52, "No, but as a supplement to the day "school it is of very great advantage." In answer to 53, "The irregular hours at which some of the "pupils leave off work and the distance others have "to go after their day's labour."

Revd. J. M. Hamilton, Chalgrave, in answer to question 53, says, "The instruction of the children "having been greatly neglected in their earlier years "for the sake of straw plait, they are ashamed when "above 12 years old to come and begin to learn the "very rudiments of reading."

Revd. W. S. Baker, Eversholt:

52. No. The children leave the day school about 10, and are not admitted to the evening school until 12 years old.

53. The difficulty of obtaining the attendance of the boys except during the four winter months, on account of their work; and the difficulty of obtaining the attendance of the girls in daylight, except during the four summer months on account of their employments in straw plaits.

Revd. T. Tanqueray, Tingrith, in answer to question 53, "Want of inclination to attend on the part "of the people."

53. What do you find to be the principal difficulties in the way of maintaining an efficient evening school?

Rev. V. C. Smith, Husborne, Crawley: I consider that in this parish, and I believe in county parishes generally, an evening school would supply to a great degree the deficiencies of the day school, *e.g.*, in the case of those boys employed in farm labour, and those girls employed in lace making and straw plaiting, whose parents cannot afford to give up the children's earnings or pay for school. Also many who have neglected school when young and are too old for the day school, would attend an evening school. I believe a good evening school to supplement a good day school (not of course, omitting the Sunday school) would be found sufficient for the wants of agricultural parishes and sufficiently attended without having recourse to any compulsory legislation. There is no evening school in this parish, there not being any room in the parish available for the purpose of a school, except the day schoolroom. This I am prohibited from using, it being private property.

The Rev. A. B. Hamilton, Ridgmont. The opposition of the authorities on the Bedford estate is one chief difficuly, and I find it impossible to get any persons above 18 or 20 to avail themselves of the night school. I have not been distinctly ordered to discontinue the night school, but have been advised to do so. I am most unwilling to do so, as it has been very successful in some cases, and many boys who could neither read nor write two years ago can now fairly do both. I think the gang system as pursued in this parish, *i.e.* of employing very young children who are paid by the employer, not by the gang master, is very injurious to the education of the poor. Numbers of these young children are employed by the Duke of Bedford and by several tenants in this parish. They say "We have no gangs" because the children are paid and employed by the farmer, not by the gang master. "We have no boys in our school over the "age of 10, and yearly in spring we lose all boys of "from 8 to 10, as they are sent by their parents to "work in preference to school. I should be glad to "hear of some measure being passed to prevent the "occupation of such young children in these gangs, "for by no other name can I describe them."

Rev. S. F. Cumberlege, says, "The evening school "by no means supplies the deficiences of the day "school. The difficulties in the way of maintaining "an efficient evening school are: indisposition to "work, preference of other employment, attendance "at mechanics' institutes, volunteers, drum and fife "bands, &c. There are two or three lads anxious "for further education, but most having left the day "school early have lost both what they learnt and "the capacity to learn, so that at the examination of "the evening scholars last year the report of the "Government inspectors reported their attainments "to be little better generally than that of the first "class of an infant school."

Bedford Union.

Mr. Charles Howard, Biddenham, in answer to question 52, says, "Perhaps not adequately, but it is "a most useful adjunct."

In answer to question 53, *Mr. C. Howard* says, "Want of Goverment help and the consequent in-"ability to maintain a properly qualified master. "Government help being at present restricted to "those particular districts which can afford a cer-"tificated master."

Ampthill Union.

Rev. H. H. Birley, Cranfield, in answer to question 52, says, "Not adequately, though of much use."

In answer to question 53, he further says, "Boys "who have been hard at work all day have not much "mental energy left, they will read and write readily, "but unless they have had previous instruction it is "very difficult to get them to."

Rev. A. Frere, Shillington, in answer to question 53, says, "I consider the rule of the Committee of "Council, that in order to be aided the night school "must be paid for by the lads, has worked very ill in "this parish."

Rev. A. Browne, Flitton:—

52. Do you consider that the evening school adequately supplies the deficiencies of the day school?—"Certainly not to the extent desired."

53. What do you find to be the principal difficulties in the way of maintaining an efficient evening school?—"If the attendance is voluntary, the "only real obstacle is the want of appreciation "on the part of the recipients, *i.e.* the parents "as well as the scholars themselves. There is "less of this in the case of adults, but there "will always be some shortsighted individuals "who cannot be induced by any prospect of "remote advantage to forego the present earn-"ings of their children, however small, in "favour of a steady continuance at school for "at least say three or four years. The expense "of properly qualified superintendents would "be another difficulty in the way of an efficient "evening school in such a place as this."

N.B.—"There is no want of educational appliances "in this neighbourhood if only the people could be "induced to avail themselves thereof. No part of "this parish is a mile distant from one or other of "three good daily schools, but scarcely more than six "are receiving instruction at any one time in all three "of them together. In fact the only teaching that "the great majority of this parish have had is that of "the Sunday school, supplemented by an evening "school two days in the week during the winter half "year, mostly for adults, but including also a few "boys above 15 years of age, who are exercised for "1½ hour in reading, writing, and arithmetic; aver-"age attendance about 34. As it is there are few "who cannot both read and write, and some have a "tolerable notion of the common rules of arithmetic."

Circular Questions, IV. 54.

"Field keeping on Sunday."

In answer to the question, "Are any boys pre-"vented from attending church by 'field keeping' or "'bird scaring' on Sundays?" a good many wit-nesses say, "One or two;" others say, "A few at "certain seasons of the year."

The following witnesses answer more fully as follows:—

Mr. Charles Howard, occupier, Biddenham, says, "I think it a practice that cannot be too strongly "condemned. I am glad to say that in this parish "we have relays of men for this work."

Mr. George Wallis, occupier, Renbold, says, "I "never allow boys to keep the fields on the Sundays,

" as I don't think it right; I send a man with a gun " to shoot off several times in the day if the crows " are troublesome."

Mr. John Horrell, occupier, Oakley, says, " We " require one boy on each Sunday about four months " in the year, and having about five boys we have " them in turns."

Rev. A. J. Coleridge, Bromham, says, " Yes, some " few; I cannot say how many. It is a great and " unnecessary evil, as I think, and has only last " Sunday resulted in a little boy of 11 years of age " shooting himself so badly that his life was almost " despaired of; he is now in the Bedford Infirmary."

Rev. J. A. Frere, Shillington, says, " Yes, a good " many, and by horse-keeping also. My own idea is, " that in the latter case the difficulty might be met " by having the entire work (and pay) divided be- " tween two lads, where now one is retained for the " work, and giving them the alternate Sundays free."

Rev. T. Tanqueray, Tingrith, says, " I cannot " think of more than three who go 'crow keeping;' " these three have not attended church service during " that time. I have known them come sometimes to " church once of the Sunday when the parent has " taken the 'crow keeping.' "

SUMMARY OF ANSWERS TO CIRCULARS OF INQUIRY FROM BUCKS.

The following summary of answers given in circulars of inquiry is from 82 such circulars returned from 74 parishes in the county of Buckingham, of which—

41 were returned by clergymen of parishes.
41 by landowners and occupiers or their agents, of whom 30 are guardians of the poor for their respective parishes.

The number of parishes in the different unions from which these returns have been received are—

In Aylesbury Union from	18 parishes.
In Thame Union from	6 "
In Winslow Union from	8 "
In Buckingham Union from	9 "
In Newport Pagnell Union from	12 "
In Leighton Buzzard Union from	2 "
In Amersham Union from	4 "
In Wycombe Union from	10 "
In Eton Union from	5 "

The circulars from one parish in Aylesbury Union and one in Eton Union arrived just too late to be inserted in the summary.

Circular Questions I.

As to Employment in Private Gangs.

Circulars either give no answer to the questions under this head, or answer that gangs are not employed. From only one parish is there a return of a private gang, viz., from Aston Clinton, of which the *Rev. C. W. W. Eyton* says, in answer to questions, " A gang of 15 boys, whose average age is 10½ years, " is employed in this parish in spring, summer, and " autumn in destroying weeds, thinning root crops, " &c.; none of them have to come more than 1½ miles " to their work. The hours of work are from 6 a.m. " to 6 p.m., 1½ hours being allowed for meals. There " is nothing injurious to the health of these boys " arising from the nature of their employment, nor " are they ill-treated in any way. The state of " education among them is bad."

Mr. W. Hawkins, Emberton, Newport Pagnell, under the head of general employment, says, " I " sometimes have from 8 to 10 children from 8 to 12 " years of age, pulling up charlock out of the barley " generally, and one old man to look after them; they " only work while the weather is fine, and are paid " 3*d.* each per day. There are no organized gangs " in this neighbourhood."

Circular Questions II. (*a.*) (*b.*) (*c.*)

II. As to the Employment of Children, Young Persons, and Women not in Gangs, either "Public" or "Private," but individually or in company with a few other Persons.

22. Inasmuch as on every farm there will probably be children, young persons, and women both permanently and occasionally employed, not in gangs either "public" or "private," but individually or with a few other persons; and as these could not be omitted from any protective legislation which might be thought desirable and practicable on behalf of those employed in "public" or "private" gangs, if the circumstances of their employment should be found to require it, be kind enough to answer, as fully as you are able, the following questions:—

(*a.*) What is the number of children, young persons, and women employed in agricultural labour singly or with a few others
In your parish?
On your farm?

(*b.*) Give as nearly as you can the following particulars as to the number and age of such persons so employed.

Males.					Females.					
Under 8.	Between 8 and 10.	Between 10 and 13.	Between 13 and 18.	Total Males.	Under 8.	Between 10 and 13.	Between 13 and 18.	Over 18. Married.	Over 18. Unmarried.	Total Females.

(*c.*) In what kinds of work are they employed during the different seasons of the year?

The following summary of answers received to these questions will illustrate the nature and extent of the employment of children, young persons, and women in Buckinghamshire.

The tables include a summary of notes taken of 20 farms in the unions of Aylesbury, Thame, Winslow, Buckingham, Amersham, Wycombe, and Eton, as well the summary of answers in circulars of inquiry.

Bucks.

Mr. Culley.

Eton	610	210	820	—	—	5	10	40	55	—	—	—	—	12	5	17
Totals	4,411	4,031	8,442	—	12	42	65	295	414 of all ages.	—	—	—	—	31	11	42 of all ages.

Showing comparative number of adult and young males, and of males and females of all ages.

Boys under 12 are employed throughout the county—

In spring in bird scaring.
„ picking couch grass (or twitch).
„ pulling charlock.
„ cutting thistles.
„ potato setting.
„ attending stock.
In summer, picking couch grass.
„ weeding.
„ helping in hay-making.
„ attending stock.
In autumn, helping at harvest.
„ bird scaring.
„ pig keeping, &c.
In winter boys under 12 not so much employed, chiefly in attending to stock, helping shepherd, &c.

Boys between 12 and 18 are employed throughout the country—

In spring in couching.
„ weeding.
„ attending to stock.
„ driving teams and carts, &c.
In summer in hoeing root crops.
„ driving teams and carts, &c.
In autumn in harvest work.
„ driving carts.
„ getting up and storing roots, &c.
In winter in driving teams.
„ attending stock, &c.

Females.—There is no return of females employed in farm labour from the unions of Newport Pagnell and Leighton Buzzard.

A few women over 18 are employed in weeding in spring in Aylesbury Union.

Women over 18, most of them married, are employed in Thame Union in couching, weeding, hoeing, and planting seed in spring; in hoeing root crops, haymaking, and harvesting in summer and autumn; in thrashing in winter.

In Winslow and Buckingham Unions, as in Aylesbury, a few women are employed in weeding as well as in hay time and harvest; there is one return of girls employed weeding.

In Amersham Union very few females are employed, except in hay time and harvest.

In Wycombe Union a few girls between 13 and 18 are employed in spring, weeding.

In Eton Union women, generally married women, are employed in spring in weeding; in summer in haymaking and harvesting; in autumn in harvesting and raising and trimming roots, &c.; in winter in trimming roots and thrashing.

There is no return of females under 18 as employed in farm labour in Eton Union.

The following witnesses, speaking of the employment of children, young persons, and women, say:—

Bucks.
Mr. Culley.
f.

Aylesbury Union.

Mr. E. Stone, Wotton, says, "Women in spring "and summer only, weeding and haymaking."

Rev. T. J. Williams, Waddesdon, "A good many "lads out of work in winter."

Rev. A. Isham, Weston Turville, says, "Women "are not employed except in hay time and harvest;" and the same answer is given from five or six parishes.

Mr. J. M. Farnborough, Dinton, "I employ one "or two women occasionally, couching, in spring."*

Mr. W. Bell, Bierton, "I do not employ any "females; occasionally a man's wife comes to help "him in piece-work, especially in harvest."*

Thame Union.

Rev. Jas. Statter, Worminghall, says of female labour, "Occasionally scutching (*i.e.*, twitching) in "winter."

Rev. E. Boys, Oakley, says of females, "At home "in winter."

Rev. W. N. Jackson, Kingsey, says of winter, "Out on the land very little."

Mr. Thos. Fuller, Ickford,—"I employ seven "married women, and two girls between 15 and 18. "They hoe wheat, couch, and clean crops generally, "and single mangold and plant beans; they also "work in hay time and harvest. They usually work "from 9 a.m. till 4 p.m., and hoeing by piece-work "they earn from 1*s.* to 1*s.* 6*d.* per day; planting "beans by the bushel they earn 10*d.* or 11*d.* per day, "planting about half a bushel."*

Mr. Henry Fuller, Ickford,—"I employ six women, "of whom five are married; they work from 9 a.m. "till 4 p.m., and are paid by the day, 9*d.*, *i.e.*, for six "hour's work, as they rest an hour for dinner."

Mr. Freeman, Chilton,—"Pays two women 4*s.* per "week for weeding, 5*s.* to 6*s.* in hay time and har-"vest, and 6*s.* for untying sheaves on scaffold thrash-"ing."*

Winslow Union.

Mr. Wm. Hinton, for Three Claydons, says, "Very "few females employed in field labour, and boys, ex-"cept with plough, not employed much in winter."

Buckingham Union.

Mr. Thos. Attwood, Leckhamstead,—"Women are "employed only a few weeks in summer months."

Newport Pagnell Union.

Mr. Wm. Hawkins, Emberton, says, "There are "no females employed on the land in this neighbour-"hood, and labour being plentiful very few young "children, except in weeding seasons, say from "middle of April to middle of May, and again from "middle of September to middle of October. I some-"times have 8 or 10 children from 8 to 12 years old "pulling up charlock in the barley in April generally; "an old man looks after them."

[*Note.*—These boys are not entered in Mr. Hawkins' return of children and young persons employed.]

Rev. J. P. Langley, Olney, says, "There are a few "boys, perhaps eight between 7 and 10, who occa-"sionally go twitching or bird keeping, and at other "times come to school."

Wycombe Union.

Mr. Chas. Brown, Princes Risborough,—"A few "girls weeding and haymaking."

Eton Union.

Mr. Joseph Trumper, Burnham,—"I employ "women couching and weeding, but not in hay time."

Mr. R. Webster, Hitcham,—"I employ three women "in couching and weeding, in harvest, and in winter "in trimming roots for cattle and sheep."

Mr. Charles Cantrell, Datchett, —"Employs "women. In spring in weeding corn; in summer "in haymaking and harvest; in autumn in raising "and trimming mangold and swedes by piece-work; "in winter only occasionally with thrashing ma-"chine."

* From Assistant Commissioner's note book.

Circular Questions II. 22. (*d.*)

(*d.*) Do they live on or near the farms on which they work? If not, how far have they to come from their homes to their daily work?

24 circulars give no answer.
50 „ answer "yes" or "near."
4 „ ½ mile to 1½ miles.

Others as follows:—

Fleet Marston, Aylesbury.—"Most have two miles "to come."

Oving, Aylesbury.—"Some go two miles."

Weston Turville, Aylesbury.—"Three farms are "two miles from village."

Lavendon, Newport Pagnell.—"One to three miles."

Circular Questions II. 22. (*e.*)

(*e.*) What are their usual hours of work upon the land?

The answers to this question vary,—for males under 18 from 5 a.m. and 6 p.m. to 7 a.m. and 5 p.m. in summer, and from 6.30 a.m. and 5.30 p.m. to 7.30 a.m. and 4 p.m. for winter; and for females from 8 a.m. and 6 p.m. to 9 a.m. and 4 p.m.

In the unions of Newport Pagnell and Leighton Buzzard the most usual answer is 6 a.m. to 6 p.m. in summer, and 7 a.m. to 5 p.m. in winter for males.

In the other unions the usual answer is 6 a.m. to 5 p.m. in summer, 7 a.m. to 5 p.m. in winter for males.

In Thame and Eton Unions the hours of work for women are,—

In Thame 8 or 9 a.m. to 4 p.m.
In Eton 8 a.m. to 4 p.m. or 5 p.m.

None of these hours refer to hay-time or harvest.

Circular Questions II. 22. (*g.*)

(*g.*) What are the times allowed for meals?

Of 70 circulars giving answers to this question—

43 answer 1½ hours.
13 „ 1 hour.
14 „ 1¾ to 2 hours.

The meaning of these answers is, that where labourers begin work at 6 a.m. the usual time allowed for meals is 1½ hours, ½ an hour for breakfast and the hour for dinner; that where labourers begin work at 7 a.m. (or, in the case of women, at 8 a.m.) no time is allowed for breakfast, which is taken before beginning work, the usual one hour being allowed for dinner; and that in certain kinds of work a rest of 15 minutes is given at 10 a.m. and 4 p.m.

Circular Questions II. 22. (*h.*)

(*h.*) Does the demand upon their physical powers injuriously affect their health and constitution?

17 circulars give no answer.
60 circulars answer "No."
3 circulars answer "That farm work improves their health."
1 circular answers "Apparently not till after 50 years of age, when it does."
1 circular answers "No, they are well paid and well fed."

Circular Questions II. 22. (*i.*)

(*i.*) Are the young or the females, whether young or grown up, subject to any ill-treatment?

Only 32 circulars answer this question, and all say "No."

Circular Questions II. 22 (*j.*)

(*j.*) Do any special employments injuriously affect females or the young generally?

32 circulars give no answer.
32 „ answer "No."
9 „ of which eight are from clergymen of parishes, answer "Straw plaiting."
7 „ from clergymen of parishes answer "Lace making."

Others answer as follows:—

Rev. E. T. Drake, Amersham, "Straw plaiting "both morally and physically."

Rev. R. C. Green, Broughton, "I think the health "and agility and mental powers of many would be "better if they had not so many hours work."

Circular Questions II. 22. (*k.*)

(*k.*) Have you any observations to make as to the effect of the employment of females in agriculture on morals and on their proper training for domestic duties?

51 circulars give no answer.
10 „ answer that females are not so employed.
3 „ answer that such employment is not injurious.

The Ven. Archdeacon Bickersteth, D.D., Aylesbury, says, "I do not think that the *occasional* "employment of females in agriculture is objectionable. The *habitual* employment of them is in my "judgment degrading and hurtful."

The Rev. H. W. G. Armstrong, Bierton, says, "When mothers are much in the field, both their "morals, and those of their families, with home "comforts for the husband, are likely to suffer."

The Rev. T. J. Williams, Waddesdon, says, "I "have a very strong conviction that both morally, "and as affecting their fitness for being good wives "and mothers, such employment is very bad."

The Rev. W. H. Young, Oving, says, "We have "no female agricultural labour, but a good deal of "straw plaiting, which is quite as great a hindrance "to education, and in my opinion more demoralizing."

Thame Union.

The Rev. B. Morland, Shabbington, says, "I "think that females employed constantly in field "labour become untidy, and, generally speaking, "rough in manner, and their absence causes confusion in domestic affairs."

Rev. Jas. Statter, Worminghall, says, "The "number of young females is so small that it is "difficult to say what effect is produced. I don't "observe that they turn out worse or make worse "servants than those who leave home early."

Rev. Jas. Hemsted, Ickford,—"I think the effect "on the women themselves is bad, but it is still "worse as regards their children who are badly "neglected. The standard of morals is very low."

Winslow Union.

Rev. A. M. Preston, Winslow, says, "When "working with boys they are generally rude and "impudent."

Buckingham Union.

Mr. Thos. Barge, Hillesden,—"I hold farms in "three parishes, and I don't remember ever having a "girl apply to me for work. I occasionally employ "a few adult women in hay time and harvest. I "think the employment of young girls is objectionable."

Newport Pagnell Union.

Reginald Walpole, Esq., J.P., says, "Agricultural labour has no evil effect morally, nor do the "proper training for domestic duties, but lace making "has. Only adult women as a rule are ever employed "on farms here."

Amersham Union.

Rev. E. T. Drake, Amersham,—"Some females "are employed in hay-making and harvesting; it "does them good physically, and no harm morally."

Mr. John Verge Howey, Coleshill, says, "In this "hamlet my experience leaves me to think that the "morals of our young girls are good, when at an "early age they can be induced to go into domestic "service, the reverse when brought up at home "platting or casual field labour."

Mr. F. C. Rickards, Manor House, Chenies, says, "I consider the employment of females in agriculture to be very prejudicial to their morals, and to "render them unfit for domestic duties."

Mr. Jas. Gurney, Chalfont, St. Giles, says, "The "effect on females when married of constant field "work is generally injurious to the comfort of their "homes, and the proper care of their children."

Wycombe Union.

Rev. F. A. Faber, Saunderton, says, "We have "thought it makes them bold, but it is better for "their health than close sitting at the lace pillow."

Rev. W. E. Partridge, Horsendon, says, "Evidently "agricultural work is less injurious to morals and "domestic duties than lace work or straw plaiting. "There is not much field work for females in this "parish except in hay-time and harvest."

Mr. H. Gibbins, Bledlow, says, "I don't think "their employment is so injurious to morals as the "want of better cottage accommodation, where male "and female, old and young, sleep in one room."

Eton Union.

Mr. C. Cantrell, Datchett, says, "It would be far "better if the young unmarried women could be "induced to go to service instead of field work, but "in many cases this is difficult to do. With regard "to married women with large families, I presume "they can find sufficient occupation at home, but "the temptation of earning a few extra shillings to "buy clothes, &c. is very strong. Moreover the "farmers are often desirous of employing them, and "would often be inconvenienced by their absence."

Circular Questions II. 22. (*l.*)

(*l.*) Taking into consideration the demand for labour in your parish and neighbourhood, and the pecuniary resources of the agricultural labourers, are you prepared to recommend that any restriction should be placed on the employment of females in field work?

If so, would you limit the restriction to females of a defined age, or would you prohibit female labour in the fields altogether, excepting at hay and corn harvest?

56 circulars give no answer.
10 „ answer "No" to the first part of this question.
3 „ „ "Yes."
3 „ „ "That no females are employed."

Others answer as follows:—

Aylesbury Union.

The Ven. Archdeacon Bickersteth, D.D., says, "Females are so little employed in field work in this "district that no restriction appears to be required."

Rev. H. W. G. Armstrong, Bierton, says, "The "wages are not high, and it is an opinion that they "must be supplemented by female and child labour. "If it were practicable to avoid I consider that no "mother should be employed in the field."

"As above, *if any plan* to that effect could be arranged it would be most desirable that female labour in the fields should be altogether prohibited, hay and corn harvest *not* excepted."

Thame Union.

Rev. J. Statter, Worminghall, says, "Considering "the rate of wages of the labourers generally, I think "it would be a great hardship to place any restriction "on the employment of females in this parish.

Bucks.

Mr. Culley.

f.

Rev. B. Morland, Shabbington,—"I cannot see "how at present a woman can be prevented from "working in the field if she has no family, I do not "see that the country suffers from her so doing; on "the other hand, if she has a family she then re- "quires the income which cannot be made up to her "in any other way."

"There are but few who do go out to field-work, excepting for hay and corn harvest, and therefore my opinion is that at present things had be better left as they are."

BUCKINGHAM UNION.

Rev. M. W. Davis, Maids Moreton,—"I should be "in favour of prohibiting field labour for females "altogether, except in hay and corn harvest."

NEWPORT PAGNELL UNION.

Mr. W. Whitworth, Willen, occupier,—"I think "females should only be employed in hay-time and "harvest, when the master is generally present."

Mr. John Yorke, occupier, Olney,—Answers as Mr. Whitworth.

AMERSHAM UNION.

Mr. Wm. Crouch, Amersham,—"I would prohibit "the employment of females under 16 years of age."

Mr. John Werge Howey, Coleshill, says, "No. "Field labour is the only opportunity females have "of earning a little money; young girls at plaiting, "old women at lace making, 12 hours' work, earning "8*d.* per day. Field labour strengthens their con- "stitution, earning 1*s.* to 1*s.* 6*d.* per day."

"No. They earn twice the amount at field labour, and are very anxious to get work, but won't ex- pose themselves to the weather, as in the northern counties."

WYCOMBE UNION.

Mr. H. Gibbins, Bledlow, says, "I think the re- "striction should only extend to females under 10 "years."

CIRCULAR QUESTIONS II. 22. (*m.*)

(*m.*) 1. Taking into consideration the demand for labour in your parish and neighbourhood, and the pecuniary resources of the agricultural labourers, are you prepared to recommend that any restriction should be placed upon the age at which boys should be permitted to be employed in farm labour?

(*m.*) 2. If so, please to state the age below which you would recommend that boys should not be so employed.

To first part of question—
18 circulars answer "No."
12 „ „ "Yes."

To second part of question—
5 circulars answer "Not under 8 years."
3 „ „ „ 9 years.
1 „ „ „ 9 or 10 years.
14 „ „ „ 10 years.
1 „ „ „ 10 or 11 years.
1 „ „ „ 12 years.
1 „ „ „ 13 years."

BUCKINGHAM UNION.

Mr. Thomas Barge, occupier, says, "No; in some "cases it would be a great hardship on the parents."

Mr. Ridgway, occupier, says, "Not under 10, except "for a few weeks bird keeping"

NEWPORT PAGNELL UNION.

Mr. W. Hawkins, Emberton, occupier, says, "I "find there are at this date (July) but two boys "under 10 at work in this parish, so that a restriction "to 10 years would make very little difference."

CIRCULAR QUESTIONS II. 22. (*n.*)

(*n.*) Do you see reason for recommending that the distance to which children and young persons should be allowed to go to work in farm labour should be restricted according to age?

If you should think some restriction of distance in reference to age desirable, do you approve of the following, which assumes that boys under 8 years of age would not be allowed to be employed at all?

No boy of 8 years of age and under - - 10 No girl under the age of - 13	To be taken to work beyond a distance from his or her home of	1 mile.
No boy of 10 years of age and under - 11		2 miles.
No boy of 11 „ „ - 12		
No boy of 12 „ „ - 13		
No young person of 13 „ „ - 14		3 miles.
No young person of 14 „ „ - 15		
No young person of 15 „ „ - 16		4 miles.
No young person of 16 „ „ - 17		
No young person of 17 „ „ - 18		

Have you any modification to propose in the above table?

47 circulars give no answer.
19 „ answer "No."
8 „ „ "Yes;" and generally approve the table.

Other circulars answer as follows:—

AYLESBURY UNION.

Rev. A. Isham, says, "Fourteen should come under "the category of 2 miles, and 3 miles ought to be the "maximum for young agricultural labourers."

Mr. J. K. Fowler, says, "I think neither child nor "grown-up person should have to go 3 miles to their "work."

WINSLOW UNION.

Mr. Wm. Neal, occupier, says, "No boy under 10 "should be employed; lads of 16 I would not attempt "to control."

BUCKINGHAM UNION.

Rev. R. P. Greaves, Tingewick, says, "Boys are "of little use here under 11; up to 14 they should "not have to go more than two miles to their work; "lads under 18 ought not to have to walk even three "miles to their work."

Mr. Thomas Attwood, occupier, Leckhampstead, says, "I consider 10 years of age sufficiently early "for any child to go out to field labour, for the fol- "lowing reasons, viz., the development of his strength "and to allow time for education."

NEWPORT PAGNELL UNION.

R. Walpole, Esq., J.P., says, "I object to these "distances even for grown men, the walk home at "night after the day's labour must unfit them for "their next day's work and lessen their value to their "employer."

AMERSHAM UNION.

Mr. J. Werge Howey, says, "Two miles is suffi- "cient at any age."

WYCOMBE UNION.

Rev. W. Partridge, says, "One mile each, being "for all ages, would be more desirable."

ETON UNION.

Rev. S. F. Marshall, says, "The table should be "lessened throughout by one mile."

CIRCULAR QUESTIONS II. 22. (*o.*)

(*o.*) Do you see reason for recommending that any restriction should be placed upon the hours of work of children and young persons employed in agriculture; and if so, what amount of restriction would you propose?

40 circulars give no anwser.
20 „ answer "No."
1 „ „ 8 hours.
1 „ „ 10 hours.

Other circulars answer as follows:—

AYLESBURY UNION.

Rev. J. Thornton, Aston Abbots, says, "I think "that all young persons ought to have the opportunity of being educated, which at present they "have not, and young children, especially females, "are cruelly confined to plaiting, to the great injury of their health and neglect of mental training. "*Compulsory education* will alone remedy the evil."

Rev. A. Isham, Weston Turville, says, "Restriction is required to bring them under education."

Rev. R. C. Burton, Cublington, says, "Children "should be obliged to attend school for a certain "number of days in the year."

THAME UNION.

Rev. B. Morland, Shabbington, says, "When "young persons go to work I think they must remain "out the regular hours; for instance, a boy at plough "must remain with the team until they leave off "work."

BUCKINGHAM UNION.

Rev. M. W. Davies, Maids Moreton, says, "In "reply to the above questions, I have tried by gentle "compulsion to keep all the children at school up to "the age of 9. I could not do so any longer, out of "regard for the parents' resources. They would "not, *as a rule, allow their children* to go to work "too far from home, nor to work above their strength. "I have found the parents generally very careful of "their children."

Rev. H. Drummond, Leckhampstead, says, "I "think some restriction very desirable. The 'usual "'hours' are sometimes completely disregarded, and "I hear of little boys under 10 kept from between "5 and 6 a.m. to 11 p.m."

Mr. John Linnell, Addington, says, "Very little, "as I consider that the discipline they are under "when at work is beneficial, that the habit of labour "is best acquired when young, that they are far "better at work than being contaminated by the "evil talk in the village street, and I do not think it "possible for persons with families of six or eight in "number to provide sufficient food for them without "their earnings, particularly while provisions are as "dear as now."

NEWPORT PAGNELL UNION.

Mr. J. Yorke, occupier, Olney, says, "I see none, "because there are many light works to which the "time of boys in the afternoons is given that fit "them for future life."

Mr. W. Hawkins, Emberton, occupier, says, "Boys "over 10 who attend evening school might with "little inconvenience leave work a little earlier, say "4 in the winter months."

AMERSHAM UNION.

Mr. C. Metcalfe, Latimer, says, "No boy or girl "should work more than 10 hours a day."

WYCOMBE UNION.

Rev. W. G. Partridge, says, "Women from 8 a.m. "to 5 p.m. except in hay-time and harvest."

Mr. Chas. Brown, landowner and occupier, says, "The hours should be from 6 to 4."

Mr. Henry Gibbins, landowner and occupier, says, "For children under 10 years of age, 8 hours in "summer, 6 hours in winter. No limit for older "persons."

Mr. Owen Peel Wethered, says, "I would apply "the provisions of the Factory Act as to hours as "nearly as possible."

ETON UNION.

Rev. S. F. Marshall, says, "I am of opinion that "the hours should be restricted to 8 hours under 14, "and 10 under 17 years of age."

CIRCULAR QUESTIONS III. 23 to 26

III. AS TO REQUIRING SOME AMOUNT OF SCHOOL ATTENDANCE IN THE CASE OF CHILDREN EARNING WAGES BY EMPLOYMENT IN FARM LABOUR.

23. The Commissioners being instructed to inquire to what extent, and with what modifications the principles of the Factory Acts can be adopted in reference to children employed in agriculture, "especially with a view to the "better education of such children," your opinion is invited on the following points:—

24. The three modes by which the prescribed amount of school attendance of children employed in trades and manufactures is obtained are—

By the Factory (7 Vict. c. 15. ss. 31–9).
1. By half day at school and half day at work.
2. By alternate whole days at school and whole days at work.

By the Printworks Act (10 & 11 Vict. c. 70. ss. 2, 3, 26).
3. By school attendance for a certain number of hours during the preceding six months.

26. You are requested to state which of such modes of enforcing some amount of school attendance would seem most applicable to the circumstances of your parish and neighbourhood; or whether a combination of one or more of them would better meet those circumstances; or whether any other mode that you might wish to suggest appears to you preferable.

Forty-three circulars give no answer.

[*Note.*—In giving the answers to this question the answers given by occupiers of land are distinguished from those given by clergymen for parishes.]

Three occupiers and one clergyman answer, none of these modes are applicable to farm labour.

Two clergymen and one occupier prefer the second mode.

Two occupiers and one clergyman consider the third mode the only one applicable, and think night-school attendance sufficient after 10 years of age.

The Ven. Archdeacon Bickersteth says, "I doubt "much whether either of the plans 1 or 2 would "answer in agricultural districts. The principle of "the Printworks Act (plan 3) might, I think, be applied with advantage with some modifications, such "as the substitution of 12 for 6 months."

Seven clergymen and four occupiers express themselves very much in the same words as Archdeacon Bickersteth, and to the same effect, most of them considering that after 10 years of age sufficient school attendance could be given in three or four winter months.

Other circulars answer as follows:—

AYLESBURY UNION.

Rev. C. Erle says, "I am unable to say what would "be the most effectual method. The boys are taken "from school when they are wanted for work, and "their education is consequently very incomplete."

Mr. John Treadwell, occupier, says, "First and "second modes totally inapplicable to farm labour. "Boys here go to night school in winter, having a "school in the village provided by the Duke of "Marlborough."

THAME UNION.

Rev. E. Boys, Oakley, says, "I would suggest the "half day at school and half day at work as preferable, and it should be compulsory. Parents keep "their children from school to work on their allotments."

Bucks.

Mr. Culley.

f.

Winslow Union.

Rev. H. F. Ralph says, "The first mode would, I "think, be best in a lace-making place."

Mr. Wm. Hinton, speaking for Three Claydons, says, "Most of the boys in these localities who do "farm work are able to go to school in the winter "months, except carters' boys, and these would not "probably be employed at all if they did not go "regularly."

Mr. W. Neal, Winslow, occupier, says, "I think "it would be immaterial to the employer whether "the boys were employed half days or whole days, "as he would have to keep double the number. In "either case it would depend more in which way the "discipline of the school could be best kept up."

Buckingham Union.

Rev. W. F. Norris says, "I have heard it suggested, "and am inclined to recommend such plan, that the "best half-time system would be effected by insisting "on school attendance for half a month, *i.e.*, the "farmer taking the boy to work for the other half, "on distinct understanding that he was at school the "first half. This would come to his employing two "boys alternately, each producing in turn his cer- "tificate from a master."

Mr. Thos. Barge, occupier, says, "The two first "modes are impracticable; boys would be useless for "either half or alternate days."

Mr. Thos. Attwood, occupier, says, "I consider "every facility should be given for the education of "the children until they reach the age of 10 years, "as by that time, under the training of a competent "person, they have every opportunity of acquiring "sufficient knowledge to fit them for the duties of "their station in life."

Newport Pagnell Union.

Rev. J. W. Irving says, "I feel a difficulty in "answering this question after consulting with my "farmers. I should prefer the alternate day system."

Rev. R. C. Green says, "We have some labourers "with eight or nine children, and I don't see how "they are to feed their families unless they can put "them out to work early. In such cases we lose the "girls often at 7 or 8, and they learn lace; the boys "at 8 or 8½. The most *suitable* mode of enforcing "education here for boys would be to require attend- "ance regularly during the six winter months, but "I do not know whether it is possible, or, in the long "run, desirable. *See* a pamphlet by Rev. H. Brand- "reth, 'Wastethrifts and Workmen,' Longmans, "1868. The case of girls is different; the half day "system would be far best for them."

R. Walpole, Esq., J.P. and occupier,—"I prefer "No. 3, as interfering less than 1 and 2 with the "occasional and intermittent work required of boys; "but I do not see how the rule is to be enforced on "the parents. No bench of magistrates would en- "force a penalty, and the rule does not touch em- "ployers. If it can be enforced it should apply to "the winter months and to boys under 11 and girls "under 15. Night schools are very useful, and "ought to be encouraged by Government, and grants "should be given to both day and night schools, where "the results are satisfactory, whether the teacher is "certificated or not."

W. G. Duncan, Esq., J.P., landowner and occupier, and Chairman of Board of Guardians, says, "I con- "sider half at school and half at work simply ridicu- "lous; alternate days at school and work not prac- "ticable. Educate the children up to 9 years of age, "and then they will have learnt to read and write "sufficiently to educate themselves afterwards."

Mr. W. Whitworth, occupier, says, "I think if "the Poor Law Board were *at once* to send a circular "to every union recommending the guardians to "cease giving out-door relief to any orphan children, "or to widows who neglected to send their children "to school if there is one convenient, and also recom- "mend them to pay their schooling, it would have "a very beneficial effect on the labouring poor."

Mr. John Yorke, occupier, Olney, says, "I think "night schools are best calculated to meet the con- "dition of the boys."

Amersham Union.

Mr. John Werge Howey, Coleshill, says, "In this "hamlet straw platting of mere children is a source "of great benefit to poor labourers. Allowing chil- "dren to learn lessons half the day, and platting the "other half, would be some inducement to send them "to school."

Mr. Jas. Gurney, occupier, says, "I beg to suggest "that under 10 years of age it might be well to place "restrictions on their employment during four winter "months."

Wycombe Union.

Mr. H. Gibbins, landowner and occupier, says, "Under 10 years parents should be compelled to "send children to a school; above that age a certain "amount of attendance at school should be enforced "up to the age of 13 years by certificate."

Eton Union.

Rev C. Whateley says, "I do not see how any "restrictions can be made. It would be hard on a "father of a large family to prevent his obtaining all "he could by his boys' earnings."

Mr. C. S. Cantrell, Datchett,—"In my own neigh- "bourhood I think boys might be compelled to attend "school during the winter months, when farm work "is slack, but in the spring, summer, and autumn "months their earnings, say 2*s.* or 3*s.* per week, con- "tribute materially to aid the family income, and it "will be impossible to keep the boys at school. "Evening schools in winter are very beneficial to "the boys and young men."

Circular Questions III. 27.

27. How far is the school attendance affected by the distance that the children have to go to school?

19 circulars
47 „ from parishes say "Not at all."
3 „ „ „ "Very little."

Others answer as follows:—

Aylesbury Union.

Mr. E. Bennett, occupier in a hamlet of Wingrave, says, "About two miles to Wingrave. A good many "don't go."

Rev. C. Shilson, Halton,—"A good many come "from a distance."

Mr. W. Mason, Fleet Marston, says,—"No chil- "dren live in the parish."

Rev. R. C. Burton, Cublington,—"There is no "parish school in the parish."

Rev. H. W. G. Armstrong, Bierton,—"The chil- "dren in the hamlets are often prevented by rough "weather in winter."

Buckingham Union.

Mr. Thomas Barge, Hillesden, says, "Some of the "cottages are necessarily a considerable distance "from the school. In such cases the attendance "depends on the weather."

Newport Pagnell Union.

Mr. W. G. Duncan, landowner and occupier, Brad- well, says, "Our school is in the village, and no child "has a quarter of a mile to come; but the parents "keep their children away from school on all sorts "of trumpery pretexts."

Mr. R. Walpole, J. P., Hanslope, says, "In wet "weather materially; but our parish has two ham- "lets, situated respectively half a mile and one mile "from the parish church, which is close to the school, "and these distances are detrimental in fine weather "and wet."

Mr. John Yorke, Olney, says, "The fact of the "distance must interfere much with the privilege of "their attending school."

Wycombe Union.

Rev. F. A. Faber, Saunderton, says, "In summer "not at all; in winter little children are unable to "go."

Rev. W. A. Partridge, Horsendon, says, "Parents "do not like sending their children when they have "far to go, say over a mile."

Rev. F. B. Ashley, Wooburn,—"This parish is "about six miles by three, and the attendance is "affected by weather and illness."

Mr. Owen Peel Wethered, Great Marlow,—"Only "in a very slight degree in our parish, as there are "outlying schools."

Circular Questions III. 28.

28. How far is the school attendance affected by the pecuniary resources of the parents?

19 circulars give no answer.
21 „ answer "Not at all," or to that effect.
12 „ „ "Considerably," or to that effect.
9 „ „ "Slightly" or "Somewhat."

Other answers as follows:—

Aylesbury Union.

The Ven. Archdeacon Bickersteth says,—"The "payment is very small, and, excepting in a few cases "of gross neglect or great poverty, is no impediment "in the way of the children's attendance. In the "National schools of the Aylesbury district alone "upwards of 100*l.* was paid in weekly pence in 1867."

Rev. T. J. Williams, Waddesdon,—"Very con- "siderably. During the past winter many young "men from 16 to 20 years were out of work, and the "cost of keeping them prevented the parents from "being able to pay for the younger children."

Rev. A. Isham, Weston Turville,—"Not at all as "to inability to pay school fees. But the rule is, "when the plait trade is brisk, few children at school; "when it is dull more come, but irregularly."

Rev. H. W. G. Armstrong, Bierton,—"The parents' "resources being small they send many of their chil- "dren, from 3 years of age, to straw platting schools."

Rev. J. Thornton, Aston Abbots,—"This is, of "course, a difficulty, especially in large families; but "if the men were more temperate there would be "little difficulty, since work is plentiful and wages "fair."

Mr. J. K. Fowler, Aylesbury, says, "I believe "there is not a labourer in regular work but who "could afford, if he pleased, to pay something towards "his children's schooling."

Mr. J. Henley, Dinton,—"Depends on the age of "the family."

Mr. W. Crook, Stone, says, "None at all, for when "there is a large family the charitably disposed pay "for their education generally in most agricultural "villages."

Winslow Union.

Rev. A. M. Preston, Winslow, says, "Not much in "the case of boys, as there are 20 free scholars "chosen from the sons of the poorest labourers; but "these are the most irregular in attendance. But "the attendance of the girls is seriously affected, the "temptation to go to straw plaiting schools being "great."

Rev. H. F. Ralph, Little Horwood, says, "This "does not appear to be a hindrance, with the small "payment for schooling, excepting the temptation to "earn money at the lace pillow."

Mr. W Hinton, Claydon, says, "Parents are gene- "rally glad, when the families are large, to get "employment for a boy at 3*s.* or 4*s.* per week. But "when this cannot it appears, excepting some cases "where parents are careless, to be generally managed "to pay the 1*d.* or 2*d.* per week per head."

Newport Pagnell Union.

Mr. W. G. Duncan, J.P., Bradwell, says, "Our "labourers are well paid and well off, and cheaply "educated; yet we find difficulty in getting many "children to school."

Mr. R. Walpole, J.P., Hanslope, says, "Not at all "until the boys are able to do field work and the "girls to make lace. The parents generally are ready "to send their children to school, and pay 2*d.* a week "for it, until they are tempted by the gains of labour."

Rev. T. P. Williams, Little Brickhill, says, "Chil- "dren often detained from school by reason of the "poverty of their parents, or by their desire for "beer."

Rev. J. P. Langley, Olney,—"Directly the chil- "dren can earn anything, or be of any use at home, "they are, in many instances, kept away from school. "The consequence is great irregularity of attendance "and early removal."

Rev. J. W. Irving, Broughton, says, "Not at all. "The payment is 2*d.* each per week, or 1*s.* 6*d.* per "quarter. To induce attendance, children who are "present four days in the week are allowed to pay "1*d.* per week into a clothing club, and to every 1*d.* "a ½*d.* is added, thus giving them, if they are regular "for the quarter, 6*d.* out of 1*s.* 6*d.* back."

Leighton Union.

Rev. W. G. Hamilton, Ivinghoe, says, "There are "but few who could not afford to pay for their chil- "dren's schooling if they were inclined."

Amersham Union.

Rev. E. T. Drake, Amersham, says, "More than "it ought."

Mr. John Werge Howey says, "The adult labouring "class, as a rule, can neither read nor write. Their "wages are, first class farm labourers averaging 14*s.* "per week. Out of this house rent 1*s.* 6*d.* per week, "firing, clothing, living upon bread at 8½*d.* or 9*d.* "per quartern loaf, what can they do to educate their "children?"

Wycombe Union.

Mr. H. Gibbins, owner and occupier, says, "Gene- "rally the poor have large families, and I think it is "the duty of the State to educate its children as much "as to enforce obedience to the law."

Eton Union.

Rev. C. Whateley, Taplow, says, "Not at all. "Some of the poorest are paid for by gentry and a "small charity. The weekly charge prevents none "from attending."

Circular Questions III. 29.

29. Are any efforts being made for the industrial training of girls, in connexion with elementary education, with especial reference to preparing them for their domestic duties?

36 circulars give no answer.
22 „ say "No."
4 „ „ "Yes," but give no particulars.
17 „ sewing in school.

Others as follows:—

Mr. E. Stone, Wootton, says, "The girls are taught "sewing and household work."

Rev. B. Morland, Shallington, says, "They are "taught to be good needlewomen, and all the school "girls get situations when old enough."

Mr. John Yorke, Olney, says, "None now. Lately "an institution was in being from which very satis- "factory results ensued."

Bucks.

Mr. Culley.

f.

CIRCULAR QUESTIONS III. 30.

30. Have you any remarks to make on the subject of cottage accommodation, in regard to its effect on morality or education; or on the health and comfort of the labouring poor?

46 circulars give no answer.

36 witnesses answer as follows:—

AYLESBURY UNION.

The Ven. Archdeacon Bickersteth, Aylesbury, says, "The cottage accommodation in Aylesbury was very "bad indeed when I came to reside here in 1853. "Since that date, and particularly during the last 10 "years, it has greatly improved, and is still improving "daily."

Rev. T. J. Williams, Waddesdon,—"I can make "no suggestions, but do most heartily regret the "evil effects, both on morality and education, arising "from too little and too deficient cottage accom- "modation."

Rev. A. Isham, Weston Turville,—"Many cottages "have only one room, in which parents and grown "up sons and daughters sleep. The effect is injurious "on health and morality."

Rev. W. H. Young, Oving,—"I do not think the "cottage accommodation sufficiently bad to be inju- "rious to health, but it must have a debasing moral "effect."

AYLESBURY UNION.

Rev. C. Erle, Hardwick,—"Our cottage accom- "modation is in some instances defective, cottages "very old and dilapidated. Lately there have been "12 new cottages in the course of erection, which "though small are an improvement on the older "ones."

Rev. R. C. Burton, Cublington,—"Most of the "cottages in this parish afford fair accommodation, "but several are *very bad*, having only one bed-room "for a family of seven or eight people."

Rev. H. W. E. Armstrong, Bierton,—"It is a "matter of general pastoral experience, that when- "ever the cottage accommodation is not what it "ought to be, the morality, education, health, and "comfort of the inmates suffer. Bierton stands "fairly in this respect, and there are but few "lodgers."

Rev. J. Thornton, Aston Abbots,—"Our village "has been almost entirely rebuilt within the last "15 years, and the cottages are very good, and to "most a quarter of an acre of land is attached."

Mr. E. Stone, Wotton, says, "Not in this parish; "but in the surrounding villages, generally, the "cottage accommodation is very inadequate, and "undoubtedly tends greatly to retard moral im- "provement."

Mr. J. K. Fowler, Aylesbury, says, "I think as a "rule the poor are badly housed, but worse even in "towns in the country. If the cottages are bad in "the country, at all events the labourers get fresh "air, but in Aylesbury the cottages are bad and "very miserably supplied with water."

THAME UNION.

Rev. Jas. Statter, Worminghall,—"Most of the "cottages have two bed-rooms, some few have three, "four or five have only one, and two of these are "inconveniently crowded. Cases of gross immorality "occur, but I hardly know whether more from the "crowded than the uncrowded houses."

Rev. B. Morland, Shabbington,—"The cottages "are extremely bad; they are nearly all freeholds, "belonging to the occupiers, originally taken from "the waste lands, for which not even a quit rent is "paid, built with mud, with but one bed-room and "one sitting room, and in many instances not a foot of "outlet. I consider this to be the greatest bar to "improvement which has to be contended with in "this parish, nor do I see any way of improvement, "for if new cottages were to be built the poor "would rather live where they are rent free than "pay a rent for a comfortable house. The morality "must suffer under these circumstances."

WINSLOW UNION.

Rev. C. H. Travers, Stewkeley,—"The crowding "of families into cottages with inadequate accom- "modation cannot fail to be destructive of all self- "respect and injurious to morality, and subversive "of all benefits otherwise to be derived from edu- "cation, as well as affecting health and comfort."

Rev. A. M. Preston, Winslow,—"Generally the "want of sufficient accommodation is very disastrous "in its effect on the morals."

Mr. W. Hinton, Claydon,—"I have no doubt that "both morally and physically improved cottage ac- "commodation is more healthy, which improve- "ment has been effected hereabout."

Mr. W. Neal, occupier,—"Some of the cottage "accommodation is very limited. The cottages in this "town are chiefly let and built as a commercial "speculation. Over-crowding affecting the physical "powers of the females, especially the bad influence, "being corrected in the males by their open air "occupation, and the division of the sexes not being "attainable in the sleeping apartments, the con- "sequence is that many of the girls become mothers "at a very tender age, say 16 to 18, and it being so "general, it is hardly looked on as a disgrace by "their own class. They are enabled to get married "soon after they are 20."

BUCKINGHAM UNION.

Rev. W. F. Norris, Buckingham,—"I have long "felt the insufficient cottage accommodation is one "of the greatest hindrances to the welfare of the "labouring poor; and health, comfort and education "suffer for want of a change in this respect."

Mr. T. Attwood, occupier, Leckhampstead,—"I "think some of the cottages are much too thickly "inhabited by their occupiers taking in lodgers, "&c.; others are too small for the requirements of "the families who occupy them, as there are but "very few that have more than two bed-rooms, and "in several of them the whole family have to sleep "in the same room."

Mr. Thomas, Barge, Hillesdon,—"I consider "cottages that have not sufficient sleeping accom- "modation act injuriously both on the health and "morals of the inmates."

NEWPORT PAGNELL UNION.

Mr. W. G. Duncan, J.P., owner and occupier,—"I find that if a labourer or artisan can crowd his "house with a lodger or two, he will do it, even if "he has to huddle all his young children into the "same bed-room with himself and wife. Rents, "owing to beer propinquity to Wolverton station "workshops, are high, from 2*s.* 6*d.* to 4*s.* a week; "wages average from 10*s.* to 17*s.* a week."

Mr. R. Walpole, J.P., Hanslope,—"I have about "60 cottages under my control, and allow no lodgers "without my consent, which is never given unless "there is decent room. No other owner in the "parish enforces a similar rule. That crowded "cottages affect the morality, health, and comfort of "the labouring poor is a fact that cannot admit of "dispute, and it is, I think, a corollary that such "crowding interferes most prejudicially with even "a desire to educate."

Rev. G. W. Tomkins, Olney,—"The defective "arrangements for sleeping which are to be observed "in the cottages of the poor have a bad effect both "on health and morality."

Rev. R. C. Green, Loughton,—"Some of the cot- "tages have one bed-room, some two; the effect "on morality (in large families) is bad. The health

" is pretty good. In this country coal is dear (1*l.* " per ton) and poor people like a *small* down-stair " room, which can be made cozy in winter ; hence " cottage-builders have built accordingly, — small " rooms below and above. Some of these small bed- " rooms, where the roof is of slate and flattish, are " very close in summer. The poor are rather un- " willing to pay a good price for a good cottage. If " you gave them a bed-room chimney, they would " probably stuff it up."

Mr. F. Coales, Chicheley,—" Bad cottages, bad " morals."

Rev. J. P. Langley, Olney, says, " The cottage " accommodation is in many cases insufficient, owing " to the poverty of the parents, who cannot afford " to take a larger house. This state of things has " necessarily a bad effect on morality, health, and " comfort. Many are too poor to pay for their " children's schooling. The lord of the manor " gives 10*l.* per annum to send such children free " to the National school."

Leighton Union.

Rev. G. W. Hamilton, Ivinghoe,—" There are " many cottages where there is insufficient accom- " modation for the family ; which does, most un- " questionably, affect the morality, and the health, " and comfort of the inmates."

Rev. W. Roberts, Northall, Eddlesborough,—" The " cottages are sufficient in number for the popu- " lation, but the bed-room accommodation is very " poor, elder girls (12 to 25) oftentimes sleeping in " same room, either with parents or grown up sons."

Amersham Union.

Mr. Metcalfe, Latimer,—" I should think the cot- " tage accommodation has a great deal to do with " the morality and also the health of the people. I " should think there is nothing so likely to improve " the condition of all labourers as good cottages ; it " stimulates them."

Mr. J. Werge Howey, owner and occupier, Coles- hill,—" As a rule cottages have two rooms. Male " and female, from children up to 14 years, huddle " together to keep in warmth ; certainly not condu- " sive to decency or morality ; frequently one blanket " for the lot of children."

Mr. James Gurney, Chalfont, St. Giles,—" There " are several cottages in this parish injurious to " health and morals."

Wycombe Union.

Rev. F. A. Faber, Saunderton, says, " The mixing " of sexes from want of sleeping accommodation is " greatly against the morality of our poor."

Rev. W. E. Partridge, Horsendon, says, " I pay " much attention to the lodgings of my labouring " people. I have 12 or 14 cottages, and I prevent " herding in dormitories as much as I can ; such " herding is destructive to decency and morals."

Mr. O. P. Wethered, Great Marlow,—Many of the " cottages both in town and parish of Marlow are so " small and badly adapted for families as necessarily " to exercise a prejudicial effect upon both morals " and health. The Nuisances Removal Act (if its " provisions as to over-crowding, &c. are firmly " carried out by the local authority) affords a " remedy in a great measure."

Mr. H. Gibbins, Bledlow, says, " Generally very " bad. I find in proportion to the insufficiency of " of accommodation, so is the degradation of those " who inhabit the cottages. Respectable and well " instructed labourers live in the best cottages, the " worst and most ignorant in the worst cottages. It " cuts both way—'*Ignorance is the fountain of* " *vice.*' "

Eton Union.

Rev. S. F. Marshall, Farnham Royal,—" The cot- " tage accommodation at present existing I consider " to be highly prejudicial to morality, as well as to " the health of the labouring poor. It is really im- " possible for feelings of delicacy to be preserved " when such numbers are herded together without " distinction of sex."

Rev. R. J. Rogers, Burnham,—" No doubt the " smallness of the cottages, and the general insuffi- " ciency of cottage accommodation in the parish, " cause great over-crowding, and this is attended by " the worst consequences to health and morality."

Circular Questions III. 31.

31. How many cottages per hundred acres are considered sufficient for the accommodation of the persons employed on the land in your parish ?

34 circulars give no answer.

In north Bucks, *i.e.*, in Aylesbury, Thame, Wins- low, Buckingham, Newport Pagnell, and Leighton Unions,—

Where the cultivation is chiefly arable,—

5 witnesses say	4
1 witness says	3 to 4
1 „ „	3

Mr. W. M. Hawkins, Emberton, says, " About one " man to 25 acres, and one boy to 50 acres are em- " ployed, taking arable and pasture together."

Where the cultivation is described as mixed, or half arable,—

Bucks.
Mr. Culley.
f.

As an illustration of this question, on 12 farms in North Bucks, containing 1,530 acres arable and 2,037 acres pasture, in all 3,567 acres, the aggregate staff of adult men employed was stated by the different occupiers to be 121 men, and the aggregate want of cottages as stated by the same gentlemen was 112, being a requirement of over 3 and less than 3¼ to each 100 acres where the cultivation is a quarter more pasture than arable. On four farms in Wycombe union, where the cultivation was 840 acres arable to 185 pasture or chiefly pasture, the ordinary staff of adult men was stated to be 37, and the number of cottages required 32, being as nearly as may be the same proportion of cottages per 100 acres as was required in North Bucks, where the cultivation was rather less arable than pasture, viz., over 3 and less than 3¼. On a farm in Eton Union 12 men, 10 of whom were married, were employed on 270 acres, and would therefore require 10 cottages where the proportion of arable to pasture was 210 to 60 acres.

Circular Questions III. 32 and 33.

32. Is there that proportion of cottages in the parish?

33. If not, what is the proportion?

27 circulars give no answer.
2 „ answer "Too many."
39 „ „ "Yes."
3 „ „ "Yes, but bad ones."
4 „ „ "Nearly or hardly."
5 „ „ "No."

Mr. C. Cantrell, Datchett, says, "There are very "few cottages on the farms, and they chiefly belong "to small speculation proprietors."

Rev. W. F. Norris, Buckingham, says, "Our farms "are singularly without cottages on their fields."

Circular Questions III. 34.

34. Are the cottages conveniently situated with respect to (*i.e.*, not more than a mile from) the farms on which the work is to be done?

21 circulars give no answer.
41 „ answer "Yes."
13 „ „ "Generally."
6 „ „ "No."

Rev. W. H. Young, Oving, says, "As we have too "large a labouring population many have to seek "their work in other parishes."

Circular Questions III. 35.

35. Is there a sufficient number of cottages with two bedrooms, or three bedrooms, and a sitting room, for the larger families?

22 circulars give no answer.
23 „ answer "Yes."
33 „ „ "No."

Others answer as follows:—

Mr. J. K. Fowler, Aylesbury, says, "There are "plenty of houses but no good ones."

Rev. B. Morland, Shabbington, says, "There are "only six cottages with more than one room."

Rev. D. Watkins, Thornborough, says, "All have "sitting rooms and most have two bedrooms, some "few have three."

Mr. O. P. Wethered, Great Marlow, says, "In the "town but not in outlying parts of the parish."

Circular Questions III. 36.

36. Are the cottages crowded, either with members of the family, or with lodgers?

25 circulars give no answer.
18 „ answer "No."
22 „ „ "Some with families."
12 „ „ "Yes."
2 „ „ "No lodgers allowed."

Others answer as follows:—

Rev. A. M. Preston, Winslow, says, "Crowded "generally and occasionally with lodgers."

Mr. R. Walpole, J. P., Hanslope, says, "Both "with families and lodgers; cottages are at a pre-"mium."

Mr. O. P. Wethered, Great Marlow, says, "If they "are a local authority remedies it."

Circular Questions III. 37.

37. Give a general description of the cottages in your parish in respect of,—1. Construction (including size of rooms, ventilation, and drainage). 2. Accommodation (including number of rooms in proportion to the family, water supply, garden, outhouses, &c.) 3. Ownership, *i.e.*, whether by landowner, or by tradesmen with whom the tenants are obliged to deal, or by other person or persons. 4. Rent.

The answers to this question will be found in the general evidence at the head of the evidence from the respective parishes.

Circular Questions III. 38.

38. If there is deficient cottage accommodation, is any progress being made towards increasing it?

58 circulars give no answer.
9 „ answer "Yes."
2 „ „ "Very little."
8 „ „ "No."

Others answer as follows:—

Rev. A. Isham, Weston Turville, says, "It has "been deficient, and private enterprise has increased "it."

Rev. J. Statter, Worminghall, says, "Progress is "intended."

Mr. W. Hinton, Claydon, says, "Mr. Morrison, "Mr. Hubbard, Mr. Dodge, as well as Sir H. Verney, "who is the largest owner, have all been making "great improvements."

Rev. C. H. Travers, Stewkley, says, "Better cot-"tages are being built, *but not for the poor*."

Rev. J. P. Langley, Olney, says, "Yes; but the "rent is high, 2*s.* per week and upwards."

Circular Questions III. 39.

39. Is the Union Chargeability Act (28 & 29 Vict. c. 79., March 1866) having any effect in causing an increase of cottage accommodation?

55 circulars give no answer.
25 „ say "No."
1 „ says "Yes."

Mr. W. Hinton, Claydon, says, "It has caused a "little increase in the small villages, I believe."

Circular Questions III. 40.

40. By the Act 27 & 28 Vict. c. 114., July 1864, the Enclosure Commissioners are authorized to advance public money for the improvement of land, including by s. 9. "The erection of "labourers' cottages, * * and the improve-"ment of and addition to labourers' cottages."
Have you any remarks to make upon this Act in regard to any additional facilities, or any reduction of cost, that might cause greater progress to be made in supplying the want of good cottages?

79 circulars give no answer.
Others answer as follows:—

The Ven. Archdeacon Bickersteth, says, "It appears to me that the provisions of this Act might "be extended with advantage."

Mr. J. K. Fowler, Aylesbury, says, "I think many "old cottages could be greatly improved at a cheaper "rate than by building new ones."

Rev. R. C. Green, Leighton, says, "I think all "cottages should be certified by the State, and improper ones not allowed to be built."

Circular Questions III. 41.

41. Can you suggest any mode by which good cottage accommodation could be provided on self-supporting terms, and involving no disadvantage to the tenant.

62 circulars give no answer.
8 „ say "No."
Others answer as follows:—

The Ven. Archdeacon Bickersteth, says, "I do not "think it possible to build labourers' cottages so as "to make them remunerative as an investment. The "real gain is of another kind, namely, the improvement in the social condition and comfort of the "labourer."

Rev. A. Isham, Weston Turville, says, "The cost "of an airy three-room cottage substantially built "must entail a rent too high for the agricultural "labourer, if it is to be remunerative. I do not see "how this is to be met, except by some regulation "that all cottages certified to be built for a benevolent purpose towards the agricultural poor should "be exempt from all taxes paid on the materials used "and all after taxation, general and local. If a "cottage which now costs 125*l.* could be brought "down to 100*l.*, and the rent fixed at 4*l.* 10*s.* clear "of all taxation, the poor would be greatly benefited. "4*l.* 10*s.* ought to be a maximum rent."

Mr. J. K. Fowler, occupier, Aylesbury, says, "I "think on all large farms a certain number of cottages should be built, and let with the farms, a "stipulation being made that the tenant should not "charge the labourer more than a fixed sum."

The Rev. C. H. Travers, Stewkley, says, "I believe that if landowners would erect suitable cottages for the labouring class they would find it easy "to let them at a remunerative rent, while the improved moral condition of their labourers would be "permanent advantage to both."

Mr. John Linnell, bailiff, Addington, says, "The "principle is not sufficiently recognized that cottages "ought to be provided for labourers on the land as "well as shedding for the stock, and let with the "farms, a nominal rent being charged by the tenant "of the farm; the labouring class would not then be "left at the mercy of speculators and small tradespeople, as is too often the case."

Mr. Thos. Barge, occupier, Hillesdon,—"When the "parish is in small holdings there are great difficulties in the way of the poor obtaining good cottages. "If people of small means build, they expect to get "5 or 6 per cent.; that brings the rent too high. "Only country gentlemen and large landowners will "be satisfied with 2 per cent."

Mr. Thos. Ridgway, Bourton, occupier, says, "Cottage building being unremunerative as a speculation, the only means to secure better dwellings for "the labouring classes would appear to be a kind of "mutual understanding between the parties principally concerned, viz., the landowner, tenant, and "labourer, each endeavouring according to his circumstances to aid and assist. The landlord should "build, the tenant take with his farm, and the "labourer, with a garden provided (a boon he seldom "enjoys in a town), pay a fair rent for same; by "some such means as this I think eventually it would "prove of benefit to all parties. But this is a subject on which a great deal might be said and more "written."

Mr. R. Walpole, J.P., Hanslope, says, "A good "cottage will never command a remunerative rent, "and a bad cottage, meaning thereby a cottage deficient in accommodation, may be remunerative, but "would be disadvantageous to the tenant."

Mr. W. Whitworth, occupier, Willen, says, "No. "But if you wish to prevent pauperism you must "*educate the children* and give them *better cottages* "*in some way*, or you will never keep them out of "workhouses and jails, and send every person to jail "or the workhouse who is found begging."

Mr. John Werge Howey, landowner and occupier, Coleshill, says, "I cannot suggest any, except "capitalists build and are satisfied with 1½ per cent. "per annum."

Rev. W. E. Partridge, Horsendon, says, "Landowners should as much as possible endeavour to "keep the cottages under their own control and not "let them in all cases with the land, or at least retain "the power to repossess them on short notice."

Rev. S. F. Marshall, Farnham Royal, says, "I "believe that better cottage accommodation for the "agricultural labouring class would be provided "without disadvantage to the tenant if it were "enacted that no rent could be recovered by legal "process for any cottage or house that did not fulfil "certain conditions essential to morality and health "of the occupants."

Circular Questions IV. 42 and 43.

IV. As to the Numbers of Children at School and the Numbers employed in Farm Labour.

42. It would be of great assistance towards forming a correct judgment upon the question of requiring some amount of school attendance in the case of children earning wages by employment in farm labour if you could furnish the Commissioners with precise information, or with an approximate estimate, relating to the points embodied in the following tables.

43. Approximate Number of Children of the Agricultural Labouring Class in attendance at Elementary Schools.

In Summer.

On the Register of some School.				In average Attendance.			
Boys.		Girls.		Boys.		Girls.	
Under 10 Years of Age.	Between 10 and 13.	Under 10.	Between 10 and 13.	Under 10.	Between 10 and 13.	Under 10.	Between 10 and 13.

Tables A. and B. will show the nature of the returns given in answer to this question. Tables C., D., and E. are summaries of A. and B.

Bucks.

Mr. Culley.

School Return.—A.

Approximate Number of Children of the Agricultural Labouring Class in Average Attendance at Elementary Schools in the following Parishes in Buckinghamshire, as given in Returns.

Parish or Hamlet.	Population.	Acreage.	Summer.				Winter.				Notes.
			Boys.		Girls.		Boys		Girls.		
			Under 10 Years of Age.	Between 10 and 13.	Under 10.	Between 10 and 13.	Under 10.	Between 10 and 13.	Under 10.	Between 10 and 13.

School Returns.—Table B.

The following are Returns of Schools which could not be included in Table A. of Bucks Schools, which is composed only of Schools where both Boys and Girls attend, and where all Particulars asked for in the Circulars of Inquiry are given.

Parish.	Population, 1861.	Acreage.	Average Attendance. In Summer. Boys. Under 10 Years of Age.	In Summer. Boys. Between 10 and 13.	In Summer. Girls. Under 10.	In Summer. Girls. Between 10 and 13.	In Winter. Boys. Under 10.	In Winter. Boys. Between 10 and 13.	In Winter. Girls. Under 10.	In Winter. Girls. Between 10 and 13.	Notes.
Aston Clinton	1,108	3,640	30	10	—	—	49	19	—	—	Boys' school only; girls not given.
Cublington	288	1,212	4	3	4	3	Not given.				Private school; no National school.
Halton	147	1,452	12		33		Not given.				—
Hardwick	708	3,200	42		64		Not given.				All schools in parish.
Oakley	420	2,250	16		32		16		32		Labouring children.
Little Horwood	449	1,950	About 40 children.				—	—	—	—	—
Swanbourne	603	2,510	22		—	—	33		—	—	—
Maids Moreton	543	1,260	50 almost all under 10 years of age.								—
Thornborough	694	2,530	15	0	8	2	Not given.				Another small school.
Little Brickhill	432	1,047	40, all under 10				40, all under 10				—
Broughton	155	1,020	23				23				Schoolmistress away.
Ivinghoe	1,849	5,252	28	11	35	14	On register only given.				There is another school.
Northall (Eddlesborough)	—	—	27	10	16	4	Not given.				Two other schools in Eddlesborough.
Latimer (Chesham)	—	—	50	12	120	30	60	12	110	40	Number on register.
Little Missenden	1,109	3,173	27	3	25	10	Not given.				—
Saunderton	232	1,590	12	0	15	0	These attend Risborough National school.				—
Wooburn	2,245	2,850	72		28		No return.				—
Olney	2,298	3,140	56		20		No return.				There is also a British school.

School Returns.—Table C.

Summary of Tables A. and B., where the particulars are stated in the returns given.

Summer.

—	In average Attendance. Boys. Under 10.	Boys. Between 10 and 13.	Girls. Under 10.	Girls. Between 10 and 13.
Average attendance in summer in all returns where both boys and girls are given	823	96	694	140

School Returns.—D.

Total boys in average attendance at schools as compared with girls at same schools where the circulars give such particulars.

In summer.

Total boys under 13 - - - 1,117
„ girls „ 13 - - - 1,011

School Returns.—E.

Total children of both sexes in average attendance in summer at all of these schools where such particulars are given.

Children under 10 - - - 1,587
„ between 10 and 13 - 246

Circular Questions IV. 44.

44. Approximate number of children of the agricultural labouring class neither at school nor at work.

65 circulars give no answer.
3 „ say "None."
1 circular says "Not many."
2 circulars say "All not at school are plaiting."
1 circular says "All not at school are making lace."

Others answer as follows:—

Waddesdon, population 1,786, "About 20 between "8 and 13 years of age."
Worminghall and Shabbington, population 725.
5 boys between 8 and 10 summer and winter.
7 girls „ „ „ „
6 boys „ 10 and 13 „ „
4 girls „ „ „ „
Winslow, population 1,890.
About 8 or 10 between 8 and 10 years.
„ 3 or 4 „ 10 and 13 „
Swanbourne, population 603,—"2 boys between "8 and 13."
Emberton, population 624,—"3 boys between 8 "and 13."
Chalfont St. Giles, population 1,217.
About 100 boys between 8 and 10 years in summer.
„ „ „ 10 and 13 „ „
„ girls „ 8 and 10 „ „
„ „ „ 10 and 13 „ „
About 150 of each class in winter.
Coleshill, population 513.
In winter about 20 boys between 8 and 10 years.
„ „ 12 „ „ 10 and 13 „
Bledlow Ridge, "20 boys and as many girls between "8 and 10 years out of about 150 children of all "ages."
Risborough, population 1,050,—*Mr. C. Brown*, says, "A few do not attend school through the neglect "of their parents, there are three schools in the "parish, one in each hamlet supported by private "benefaction."

Bucks.

Mr. Culley.

f.

Circular Questions IV. 45.

45. Approximate number of young persons of the agricultural labouring class growing up with insufficient education.

Where numbers are given in answer to this question they are as follows :—

——	Population.	Males.	Females.
Aston Abbot - -	311	30	30
Oving - - -	436	15	12
Singleton - - -	386	11	4
Emberton - - -	624	27	12
Northall - - -	—	15	15
Coleshill - - -	531	31	17
Horsenden and Ilmer -	124	5	—
Chalfont, St. Giles -	1,217	200	200
Bledlow - - -	1,189	100 Male and Female.	

Other circulars answer as follows :—

Rev. A. Isham, Weston Turville,—"Many females "cannot write their names, and some males, but the "number is greatly diminished."

Rev. B. Morland, Shabbington, says, "Very few of "the boys are sufficiently educated, I may say none, "as they are taken away so young, but the difficulty "is how to keep them longer. Females are much "better educated, sufficiently so for me to get them "all out to service."

Rev. Jas. Statter, Worminghall, says, "All would "depend upon what was considered to be the "meaning of the word insufficient; there are "certainly many young persons imperfectly educated, "I mean not sufficiently for their condition in life."

Rev. Wm. Hinton, Claydon, says, "Very few "males without elementary education, but cannot "state a number. I should think no females, as "girls attend school better."

Rev. M. D. Maulden, Swanbourne, says, "They "are for the greater part backward, the habit of "straw plaiting preventing much real school work "being done by the girls. There is a plaiting school "attended by about 20 girls over 11 years of age. "They plait the greater part of the day, having "half an hour's schooling in the morning and an "hour in the afternoon for five days per week; a "regular child can get about a day and a half's "schooling per week."

Rev. D. Watkins, Thornborough, says, all can read, most of them can write, and many of them can cipher a little.

Rev. M. W. Davies, Maids Moreton, says, "The "generality know how to read; those who do not owe "it commonly to the neglect of their parents, who "would not use a good school, when placed within "their reach."

Rev. R. M. Russell, Beachampton, says, "The "greater majority of the 19 males employed on the "10 farms."

Mr. Thos. Barge, Hillesden, says, "Till within a "recent period the means of education were very "scant in this parish. Some of the labourers are very "unlearned, but it is different now with the children; "they have the opportunity of attending a good "school. Being a scattered village there is no night "school, but in lieu of that, books are found them "after they leave school."

Rev. W. J. Hamilton, Ivinghoe, says, "I cannot "state; many attend the *Sunday* school who do not "come *daily*, and in fact, have very little teaching "except what is obtained there."

Rev. T. P. Williams, Little Brickhill, says, "As "scarcely any children remain at school, even so "long as to nine years old, the education of *all* is "insufficient."

Rev. J. P. Langley, Olney, says, "Some cannot "read or write; the education of almost all is very "insignificant."

Mr. Francis Coles, Chicheley, says, "All can read "and most of them can write."

Mr. W. G. Duncan, J. P., Chairman of Newport Board of Guardians, Bradwell, says, "In all parishes "you will find parents who neglect their children's "education and morals. There are very few young "persons in this parish who cannot read."

Mr. C. Metcalfe, Latimer, says "The education of "the girls is much better than that of the boys, as "the boys are sent out to work soon."

Rev. F. H. Ashley, Wooburn, says, "All have "been to school, but some insufficiently educated."

Mr. Charles Brown, Princes Risborough, says, "About three families in 20 neglect daily education, "owing to the children's going to work or negligence "of the parents."

Circular Questions IV. 46 to 51.

46. Is there an evening school in your parish?
47. How many weeks in the year is it open? At what periods of the year?
48. How many nights per week?
49. How many hours per night?
50. What is the number of scholars?

On the Register.		In average Attendance.			
		In Winter.		In Summer.	
Under 12.	Above 12.	Under 12.	Above 12.	Under 12.	Above 12.

51. What are the subjects of instruction?

46. Is there an evening school in your parish?

Circulars from 37 parishes answer that they have night schools.

The following parishes have night schools for both boys and girls :—Aylesbury, Cublington Adstock, Thornborough, Emberton, Olney, and Wooburn.

Waddlesdon and Princes Risborough have each three night schools, and Hardwick two for boys.

47. How many weeks in the year is it open, and at what periods?

In Emberton and Bledlow the schools are open throughout the year for boys and girls, and in Olney throughout the year for girls only.

In 6 parishes the schools are open above 20 weeks.
„ 14 „ „ „ for 20 weeks.
„ 10 „ „ „ less than 20 weeks.
„ 5 parishes the number of weeks is not stated.

All these are open in winter or spring only, and all for from 12 to 24 weeks.

48. How many nights per week?

In Cublington 6 nights for boys and 2 for girls.
„ In Emberton 5 nights.
„ Aylesbury 4 nights for boys and 2 for girls.
„ 3 parishes 4 nights.
„ 11 „ 3 „
„ 17 „ 2 „
„ 1 parish 1 night.
„ Waddesdon 2 schools for 2 nights, and 1 school for 3 nights.
„ Risborough 2 schools for 3 nights and 1 school for 2 nights.

49. How many hours per night?

1 school is open for 3 hours.
2 schools are open for 2½ hours.
14 „ „ 2 „
24 „ „ 1½ „
1 school is open for 1 hour.

50. What is the number of scholars?

The following table shows the nature of the answers to this question.

—	On the Register.		In average Attendance.			
			In Winter.		In Summer.	
	Under 12.	Above 12.	Under 12.	Above 12.	Under 12.	Above 12.
Emberton	10	28	10	28	6	14
Cublington	15	19	13	15	—	—
Oving	3	27	2	15	—	—
Aylesbury, Boys	0	45	0	25	—	—
„ Girls	0	90	0	70	—	—
Bierton	0	28	0	14	—	—
Waddesden	1	70	2	34	—	—
Upper Winchendon	5	12	5	10	—	—
Ickford	4	16	4	16	—	—
Worminghall	7	18	5	9	—	—
Swanbourne	0	40	0	31	—	—
Adstock	20	32	16	22	—	—
Leckhampstead	4	21	4	11	—	—
Chalfont St. Giles	6	34	5	30	—	—
Coleshill	0	18	0	6	—	—
Buckingham	0	10	0	10	—	—
Taplow	2	7	2	5	—	—
Wooburn	0	72	0	49	Boys and girls.	
Aston Abbotts	—	—	0	12	—	—
Winslow	—	—	0	30	—	—
Thornborough	35		25		Boys and girls.	
Risborough	50		30		—	—

Chickeley	-	-	17		—	—
Ivinghoe	-	-	19		Boys and girls.	
Northall	-	-	13		—	—
Saunderton	-	-	8		—	—
Little Missenden	-	-	18		—	—
Farnham Royal	-	-	29		—	—
Olney	30		12 Boys.		—	—
„	40		30 Girls.		—	—
Bledlow	"Sometimes none; never more than 8."					

51. What are the subjects of instruction?

Wherever there are night schools for girls sewing is taught.

In all night schools reading, writing, and arithmetic are taught.

In five cases Scripture teaching is added; in two cases dictation and letter writing are added; in two cases geography, and in one history.

The following notes are given in answer to the question 46:—

Rev. A. Isham, Weston Turville, says, "An evening "school attended by about 20 of all ages was open in "the winter of 1866 to 1867 for about 12 weeks in "winter; but for want of a superintendent it was not "opened in 1867 to 1868."

Rev. R. W. Russell, Beachampton,—"There is no "evening school. Except an evening school is "restricted as to age it appears to encourage indif- "ference towards the day school, and encourages an "earlier removal from school to work."

Rev. W. E. Partridge, Horsendon, says, "I don't "affect night schools in general. Much mischief "frequently follows unless a strict surveillance in all "cases is exercised to and from school after dark."

Circular Questions IV. 52.

52. Do you consider that the evening school adequately supplies the deficiencies of the day school?

52 circulars give no answer.
2 „ answer "Yes."
1 circular answers "Very fairly."
1 „ „ "To a certain extent."
1 „ „ "Not altogether."
20 circulars answer "No."

Others as follows:—

Rev. T. J. Williams, Waddesdon, says, "Not "adequately, certainly; but it is a great help to "those who use it regularly."

Rev. H. W. E. Armstrong, Bierton, says, "It might "do so if regularity of attendance could be secured."

Rev. J. Thornton, Aston Abbots, says, "No; being "quite voluntary it is not attended."

Mr. W. Hinton, Claydon, says, "Yes; it is appre- "ciated fully."

Rev. G. W. Tomkins, Lavendon, says, "It does "much good."

[*Note.*—The return of the night school in Lavendon was accidentally omitted from the Table of Night Schools. It is open for six or seven weeks, and for six nights per week, and has about 30 scholars. There is no return of a day school.]

Circular Questions IV. 53.

53. What do you find to be the principal difficulties in the way of maintaining an efficient evening school?

41 circulars give no answer.

Several witnesses give more than one source of difficulty. The following table shows the proportion in which the different causes of difficulty are named in 35 answers:—

Weariness or indifference of the young 15 times.
Want of teaching power or funds - 13 „
Indifference of parents - - 5 „
Want of schoolrooms - - - 5 „
Beer-houses - - - 3 „
One circular answers that there is no difficulty.

Others answer as follows:—

Rev. A. Isham, Weston Turville, says, "The "want of a master to conduct the male department. "And with regard to the female department, the "girls will not leave their plait for education; if "they would, the want of a mistress."

Rev. W. H. Young, Oving, says "I do not approve "of evening schools for girls in a village. It does "not answer for young men, except in the winter. "I find the young men who have learnt very little "ashamed to come with boys who have left school "lately, and therefore know more than themselves."

Rev. R. C. Green, Loughton, says, "It is dependent "almost entirely upon me. A young man helped "me gratuitously last winter for one hour per night, "but I wanted more help, and should like to be able "to remunerate the helpers for their services. The "school ought to be open five nights instead of three; "but I could not undertake this myself, and it ap- "pears to me absurd to expect a day master or "mistress to undertake it. At present the great "burden is the backwardness of the pupils; this "evil will probably diminish as the influence of a "good day school extends itself, a thing which we "have only lately succeeded in getting. Several of "the *younger* boys are too tired and sleepy to do "much work at a night school. I take them at 9 "when I know that they have left the day school."

Mr. R. Walpole, J.P., Hanslope, says, "The want "of a paid male superintendent and master, and of "voluntary teachers. The National day school is "under Government inspection, and is a mixed girls' "school, therefore under a mistress, who is not fitted "by her sex to be a paid teacher of young male "persons in an evening school. The mistake made "by Government is, laying down the principle of "payment by results, and then neglecting to follow "it up by recognizing uncertificated teachers. I "think the system of Government inspection very "good, but that it is too confined in its operation; "and I have also no hesitation in saying that, for the "purposes of giving a sufficient education to the "children of the agricultural labourers, it requires "too high a qualification for the teachers, and im- "poses too high a standard upon the taught. I am "sole manager of the school in this parish, and "speak from observation. The Government does "not seem to know the difference that exists between

Bucks. Mr. Culley. f.

"the life of a child in a comparatively sparsely "populated district and that of one who is born and "bred in the hotbed of a manufacturing town. I "believe that inquiry of experienced persons, such "as Her Majesty's Inspector of Schools, will show "that a child of 7 years who pays his 2*d.* a "week for his schooling in London is equal in "intelligence and quickness to one of 9 in an "agricultural district paying the same amount; and "I think that until this difference is recognized and "acted on Government inspection will not do the "good that it might."

Rev. W. F. Norris, Buckingham, says, "The class "of persons for whom night schools are intended "will not come to the school. Their primary educa- "tion generally has been much neglected, and they "themselves have no desire or inclination to learn "anything more than they already know. Many "come to school for a night or so, but lack that "perseverance which is essential to improvement. "Consequently they give up the effort, and seek "some more pleasant mode of passing their evenings. "A constant excuse for not attending school is, that "their fathers got through the world without learning "and they are content to do the same.

"I consider that there is no lack of teaching power "or disposition in school managers to render any "assistance they can."

GENERAL EVIDENCE FROM BEDFORDSHIRE.

Bedfordshire. EVIDENCE from 52 parishes in BEDFORDSHIRE, giving the ANSWERS to the CIRCULAR QUESTION III.—37.—("Give a general description of the cottages in your parish in respect of,—1. Con- "struction (including size of rooms, ventilation and drainage). 2. Accommodation "(including number of rooms in proportion to the family, water supply, garden, out- "houses, &c.). 3. Ownership: *i.e.*, whether by landowner, or by tradesmen with whom "the tenants are obliged to deal, or by other person or persons. 4. Rent.") And other evidence, including that of labourers, their wives and children, &c.

WOBURN UNION.

1. Aspley Guise - Pop., 1,435 - Acr., 1,936.

Cultivation mixed.

1*a*. *Rev. H. M. Erskine* says, "The condition of "cottages varies very much according to ownership, "the worst are those which belong to small pro- "prietors, farmers, and small tradesmen, who are "either unable or unwilling to lay out anything in "their improvement; some have but *one* bedroom "for the whole family; few, if any, have more than "two; the rent ranges from 3*l.* to 6*l.* a year.

2. Battlesden - Pop., 143 - Acr., 1,096.

Cultivation mixed. All cottages have an allotment of 40 poles.

2*a*. *Mr. Geo. Harris* says of the cottages, "They "are of brick and thatch, old cottages, but have been "recently put into repair and made comfortable by "the landowner, who is the owner of the cottages."

3. Chalgrave - Pop., 961 - Acr., 2,330.

Allotments, 17 acres of glebe let in allotments, eight of 20 poles, and 10 between 40 poles and 5 acres. Rent, 3*l.* per acre.

3*a*. *Rev. J. M. Hamilton* says of the cottages, "In "most cases their is only one downstairs room, 10 or "12 feet square, with fireplace; this is used as kitchen "and living room; behind this is a small room (with- "out fireplace), about 10 feet by 6. Above these are "two bedrooms, the staircase reducing the size of the "smaller one. Out of 118 cottages, 60 belong to "small yeoman farmers, 37 to small tradesmen, 11 "to men in humble circumstances, and 10 to the "large landowners." Rent of cottages, 4*l.* to 5*l.* 5*s.*

3*b*. *Mrs. Mitchell*, "I was applying for relief "when I saw you last, sir, at Woburn, because my "husband was out of work; he is hoeing wheat now, "and his eldest boy is with him, that boy cannot "read nor write; four of these six have never been "at school, and I can't say any of 'em can read or "write; they plait sometimes as late as 10 at night, "but then they rest four or five hours in the day."

[NOTE.—These children were very ill clad, wretched, and sickly looking, and the parents had been accused of ill-treating them, which however the woman vehemently denied.]

3*c*. *Mr. John Ayre*, occupier: "I pay men 12*s.* "per week, they get nothing extra except in hay- "time and harvest."

4. Eversholt - Pop., 885 - Acr., 2,130.

Cultivation mixed. Eighteen acres let in allot- ments, of which 44 are of 20 poles let at 40*s.* per acre.

4*a*. *Rev. W. S. Baker*, speaking of the cottages, said, "This is an open parish, supplying labour "to other parishes; there are some very good and "some very bad cottages."

Visited a block of four cottages recently built by the Duke of Bedford, such as those described by Mr. Stephenson for Woburn, the centre cottages have two bedrooms upstairs, and the end cottages three each, the walls are 14-inch solid brick walls, and plastered, which, with the very perfect offices for each cottage and common oven, will make the cost very great, certainly more than 800*l.* for the four.

4*b*. *Mrs. Kean*, living in one of these cottages, has brought up 10 children, the youngest of 11 years is still at school, and none of her children have left school under 10 years of age; her husband has 14*s.* per week.

4*c*. Visited also three old mud cottages built in 1801, and in bad condition, rooms very low and small as usual in old mud cottages; in one of these, with two small bedrooms, a family of nine, father, mother, and seven children, eldest children girls 18 and 16, and boy 15.

5. Harlington - Pop., 557 - Acr., 1,841.

Ten acres of gardens and allotments. Cultivation half arable.

5*a*. *Mr. John W. Foll* says, "The cottages gene- "rally consist of two rooms below and two small "rooms above, but many have not more than one "bedroom. Ventilation and drainage very fair; "water supply good; generally belong to landowners, "a few to tradesmen."

5*b*. *Arthur Cox*, has never been at any school, is 8 years old, and cannot read nor write.

[NOTE.—There is no school at Harlington, and children attend Westming school.]

5*c*. *Charles Denton*, labourer, with four children, has been out of work six days, and is now applying for relief; eldest child 6.

5*d*. *Mr. J. W. Foll* estimated the addition to the ordinary labourer's wage of 11*s.* per week to be by piece work and extra wage in haytime and harvest, 2*s.* per week for the year, which, allowing 1*s.* a week is 52*s.* per year as the value of beer allowance, which make the cost per week of such a man 14*s.* for the year; eight pints of beer are often allowed in long days in harvest.

6. Hockliffe - Pop., 416 - Acr., 1,000.

Four acres of small allotment. Cultivation chiefly pastoral.

6*a*. *Rev. J. S. Newmann* says of the cottages, "Ventilation and drainage in some cases imperfect; "in several instances only one bedroom; water has "to be fetched from a distance; more privies needed. "Ownership generally satisfactory. Average rent, "4*l.*"

6*b*. *Mrs. G. Turney*, herself, husband, and seven children in a cottage with only one sitting and *one small* low bed room; eldest girl 20, eldest boy 17; husband earning 11*s*. per week and son 7*s*. per week. Her husband was in one benefit club for 25 years, and then they found it was insolvent, and he and some others started a new club at the same public house, which he still subscribes to. There are four such clubs, one at each of the public houses in the village. There are one or two houses like hers, but none worse for large families.

7. Hulcote and Salford - Pop., 335 - Acr., 1,800
Cottages, 51.

Cultivation mixed. Forty-one allotments under one acre.

7*a*. *Rev. B. C. Smith*, of the cottages, says, "They "are mostly wattle and daub, or lath and plaster; "the rooms are low, of medium size, and I do not "think the drainage very bad *generally* speaking. "In consequence of the miserable state of repair "that they are in the ventilation is *abundant*. There "is no deficiency of water; the gardens are small, "some have none, but they have allotment ground; "outhouses bad. Some families are much crowded. "The cottages belong to lessees under All Souls "College, Oxford, *i.e.* those in *Salford*, not those in "*Hulcote*. Three out of the five in Hulcote belong "to me; the other two to the Rev. G. G. Harter of "Cranfield. Rent 1*s*. a week generally, though some "few are let at 2*s*. 6*d*. per week.

7*b*. *Joseph Laing*. Has 11*s*. per week; lives in a very bad cottage with a daughter 18, and two sons 13 and 5; living room very low and small, and one very small bedroom.

Cottage next it same size and in same bad condition. John Laing, in a similar cottage near these two, has also 11*s*. per week.

8. Husborne Crawley - Pop., 535 - Acr., 1,520.

Allotments, 65 allotments of 20 poles; rent, 40*s*. per acre.

8*a*. *Rev. V. S. C. Smith* says of the cottages, "The "houses generally contain two rooms below, two or "three above stairs; size, 9 feet square; water supply, "outhouses, &c. in good proportion; the rent 1*s*. 2*d*. "to 1*s*. 4*d*. per week. There are a few exceptional "houses where the rent is about 4*l*. per annum, with "for the most part one room below and one or two "above. The Duke of Bedford owns about seven-"eighths of the houses; the rest chiefly belong to "small non-resident tradesmen."

A new and very good school recently built by the Duke of Bedford with Moule's earth closets in operation, which seem to answer very well.

8*b*. *Charles Bowler*, labourer, "I worked for the "duke may be a dozen years ago at 1*s*. 4*d*. a day, "8*s*. a week, then we were raised to 9*s*., and then "10*s*., and there we stuck for a good many years, "and then the new railway raised us to 11*s*., and "now I believe they pay 12*s*., but many a farmer "round pays no more than 11*s*."

9. Milton Bryant - Pop., 352 (1861), now (309);
Acr., 1,508.

Allotments, 46 allotments of 20 poles. Cultivation one-third arable.

9*a*. *Rev. H. Cobbe* says of the cottages, "Two "storied, brick-tiled or slated. Living room about "12 square yards, with one small room behind and a "bedroom over each. Ventilation and drainage "fair. Water supply very good; garden and out-"house close to cottage, and allotments near at "hand. Landowner. Every cottage except nine "belonging to charity trustees, and three belonging "to another landowner are upon one estate. Gene-"rally 2*l*. 12*s*. per annum."

9*b*. *Mr. Lewis Burnell*, occupier, pays his ordinary labourers 11*s*. per week, horsemen 12*s*. with no increase except in haytime and harvest.

10. Potsgrove - Pop., 298 - Acr., —.

Allotments, 40 of 20 poles each, at 40*s*. per acre.

10*a*. *Rev. J. G. Bulman* says, "The cottages vary "much; some of them are fairly comfortable, others "are very deficient in accommodation. In one, in "which there are (I think) seven persons, there is, for "instance, only one small bedroom under the thatched "roof, in addition to the room, by no means large, "on the ground floor.

"There is sufficient water supply from a good well "in the village.

"Some of the cottages are owned by tradesmen. "The cottagers tell me they are *requested*, but deny "that are *compelled* to deal with them. I leave "you to estimate the value of this distinction. I "ought to add that these cottages are about the best "in the village."

10*b*. *Mr. Joseph Paxton*, occupier, says, "It is "admitted that the cottage accommodation in agri-"cultural districts is in a very unsatisfactory state. "Generally speaking, the class seem to delight in "being huddled together. There ought to be three "bedrooms in cottages where large families exist. "The system of 'earth closets' is so remarkably "simple and so very beneficial to health that when "in operation it is a great boon."

10*c*. *Mr. William Stopp*, occupier, pays men from 11*s*. to 13*s*. per week; employs no boys under 10. Thinks wages are increased on an average 1*s*. per week for the year by piece work.

10*d*. *Mr. J. Hill*, occupier, says, "I employ no "boy under 10, and see no reason why they should "be employed so young if it were not for the poverty "of the parents; I pay men from 11*s*. to 13*s*. per "week."

10*e*. *Mrs. Bunyan*, Sheeplane, hamlet of Pots-grove, "I have four children, three are at school, the "eldest 10; they are not fit to go to work till they "are 12. My husband has 11*s*. a week regularly "now he is draining, and may get 13*s*. by the piece. "We have an allotment of 30 poles, but we had our "name down a long time before we got it. I find it "very difficult to keep my children at school, but "I think it is my duty to keep them out of the plait "school."

10*f*. *Mrs. Bodsworth*, living in a very bad cottage, rent 1*s*. per week (this cottage not fit for any one to live in).

10*g*. *Mrs. Neal*, husband and five children; is a very wretched cottage with one very small bedroom, rent 1*s*. 2*d*. per week.

11. Ridgmont - Pop., 1,029 - Acr., 2,238.

Allotments, 15 acres, let in 110 allotments. Cultivation, two-thirds arable. National and British schools.

11*a*. *Mr. J. Crouch*, occupier, Ridgmont, says of the cottages, "The cottages in this parish are for the most "part substantially built and well ventilated. Rather "less than two-thirds of the cottages are owned by "the labourers themselves, small tradesmen, &c.; "more than one-third are owned by the Duke of "Bedford, the principal landowner. I believe the "average rent is about 3*l*. 10*s*. per annum."

11*b*. *James Wait*, Bickerings Park, Ridgmont, a farm labourer in charge of a gang of 14 boys twitching, boys between 8 and 11 years, and receiving 2*s*. per week, "I have 11*s*. a week and do piece work oc-"casionally; these boys are here because their parents "can't afford to keep them at school; they'll work "here or elsewhere till autumn, and then may be "some of them will be sent to school."

11*c*. *Charles Tuck* (one of gang):
How old are you?—"In my 11" (10).
Can you read and write?—"A little."
Can you spell your own name?—"Yes" (spelling it).

11*d*. *Phineas Juff* (one of gang):
How old are you?—"In my nine" (8).
Can you read and write?—"Not much."
Can you spell your name?—"No."

11*e*. *Mr. Henry Readman*, guardian for Ridgmont, "We shall pay 5*s*. rates this year; the workhouse "(Woburn) is full of able-bodied men whose families "are receiving out relief; 18 came in one day about "three weeks ago, having amongst them about 60 "persons composing their families."

Bedfordshire.

Mr. Culley.

f.

12. Tilsworth - Pop., 348 - Acr., 1,213.
Cultivation mixed.

12*a*. *Rev. Joseph Simpson* says, "There are 55 cottages in the parish, of which 23 have one bedroom, 30 two bedrooms, 2 three bedrooms; 32 cottages are occupied by farm labourers in regular employment.

"A great many old cottages built of wooden frames, lath and plaster, and thatched; some, and those bad ones, of brick and slate, built by tradesmen; some cottages freehold or copyhold on the waste.

"Drainage very bad, and a great many nuisances.

"Rent of cottages about 3*l*. 10*s*. per annum. Many old cottages belong to landowners."

[NOTE.—The cottages in Tilsworth are in many cases as bad as they well can be, and overcrowded in five or six instances visited by the Assistant Commissioner; two extremely badly situated cottages by the side of a pond, belonging to one of the landowners. There is no school, and only seven boys were reported as attending the Wesleyan school in Tebworth, about two miles; what should be the school, a very small building, is used as a plait school.]

12*b*. *Mr. J. H. Simpson*, speaking of the state of the parish, said "About the time the boys voices begin to crack they are just beginning to be able to read the Psalms easily. The girls are hard worked by their parents as long as they are young, and when they get a little older and can keep themselves they care nothing for their parents or anybody else; they get married when they can, utterly unable to keep their house, and between their bad management and the bad cottages, no wonder the husbands go to the beershop. The people in this parish are honest and docile."

12*c*. Two boys leading teams at Tilsworth, 13 years old each of them: Neither of them can read or write, one never had been at any day school, the other had been a short time at Wesleyan school at Chalgrave.

13. Tingrith - Pop., 226 - Acreage, 962.

Allotment, 10 acres, 50 allotments. Cultivation mixed.

13*a*. *Rev. T. Tangueray*, says of the cottages, "Brick and tile or stones and tile. Ventilation good if the tenants do not fill up the chimneys; drainage good. The largest room about 15 feet square, the smallest perhaps 13 feet square. Supply of water ample, from a public tap. Garden to each cottage besides allotments. No crowding in rooms. Landowner. No shops or shopkeepers. Rent about 1*s*. per week."

13*b*. [NOTE.—Tigrith is a small close parish in which the cottage accommodation is well looked after, but it is said to depend on the neigbouring open parishes for a good deal of its labour.]

14. Toddington - Pop., 2,433 - Acreage, 5,600.
Cultivation, mixed.

14*a*. *Rev. John Clegg*, of the cottages, says, "The dwelling houses are many of them in a most lamentable state, and totally unfit for human habitations. Artificial drainage is bad, in fact I think the place is almost devoid of any drainage. Ventilation is very bad. There is plenty of good spring water in the place. The houses are owned for the most part by tradesmen or small owners, very many of whom live out of the parish."

14*b*. Copy of letter, dated March 13th, 1868, from Rev. J. Clegg to George Culley, Esq.

DEAR SIR,

I WAS sorry that I missed you on Tuesday. The straw plait trade is very bad now, otherwise you would have seen those small rooms crammed to suffocation with little children. On perusing the paper of questions which you forwarded to me I find I shall be unable to answer any question satisfactorily, for this reason, the questions have reference to women and children employed in agriculture. There are no women employed in this parish in agricultural labour, and no more boys than are generally employed in any ordinary country parish. In answer to your question concerning the apparently low state of morals in this parish, the causes are (in my opinion) want of education; the bad state of many of the houses of the poor; the great number of public houses; and the straw plait. There are two schools in the parish, both under Government inspection, one Church of England, the other Wesleyan; with the latter of course I have nothing whatever to do, of the former I know a good deal to my cost, as I could not possibly keep it in its present efficient state without the help of my own personal friends. The squire is the chief subscriber in the parish, and three farmers help me; the attendance of the children is so irregular that our grant is small in comparison with the expenses. The moment straw plaiting improves in value a great number of the children are taken away from the school and made to plait. The average attendance at the National school is 100. The introduction of any system by which a regular attendance of children at school could be ensured would be a boon to the parish. The houses in the parish are many of them in a wretched state, and belong to a variety of persons, many of them living out of the parish. We harbour here the outcast poor from many other parishes, where the houses have been pulled down and the inhabitants consequently obliged to seek shelter elsewhere. In such houses there is, as you may suppose, very little regard for decency, in fact none, and it is a wonder to me that there is not more immorality than there is. There is also a great deal of drunkenness in this parish. I think there are 13 or 14 public houses in the place, and many of the labourers spend their wages regularly at them, while their wives and families maintain the house by straw plaiting. There is not so much poverty as improvidence; money is spent as fast as it comes, and families, to my knowledge, have been starving this last winter where the husbands were earning 20*s*. to 25*s*. a week nine months ago by working on the railway. The people here are quite alive to the *Poor Law*, and know that as soon as they have spent all and have no work the parish must keep them, and it is quite amusing to watch the systematic way in which they proceed. I think I may safely say that the present *Poor Law Act* does quite its share towards producing a low state of morals here. I trust that what I have stated may prove of service to you in making your report to Her Majesty's Government.

Believe me, dear Sir,
Faithfully yours,
JOHN CLEGG.

14*c*. Copy of a letter, dated March 25th, 1868, from Mr. Thomas Magor to George Culley, Esq.

DEAR SIR,

As no women or girls are employed in this district, and no boys at an age when such work would be injurious to them, I shall confine my observations to what in my opinion is the primary cause of the peculiar wretchedness of this district, viz., the straw plait manufacture, and secondly, the evils arising to a great extent from it: 1. Defective education. 2. Drunkenness. 3. Evils of the present Poor Law Act. 4. The tally system. 5. The mismanagement of clubs and friendly societies. 6. Overcrowding of villages.

The straw plait manufacture.—At from 3 to 5 years of age children of both sexes are sent to the plaiting schools, which for the most part are conducted in labourers' cottages quite unfit for the purpose (an exception may be made in favour of the village of Harlington, where there are two schools, both well managed and the children taught the rudiments of reading and writing, and sewing in case of girls). In these schools, with the above exception, the children are crowded together almost as thickly as they can get for about eight hours; during summer imperfect ventilation is procured by opening the door, but as any amount of cold so benumbs the fingers as to unfit them for plaiting, during winter fresh air is carefully excluded, so that the atmosphere is sometimes sickening. At the age of 10 or 12 most of the boys exchange plaiting for farm work, but

resume plaiting when severe weather or a scarcity of work prevents them labouring in the fields. Many of the girls as they grow up exchange plaiting for bonnet sewing at certain seasons of the year. From the fact of the girls being engrossed from early childhood by plaiting, they grow up as a class very ignorant of domestic economy, they can neither cook, make or mend their clothes, which are usually bought of some material which will not wash, and is worn until it drops to pieces. The profits of the plait trade are very fluctuating; in prosperous times a good workman can earn from 1*s.* to 3*s.* daily, but at the present time, when the trade is very depressed, very little can be earned. In my opinion the operation of the Factory Act would ameliorate many of these evils, but females' education must be made to embrace instruction in domestic economy, before much good can be done.

Drunkenness.—Most of the men are intemperate. The causes are the aggregation of the cottages in villages, the wretched condition of the cottages, often deficient in all sanitary conveniences, the entire absence of a proprietary considering themselves in any way responsible for the moral or physical well being of their tenants, and lastly the very defective legislation respecting public houses. To remedy this state of things I would especially recommend the erection of a sufficient number of cottages on each farm to accommodate its own labourers, saving them the labour of a long daily walk with the public house at its finish; sanitary matters should be regulated by a central board instead of a local one, often interested in keeping up local abuses, and the landlords of public houses should incur a certain amount of responsibility for harbouring drunken men, while licences should be much more sparingly issued.

The tally system.—With the establishment of the county court a race of tradesmen arose whose dealings were chiefly among the needy; for a weekly payment varying in amount goods below a certain value can be obtained, the trader trusting to the county court and to a charge of from 20 to 40 per cent. above cost price for repayment. These tallymen, by appealing to the vanity of the women and their extreme ignorance of all economy, contrive to get them as much in debt as may suit their purpose, so that the wages of these poor people are always spent in anticipation. No debts below 5*l.* should be recoverable in the county court. Traders should receive no encouragement to trust people with weekly wages, who after a time would learn the value of ready money payments.

The mismanagement of clubs and friendly societies.—Most of these clubs are held in public houses; the working expenses are unnecessarily heavy. The members are not secured against fraud. They are not sufficiently assisted in times of distress by the Poor Law, and it is found almost impossible under the present regulations to provide a fund for aged members.

Overcrowding of villages. — Toddington seems formerly to have been a much more important place than at present, but as the prosperity of the town decreased the number of inhabitants was kept up by the origination of the plait trade. The women and children in past years could earn sufficient money to keep the household, while the men spent their own earnings too frequently in drink. For generations they have borne a bad character; most of them agricultural labourers, and always being in greater number than the surrounding farmers required, they have kept down the price of labour, have prevented landlords or farmers from building cottages on each farm, and have often to walk a distance of four or five miles to and from their work to a cottage presenting none of the features of what a home should be; no garden, these house generally consisting of two wretched rooms utterly insufficient for the purposes of decency.

Evils of the present Poor Law system.—In the parish of Toddington, with a population of 2,433, 542 persons have been relieved by the parish from the 1st of October 1867 to 11th March 1868. I consider the present poor law system altogether bad; no distinction is drawn between the man struggling with adversity, the able-bodied loafer, and the drunken and dissipated. Severe labour tests should be imposed upon those who are known to be bad characters, while those who are sick or otherwise helpless should receive more tender consideration.

You will excuse this hasty and imperfect report, as I am much pressed for time.

Believe me very truly yours,
THOMAS MAGOR.

14*d.* *Mr. W. Horsley*, registrar of births, marriages, and deaths, "This place (Toddington) I should say "has no equal; we have the refuse of Harlington, "Sundon, Chalgrave, Tingrith, and all round us; "about 100 new cottages have been built here lately, "but they didn't pull the old ones down, so there they "are with such people in them, not fit for pigs to live "in scarcely. All these houses, or nearly all, belong "to small freeholders, and the gentry round about on "whose land these people work pay no heed to them. "Why they used to pull down houses at all the places "round and drive the people here."

14*e.* *Mrs. Edwards*, husband a farm labourer. Herself, husband, her mother, and five children have only one bedroom; living in a very wretched house, for which they pay 4*l.* a year. Has two children who go to plaiting school half day and National school half day.

14*f.* *Mrs. Garner* and seven children in one very small bedroom, about 8 feet square and very low.

14*g.* *George Purser*, 20, can neither read nor write; has done no work since last harvest, when he got 30*s.* a week in the Fens; is in the Beds militia. "No "recruiting serjeant for the regulars ever comes near "here."

14*h.* *Charles Purser*, 16, can neither read nor write; has been often in the workhouse, but has never been taught to read; is not doing anything just now.

15. Woburn - Pop., 1,764 - Acr., 4,196.

Allotments, 10 acres in 78 allotments; average rent, 53*s.* 4*d.* per acre.

15*a.* *Mr. C. Stephenson*, Woburn Park Farm, says, "All cottages of modern construction are brick "and tile, or slate; one bedroom, 12 ft. square, and "two are 8 ft. by 12 ft.; lower rooms, 12 ft. square. "Ventilation by chimney and windows; when ventilators are put in, they have invariably been "stopped up by the occupiers. Drainage, part into "main sewers and part into cesspools, cleaned out "once a year. Accommodation, one sitting room "and one large scullery; about one half the number "have three bedrooms, and the remainder two. "Water is supplied to all, spring from wells and rain "gathered in tanks. All cottages have small gardens attached independent of their allotments. "Outhouses include wood barn, privy, and ashbin, "and one large oven to each block of cottages; a "small kitchen range in each cottage, which has "oven and boiler. Tenancies held direct from the "owner. Rent, 1*s.* 2*d.* and 1*s.* 4*d.* per week."

15*b.* [NOTE.—This description applies to blocks of cottages built in many parishes by the Duke of Bedford, and is raferred to in describing the cottages in those parishes. The cottages are for the most part built of brick, but in some parishes, as in Oakley, they are of stone. The blocks consist of two, three, or four cottages, as may be required, four being the most usual number, in which case the outside cottages have three and the inside two bedrooms each.—G. C.]

15*c.* *Mrs. Burnage*, Woburn, husband a farm labourer, works at Speedwell, and gets 11*s.* per week; "Sometimes gets a bit of piece work, but seldom, "say 5*s.* or 10*s.* for the year, putting by harvest." Has five children, two of 4 and 6 years at infant school. Girl of 8 stops at home to work. Girl of 11 goes out to nurse a baby and earns 1*s.* per week. "12*s.* a week is all we have to live on, and bread

Bedfordshire.
Mr. Culley.
f.

" costs me 7*s.* a week." Has an allotment of 20 poles.

15*d. John Willesden*, farm foreman, Woburn. Has one son, 10 years old, at school in Woburn. The clergyman wants him to remain at school, but he is afraid he may have him there till he loses the opportunity of learning his business as a farm labourer. " You know, sir, I began work at 8, and no " doubt lost a good deal by not remaining at school " longer, but I consider that I learnt some things " between 8 and 10 at work which has helped to " make me what I am, a foreman of a small farm. . . . " I pay a regular labourer under me 11*s.* per week, " with no piece work or any extra pay, except in " haytime and harvest. I can get as many men at " 11*s.* per week as I like, and I consider *that* the " regular wage of the district."

15*e. Mr. Lewis*, Hundreds Farm, Woburn. Farms 80 to 90 acres. Pays horsemen 14*s.* per week; pays another man 12*s.* per week. The man at 12*s* per week would make 2*l.* in the year by piece work, besides haytime and harvest.

15*f. Mr. C. Stephenson*, Woburn Park Farm, says of the wages, " Wages nominally 11*s.* or 12*s.* per " week, but 22 men upon this farm have averaged " 2*s.* 7*d.* per day during 1867; this of course includes " all piece work, and the usual beer allowance is also " commuted and paid in money. Lads 14 to 17 " years of age earn 1*s.* 3*d.* per day."

15*g.* The following TABLE gives the names, numbers in families, number of bedrooms, rent of cottages, ownership of cottages, quantity of garden or allotment, and distance from work, in the case of 14 (all the) married labourers working on a farm in Woburn Parish.

Name of Labourer.	Family.	No. of Bedrooms.	Rent of Cottage.	Owner of Cottage.	Garden Ground.	Distance from Work.
			s. *d.*			
Sinfield -	Wife and 4 children, 12 to 1 years	One bedroom -	1 10	Mrs. Circuit -	2 poles	1 mile.
Newbury -	„ 5 children, 10 to 1 „	Two bedrooms	2 6	Miss Cobbe -	- -	„
Oliver -	„ 1 child - - -	„ „ -	1 2	Duke of Bedford	40 poles	„
Sedgwick-	„ 4 children, 15 to 2 „	„ „ -	1 9	Mr. John Cook -	5 „	„
Foulkesk -	„ 3 children, 9 to 2 „	One bedroom -	1 6	Mr. W. Gurney	4 „	„
Smith -	Wife, family away - - -	Two bedrooms	2 3	Mrs. Mahon -	20 „	„
Keetch -	„ „ - - -	Three „ -	1 4	Duke of Bedford	15 „	1¼ mile.
Hurst -	„ „ - - -	Two „ -	1 2	„ „	1 „	1 mile.
Henley -	„ „ - - -	One bedroom -	1 2	„ „	- -	„
Brown -	Wife, no family - - -	Three bedrooms	1 4	„ „	8 poles	1½ mile.
C. Clarke-	Wife and 6 children, 17 to 7 years	„ „ -	1 4	„ „	1 pole	¼ of mile.
Burgess -	„ 4 children, 17 to 6 „	Four bedrooms	1 4	„ „	20 poles	On farm.
Ward -	„ no family - - -	Three „ -	2 6	„ „	40 „	„
G. Clarke	„ 3 children, 20 to 14 „	Two „ -	1 6	„ „	40 „	1¼ mile.

15*h. Mrs. Newbury*, 18, Cobbe's Row, Woburn. Husband a farm labourer working on Birchmore farm, and getting 11*s.* per week. Pays 2*s.* 6*d.* a week rent for a bad cottage in a very narrow and dirty street; no land attached to cottage. " We can't get " one of the duke's houses; there is always a many " crying out for them; they're cheap and good, and " we have no chance. . . . . We often say as we " would like a piece of land, but there ain't much " chance for us here in Woburn; there is only one " field for all Woburn. I have five children; the " eldest 10, a girl, I must keep at home to mind the " baby when I get a bit of washing or such like. If " I'm not to send my boy to work in his 10 (at 9 " years old) I think we must starve. My husband " gets no great work, and has not done for two years; " we have nothing but bread and dripping and some- " times dry bread to eat, and may be a penn'orth of " turnip tops on Sunday."

15*i. Mrs. Holmes*, 10, Cobbe's Row, Woburn. Husband an able-bodied labourer (described by the relieving officer as a bad lot from Toddington) in the workhouse. Family, his wife and five children, receiving out relief, six loaves and 4*s.* per week. Pay 2*s.* 6*d.* a week rent for bad cottage and no ground. Eldest child of 11 and three others at school. Wife pays schooling, and does straw plait to make up their living. " I can do a score of plait a day, and get 4*d.* " a score, and have to pay 1½*d.* for straw. . . . . We " eat rice and bread, vegetables is out of character; " sometimes I get a penn'orth of turnips "

BEDFORD UNION.

16. Biddenham - Pop., 350 - Acr., 1,556.

Cultivation is mixed; about two-thirds arable, one-third grass. Sixty-three labourers' cottages.

16*a. Mr. Wm. Golding*, says, " The cottages are " constructed of stone and tiles; and many of them " of oak frames, studded, and lath and plaster, and " rough cast, and covered with thatch; the latter " are very strongly built cottages. The living rooms " average about 12 ft. by 10 ft., some larger and " some smaller; the bedrooms about 10 ft. by 7 ft., " some much larger and others a very little smaller. " Nearly all the cottages have three sleeping rooms, " all good water supply and drainage. Each has a " garden attached, varying from 15 poles up to 1 rood, " which produces enough to pay the rent. The land- " lord pays all rates, taxes, &c., and for all repairs, &c. " The Right Hon. Lord Dynevor's trustees are the " owners. Annual rent 25*s.* up to 3*l.*, according to the " size of cottage and its accommodation. In addition " to the home garden as above described, each cottager " has an allotment averaging about one rood, and for " which he pays about the same rent as the farmers " are charged for their occupation; I consider these " allotments most beneficial in helping the parents of " large families to bring them up respectively, and " they have proved a great preventative to crime; " in the event of any of the occupiers being convicted " before a bench of magistrates they forfeit their " allotment, we have had but here and there a case " of forfeiture; the men would suffer anything rather " than forfeit their allotment."

This description applies also to Bromham.

16*b. Mr. Charles Howard*, says, " Our village is " considered very pretty, the cottages being generally " described as 'truly rural.'"

[NOTE.—Mr. Howard then describes the cottages very much as Mr. Golding.]

16*c. William Hockle*, 11 years old, " keeping " crows;" is in field from 6 to 6, with 1¾ hour rest. Was at school till he was 7; can read and write now.

16*d. Arthur Baxter*, at work; left school at 7½, but goes to Sunday school; can read a little.

16*e. Joseph Macom*, 10, left school at 9; can read and write; is helping shepherd.

16*f. Julia Brockett*, 16, lace making; works from 8 or 9 a.m. till " whiles," 10 p.m., with 2 hours rest; earns 2*s.* 6*d.* a week.

[NOTE.—This girl at work in a very low cottage; rooms not above 5 ft. 6 in. to 6 ft., I should think.]

17. Bromham - Pop., 361 - Acr., 1,700.

17*a*. *Rev. J. A. Coleridge* says, "As a rule our "cottages are above the average, some few are still "very bad. They are thus constructed" (here follows a description similar to that for Biddenham, belonging to the same owners, and having the same allotment system and moderate rent for cottages).

18. Bletsoe - Pop., 412 - Acr., 2,187.

Cultivation, two-thirds arable; one-third grass.

18*a*. *Mr. John Thomas* says, "The cottages are "thatch and plaster and brick and slate; rooms "small, drainage good generally; water supply, "garden ground, &c., good. They belong to the "landowner and rents are moderate."

19. Cardington - Pop., 1,419 - Acr., 5,060.

19*a*. *Rev. E. J. Hillier* says, "The cottages are "most of them the property of the landlord, who is "careful in the management of them, and they are "let at low rents to labourers on the estate."

19*b*. *Mr. John E. Bodger* says, "Good accom-"modation in every respect, with a rood of land for "the cottages. Rent low. My men have each a "rood of land, and I consider that quite sufficient "for a labouring man. The late Mr. Whitbread was "asked to give an acre and refused."

19*c*. [Note of Assistant Commissioner.—Visited one bad cottage in Cardington, in which Mrs. Peck lives; cottages generally good.]

19*d*. Here is an industrial school for girls, the only one, I believe, in the county of Bedford, of which the report is as follows:—

"Cardington Industrial Day School for Girls.

"This school is the only one of the kind in the "county of Bedford; and as an experience of eight "years has now been gained, it is thought that a "statement of the method pursued, the expense "incurred, and the advantages resulting, may be to "some persons suggestive and serviceable.

"If a girl goes out to domestic service without "special training, she generally begins at low wages, "in a place of an inferior kind; but from this in-"dustrial school the girls have obtained at once a "good start in life, in superior families, at wages "of about 10*l*. a year.

"In the Cardington Industrial School girls are "admitted between the ages of 7 and 17. Instruc-"tion in the elementary branches of education—"reading, writing, and arithmetic—and in the Bible "and the formularies of the Established Church, is "here given as in the parochial school. Plain "needlework and cutting out are also taught; and "the elder girls are instructed in the use of a sewing "machine.

"To this instruction is added the special training "in the work of a cook, a housemaid, a laundress, "and a dairymaid; the elder girls taking weekly "turns to act in these capacities.

"Practice in all ordinary kinds of cooking is "obtained in the following ways: 1st, soup and "other articles of food are frequently prepared for "poor sick persons; and, 2ndly, a dinner in winter "and a meat tea in summer, with a varying bill "of fare, is given to the whole school once a week; "which dinner or tea, however, any girl may forfeit "through her own fault.

"The milk for the dairy is bought of a farmer. "One girl acts as dairymaid, and she takes her "pail to the milking. The butter is sold at market "price.

"The buildings consist of an ample school room, "furnished with a Flavell's cooking range, a mistress's "house, a dairy, a pantry, and a scullery furnished "with washing trays and other appliances.

"When any girl, at the age of 17, after con-"ducting herself well, goes out to service, to a "place approved of by the patrons of the school, "she is presented by them with an outfit of clothing.

"All the girls who have hitherto gone out to "service from the school in this way have obtained "good places, and have given satisfaction in them; "and those who have left the school before the age "of 17 have obtained better places than they could "otherwise have expected.

"The chief employments of women and girls in "this county are lace making and straw plaiting. "As the wages of farm labour are low, parents "cannot afford both to pay the weekly twopence, "which is the small school fee required, and also to "lose what their children could earn at the lace pillow "or at plaiting straw. Therefore these manual em-"ployments are adopted into the work of the school. "A certain number of hours a day are devoted to "these occupations, and a teacher is engaged to "superintend the girls so employed. This arrange-"ment is found to leave the girls time enough for the "other school work, and it leaves the mistress more "free to attend to the domestic training; and those "girls whose parents wish them to do more work "than can be done in the allotted time may remain "after the regular school hours to complete it.

"The entire training in all its branches (except "the instruction in lace making and straw plaiting), "is carried on by one competent trained but not "certified mistress, who has also had some ex-"perience in domestic service. It is considered "to be a decided advantage that she does not hold a "certificate, as she is able to devote to the industrial "training of the elder girls all the time and energy "which certified mistresses are bound to give to the "instruction of pupil teachers.

"The total expenses of the school at present are "about 70*l*. a year. The number of girls is limited "to 30, which is found to be as many as can be "supplied by the population of Cardington proper, "which by the last census was 572; some girls are "admitted also from hamlets belonging to Cardington. "It may be remarked, however, that in a large "parish a school of double the number could probably "be maintained at proportionally small extra cost. "The cost would also be dimished if the industrial "part were an annex to the parochial school, instead "of being, as this is, a separate establishment."

"April, 1868."

20. Clapham - Pop., 502 - Acr., 1,948.

Cultivation chiefly arable.

20*a*. *Messrs. J. & F. Howard* say of the cottages, "The construction is generally inferior, the soil is "generally porous, and the river very near, so that "there is little or no artificial drainage. Ownership "by men of moderate means who have built or "bought cottages as an investment; a few belong to "the landowners. Rents are moderate, from 3*l*. to "4*l*. a year. We hold strong opinions on the de-"sirability and even the duty of landowners pro-"viding sufficient accommodation for the labourers. "We should even be glad to see some compulsory "enactment to provide for parishes where the cottage "accommodation per hundred acres is much below "the requirements."

21. Cople, Pop., 565 - Acr., 2,109 - Cottages, 102.

Allotments, 96, containing 17 acres, let at 40*s*.

21*a*. [Nearly all the cottages belong to the Duke of Bedford, and are good, constructed as those described by Mr. C. Stephenson for Woburn, with good offices and a rood of ground as allotment. Most of the farms have a block of cottages attached to the farm-steading. Speaking of such a block, Mr. Amos Warwick, bailiff to Mrs. Brimley, farming 300 acres, said, two were quite enough as long as they were kept in the landlord's hands.]

21*b*. *Mrs. Facey*, living in house built on waste, for which she pays quitrent, 5*s*. Self and five children in one small bedroom; three younger, two at school; gets 3*s*. and 3 loaves from parish. "I wouldn't "have any of my children leave school before 11 or

Bedfordshire.
Mr. Culley.
f.

" 12 if I could help it, and none of them have left " before 10, but betimes we might have starved if " they couldn't work at it before 10 when they " was'nt at school."

21*c*. *Joseph Eastwell*, 15 on Mr. Purser's farm topping and rooting mangold ; can read a little but cannot write.

22. Goldington - Pop., 609 - Acr., 2,735.

Cultivation mixed.

22*a*. *Mr Ulysses Paine* says of the cottages, " Some newly built with good accommodation, others " mud and stud. Drainage and ventilation bad, rooms " small, short in number for a family ; water good, " with garden accommodation. Landowners' rent, " 3*l*. 10*s*. per year."

22*b*. [Assistant Commissioner's note.—Some cottages built of mud and stud in a very bad state belonging to a small freeholder, rent 1*s*. 2*d*. to 1*s*. 4*d*. per week, with no garden.]

22*c*. *Mr. Newmann* (a farm labourer) with five children in a very bad cottage. Three children at school, no child at work ; he receives 12*s*. per week, which is " the usual pay."

22*d*. Very good schools with large attendance of very young children. Some good blocks of cottages belonging to the Duke of Bedford.

23. Kempston - Pop., 2,191 - Acr., 5,000.

Cultivation chiefly arable. Some good and some very poor cottages.

23*a*. Copy of a letter addressed to Rev. Jas. Fraser by Mr. Chas. Howard in which reference is made to Kempston.

Dear Sir,

We have no gang system in this part of the country ; it is therefore thought by most of those to whom I have spoken that no legislation is required for fixing the age at which boys should go to work ; my own opinion is that no boy should go to work until he is 10 years of age ; up to that time he should go to school. I fear this will not be accomplished except upon the compulsory system, and yet I cannot see my way clear to carry this out in our rural districts, where in outlying places the schools may be miles from the children. *There is a parish adjoining this one, the largest in Bedfordshire, where cottages and farm homesteads are miles from either the church or school.* The alternate system of one day at school and the other at work will never answer. It will be far better to keep the boys altogether at school up to 10 years of age, arranging for rather a long holiday in the hay and corn harvest. After this age, if lads could go to winter evening schools, much good would result to them ; at least such has been my experience in this parish. The time has doubtless arrived when our children ought not to be allowed longer to remain in ignorance. On every farm our best men in every sense are those who have had some educational advantages. On a better education depends the well-being of our rural population ; only let this be enforced, more commodious cottages must follow, or the rising race of labourers will refuse to live in such as they now have. That curse of our labourers, the beer shop, will then have fewer attractions, and consequently our gaols fewer inmates. England will find in the long run that money spent in the education of her children is the truest economy.

Yours truly,
Charles Howard.

23*b*. Copy of a letter from the same gentleman Culley, Esq., Dated April 13th, 1868.

My dear Sir,

The parish alluded to in my letter to Mr. Fraser is Kempston, which is the largest parish in the Bedford Union. It commences at Bromham Bridge and joins the parish of Houghton Conquest near Ampthill. There are several " ends " (hamlets) at a long distance from either church or schools. I have ere now found girls very useful in picking twitch, and perhaps may again. In fine warm weather it is " an " agreeable change from the lace pillow " and no doubt does them a deal of good.

My dear Sir,
Yours very truly,
Charles Howard.

23*c*. Copy of letter from the Rev. H. J. Williams, Vicar of Kempston, to G. Culley, Esq., Dated April 24th, 1868.

My dear Sir,

With reference to your letter respecting a statement which has been made respecting the great distance there is from the parish church and schools to some part of this parish, I would endeavour to explain that few parishes in the county with so scattered a population and so wide an acreage, nearly 5,000, are so well provided with both as ours. The parish church, though it has but seven houses besides the vicarage around it, is in the centre of the acreage. Some of the scattered farms and cottages are from a mile to a mile and half distant, and one farm which stands alone is 2 to 2½ miles. The schools for this part of the parish are close to the church, and though there are scattered groups of cottages over a considerable area, the main body are from a quarter to one mile distant. There is one group of 10 cottages near Bromham and Biddenham where several of the children go to school from their parents having been connected with these parishes though the distance is not the objection, as the children of two of these families come regularly to our school ; indeed, I do not find that there is any difficulty for boys or girls of 5 or 6 years old coming on the other side of the parish towards Bedford, where the chief part of the population is concentrated, and in the midst of them we have three day schools for boys, girls, and infants, as you may see by the returns, and they are well attended, besides an evening school, as well as a Sunday school for this part of the parish situated about 1¼ mile from the parish church and schools, which embrace all the population of the village properly so called. There are no large groups of cottages at any distance from this part of the parish except two or three cottages attached to two separate farm houses, one at about half, the other at a mile distance. You will see from this statement that, considering the large area of the parish, we have our schools placed as conveniently as practicable and for the accommodation of the people. I should mention that a new church is building in the populous part of the parish and will be opened next month in place of the service which has been carried on for some years in the licensed school room. To suppose that a school can be placed in the midst of every half dozen of cottages in so scattered a population is preposterous and impossible. I hope this statement will prove satisfactory.

Believe me,
My dear Sir,
Yours truly,
H. J. Williams.

23*d*. *John Costin*, labourer, Kempston, working for Messrs. Howard : " I live in Kempston and have " a little girl in my charge, but no children of my " own. I would not object to my children being " taught the church catechism, at least most of it. " I send the little girl to the Kempston church " school, where the catechism is taught. Up to two " years ago the Wesleyans were not admitted to the " Kempston school unless they would attend the " church Sunday school ; there is no such stipulation " now, the Wesleyan scholars attending their own " Sunday school."

23*e*. *Thomas Eates*, working for Messrs. Howard : " I don't object to the church catechism except those " parts about baptism. If they would omit the " baptismal parts my children can learn it all. I " have no objection to the belief or duty to God and " your neighbour."

23*f*. *George Freshwater*, working for Messrs. Howard: "I bring up my children as Baptists. "They are learning the church catechism at school, "only they can't answer the baptismal questions. I "don't at all object to the church catechism, but I "believe the Baptists, as a body, would, even to the "non-baptismal portion."

23*g*. *Mrs. Lack*, Kempston: "My husband is a "farm labourer, works piece work just now; I don't "know what he earns, he is not one as tells his wife "what money he gets; I know what I get from him, "and it ain't scarcely enough to buy bread, let alone "sending my girl (10 years old) to school; she must "work, she must; if the Queen means to do any "good to us she had best begin by putting down "them alehouses; they makes gentlefolks' fortunes, "they do; look at this, captain; and they won't put "them down, but the Queen might, or leastways "shorten their hours. It's Saturday night till 12 "o'clock, and they ain't well out o' church a Sunday "till they're in again. Them alehouses is our curse, "they are."

This woman's daughter is 10 years old, is employed in lace making, and can neither read nor write.

23*h*. *Wm Purser*, 10 years of age, keeping crows; can read and write a little. Was at school two years ago. Has been "keeping crows" on Sunday for three weeks; will go to church next Sunday.

23*i*. *Joseph Cave*, leading team, 10 years old, can read and write a little; was at school till he was 8. Can spell "Cave."

23*j*. Two men (catch workmen hoeing wheat) get 4*s*. per acre. Can earn, "may be," 2*s*. 6*d* a day if the weather is good.

23*k*. *Mrs. Garner* (living in a good cottage belonging to Mrs. Barnard).

	per week. s.	d.
Husband a farm labourer (horse keeper), gets, starting at 4 a.m. -	14	0
Boy 18 gets - - -	8	0
Boy 13 „ - - - -	4	0
Boy 9 } for three or four week just Boy 8 } now dropping potatoes -	2	0
Girl 15, making lace four days, at sewing school two days. Works from 7 a.m. till 10 p.m. - -	2	4
Girl 10, lacemaking - - -	1	0
Whole family (just now) -	33	4

Upon which she has to keep husband and self and nine children. The boys 8 and 9 will go to school again as soon as potato dropping is over.

24. Knotting.

Knotting - Pop., 185 - Acr., 1,724.

Cultivation, mixed. Allotments, 26 of 40 poles each; rent per acre, 26*s*. 8*d*.

24*a*. *Mr. Geo. Hine* says of the cottages, "New cot- "tages, with two or three bedrooms, built of brick and "tiled, with good offices, but requiring bigger barns for "wood, &c. Old cottages, brick and thatched, with "low rooms, old farm houses converted. All my men "have 40 poles of ground and can grow five bushels "of wheat on half of it. The good cottages belong "to the Duke of Bedford.

24*b*. *James Arber* (living in a poor cottage with no conveniences): Has 14*s*. per week as a horse keeper; has nine children from 1 to 14 years; two girls "twitching," just come home, both can read and write, "We have no schoolmaster, but I teach them." [Both girls told the Assistant Commissioner they liked twitching better than the lace pillow.]

24*c*. *Elijah Wiggins*, lives in a very low cottage with two rooms upstairs, his wife, wife's mother and sister, and three children in house. No outhouses.

25. Melchbourne.

Melchbourne - Pop., 251 - Acr., 2,573.

Cultivation mixed.

25*a*. *Mr. E. Campion*, says of the cottages, "Cot- "tages good and rooms of moderate size;

	ft.	ft.
"Two bedrooms to each, about	12 by	11
"Living room - -	12 „	12
"Wash house - -	8 „	6

"Ventilation and drainage good.
"Water supply good.
"Garden and outhouse to each cottage.
"Each cottage an allotment of 40 poles.
"Rent, 50*s*. per year.
"All cottages property of landowner."

25*b*. *Rev. R. P. Bent*, after describing cottages, &c. much as Mr. Campion, says, "In fact the whole parish "belongs to Lord St. John. A large proportion of "labourers working on the farms in Melchbourne "live in the adjoining parishes."

25*c*. [The cottages visited by the Assistant Commissioner were thatched cottages with larger and loftier rooms than in most of the thatched cottages in the county.]

26. Oakley.

Oakley - Pop., 443 - Acr., 1,500.

Cultivation, chiefly arable. Allotments, 10 acres divided into 99 allotments.

26*a*. *Mr. John Horrell*, of the cottages, says, "The "parish of Oakley is, with the exception of a few "cottages, the property of the Duke of Bedford; the "cottages have most been built within the last 12 "years; some built of brick and tiles and some of "stone and slate. Water supply good, small gardens "and outhouses to each cottage. Rent 56*s*., 60*s*., "and 70*s*. per annum, according to number of family "and number of rooms required."

26*b*. [Note.—For description of these cottages see Mr. C. Stephenson's description for Woburn. The new cottages here visited by the Assistant Commissioner are very good; struck him as having too much window and too large panes of glass.]

26*c*. *Ellen Warwick*, 19, lace making, can read but cannot write was never at any day school; work from 7 a.m. till 9 p.m., with two hours rest in middle of day. *Mary Ann Cockings*, working with her, 17 years of age, has never been at school, and can neither read nor write.

26*d*. *Mrs. Jane Hulett:* "All my children, eight of "them, are able to read and write, and have been "regular at school up to 9, some of them up to 13; "my boys went to night school, or they would soon "have forgotten to write and the girls went to sewing "school."

27. Ravensden.

Ravensden - Pop., 477 - Acr., 2,185.

Cultivation mixed; 75 acres glebe let in allotments, half to eight or nine acres each.

27*a*. *Francis Wythes, Esq.*, landowner and occupier, says of the cottages, "Some are very bad as to venti- "lation and drainage and water supply. Ownership, "some by tradesmen; some on the waste (and claim "ownership themselves), these are very bad. Rent, "50*s*. to 80*s*."

27*b*. [Note.—Mr. Francis Wythes told the Assistant Commissioner that he had employed men in most parts of England, and that for the work done he considered that Bedfordshire men were paid higher than in any other county in which he had employed men. That he had employed cheaper men at 18*s*. per week in the north than the Beds men at 12*s*.]

28. Renhold.

Renhold - Pop., 513 - Acr., 2,077.

Cultivation mixed.

28*a*. *Rev. Leigh Spencer* says, "All cottages have "from half to two acres of allotment; all have gardens; "nearly all keep pigs; water supply most inadequate; "chiefly using pond water for all purposes. Owner- "ship, chiefly landowner."

28*b*. *Mr. G. Wallis*, says, "The cottages are badly

Bedfordshire.
Mr. Culley.
f.

" off for water in summer, as there are no springs " or wells."

[NOTE.—The Assistant Commissioner visited several poor cottages with very small bedrooms in high-pitched thatched roof, with windows almost on the floor.]

29. RISELY.

Risely - Pop., 1,026 - Acr., 2,980.

Cultivation chiefly arable.

29*a*. *Rev. R. N. Durrant*, describing the cottages, says, "Construction.—Brick and tile or lath and plaster " rough cast with thatch. Average size of rooms, " 13 feet by 13 feet; ventilation is either close or " drafty; drainage is defective, either as securing " cleanliness or freedom from damp.

" Accommodation.—One living room, two bedrooms, " a dip-well with good water to each cottage or one " between two cottages, a small garden, with fre- " quently one rood of allotment ground at 40*s*. per " acre, and almost every cottage has its small 'barn' " or outhouse.

" Ownership is mostly by landowner, hardly in any " case by tradesmen with whom tenant is obliged to " deal.

" Rent varies from 3*l*. to 5*l*., but mostly below the " maximum."

29*b*. The Assistant Commissioner did not see any very bad cottages in Risely, although there are a good many old ones.

30. SHARNBROOK.

Sharnbrook - Pop., 872 - Acr., 2,318.

30*a*. There are a great many very bad and very high-rented cottages in this village belonging in some instances visited by the Assistant Commissioner to one of the chief landowners of the parish, and in others to small freeholders. A great want of an energetic inspector of nuisances.

3*b*. *Mrs. Allen*. Husband a farm labourer; living in a very small cottage very much out of repair, and paying 3*l*. a year rent. " I have five children; one " of 7 is at school, a boy 12 is at work. I'm no " scholar, but I would have my boy of 12 at school " if I could afford it; I have another little 'un as " should be at school, but there is so little pay " coming in."

30*c*. *Mrs. Bone*. Husband a farm labourer. Pays 4*l*. a year for a miserable cottage of four rooms; largest rooms 10 ft. square by 6 ft. high (next cottage in same state), altogether out of repair. Has six children, three boys, 16, 14, and 8, at work; two girls, 10 and 6, at school.

31. SOULDROP.

Souldrop - Pop., 276 - Acr., 800.

31 *a*. *The Rev. G. D. Newbolt*, of the cottages, says, "Almost all the cottages in this parish belong " to the Duke of Bedford, who is careful that the " accommodation shall be as good as possible." There are 33 allotments belonging to chief landowners, and some part of glebe is let in larger allotments.

SWINESHEAD.

32. Swineshead - Pop., - Acr., .

Cultivation chiefly arable.

32*a*. *Mr. John Smith*, of the cottages, says, "Cot- " tages very bad; many built of lath and plaster, " with wood frames, and thatched. Some belong to " principal landowners, and many to small free- " holders. Drainage very bad. Rent about 1*s*. 3*d*. " a week."

32*b*. No school nearer than Pertenhall. No resident clergyman.

32*c*. *Mrs. Howe*. One bedroom and one living room. Has four children, eldest 10; no child at school. Her cottage in very bad state, as also two or three mud and thatch cottages near it. No drainage, and many nuisances.

32*d*. *Mrs. Pickering*. One bedroom. Five children, eldest a boy 17, a girl 14. Pays 1*s*. per week for a very bad cottage without barn or privy.

THURLEIGH.

33. Thurleigh - Pop., 666 - Acr., 3,300.

Cultivation chiefly arable.

33*a*. *The Rev. B. Trapp*, of the cottages, says, " They are generally built of clay and thatched. No " drainage or water supply. Ventilation bad; so " much of fresh air outside that they prefer closed " windows. An energetic medical man once broke a " hole in the thatched roof to secure some fresh air for " his patient, the opened window being closed as soon " as he left. Out of about 110 cottages, more than 50 " are built on the waste land at the side of the road, " and belong to the occupiers. The principal land- " owners have none, or next to none, on their estates. " The rents are low, generally about 50*s*. per annum. " One person has built lately four good cottages of " four rooms each, with water supply and all con- " veniences, which would let in Bedford for 8*l*. or " 10*l*. a year; here he gets 4*l*. a year, which is con- " sidered enormously dear. The cost of building is " greater than in Bedford, though land of course is " cheaper."

33*b*. [NOTE of Assistant Commissioner.—Of 110 cottages, 52 belong to occupiers and are built on waste; these are generally in a bad state, some have only one room for all purposes, and some two rooms; some of these occupiers pay 1*s*. quit rent, others pay nothing. One landowner of about 830 acres has four cottages (very poor ones), and another who owns 550 acres has no cottage to represent it, though very good farm offices. The water supply is by means of holes dug to catch rain water on the road side.]

33*c*. Speaking of these cottages, one of the landowners said to Assistant Commissioner, " No man " without the Bank of England at his back could " afford to buy up, pull down, and rebuild cottages on " waste as at Thurleigh. No doubt it was a neglect " on the part of the owner of the estate to allow " these cottages to be built on the road side, but the " thing is beyond remedy."

33*d*. *Reuben Darlow*, farm labourer. Has two sons and two daughters, all grown up, who sleep in one small bedroom with himself and wife. Had six of them at home last year. Has 1½ acres of allotment. " It's t'much, nearly."

33*e*. *Joseph Gammon*, age 10, keeping sheep. Gets 4*s*. per week; cannot read nor write.

33*f*. *William Sykes*, horsekeeper. Gets 12*s*. a week and two meals. Would rather have that than 14*s*. a week, but has to work from 4 a.m. till 7 or 8 for it. He says, " My house has but one bedroom, " very small; I have two children."

33*g*. *George Gammon*, farm labourer. Has an allotment from Mr. Trapp of 36 poles; pays 8*s*. a year for it. He thinks he could manage half an acre if his master would help him by giving him horses for one day.

TURVEY.

34. Turvey - Pop., 1,093 - Acr., 4,000.

Cultivation mixed.

34*a*. *Rev. W. B. Russell* says, " During my 35 " years residence at Turvey the village has been " almost entirely rebuilt, and the cottages in general " may be called model cottages, affording suitable " accommodation for families. Size of rooms, from " 12 feet square upwards. Ventilation and drainage " good. Good water supply and sufficient outbuild- " ings. Belonging to landowners almost entirely; " rent 1*s*. per week and upwards."

34*b*. [NOTE of Assistant Commissioner.—This is a very nice village, almost altogether new, and yet picturesque. There are good schools, a reading room for the labouring class, and a parochial meeting room. I saw no bad cottage in this village.]

WILLINGTON.

35. Willington - Pop., 290 - Acr., 1,648.

Allotments, 46 allotments of 20 poles each.

35 *a*. *Rev. Augustus Orlebar* says of the cottages, "They are the Duke of Bedford's model cottages."

35*b*. *Mr. Henry Purser* says, "Very many of the "young men have left us in consequence of the want "of cottage accommodation, and many more will "leave us for the same reason."

35*c*. [NOTE.—There are 48 cottages in the parish, generally good ones.]

35*d*. *Mrs. Purser*. Husband, farm labourer. Husband has 11*s*. or 12*s*. (wife doesn't know which) per week; three boys, one of 12 years earning 4*s*. 6*d*. per week, one of 10, 2*s*. 6*d*. per week, and one of 8, 2*s*. 6*d*. per week. Has three girls lace making, each earning 2*s*. 6*d*.; two other children not earning anything, one of 5 at school; boy of 8 can neither read nor write. "I wouldn't send him to school "unless I am obliged to; they say as now we shall "be obliged to now this new school is built." [NOTE. —A new school built by the Duke of Bedford, the present attendance at the old school being about 8 or 10.—G. C.]

[NOTE.—This family is getting in about 29*s*. per week to keep a family of 10. Clergyman thinks they should be able to live on 26*s*. 6*d*., and send boy of 8 to school. The cottage very dirty, with only *two* bedrooms.]

AMPTHILL UNION.

36. Ampthill - Pop., 2,144 - Acr., 1,928.

36*a*. *Mr. H. Swaffield* says, "The cottages are "good, principally belonging to landowners. There "are upwards of 58 acres let in allotments of less "than one acre. Rent, 3*d*. to 7½*d*. per pole."

"Good schools."

[NOTE.—There are 162 allotments of about 20 poles each, belonging to one landowner.]

37. Cranfield - Pop., 1,591 - Acr., 3,933.

Chiefly arable.

Allotments, 65 acres let at moderate rent to 106 tenants.

37*a*. *Rev. H. H. Birley*, says, "The older class of "cottages are small and insufficient in accommodation, "but they are gradually disappearing. There is not, "so far as I am aware, any case of ownership by "tradesmen with whom the tenants are obliged to "deal. Mr. Harter, the only resident large land- "owner has recently purchased and pulled down "some of the worst cottages and has built new "ones provided with all desirable conveniences."

"Good schools."

37*b*. *Mr. Prentice*, occupier and guardian, while discussing the educational question at the Ampthill Board meeting, said, "I never had any education till "I was 14, and I know what it is to have to begin "then. I have a boy on my farm now of 15, who has "never been either at school or church; the un- "educated will not send their children to school, and "you must compel them; let the boys be kept at "school till 9 years old, and then compel them to go "to night schools."

38. Flitton - Pop., 597 - Acr., .

Allotments, 140 acres, let to 219 tenants by one landowner. Average rent, 55*s*. per acre. The allot- ment system was adopted in this parish when, under the old Poor Law, the rates had risen to 18*s*. in the pound. A large farmer gave up his farm and it was divided into allotments and let to the labourers.

38*a*. *Rev. A. Browne* says, "The cottages are "mostly of brick, with living rooms and washing "place, with two rooms above, and in some half dozen "cases of newly built cottages an additional garret "or two over all. Rooms average 11 or 12 feet "square at the least. Most cottages have gardens "attached. Drainage little or none, as is common in "the country with detached tenements; ventilation "good enough in the day time, but closer in bed- "rooms than need be, were not poor people generally "under great apprehension of fresh air in the night. "The great majority of cottage dwellings in the "parish belong to the Countess Cowper. Rent with "garden varies from 3*l*. to 5*l*.

"National school."

39. Flitwick - Pop., 780 - Acr., 2,100.

39*a*. *Major J. H. Brooks* says, "There are three "classes of cottages in the parish:—

"1st. The old-fashioned thatch roof, single and "double.

"2nd. The wayside freehold hovels.

"3rd. The blocks of new cheap brick dwellings.

"The former are the most frequent and are the best. "The second are simply execrable, and mere pigsties; "the last are in some cases good, but the rooms are "usually too small; a dwelling room and two bed- "rooms is in general the sum of a family's accom- "modation. The water supply is good; the rent at "an average may be set at 4*l*. a year; many cottages "are, however, of lower rent, I have built two "cottages myself this year, on a very good principle, "with a third story, at the above rent.

"Schools well attended."

40. Maulden - Pop., 1,563 - Acr., 2,500.

Allotment, 38 acres let in 186 allotments, belonging to one landowner.

40*a*. *Rev. Charles Ward*, says, "Many *old* cottages "have but two rooms, those generally of a fair size; "nearly all new ones have four, the two front ones of "a fair size, the two backs ones smaller. Parts of "the village badly drained, or the drains not properly "looked to. Many of the new cottages are built on "speculation by tradesmen and other small proprietors "at from 4*l*. to 4*l*. 10*s*.; very little garden; the "old cottages from 3*l*. to 5*l*.; garden plots are let "separately in several different and convenient parts "of the parish."

40*b*. "Straw plaiting is allowed in National school "three days per week."

40*c*. *Mr. George Street* says, "Some occupiers of "cottages are required to deal with the owners who "are tradesmen, but not as a rule. . . . Many of "the best labourers have regular work and decent "homes, and are generally well conducted; a con- "siderable number depend upon jobs amongst gar- "deners and others during the summer, and live as "they can during winter, these are for the most part "not nearly so well off or so respectable as those "who have regular work. This being an open "parish, it contrasts most unfavourably with those "belonging principally to the Duke of Bedford and "other noblemen. . . . Some of the cottages are "small and bad, and are occupied by the refuse of "other parishes. Piece work, a good deal done in "this parish on larger farms, dibbling peas, beans, "and wheat, singling turnips, &c., a good man may "increase his wages from 11*s*. to 13*s*. throughout the "year by piece work. I pay ordinary labourers 11*s*. "per week. Shepherd and horsemen 13*s*. per week. "A number of men are now begging work of me at "2*s*. per day, who in summer work for market "gardeners. My best workmen began work at 8 "years of age."

40*d*. [NOTE.—A boy "crow keeping." "I be a "comin' to my seven (*i. e.*, nearly 7 years old); I "can't read nor write. I was at school once, some "time ago."]

41. Millbrook - Pop., 430 - Acr., 1,700.

Allotments, 10 acres in 68 allotments, belonging to chief landowner; rent 40*s*. per acre.

41*a*. *The Rev. Harvey Vachell* says, "My parish "entirely agricultural. Wages about 11*s*. per week. "Boys as early as 12 and 14 can and do earn from "2*s*. 6*d*. to 3*s*. per week. They are taken away "entirely from school when once they can obtain a

Bedfordshire.
Mr. Culley.
f.

" fixed place ; till then they attend irregularly when " not at work ; as soon as they can earn for them- " selves they get out of both parental or scholastic " restraint, and the only hold we have over them is " the slight moral restraint of the Sunday school, " which is of course stronger or weaker, as we are " or are not successful in our efforts for their " spiritual good. A fearful lock has been put on our " attempts to get the lads under restraint on Sundays " by the Duke of Bedford's systematic withdrawal " of all pecuniary support to schools (Sunday) on " his property. My school is thus situated. The " straw plait is the prevailing work of the girls, and " bonnet sewing of the young women. Straw plait " schools, of which I have two in my parish, draw " away girls from even the early age of 6 or 7. I " have seen from 12 to 15 in the plait schools. No " out-door work is done by girls or women. No gangs " are employed of either sexes, except in early spring " for a short time 10 or 12 boys are under a labourer " for 'twitching.' I believe compulsory education " could never be applicable in my parish. Put the " screw upon the parents and they would at once put " all the boys to plait—aye, even though it pays as " miserably as it does now. As regards night schools, " I began one this winter, although rather late. I " am not in a position to speak therefore with any " confidence as to its in any way advantageously " supplementing the extremely deficient education " (I may say even gross ignorance) I find prevailing " amongst young men, women, and farm boys. If " permitted to see and work here another winter, I " shall begin earlier and probably have two evenings " instead of one for instruction. My predecessors " were here for a very short time, but both of them " found evening schools very unsatisfactory. A " neighbouring clergyman, however, has succeeded " so well, it encourages me to hope for better things. " . . . . All the cottages are the Duke of Bedford's. " Most of them new, and model cottages for room, " for convenience, and cheapness. All have gardens ; " all hire at a low rent as much allotment ground as " they can well manage."

42. Pulloxhill - Pop., 703 - Acr., 1,576.

Cultivation mixed. Allotments, 51 acres let in 148 allotments by one landowner at 50*s.* per acre.

42*a*. *Rev. D. Wheeler* says, " A few of our cot- " tages are too confined in their accommodation ; " most of them are built of brick, of modern construc- " tion, and with few exceptions have two or three " bedrooms. Drainage such as is usual in the country. " Water from wells. Ownership, small proprietors. " Rent from 1*s.* 6*d.* to 2*s.* 6*d.* per week. I should " say that the cottage accommodation in this parish " is upon the whole good."

43. Silsoe - Pop., 713 - Acr., 2,067.

Allotments, 22 acres, let in 86 allotments. Average rent, 72*s.* for very good land. Cultivation mixed.

43*a*. *Mr. H. Trethewy* says, " There are 90 cot- " tages for labourers. Brick and slate or tile ; rooms " vary very much in size ; ventilation and drainage " good. There are five rooms to about six or seven " persons. Ownership, landowner. Rent, 50*s.* to " 3*l.* 10*s.* with small garden."

43*b*. *Mr. Trethewy* told me (G. C.) that on Lady Cowper's estate now they build two, three or four cottages attached to the farm steading, and *let with the farm*. (The farmer having entire control of the cottages.) This supply of cottages he considers necessary as a substitute for the old plan of having a certain number of single men lodging in the farm house, to which there are many obvious objections, and which as a custom is entirely given up. Mr. Trethewy has never known any evil result to the labourer from this arrangement, considers that the horsekeeper, cowkeeper, and shepherd on a farm are or ought to be in the same position as a groom or other domestic servant, and that this cannot be the case where the cottages are not let to the farmer and under his control.

44. Shillington - Pop., 1,788 - Acr., 5,256.

44*a*. *The Rev. J. A. Frere*, says, " The older cot- " tages are built of lath and plaster ; none are now " so built, but with brick, and slated. The ven- " tilation generally not good ; drainage, decidedly " *bad*. I suppose as guardians we have issued from " 20 to 30 summons for nuisances in the last two " years, so I hope things are not so bad as they were. " There is very deficient water supply and a great " want of garden ground ; in a considerable part of " the village proper there is absolutely *none*. The " outhouses (privies) are deficient in number in my " opinion. The cottages belonging to larger land- " owners have good gardens, and a good many of " those run up by builders have small ones." . . . .

" A good many boys are kept from church by " field keeping and also by horse keeping. My own " idea is that in the latter case the difficulty might " be met by sharing the extra work and pay between " two lads where now one is retained for this work, " and giving them the alternate Sunday free."

Two church schools in parish.

45. Westoning - Pop., 800 - Acr., 1,760.

45*a*. *Rev. J. W. C. Campion* says, " Most of the " cottages belong to the landowner and have been " much improved and enlarged. A few belong to " tradesmen ; nearly all have gardens and outhouses. " Rent from 1*s.* to 2*s.* per week.

45*b*. [Note.—The cottages let at 1*s.* are very small and rooms low; let to widows and single couples ; two rooms about 10 by 8 feet and very low on ground floor in the case of one visited by Assistant Commissioner and occupied by a widow. Cottages at 2*s.* good.]

45*c*. [Note.—There is a good school at Westoning drawing children from neighbouring parish of Harlington, where there is no school.]

45*d*. *Mrs. Whittington* (two rooms and two bedrooms). Husband a cowkeeper, gets 11*s.* per week and no piece or extra work except in harvest. Three children ; eldest girl, 14, at home plaiting, earning now about 1*s.* per week, can write very imperfectly ; boy 5 years old at school, for whom she pays 2*d.* per week.

45*e*. *Mrs Elliot.* " Husband has 12*s.* per week " and gets no piece work or extra wage ; occupies a " good cottage, with garden of 20 poles attached."

45*f*. *Mrs. Chance* has a girl 14 at home plaiting, who cannot write, and can only earn 1*s.* a week just now at plait.

45*g*. A boy, twitching, 9 years old, cannot read or write much, was at school up to last Christmas.

Biggleswade Union.

46. Arlesey - Pop., 1,401, increasing - Acr., 2,303.
National mixed school.

46*a*. *Rev. R. F. Scott*, " The cottages as a rule " are good, fair size, and fairly ventilated. Dwelling " room 12 feet square ; back kitchen, 10 feet by " 9 ; two rooms above the same. Average rent, " 4*l.* 10*s.* The drainage of the village is very bad ; " the water supply is now in most parts of the village " fairly good ; there are but few gardens ; about " 25 acres (more or less) are, I believe, let out in " roods to the poor ; a great many of the cottages " are very badly off for outhouses. The ownership " of the cottages at the north end of the village are " in hands of the squire and tradesmen and small " farmers ; at the south end (the most populated), in " the hands of tradespeople and small farmers. I do " not think the tenants are obliged to deal with their " landlord."

46*b*. [Assistant Commissioner's notes.—A great many cottages with one room, some very bad ones. Seven in a row very bad thatched cottages with *one* bedroom. In one of these Joseph Houghton lives with wife and seven children under 13 years of age. No

furniture except two wooden chairs and a small table; four children sitting on floor round a fire, nearly naked, mother with very little poor clothing on; another family of seven in same row, three of children above 15. They pay 1*s.* 6*d.* a week for these cottages, which are about as bad as can be. There are three sets of coprolite works, three brickyards and a cement work at Arlesey, which have caused a great increase of population during the last few years, especially in summer, when many houses are crowded. A good many straw cutters in Arlesey, who buy and cut straw, clean and sell it either at market or to villagers, who buy it for plait; men can earn sometimes 12*s.* to 14*s.* per week as straw cutters. Coprolite employs a good many men, many of whom are strangers; brickyards also employ a good many men, especially in summer. Coprolite works employ some boys leading horses; brickworks also employ some boys. Rents for cottages very high. Land round very good.]

47. Biggleswade - Pop., 4,631 - Acr., 4,310.

Cultivation, arable and market garden. Boys' and girls' National schools and boys' British schools.

47*a*. *Rev. C. G. Douton* says, "The crowded state "of the cottages, a want of thorough good drainage, "and bad ventilation must be excessively injurious to "health; no serious epidemic has as yet broken out "amongst us, but what the consequences would be "should such a case arise it is impossible to say. "The cottages are the property of landowners and "tradesmen, and the rents are from 4*l.* 10*s.* to 6*l.* per "annum."

47*b*. Copy of report presented to Biggleswade Board of Guardians in February 1867 by *Mr. Edwin Blunden*. The report was as follows:—

"Gentlemen,

"I have now completed my inspection of the dwelling houses of the town of Biggleswade I have examined 930 houses. Of these I find 670 with good water, 150 with bad water, 109 without any water at all. In the 109 houses without water the inhabitants are either obliged to beg it from their neighbours or get a supply from the pump near the gasworks.

"Where the water is bad, it mostly arises from the closeness of the drains, privies and pigstyes to the wells of the houses. There are 30 houses in Langford Street, near the gasworks, where the wells are impregnated with offensive matter from these works, and which renders the water unfit for drinking or for cooking purposes. The pigstyes are generally very close to the dwelling houses, and the accumulation of manure is usually kept close to the stye. And these necessarily occasion very offensive stench not only to the houses themselves, but to the neighbourhood in which they are situated.

"I found 796 of the houses clean, and 134 were in a very dirty and offensive condition.

"Many of the houses have no back doors to them, and the general run of cottages are very ill ventilated, and a large proportion of them are in a very bad state of repair.

"I found 12 houses in a state totally unfit for habitation; there are many others in a wretched state, although not quite so bad as those specified in the table.

"Ninety-five of the houses were reported to me as being infected with bugs and other noxious vermin.

"As to drainage, I found 85 houses without any drains, and in 197 other houses the drains were most offensive and defective.

"In 110 instances where pigs are kept the pigstyes were in a most filthy state, some of them being in small barns with little or no ventilation, and in these barns there were often box privies in a very offensive state, with very imperfect, if any, drainage.

"I found 205 very offensive privies, and 12 houses without any at all.

"In five houses I found privies actually under bedrooms constantly occupied by persons at night.

"I may say generally the privies attached to the houses of poor persons are in a very filthy state, and many are in such a state of repair as to render them absolutely unfit for use; many as I have before remarked are placed in the small barns in which pigs and wood and straw are kept.

"I found 179 cottages occupied by 851 inmates, and for these only 37 privies are provided. I was told repeatedly that many of these occupiers experienced great personal inconvenience for want of privy accommodation. And in three instances there were no less than 45 persons to one privy, and it frequently happened that they had to watch one another going to and fro that they might get their turn.

"In two instances new wells have been sunk, and many have been emptied and cleansed.

"In my inspection of the houses I inquired the number of inhabitants to each house, the particulars of which I have entered in my report book. I found the dwellings of the labouring classes generally very much overcrowded. Forty-five of the most overcrowded dwellings contained only one bedroom, and these bedrooms were occupied at night by 301 persons. Thirty-nine houses containing five bedrooms were occupied at night by 336 persons. In 18 of the houses with one bedooom, and in 17 houses with two bedrooms, I found men and their wives with adult children of both sexes sleeping in the same room, and in a few cases I found the sons and daughters with their husbands and wives occupying the same bedroom with their parents. I found also widows with adult children of both sexes between the ages of 35 and 16 sleeping in one room.

"In several of the cottages with two bedrooms, the father, mother, and children were huddled into one room, and the other bedroom is let to lodgers.

"The sleeping rooms are generally very small, and frequently without even the ventilation afforded by a fire-place, and I scarcely need add I found them close and very offensive; the most crowded room I found was occupied by 14 persons, and did not afford more than 77 cubic feet for each person. In the houses with one bedroom, before referred to, there are 12 with less than 150 cubic feet to each inmate, and in no instance in these one bedroomed houses does the area amount to 250 cubic feet for each person.

"In the houses with two bedrooms, before referred to, there are eight with less than 150 cubic feet to each inmate, and only eight with 252 cubic feet to each occupant.

"I have the honour to be, Gentlemen,
"Your most obedient servant,
"Edwin Blunden, Inspector."

47*c*. [Note.—A medical officer of the union informed me that the state of the labourers' cottages and nuisances remained as they were when Mr. Blunden reported, and I certainly saw some of the worst and dearest cottages here that I have seen anywhere in Beds; for instance, three or four in Palace Street (whose floors are one foot below the level of the street) let at 5*l.* per annum, one slightly larger in same street lets at 6*l.*—G. C.]

Market Gardens.

47*d*. *Mr. T. J. Hooper* says, "Market gardeners "employ a large number of boys at particular seasons "of the year, dropping potatoes and peeling onions, "&c. Women are also employed in peeling onions. "The gardeners pay highly for their labour at certain "seasons, but give very little employment in "winter."

47*e*. *Mr. Daniels*, Biggleswade, has about 85 acres of market garden; employs very few boys; had four or five yesterday weeding. Does not grow small onions for pickling, those who do employ a lot of women and children peeling; one man at Sandy sometimes has 200 or 300. No boy is much use to us while he's 10. They should go to school, but they won't unless you compel them, and then the parents will go there (pointing to the workhouse)

Bedfordshire.
Mr. Culley.
f.

47*f*. *Mr. James Odell*, Manor farm, Biggleswade, occupies a market garden; last year had 10½ acres of small onions, which employed about 130 women and children, chiefly adult women, for six weeks from about the middle of July, peeling in sheds. No boys over 12 years of age work with the women, those who do work are generally little boys working with their mothers. All these women and children work together under a foreman. Women can earn about 1*s*. 6*d*. and children 6*d*. per day, the work is done by the piece (by the peck) varying in price according to size of onions; 6*d*. per peck is an average price. Last year could not get women enough. Some market gardeners grow more onions and employ bands of 200 women and children, who go on peeling in some cases for three months. As a regular staff does not employ more boys than an ordinary famer, but has three or four extra boys in potato dropping season.

Average staff per 100 acres of market garden,—

Summer :		Winter :	
12 men.		9 men.	
3 boys.		3 boys.	
5 horses.		6 horses.	

To cultivate market gardens would require about eight cottages per 100 acres, besides the extra supply of women and children for onion peeling, &c.

Planting out turnips for seed is done by men.

Women are employed to cut tops off larger onions.

Market gardeners pay labourers 12*s*. per week and horsemen 14*s*. a week, with two pints of beer per day in summer and one pint per day in winter, which would add 1*s*. 6*d*. per week in summer and 9*d*. per week in winter to the weekly wage.

47*g*. Wages earned at onion peeling.

1st boy, age 12, "I go onion peeling with my "mother and sister, we sometimes get 4½*d*. a peck; I "can do more nor a peck, mother can do three "peck."

47*h*. 2nd boy, age 12, "I go onion peeling with "mother and the rest of us, we work together, I can "do a peck easy, mother can do four pecks of tidy sized "ones; we get 4½*d*. a peck sometimes."

47*i*. Examined 11 boys caught for me by Mr. Weale on their way home from farm work at Stratton.

All boys between 10 and 13 years. None of them had been at school after 10. Nine of them could read a little. Two could not read at all. None of them knew the name of the Queen. One knew what was meant by the Queen. Eight could spell their own names, three could not. Ten out of the eleven did not know the name of the county they lived in, and none of them knew the chief town in it.

Northill.

48. Northill - Pop., 1,362 - Acr., 4,120.

Cultivation chiefly arable and market gardens.

48*a*. *John Harvey, Esq*., Ickwell, Bury, says, "Cottages on the whole pretty good, *i.e*., good in "Ickwell and Northill, but very bad in Caldecote. "Most of the cottages have roods of ground attached. "One large landowner owns part of the cottages, the "rest belong to small owners. Cottage rent varies "from 2*l*. 10*s*. to 7*l*. per annum."

Sandy.

49. Sandy - Population, 2,118 - Acr., 4,010.

A good deal of the parish occupied by market gardeners.

49*a*. *Rev. John Richardson*, describing the cottages, says, "Two sitting rooms and two or three bedrooms, "size 10 by 12. Water supply tolerably good. "Very small gardens. Outhouses convenient. All "kinds of owners. Tenants usually deal with land-"owners."

49*b*. *Mr. Charles Pope*, guardian for Sandy, says, "Some of the gardeners employ a large number of "women and children in summer and autumn, from "the end of July to October, in peeling onions; they "also employ a number of boys at other times "dropping potatoes, &c. The best form legislative "interference can take in this district, if it is neces-"sary to interfere, is to prevent the children working "up to 10 and then leave them alone."

49*c*. [Note.—At Sandy examined two thatched cottages with one bedroom and sunken floors, near the vicarage; a man and his wife and five children in one of them.]

49*e*. [At Beeston Green, a hamlet of Sandy, examined four lath and plaster and thatched cottages in poor condition with one bedroom in each; largest family in any of these a man, his wife, and five children, eldest a girl of 16. Number in each of the others, two, three, and four persons.]

50. Southill - Pop., 1,391 - Acr., 6,180.

50*a*. 240 cottages for labouring class.
96 allotments of one rood each, let at 48*s*. per acre.
Rent of cottages about 1*s* per week.
Three schools in parish.
Cottages are generally good, and belong to Mr. Whitbread, the chief landowner.

50*b*. The following account of some boys attending school, but who had been at work, was given to the Assistant Commissioner by Mr. Thomas Stothard, schoolmaster.

Table of boys' work.

Boys name.	Present age.	Age when sent to work.	Employment.	No. of hours employed per day.	Payment.
Frederick Wells	9	8	Potato setting - -	6 to 6	2*s*.
Samuel Stacey -	9	7	Stone picking and field keeping.	„	3*s*.
Walter Massey	9	6	Weeding - - -	„	2*s*.
Joshua Finch -	8	7	Potato setting - -	„	3*s*.
Isaac Finch -	6	5	Picking twitch - -	„	3*s*.
John Bond -	7	6	Field keeping, on Sundays as well as week days.	„	2*s*.
Wm. Samuels -	7	6	Cow keeping - -	„	2*s*.
Charles Hull -	8	6	Potato picking - -	„	2*s*.
Fredk. Button -	9	7	Pig keeping - -	„	2*s*.
Wm. Wheatley	9	8	Potato picking and onion peeling.	4 a.m. to 8 p.m.	2*s*.
Charles Huckle	8	7	Field keeping in summer.	„	3*s*.
Charles Crozeley	9	8	„ „	„	3*s*.

Luton Union.

51. Barton in the Clay - Pop., 956 - Acr., 2,225.

Cultivation mixed.

51*a*. *Rev. A. Blomfield* says of the cottages, "The "cottages as a whole are better than in most villages, "both as to size and garden ground or allotment "added. The oldest cottages are of wood and brick "mixed, and thatched. The new (of which a good "many) brick and slate. Many are let with *the "farms* and belong to the manor. Most of the new "cottages belong to tradespeople, who buy small "portions of land and build cottages for investment. "Rent varies according to size of cottage, but in all "cases is moderate."

52. East Hyde - Pop., 420 - Acr., 1,605.

Cultivation mixed.

52*a*. *Lionel Ames, Esq., J.P*., says of the cottages, "Brick built cottages, slated, rooms about 12 feet by "10 feet. Mostly with living room, scullery, and three "bedrooms. Plenty of water, with gardens, wood-"houses and privies under one roof for each block. "Chiefly in the hands of landowner. Rent varying "from 1*s*. to 2*s*. per week."

53. Woburn Bench of Magistrates, March 6th, 1868.

Present—C. Hervey Smith, Esq., Carlisle S. Parker, Esq., C. P. Stuart, Esq.

"We do not think that legislation is necessary for the purpose of fixing the age below which boys (girls are not employed) should be employed in labour, either to protect them from physical injury or to secure for them a satisfactory elementary education. We consider that agricultural labour, as it is conducted in this neighbourhood, is conducive to health, and that the education of farm labourers' children is well attended to. We no not think there is good ground for limiting the hours of work of children employed in agriculture. If the Factory Act's principles are to be applied to children employed in farm labour we think that school attendance for four winter months would be much better suited to such employment than either a half-day or alternate day system."

54. Bedford Bench of Magistrates, March 28th, 1868.

Present—Col. Higgins, Chairman, Col. Stuart, M.P., Rev. F. C. G. Passy.

"We think that legislation is not required to fix an age below which boys (girls are not employed in the district) should not be employed in farm labour for the sake of protecting them from physical injury, but we think there should be legislative interference to secure for them a more satisfactory elementary education, by fixing an age below which they should not be employed in farm labour, and we should recommend 9 as the age to be so fixed, as being more likely to disarm opposition than 10. We think the hours of labour of children should be limited to 10 hours exclusive of time allowed for meals. Of the Factory Act's modes of interference with children actually at work, we think the 3rd, or Prints Works Act, plan of demanding a certain number of hours of school attendance during the preceding six months the most applicable to farm labour, substituting twelve for six months."

55. Luton Bench of Magistrates, April 23th 1868.

Present—Lionel Ames, Esq., Rev. H. B. Smyth.

"We think that no boy (girls are not employed in the district) should be allowed to be employed under 10 years of age, and we think the hours of work should be limited to 10 hours, exclusive of time allowed for meals, in the case of children employed in farm labour. If there is any legislative interference for boys employed between 10 and 13, similar to the provisions of the Factory Acts, we think the best plan would be to demand a certain number of hours school attendance during the preceding twelve months."

56. Woburn Board of Guardians, March 20th 1868.

Present—19 elected Guardians, Mr. J. W. Foll in chair.

Answers to Assistant Commissioner's questions.

"We think the employment in farm labour is good for boys, and that as far as physical injury is concerned there is no need of fixing an age under which boys should not be employed, nor do we think that as far as this union is concerned there is any good ground for limiting the hours of work of children; except in hay time and harvest boys are not, and should not be employed for more than 12 hours, including 1½ hours for meals. No girls are employed in agricultural labour in this union. We do not want any compulsory scheme of education, but we think no boy should be employed below 10 years of age. We think the half-day and alternate day system wholly unsuited to employment in farm labour, and we object to the Print Works Act provision as interfering unnecessarily with our employment of boys between 10 and 13, and with the ability of a parent to support a family where the elder children are between 10 and 13."

57. The Assistant Commissioner having asked the Woburn Board of Guardians the following questions:—

1st. What is the ordinary farm labourer's wage in Woburn union?

2nd. To what extent is this wage increased by piece work, hay and harvest wages, beer allowance, and any other allowance or extra wage? That is, how much is the nominal wage of say, 11*s.* per week increased throughout the year?

After a very careful discussion and comparison of payments by several members of the board, the following answers were given.

"The ordinary day labourer's wage is 11*s.* per week. He should earn by piece work at least 2*l.* in the year beyond the ordinary wage, say, 10*d.* per week for the year. He should earn by extra wages in hay time and harvest 52*s.* in the year, say, 1*s.* per week for the year, and his beer allowance costs the farmer at least 1*s.* a week for the year. His whole earnings therefore are worth 13*s.* 10*d.* a week throughout the year."

58. Bedford Board of Guardians, March 28th 1868.

Present—Three ex-officio Guardians, 27 elected Guardians, Mr. G. Hurst, Chairman.

1st. Resolved, "That no legislation is necessary for the sake of protecting boys (women and girls not employed in the union) employed in farm labour from physical injury arising from such employment, and that there is no necessity for limiting the hours of work of boys so employed."

2nd. Resolved (only one guardian opposing), "That legislation *is* required for the purpose of fixing the age below which boys should not be allowed to be employed in farm labour, for the sake of securing for them a satisfactory elementary education, and that 9 years should be the age so fixed, provided there be no restriction in hay time and harvest."

3rd. Resolved, "That if the Factory Acts principles be applied to labour in agriculture, attendance at night schools should be deemed sufficient after 10 years of age."

[Note. The above resolutions are taken from the Assistant Commissioner's note book.]

59. Ampthill Board, April 2nd 1868.

20 Guardians present, Rev. J. W. C. Campion, Chairman.

The board were of opinion that no legislation is required for the purpose of fixing an age below which boys should not be employed in farm labour for the sake of protecting them from *physical injury*, and that there is no good ground for limiting the hours of work for children.

As to education the board resolved as follows:—

Mr. Crouch moves "That legislation is necessary for fixing the age under which boys should not be employed in farm labour, in order to secure to them a satisfactory elementary education, and that such age should be 10 years."

Seconded by Mr. Eames, and carried by a majority of 9 to 8 votes; Mr. Prentice's amendment "That the age be fixed at 9 years," being lost.

Mr. Street proposes and Mr. Crouch seconds the resolution, "That this board desires that the Government should take measures for the encouragement of free night schools for boys alone above 10 years of age; and if that should be done they think no further legislation would be necessary with respect

Bedfordshire.
Mr. Culley.
f.

" to such boys, *i.e.* boys above 10 years." (Carried *nem. con.*)

60. Biggleswade Board of Guardians, April 22nd, 1868.

25 Guardians present, Charles Barnett, Esq., Chairman.

Resolution, " We do not think that legislative interference is necessary in this union, either to protect children from excessive labour in agriculture or to secure for them better elementary education; but if it is found necessary to legislate for the whole country upon this subject we are of opinion that such interference should be confined to children under 10 years of age, beyond which no interference is considered necessary, but that Government aid ought to be extended to night schools." (Carried *nem con.*)

61. Luton Board of Guardians, May 18th 1868.

15 Guardians present, Mr. C. S. Benning, Chairman.

Resolved that, " We are of opinion that legislation is necessary to secure for children employed in agriculture a satisfactory elementary education; that no children should be so employed under 8, and for six months in the year only between 8 and 10, and that after 10 all legislative interference should cease."

This Board is of opinion that it is undesirable to interfere with the hours of labour of children employed in agriculture.

62. Parish Meeting held at Turvey, April 6, 1868. Present:

Chas. Longuet Higgins, Esq., J.P., Chairman of Bedford Board of Guardians.
The Rev. W. B. Russell, and five other gentlemen.

" The meeting were unanimously of opinion that no boy should be allowed to be employed in farm labour under 10 years of age, chiefly for the sake of securing a better education; that the hours of work for boys should be limited to 10 hours exclusive of time allowed for meals; that Government grants to night schools should be extended to children from 10 years of age, and that a certain attendance at night schools should be required from children earning wages."

Medical Evidence.

63. Extract from a letter to Geo. Culley, Esq., from Mr. H. Veasy, F.R.C.S., M.O. Woburn Union.

" In a physical point of view early field labour conduces to natural growth and general development, by expanding the chest, exercising the muscles, bone, and ligament to their proper use, quickening all vital action with free supply of its best support in pure air; innuring to hardness and the compensatory blessings of ready digestion and sound sleep by constant exposure and moderate fatigue, beyond which nature's sway provides her best restorative. Indeed neither farm men nor boys are unduly tasked in time or degree, though but ill-fed and under paid; whence the main reason for early service, which conducive as it may be to health greatly prejudices moral training and mental culture. Sunday schools in part supply the want, but much of the good derivable from this source, fails for the lack of rudimentary preparation. Greatly then is it to be desired that no lad under 13 should be regularly hired to out-door work without a schoolmaster's certificate that he can read, write, and do the first rules in arithmetic. Under 10 years no boy should be legally hired, and if agreement could be made compulsory for suitable education during the least occupied season of the year until he attain a certificate, possibly enough might be taught to make him equal for his vocation in husbandry."

64. Memorandum sent to Geo. Culley, Esq.

" B. L. Hawkins, M.R.C.S., a surgeon in practice at Woburn in Bedfordshire, also Poor Law medical officer during the last 9 years for six parishes around, the male inhabitants of which for the most part are engaged in agricultural pursuits. Does not find that the employment of the young in sheep-minding, team-leading, and bird-keeping prejudicial to their health, but on the contrary they come more under the doctor's care when they are withdrawn from out-door work or sent to school. Does not find that boys engaged whilst young on farm and field labour compare unfavourably (in a physical sense) with boys otherwise employed."

65. Mr. C. P. Stevens, surgeon, Biggleswade, M.O. of Union.

" Neither girls nor boys should be employed in agricultural labour under 14 years of age. The hours of labour of boys and girls so employed should not exceed 6 to 8 hours. Proper meal times should be secured by legislation. The distance to which children should go to their work should be fixed according to their age. It is not necessary to provide by legislation that females should be protected from unhealthy or unsuitable employment in agriculture. The defective state of the education of the young found at work is to be attributed to the poverty of the parents, to the indisposition of the parents to forego the weekly sum that may be added to the family earnings by the child's labour, and to the low moral tone of the parents. Deficient cottage accommodation is a cause of this low moral state, and no progress is being made in providing better accommodation."

66. Mr. Thompson, surgeon, Biggleswade District, M.O.

Does not know of any employment in the district in field work injurious to children or women. Does not think the cottages are very bad in Biggleswade. The worst he knows are in Langford.

67. Extract from letter to Geo. Culley, Esq.

Mr. R. Tomson, surgeon, Luton, says, " I cannot speak disparagingly of our agricultural population in a physical point of view, because in that respect they contrast most favourably with our town population, and further the labourers are as a whole longer lived than their employers. I have examined recruits both for the regular army and the militia now some years, and as far as my recollection serves me, it is quite the exception to reject an agriculturist, while the tendency is rather the other way with candidates from the town. Most of the *very old* people amongst the paupers are from the agricultural districts. I think that although a little more animal food might be agreeable, yet, if they were better educated the agricultural labourer would be one of the finest races in the world. It is really lamentable to witness as I have done a most intellectual man carrying off the champion cup for ploughing or other marks of distinction, not able to write his name. But all education must be useless or worse, if some law be not made respecting the homes of the poor. As I think most of our moral feelings are acquired, or at any rate developed by exercise, it is quite impossible to expect chastity or even decency amongst a population where the sexes have been obliged to mix indiscriminately from the date of their birth until the time of their leaving home, and where the privy accommodation is nil or simply disgusting. I have had nearly 22 years experience amongst the poor, and I am satisfied that a wide field is open for future cultivation, politically, morally, and religiously, and that the eyes of the governing classes are only just opening to their duties respecting the poor."

RELIEVING OFFICERS' EVIDENCE.

68. *Mr. Matthews*, relieving officer, Woburn, gave the following evidence:—"Woburn Union, contains "(according to the census of 1861), 11,684 in- "habitants.

"The largest number receiving relief at any one "time during the quarter ending Lady-day 1868, "was 992 persons.

"The smallest number during the same quarter, "was 888 persons.

"Largest number of able-bodied men receiving "relief at any one time during the same quarter, "was 164 men.

"Smallest number of able-bodied men, was 125 men.

"About half the relief goes to Toddington. "Before the commencement of the New Midland "line, the ordinary farm labourer's wage was 10*s.* "per week; in consequence of railway work, the "wage rose to 11*s.*, and there remains; and "if piece work is done, such a price is fixed as to "make it difficult for a man to earn much more than "11*s.*, and so the labourers do not much care about "it. If a man falls out of work on Saturday, he "gets relief by the following Friday: the man "Holmes you spoke of is a bad lot, a sample of "Toddington, he is in the house costing 4*s.* a week "to keep, and his family are receiving 8*s.*, *i.e.* "(6 loaves and 4*s.*) out, so that they are getting 12*s.* "a week, and as he could only earn 11*s.* if he was "out, it is not much wonder that a man like that "finds himself in the house; with bread at its present "price, how families can live on 11*s.* a week, and I "believe there are many get no more, I cannot tell."

69. *Mr. Alfred Self*, relieving officer, Biggleswade, "I beg leave to reply to the questions in yours of "the 17th inst. The state of the cottages in some "cases are defective in not having sufficient sleeping "accommodation, several of them possessing only "two rooms, one living and one sleeping room which "is common to the whole family. The state of "education is not in a flourishing condition, but still "is not behind other localities in the county; the "parents as a rule would be willing to send their "children to school regularly up to 10 years of age, "but on account of the smallness of wages and the "uncertainty of work they are quite unable to do so.

"Not having any working in gangs here, the "field work does not prove at all injurious to the "health of the children. The ordinary rate of "wages for an able-bodied labourer is now 11*s.* "per week.

"Considering the amount of idle time that the "young people have in this neighbourhood, and the "slight authority their parents possess over them, "the morality of the district may be considered not "at all below the average."

LUTON UNION.

70. *Mr. C. Maffey*, relieving officer, says,

	Population.
"There are no schools in Studham	882.
" " or Whipsnade	195.

"In my district the cottages are worst in Houghton "Regis, and they are very bad there."

71. *Mr. D. G. Gilbie*, relieving officer, says,

	Population.
"There are no schools in Barton	956.
" " in Streatley	241.
" " in Sundon	438.

"In my district the cottages are worst in Sundon."

70*a*. Earnings of a family, as given by Mr. C. Maffey.

		Per week. s.	d.
Charles Hull, farm labourer,	age 53, earns	12	0
Mary Hull, wife of Charles	" 42 "	1	6
Frederick Hull, son	" 13 "	4	0
John Hull, son	" 7 "	3	0
Ann Hull, daughter	" 5 "	0	0
Albert Hull, son	" 3 "	0	0
Total earnings of family		20	6

71*a*. Earnings of a family, as given by Mr. D. G. Gilbie.

		Per week. s.	d.
Joseph Mooring, farm labourer,	age 42, earns	11	0
Jane Mooring, wife of Joseph	" 39 "	1	0
Levi Mooring, son (straw plaiter)	15 "	1	6
Albert Mooring "	" 11 "	1	0
Matilda Mooring, daughter	" 9 "	1	0
Mary Mooring "	" 6 "	0	0
Margaret Mooring "	" 4 "	0	0
Total earnings of family		15	6

(NOTE.—If straw plait was good, the latter family would earn from 20*s.* to 25*s.*—G. C.)

SCHOOL TEACHERS' EVIDENCE.

71. *Miss S. E. Ridley*, Husborne Crawley School.

Average attendance,—

Boys under 10	28	29
" between 10 and 13	1	
Girls under 10	31	38
" between 10 and 13	7	

"I consider that if children over 10 years of age "were allowed to attend school during the winter "months it would be sufficient, and far preferable to "their attending alternate days or half days. A "child at 10, if he has attended school regularly, "ought to be able to read well, write with correct "spelling, and do the first four rules of arithmetic. "As this school was only opened in October 1867, "the winter average can only be given, and out of "the 73 children on the books only 13 could write "(even their letters), and but eight work a simple "sum."

72. *Mr. John Assbee*, Woburn British Boys' School. Seven years teacher; 5½ years at Woburn.

"At what age do the children of agricultural "labourers begin to attend your school?—At 6 "years and 10 months.

"At what age do they usually leave?—10 years.

"To what is the bad attendance of these children "to be attributed?—

"*a*. To the poverty of the parents? or,

"*b*. To the indifference of parents?—

"To both."

"I often think laziness and thoughtlessness are the "real sources of the evil. Frequently a child is "kept at home to perform some trifling act, or fetch "some errand, which could just as well be done out "of school hours, had the parent any desire for the "education of the child. Sometimes the child is "assisting in work which could not be performed in "his leisure hours, or he is employed for a few "weeks by another person. A child of 10 years of "age, of average ability, if kept regularly at school "from infancy, would be able to read and write "easily, and work the four first rules of arithmetic. "The whole of this question depends upon the regu- "larity of attendance and proper infant teaching; "without supplying these, the law forbidding em- "ployment will not have the desired effect. The "reason so few children at 10 can come up to the "standard above mentioned is chiefly the irregu- "larity of their attendance, and almost entire igno- "rance at 7. This ignorance is, I dare say, the "result of irregularity at infant school. To the "question, 'Supposing a boy at 10 could read and "'write easily, and work the first four rules of arith- "'metic, what amount of teaching would be required "'between 10 and 13 to keep up (not increase) that "'knowledge?' I answer, 'Either five consecutive "months (say winter months) or afternoons (two "'hours a day), or two days per week.' If a lad "remains absent seven months at one time, he "requires longer to keep up his education, because "he forgets so quickly, whereas if he came in the "afternoons he would never forget. I do not think

Bedfordshire.
Mr. Culley.
f.

" evening school alone would be sufficient, nor is it " desirable to fill an evening school with such young " scholars. In cases where many agricultural scho- " lars attend, their presence for five winter months " and absence seven summer months would necessi- " tate changes in the staff of a school."

73. *Miss Keen*, St. John's School, Sheeplane, Potsgrove.

" A child of ordinary ability at 10 years of age " would, after attending school from the time that it " was 5 or 6 years of age, be able to read, write, and " use the four first rules of arithmetic with facility, " if that child's attendance had been very regular. " Six months attendance at school between the age " of 10 and 13 would be sufficient to keep up this " amount of education for a child who had been " well taught during the five years' regular attendance " at school."

74. *Miss Hinkin*, Bromham, certificated mistress. (School not under Government.)

" I think at 10 an ordinary child should be able to " read, write easily, and do elementary arithmetic. " I doubt their being able to do so at 9. After 10 " I think attendance during four winter months " would be sufficient to keep up this elementary " education. Boys from 8 come irregularly when " out of work. Some girls come half days, those " who are lace-making, and one or two families who " are plaiting. All children attend this school, and " all Wesleyans in the parish attend church, and " many attend church communion."

75. Cardington School. *Mr. William Mortimer.* Has been master here for 12 years.

" Farm labourers' children generally leave school " between 8 and 9 years of age, and the attendance " after 7 is very irregular. I feel certain that after " a regular attendance from, say 5 to 10, night schools " if fairly attended would be sufficient to keep up the " elementary education gained at 10, *i.e.* reading, " writing, and ciphering."

76. Melchbourne School. *Mr. E. M. Peake*, teacher.

" Our school attendance is very good. All children " in the parish above 4 and under 8 are at school. " The children are generally withdrawn at 9 years " of age, especially boys. If a boy attended school " regularly from 4 to 10 it would not take much " attendance betwen 10 and 13 to keep up the ele- " mentary education obtained at 10—say night and " Sunday schools combined, or better, one day per " week or even half a day per week at school through- " out the year. I would consider the half-day per " week better than night school two days per week."

77. *Miss Eastland*, certificated mistress, National School, Renhold.

" If children attended school regularly up to 10, and " then attended school for four months during the three " following years, there would be no danger of their " losing the power of reading and writing and using " the first four rules of arithmetic."

78. Riseley School. Nathaniel Baxter, 11 years teacher.

" Children withdrawn on an average at 8½ years, " boys for farm labour, girls for lacemaking, if they " began school attendance at 3 and attended regularly " to 10, very little school attendance would be neces- " sary between 10 and 13 to keep up reading, writing, " and arithmetic, say half a day per week or two days " a week at night school. Sunday school alone would " not be sufficient."

79. Turvey. *Mr. Ellis*, 15 years teacher and now retired.

" If a boy went to school at 6 and remained till 10 " he would be able to read and write easily and do " ordinary arithmetic, and this knowledge might be " maintained by regular attendance at night schools."

80. *Mr. Frederick Workman*, certificated teacher, Westoning School.

" I think that an ordinary child of 10 years old " who had been kept regularly at school would be " able to read, write, and work the first four " rules in arithmetic *well*, and that from 10 to 13 " regular attendance at an evening school would keep " up this amount of knowledge.

81. Arlesey National School. *Joseph Allison*, master, certificated teacher. Has been master of this school four years.

" If a child attended regularly up to 10 from 3 years " he or she would be able to read and write and use " the first four rules of arithmetic easily, and between " that age and 13 this state of education would be " kept up by half-time (which, however, could scarcely " be worked with these children), or by 5 winter " months' attendance. I don't think that Sunday and " night school would answer in this parish, as boys " and girls are employed in winter evenings in " cutting straw for plait ; even under any circum- " stances I don't think night schools would answer the " purpose."

82. *Miss M. J. Rossiter*, certificated teacher, girls' National School, Biggleswade, five years pupil teacher, six years mistress at Biggleswade.

1. At what age are the girls (*daughters of agricultural labourers*) usually withdrawn from school, and for what purpose?—From 8 years to 11 years, few staying over 11. The attendance is very *irregular* after 8 years of age. The girls are withdrawn for plaiting, field work, and nursing.

If one of these girls were to attend school *regularly* from 4 to 10 years of age, would she be able to read, write, and use the first four rules of arithmetic with facility ?—Yes.

What amount of attendance at school between 10 and 13 years of age would enable a girl to keep up the elementary education obtained at 10 ?—Three mornings weekly.

83. *Mr. George Hogger*, certificated teacher, eight years master of Biggleswade boys' National School.

1. At what age are the children of agricultural labourers usually withdrawn from your school ?—From the age of 8 or 9 the attendance is very irregular : at 11 or 12 the children are withdrawn altogether.

If a boy attended school regularly from 4 years of age up to 10 years of age, would he be able to read, write, and use the first four rules of arithmetic with facility ?—Yes.

Supposing that a boy could read, write, and use the first four rules of arithmetic with facility at 10 years of age, what amount of attendance at school would be required between 10 and 13 to keep up this attainment ?—At least four mornings in the week.

84. Biggleswade boys' British School. *Walter Browning*, master. Has been master for nine years.

" Boys usually withdrawn before 10. Out of 150 " children 100 belong to agricultural labouring class. " If a boy began his attendance at 5, and attended " school regularly up to 10, he would be able to pass " in Standard 3 of the Revised Code. I hardly think " four winter months' attendance would do, better " alternate days or weeks throughout the year (har- " vest excepted) ; many boys attend my school for " three winter months between 10 and 13. Boys " attend very irregularly after 6 or 7 years of age. " They go out for a month in spring, potato dropping " and field keeping, at 7 years. Later in the year " they go to onion peeling. I was pupil teacher at " Croydon before coming here, and I find the children " here very much more difficult to teach and much " slower than the children in the neighbourhood of " Croydon. This difference of aptitude to learn has

"struck me very forcibly. A good many labourers "in the town do not send their children to school at "all after they leave the infant school. Many chil- "dren are sent to plait schools. The parents do not "care about their children learning. I am afraid it "would put a serious burden upon many parents if "attendance was made compulsory up to 10. Even "well-disposed parents seem obliged to withdraw "their children from school at 8 or 9."

85. Houghton Regis National School; *Mrs. Tomkins*, nine years teacher.

"Our children come at 3 years of age; their at- "tendance becomes irregular at 8. If children would "attend regularly to 10, they would be able to read "and write very easily, and do first four rules of "arithmetic. Between 10 and 13 years of age three "days a week of school attendance would be desirable "to keep up this amount of education. Even two "days a week would be better than four winter "months."

86. *Mr. Thomas Stothard*, certificated teacher; teacher for 15 years, five years at Southill.

"Boys of agricultural labouring class I believe "might read moderately well at the age of 10, assum- "ing them to be in regular attendance from 5 years "old to 10. Mental capacity in this class excessively "low, home influence being rather against than for "morality. After 10 years, assuming regular attend- "ance from 5 to 10, school attendance during the "winter months of November, December, January, "and February would, with the aid offered by night "school teaching, not only keep up but advance the "education already received."

Allotment System in Beds.

87. Woburn Union Allotment System.

Totals	11,682	29,603	793	197	990	147 2 18	4¼	258 3 30	1,096 gardens and allotments under 5 acres.

* The returns from these parishes are as accurately given as the information obtained by the Assistant Commissioner will allow, the returns from the other 13 parishes he believes to be strictly accurate.

The principal providers of allotments in the Woburn Union are,—

The Duke of Bedford, who provides	337	allotments of	20 poles or upwards.
Major Cooper	120	„	„
Rev. J. Clegg	77	„	„
Miss Trevor	50	„	„
Rev. J. S. Neumann	47	„	10 poles or upwards.
Lady Inglis	46	„	20 „
Proprietors of Salford	42	„	„
Rev. J. M. Hamilton	18	„	„

There may be other proprietors of allotments whose names should have appeared in this list, but the Assistant Commissioner was unable to ascertain them. This is probably the case in Eversholt, one of the chief proprietors being absent at the time the returns were made.

The Duke of Bedford's Allotments.

88. The allotments on the Duke of Bedford's estate, which number for Bedfordshire about 1,250, are from 20 to 30 poles, 20 being the ordinary and most approved number, being considered sufficient for a regularly employed farm labourer; the rents vary from 4*d.* to 5¼*d.* per pole, the landlord paying all rates and taxes. Occupiers of allotments on this estate are not allowed to hire allotments from anyone else, a rule very consistent with the position that the quantity allowed is sufficient for the purpose intended.

The parishes for which this estate provides allotments are—

Woburn.	Potsgrove.
Ampthill.	Ridgmont.
Crawley.	Steppingley.
Eversholt.	Cople.
Houghton Conquest.	Knotting.
Lidlington.	Souldrop.
Marston.	Oakley.
Maulden.	Willington.
Millbrook.	

Bedfordshire.

Mr. Culley.

f.

Wrest Estate.

89. Lady Cowper lets 949 allotments at rents varying from 4*d.* to 7½*d.* a pole (rent in case of allotments, always includes rates and taxes as paid by landowner). The rule of the estate is to allow 40 poles to each cottager; there are however a number of larger allotments in Flitton, which were originally let at a time when the parish became so pauperised that farms could not be let. The effect of dividing a large farm into allotments in this case was very materially to diminish the poor rate. The parishes provided with allotments by the Wrest estate are—

Silsoe.	Lower Gravenhurst.
Clophill.	Harrold.
Flitton.	Carlton.
Pulloxhill.	Blunham.
Upper Gravenhurst.	

Mr. Henry Trethewy, agent for the Wrest estate, read a very able paper on "The allotment system, its "uses and abuses," at the Central Farmers' Club in November 1858, and the opinions he held then are the opinions he holds now (as Mr. Trethewy assured the assistant commissioner), after the experience of many years in the management of estates upon which the allotment system largely prevails. It is difficult to make extracts from this ably arranged paper without destroying to a certain extent its force, but the following extracts illustrate the points in Mr. Trethewy's argument:—

"It cannot be denied that much of the success of "the farmer depends upon the class of labourers he "may have about him, whether steady, industrious, "and skilful, or otherwise. . . . . Any system, "therefore, having a tendency to elevate the moral "character of the labourer and to improve his con- "dition must be worthy of encouragement. . . . . "A desire for the occupation of land is inherent in "the human mind. . . . . Almost every man, what- "ever may be his pursuit in life, attaches himself "more or less to the soil. He feels that he possesses "in his garden or paddock at least one spot which "he can call his own, and where he can indulge his "own peculiar taste. No wonder, then, that the "labourer, whose very existence is identified with "vegetable life, should participate in this feeling. "No wonder that while the greatest portion of his "time is devoted to the cultivation of the crops of "his employer, he should aspire to the occupation of "a small area for himself, independently of its value "and convenience to him. And when we consider "how influential this feeling often is, in diverting "his attention from places and objects having a ten- "dency to demoralization, surely it is the duty of "every one interested in his well-being, so far as is "consistent, to promote his wishes. How many "hours which might otherwise be passed in the ale- "house may thus be spent in profitable occupation? "But here it is possible I may be met by an objec- "tion, which I have sometimes heard made, that if "the labourer does his duty to his employer during "the day he can have little desire to work after- "wards. In other words, that he employs that "strength and exertion on his own land which of "right belong to the farmer who pays him for his "day's work. To this I would reply, that if the "day's work is done (and I apprehend no employer "would keep on a man who habitually failed in doing "it), to restrain him from devoting his leisure hours "to his own pursuits, would be to reduce a labourer "to the lowest degree of serfdom. . . . . In Bed- "fordshire allotments were laid out on the estates of "the Duke of Bedford and Earl de Grey in the year "1829. In that year it appears that on the former "estate in the parish of Maulden, 18 acres were "divided into parcels of from 20 to 40 poles each; "while on the latter estate, in the same year, 30 "acres were set out in parcels of from 1 rood to 2 "roods each. Other proprietors soon afterwards "followed these examples, until garden allotments "became very general. I would, however, here "observe, and I beg particular attention to the "remark, that it is not my opinion that allotments "are suited to all districts; and that it does not "follow that because they answer in one locality, "that they will succeed in another. . . . . I would "merely observe that where labourers live in vil- "lages, as in the midland counties, the system would "be more practicable than in those districts where "they more generally reside on the farms they work "upon. . . . . My experience convinces me that a "rood is sufficient under almost any circumstances; "and the greatest error that has been committed "has been the allotting too much land to one indi- "vidual. To dwell upon the evils arising from such "a proceeding is scarcely necessary, as it must be "obvious that without sufficient capital the occu- "pation of land cannot be attended with profitable "results. Some instances in confirmation of this "view have come under my own observation, and I "can confidently assert that instead of the position "of such men being improved, it has retrograded. "Occupied nearly the whole of their time upon their "own land, they can no longer be classed under the "head of labourers, and they actually injure regular "workmen by throwing their labour into the market "at seasons of the year when the demand for it is "unusually depressed. . . . Every employer knows, "and every man of common sense must feel, that it "is as important to the farmer to have his regular "men at work at all times, as it is to the manufac- "turer or tradesman, and that the business of the "farm could not be carried on without such regu- "larity. I regard it, then, as a fatal error for the "labourer to follow any pursuit that would at all "interfere with the claim of his employer upon him, "for, be it remembered, that it is upon *hired* labour "that the working man must chiefly depend for his "subsistence, and any scheme that has a tendency "to interfere with this, his chief capital, must very "shortly end in disappointment and distress; but "any plan that can be devised which will improve "his condition, without interfering with his free "labour, must be hailed as a great boon. Such, I "believe, the allotment system, properly managed, to "be. . . . . The chief abuse of the system consists "in giving the labourer more land than he can "manage consistently with his usual occupation. "Every scheme must be kept within due bounds. "Every system must have a limit. To extend the "allotment system beyond its legitimate bounds "would have the effect of completely changing its "character, and turning that which was intended to "be an auxiliary into a leading pursuit."

90. On Lord St. John's estate the custom is to allow 40 poles to each cottager as conveniently placed as possible, and at a moderate rent.

Dynevor Estate.

91. The following statement of the allotment on the estates of Lord Dynevor's trustees in the three parishes of Bromham, Stagsden, and Biddenham was sent to the Assistant Commissioner by Mr. Golding, of Biddenham, agent for the estates.

Acreage of the three parishes - -	- 6,651
Population of three parishes - -	- 1,719
Number of cottages - - - -	225
Number of allotments averaging 40 poles -	304

These allotments are in addition to a garden of from 15 to 40 poles attached to each cottage belonging to the estate.

Mr. Golding says, "In addition to the home "garden each cottager has an allotment of about "40 poles, for which he pays about the same rent as "the farmers are charged for their occupation. I "consider these allotments most beneficial in helping "the parents of large families to bring them up "respectively, and they have proved a great pre- "ventative to crime. In the event of the occupiers "being convicted before a bench of magistrates they "forfeit their allotment. We have had but here and

" there a case of forfeiture: the men would suffer " anything rather than forfeit their allotments."

92. *Mr. S. Bailey*, Southill, agent to Mr. Whitbread, said, " Mr. Whitbread gives each cottager an allot- " ment of 40 poles (in one or two cases the 40 poles " are divided between two old men); he lets 95 such " allotments at the rate of 48*s.* per acre in Southill " parish, and there are 20 cottages with gardens of " 40 poles attached. This is the custom in all " parishes that Mr. Whitbread has property. Mr. " Whitbread always builds a pigsty as part of the " offices of a cottage, and I consider it a great ad- " vantage to a cottager who has an allotment to " keep a pig."

93. *Mr. G. Harris*, occupier, Battlesden, says, " I " consider the allotment system a great accommoda- " tion to the poor."

94. *Mr. J. Foll*, Harlington, occupier, and Vice-chairman of Woburn Board of Guardians, considers, " An allotment of 20 or 30 poles a great blessing to " a labouring man, keeping him out of the beershops, " and giving him an occupation during the summer " evenings. 20 or 30 poles is as much as a man can " work by spade husbandry in his over hours; I " think 20 poles better than 30."

95. *Mr. Gostling*, occupier, Oakley, and agent for estates in which there are 300 allotments in Leicestershire, said, " I think no labourer, being a regular " farm labourer, should have more than 20 or 30 poles " of allotment ground; if he has it takes away from " the labour which his master has a right to expect; " some farmers will not employ a man who has more " than 20 or 30 poles."

96. *Mr. Prew*, occupier, Sharnbrook, said, " The " allotments here are from 1 rood to 7 or 8 acres, " and one mile from the village, and I believe do " positive harm; no farm labourer ought to have more " than 40 poles, and that near his cottage; I think 40 " poles near the cottage a very good arrangement."

97. *Mr. Pedder*, carter and hawker, Silsoe, has now 4 acres of allotment, formerly occupied only one of 40 poles in Silsoe, " The last year I had the " 40 pole allotment I grew on 20 poles of it 5 bushels " of wheat, on the other 20 poles I grew onions " and potatoes, and that year the gross value of " the produce of my 40 poles would be about 3*l.*" This was on very good land for which he paid 17*s.* rent for 40 poles, leaving therefore 43*s.* as payment for labour due on the allotment; and, therefore, if this labour was all done in extra hours, adding 43*s.* to his yearly earnings.

Straw Plaiting.

98. Copy of Memorandum by Rev. Joseph Simpson, Tilsworth, April 22nd, 1868.

" The children begin straw plaiting at 4 years " old; if they do not begin young they never " make good plaiters. It is the general practice " for parents to keep their children indoors all " the day at straw plaiting. Children are at straw " plaiting schools about seven hours in the day, and are " generally employed at home about three or four " hours besides, if they have not done the number of " yards set by their parents. At some plait schools " each child gives to book learning three or four minutes " each day, or as much time as is taken up in reading " five or six verses of the New Testament; but at most " plait schools there is no reading whatever. The " position of the body adopted by straw plaiters " for convenience and expediting their work cannot " be conducive to health. A bundle of straw is " placed under the left armpit from which three or four " straws are taken, and placed in the mouth to be " moistened by the saliva; the fingers being all the " time engaged in plaiting, the head is bent forward " each time a new straw is required, which recurs " constantly as the straws are only a few inches in " length, thus a stooping habit is acquired from the " constant bending of the head and cramped position " of the left arm, to say nothing of the injury done " by the constant habit of holding dyed straws in " the mouth. The children often have sore lips, and " then no doubt suffer from the abstraction of saliva " sufficient to moisten many yards of plait per day. " It was formerly the custom to moisten the straw " with water, but the saliva is considered by the " dealers to give it a better appearance, and hence " the present filthy custom. Straw plait carried out " in moderation is a great source of benefit to the " district, inasmuch as it keeps away poverty, but " as at present conducted in the case of children " sadly needs restriction."

99. *Rev. A. Blomfield*, of Barton in the Clay, says, " The girls who plait sometimes separate themselves " from their own families and lodge with other " families. They have very little regard for their " parents; there is little or no feeling of modesty " amongst these girls."

100. *Mr. D. G. Gilbie*, relieving officer, Luton, says, " Plait has been bad, and we have had a terrible " winter; the men, a good many of them, make the " women keep them when plait is good. Scores of " men sell bonnets, plaits, and block hats, and won't " go out to farm work. They have no shame about " applying for relief, and a great many get relief who " don't deserve it."

101. *Mr. T. E. Austin*, clerk of board of guardians, Luton, said, " The men in many rural parishes of the " union will not work in farm labour except in summer, " and content themselves by being supported by the " women and children."

102. *Mr. C. Austin*, clerk of magistrates, Luton, said, " The girls soon become independent of their " parents, and go and lodge in Luton or elsewhere and " leave their parents. The morals of the girls in the " rural parishes is much worse than in Luton itself."

103. *Rev. Frederick Hose*, Dunstable, says, " The " girls who work here for the most part work at " the better class of bonnet sewing, and work in the " manufactories, where very good order is kept, and " there is no such thing as open vice in the town, and " I attribute this to their working in good airy rooms " under proper control, rather than within close " houses or lodgings; their conduct contrasts favour- " ably with the conduct of the girls either in Luton, " where they work principally in their own houses or " lodgings, or in the neighbouring rural villages, " where in summer they walk about the lanes to " plait."

104. *Mr. J. Crouch*, Ridgmont, on this subject, said, " The immorality of the girls here is very great, and " and I attribute it to the plait and lace work, which " is not in its nature an employment sufficient to keep " them out of mischief; in districts where I have " lived where women were employed in farm labour " the feeling of chastity was much stronger than here, " and I attribute the difference to the more wholesome " work."

105. *Rev. A. Baillie Hamilton*, of Ridgmont, also bore strong testimony to the want of chastity amongst the plait girls.

106. *Mr. Henry Whichello*, guardian for Linslade, Leighton, says, " The daughters of farm labourers are " generally employed in plaiting; the sons partly in " plaiting and partly in farm work. In consequence " of the early age (5 or 6 years) at which the children " are usually sent to the plaiting schools they have " no chance of going to any other schools, and conse- " quently grow up without any education. The " plaiting schools, as a rule, are held in a room of a " cottage, and are very much crowded, much to the " injury of their health. The rate of wages may be " taken at 11*s.* per week, and as a child at 12 years " (if sent to a plaiting school at the above age) can " earn 2*s.* 6*d.* a week, it is a great temptation for the " parents to keep them from any other school. As

Bedfordshire.

Mr. Culley.

f.

" regards their morals I do not think it is much " affected by the plait trade, but the poverty of their " parents has, in my opinion, much more to do with " the want of chastity so prevalent than the plait " trade. It is a not uncommon occurrence for the " whole family to sleep in one room—grown up sons " and daughters. At our last meeting we had the " case incidentally mentioned of a family of ten, " including a daughter with an illegitimate child, all " sleeping in one room."

107. *Rev. J. Clegg*, in speaking of the state of Toddington, says, " The state of pauperism is due to " the straw plait, and I think it would be very unfair " to expect the landowners to bear the burden of " remedying evils caused by straw plaiting."

108. *Mrs. Marsden*, Toddington. Cannot read. Has 15 children who come to her house to plait, 13 girls and two boys. " Plait is so bad I don't believe they " can earn a penny when their straws and schooling " is paid for. They pay me 2½*d.* per week. They " come at 9 some on 'em and stay while 12, then they " come at 1 and stay while 4, and come again at 6 and " stay while 9, some on 'em."

109. *Mrs. Randell*, Toddington, has 23 children plaiting; should get 2*d.* per week each; last week only got " 4*d.* for the lot, the parents is so poor." " I don't care, I don't, how soon these schools is " stopped, they can keep me then and I can't keep " myself now." Room, 12 ft. square and low, has had " may be 40 in it when plait was good."

110. *Mrs. Kirby* of Maulden has a plait school, 20 girls between 4 and 14; has had 30 in a room about 14 ft. by 7 ft. and 8 ft. high. " The best " of these girls can plait 1½ score (*i.e.*, 30 yards) per " day, and her plait just now is only worth 2*d.* per " score, and when the straws are paid for and the " schooling (2*d.* per week) there's nothing left."

111. *Joseph King*, Houghton Regis, has a plait school, 13 ft. by 13 ft. 30 children in school between 5 and 11 years. Best can make about 22 yards per day in 5 hours, sold at 4*d.* or 5*d.* per score; straws cost from 1½*d.* to 2*d.* per score.

112. *Mrs. Poulton*, Houghton Regis, has a plait school, about 13 ft. by 8 ft., but about 8½ ft. high. 32 children between 6 and 14 years, who work 5 hours a day with her, and finish their tasks at home if they are not done when they leave her; children pay 2*d.* each per week. The quantity of plait to be done is set by parents, not by her. Most of these children had been either at National or British school.

113. *Mrs. Mooring*, Houghton Regis. A plait school about 10 ft. square and 6½ ft. high. 26 children between 5 and 8 years at work.

114. *Mrs. Warner*, Biggleswade, Palace Street, has a plait school in a tolerably airy large room has 14 children between 6 and 12 at work. Children come at 8½ a.m. and stay till 5½ p.m., or 6 if they have not done their task.

Lace Making.—Lace Schools.

115. *Mrs. Sarah Mitchell*, Oakley, has a lace school. Four girls between 8 and 12, and eight girls under 8. Elder girls pay her 3*d.* a week, little ones 2*d.* Elder girls work at the pillow from 8 a.m. till 5 p.m., and then read two or three verses out of the Bible: " I " can't learn 'em much, I can't read much myself, but " I do the best I can."

116. *Mrs. Buttering*, Turvey, has a lace school, 10 girls from 7 years upwards. Girls work from 7 a.m. till 6 p.m., with one hour's interval for dinner.

117. *Mrs. Howe*, Turvey, has a lace school. 22 girls at work at present; has 32 when she's full; youngest girl 7, average age 11. They work from 7 a.m. till 12 noon, and from 1 p.m. till 5 p.m., or till they finish their task, sometimes 7 or 8 p.m.

118. *Mrs. Neal*, Risely, has had a lace school for 8 years. 10 children at work at present. " Girls can " learn lace making almost at any age, easily at 10, " though not quite so quick as if they came earlier."

119. *Mrs. Hart*, Thurleigh, used to have a lace school of 15, and will have again in summer. Girls between 8 and 16 all pay 3*d.* per week. School hours from 8 a.m. to 6 p.m., with one hour for dinner.

" They had'nt ought to begin while they're 9 years " old, but their parents can't afford to keep 'em and " pay their schooling; I have a little one in her 8 " (*i.e.*, 7 years old). I can't send her to school, and " she's been learning at her pillow two years; my girl " of 13 works from 7 till 7, with an hour for dinner." Mrs. Hart has two girls of 16 and 13, neither of whom can write, and were never at school, except Sunday school, after they were 6 years old.

Benefit Clubs.

120. *Mr. Chas. Howard*, of Biddeham, on " Benefit " Societies in Rural Districts."

Mr. Chas. Howard read a very interesting paper on the above subject at a meeting of the Central Farmers' Club (see Journal, November 1867), in which he says, " I find in our small county (Bedford- " shire), and I believe it is only a sample of the " rest, that there are 260 clubs (public house benefit " clubs), or nearly two to a parish." Farther on in his paper Mr. Howard says, " In a discussion in the " House of Lords it was stated *that the Registrar-* " *General could not satisfy himself of the soundness* " *of* 20 *out of* 25,000 *societies.* If such be the case " legislation will not be commenced too soon. The " permanent success of a friendly society, upon the " principle that union is strength and the many can " help the few, depends on the number of its mem- " bers. If a society be few in numbers, it is clear " that when a large proportion have to throw them- " selves upon the funds, as is invariably the case " when the members become advanced in life, the " failure of that club is inevitable; especially so is " it when the sickness pay is out of proportion to " the monthly payments. Those present who happen " to be members of boards of guardians can bear " testimony to the many pitiful cases which come " before them, of men who have subscribed for 30 " and even 40 years to a club, and after all the club " has failed, and in their time of need have had to " throw themselves upon parish bounty. From a " recent return I find that *there are nearly* 4,000 " *paupers in union workhouses* who have been " members of friendly societies which have been " dissolved or broken up. I confess, after giving the " subject some consideration, that I shall prefer to " see the government grapple with the question of " friendly societies, either by the post office or some " other agency. Until, however, such is the case, " and as it may be years about it, I incline to the " principle of county or district associations."

Public House Benefit Clubs.

121. Copy of letter from J. H. Simpson, Esq., to Geo. Culley, Esq.

Dear Sir, Tilsworth, May 5th, 1868.

I think the only way to prevent great distress among the older members of benefit societies during the next 10 years, would be for the legislature to interfere and pass an act which shall place the benefit societies on a footing with ordinary joint stock companies, compelling the present members to provide a substitute to undertake their liability before they are released from their obligations, and so prevent the young men deserting in a body, and thus leaving the old men to provide for themselves.

This would avert the threatened calamity for 20 or 30 years, but as the members died off the club would be weakened. It is a great evil which requires adjusting. The Odd Fellows club is all the fashion among the young men now, they seeing the evils of a public house club, which divides the money annually.

There is a club at *Totternhoe* held at the Bell Inn, which I believe follows the practice of supplying the members present with beer according to the full number in the club books.

One night about two years ago I heard a great "row" going on, and upon inquiring the cause I was told by the landlady that it was the "club," which it seems had been in weak numbers that night in consequence of several being "up in the hay "country," *i.e.*, near London, haymaking, and the half dozen that were there had all the beer to themselves, of which last they took good care to inform the neighbourhood.

Believe me to be
To George Culley, Esq., Yours truly,
Assistant Commissioner of J. H. Simpson.
Children's Employment Commission.

122. Cases of Thos. Holland and William Piggott, of Tilsworth, as stated to the Assistant Commissioner.

122*a*. Thomas Holland joined the King's Arms Club at Hockliffe, which inn was then kept by a Mr. Hakford, who removed to the White Horse, and the club also removed their place of meeting to there, but subsequently returned to the King's Arms, which was and is now kept by a Mr. Inwards. He (*i.e.*, Holland) joined it in the year 1816; he was one of the original members, being the eighth that joined, and was always regular and punctual in his monthly payments of 1*s*. 6*d*. There were as many as 130 members in the club at one time, and a year before it was broken up there were between 80 and 90 in it; but about that time there were some of the original members who, having arrived at the age of three score and ten, were unable to earn their livelihood as formerly, and were expecting to reap the fruits of their lifelong savings, when the younger members complained, some of them even going so far as to shamelessly avow that "they were not going to 'help "'keep' an old man," and 40 of them left at one time. This was a blow that the club never recovered, and it was accordingly dissolved some months afterwards, each member receiving the sum of 5*s*. at the dissolution. One of the original rules was that each member upon attaining the age of 60 was to be in receipt of 3*s*. 6*d*. per week during his life, but Holland, who in common with several others consented to an alteration of the rule to the effect that 70 should be the age instead of 60, and 2*s*. 6*d*. the weekly receipt instead of 3*s*. 6*d*., enjoyed the benefit of his self-denial but a short time after he attained the age of 70, the society having been dissolved. The expenditure was most reckless, for in addition to the annual dinner on Whit Monday, which cost on an average but little short of 30*l*., it was the custom for a pint of beer per member (according to the number in the club, not of those present only) to be drawn, and if only half were present (which often happened) they would have double allowance. Thus the sum of 1*l*. 7*s*. 8*d*. per month was expended for the *sole* benefit of the landlord. At one time they had as much as 700*l*. in a bank at Bedford, and this was alleged by the younger and more reckless as a reason for keeping up the expenditure caused by eating and drinking, and when an old member ventured to remonstrate, he was assailed with such epithets as "hog," "beast," &c. This I have been told by one whose word I can rely upon. The rules of the society appear to be good (with the exception of Rule XII.), but they were habitually disregarded, and to such an extent was the breach of them carried, that to prevent the public scandal of a club funeral, the stewards *only* were allowed to go latterly. On looking at the rules, especial attention should be directed to Rule XII., which gives the landlord a power over the surplus money, and as an instance of the care and prudence with which he fulfilled his trust, it is only needful to refer to a circumstance which took place some years ago when the club was held at the White Horse. One day the box was missing. It was at last found in one of the landlord's fields, and the money (16*l*. 16*s*. and some pence) taken out of it, but only one of the papers was stolen, and that was a document signed by the landlord, in which he had undertaken to be responsible for any loss happening to the club funds upon its removal from the King's Arms. Holland is now in the receipt of 2*s*. 6*d*. per week and a loaf of bread from the parish, and is bordering on destitution. His is a hard case, for it is rarely that a *more deserving* man has met with a harder fate; he is one universally respected by all who know him.

122*b*. *Case of William Piggott.*

Belongs to the Union Benefit Society, held at the Five Bells Inn, Standbridge, and has been regular in his monthly payment of 1*s*. 6*d*. during the 37 years he has belonged to the club. He will be 73 years of age this next June, and being unable to work has been in the receipt of 4*s*. per week, in accordance with Rule 5.

A few weeks ago the weekly payment was stopped, and Piggott had to apply to the magistrates at Leighton for a summons calling upon the officers to hand over to him the arrears, *which has been done*, and now the younger members are complaining because they will have no surplus money to divide under Rule 22 as heretofore, for the purpose of spending in drink, &c., which of course cannot be done when aged and infirm members have to be supported. They are accordingly moving to alter the rule so in fact cut off the old members from obtaining assistance, in other words trying to divert the club from its original purpose and deprive the aged members of the relief and provision they have been making a lifelong effort to obtain, and all to please a few drunken dissolute fellows and a rapacious landlord.

If this club had not had such an unjust rule as Rule 22, it would have been worth nearly 700*l*. now, instead 80*l*. or 90*l*., *i.e.*, 1*l*. per member.

Piggott is a very tidy respectable man, and has been so all his life.

123. King's Arms, Hockliffe, Friendly Society, begun January 1, 1816.

Rule III. . . . . "A member to have one pint of "ale on payment of one or more months."

Rule XII. (referred to in Thomas Holland's case). "The money belonging to this society shall (as soon "as the stock will admit and convenience serve) be "placed in the Bank of England or to interest on "some approved security, the remainder to be kept "by the landlord to pay sick members with, he being "responsible."

Rule XIII. "There shall be an annual feast, which "shall be held on Whit Monday, at which feast each "and every member shall pay or cause to be paid the "sum of 2*s*. 6*d*., whether present or not, except in "cases of sickness or lameness."

124. The White Swan Friendly Society, Hockliffe, has no such rules as those quoted, III. and XII. of the King's Arms club, and instead of Rule XIII. of the King's Arms club Rule 28 of the White Swan club says that at the annual feast each member, *whether present or not*, shall pay 1*s*. 6*d*., except in case of sickness, &c.

The rules of this club are not certified by Mr. Tidd Pratt.

125. The White Horse, Hockliffe, Union Friendly Society. The rules of this club are certified by Mr. Tidd Pratt. Rule 19 says, "A dinner shall be pro-"vided, and every member *that dines* shall pay "1*s*. 6*d*."

Note.—(Hockliffe contains 416 inhabitants according to the census of 1861.)

126. United Tradesmen's Benefit Society, held at "White Bear," Woburn. Established June 21, 1852.

	s.	*d.*

Bedfordshire.
Mr. Culley.
f.

Members having paid 12 months' subscription entitled to 10*s.* per week for 26 weeks, and 5*s.* per week for remainder of year if sickness continue. No member receiving relief for 12 months can receive any more relief till he has been off the books 12 months.

Rule 9. "On the death of a member 5*l.* to be paid "towards his funeral expenses, each member of the "club paying 1*s.* to box for that purpose. Upon the "death of a member's wife 3*l.* to be paid towards her "funeral, and all members to subscribe 6*d.* towards "box."

Rule 18. "If the steward whose duty it is to visit "the sick members at least once a week should fail to "do so, he will be fined 2*s.* 6*d.* or excluded. The "money allowed to the steward to be spent at the "club house."

The rules of the above club *not* certified by Mr. Tidd Pratt.

127. Goldington.—The Assistant Commissioner was shown the rules of a public house benefit club by one of its members. That club has been broken up twice from want of funds during its existence of 30 years, but has not been in difficulty since 1850.

128. Tingrith Friendly Society, held at the schoolroom at Tingrith, and extending its operations to the parishes of Tingrith, Eversholt, Westoning, Milton, and Henlington Wood End, had on the 31st December 1867 198 members, and a balance in favour of the society of 1,443*l.* This club had at one time 29 honorary members, now diminished to 19; and a great part of the trouble of working the club has fallen to the share of the rector of Tingrith, who is honorary secretary. From the remarks made by himself on the margin of the copy of rules sent to the Assistant Commissioner by the honorary secretary, it is evident that too much reliance has been placed on the donations or subscriptions of honorary members, and that in this club, where the rules are very much better than in the ordinary benefit clubs, they are not so good as to satisfy the secretary that the club could do without aid from honorary members. Rule 43 provides for a triennial examination of the engagements and position of the society by "competent persons," meaning, no doubt, an actuary or professional accountant. To this rule the secretary's note is, "This has "never been done, because an actuary once applied "to demanded only 10*l.*!!" This society therefore, having double the number of members of the usual village benefit club and managed on a much sounder basis, cannot afford an audit by a "competent "person."

129. Inquiry into the state of the dwellings of the rural labourers, 1864.

Dr. Hunter's report, page 146:—

"In the small county of Bedford 150 cottages were "visited. Of these 94 had but one bedroom;". . . . specimens of the worst being taken from Cockayne Hatley; Wrestlingworth, Eyeworth, Dunton, Sutton, Biggleswade, in Biggleswade Union; Houghton Regis, in Luton Union; Tilsworth, in Woburn; Eggington, Leighton Buzzard, in Leighton Union. Further on in his report Dr. Hunter describes Wrestlingworth as the village in which he found cottages of the meanest description. He mentions Potton, Cockayne, Hatley, and Dunton as very bad. Of Eyeworth he says, "At Eyeworth there is more "comfort and decency, and there are gardens to "nearly all (the cottages;) but this state is artificial, "the place belongs to one owner, and many men who "belong to and work in Eyeworth are obliged to "live in Dunton and the wretched Wrestlingworth."

The Right Hon. C. P. Villiers having received Dr. Hunter's report, wrote to ask Mr. Robert Weale, then Poor Law Inspector for the district including these villages, whether from his knowledge of the localities he could confirm Dr. Hunter's statement. Mr. R. Weale then writes on the 6th of May, generally confirming Dr. Hunter's statement with regard to the villages mentioned by him, and more especially with regard to Potton and Sutton. As to the causes of overcrowding in cottages in the Biggleswade district, Mr. Weale says, "A considerable portion of the land "in the Biggleswade Union is now cultivated as "garden ground, and this kind of cultivation is "yearly extending. Very much more labour is re"quired on the land in consequence of this mode of "culture; and as dwelling-houses have not increased "in proportion to the increased labour required, "great difficulty is experienced by the labourers in "finding house accommodation. The straw-plaiting "is also extensively carried on in the neighbourhood, "and as this is a profitable employment for young "women, and one that gives them the command of "their own time, very few of this class will go out to "domestic service; and this again increases not only "the overcrowding of the houses, but the demo"ralizing practice of mixing up the sexes in the "way referred to by Dr. Hunter."

"Mr. Weale informed the Assistant Commissioner "at the state of the villages referred to is now very much what it was in May 1865, the date of his letter to Mr. Villiers. Coprolite works and brick fields may be added to the causes given by Mr. Weale for the overcrowding and use of bad cottages in the neighbourhood of Biggleswade.

130. *Mr. Graham*, superintendent of police and deputy chief constable, thinks the people might make much greater efforts to educate their children; are not nearly so alive to the benefit of education as in his native county, Cumberland. Does not know any cases where children suffer from severe work in agriculture, except that boys are employed too young in driving carts.

131. Extract from Report of Governor of Bedford County Gaol, dated Michaelmas 1867.

Out of 565 committals,—

6 read and write well.
162 read and write imperfectly.
160 read only.
257 neither read nor write.

132. Copy of letter from John Harvey, Esq., Chairman of Quarter Sessions, to George Culley, Esq., Assistant Commissioner.

20, Eaton Place,
March 9th, 1868.

My dear Sir,

I think I may say that the agricultural gang system, either public or private, has no existence in the county of Bedford.

Your questions I see exclude haytime and harvest.

The only approach to the system is, that in the spring a man will hire some bean dibbing by the acre; he then has three or four little children, generally his own, and I think always from the same parish, to put the seed into the holes he makes.

When grass is about to be laid for hay a man will have 10 or 12 children for a couple of days to pick up the stones. But this is only in the case (save in Bedfordshire, I am sorry to say) where the grass has been manured or dressed with earth.

In the garden grounds of Sandy and Biggleswade women are sometimes employed in onion picking; but as this is generally done in the barn and under cover, I imagine it hardly comes under the name of field labour. The reason why women are employed so little in the fields, I have no doubt, is their custom of making straw plait. Little boys are chiefly employed, and prevented from attending school by, 1st, "field keeping;" 2nd, driving carts and ploughs. With regard to the best method of combining instruction of boys in agricultural districts with the equally necessary habit of field labour, I have never seen any suggestion so good as that of my friend Mr. Baker, of Hardwicke Court, Gloucestershire, or rather that of Sir J. K. Shuttleworth, which Mr. Baker recommends. Mr. Baker, in a letter to the editor of the *Gloucestershire Chronicle*, says,—

"The second point is one of more general interest, "namely, the education of the lower classes. Much "as we dislike the term 'compulsory education,'

" most people feel that it is desirable to compel " parents to do justice to their children, as it is the " object of all law to compel every man to do justice " to his neighbour. Yet the means of doing so ap- " peared almost hopeless. To fine a poor man because " he tried to get another shilling a week for his " family by sending his boy to plough instead of to " school—and to enforce the payment of such a fine " —would be beyond the strength of mind of magis- " trates or local boards, or the endurance of the " public. Moreover, under such compulsion, a parent " would be most likely to hate the school, and the " child would readily adopt the father's view, and " learn as unwillingly and as little as possible.

" Sir James Kay Shuttleworth, however, suggested " a means of gaining the object, yet avoiding the " evil. He proposed simply to fine any person who " employed a child who had not got a certificate. " Examinations should be held once or twice a year " at every school. A boy might, if very clever, " pass his *first* examination at 9 years old. If he " did so it would enable him to be employed for " wages three days in the week, working in school " for the other three. If he could not pass this " examination at 9 years old he would be let " through more easily at 10; and at 11 he " might work his half-time even if he did not know " his letters. These are important and wise points. " The half-time system is most valuable in accus- " toming boys early to hard labour, and yet con- " tinuing some schooling to a later age, when the " child is better able to profit by it. At the same " time, it would never do to keep a stupid boy at " school so late that he will never make a hard-work- " ing labourer." And I earnestly hope some such suggestion may become law.

As to the question of cottage accommodation for the poor, it is one in which I feel so strongly, that I am almost afraid of expressing my opinions. I am convinced that till the labourer has a decent habitation you may try to teach him decency in other things in vain. It is the most frightful evil of the whole of the social condition of Great Britain. There is not adequate accommodation for the labourer in any county, in any town, in any district in England. How can you expect girls to be uncontaminated who have to sleep in the same room with grown up brothers, or worse, with their father and mother? Can a man be expected to keep away from the beer-shop when his cottage is what it too often is? But the practical difficulty of providing a remedy is enormous. Cottages, unless at exorbitant rents, will not pay, and till the Union Chargeability Act, 28 & 29 Vict. cap. 79, cottages were actually pulled down to save the rates.

I am very doubtful as to the working of that Act, and I think that every parish should be charged to the union rate in proportion to the number of labourers it *ought* to employ according to its acreage, *i.e.*, where any parish did not contain sufficient cottages for the number of labourers sufficient for its acreage under cultivation. I would double all the *union* or *common* charges on that parish until sufficient accommodation was provided.

I remain, dear Sir,
Yours very truly,
(Signed) JOHN HARVEY.

133. *Col. Gilpin, M.P.*, in answer to questions proposed by Assistant Commissioners,—

" I should say 10 years of age should be the limit " under which boys should not be employed in farm " labour, chiefly for the sake of education; and I " would suggest a limit of 10 hours for the work of " boys so employed. I think the half-day system " quite out of the question in agricultural labour. If " children are employed under 10 years of age, I should " like to see them sent to school three days a week. " I attribute the neglected state of education of the " young not to want schools, nor to the inefficient " mode of instruction in such schools in our country, " nor to the poverty of the parents, but to the indis- " position of the parents to forego the weekly sum " that may be added to the family earnings by the " children's labour. On this side of Bedfordshire, " when the plait trade is brisk, the earnings of the " children are considerable."

134. *Major W. C. Cooper*, Toddington, March 10, 1868, in answer to questions by Assistant Commissioner,—

1.—Is legislation required for the purpose of fixing the age below which boys should not be allowed to be employed in farm labour?

1st. To protect them from physical injury.
2nd. To secure for them a satisfactory elementary education.

In reference to Toddington and the vicinity I do not think legislation necessary. Boys at an early age are seldom employed at hard work. Young boys are employed at seed and harvest times "bird keeping," an occupation requiring but little exertion. As regards elementary education, the difficulty here is with the parents of children, who seem in most instances careless on the subject; being perfectly ignorant themselves, they cannot see the advantages of it. The practice of the families here is to keep the children at "straw-plaiting" as long as possible, thereby adding to the weekly gains, and this militates against their attendance at schools. The children when 3 or 4 years old are sent to "plaiting schools," where 20 or 30 may be seen sitting on forms in rows in close confined rooms, with bad ventilation, and the parents pay a small sum weekly for the tuition, which soon becomes a source of profit. The wages of farm labourers hereabouts vary from 9*s.* to 12*s.* per week, and this may in part account for the parents' apathy as regards education, for when the plait trade is bad the wages are not sufficient to maintain a large family, and to pay for education under these circumstances would be impossible under the present school system. An adult school for teaching girls domestic duties would be a great boon, but unfortunately none exists. The population of Toddington is nearly 2,500. The town is well situated and fortunately very healthy. The population is of the poorer class, and the cottages bad. The cottages mostly belong to small proprietors, and there are more than are required for the native population in consequence. The outcasts from surrounding villages readily obtain refuge, and any addition to the number of such dwellings would only increase the evil. The parish was enclosed at the beginning of the present century, and small allotments were made to those having the right of common, and hence the number of small tenement proprietors. The poor rates are very high. There are two National schools, the Church of England and the Wesleyan; both are well conducted.

W. C. COOPER.

Toddington Manor,
March 10, 1868.

135. *C. P. Stuart, Esq., J.P.*, Woburn Sands. Opinions on employment and education of children in agriculture.

Is legislation required for the purpose of fixing the age below which boys should not be allowed to be employed in farm labour?—So far as health is concerned, I do not think it is. Farm operations differ very materially from factory labour. Factory labour requires nimble fingers, but not necessarily strength of hand. Farm labour, from its nature, requires the use of the hand and some muscular exertion. In general I should say that such farm work as a child could do could not be injurious to its health.

Is there good ground for limiting the work of boys or girls?—Where I have resided, principally in the neighbourhood of Slough, I have never seen young girls at work. I have occasionally seen them

Bedfordshire.

Mr. Culley.

f.

in the hayfield and at harvest time. I do not know, as far as health is concerned, of any reason for limiting the hours of work. I have only seen young boys employed as bird minders, but certainly boys over 10 years of age are generally employed in various departments of farming. On the whole I should be disposed to say that as far as health was concerned no legislation was required.

I have been informed that young women going out hop picking and pea picking rarely escape demoralization.

As to the second series of questions, I believe there are more children receiving education now than at any previous period, but boys are usually sent out to work a year or two earlier than girls. In the neighbourhood of Slough and in my present neighbourhood there was no want of schools, and here they seem very well attended. I do not know the amount of education among the children, but certainly a large portion of adults cannot write their names. The school fees are generally small, but I think if the parents can get work for the children they would rather have them employed in earning their bread than learning to read and write.

I am of opinion that the poor generally speaking prefer paying some trifle towards the education of the children.

Compulsory education and compulsory rating have been advocated lately by many eminent men. It might be possible to get a compulsory rate, but that would press hard upon those who, as in this neighbourhood, already pay rates of 3*s.* or 4*s.* in the pound. Such a rate would put an end to charity in that direction, and consequently one would have to inquire into the present cost of the schools. I think a 6*d.* rate would be required in this parish. I am of opinion that such an arrangement would be bad in several ways. In one way at least I think it would. At present many of the gentry take great interest in the matter, but I think if it were made a forced contribution they would cease to do so. In the next place, the burden is usually borne to a large extent by the gentry, whereas in the case of a compulsory rate it would at first, without special legislation, come from the farmer. I believe too any such rating, unless it were union rating, would be more unequal than the poor rate. There are parishes were there are only 50 or 60 people. If a good school has to be kept up in such small parishes, the cost would be large. As to compulsory education, I do not see how that could be enforced without an enormous force of police. I have not got the figures before, but I think the police do not exceed one in a thousand of the population, and such a force is considered ample for all ordinary purposes; but to go and inspect cottages and drive the children to school would require some such army as Prussia maintains, amounting, I believe, to 20 or 30 per thousand. Of course the schoolmaster might have a register of all the children, and the parents might be summoned and fined if they did not send their children; but such a register would occasion a necessity for an additional officer in every parish. Again, how could fines be enforced in the case of illness? and admitting that a medical certificate would do to answer a charge, who is to pay for such certificate? Again, if there were some unruly boys or girls, would it be in the power of the master or manager of the schools to dismiss them as now? In that case, where the parents objected to education, the boys have only to be exceedingly troublesome, and it could not be enforced. It must be remembered that severe punishments, such as are inflicted on gentlemen's sons, cannot be inflicted on the children of the poor without a great outcry.

In conclusion, I would say that a limitation of the age below which boys should not be allowed to earn their bread would be desirable so far as scholastic education is concerned, but on no other ground; but I know far too little upon the subject to set a high value on my own opinion, particularly if opposed by others.

As to gangs, I do not know of any, but I have heard of one in the neighbourhood.

Compulsory education I consider could not be enforced. Compulsory rating might be, but it would not be desirable in my opinion.

136. Copy of letter from Capt. Polhill Turner to Geo. Culley, Esq., Assistant Commissioner.

SIR Howbury Hall, March 31, 1868.

RESPECTING the inquiries you are instructed to make, I can only state broadly, that I think no child should be employed in agricultural work under 10. That agriculture is a most healthy occupation, and neither boys nor girls are in these parts, nor in the agricultural district generally, overworked.

In this district, female labour is not much used; lace making and straw plaiting being very general. I think I may state that ample time is allowed for meals. In this parish we have an excellent and well attended school.

As to cottage accommodation, the subject has been much discussed at our diocesan conferences, &c., and the result seems to be that landlords should be assisted by Government in a manner similar to drainage works. That no lodgers should be allowed, and that a rigid inspection should be made periodically.

I think the circumstances of agricultural life so very different to the manufacturing that the Factory Acts would hardly apply, but I am not fully acquainted with the provisions of the Acts.

I am, dear Sir,
Yours faithfully,
F. C. POLHILL TURNER.

137. John S. Crawley, Esq., landowner and occupier, J.P., Luton, in answer to Commissioners' questions.

Question.—"Is legislation required for the purpose "of fixing the age below which boys should not be "allowed to be employed in farm labour, either to "protect them from physical injury or to secure for "them a satisfactory elementary education?"

Answer.—"Not in my opinion, as before 10 years "of age they have not sufficient strength to be of "any use. In this district the majority of children "are sent to school, the staple trade (straw plaiting "and bonnet sewing) enabling their parents to do "so. I don't think there is good ground for limit-"ing the hours of work of children employed in "agriculture."

138. Copy of letter from James Howard, Esq., of Bedford, to George Culley, Esq., Assistant Commissioner.

DEAR SIR,

I HAVE given some thought to the subject upon which we had an interview, viz., elementary education. The following points have suggested themselves to my mind, and as you expressed a wish to hear from me on the question, I have put my views in as brief a form as I know how.

I contend for a comprehensive scheme of national education, the schools to be *subsidized* partly from the national treasury, and partly from local taxation, the local tax to be paid jointly by the owner and occupier.

That all schools be placed under the present Committee of Council on Education, which I think should be styled "The Board of Education."

That the country be divided into educational districts, which districts could be subdivided as occasion might require.

That an Educational Board be appointed for each district, charged with the management of the schools, including the appointment of masters and mistresses, and other duties to be defined.

That any acts of the local board should be subject to a reference to the central board.

That the local boards should be required and empowered to provide proper and adequate school accommodation in parishes and places *where such does not exist.*

That in the event of the local boards failing to provide the necessary schools and accommodation, the central board shall cause such to be provided; the expenses to come jointly out of the local or district rate and the national treasury.

That the local boards be elected by the several parishes in the same manner as is adopted in the election of the Poor Law Guardians; that all Justices of the Peace residing in the educational district shall be ex-officio members of the local board.

That the local boards shall appoint for each school or parish "school visitors," whose duty it shall be to report to the local board any improvements or alterations which they may deem desirable. The visitors may be selected from members of the local board, or from the clergy, ministers, or other residents in the parish, or from any adjoining parish. Ladies should be also invited to act as visitors of girls' schools.

In a parish or place where sufficient school accommodation already exists, such parish or place should be exempted from the general school rate of the district, and if such schools are supported without Government aid, although they may have received a grant toward the building, then such schools shall be exempt from the authority or government of the local board.

That local boards should be empowered to negotiate with and, subject to the approval of the national board, conclude the purchase of any existing school within their district, whether belonging to private individuals or otherwise possessed.

That in the appointment of teachers to the existing denominational schools, the teachers shall belong to the same church or denomination as the schools to which they are appointed.

That the local board shall, subject to an appeal to the national board, determine the curriculum of the schools, except so far as relates to religious instructions.

That the reading and reciting of Holy Scripture be the sole religious instruction, except as hereafter provided.

That a portion or portions of Holy Scripture be read and prayers offered at the commencement of the school and at its close.

That in order that no distinction should be drawn by the State between the various religious bodies, all parents shall be required, when making application for their children to enter a school, to fill up a form of application in which it shall be set forth whether they desire that their child be instructed in the religious teaching of the school beyond the reading of the Scriptures; and to meet the case of secularists, the same form shall contain a column in which the parent can signify his wish that his child shall not receive any religious teaching, nor attend prayers, or be required to be present during the reading of the scriptures.

The above provision I conceive would meet the difficulties of Churchmen, Wesleyans, Baptists, Roman Catholics, Jews, and Secularists; all would have the same liberty, and this whatsoever school their children might be about to enter.

I am opposed to compulsory education, because I believe in a free country like England it could not be enforced. I believe if children were not permitted to engage in agricultural labour until 10 years of age, the object would be secured, and there would be no need of any compulsory measure.

In some of the states of America the attempts to enforce education broke down. I may be told that in Prussia the result of the compulsory system is satisfactory. My answer is, that what is quite possible under Imperialism is, I believe, altogether impossible under a Constitutional form of Government like that of England.

I am, dear Sir,
Yours very truly,
Bedford, April 9, 1868. JAMES HOWARD.
To George Culley, Esq.

139. Copy of letter from Rev. W. H. Bond to George Culley, Government Assistant Commissioner. Bedfordshire. Mr. Culley. f.

DEAR SIR, Goldington, April 7, 1868.

THERE has been a day school for the education of the children of the poor in this parish for upwards of 60 years, and at Michaelmas 1865 the new schools were opened, and the children transferred to them. The parents have many of them availed themselves of the opportunity of sending their children to the day school, whilst others, either from ignorance on their part or from indifference rather than from poverty, have allowed their children to grow up in an untaught state; and I have noticed this to be the case in other parishes in which I have been placed. The defective state of education amongst the children of the poor, where opportunities have been at hand, must be attributed in my opinion in a great degree to the ignorance and low moral tone of many of the parents. As I have stated, some parents amongst the poor struggle against difficulties, and keep their children at school as long as they feel able to do so; and in this village, where fewer children are put down to the lace pillow than in many others, as they prefer becoming domestic servants, I have noticed that the girls remain at school to a much older age than the boys. We lose the boys before they are 9 years of age, often at a much earlier age. I am convinced that legislation is necessary to fix the age below which a boy should not be allowed to be employed in farm labour. If this be not done, the majority of parents would, as now, send their children to work at too early an age. I think, too, that the limit should be 10 years, under which none ought to be employed; and I am of opinion that it would act as a stimulus to the parents in sending their children regularly to school, if it were also enacted that children should not be allowed to be employed even at 10 years, unless it could be shown that the boy had attained a certain amount of knowledge in reading, writing, and arithmetic. This could easily be ascertained.

I do not know if it is necsssary to limit the hours of labour. In this district boys are employed with the men from 6 to 6, except in winter, having an hour for breakfast and an hour for dinner.

It is only by direct legislation upon the subject of the education of the children of the agricultural poor, and their employment in agricultural labour, that any real good can be hoped to be arrived at.

The poverty of some parents, the ignorance and indifference of others, and the unwillingness to lose the child's small earnings on the part of others, and the unwillingness on the part of the farmers, who as a body are opposed to the education of the poor, would be found to operate most seriously against any and every attempt to educate the children of the poor, however young the age might be fixed below which the child should not be employed; and it is this consideration which brings me to the conclusion that any plan to be efficacious must be compulsory. The welfare of the community at large requires this, as well as the interests of the children. If it be left optional on the part of parents whether their children shall be sufficiently educated or not, a few would be found to prefer a sufficient education for their children, and would be ready to sacrifice a good deal to obtain it for their children; but the majority of them would be indifferent, and leave their children to grow up in ignorance. If education were compulsory it would relieve managers of schools from some difficulties, for they find in their efforts to induce parents to send their children to school, that the parents have a notion that the managers have some interest apart from the good of their children in wishing the children to be sent to school. If education were compulsory this question would be set right.

When I stated that this village had its day school for the education of the children of the poor for more than 60 years, it must be remembered that the mode of instruction in those early days was different from

Bedfordshire. Mr. Culley. f.

what it is at this day, but still some good was done by it.

Believe me to remain,
Yours truly,
W. H. Bond.

140. Signing with a mark as a test of ignorance.

From the table showing the proportional number of men and women that signed the marriage register with marks in the counties of England and Wales, it appears that for every one hundred marriages the

	Men.	Women.
Average for England was in 1865	22·5	31·2
Proportion for Bedfordshire was	35·0	43·8

Comparing the returns for the years 1855 and 1865, whereas the average improvement for England is for men, 7 per cent., for women, 10 per cent. For Bedfordshire it is, for men, 9 per cent.; for women, 12 per cent. If the sign by mark of the marriage register therefore be a test of want of education, the improvement in Beds was greater than the average improvement in England between the years 1855 and 1865, but the amount of ignorance is much greater in Beds than in the average of England; in fact, measured by this test it stands third in the list of English counties, putting the most ignorant first. As in the average of England, so in Beds; more persons sign the register with a mark in the rural than in the districts containing Parliamentary boroughs. As between men and women—

In England in 1855, nearly 12 per cent. more women than men signed with a mark; in 1865 this difference had fallen to under 9 per cent.

In Bedfordshire in 1855, barely 9 per cent. more women than men signed with a mark; in 1865 the difference was under 6 per cent. in a county where girls are employed at a very early age in straw plaiting and lacemaking.

Illegitimate Births :—

Poor's Rate return.

During the year ending Lady Day 1868 the charges for the two items of in-maintenance and out relief were :—

In the Woburn Union,—2*s.* 2¼*d.* in the pound on the rateable value, and at the rate of 9*s.* 3*d.* per head for the whole population of the union.

In the Bedford Union,—1*s.* 4½*d.* in the pound on the rateable value, and at the rate of 6*s.* 10*d.* per head for the whole population of the union.

In Biggleswade Union,—1*s.* 7½*d.* in the pound on the rateable value, and at the rate of 8*s.* 1*d.* per head for the whole population of the union.

GENERAL EVIDENCE FROM BUCKINGHAMSHIRE.

Buckinghamshire. Mr. Culley.

Nos. 1 to 87 in the Evidence contain the Answers given in the Commissioners' Circulars to the Question III. 37, asking for a Description of the Cottages; and such other Evidence as is peculiar to each Parish; they contain also Evidence as to the Wages and Earnings of Labourers, and the Evidence given by the Labouring Class themselves.

Aylesbury Union.

1. Aston-Abbots, population, 1861, 311; acreage, 2,180.

1*a.* The *Rev. J. Thornton* says of the cottages, "The cottages in this village may be considered gene-" rally as model dwellings, rooms of fair size, 11 ft. " square, well ventilated, lighted, and drained, with " two lower rooms, and two or three upper rooms and " pantry; most of the *groups* have a brick oven, pig-" styes, and out-buildings, and *many* of them, and *all* " of Lord Overstone's have ¼ acre of land."

Ownership.—24 cottages belong to Lord Overstone, five to Sir Anthony de Rothschild, 12 to Messrs. J. and P. Roads, farmers; five to Mr. John Gates, cattle dealer; and a few to other proprietors, but all are free from any stipulation as to dealings. The average rent for cottage and land jointly (¼ acre) is 2*s.* per week.

1*b. State of Education.*—Mr. Thornton told the Assistant Commissioner that he could not find a man who could read to make parish clerk, that he was teaching a man to read under promise of making him clerk if he could read in three months.

Copy of a Letter from Mr. John Beasley, Land Agent, to Geo. Culley, Esq., Assistant Commissioner.

Dear Sir, 27th May 1868.

Eight of the cottages you saw at Aston-Abbots cost 800*l.*, including every expense of sinking wells, fencing, &c. The whole of the others cost 150*l.* each, they are let with 40 poles of land at 2*s.* per week, and the occupiers are all tenants of Lord Overstone. They hold them under agreement, and are weekly tenants. In this parish Lord Overstone has 24 cottages, and is the owner of about 1,200 acres of land. In the adjoining parish of Wing, in which Lord Overstone is a large landowner, there are only 12 cottages belonging to his lordship.

The greater number of the cottages belong to small proprietors, and the village is in a bad state.

I am, dear Sir,
Your obedient servant,
J. Beasley.

2. Aston Clinton, population, 1,108; acreage, 3,640; cultivation, mixed.

For description of cottages, see Mr. James's evidence in Halton.

2*a. Sir Anthony de Rothschild* thinks that "if by " legislative interference more children are induced " to attend schools, such increased demand for school " accommodation and teaching should not be expected " from the present voluntary aid, but should be ac-" companied by a compulsory rate." Note.—(Lady de Rothschild has a girls' school, frequented by children from several parishes round).

2*b. Rev. C. W. W. Eyton* informed the Assistant Commissioner that many more public houses had been opened since Sir A. de Rothschild employed more labour; men earning 15*s.* a week give their wives so much, and spend the rest in drink.

2*c. Mr. Ambrose L. Taylor,* land steward of the rate of wages says, "At Aston Clinton we pay 14 men " of the lowest class of labourers we employ 2*s.* 2*d.* " per day, *i.e.* 13*s.* per week.

"Men trenching have 14*s.* per week. Drainers "earn on an average 15*s.* per week in piece work. "I know about 18 men who can earn 18*s.* per week "draining, but I never knew them earn more, the "price allowed for such work is too low to allow them "to earn more."

The following are examples of earnings of men taken from Mr. Taylor's labour book by the Assistant Commissioner:—

Thomas Stockford, 14*s.* per week for 48 weeks.
24*s.* „ for 4 weeks (harvest).
Average per week for year, 14*s.* 9¼*d.*, nearly.

James Morris and Chas. Green, two other examples, traced by the Assistant Commissioner, had 14*s.* throughout the year, except in harvest, when they were allowed to seek work elsewhere, and during which they would probably earn as much as Stockford, *i.e.* about 24*s.* per week for four weeks.

Mr. Taylor continued, "Some men will take their "wages on Saturday night, give you no warning, and "go off somewhere else to work on Monday; we pay "about the same wages as other people, our wages "have not varied much since 1864, but the tendency "is to rise."

3. Aylesbury, population 1861, 6,168; acreage, 3,200.

3*a. The Ven. Archdeacon Bickersteth, D.D.*, says, "I may remark generally that two causes have been "in operation for many years past tending to draw a "very poor population to Aylesbury, and to concentrate them here in a manner hurtful to health and "morals; (1) the removal of cottages from the "estates in the adjacent parishes, and (2) the existence of a large number of charities for the poor in "Aylesbury. These two causes have combined for "many years past to draw to Aylesbury far more "than its normal number of poor. I may add, however, that the evil is gradually being cured, partly "by the erection of a better class of labourers' cottages "in all the suburbs of the town, and partly by the "action of the 'Union Chargeability Act,' which will "no doubt tell favourably in the re-erection of a sufficient number of labourers' cottages on the adjacent "estates in the neighbouring parishes."

Mr. J. K. Fowler, occupier, says of the cottages, "On the whole cheaply constructed, ventilation bad, "drainage tolerably good, water supply really none in "many places, and what there is very bad, scarcely a "garden attached to the houses to be found. The "cottages are generally built and owned by small retired tradesmen builders, to employ surplus labour I "should fancy, not many belonging to landowners. "The rent is from 2*s.* 9*d.* to 3*s.* 3*d.* per week including rates.

"I pay my horsemen and men who work on Sundays 15*s.* per week; my other able farm labourers "13*s.* per week. Women are scarcely ever employed "in the fields in this neighbourhood. Plait being so "bad, about 10 women came to me this spring for "picking twitch for a few days. Girls are employed "in plaiting straw, and old women in making lace."

Boys at Work.

3*c. James Mason*, age 13. Was at National School till he was 10. "Cannot read nor write very well." Could spell his own name.

3*d. Geo. Garnett*, age 11. Was about a year at school. Doesn't know when he left. "Can't read "nor yet write much." Cannot spell his own name.

Hiring.

3*e. Mr. Ed. Stone.*—"There is very little yearly "hiring in Aylesbury Union; the hiring is weekly; "this, however, does not prevent labourers remaining "several years on the same farm; I think it rather "encourages them to remain; the services are longer "under a weekly than a yearly hiring."

4. Bierton, population 1861, 691; acreage, 2,470.

Buckinghamshire.

Mr. Culley.

f.

4*a. The Rev. H. W. G. Armstrong* says of the cottages, "Many are old and inconvenient, but new "ones are being built from time to time. The "drainage has been bad, but a pressure having been "brought on the landlords it is improving. The "water supply cannot be considered sufficient. Gardens are attached to most houses. Some of the "cottages belong to landlords, some to tradesmen, "some to yeomen. A private person non-resident "lets a field of a few acres as allotments to the poor. "My opinion is that it is a positive duty on the part "of landlords to provide their tenants with properly "arranged cottages. If cottage property is worth "holding I consider it ought to be properly attended "to as respects tenants."

4*b. Mr. Wm. Bell*, occupier, says, "I do not employ any females; occasionally a man's wife comes "to help her husband in piece work, especially in "harvest. I employ only two boys on my Bierton "farm; they are between 13 and 15 years of age, "and are plough boys. I don't care about boys, and "seldom employ them. I employ a regular staff of 16 "or 18 men. There are a sufficient number of cottages "near my farm belonging to various persons, and our "cottages are, with some exceptions, good and commodious; five or six of those occupied by my men "belong to my landlord. There is a good school "managed by the clergyman and a committee, and "the children attend well; they go as their parents "please to the Church, Wesleyan, or Baptist Sunday "School. In Bierton children are seldom employed "in agriculture till 12 years of age. This arises in "some degree from more than two-thirds of the parish "being in permanent pasture. The cottages belonging "to the estate have good gardens; many of those who "have no gardens have allotments. In 1867, when "the nominal wage was 12*s.* per week (now 13*s.*), "my men averaged 14*s.* per week throughout the "year in money only, and they had beer besides all "the summer months. A few of my men had no "allotments, and I gave them 20 poles each at 5*s.* per "annum. When men are paid 13*s.* a week, as in this "parish, they don't care about piece-work, except in "hay time or harvest. No agricultural labourer need "be out of employ in Bierton parish."

5. Buckland, population 1861, 732; acreage, 1,544.

5*a. Mr. Peter Parrott*, owner and occupier, says, "Very few of the cottages belong to the landowners; "nearly all have gardens or allotments. Water supply "is good. Rents vary from 3*l.* to 5*l.* a year. Men "ought to earn an average of 14*s.* to 14*s.* 6*d.* a week "throughout the year, including beer allowance."

6. Chearsley, population, 287; acreage, 914; cultivation mixed.

6*a. Mr. Charles Simmonds*, occupier.—The cottages are fairish in Chearsley; they belong to different people; rents are low, 1*s.* to 1*s.* 6*d.* a week with five or ten poles of ground.

I employ two or three married women couching, weeding, and hay-making; they have 1*s.* a day now, generally 10*d.*

I employ two boys under 10 keeping pigs.
„ four plough boys.
„ two unmarried lads of about 18, who get 12*s.* a week now in summer, and 8*s.* a week in winter.

The hours of labour for men and lads are 6 a.m. to 5 p.m.

Three men mowing by the piece cut 6½ acres of clover for me in two days, beginning at 2½ a.m. and working till dark. I paid them 35*s.*, so that each man earned 5*s.* 10*d.* a day. I gave them *as much beer* as they liked, and they drank nearly two gallons each per day.

7. Cublington, population, 288; acreage, 1,212.

7*a. The Rev. R. C. Burton* says, "There are no "allotments."

Buckinghamshire.

Mr. Culley.

f.

" Mr. Biggs gives a good many labourers about " eight poles each."

" The chief landowner, the Hon. R. Cavendish, " has one cottage."

" The drainage of the village, though it stands " high, is very bad."

Water is abundant.

One row of four cottages, and another of five, have only one privy to each row. Rent of cottages from 50*s.* to 80*s.* per annum.

7*b*. From Assistant Commissioner's notes :—

There is no parish school in Cublington, a small private school only.

Five very wretched dens in the roadside waste claimed by parish and occupied by five families rent free. The only drainage an open ditch between cottages and fence. One of these cottages has only one small room for all purposes, inhabited by man and wife and one daughter of 13, and this cottage was the neatest and cleanest of the whole.

7*c*. *Martha Kempster*.—" My husband is a farm " labourer, gets 12*s*. a week as a milker; he has to " go on Sundays. Have four children—boy of 10, " girl of 8, girl of 3, girl of 1.

" Boy gets 2*s*. 6*d*. per week, works to Mr. Hams " birdkeeping or anything. Girl of 8 can plait a " score a day, and her score sells at 4*d*. There ain't " much in it, but it keeps them out of mischief, and " keeps their clothes better, and they say as how " they musn't plait now. I don't know what they " be going to do with poor people."

7*d*. *John Ingram*, farm labourer, is paid 10*s*. per week; he works from 6 till 5.30, lives in a house with one bedroom; his family consists of his wife, one daughter 20, one daughter 18 and one boy 18, twins; one boy 15, one boy 13. He pays 2*l*. 10*s*. a year for his cottage.

Boy of 18 gets 7*s*. a week.
„ 15 „ 4*s*. „
„ 13 „ 3*s*. „

The mother goes out.

The two girls plait 14 score per week (one plaiting 8 the other 6). They get 5*d*. a score.

The boy of 13 cannot write well, he can read a little.

8. Cuddington, population, 1861, 590; acreage, 1,281.

8*a*. Assistant Commissioner's note, after visiting some of the cottages in Cuddington.—(" The cottages " in Cuddington are not good, and many of them out " of repair, but the rooms are generally fairly large " and higher than in many villages, and those I have " seen kept pretty clean.")

8*b*. *Mrs. Oakley* (husband a farm labourer).—" Not many of them (farmers) give more than 11*s*. " My husband, he has 12*s*. Cowmen have 1*s*. more. " also the horsemen and shepherds count to have a " shilling more, 'cause they go on Sundays. Now " and then some farmers give 2*s*. more. When I " first came here there used to be plenty of men out " of work, now there's seldom they can't get work; " a good many of the young and able-bodied men " have gone elsewhere to better themselves; gene- " rally they go to London, most of them have gone " within the last three years. A girl must be pretty " good at lace-making before she can now 2*s*. a " week; she must be 14 or 15. It all depends how " soon they are put to it and kept at it whether they " are quick at it; if not put early you never get " quick; it is not like anything else. Some boys go " out at 6 years' old 'bird-keeping.' They don't " go to regular farm work till about 8 years; if " you can get anything for them to do they get 2*s*. a " week, not more than that up to 10 or 11. My " husband does very little great work, scarce any " except hay-time and harvest, then they do all by " the great. There is a few masters as give some " hoeing by the great, but my husband doesn't get " any; farmers don't like 'em to earn over much."

8*c*. *Mrs. Betts*, husband farm labourer.—" My " husband has 12*s*. a week, he don't work on Sundays. " We have four children, ages 17, 13, 10, and young- " est 7. We pay 1*s*. a week rent. My girl, 17, does " the sewing for the family. I make lace; I don't " make 1*s*. a week. The boys hadn't any work in " the winter, now one (the boy of 13) gets 4*s*. per " week, and the one of 10 gets 3*s*. per week. They " have to go a Sundays; one goes to feed horses and " the other feeds sheep on Sundays. My husband " hardly ever does great work except hay-time and " harvest. The girl, 7, goes to school.

(Expenditure of this family per week :—)

	s.	*d*.
" Flour, a bushel	11	4
" Rent	1	0
" Pork, 1 lb.	0	8
" Tea, ¼ lb.	0	6
" Sugar	0	7
" Hundred of coals	1	0
" Washing materials	0	6
	15	7

" When the boys can't get work we can't buy pork " or as much tea and sugar. My husband has only " had an allotment for 12 months, and that is 20 " poles in next parish, 1½ miles off; we pay 13*s*. a " year for 20 poles. The allotments in this village " are 20*s*. for 20 poles (*i.e*. 1*s*. per pole). There's " plenty of families of four and five with only the " man's money coming in. All women make lace."

9. Dinton, population, 1861, 814; acreage, 4,100.

9*a*. Notes of cottages taken at parish meeting held at vicarage.

Old cottages built of wooden frame, mud walls and thatch; newer cottages of brick and tile. Most of the cottages are owned by two landowners, some are very poor. Most labourers have allotments of from 20 to 40 poles. Water supply is pretty good, and rents vary from 3*l*. to 4*l*. per annum. Old women engaged in lace-making, young women and girls in plaiting straw. One or two married women, wives of labourers, employed couch picking and weeding. Ordinary labourers are paid 12*s*. per week. Sunday men, *i.e*. men employed with horses, cattle, &c., on Sunday, 14*s*. per week. Men cutting hay by the piece expect to earn 5*s*. to 6*s*. per day. (Four occupiers present agreed in the above statement as to the wages of labourers.)

9*b*. Copy of rule 4 of the Dinton parish school :—

" 4. On Sundays the children will meet at the " school in the morning at 10, and in the afternoon, " from Michaelmas to Lady-day, at 2 o'clock, and " during the rest of the year at half-past 2. They " will then proceed together to attend divine service " at the parish church."

The following privileges are held out as inducements to parents to send their children to the parish school :—

" Children regularly attending the school will have " the privilege of becoming depositors in a penny " bank, and their parents, being day labourers, will " have preference of admission into a clothing club."

9*c*. *The Rev. A. C. Cuxson*, vicar, informed the Assistant Commissioner that he could fill his school if he were to allow plaiting in school, which he did not approve of.

9*d*. The following is a copy of a note from Mr. Farmbrough, occupier, Dinton, to the Assistant Commissioner :—

" The wages of an able-bodied man working on " my farm during the last 12 months were on an " average 13*s*. 6*d*. per week, generally at piece- " work."

10. Fleet Marston, population, 1861, 23; acreage, 929.

10*a*. *Mr. Wm. Mason*, occupier and guardian, says, " There are only 90 acres of arable land in the

" parish, and only three cottages, which are pretty " good, and belong to the rector. The weekly wage " for ordinary farm labourers is 12*s.* I have calcu- " lated the wages of my men ; they earn 15*s.* a week " throughout the year on an average, not including " the beer allowance. All grazing farmers give milk, " and my men have as much as they like, not in- " cluded in their 15*s.* a week. Bird-keeping boys " get as much milk as they like, and generally get " fat with me."

11. HALTON, population, 1861, 147 ; acreage, 1,452. Cultivation, arable, and woodland.

11*a*. *The Rev. A. Shilson* says, "There are 20 " cottages, all good, the property of Sir A. de Roths- " child. The water supply is from the Chiltern " Hills Company. Each cottage has a Moule's earth " closet; gardens, and outhouses good."

11*b*. For the parishes of Halton, Aston Clinton, and Mentmore.

Mr. Jas. James, solicitor and agent to Baron L. N. de Rothschild, Baron M. A. de Rothschild, and Sir A. de Rothschild, Bart., says, "The whole parish of " Halton belongs to Baron L. N. de Rothschild, M.P. " In Aston Clinton the property belongs to Sir A. " de Rothschild, Bart., the Mercers' Company, and " others. In Mentmore nearly the whole parish " belongs to Baron M. A. de Rothschild, M.P.

" There is nothing exceptional in the labour ques- " tion in any of these parishes. Boys are employed " in agriculture from 8 to 10 years of age with " plough teams and in other farming operations.

" I know of no use made of female labour in agri- " culture, except in harvest, in any of these parishes.

" These parishes are small, and in no cases have " the children employed to leave their own village.

(NOTE.—This is in answer to the question as to how far children do have "to *go*" to their work. If the question had said "to *come*" to their work, the Assistant Commissioner thinks the answer might have been that Halton and Mentmore draw some of their labour from surrounding parishes.—G. C.)

" I would not allow boys to be employed under 10 " years of age ; girls, I think, should not be employed " at all in farm labour.

" There are excellent schools in all of these parishes ; " in Halton they are supported entirely by Baron " Rothschild, and in Aston Clinton a large girls' " school is maintained by Lady de Rothschild. " Another large infant school is now in course of " erection; the boys' school there is supported by " general subscription. At Mentmore a large school " is supported by Baron M. A. de Rothschild, M.P.

" In Halton, Aston Clinton, and Mentmore the " condition and position of the cottages are for the " most part satisfactory, but it may be taken as a fact " that this is not the case in the county of Bucks " generally, overcrowding being very common."

12. HARDWICK, population, 1861, 708 ; acreage, 2,300.

12*a*. *The Rev. Christopher Erle* says of the cot- tages, "The rooms are small, the drainage is pretty " good ; some have only two rooms, some three, and " some have four. Some of the cottages belong to " landowners, some to tradesmen. The rents vary " from 1*s.* to 1*s.* 6*d.* per week. There are 173 " habitations."

13. OVING population, 1862, 436 ; acreage, 991.

13*a*. *The Rev. W. H. Young*, in speaking of the cottages, says : "A good many of the cottages are " out of repair ; I do not know of any with three " bedrooms, several have only one. There is a fair " supply of water near, and generally a small piece of " garden. A large number of the cottages are " owned by the inhabitants themselves, being built " on waste land. A grocer at Aylesbury owns a " good many more, with whom most of the cottagers " deal through the small shops. The rent is gene- " rally 1*s.* per week, sometimes 1*s.* 3*d.* or 1*s.* 6*d.*

13*b*. *Mr. Thos. S. Curtis*, occupier and guardian, says, "Cottages as a rule are very middling, many " of them built on the waste and owned by occupiers. " When the occupiers of cottages on the waste apply " for relief, the guardians order the cottage to be " sold, and a pretended sale takes place; I have " known one or two pretended to be sold two or " three times and still remain in the same hands."

13*c*. *Mr. Wm Nash*, labourer, says, "I have been " 64 years in the parish, about 40 cottages have been " built on the waste since I remember, I don't think " them as lives in the waste cottages is any better " than those as pay rent, they don't get the parish " doctor ; when a man owning a waste cottage applies " for relief they make him sell it, and a Mr. King- " ham has bought most and lets them at 1*s.* to " 1*s.* 6*d.* according as they is. A few cottages on " waste built of mud on stone foundation, most of " brick, some thatched, some tiled ; rooms very low ; " most have two bedrooms, kitchen, and scullery. " A famous place for water, no better in England."

13*d*. Examined two boys at work, Edwin Clark and Thomas Young, 13 years of age, whose answers to the Assistant Commissioner's questions did not exhibit much proof that they had ever been at school, which, however, was the case.

13*e*. *Thos Clever's* wife says, "We have a cottage " on waste belonging to Mr. Kingham, grocer at " Aylesbury, we don't deal with him, but the shop- " keepers here deal with him and we buy from them. " I have seven children here and my husband. My " eldest boy is 16, my eldest girl 13. I have only one " room, we get up by a ladder,—its miserable in " summer. We have three beds; there isn't any " room to move about ; rent, 1*s.* My husband rents " ½ acre at 45*s.* for the ½ acre, he has 11*s.* per week, " and more by piece-work. When he had 17*s.* by piece- " work without beer, it did'nt seem to do him more " good than 13*s.* with beer—I'm sure he was as well " off."

Earnings of this family :—

Husband 11*s.* per week.
Son of 16, 5*s.* do.

"The rest only earned 9*d.* last week."
Total for week 16*s.* 9*d.*

Expenditure on family of nine for week :—

	s.	*d.*
Bread - - -	11	9
Flour - - -	1	6
Tea - - -	0	4½
Firing - - -	1	0
Rent - - -	1	0
Other things - -	1	1½

" We have no potatoes just now, and I don't know " when I did have any butter or meat ; it has been " awful bad with us lately."

13*f*. *Mr. Edward Stone*, Chairman of Board of Guardians, informed the Assistant Commissioners that Oving parish was given up to the labourers under the old Poor Law, at a time when the rates were 25*s.* per acre.

14. STONE, population, 1,094 ; acreage, 2,520 ; cultivation, mixed.

14*a*. Several very poor cottages about the sides of the roads in this parish, built with mud walls and thatched ; some of them claimed by occupiers.

14*b*. *Mrs. Woodford* (living in a cottage belonging to one of the landowners), says, "My cottage is a " very poor one, sir, my upstairs is out of repair, the " walls do keep tumbling (as was evidently the case); " I pay 1*s.* a week rent. I have six children, the " eldest 12, a boy at work, a girl 10, at home, one of " 8 and one of 5 at school, and two younger."

14*c*. *Mr. John Monk*, occupier, says, "I employ " no women on my farm, they make straw plait, ex- " cept some of the older ones, who make lace. I " employ five boys between 13 and 15, and 14 or 15

Buckinghamshire.

Mr. Culley.

f.

" men, and I would require four cottages per 100 " acres for my farm, which is rather more than half " tillage.

" I pay ordinary labourers 12*s.* per week. In hay " time and harvest they get extra wages, say 1*l.* per " week for 10 weeks, at this rate a man's earnings " would be—

42 weeks at 12*s.*
10 weeks at 20*s.*

" Beer allowance, say 50*s.* for the year.

" Total average earnings for 12*s.*-men 14*s.* 6*d.* per " week. (Beer is given in haytime and harvest and " for extra work, such as thrashing, filling dung, and " drilling.) Sunday men have 2*s.* extra."

14*d.* *Mr. Jos. Hughes* gave similar evidence as to value of wages, and added, " Stone and Hartwell " parishes have paid for many years 1*s.* a week more " than other parishes in Aylesbury union."

15. Waddesden, population, 1861, 1,786 ; acreage 6,010.

15*a.* *The Rev. T. J. Williams* says of the cottages, " There are a great many cottages built by small " freeholders on speculation with very small rooms " and without ventilation. The drainage is tole- " rably good. The water supply is short in dry " seasons. There are a great many allotments and " gardens in the parish about 100 acres. The allot- " ments average 40 poles. Very few of the cottages " belong to the chief landowners."

The following statements were made as to the value of wages, &c. at a parish meeting at Waddesden, on the 21st of May 1868.

15*b.* *Mr. Thos Bliss :* " I farm about 900 acres in " Waddesden and Winchendon parishes. I employ " five or six boys between 10 and 13, and pay them " 3*s.* a week ; I employ seven or eight between 13 " and 18, and pay them 6*s.* per week. I employ " regularly on these farms 21 able-bodied men, each " of these men may, if he likes, cost me 15*s.* a week " for the year, four of them cost me 17*s.* each.

15*c.* *Mr. Richard Marks.* — " I farm 400 acres " half grass in Quainton. There are two schools in " the parish. I have three boys between 10 and 13 " and three between 13 and 18, and 12 men. I pay " ordinary men 11*s.* per week, Sunday men 12*s.* " I consider that men at 11*s.* per week, taking the " year through, increase their wages in this way :—

	s.
6 weeks, piece work, hoeing, &c. -	9
6 weeks in hay time -	36
6 weeks in harvest - -	60
Beer and other allowances -	52
	157

" *i.e.* about 3*s.* a week for the year, making 11*s.*-men cost or earn 14*s.* per week.

15*d.* *Mrs. Timms.*—Husband a farm labourer. Herself, husband, son 21, and two young children in a small low cottage paying 13*l.* per week rent.

" I always send 'em all to school, I never keep any " of 'em away not one half hour. My husband gets " 11*s.* per week, they won't give him money enough " to work by the piece."

15*e.* (Note.—Examined three boys just come home from work in Waddesden, two could both read and write, and one could read but write very badly. Boys ages 12, 14, and 14. Two of them very intelligent boys.)

16. Weston-Turville, population, 1861, 724; acreage, 2,450.

16*a.* *The Rev. A. Isham,* says of the cottages :—
" The majority are old, and not well ventilated.
" Some ought to have a second room.
" The water supply is good.
" The garden advantages good.
" The outhouse accommodation is generally good.
" Ownership various. No trade tyranny.
" Rent from 3*l.* 10*s.* to 5*l.* 5*s.*"

16*b.* *Mr. J. P. Parrott,* occupier, says of the cottages, " Very few of them belong to the land- " owners, most have gardens."

Of the wages, he says, " An able-bodied man ought " to earn on an average throughout the year 15*s.* " per week. I am sure mine do by piece work, and " extra wages in hay time and harvest, *i.e.,* including " their beer allowance."

16*c.* *Mr. T. W. Morris,* landowner and occupier, says, " The lowest daily wage during the last 12 " months has been 2*s* per day, horsekeepers and " cowkeepers have 14*s.* per week, and shepherds " have 15*s.* My shepherd has 20*s.* extra in hay " time, 30*s.* extra in harvest, 20*s.* extra in lambing " time, and he makes about 20*s.* extra in sheep " shearing."

Cottages.

16*d.* *John Dering.*—Cottage, with one bedroom ; two grown-up daughters and a child. Privy and shallow well very near each other, and very near the cottage. Rent of cottage and 40 poles of ground, 4*l.*

16*e.* *Thomas Bunce.*—Man and wife, two grown-up daughters, two grown-up sons, and two children of another daughter in house with one bedroom.

16*f.* A good many people in this village rear ducks, and some of them share their houses with them. One man feeds about 1,000 in the year.

17. Whitchurch, population, 884 ; acreage, 1,674.

17*a.* There are many very poor cottages in this village. Two schools, National and Wesleyan.

17*b.* *Mr. Jas. Epsley,* teacher of the Wesleyan school, says, " The attendance of children of the " labouring class becomes very irregular at 10. " Some, but not many, go to field work before 10 ; " bird-keeping and weeding in spring.

18. Upper Winchendon, population, 1861, 220; acreage, 1,184.

18*a.* *Mr. John Treadwell,* occupier and guardian, says, " Some good new cottages have been lately " built in the room of old ones, and others enlarged " for the largest families. The land and cottages in " the parish belong to his Grace the Duke of Marl- " borough."

Hiring.

" Only single men are hired for a year, some we " keep, others keep themselves ; they are paid 6*s.* a " week, and from 6*l.* to 10*l.* at Michaelmas when " they keep themselves, and the same at Michaelmas, " with no weekly wage when we keep them ; those " who keep themselves get vegetables, and have " cooking done for them."

THAME UNION.

19. Chilton, population, 364 ; acreage, 2,080. (For allotments, *see* Evidence on allotment system.)

19*a.* *Mr. Freeman,* occupier and guardian.—" The " cottages here are good and well cared for, but " there are not enough of them, some of my labourers " come from Crendon. One-half of my farm is per- " manent grass, and yet I never employ less than at " the rate of 3½ men to 100 acres. I employ two " women.

" They are paid as under :—

Weeding - - -	4*s.* per week.
Hay time - - -	5*s.* "
Harvest - - -	6*s.* "
Thrashing - - -	6*s.* "
I pay 1 boy of 9 - -	3*s.* "
" " 12 - -	3*s.* 6*d.* "
" " 14 - -	4*s.* "

" I pay carter, shepherd, and milkman 14*s.* a week.

" The three men you saw hoeing mangold have " earned 14*s.* a week throughout the winter. There " is no yearly hiring here, all are hired by the week."

20. Ickford, population, 437 ; acreage, 1,249. 14 acres of allotment.

20*a.* Evidence of *Rev. J. Hemsted.*—" Women

"work a good deal in the fields, and farmers will "hardly have a man whose wife will not go out. "Two-thirds or three-fourths of the women when "married are in the family way, but there is no "prostitution, and no infidelity ever heard of after "marriage, they simply don't care much about the "marriage ceremony. There is a dissenting as well "as national school. I insist on the children attending church once on Sunday. There is a grocer "here who has a dozen or more cottages, and compels his tenants to deal with him. Many of our "cottages are very poor without common conveniences."

20*b*. *Mr. Thos. Fuller*, occupier.—"I employ "seven grown-up women all married, and two girls "between 15 and 18. They work from 9 a.m. to "4 p.m., resting one hour. They are employed "hoeing and weeding, and cleaning crops generally, "singling roots, planting beans, &c., and in hay time "and harvest. They do hoeing by the piece, and "earn from 1*s*. to 1*s*. 6*d*. a day. They plant beans "by the acre, and plant half a bushel, earning 11*d*. "a day, sometimes they have their children with "them. Most of the girls under 18 are out at service, "we cannot get them for farm work.

Boys under 10 get 2*s*. 6*d*. a week.
Boys of 14 „ 5*s*. „
„ 16 „ 7*s*. „
Lads of 18 „ 10*s*. „

"Most farmers employ too few hands.

"There are 14 acres of allotment ground which "belong to a clergyman at High Wycombe, and are "let at 9*d*. per pole. The value of the land to farm "is about 6*d*. per pole.

Milkers have 14*s*. per week.
Carters „ 13*s*. „
Other men, 11*s*. to 12*s*. per week."

20*c*. *Mr. H. Fuller*, occupier.—"I employ six "women, as a rule, of whom five are married. They "are hoeing mangold to-day as you saw. They work "from 9 a.m. till 4 p.m., resting an hour; and earn "from 1*s*. to 1*s*. 6*d*. per day by piece work. I have "known women earn 2*s*. a day.

"There is a shopkeeper here who compels his "tenants to deal with him, and turns them out if "they do not."

20*d*. *Mrs. Neal*.—Occupies a poor cottage, for which she pays 1*s*. 2*d*. per week; has five children, eldest 14; and only one bedroom.

Who is your landlord?—"Mr. Basson."

Does he compel you to deal with him?—"We have "to get things at his shop."

21. Long Crendon, population, 1861, 1,570; acreage, 3,120.

21*a*. *The Rev. Thos. Hayton*, says, "The cottages "are generally very defective in construction and "accommodation, most of them belong to speculators "or small tenement holders, few to chief landowners. "Some allotments are let by farmers and others at "10*d*., 1*s*., and 1*s*. 2*d*. per pole.

"There is no school in the parish.

"Boys attend Thame School, and girls only go to "lace schools; they of course attend Sunday school. "There is no night school in the parish.

"The chief landowners are Lord Churchill, All "Souls' College, Oxford, and the Dean and Canons "of Windsor (or the Ecclesiastical Commissioners "for them).

21*b*. *Mr. J. C. Crook*, occupier and guardian, says, "There is no yearly hiring for farm labourers. "Some few single men may be hired, but seldom; "the hiring is a weekly hiring. Occasionally they "are taken in spring on condition of remaining over "harvest."

21*c*. *Mrs. Weston*.—Husband a shepherd. Has four children:—

A son, age 20, a shepherd.
A daughter, age 15.
A son, age 12 } working with their father.
Do. 9 }

The only one of these four children who can read or write, according to their mother's account, is the daughter. The lads have not been to any school. A poor cottage with one bedroom, for which they pay 11*d*. per week.

21*d*. *Mrs. Hawks*.—Man and wife and five children in one bedroom:—

Daughter, 16. Makes lace. Can read.
Son, 13. Gets 4*s*. a week. Reads a little.
Son, 10. Gets 2*s*. „ „
Son, 8. Doing nothing. „
Girl, 6. At school.

None of these children can write. Mrs. Hawks says, "I send my little girl (girl of 6) to school, but "I can't send more; it grieves me, but I can't send "but one."

22. Oakley, population, 1861, 420; acreage, 2,250.

22*a*. *The Rev. E. Boys*, says of the cottages, "The cottages are bad, *generally* built of brick or "stone and thatched, and one sitting-room and one "bedroom. Water-supply and drainage good. Many "are owned by the occupiers, and the rest by the different landowners living in and out of the village."

22*b*. 100 acres of allotment ground in Oakley and the adjoining portion of Shabbington parish, *see* Evidence on allotment system.

22*c*. *Mrs. Mixey*.—Living in a very low poor cottage, with one bedroom, on the waste, and belonging to the occupier. Has six children:—

Son, 16. At work.
„ 14. do.
Girl, 12. "Goes on land sometimes, and plays." Can read.
„ 10. Plays. Can read and write her name.
„ 8. Do. Can read, but cannot write.
„ 5.

22*d*. (Oakley bore a very bad character before Mr. Henley established his allotment system, and the power of reading and writing is not held in any great esteem yet.—G.C.)

23. Shabbington, population, 1861, 371; acreage, 2,138.

23*a*. *The Rev. B. Morland*, says of the cottages, "Construction, bad. Rooms, I should say not more "than 12 feet by 12. Ventilation, not good generally. "Drainage, as the village is high, that is the greater "part of it, tolerably good. In answer to Question "30, I have stated the deficiency of rooms. Water-supply not very good. The occupiers are nearly all "owners, and therefore rent is immaterial."

23*b*. Statement of population and what they are doing, given by Rev. B. Morland:—

Cottagers and aged people living with them		123
Young men and boys at work	29	
Boys at school	25	85
Boys under four years	22	
Boys neither at work nor school	9	
Girls home from service	3	
„ who go to work	2	
„ who look after children	6	70
„ at school	36	
„ under four years	23	
Total cottagers and families		278
Other inhabitants of parish		51
Present population		329

23*c*. (Note.—A very poor village, most cottages of mud and thatch, built on the waste. Women work in Thame parish at about 5*s*. a week).

24. Worminghall, population, 1861, 354; acreage, 1,469.

24*a*. *The Rev. Jas. Statter*, says of the cottages, "Many of the old cottages confined and badly ventilated; the drainage is very fair. The new cottages "are in much better condition; the drainage is very

Buckinghamshire.

Mr. Culley.

f.

" good; the sleeping rooms generally too small. " Water supply good. Garden ground in most cases " sufficient. Outhouses capable of improvement. With " the exception of two cottages belonging to a charity, " the rest are the property of the lord of the manor."

24*b*. Earnings of a family in Worminghall as given by Rev. Jas. Statter:—

Daniel Chudbone, age 49, has 10*s*. per week.
Wife, 46 (7*d*. per day), 3*s*. 6*d*. „
Daughter, 22.
Son, 21, has 9*s*. per week.
Do., 12, has 2*s*. 6*d*. per week.
Daughter, 10. At school.
Do. 7. do.
Two infants.

Total income of family 25*s*. per week to provide for nine persons and keep two children at school.

WINSLOW UNION.

25. Three Claydons, population, 1861, 1,477; acreage, 8,016.

25*a*. *Mr. Wm. Hinton*, says of the cottages, " Many of the old cottages were of wattle and daub, " with thatched roofs, and badly lighted and venti- " lated; but these are gradually giving way to " superior brick and tiled cottages having larger and " better ventilated rooms. In some cases there is a " well of water in the cottage gardens, but recently " a well in each village has been sunk by the present " Lady Verney, each yielding an ample supply of " pure water. This year a handsome cast-iron pump " and rustic porch have been placed over each of " these wells, which make them as ornamental to the " village as they are useful. For the most part the " cottages belong to the landowners."

25*b*. *Mr. A. Fraser*, land agent, says, " Very few " boys are employed in this district, which is chiefly " grazing, except in hay time and harvest, when a " few girls and women are also employed. There is " no agricultural employment injurious either to " health or morals. It would be an injury both to " parents and children to fix an age under which " they should not be employed in farm labour, as the " child must learn its work, and the parents in many " cases cannot do without the earnings of the " children. In this district children do very little " work in winter, and could therefore be kept at " school during four or five winter months. Two " cottages per 100 acres is sufficient for cultivation " of land in this district. The ordinary wages vary " from 10*s*. to 14*s*. per week. Boys earn from 4*s*. to " 5*s*. per week. Women in hay time and harvest " earn 1*s*. per day, not including beer. In the Three " Claydons, the cottages belong principally to Sir " Harry Verney, and consist of two rooms and back " premises on the ground floor, and two or three " bedrooms; rent, 3*l*. per annum. No family lives " in a cottage with less than two bedrooms. On Sir " H. Verney's estate there are sufficient cottages " belonging to him for the cultivation of the land. " I think it would be a great encouragement and aid " to landowners to provide suitable cottages if they " could borrow money directly from Government on " better terms than at present through public com- " panies, and without some of the restrictions im- " posed by the Enclosure Commissioners, some of " which I think absurd."

26. Great Horwood, population, 725; acreage, 2,389.

26*a*. Circular questions not answered for this parish. The cottages appeared to the Assistant Commissioner to be fairly good.

26*b*. *George Stokes*, a farm labourer: " I am a " Sunday man. I get 13*s*. a week. I get no victuals " nor milk, only a drop on Sunday mornings. I work " from 5 a.m. to 6 p.m. I get about 15*s*. a week in " hay time and harvest, a month at each time. I pay " 3*l*. 4*s*. a year for my cottage and four poles. I " have seven children, eldest 16, a boy; he gets 8*s*. " a week, and gives us 5*s*.; he finds his own clothes, " and pays his club 2*s*. 4*d*. a quarter; I don't know " justly what he gets. The boy 14 gets 6*s*. now; he " gives it all to us, and we find him all. The girl, 12, " makes a little lace. The boy, 9½, is at farm work, " and gets 2*s*. 6*d*.; he was at school till he was 9. " I wish he could have kept on; but we can't do " without his 2*s*. 6*d*., with bread so dear; all the same " I approve of that job keeping them at school till 10. " I heard there was some talk of keeping them till 13, " and that would not do at all. What I've told you is " every penny I have had since last harvest. There " are several men out of work in the village. I " rather think there's plenty of work, but may be " the farmers is rather short of money. If I had four " acres I could support my family on it, and I think " every family ought to have that. We have three " allotments, one rood each, and we work it amongst " us. We work by moonlight sometimes, and, with " my other work, it's almost too much for me, the late " hours."

27. Little Horwood, population, 1861, 449; acreage, 1,950.

27*a*. *The Rev. H. F. Ralph* says of the cottages: " The cottages are very bad, small, the great majority " of them with one bedroom only, thatched, the ven- " tilation and drainage good, water supply fair, gardens " good. The cottages belong chiefly to small owners, " some possessed by the cottagers themselves."

28. Hogston, population, 1861, 207; acreage, 1,526.

28*a*. *Mr. John Morris*, occupier, says of the cottages: " Brick and tiled, some brick and thatched, " rooms sufficiently large and well ventilated, drainage " good, water supply and gardens very good. Cottages " belong to landowner. Rent about 40*s*."

29. Mursley, population, 482; acreage, 2,840.

29*a*. Some of the cottages in the parish are good, some very bad; the cottages do not belong to the chief landowners.

29*b*. *Mr. Conway*, occupier, says, " Children are of " no use to us in this neighbourhood under 10; but " still I would not approve of any legislative interfer- " ence to fix an age under which boys should not be " employed. The hours of work on my farm are, in " in summer, from 6 to 5½; meal times, 1½ hours. " The average labourer's wage is 12*s*. Sunday men " have 13*s*.

30. Stewkley, population, 1861, 1,453; acreage, 4,330.

30*a*. *The Rev. C. H. Travers* says of the cottages: " As a general rule, the cottages are totally inade- " quate as regards accommodation. The ownership " being vested in small tradesmen, and the straw- " plait trade having brought an increase of nearly " 900 people into the parish in this century, a number " of tenements have been formed, some out of malt- " ing houses, &c., which readily let, and where fami- " lies are crowded together sometimes from six to " eight in one small room, the rents varying from 1*s*. to " 1*s*. 6*d*. per week. There are very few labourers' " cottages in the village with more than one bedroom, " and that one of miserable dimensions."

30*b*. *Mr. Thomas Woodman*, occupier: " I occupy " 590 acres, of which 535 are pasture. I employ 14 " or 15 able-bodied men throughout the winter, and, " as my farm lies two miles from the village, my " labourers have that distance to walk to their work. " My opinion is decidedly in favour of having cottage " accommodation provided for the labourers as near " as possible to their work. The average weekly " earnings of my men, who attend to cattle (exclu- " sive of an allowance of milk for breakfast, and 1*s*. " for Sunday service), has been for the past year 12*s*. " per week. The total earnings of my men who " have taken their work has amounted to 40*l*., or as " much as 15*s*. per week for the past year.

Parish Meeting.

30*c*. Evidence of *Messrs. Palmer, J. Vere Woodman,* and *James Kempston,* occupiers: "Wages are rather "lower in this than in the surrounding parishes. "Ordinary labourers have 11*s*. a week; cattle men, "who go on Sunday, 12*s*.; lads of 13 or 14 years "have 4*s*. 6*d*. a week. The hours of work are from "6 a.m. to 5 p.m. Labourers who have 11*s*. per week "in winter and spring, have 16*s*. for four or five weeks, "generally five in hay time, and 18*s*. to 21*s*. for four "weeks in harvest. There is not much piece work in "the parish. The beer allowance costs at least 40*s*. "per man per year. Men at 11*s*., with no other "piece work or allowance, would earn for the year an "average of 12*s*. 6*d*. to 13*s*. per week. Most of "them could add somewhat to this. Almost all have "allotments, most of them half an acre, some on "parish land and some on glebe. Very few cottages "belong to chief landowners. They are crowded in "many instances, and bad, with no drainage. From "two to three cottages per 100 acres would be suffi-"cient for the cultivation of this parish, probably two "per 100 acres."

30*d*. Visited three *one-bedroomed* cottages, unfit for people to live in, standing in a row back from the road. In one of them—

30*e*. *Mrs. Smith* (husband a labourer) has six children; rent, 1*s*. 1*d*. per week:—

Boy, 15, gets 5*s*.
Girl, 10, never been at any school.
Boys (8 and 7) at school.
Two younger not at school.
Husband has 13*s*. per week.

In another—

30*f*. *Mrs. Green,* her husband, and six children.

Girl, 16, at home.
Boy, 13, at work.
„ 11, „ occasionally.
Boy, 5, at infant school, others do nothing.

In the last cottage of this row are seven persons.

30*g*. Visited an old malting house made into seven very small cottages, with one small bedroom and a nasty open drain close to the doors. Rent of each cottage 1*s*. per week.

In one of these lives—

30*h*. *Mrs. Mead*: "My husband is a farm labourer; "he has 11*s*. a week; he worked on the road for 10*s*. "in the winter. I have 10 children: eldest 16, a "boy, get 7*s*. a week. He can read, but can't write. "The next, a girl 14, plaits; she can read, too, but "can't write. That drain in front is very nasty, the "rooms being small, and we can't sit out for the "drain."

31. Swanbourne, population, 1861, 603; acreage, 2,510.

31*a*. *Rev. M. D. Maulden* says of the cottages: "There are about 80 cottages, mostly thatch roof, "mud walls between rafters, with two or, at the "most, three rooms. Drainage not good, water supply "fair, deficiency of gardens and outhouses. About "half belong to the resident landowners, and the "other half to tradesmen and farmers. The rents "run from 2*l*. 10*s*. to 4*l*. I am not aware that the "tenants have to deal with the tradesmen their "landlords."

31*b*. There are five low, thatched, and very poor cottages on the road side, rent for three of them 1*s*. per week, two pay only the rent of ground.

31*c*. *Mrs. Rowe* says, "My husband has 11*s*. a "week; we are pretty well off, and don't complain. "I have no children."

32. Winslow, population, 1861, 1,890; acreage, 1,900.

32*a*. *Mr. William Neal,* occupier, says, "The "landlord's cottages are old and thatched, but much "more roomy than the modern ones, always having "two rooms below and two above, often three, and "a piece of garden ground at the back. Many of "the new cottages have no ground only what they "are built on. Some in the centre of the town have "no closet accommodation, obliging occupiers to "trespass or ask leave of their neighbours. They "frequent the nearest public pump for water, the "supply of which is good on the whole. The drain-"age of the town for surface water is good, but the "system of draining the closets into it without any "water works for flushing is sure to lead to bad "consequences in time."

"The rent of one front room with back kitchen "and two small bedrooms is 1*s*. 8*d*. per week."

32*b*. Some very bad cottages, with one bedroom each, at Tinker's End; five of them rejoice under the name of "Albert Place." Rent 1*s*. 2*d*. to 1*s*. 4*d*. per week. Farm labourers live in most of them.

32*c*. *Mr. Dudley,* land agent, says, "I employ a "good many labourers, and pay them 12*s*. a week as "regular wage, winter and summer, and for extra "work I pay them extra. I pay in hay time and "harvest 15*s*. for eight weeks. The greatest diffi-"culty the farm labourer has to deal with is im-"providence and the weakness of the family ties. It "is terrible to see the slightness of the family tie; "they think no more of father or mother than I do "of my dogs."

32*d*. *Mrs. Boyce,* Piccadilly, says, "My husband "is a farm labourer, and has 13*s*. per week. Have "five children—

Boy of 13, at work.
Ditto 11, ditto.
Ditto 9, at school.
Ditto 4, at home.
Girl of 6, at school.

"I have kept them all at school to 10. We pay "1*s*. 8*d*. a week rent."

32*e*. *Mrs. Vickers.*—Husband a farm labourer; has 12*s*. a week; has five children, two of 8 and 9 at day school, two of 4 and 6 at infant school, one of 2½ at home. "We have nothing else but my hus-"band's money. I manage to keep them at school, "but it's hard work, and we have had a hard struggle "to get on at all. As soon as my boy of 8 can "get work he must go, we can't help it."

32*f*. *John French,* in workhouse at Winslow because he cannot get a house, says, "I occupied a "wattle and dab cottage, with thatch and no win-"dows, at Nash; paid 6*d*. per week rent. Inspector "of nuisances reported the house, and landlord sent "me out, and said he would pull down the cottage "rather than put it right. I had 10*s*. a week. My "girl of 16 got her victuals for her work at a farm-"house, son of 14 had 3*s*. a week, son of 12 was at "school when he would go, son of 10 at school. I "like to keep 'em at school, but if a farmer will give "them 2*s*. a week, they must go and work, but there "ain't much as boys can get to do much afore they're "12."

32*g*. *Robert Turnly,* 10 years old, in charge of a cart with sand going from Winslow to Grandborough, sitting on the horse with his feet on shafts; has never been at any school except Sunday school; can neither read nor write. Name on the cart Morecraft.

BUCKINGHAM UNION.

33. State of cottages in Buckingham Union:—

The Assistant Commissioner received from one of the guardians of Buckingham Union a copy of a series of papers entitled "Rural Life in Buckingham-shire," published in the "Morning Star" in the autumn of 1863, and his remarks on the changes, if any, which had taken place in the villages referred to in those papers. The chief offenders in the way of cottages were, in 1863, Gawcott, Maids Moreton, Hillesden, Padbury, Adstock, Preston Bissett, and Twyford.

Buckinghamshire.

Mr. Culley.

f.

In Twyford	82	out of	124	cottages had but one bedroom.
In Maids Moreton	58	„	94	ditto.
In Preston Bissett	36	„	66	ditto.
In Padbury	33	„	77	ditto.
In Gawcott	32	„	87	ditto.
In Adstock	31	„	70	ditto.
In Hillesden	12	„	38	ditto.

The only improvement in cottage accommodation which has taken place in any of these parishes is in Hillesden and Padbury, according to the Assistant Commissioner's informant, who says that Hillesden has been much improved by Mr. Morrison, and that a few new cottages have been built in Padbury. Many other parishes are found very serious fault with in these papers, in some of which the Assistant Commissioner was informed that improvement had taken place, and in others that there was no improvement. The village of Shalstone is held up in joyful contrast to all of those round it, and remains as a bright example of what a resident proprietor may do for the comfort of the labouring poor.

34. Addington, population, 1861, 111; acreage, 1,268.

34*a*. *Mr. John Linnell*, bailiff to J. J. Hubbard, Esq., says, "The cottages in this parish are constructed of brick with tiled roofs principally, well ventilated, with a living room 12 ft. + 14 ft. + 8 ft. 6 in. and bedrooms lofty and ventilated, with garden, pump, washhouse, and coal place. There are three bedrooms in almost every instance where there is a family. These cottages are of superior construction, and well fitted with respect to accommodation in every respect. They are the property of the owner of the land; the rent varies from 1*s*. to 2*s*. per week."

34*b*. Note.—(The cottages in this parish are not sufficient to supply the labour required. In answer to Circular Question III. 32, Mr. Linnell says, "We obtain our labourers from Adstock, situated within a mile."—G. C.)

35. Adstock, population, 1861, 385; acreage, 1,130.

35*a*. *The Rev. J. Niven* says of the cottages, "Some of mud or clay, others of brick; good water; nearly all have gardens or allotment ground. A number of the cottages belong to the poor men who occupy them, and are generally kept clean; others belong to landowners and other parties. Rents vary from 1*s*. and 1*s*. 3*d*. per week. We supply labour to Addington."

35*b*. Note.—(Most of the cottages are old and small, but the Assistant Commissioner found them cleaner than is generally the case in such cottages in Bucks.)

36. Beachampton, population, 1861, 272; acreage, 1,492.

36*a*. *The Rev. R. N. Russell* says, "The chief landowners are James Walker, Esq., and Lord Carington.

"James Walker, Esq., owns about 750 acres, and has 28 cottages, eight new and good, with three bedrooms, rent 1*s*. per week; some of remainder fair, and some bad, rent 30*s*. a year.

"Lord Carington owns about 500 acres. On a complaint of the condition of the cottages on this property, they were pulled down, and a miserable hovel-like farmhouse made into three cottages unapproachable in winter, and having no water to drink except pond water, unless it is fetched from a distance; it would be most desirable to induce the present owner to look into this matter.

"There are some wretched hovels built by a squatter on the road-side adjoining Lord Carington's property."

36*b*. Four brick cottages in a row by road-side, with one small room downstairs and ditto above; rent 1*s*. 3*d*. per week; no outhouses or other conveniences. In one of these lives—

36*c*. *Mrs. Reynolds*, who says, "My husband is a farm labourer, and gets 11*s*. a week. We have four children, the eldest eight. I would be glad to send him to work if he could get it. You see there's six of us to keep out of the 11*s*. a week."

In another of these cottages lives William Alderman, who works at Wolverton Station, and has to walk, acording to his wife's account, four or five miles to his work, but cannot afford to take a cottage nearer, rents are so high.

36*d*. *Mrs. Betts*, occupying a cottage in another part of the village, says, "My husband is a farm labourer, but he is never well very long together. We have eight children at home.

"Lad 20, works, keeps himself and lodges here.

"Girl 17, makes lace.

"Boy 15, gets 5*s*. and gives me 4*s*.

"Boy 13, gets 4*s*., gives me all.

"Girl 10, makes lace (goes to school three afternoons per week).

"Boy 8, goes to work, gets 2*s*.

"Two younger at home.

"Neither the girl 10 nor boy 8 can read or write. It's a pity, but we had to send the boy of 8 to work."

36*e*. *John Shean*, age 12, cannot read nor write, works about a farmhouse, "chopping wood, cleaning milk buckets, and such like jobs."

37. Buckingham, population, 1861, 3,849; acreage, 4,777.

37*a*. *The Rev. W. F. Norris*, says of the cottages, "Ventilation bad.

"Drainage chiefly into the river, and the drains *mostly* cheaply made with stones, and quite insufficient.

"Water supply is good, and gardens are sufficient for the population.

"Owners in every class of life.

"No compulsory dealing, though in certain cases the tenant is expected to frequent a certain shop.

"Rent considerably higher than in the villages."

37*b*. *Mr. Thos. Ridgway*, occupier, says, "The cottages are not so good as one would desire to see them, still where the land is owned by large proprietors improvements are being rapidly made in most instances, the reverse being the case where they belong to small tradesmen or speculators.

"Being in a market town they vary much in size and construction. The accommodation is very various. Water supply generally good. Being in the town many of the dwellings have no garden, and scant means of out-door convenience.

"The principal owners of cottage property are tradesmen, who have built tenements for the use of small holders.

"The rent varies, say from 2*s*. to 3*s*. 6*d*. per week, according whether any garden belongs to the cottage."

38. Foscott, population, 96; acreage, 714.

38*a*. Several wattle and daub cottages.

38*b*. *Mrs. Bryant*, husband a farm labourer, has 12*s*. per week.—"We have four children; the eldest a boy of 10 goes to work, drives a plough, and gets 2*s*. a week. Next a boy of eight goes to work crow-scaring, and gets 2*s*. Next, child four years old. Next a baby. Both elder boys were at school, and one of 'em will go again after hay-time. If Mr. Hall will keep him on, the eldest will go on at work. The boys can read and write a little. They go two nights a week to night school. My husband earns more than 12*s*. at piece work, such as wheat hoeing, bean hoeing, and hedge cutting, but I don't ask for what he gets more than 12*s*. I never count on having more than the 12*s*. We pay 6*d*. a week rent, and have one very small bedroom."

39. Hillesden, population, 1861, 251; acreage, 2,150.

39*a*. *Mr. Thos. Barge*, occupier, says, "About

" half the cottages in this parish are newly built, with " five rooms, good size, well ventilated, and drained; " large gardens, &c. The others are now in course of " enlargement and repair. They all belong to one " proprietor, the owner of most of the land in the " parish. The rent is from 1*l.* 10*s.* to 3*l.* per " annum.

" In some of the parishes in this district where " the land and houses belong to many and different " owners, the cottages are small and bad, and very " little improvement is taking place; on the contrary, " where the parish belongs to a large landowner, in " most cases, excellent dwellings for the labourers " are being put up, and great improvements are in " progress.

" The labourers wages are about 14*s.* per week; " other earnings very uncertain."

40. Leckhampstead, population, 1861, 482; acreage, 2,522.

40*a*. *Mr. Thos. Attwood*, occupier, says, " The " cottages in this parish (although many of them are " old) are on the whole an average of the cottages in " other villages in this neighbourhood. They are " well supplied with water, there are but very few " that have not good gardens, and they mostly have " outhouses, &c. A very large proportion of them " belong to the landowners, and I can with safety say " there are not three of the occupiers that are re- " stricted in their dealings by their landlords. I am " under the impression that the average weekly rental " would not exceed 1*s.* 2*d.* per week."

41. Maid's Moreton, population, 1861, 543; acreage, 1,260.

41*a*. *Rev. M. W. Davies* says, " The cottages are " badly constructed; many of them with but one " room below and one above, and these of course " crowded; the drainage is imperfect; the water " supply deficient; gardens are scarce; privy accom- " modation extremely bad; rents low, though high " enough for what the cottages are; ownership chiefly " vested in the landowners. Considering the many " drawbacks the morality and health of the parish are " very fair."

41*b*. *George Henderson*, a farm labourer, living in one of a row of six old and very bad cottages (called Well More or Moor) quite unfit for human beings to live in, with a small room on ground floor and ditto above, has six children.

Boy, 18, at work, gets 9*s.* per week.
Girl, 15, making lace.
Girl, 12, ditto.
3 younger girls.

41*c*. Girl, 12, *Louisa Henderson*.—" There is no " schoolmaster just now not for two or three months. " I cannot read nor write nor spell my own name."

41*d*. *Ellen Jones*, aged 12 (Wellmore).—" I work " at my pillow. I can't read nor yet write. I go to " school of a Sunday. I was at school a time, but I " didn't learn much. There ain't no school just now. " James Jones, my father, gets 11*s.* a week. Mother " is osier peeling. My eldest sister 15 is with her. " I've two sisters younger. None of us are at school. " There ain't never a school."

41*e*. *Mrs. Hands* (husband a farm labourer, has three children) says, " He gets 12*s.* a week. He " never gets great work. The eldest boy 10 works " for a farmer; he gets 2*s.* 6*d.* per week. He went " to school five years, but he didn't improve much " with his schooling."

41*f*. *Frank King*, labourer.—" I am digging gravel " for a poor man who has the road. He pays me 3*s.* " a day, from 6 a.m. till 4½ p.m. We rest a little, " over an hour. I live in Maid's Morton. Nearly " all the houses have only one room. We pay 1*s.* a " week rent."

41*g*. *James Anderson*, wife and four grandchildren, eldest a boy 19; second, ditto 15; pays 2*l.* a year rent, says, " It's a shocking place. My landlord " wanted me to buy it; I told him I would not have " it at a gift."

41*h*. *Thomas Jolly*, 18.—Can read and write a little.

41*i*. *John Jolly*, 15.—Can read and write. Left school four years ago.

41*j*. *William Jolly*, 12.—Can read and write a little. Gets 3*s.* a week driving plough. Was at school three weeks last winter.

42. Shalstone, population, 246; acreage, 1,320.

42*a*. The following account of the state of the cottages in Shalstone is copied from one of the articles before referred to, published in the " Morning Star " in 1863, and represents very truly the state of the village as seen by the Assistant Commissioner in 1868:—

" The village of Shalston is a gladsome contrast to the penury and suffering around. Here no old nor ill-conditioned cottages are to be seen. Nearly all have been rebuilt, all the old ones are well repaired, and all the new ones, built of brick, have four rooms, a pretty portico in front, wash-houses and out-houses, pump, well, and pigsty. A piece of well tilled garden is attached to each cottage, and plots of ground at cheap rates are available to each cottage."

42*b*. *Sophia Greaves* (single woman), working with another woman (married) picking twitch (or " switch "), gets 8*d.* a day. " I come out in February, " and work on in the field till Michaelmas, at any " job, weeding corn, &c. I live in Water Stratford, " and work on this farm in Shalstone."

42*c*. *Wm. Parkins* (an old man) says, " And " there's another thing in this parish, we have never " a public house, so the men can't waste their wages. " I've been out and about a good deal, and I think " there is nothing helps a man to save more, nor not " having a chance to spend his 6*d.* or so of a Saturday " night at a public house."

43. Thornborough, population, 1861, 694; acreage, 2,530.

43*a*. *Rev. Daniel Watkins*, says of cottages, " We " should be glad to have three bedrooms in each cot- " tage occupied by a man and wife and children of " different sexes, but with the present rate of wages " the cottagers could ill afford to pay a higher rent. " The water is good, and not deficient in quantity. " Most cottages have gardens attached. Ownership " very much divided; chief landowner has about 700 " acres, and owns three or four cottages. The rents " vary from 4*l.* to 2*l.* 10*s.* We supply labour to " Thornton and Buckingham."

43*b*. *Mr Bell*, occupies Coombe, says, " I employ " nobody under 10 years. I pay ordinary men 13*s.* " a week, and they have a good deal of piece-work " at which they earn about 15*s.* per week. I have a " brick yard, in which three boys of about 14 are " employed; this farm belongs to me, and is well sup- " plied with good cottages."

43*c*. *Mrs. Griffin*, Coombe; husband a farm labourer, has 12*s.* a week; occupies one of a block of three good brick and tile cottages, with 30 poles of garden at 3*l.* a year. Mrs. Griffin says, " We have three " children, the eldest, four years, goes a mile to school " at Thornborough; we get on pretty well considering " bread is so dear, and haven't anything to complain " of."

43*d*. *Mrs. Clarke* (husband a farm labourer, earning 12*s.* a week), says, " she has four children:

" Girl 10 years old, at lace school.
" Girl 7 „ „
" Boy 6 „ at day school.
" Boy 2 „ at home."

The girl of 10 earns 1*s.* a week. " I pay 8*d.* a week " for the children at school " (meaning lace and day school) " we have hard work to get along, but we " get along somehow, and I often say as how I would " like to keep my girls at school, but how are we to " live if they ain't to work. My girl works 10 and " sometimes 11 hours a day, and it's long sitting. " The little one of 6 she grows thin on it, it don't " suit her sitting at the pillow so long."

Buckinghamshire.

Mr. Culley.

f.

43*e*. *Wm. Mundy*, 13 years old, working for a farmer; can read, but can't write; was at school a good many years ago: goes to Sunday school.

43*f*. *Martha Howard*, keeps a lace school.

Girl, 13, can read, cannot write, goes to Sunday school.
Girl, 12, can read a little.
„ 12, can read, cannot write.
„ 12 „ „
„ 12 „ „
„ 11, can read and write a little.
„ 8 „ „

44. Thornton, population, 111; acreage, 1,332.

44*a*. *Mr. Macfarlane*, land bailiff, says of the labourers, "I consider labour here dearer than in "Oxfordshire, Northampton or Berks, and much "dearer than in the south of Scotland, where one "man is nearly equal to two of ours. Some men "working for Mr. Cavendish are now earning 15*s*., "16*s*., and 17*s*. per week, hoeing beans, and mangold, "&c., our beer allowance costs us about 3*l*. a year "per man."

44*b*. Note.—(This parish draws labourers from surrounding parishes.—G. C.)

45. Tingewick, population, 1861, 914; acreage, 2,072.

45*a*. *Mr. R. P. Greaves*, occupier, says of cottages, "Construction, fair generally. Brick and slate with "good drainage and ventilation; in such a number "of cottages, there will be some exceptions, we have "some miserable places run up on the waste years "ago, now scarcely habitable, small rooms badly "ventilated, containing in a few cases, large families.

"Accommodation. Two bedrooms generally, water "supply good, mostly gardens, and sufficient out-"houses.

"Ownership. Various, no large landowner pos-"sessing any, no tradesmen pressing their tenants to "deal with them.

"Rents moderate, from 3*l*. to 4*l*., including often good-sized garden."

NEWPORT PAGNELL UNION.

46. Bradwell, population, 1861, 1,658; acreage, 891.

46*a*. *W. G. Duncan*, Esq., landowner, says, "Our "cottages are fairly comfortable; rooms are small, "but a poor man objects to a large room, he says it "is cold in winter. Ventilation and drainage good. "Accommodation generally sufficient, if they would "not take lodgers; water supply deficient; not many "with gardens; all with out-houses. Landowners "have scarcely any houses. The houses have been "built in rows by various persons buying plots of "land and running up houses to induce the artizans "from Wolverton to occupy them at a less rent than "at Wolverton, 1½ miles off. Rent 2*s*. 6*d*. to 4*s*. "weekly.

"This parish is very peculiarly circumstanced. "20 years ago it was peopled by a purely agricultural "population of about 340 inhabitants. But Wolver-"ton station works increased so much, that labour "was required there, and our labourers left farm "work and took to labour at the workshops. Agri-"cultural labour has been hard to get *in* the parish. "Just now, employment at Wolverton has decreased, "consequently, we have plenty of labour for our "farms, chiefly from the single men. The number "of children of the agricultural labouring class in "our school is very small. We have a very good "school, with three teachers; charge to each scholar "2*d*. weekly, and we have had 62 children on the "books, since Christmas 1867."

47. Great Brickhill, population, 1861, 590; acreage, 2,333.

47*a*. *Mr. Charles Gilby*, says of the cottages, "The accommodation, water supply, garden, out-"houses, &c., generally good; they belong to the "landowner.

"Rent, from 3*l*. to 4*l*."

47*b*. Note.—(As far as the Assistant Commissioner could see the cottage accommodation in this parish is well looked after.)

48. Little Brickhill, population, 1861, 423; acreage, 1,047.

48*a*. *The Rev. T. P. Williams*, says of the cottages, "The rooms are for the most part small.

"Drainage tolerable, and water supply sufficient.

"Gardens not generally adjacent to cottages, but "all have allotments of 20 poles in the immediate "vicinity."

48*b*. Copy of Letter from Rev. T. P. Williams to G. Culley, Esq., Horrabridge, Plymouth.

Sir, June 3rd, 1868.

Speaking generally, Little Brickhill may be considered well circumstanced as to the agricultural population.

The farmers (five in number) are considerate people who do not desire to press unduly on their labourers. The labourers are sufficient for the requirements of the farmers (in point of *number*) and not in excess. The average of wages, except in harvest time, is about 11*s*. for an adult. Women and girls are *never* employed in agriculture, but seldom even in hay-making.

Lace making and straw plaiting occupy much of the time of the young girls who are not at school. Many of the older ones go off to Dunstable or to Luton as "bonnet sewers." They do not, as a rule, affect domestic service.

The labouring men of this part of Buckingham-shire generally, do not compare favourably with the labourers of other counties. They are not fond of hard work, and are fond of beer. The wives having been usually straw plaiters or bonnet sewers, know little about promoting the domestic comfort of their husbands, or of properly bringing up their children.

I am, Sir,
Your obedient servant,
T. P. Williams.

48*c*. *Mrs. Ickford* (husband farm labourer, has five children, eldest 11, four of them at school,) says, "If "my girl (11) could earn anything she would be at "work, but plaiting is so bad, she can't. I like 'em "to be at school, but they must work as soon as they "can earn anything."

49. Broughton, population, 1861, 155; acreage, 1,020.

49*a*. The *Rev. J. W. Wing* says of the cottages, "One sitting room and a pantry below, and two to "three bedrooms as above; one well for four houses. "Garden about 15 poles. Outhouse should be "farther from the dwelling, it now adjoins. Owner "is the proprietor of the entire parish. Rent, 1*s*. per "week."

49*b*. Extract of letter from the *Rev. J. W. Wing* to *Geo. Cully, Esq.*:—"I am of opinion that the "Factory Act should be extended to our lace "schools, for children of the tender age of 7 or 8 "ought not to be confined at work for many hours "each day in small close rooms. If we could have "them regularly each day up to 10 years of age, "then with a night and Sunday school we might "give them all the education needed for their station "in life. If we are to have a school rate parents "must be compelled to send their children to "school."

50. Chicheley, population, 1861, 265; acreage, 1,620.

50*a*. *Mr. Francis Coales*, occupier, says, "The "cottages are old fashioned but comfortable, and "standing in different parts of the parish on the "farms; they have gardens and outhouses, and are "the property of the landowners. Rent from 4*d*. "to 1*s*. per week, average about 7*d*.

"Men attending stock on Sunday get 14*s.* per "week, ordinary labourers 12*s.*, increased by piece "work to 16*s.*"

50*b*. Copy of letter from MAJOR CHESTER, J.P., Chicheley, to GEO. CULLY, Esq.

DEAR SIR, June 22, 1868.

I RECEIVED your letter and enclosure yesterday. The women and children (female) in this neighbourhood never attempt farm work, but devote themselves almost entirely to *lace making*, the girls commencing at the early age of 6 or 8. The hours of work of women and children and the distance from their homes to their places of work are much improved of late years; their health is good generally, and the state of their education tolerably good.

Believe me,
Yours faithfully,
C. M. CHESTER.

51. EMBERTON, population, 1861, 624; acreage, 1,860.

51*a*. *Mr. William Hawkins*, occupier, says, "The "cottages belong to many different proprietors and "are of very varied construction, from good to very "bad. Some, perhaps, 15 to 20 have but one room "above and one below, very few have above two "rooms on each floor, and not much attention is "paid to ventilation. The village is well supplied "with water, and of late sanitary regulations have "been better attended to. The rents vary from 1*s.* "to 2*s.* per week, they average, I should say, 1*s.* 4*d.* "without garden. On the whole I consider there "is a want of good cottage accommodation as many "cottages are too crowded. I do not, however, see "much prospect of amendment, as those cottages "owned by the lord of the manor are amongst the "worst in point of size and accommodation.

"Reckoning none but those of agricultural la"bourers, there are 106 cottages inhabited by 464 "persons. There are 37 children between 8 and 10 "years, and 34 children between 10 and 13 years. "Very few of these go to school except on Sunday, "save that the girls go to lace schools."

NOTE.—(The school return shows that of the 34 children between 10 and 13 only one goes to the day school.—G. C.)

52. GAYHURST, population, 129; acreage, 840.

52*a*. *Mr. John Wilmer*, occupier, says, "I employ "a few boys, sometimes as many as 14 or 15 for a "few days in hot weather; boys whose ages vary "from 9 to 12. My wage for ordinary men is 12*s.*, "Sunday men 13*s.* with beer. In hay time I pay "no additional wage but they get beer. In harvest "I pay 3*s.* 6*d.* a day and five pints of beer. Harvest "is generally done by piece work, but when I take "them off I give them as above; I let all cutting by "piece work. The men clear at piece work in "harvest 25*s.* per week including beer, say, a guinea "and beer, no man has a right to earn less. Several "families earning most are worst off in my neigh"bourhood, their wives are such bad managers."

53. HANSLOPE, population, 1861, 1,791; acreage, 5,540.

53*a*. *R. Walpole, Esq.*, landowner.

Ventilation tolerably good; *drainage* much improved of late years, but requires close supervision by the relieving officer, who is the inspector of nuisances, and does not inspect except on complaint made.

Some four, some two roomed, very few with three bedrooms; water supply very fair; gardens to a moiety; about 120 allotments varying for 10 to 30 poles; outhouses moderate.

Landowners and persons who have saved a little money are the owners of the cottages.

Rent, 3*l.*, 4*l.*, 4*l.* 10*s.*, and 5*l.* a year, a few 7*l.*; but a very fair rent for a cottage and garden is from 4*l.* to 4*l.* 10*s.*; 4*l.* 10*s.* ought to be highest. Daily wages have increased from 10*s.* and 11*s.* a week to 12*s.* and 13*s.* during the last 12 years; and shepherds, cattlemen, and the like command 14*s.* and 15*s.* a week including Sunday work.

54. LAVENDON, population, 1861, 820; acreage, 2,562.

54*a*. The *Rev. G. W. Tomkins* says of the cottages, "Rooms generally average 14 feet square; "ventilation fair; drainage good; water supply "good; garden good. Ownership, very little by "tradesmen, but a good deal scattered."

55. OLNEY, population, 1861, 2,298; acreage, 3,140.

55*a*. *Rev. J. P. Langley* says of the cottages:—

"1. The drainage has been improved lately.

"2. Water supply good.

"3. The owners of cottages are many here, and of "various trades or professions; the lord of the "manor owns but few cottages. This state of things "is not favourable to the goodness of the cottage "accommodation. Some owners are non-resident "and cannot look after the repairs. Some cannot "get the rents paid and have no encouragement to "make improvements. Many cottages are built "down yards or alleys at right angles to the principal "street, with little or no room for out premises.

"4. The rent of a cottage of two rooms is, perhaps, "1*s.*, of four rooms from 1*s.* 3*d.* to 2*s.*"

53*b*. *Mr. John Yorke*, occupier, says of cottages, "All vary, from the merest hovel to decent and "respectable cottages. The rents vary from 50*s.* to "to 5*l.*, few at the last rate."

56. RAVENSTONE, population, 400; acreage 2,230.

56*a*. The following statement of the state of education of 30 families of labourers living near him was given to the Assistant Commissioners by the guardian for Ravenstone:—

In 24 families out of the 30 all the children above seven years old can read and write.

In one family one child of 8 cannot read nor write.

In one family one child of 13 cannot read nor write.

In one family of seven children, between 2 and 18 years, no child can either read or write.

In one family of three children two of over 12 years can neither read nor write.

In one family four out of five children over 9 years old cannot read nor write.

In one family three children over 9 can read but cannot write.

Most of the children of the 24 families who can read and write left school at 9 or 10 years of age, *i.e.* of those who are over that age, but many are still at school.

57. SHERINGTON, population, 1861, 839; acreage 1780.

57*a*. *Rev. Alex. King*, says of the cottages, "There "is a sufficient amount of cottage accommodation "and the cottages are well kept; ventilation and "drainage are good; water supply is good. The "cottages belong to landowners and small free"holders, and some to the labourers themselves. "Rents are from 1*s.* to 1*s.* 6*d.* per week."

58. STOKE GOLDINGTON, population 963; acreage 2,061.

58*a*. *Rev. C. Jerdein*, says (in a circular which was returned too late to be put into the summary of answers contained in such circulars), "The cottages "in Stoke Goldington are in general small, ill-con"trived, and in *very many* instances quite inadequate "to the accommodation of the families inhabiting "them. The owner of the greater part of them is "the landowner. The rent of his cottages is small. "I feel deeply that my efforts to improve the people "are in a great degree counteracted by insufficient "accommodation. It is very prejudicial to the "morality of the poor."

58*b*. NOTE.—There is a night as well as day school at Stoke Goldington with an average attendance of

Buckinghamshire.
Mr. Culley.
f.

14 in winter and 10 in summer, all over 12 years of age. In the day school the average attendance of of children is :—

In summer—	
Under 10 - - - -	73
10 to 13 - - - -	3
	76
In winter—	
Under 10 - - - -	60
10 to 13 - - - -	6
	66

There are no girls over 10 years of age at the day school.

59. Tyringham, population, 226 ; acreage, 1,736.

59*a*. *Mr. Morley* says, "We have built for Mr. Tyringham four pair of good cottages for 230*l*. including carriage, with three bedrooms, living-room, scullery and pantry, privies and ashpits, and barns for each ; one draw-well extra for four pairs, brick and slate nine-inch walls ; we can build such cottages with 14-inch walls for 250*l*. all included ; we let these cottages at 3*l*. a year including 15 poles of land."

60. Willen, population, 1861, 80 ; acreage, 657.

60*a*. *Mr. Wm. Whitworth*, occupier, says, "In the parish of Willen the cottages are good, but I am the owner of many old cottages totally unfit for human habitation. I charge them very little rent so cannot persuade the people to leave them, or would pull them down but do not feel inclined to build more."

The trustees of Dr. Busby's charity, Westminster, are the owners, and the rent 6*d*. per week with every comfort.

LEIGHTON BUZZARD UNION.

61. Cheddington, population, 628 ; acreage, 1,400.

61*a*. The Commissioner's circular has not been returned from this parish.

There are some new and good and some old and bad cottages, a few claimed by the occupiers.

61*b*. *Mrs. Rowe*, occupies a cottage with one bedroom and pays 3*l*. 10*s*. for cottage and very small garden, husband a farm labourer, six children at home :—

Girl 19, plaiting.
Son 16, at work.
Girl 14, plaiting.
Girl 8, at plait school.
Son 5, at day school.
Son 3, at home.

says, "I can't afford to send my girl of 8 to school, I would send her if I could. My girl of 14 can read but she can't write."

61*c*. *Arthur Seabrook*, 13, driving a harrow, can read and write, spell his own name, and add figures together pretty readily.

62. Northall (hamlet of Eddlesborough).

62*a*. *The Rev. W. Roberts* says of cottages, "Ventilation is often very faulty and the drainage poor. There is also in many instances a sad lack of wholesome water.

"The cottages in this hamlet are in the following proportion (approximate) :—

Landowners, one-third ; tradesmen, &c. two-thirds ; rent, fair.

62*b*. There are three schools in Eddlesborough parish at which the attendance is at present 207. Population, 1,671.

62*c*. (The drainage in the village of Eddlesborough appeared to the Assistant Commissioner to be exceedingly defective.)

63. Ivinghoe, population, 1861, 1849 ; acreage, 5,252.

63*a*. *The Rev. W. J. Hamilton* says, "There are some cottages with good accommodation, and garden ; others quite the reverse. The best are those belonging to the great landowner, Earl Brownlow. Some built by smaller owners as a speculation are good, but many have very indifferent accommodation. The water in the town is good, and sufficient. An outbreak of cholera took place in one yard, two years ago, the origin of which was attributed, in great measure, to the water of a well into which sewage and impurities had found an entrance. Of course, the use of it was prohibited till the defects were remedied. The houses there were badly drained, and imperfectly ventilated, and some very filthy."

63*b*. *Mrs. Stratford.*—Three children. Husband a farm labourer. Eldest child a girl, 16. Only one bedroom. Cottage very clean. Girl 16, can read and write. Boy 11, now working on a farm, was at school till very lately, "he gets 7*d*. a day." Pays 1*s*. 9*d*. a week rent : "Yes, the rent's high and we don't get much for it you see, I keep it as tidy as I can, but it ain't easy to keep a place clean when you have to do everything in it."

63*c*. Close to Ivinghoe village the Assistant Commissioner visited an extraordinary collection of cottages in a rag or chalk pit. These cottages are built against the west and north sides of the pit which is about 100 feet square. Eight cottages, with one room 10 ft. by 10 ft. and a back place 10 ft. by 6 ft. downstairs, and a low bedroom 10 ft. by 10 ft. upstairs, stand in a row along the west side of the pit, and eight cottages of the same size and description, but having eight other single-roomed cottages in one floor over them, stand against the north side ; the doors of the lower habitations in these last cottages opening into the pit, and of the upper habitations on to the natural surface of the ground behind. At the south end of the pit are some barns belonging to the cottages which open into it, and in front of the barns is a common midden for the 16 cottages facing it. The following description of the size of 24 habitations in the rag pit village was obtained by Capt. Drake, Chief Constable of Bucks, for the Assistant Commissioner.

Sixteen of these cottages consist of two rooms 10 ft. by 10 ft., and a back place of 10 ft. by 6 ft.

In these 16 cottages—

There is	1 family of	9 persons.
	1 „	8 „
	2 families of	7 „
	4 „	6 „
	1 „	4 „
and	7 „	3 persons or less.

Total 16 families containing 75 persons.

In the upper tier of eight one-floored habitations the sizes of the two rooms (or one divided) are 9 ft. by 9 ft. and 8 ft. by 7 ft.

Four of these are occupied by two families, and the other four by one family each. The largest family having to sleep in one of the bedrooms, 8 ft. by 7 ft., is five.

Supposing the rooms to be 7 ft. high, which is considerably above the height of some of them, as far as the Assistant Commissioner can remember, there are 40 of the 102 inhabitants of the pit who have to sleep in less than 100 cubic feet of air each, including the space occupied by furniture. The occupiers of the cottages in the pit are thus described :—

18 cottages are occupied by labourers.
1 by a straw plaiter.
1 is a plaiting school.
1 is occupied by a dealer.
and 1 by a rope maker.

There is no ventilation at the back of any of the cottages whose doors open into the pit.

AMERSHAM UNION.

64. Amersham, population, 3,019; acreage, 7,734.

64*a*. *The Rev. E. T. Drake* says of the cottages, "The drainage is pretty good in the town, and bad "in the hamlets.

"Half of the cottages belong to the chief land-"owners, half to small tenement holders who are not "tradesmen.

"There ought to be more bedrooms. Rents are "about 1*s*. 6*d*. per week."

64*b*. Wages on four farms occupied by tenant farmers:—

Boys from 8 to 10, 3*s*. per week.
„ 10 to 13, 4*s*. „
„ 13 to 18, 4*s*. to 7*s*. per week.

Females for weeding and haymaking, 1*s*. per day.

Hours of work for boys, 6 a.m. to 6 p.m.

64*c*. Wages on Mr. Drake's farm:—

Men.—1 man at 16*s*. per week.
2 men at 15*s*. „
9 men at 13*s*. „
22 men at 12*s*. „

Each of these men has 21*s*. a week in harvest, and the 12*s*. men are raised to 13*s*. in hay time.

Boys.—7 boys between 13 and 18 at 5*s*. per week, raised to 12*s*. in harvest.
18 boys under 13 years at 3*s*. per week.

18 women in hay time at 1*s* per day.

(The above table was kindly sent to the Assistant Commissioner by Mr. Drake as an example of the wages of the parish.)

64*d*. *Mr. Crouch*, occupier and guardian, thus gives the average earnings per week of six men, from Lady-day 1867 to Lady-day 1868, taken from his labour book:—

	s.	*d.*
No. 1. - - -	15	10
No. 2. - - -	15	6
No. 3. - - -	15	2
No. 4. - - -	15	0
No. 5. - - -	14	11
No. 6. - - -	13	10

Average per man of six men, 15*s*. 0½*d*.

65. Chalfont St. Giles, population, 1,217; acreage, 3,690.

65*a*. *Mr. James Gurney*, occupier, says, "The "construction of the cottages is inconvenient, and "drainage bad. Water supply good. Gardens in-"sufficient. Owners chiefly tradespeople, who do "not compel their tenants to deal with them.

"Rents are moderate."

66. Chenies, population, 1861, 486; acreage, 1,744.

66*a*. *Mr. F. C. Rickards*, occupier, says, "All "the cottages belonging to the Duke of Bedford "have sufficient accommodation for the families who "occupy them. There are about 72 cottages, but "not more than 25 inhabited by agricultural "labourers."

66*b*. *Mrs. Crutchley* (husband a farm labourer), says "My husband has 12*s*. a week, and in hay time "about 15*s*. My eldest child is a girl 11 years old, "she plaits and earns 1*s*., as I hinder her a good "deal. My second girl, 8 years old, earns 1*s*. "I ain't against education, but with all they can "earn, it isn't over good living."

The girl 11 can read and write her name.

The girl 8 can read, but cannot write.

67. Coleshill (a hamlet of Amersham), population, 531; acreage, 2,810.

67*a*. *John Werge Howey, Esq.*, landowner and occupier, says, "Cottages have two rooms, one on "the ground, one above, as a rule 12 ft. by 12 ft., "height, 9 ft. Ventilation, door, chimney, or a "broken pane of glass. No drainage, except to the "road. The number of the family not taken into "consideration. Water bad, and scarce in dry "seasons; his hamlet is better supplied than gene-"rally in the parish. A small out-house, a small "pot garden; when obtainable, a piece of potatoe "ground. Owners, some out of business, some in "trade. Rent, 1*s*. to 2*s*. per week. Cottages, as a "rule, miserably poor in furniture, the bedding of "the scantiest and most wretched description. After "a meal, nothing left in the cottage, no bacon, no "cheese, no lard, perhaps a piece of bread left for a "young child. Beer shops are the curse of the "hamlet.

"As a northern man, I cannot help contrasting "the difference between a hind's house in the north, "and a labourer's cottage in the county of Bucks. "In the first you see useful substantial furniture, "crockery ware, good beds and bedding. Overhead "sides of bacon, cheese, bread; in the dairy, butter, "milk, &c. The people go to work with a heart and "good will. Now in Bucks, look into a cottage. "You see a want of furniture, scanty bedding, "perhaps the remains of a quartern loaf, and a mug "smelling of beer. The family not having a good "meal of victuals once in twelve months, do their "work (except piecework), accordingly without a "will. As a rule, they are honest and well con-"ducted, but their enemies are want of economy, "ignorance, and the beershop."

68. Latimer (hamlet of Chesham).

68*a*. Of the wages, *Mr. Metcalfe*, steward to Lord Chesham, says, "The average wages of able-bodied "farm labourers, take the year round, are at least "14*s*. per week. We only give beer in hay time and "harvest. There is very little work for boys under "10; we don't care to take them. If I employ such "a boy he gets 8*d*. a day. Boys from 10 to 13 get "from 8*d*. to 1*s*. per day.

69. Great Missenden, population, 2,250; acreage, 5,731.

69*a*. *The Rev. Joshua Greaves* says (in a circular which was not returned in time to be put into summary), "There are 300 cottages in the parish, most of "them have only one bedroom, some have two, and "very few have a third. Those who live on the high "ground depend for water on tanks and ponds; the "tanks are found very useful. We have 20 acres of "allotment gardens, besides others let by private per-"sons; this is in addition to gardens round the "houses. There has been some improvement of late "years in cottage accommodation. My own opinion "is that cottage property, if the buildings are suitable "and kept in repair, will not pay more than 3 per "cent.; the cottagers here cannot afford to pay more "than 4*l*. per annum rent. No females are employed "in agriculture except in hay time and harvest, and "boys are subject to no ill-treatment or hardship from "such employment. I think there is no necessity "here for fixing an age below which boys should not "be employed in farm labour, except it be for the "sake of educating them, and only a small portion "would come to school unless they were obliged to. "I see no reason for restricting the hours of work of "boys unless that be also for the sake of education to "which my last remark would apply. As to the "modes of enforcing school attendance under the "Factory Acts, I think the third method, by demand-"ing a certain number of hours attendance during "preceding six months, would suit our neighbour-"hood best. School attendance is only partially "affected by the poverty of the parents; there is an "indisposition on the part of children to come, and "the parents do not enforce it; they go chiefly to the "plaiting schools. I believe the subject of cottage "accommodation is of the greatest importance, and "that we shall never raise the poor socially until it "receive the attention of the legislature."

69*b*. *Mr. Carter*, secretary to South Bucks Friendly Society, says, "It would be very little hardship to the "parents to compel school attendance up to 10 years "of age."

Buckinghamshire.

Mr. Culley.

f.

69*c*. *Mrs. Carter* (husband a farm labourer, has seven children, three eldest a girl 16, a boy 15, and a boy 12, sleeping in same bedroom as parents), says, "It's not wholesome nor yet decent. My boy of 12 "can only get work occasionally in throng times, "such as haytime; there is very little farm work for "boys in this parish."

WYCOMBE UNION.

70. Bledlow, population, 1861, 1,189; acreage, 4,130.

70*a*. *Mr. Henry Gibbons*, landowner and occupier, says of the cottages, "The construction, flint and "brick; rooms about 10 feet square, and a buttery "10×6. Upstairs, one room and one small one. "Some are thatched, with no upstairs. Ventilation "bad, except where windows are broken. No drain- "age. Water supply from ponds, should be tanks, "as this is a hill country. Gardens are good, out- "houses bad generally. Ownership, by landowner; "some few by others; no compulsion to deal. Rents "average 1*s*. 6*d*. to 1*s*. 9*d*. per week. Owners of "improved built cottages will not have degraded "tenants, thus good cottages raise the standard of "morality in a village or town. These questions as "answered will be correct as to what is termed the "lower part of the parish where, being situated in a "vale, water is easily obtained from springs. The "population of each division of the parish may be "assumed as equal.

71. Horsendon and Ilmer, population, 124; acreage, 1,192.

71*a*. *The Rev. W. E. Partridge* says of the cottages, "There is generally a kitchen and washhouse "downstairs, two rooms above, the youngest children "generally sleeping in their parents' room. Water "supply is good; generally about 12 poles of gar- "den. The newer cottages of a superior class which "I have constructed have 20 poles of ground, with "two good rooms below and three above, pantry, "scullery, and common bakehouse. They are occu- "pied by railway porters, police, and a nurseryman. "The rent of these last cottages is 8*l*. per annum.

72. Little Kimble, population, 182; acreage, 750.

72*a*. *Mr. Fordom*, occupier, says, "There are 28 "cottages, which would be sufficient for our parish, "but we have to find labourers for Great Kimble. "I occasionally, but not often, employ adult women "picking couch and weeding. Young women plait "or make lace. We offered a premium in the Ris- "borough Agricultural Association for shirt making "to wives and daughters of labourers, and no single "girl competed. I pay regular men 12*s*. a week, "Sunday men 14*s*. The men at 14*s*. a week would "get 20*s*. at hay time and 50*s*. at harvest extra, and "beer allowance. My men work from 6 to 5; "some men work only till 4 o'clock. There are "schools at Great Kimble for both parishes."

73. Little Missenden, population, 1,109; acreage, 3,173.

73*a*. *Rev. T. S. Pepper* says, "The cottages have "sufficient water supply, good gardens, outhouses, "except in a few instances at Hyde Heath."

73*b*. *Mrs. Lancaster*.—Husband a farm labourer. Occupies a cottage with two bedrooms. Has seven children, eldest 12 years.

Girl, 12, goes to parochial school, reads and sews two days, plaits three days, and plays one day.

Boy, 10, has 2*s*. 6*d*. a week; only began work at 10, was at school up till then. "Wasn't at work sooner, "because they don't employ 'em so young; my "husband has 12*s*. a week, and we have to get on "as best we can; we have to wait for new clothes "till we can catch 'em."

74. Radnage, population, 470; acreage, 1,352.

74*a*. *The Rev. G. Phillimore* said, "The only "women employed in agriculture are in harvest, "when families take piece work; women are usually "employed in lacemaking. As soon as girls are able "to make lace they take them from school. None "of them can make up their own clothes. Boys are "employed in farm labour and chairmaking. Chair- "making is withdrawing boys a good deal from farm "labour, and farmers complain of this. The school, "from the population of 450, is almost an infant "school, and the age at which attendance ceases is "about 10. A few families say they cannot pay for "school. In winter several men have only 10*s*. a "week. I don't think the work of children in agri- "culture is injurious to them, but the contrary. I "consider that a strictly compulsory scheme of "education is impracticable in an agricultural district "of this kind."

75. Monk's Risborough, population, 985; acreage, 3,220.

75*a*. *Mr. George Humphreys* says, "The cottages "are pretty good, of various sizes, but generally "speaking two rooms up and two downstairs, in some "cases three upstairs. Owners chiefly landed pro- "prietors. Rent from 2*l*. to 3*l*. 10*s*., according to "the size of the garden."

76. Prince's Risborough, population, 1,050; acreage, 2,000.

76*a*. *Mr. Charles Brown*, landowner and occupier, says of the cottages, "Construction as to size of "rooms, ventilation, and drainage is fair, accommo- "dation mostly good, water supply improving with "the greater use of tanks. Allotments and gardens "sufficient. Ownership various, some cottages owned "by landowners, a few by tradesmen. Rent averages "4*l*. a year."

76*b*. *Mrs. Henry Lonun*.—Husband a farm labourer, has 12*s*. a week; her boy of 16 has 8*s*. Child of 6 goes to school; pays 1*s*. 8*d*. a week for her cottage with two bedrooms. "No privileges in any way, no "garden; my boy of 16 has been at work eight "years, he went when he was 8; he got 1*s*. 6*d*. a "week at first." The boys says, "I've never been "at day school since I went to work; I'm a plough- "boy; I can read and write pretty fair, can write a "letter to my brother."

76*c*. *Mrs. Smith* says, "My husband is a farm "labourer; he has 13*s*. a week, because he goes "with the thrashing machine; he can't get much "piece work as he is often with the machine. My "eldest girl, 17 years old, has been ill a long time "with gastric fever, and my second girl, 15 years old, "has to wait on her. My boy, 13 years old, gets "3*s*. a week as a ploughboy, and the youngest, 10 "years old, is at school. I can't hardly keep him "there, but I like to send them to school. We have "a garden about 40 poles, and pay 5*l*. a year and "rates for house and garden."

77. Saunderton, population, 232; acreage, 1,590.

77*a*. *The Rev. F. A. Faber* says, "The cottages "generally have two rooms, about one-third have "three, size about 12 ft. by 12 ft. by 7 ft. Ventilation "fair. Drainage open. Water from wells pretty "plentiful. They always have gardens of from 10 "to 20 poles, outhouses, and in some of the hamlets "a common oven. Pigsties made by the cottagers "themselves.

12 cottages belong to Lord Dormer.
3 „ „ Lady Dashwood.
4 „ „ farmers.
6 „ „ a tradesman.
2 „ „ the occupiers.
4 public houses are rented by brewers at Wycombe.

"Cottage rents are about 1*s*. 4*d*. per week."

77*b*. *Mr. R. Gurney*, occupier, says, "I farm 325 "acres, of which 300 are arable. I employ no boys "under 10 regularly, occasionally one or two in "summer, when my regular staff is engaged in "making hay, &c. I never employ women, except "a few in harvest. I employ three boys of about 14.

" I employ 12 to 14 men regularly, and I would require for the use of my farm 10 cottages. I have five cottages attached to my farm. The cottages in the parish are pretty good, but there are not sufficient for the labour required in the parish. The rent of the cottages is about 3*l.*, and they belong to different freeholders. One proprietor has about 700 acres, principally arable, and he has 12 cottages. I do not think legislative interference is necessary for the sake of education, unless it took the form of compelling them to attend evening schools. I would have another boy or two if I could get them, they go chairmaking. The women eat opium very much, they go into a shop and say, 'I'll have two-'pence or threepence to-day,' meaning opium, with which the shopman supplies them without asking what the twopence or threepence are meant for."

78. WENDOVER, population, 1,932; acreage, 5,719.

78*a*. *Mr. Wm. Horwood*, occupier, says, " I never employ women except where men take harvest by piecework, and his whole family assist him. I employ no boy under 13; two between 13 and 18, and ten regular men. The cultivation of land in my parish would require four cottages per 100 acres. I farm in four-course rotation. I pay regular men 12*s*., cattle men, 13*s*. My men work from 6 a.m. to 5 p.m.

79. WOOBURN, population, 1861, 2,200.

79*a*. *Rev. F. H. Ashley*, says, " The worst cottages have gradually disappeared the last 20 years. The new cottages (which are going on rapidly increasing) though far superior are *not* what they ought to be; they have generally good water and gardens.

" The ownership is very varied, those cottages built or possessed by the landowners or residents are the best. It would be well if there was a law which would apply stringently to the new cottages building, or about to be built." Rent, 2*s*. or more.

80. WYCOMBE, population, 1861, 8,373; acreage, 6,318.

80*a*. *Mr. Wm. Treacher*, landowner, says, " There are not many cottages in this district of the parish, excepting the town where some few of the agricultural labourers reside."

80*b*. *Mr. Wm. Edmunds*, occupier, Wycombe: " I hire my shepherd, carters, and ploughers by the year from Michaelmas, and many farmers do in this neighbourhood.

" My shepherd has 12*s*. a week and his house, and 6*l*. extra at harvest.

" My carters have 12*s*. a week, a house, and 5*l*. extra at harvest.

" Ploughboys have 5*s*. a week, their lodging, and 2*l*. 10*s*. extra for harvest (boys from 13 to 18).

" I employ women, some single and some married, weeding sometimes, and haymaking, I pay them 1*s*. a day, and give them beer in hay time."

80*c*. *Mr. Wm. Guy*, occupier, Wycombe: " The hiring for ordinary men is weekly, but shepherds, carters, under carters, and ploughboys, are hired by the year from Michaelmas.

" They are paid about as follows:—

" Shepherds, 13*s*. a week, and 6*l*. at harvest.

" Carters, 13*s*. a week, and 5*l*. to 6*l*. at harvest.

" Under carters, 8*s*. a week, and 5*l*. at harvest.

" Ploughboys, 5*s*. and lodging, and 2*l*. 10*s*. to 3*l*. 10*s*. at harvest.

" I think two cottages per 100 acres sufficient for farms in the Chilterns in five-course rotation.

" I have one ploughboy from the workhouse, who came to me at 13, and is a very good boy. I think that a boy beginning at 13 labours under no disadvantages compared with a boy beginning at 10, except what may be got over in a few weeks.

80*d*. *Mr. Edward Hutchinson*, chair manufacturer: " I employ 54 persons on my premises, and 16 out. Of the 54, nine are women above 18, five are girls between 13 and 18, and one is a girl of 11 years. We employ women only in caning, lad under 18 in finishing. The chairmakers in the outlying districts draw their labour from the agricultural labouring class. Girls from 13 to 18 earn 7*s*. 6*d*. a week, boys of 13 or 14 earn 5*s*. or 6*s*. Lads of 16 to 18 earn 14*s*. and 16*s*. a week."

80*e*. *Mr. Smith*, chair manufacturer: " Children employed in chair making from 12 to 16 years of age earn from 5*s*. to 9*s*. a week, in farm work from 3*s*. to 6*s*. I employ about 130 hands, of whom 28 are females between 13 and 30 years of age. We employ boys of 13 years and upwards, none under 13 because the Factory Act makes it so troublesome, we discharged three boys under 13 on that account."

ETON UNION.

81. BURNHAM, population, 2,223; acreage, 6,250.

81*a*. *Mr. R. J. Rogers* says, " The cottages occupied by the labouring poor in this parish consist chiefly of a living room and back kitchen or washhouse on the ground floor, and two bedrooms, one of which is usually very small. They are badly ventilated, and have scarcely any drainage. They are owned chiefly by small capitalists, in some few cases by landowners, but not at all, so far as I know, by tradespeople with whom the people deal. In the large majority of cases large families are muddled together in such cottages as I have described."

81*b*. *Mr. Joseph Trumper*, occupier, says, " I employ from eight to ten women in weeding and couching, but not in hay-making; they are all over 16 years; some are married. They work together, not mixed with men, under an old man, my servant. They work from 8 till 4, with one hour's rest at dinner; they are seldom at work at 8. They get 9*d*. a day. They live in Burnham village. They prefer this work to domestic service, there is less restraint.

" I think such employment injures women morally, but not physically. I employ no boys under 10. I have three between 10 and 13 driving ploughs, hay-carts, or any farm work, and about five between 13 and 18. Boys from 10 to 13 earn 3*s*. to 3*s*. 6*d*.; they come at 6 a.m. and leave at 5 p.m., and have one and a half hours for meals. They have half a pint of ale, while the men have one pint. They are in no way injured by their work. Day men have 13*s*. a week, carters 14*s*.; by great work they earn 15*s*. to 16*s*. When we thrash they have two pints of ale. They all leave off work at 5; in haytime, if we keep them till 8 o'clock, they have 15*s*., and have from five to six pints of ale per day."

81*c*. The following is quoted from the "Burnham Magazine" of May 1868, which was sent to the Assistant Commissioner:—

The Dwellings of our Poor.

"We published in our last number an indignant letter from a correspondent, which, although it only just touched, in a few warm sentences, upon the miserable condition of the so-called "Barracks," seemed to us to furnish an occasion for noticing one of the chiefest social evils amongst us—the terrible state of the dwellings of our poor. We are crippled at the first in our wish to state our case as plainly as we would, because if the mischief is literally patent to all, the details are wholly unfit for publication. To talk modestly about "overcrowding" is simply to use a decent word to keep out of sight a shameless indecency. Not only are many of these cottages in the worst state of tottering dilapidation, but there is so little accommodation in them at the price, that the families who live in them must be huddled together irrespective not only of kindred but of sex. Churchgoing won't cure this: all the sermons in the world won't make a shaky cottage wind-tight, or give it another room. And after all, bad as they are, the "Barracks" as an abomination do not stand alone.

Buckinghamshire.

Mr. Culley.

f.

At the other end of the town there are some rival "dens" where the demoralization of our poor may be equally guaranteed. Human nature caged up in them must become degraded, and when these "homes" are emptied, from the sheer impossibility of living in them, the beer-shops of course are filled."

81*d*. The following information was given to the Assistant Commissioner by the *Rev. Thos. Carter*, vicar:—"There are a great many cottages in a bad "state, a row, for instance, called the Barracks. "Lord Orkney pulled all the cottages down at "Taplow, and drove the poor and bad characters "into Burnham. Women reap and go hay-making, "and the girls work with their mothers. Cottages "are very dear, obliging the occupiers to take "lodgers. Cottages which were 2*s*. or 2*s*. 6*d*. are "now 3*s*. 6*d*. a week. I pay men working about my "premises 14*s*. a week. Farmers could not do with-"out female labour in harvest. Men come here for "harvest from North Bucks, Berks, and even Wilts. "There should be a public inspector of cottages. "Licences to beershops should be granted in the "first instance by the magistrates, and should be "more sparingly granted."

81*e*. *Mrs. George Aldridge*, Barrack, Burnham:—"My husband has 14*s*. a week. We pay 2*s*. a "week rent. I have six children. My eldest boy "15, gets 4*s*.; my second, 12, is getting 3*s*. now, "but did nothing all winter. I have a girl 9 and a "boy 8, the rest younger; none of 'em are at school, "they haven't clothes to go in. It costs me 10*s*. a "week all but a penny for bread. My husband has "14*s*. a week and 30*s*. extra for harvest, that's all I "know about it. I can't send my children to school "off my husband's wages; if I can get some reaping "they'll go again."

81*f*. *George Denton*, his wife, and four children, in a poor cottage with one bedroom. Eldest girl, 15, can read and write a little; girl, 12, cannot read nor write.

81*g*. *Susan Middleton*, aged 21, works on a farm at all times of the year, when she can get work at 8*d*. She gets 1*s*. in hay-time; she does not reap, but gets 1*s*. for barley raking.

82. Datchett, population, 982; acreage, 1,630.

82*a*. *Mr. C. S. Cantrell*, occupier, says, "The "cottages vary very much; some are very old and "inconvenient. The more recently built ones are "great improvements; they chiefly consist of two "rooms below and three above, viz., one good size "and two small ones. Rent 3*s*. and 3*s*. 6*d*. per "week, exclusive of rates. They have generally a "small outhouse and a *small* plot of garden, say 10 "poles or thereabout.

"The cottage accommodation in Datchett is bad, "and the rents *much too high* for labourers. His "Grace the Duke of Buccleuch is kindly endeavour-"ing 'to better' this state of things, by enlarging "cottages and making them more healthy and com-"fortable, and letting them at moderate rents. I "hope he will build some on the farm I hold under "him this summer, and which I propose to let at low "rents to my best labourers, as boon and encourage-"ment to good conduct."

82*b*. *Mr. Cantrell* gave the following examples of men's earnings by piece-work from his labour book, 1868:—

Hoeing potatoes between the rows, four men earned 3*s*. 3*d*., 3*s*. 1*d*., 3*s*. 1*d*., and 2*s*. 10*d*. respectively. Same four men hoeing mangold earned 3*s*. a day each. Same men hoeing wheat at 4*s*. per acre earned 2*s*. 9*d*., 2*s*. 8*d*., 3*s*. 2*d*., and 2*s*. 6*d*. respectively. Thrashing wheat (which includes "feeding, thrashing, half winnowing, and tying up straw") at 2*s*. 3*d*. the load of 36 trusses, men earned from 2*s*. 6*d*. to 3*s*. 6*d*., the machine going smoothly. Picking gravel by the piece, Mr. Cantrell's men earned 2*s*. 6*d*. to 3*s*. per day. Spreading dung by the piece, at 1*s*. 6*d*. per acre, men earned from 2*s*. 6*d*. to 3*s*. At hedge trimming two men earned 3*s*. 9*d*. a day each. Mr. Cantrell says, "The ordinary weekly wage is now "13*s*.; was 12*s*. before corn was so dear, and will "probably be 12*s*. again if corn becomes cheap. I "have two young men of 19 and 20; they get 7*s*. "a week in winter and 8*s*. in summer, with 5*l*. at "harvest. They live in my house, and find their "own food; I find firing for them, and give them "small beer. Boys of 16 have 4*s*. 6*d*. in winter, 5*s*. "or 5*s*. 6*d*. in summer, and 50*s*. at harvest. My day "labourers earn on an average 15*s*. a week through-"out the year."

83. Farnham Royal, population, 1,378; acreage, 2,910.

83*a*. *Rev. S. F. Marshall* says of the cottages, "A sitting room and kitchen 12 ft. by 10 ft.; a back "kitchen and landing, 10 ft. by 8 ft., and 7 to 8 in "height; with bedrooms of the same size respec-"tively over them, with the general accommodation. "2. The water is fetched from wells or springs adja-"cent. 3. The ownership is various, some belonging "to the landowners, others to tradesmen and other "proprietors not resident in the parish. 4. The "rents vary from 7*l*. 10*s*. to 4*l*. 10*s*."

In speaking of the cottages, Mr. Marshall said, "Owners should not be allowed to recover rent for "cottages unfit for human dwellings."

Note.—(There are some very poor and crowded cottages in Farnham.)

84. Hitcham, population, 205; acreage, 1,370.

84*a*. *Mr. Richard Webster*, occupier, says "There "are some bad cottages in this parish, and cottages "are very dear. The better ones are occupied by "gentlemen's servants and persons better off than "agricultural labourers, and these have often to con-"tent themselves with a poor cottage at 2*s*. 6*d*. a "a week. The best system is where cottages are "built attached to farms, and let with the farms. "Men are then better housed, and can have a good "garden near their house.

"I pay carters 14*s*. a week; day-men 13*s*.

"I employ three married women weeding and "couching in spring, at hay and harvest in summer, "and in trimming turnips for sheep, &c., in winter. "They are paid 9*d*. a day when they work from 8 "till 4, with an hour's rest. In hay time and harvest "they get 1*s*. a day, and work from 8 a.m. to 6 p.m., "when they rest half-an-hour at 11 a.m., and half-"an-hour at 4 p.m., besides the dinner hour at 1 "o'clock. They have three pints of beer per day in "hay time and harvest. Two men and a boy look "after eight horses. I rent two cottages for a carter "and shepherd to have more control over them, and "to secure cottages for my men. In a farmhouse "which I don't occupy lives a head carter and two "lads. Lads of 17 hired by the year have 6*s*. a "week, and 40*s*. to 50*s*. at harvest. They find their "own food, and I find them lodging and firing. Lads "of 14 hired in the same way have 4*s*. 6*d*. a week, "and 40*s*. at harvest."

84*b*. *Mrs. Rush* (living in one of six one-bedroomed and very poor cottages at Hitcham New-town) says, "We pay 2*s*. and have about 10 to 15 poles. My hus-"band is a farmer; is a labourer; he is truck-filling "to-day; he earns at day-work 2*s*. 9*d*. to 3*s*., but I "can't rightly tell, not if you gives me a guinea. I "have seven children, and my father sleeps here. "Three go to school, and we pay for them. I'm "obliged to work to keep them at school. The eldest "at school is 9, I think, but I'm no scholar; my "husband puts them in the book."

84*c*. Note.—(The cottage rents are very high; 3*s*. for anything like a decent cottage; good ones 4*s*. to 4*s*. 6*d*. All who can do so take lodgers.)

85. Horton, population, 810; acreage, 1,200.

85*a*. *Mr. S. Pullin*, occupier, says, "The cottages "are all built of brick with tile or slate covering, "except three of thatch. They are in groups of "three or four, with good water. The general size "of rooms are from 10 to 12 feet square, with two

" rooms up and two down, with mostly a small shed " for tools, coals, &c. Held by owner. Rent from " 2*s.*, 2*s.* 6*d.*, and 3*s.* per week, including rates, &c. " Parish under Small Tenement Act."

86. Iver, population, 1861, 2,114; acreage, 6,133. Cultivation chiefly arable.

86*a.* Answers to shorter circular of inquiry by *C. Tower, Esq.*, Huntsmoor Park.

Boys are employed in farms in Iver parish from 8 years of age; some all the year, others in the spring and at harvest.

No girls are employed in farm labour.

Two-thirds of the women in the parish are employed in farm work, in fruit gardens, or at a paper mill.

Those who are employed on farms have no long distances to go to their work.

The hours of work of children and women are from 8 a.m. to 4 p.m. generally, and in harvest as long as they please.

Children should be restricted from working on farms till they are 11 years of age, and be kept at school, and after that age up to 14 or 15 years they should go to school for some portion of the day or week.

There are three day schools in the parish, conveniently situated, and a lads' night school in winter, not as well attended as they should be, chiefly owing to early labour and the ignorance of the parents.

The cottages are not sufficient for the supply of labour, and are many of them bad, overcrowded, and without ventilation. Water is deficient in some localities. About four-fifths of the cottages have gardens.

87. Stoke Poges, population, 1,600; acreage, 3,153.

87*a. Mr. H. Cantrell*, occupier, says, " I employ four " women, but not constantly; they have 1*s.* in hay- " making, and 9*d.* at other times. They are all married " women. My single men sleep in my house; we " live so far from the village I am obliged to have " them in my house, but I would much rather have " cottages attached to my farm. I have no worker " who lives less than a mile from my farm, and some " live one and a half to two miles, except, of course, " the young men who live in my house. The dealers " who buy peas from farmers employ Irish people to " pick them; whole families come and sleep any- " where they can, sometimes 30 or 40 in a barn, the " families sleeping together. It is said that very little " immorality takes place owing to the greater chastity " of the Irish girls."

88. Taplow, population, 811; acreage, 1,920.

88*a. Rev. Chas. Whateley* says, "There are cot- " tages not occupied by agricultural labourers; some " very crowded. Water supply bad. Owned not by " tradesmen with whom the tenants deal, but by per- " sons who built them as an investment. Rent 4*s.* a " week. No garden. Drainage not bad. Ventilation " good."

88. Answers given by the Buckingham Bench of Magistrates to the Assistant Commissioner's Questions.—Rev. W. A. Uthwatt, J.P., Chairman.

1. Is legislation required for the purpose of fixing the age below which children (*i.e.*, under 13) should not be allowed to be employed in farm labour?

Either to protect them from physical injury, or to secure for them a satisfactory elementary education? —"No."

2. Is there good ground for limiting the hours of work for children? and if so,

What are the limitations you would propose?— "No."

OPINIONS OF BOARDS OF GUARDIANS.

Aylesbury Board of Guardians.

89. Minutes made at a meeting of this Board held at the board room on the 20th of May 1868.

Mr. Culley attended the Board and introduced the questions as to the employment of women and children in agriculture, and the education of such children which had been mentioned to the board last Wednesday, and, after discussion,

It was resolved,

That in the opinion of the board no legislative restrictions are necessary with reference to the employment of boys and girls in agriculture, either in fixing a minimum age or to protect them from physical injury.

That having regard to the number of schools of late years established in almost every village throughout the rural districts of the county, and the facilities now being offered for the education of the children of the poor, it is not expedient to put in force any compulsory system of education.

Thame Board.

90. Extract from the Minutes of the Thame Board of Guardians made at their meeting on the 25th June 1868.

" George Culley, Esquire, a Commissioner appointed to inquire into the employment of children, young persons, and women in agriculture, attended the Board and stated the objects of the inquiry with a view of ascertaining the opinion of the guardians thereon.

" Resolved that, in the opinion of this board, boys under 10 years of age (if employed at all in agriculture) should not be entrusted with the care of horses.

" That children of both sexes should be kept at school until 10 years of age.

" That no legislative interference relative to the employment of children in agriculture after that age should be made."

William Parker,
Clerk to the Guardians.

Buckingham Board.

91. "The Guardians of the Buckingham Union are of opinion that legislation is not required for the purpose of fixing the age below which children should not be allowed to be employed in farm labour, either for the purpose of protecting them from physical injury, or of securing for them a satisfactory elementary education."

91*a.* Copy of a letter from Mr. Henry Hearne, clerk of the guardians, enclosing a copy of this resolution to the Assistant Commissioner.

Buckingham Union,
Dear Sir, June 24, 1868.

I am directed by the guardians to enclose you their reply to the questions put to them by you, which, as you will see negatives the necessity for legislation on the subject of the employment of children in farm labour. I may, perhaps, add that the question was very fully and ably discussed before this decision was arrived at. The board seemed to feel a difficulty in supplying authentic information as to the rate of wages in the several parishes comprised in the union; but there appeared to be an opinion that more cottage accommodation was wanted, although many new cottages have been within the last few years built in the district.

It seems to me that union rating has removed the chief obstacle which has existed to the erection of cottages on or near the farms requiring the labour which the cottages shelter, and that if reasonable power is given to tenants for life, &c., to charge their estates with the cost of building and repairing a

Buckinghamshire.

Mr. Culley.

f.

necessary number of labourers' houses, nothing more can be expected of the legislature in this direction.

I am, dear sir,
Yours very truly,
HENRY HEARNE.

NEWPORT PAGNELL UNION.

92. At a meeting of the Board of Guardians held at the union workhouse on Wednesday the 10th day of June 1868.

"It was moved by Mr. Walpole and seconded by Coales, and

"Resolved, that in the opinion of this board there is no objection to restrict the employment of boys in field labour to those who have passed their tenth year.

"It was moved by Mr. Walpole and seconded by Mr. Tarver, and

"Resolved, that in the opinion of this board it is of great importance that increased support, by way of pecuniary grants as payments for results be given by Government, to night schools whether superintended by certificated or uncertificated teachers, and that the age at which boys should be admitted to such night schools be fixed at 10 instead of 12."

WILLIAM POWELL,
Clerk to the Guardians.

AMERSHAM BOARD.

93. Minutes of a special meeting of the Guardians of Amersham Union held June 16th 1868.

A special meeting of the Guardians of the Amersham Union held at the workhouse, Amersham, on the 16th day of June 1868, for the purpose of giving information and assistance to the Commissioners appointed under the Royal Commission, "to inquire "into and report upon the employment of children, "young persons, and women in agriculture, for the "purpose of ascertaining to what extent and with "what modification the principles of the Factory "Acts can be adopted for the regulation of such "employments, and especially with a view to the "better education of such children."

Present:

Thomas Tyrwhitt Drake, Esq., Chairman.

William Lowndes, Esq., J. W. Howey, Esq., Captain Harmar Hardy, Mr. Birch, Mr. Rickards, Mr. Gurney, Mr. Crouch, Mr. W. Weller, Mr. Charsley, Mr. Jackson, Mr. Judge.

George Culley, Esq., an Assistant Commissioner appointed with the approval of Her Majesty's Secretary of State, attended the meeting.

Proposed by William Lowndes, Esq., seconded by Mr. William Weller, and carried. That if the principle of the Factory Acts is to be applied there should be an absolute prohibition from employing children in agricultural labour under the age of 10 years, but after that age all further interference should end.

ETON BOARD.

94. At a meeting of the Board of Guardians for Eton Union, held at the union workhouse at Slough on the 30th of June 1868, it was "Proposed by Mr. "Way and seconded by Mr. Irvine, that it is desirable to legislate to prevent children being employed "in agricultural labour up to 10 years and to compel "their attendance at school; an amendment was put "by Mr. C. S. Cantrell, seconded by Mr. Geo. Botham, "that it is not expedient to legislate for the purpose "of fixing the age at which children should be employed in agriculture. There were for the amendment nine votes and for the resolution four, showing "a majority in favour of the amendment of five "votes."

94*a*. Extract from letter from Mr. R. Barrett, clerk to the Board of Guardians for Eton Union, Bucks, to the Assistant Commissioner.

DEAR SIR, June 24th 1868.

FOR your guidance I may state that as a rule (in the district) boys are not employed under the age of 12, and girls scarcely at all until after 16, when they rank as adults and are paid the same as women, their hours of labour from 8 till 4.

Of course there are exceptions to this rule during harvest and probably when the thrashing machine is in operation, but my experience leads to the conclusion that the exceptions are few.

* * * * * *

I am, dear Sir,
Yours very truly.
R. H. BARRETT.

94*b*. Rules of the Eton Board of Guardians for placing out children to board and lodge.

The following copy of the above rules was kindly given to the Assistant Commissioner, along with a copy of the register of school attendance of the children of widows receiving relief, which must be presented every time an application is made for renewal of relief.

Copy of Rules.

"The board will pay 3*s*. 6*d*. per week with each child, provided they have a sufficiency of good wholesome food and warm and cleanly lodging; the money to be paid on the weekly visits of the relieving officer for the district.

"The board will supply each child with a proper outfit of clothing as per list annexed, which is to be renewed and kept in decent repair by the party with whom the children are placed, and for this, after the expiration of three months, 6*s*. 6*d*. quarterly will be paid in advance. It is however to be understood, that it is optional with the board whether to pay this sum in money, or to supply its value in clothing. A list of the clothes will be supplied with each child, which is to be shown when required either by a member of the board, or by the relieving officer on his weekly visits. The clothing to be at all times considered to be the property of the board.

"The children shall be sent regularly to school on week days (and to Sunday school where opportunity offers), and on Sundays shall attend divine worship. After 13 years of age they may be employed for wages in any labour of which the guardians through the relieving officer may approve. Two-thirds of the wages they may earn when at work will be deducted by the relieving officer from the weekly payments, the remaining one-third will be the property of the person who may lodge and clothe them, as a compensation for the extra food and clothing which may be considered necessary in consequence of such employment."

The Report of the school committee to the Eton Board also given to the Assistant Commissioner is very interesting, and shows the great interest taken by the board in the education of children falling under its care.

95. Copy of a Letter from G. O. Rogers to Geo. Culley, Esq.

Newport Pagnel,
SIR, July 17th, 1868.

IN reply to the two questions proposed in your letter of June 19th, I beg to say that *females are not* employed in agriculture in this neighbourhood.

With reference to the boys, there is no doubt that the poverty of the parents compels them often to interrupt their attendance at school while quite young, and to take them away from school at much too early an age (greatly to their disadvantage), yet I do not think that legislation is necessary to counteract this evil.

Indeed, it would, in my opinion, *at the present rate of wages* be oppressive to the poor.

I remain, Sir,
Your obedient servant,
GEO. OSBORN ROGERS.

RELIEVING OFFICERS' EVIDENCE.

THAME UNION.

96. *William J. Nash*, relieving officer, Bucks district, inspector of nuisances:

"The cottages are not good throughout my district, and are very bad in some parishes. Worst in Brill, Towersey and Shabbington. The poor in the district are very badly off. As inspector of nuisances I have summoned 10 persons in 12 months."

BUCKINGHAM UNION.

97. *Mr. Richard King*, relieving officer, Tingewick:

"The worst cottages, as a rule, in my district are in Marsh Gibbon. In Marsh Gibbon a few women are employed in general farm work, such as setting beans; they get 1*s.* 8*d.* per bushel for bean planting; the men if planting beans make it a rule to plant a bushel, and then go and work at their allotment, some few work out the day, and can earn 2*s.* 6*d.* a day at it."

NEWPORT PAGNELL UNION.

98. *Mr. Wm. Gardener*, relieving officer, and inspector of nuisances:

"The cottages in my parishes are, as a rule, pretty good, the worst village I have, is Hanslope. Some very poor cottages in Olney. No women work on farms except a little in hay time and harvest. Girls make lace and sew shoes round Olney. Farm labourers have 11*s.* to 12*s.* a week; horse keepers 14*s.* There are two many beerhouses in some of our villages. I don't know any village of any size without a school. Very seldom see a boy at work under 10 years, except a few 'bird keeping.'"

99. *Mr. Chew*, relieving officer, and inspector of nuisances:

"I have 24 parishes, of which three have no schools; of these three, Shenley is the largest. The labourers' cottages in my parishes are generally good, the exceptions are North Crawley, and Little Brickhill: the cottages are very good in Great Brickhill, Water Eaton, and Broughton. Wages, average 12*s.* Few children are employed in farm labour under 12 years. I think the labourers are well off in my district."

AMERSHAM UNION.

100. Chesham district, *Mr. H. Scarr*, relieving officer:

"The wives and daughters of farm labourers in Chesham plait. The rents of their cottages vary from 1*s.* 6*d.* to 2*s.* 6*d.* per week.

"Farm labourers wages vary from 11*s.* to 12*s.* a week in winter, now they are getting 15*s.* a week, haymaking, men mowing by the piece make 20*s.* to 22*s.* per week.

"The worst cottages in Chesham parish are in Botley and Ashley Green, and belong to small tenement holders. Boys seldom go to work before 10, and are generally at school up to that age. There is plenty of work for good labourers, but there are some the farmers would not employ at any price."

101. Amersham district, *Mr. W. Bryan*, relieving officer:

"In spring, boys are employed as young as 8 in weeding and 'bird starving,' but they are not generally regularly employed before 10 or 11. They get 4*d.* and 6*d.* a day picking couch.

"A few adult women are employed weeding by the piece they make 1*s.* to 1*s.* 2*d.* a day. In harvest they help their husbands in piece work. The cottages in my district generally are not good. In Penn and Chenies they are remarkably good where they belong to the landowners. There are bad cottages without ventilation or drainage in Washington Row in Amersham. There are very bad cottages in Chalfont St. Giles, and in Lee, belonging to small owners. If corn gets dear the farmers raise wages, last winter they gave 11*s.* to 12*s.*, the winter before, 10*s.* to 11*s.*

"The water supply is bad in Great Missendon and Amersham commons, and Penn."

Buckinghamshire.

Mr. Culley.

f.

WYCOMBE UNION.

102. *Mr. J. J. Painter*, relieving officer, Stokenchurch district:

"In my district in Bucks children are a good deal employed in agriculture often below 10; up to 10 some go to school, and some do nothing. There are very few parents who cannot keep their children at school up to 10, after 10 the very poor people cannot keep them at school. In my Bucks district (part of district in Oxford) very few women work in fields. The Board does not pay for school attendance of children receiving relief, but encourages them to send them. The absence of the children from school arises chiefly from the carelessness of the parents."

103. *Mr. Russell*, relieving officer, Great Marlow district:

"I think the parents could send their children to school much more than they do. The ordinary wage near Marlow is 12*s.* a week.

ETON UNION.

104. *Mr. H. A. Aberdeen*, relieving officer:

"Children are rarely employed in farm labour in my district under 10.

"The boys who would be in the union house are farmed out with respectable cottagers, calculating 3*s.* 6*d.* for a boy's keep per week we deduct 2*s.* 3*d.* of his earnings or supposed earnings to pay the difference to the person he lives with. Suppose the boy can earn 3*s.*, we pay the person he lives with 1*s.* 6*d.* The cottages in my district (Datchet, Denham, Eton, Horton, Ives, Langley, and Upton,) are good, but the rents very high, 4*s.* to 5*s.* a week; the cottagers let part of their house which sometimes leads to crowding; very few cottages in Slough are altogether occupied by one family. Farmer's men earn 12*s.*, 13*s.*, and 14*s.* a week, and get 1*l.* a week for a few weeks in harvest. A good many women are employed weeding and couching, they get about 1*s.* a day in summer and 8*d.* a day in winter, and work from 8 a.m. till 4 p.m. Horses, and the boys with them, cease work at 2, and the boys help to look after the horses. The people are and have been healthy for some time past. As far as my experience goes, a single man, or a man and his wife without children, are more likely to get to the workhouse, than a man with a family."

Burnham district, *Mr. R. J. Rogers*, relieving officer:

"The effects on morality of the employment of females in agriculture are the worst possible, rendering them wholly unfit for domestic duties. I consider that there should be a system of compulsory education applicable to both sexes. The standard should of course be low, but I would enact that every child must be able to read and write, and do simple sums in arithmetic before he or she be permitted to receive wages. When the child had attained to this educational standard, he or she should be furnished with a certificate entitling him or her to work. It should be made a misdemeanor to employ any child unable to produce such a certificate. The cottages are very dear in Burnham parish, 3*s.*, 3*s.* 4*d.*, and 3*s.* 6*d.* a week for anything like a decent cottage; 14 cottages called 'the Barrack' are very bad and dirty, are let at 2*s.* per week."

Buckinghamshire.

Mr. Culley.

f.

SCHOOL TEACHERS' EVIDENCE.

Aylesbury Union.

106. *Mr. Wm. Gibbins.*—National School, 1st class (certificate), Waddesdon; 9 years teacher.

"The vast majority of young persons in the parish are growing up without any education to be of practical use to them. They come to school at 3, and attend till about 8, and their attendance is so bad that they come back to the night school in a year or two unable to form their letters. In Standard V. of the Revised Code, in five years, I have only presented seven boys and three girls, and of these only five boys and two girls belong to the class of farm labourers. In Standard VI., I have presented one boy and two girls, speaking of children for whom I can claim a grant. A boy of average ability, if kept regularly at school till 10, would be able to read and write, and cipher easily, and I think the night school would be sufficient with good attendance, say an attendance of 36 nights of 1½ hours, to keep up their education. This school would be much better if there was only one in the village."

107. *Mr. H. H. Clark.*—Aston Clinton National School; 7 years teacher; 3 years at Aston Clinton.

"Boys, as well as girls, are withdrawn from my school for plait. Some boys are obliged by their parents to plait 18 scores per week, about 12 of these come to me from three to five half-days in the week; they are obliged to come three half-days to obtain the benefit of Lady de Rothschild's clothing and shoe clubs, into which they pay 5*d.* per week and receive shoes and clothing to the value of 10*d.* Some boys as young as 7 are employed in the gangs about the grounds at Aston Clinton. If a boy attended school regularly from 6 to 10, he should be able to read, write, and use the first four rules of arithmetic for ordinary purposes; if they were compelled to attend a night school regularly for the winter half-year it would be sufficient to keep up this elementary education. Day attendance during three winter months would be quite as effective, or more so. One hour's attendance in day school is equal to three in night school."

108. *Mr. Jas. Little.*—Dinton, certificated teacher; 14 years' standing.

"If a boy came to school at 5 and remained till 10, attending regularly, he would be able to read and write tolerably well, and do the first four rules of arithmetic. I think that if after 10 he attended regularly at a night school, say six months of three nights per week, it would be sufficient to keep up that education. I think the parents in this parish are anxious to send their children to school."

109. *Mr. Thos. Eagleton.*—Stone; 27 years' teacher.

"If a boy attended school regularly from 5 to 10 years of age, he would be able to read with facility, and do the first four rules of arithmetic. Between 10 and 13, this elementary education might be kept up by attendance during four winter months, or regular attendance at night school. Such education would be quite sufficient for agricultural labourers."

Winslow Union.

110. *Mr. Thomas Piper.*—National and Free School teacher. A teacher for 30 years, in Gloucestershire, Devonshire, Hampshire, Kent, Suffolk, Middlesex, Herts, and Bucks; 3 years in Winslow.

"I think the ability of children varies a good deal in different counties, and that town boys are sharper than country boys, as a rule. I think the children I have here are slower than those, for instance, in Herts or Suffolk, or Kent or Gloucester. The sharpest boys of the agricultural class I have had were in Kent. I think that the boys here, if they could attend regularly from 6 up to 10, would require very little school attendance after 10 to maintain their reading, writing, and cyphering; say attendance at night schools up to 13. I visit, as a Scripture reader, many parents of children attending and not attending school. When children are not attending I find it is in consequence of the want on part of the little money the children earn at bird keeping, for instance. The cost of living in this parish is very high, and wages low and irregular, and I therefore think that many parents with large families could not afford to keep their children at school without some assistance."

111. *Mr. J. R. Ager.*—Middle Claydon, certificated teacher, 12 years' standing.

"If a child came at 6 and remained in regular attendance up to 10, he should be able to read and write pretty well, and ought to be able to use thoroughly the first four rules of arithmetic; between 10 and 13, I think half-time attendance would be sufficient to maintain this elementary education. I mean by *half time* such portions of the year, not less than six months, which should be specified beforehand, and regulated by the requirements of agricultural labour. And I think the requirements of agricultural labour in this district would allow such attendance. I think a good deal of pressure is put upon the parents by the farmer to obtain the labour of children for the sake of saving the wages of a man."

112. *Mr. Chas. Willcocks*, Beachampton, says, "I have been master of this school for 13 years, in "which time only one labourer's child has reached "the first class. There is an endowment of 70*l.* for "boys, we never refuse girls, but find it difficult to "get them to attend."

Leighton Union.

113. *Miss Pearson*, Eddlesborough:

"I have been teacher seven years. We teach plaiting in school; the children plait three hours per day. We stopped plait under 8 years old last week. We let the children plait to induce them to attend school. The attendance is very irregular after 8. The parents cannot keep their children without plaiting. Wages are very low in this parish, from 10*s.* to 11*s.* per week."

114. *Mr. Wotton Winsor.*—Certificated teacher, 3½ years standing.

"At 10 a child should be able to read and write easily, and use first four rules of arithmetic for ordinary purposes, attendance having been regular from five years old; from 10 to 13 four winter months' schooling would keep up this elementary education. I have a good many children of agricultural labourers up to 12. Our attendance is very good."

Amersham Union.

115. *Mr. Jas. Dolman.*—Chemies. Certificated master; 6 years.

"After regular attendance to 10 years of age, a half-time attendance would be necessary up to 13 years of age to keep up the elementary education gained at 10, and secure the power of using it in after life, say half-day, or alternate day, or even alternate week's attendance; but the interval for work should not be longer than a week. I think the boys here are tolerably sharp for an agricultural district. I found them duller in Surrey and the Isle of Wight."

Eton Union.

116. Copy of a Letter from Mr. T. F. Mason, schoolmaster, Denham-Uxbridge, to George Culley, Esq.:—

Sir,

I have been requested by B. H. W. Way, Esq., of this parish, to state to you my view of educating children after they have been employed for a time at field work. My opinion is, and has always

been the same, that a child should be sent to school at an early age and there remain until he is at least 12 years of age, and under no pretence whatever should he be allowed to be kept from school to bird keep, or any other field work, until he is old enough to be permanently taken away to earn his daily bread. My opinion has been very carefully formed, and is the result of at least 20 years' experience as master of this school situate in an agricultural parish. I have long ago discovered that if a child has been kept from school, say during the summer months to go to farm work, and then returns on the approach of winter, with very few exceptions does that child come back again with the same teachable mind as when he left school. He is restless, he is not docile, in a word, he shows symptoms of insubordination, and perhaps rightdown rebellion. It may be asked, what has wrought this great change in the once tractable, submissive, and quiet child? and the only answer that can be satisfactorily given is, that for the last four or five months, his companions or associates have been farm labourers, who have contaminated him with their coarse language and brutalizing conversation, coupled with the fact, that when at work they are not under the slightest discipline either at home or under the farmer who is his employer. I think boys living in an agricultural parish ought to leave school permanently to follow farm occupations at the age of 12 years, and not to exceed 13, except in rare cases, such as parents who are in better circumstances, and perhaps can afford to apprentice their children to trades, or other more lucrative positions in life than farm labourers.

I remain, Sir,
Your most obedient servant,
T. F. Mason.

117. Marginal notes written by Sir Harry Verney, Bart., M.P., landowner, Claydon, Bucks, on a copy of the Assistant Commissioner's instructions:—

"I do not think that legislation is required for the purpose of limiting the hours of work for boys employed in agricultural labour, nor for the purpose of securing proper meal times, nor for the purpose of limiting the distance to which they should be allowed to go to their work, nor to protect females from unhealthy or unsuitable employment in agriculture."

"The defective state of the education of the young found at work, where such education is defective, is to be attributed to the indisposition of the parents to forego the weekly sum that may be added to the family earnings by the child's labour, and to the low moral tone of the parents."

"If it were decided to fix an age below which boys should not be allowed to be employed in farm work, I would suggest 10 years; but that would bear hard on a large young family, when a boy of 9 might earn 2*s.* or 2*s.* 6*d.* per week by bird keeping."

"A labouring man, with regular employment and a thrifty wife, can pay their children's schooling, excepting in cases of sickness or large families of young children (a wide exception)."

"Over-crowding of cottages is a great evil; much has been done to provide against it. I sometimes suggest to parents to let the boys or a young man sleep downstairs for a time, but they do not like it."

"Young girls are never employed in agricultural labour. A stout young woman or even a mother of a family can earn about 1*s.* daily haymaking."

"If any enactment were desirable, interfering between the farmer and labourer or labourer's children, I would suggest that ability to pass a very low examination in reading and writing is better than a limit of age."

"Such an examination might afford some stimulus to parents to take interest in their children's schooling."

"Care must be taken not to interfere in a way that may appear unjust to either; a little farmer often struggles as hard as a labouring man to make both ends meet. Neither farmer nor labourer ought to think that the latter is under the peculiar protection of the Government. There is some danger of employers of labour losing the sense of responsibility for their labourers and of parents for their children. Interference between farmer and labourer is a very nice point."

"I have often discussed with my rector, my steward, farmers and labourers, the question where cottages for farm labourers ought to be built: in the village or near the farm house, when at a distance, say, one or two miles from the village."

"My rector says near the school and church; the labourer's wife says the same, including, of course, as her reason the village shop, living near her friends, &c."

"Her husband objects to walking a long distance to his work, especially if he is walking all day, which is usually the case with the carter, ploughman, &c.; but the work of many farm labourers is more of the hands and arms than of the legs, such as hedging and ditching, plashing hedges, pulling thistles, thrashing, and thatching. These do not suffer by a walk to and from their work. The most responsible man on a farm is the carter; the farmer likes to have him live near, in case of an accident, and to bait his horses."

"When the horses come in in winter they get first a little hay, then the carter goes to his dinner, and then ought to spend 1½ or 2 hours baiting (oats and chaff) and cleaning his horses, after which he leaves his horses with their supply of hay for the night. For this duty a carter ought to be near; but if his cottage is TOO NEAR, the children would always be in the farm yard, to the great annoyance of the farmer."

"What I desire for my outlying farms is to have a couple of cottages for each, on the hard road, supplying a dry walk to the village; and I would let those with my farm, so that the farmer would have entire control over his labourers living in them. This power might occasionally be abused, but it would be to the interest of both farmer and labourer to do fairly by each other."

"Formerly the carter used to be unmarried, and live in the farm house."

118. Copy of Letter from Rev. W. R. Fremantle, Claydon, to Geo. Culley, Esq.

Claydon Rectory,
July 7th, 1868.

Dear Sir,

I find, from a conversation with Sir Harry Verney, that you are in possession of all the information which I could give you with respect to the state of education at Claydon; I will not, therefore, trouble you with a repetition of it. I will only venture to make a remark which is based upon the experience of 30 years in a rural district. The real difficulty of school-keeping is to secure the attendance of children. Labourers in the receipt of 10*s.* or 12*s.* a week prefer the 2*s.* or. 2*s.* 6*d.* per week which a little boy of 7 or 6 years of age will earn by keeping a pig in the lane or minding sheep, to the payment of 2*d.* per week for his learning to read and write. Many of the farmers encourage this, because they too often obtain work at 2*s.* 6*d.* per week out of a big strong boy, which otherwise would cost them 10*s.* from an adult. I am not at all sure whether the fault does not lie more in the employers than in the employed; but wherever the evil lies there is only one cure for it, and that is in a protective law for little boys and girls—protection against the covetousness of parents and the covetousness of employers. The law I should like to see passed would be of this nature: no boy or girl shall be employed in manual work until they can produce a testimonial signed by a certificated master or mistress, and countersigned by the clergyman of the parish, or the minister of the chapel or church to which the individual belongs, that they can read and write. The advantages of this law would be twofold: first, it would prevent little children being put to hard labour before they are fit for it, and secondly it would compel the employer to pay a just price for work done, and enable parents to do better for their children. Often and often I have known a strong father out of work while a little boy has been the breadwinner of

Buckinghamshire.

Mr. Culley.

f.

the family; and I may add that, generally when a child has been long enough at school to learn to read and write, he is not hastily taken away, the benefits of a good education are realized. I was looking over our school registers not long ago, which have been kept since 1825, and in tracing out the history of a generation I have found that almost in every case where the boys began life by a regular and continuous attendance at the school, they have turned out well, and to this there is scarcely an exception, whereas in the example of irregular attendance, and of short duration, the boys have either come to grief, or have grown up into the type or the ignorant alehouse sot, their families a burden to everyone. Of course, there may be here and there an exception to this, but it is rare. Hoping that Government will take this view of the subject in hand,

I am, dear Sir,
Yours faithfully,
W. R. Fremantle.

P.S.—I am of opinion that the present system of Government inspection does not work well. The efforts of the masters and mistresses is to give the children a sort of mechanical knowledge of the three subjects which will secure for them the Government grant, beyond this next to nothing is taught. I am perfectly certain that our boys were better taught, knew more, could answer general questions better, write quite as well, and read as well 20 years ago as they do now.

119. Copy of a letter from B. H. W. Way, Esq., J.P., Lord of the Manor of Denham, to Geo. Culley, Esq.

Dear Sir, June, 30th, 1868.

I write a few lines to add to anything that may have been said at Slough to-day with reference to the education of the lower orders, I am still of opinion that compulsory education would be of great value to the community for many reasons, among others—

1. He would be amenable to wholesome discipline, say from 6 to 10 years of age.

2. He ought in that time to have mastered reading, writing, and the four first elementary rules of arithmetic, to which might be added history and geography, and of course have received religious instruction, which otherwise, he must, I apprehend, be totally without.

3. A man that cannot read, if out of work, or if it be too wet for his labour, instead of being able to amuse himself with a book, is driven to a public house for relaxation, where he spends in beer that which ought to go in bread, and drunkenness is the curse of the labourer.

4. Take up any calendar at any assize, and see how Imp., R., and N. will preponderate among the prisoners.

5. The child is father to the man, how then can a boy who has been utterly neglected make an honest and industrious labourer?

I could continue much longer, but will conclude now having given my opinion so far. I may however add that, I think it would be very desirable that parishes which are anxious to have "compulsorily education," should not be deprived of the means of acquiring it, because certain people are blind to its advantages, and one of their number considers education the greatest curse of the labourer.

I think the employment of boys in bird keeping is a great mistake, a man with a gun would be much cheaper and more efficient, as it is impossible to keep boys in such work.

I am, dear Sir,
Yours faithfully,
Lord of the Manor of Denham, Bucks. B. H. W. Way.

120. Extract from a letter from Mr. W. Brown, land agent, of Tring, to the Assistant Commissioner, enclosing a report of a lecture on "The labourer and the cottage," delivered by Mr. Brown at a meeting of the Royal and Central Bucks Agricultural Association, held at Aylesbury in April 1867.

Sir, Tring, July 1868.

I send you the only report I have of the paper read at Aylesbury last year. My experience since that time confirms my opinion that the greatest drawback to the improvement of the agricultural labourer is the confounded beershop and the temptation to men to drink more than is necessary for their good. The beershops are the curse of the country. It is seldom that an honest, temperate, and industrious man allows his family to be brought up improperly, and so long as such temptations are held out for drunkenness, I see but little chance of improvement. If the Commission with which you are connected overlooks this crying evil I shall regret it.

I am, Sir,
Your obedient servant,
To G. Culley, Esq. Wm. Brown.

The following are extracts from Mr. Brown's paper. After speaking of the contest going on between town and country in the labour market, and of the inducement which may be held out to young men to remain in or return to their native villages as farm labourers, Mr. Brown goes on to discuss the question of education, where he says:—

"I think I may calculate on the general assent of my audience (nearly all Bucks farmers) when I say that the early age at which children are now employed in labour to the neglect of their education, is both morally and physically wrong. The mode and extent of the education they should receive is a contested point, but no one will deny that to train them up to fear God and honour the Queen, it is necessary they should not only be taught to read and write, but made to understand religious truths and principles, so as to enable them to perform their duty in after years. . . . . It has been contended that children should not be sent to work until they are 10, or for a whole day until they are 12 years old, and suggestions have been made that half the day should be devoted to education and the other half to suitable labour, or according to the system of Mr. Paget, which has many recommendations, on alternate days; but I can scarcely see my way to any general adoption of this system, because the farmer has but little need of a boy, unless his services are continuous. It has occurred to me that, as full employment can be found in summer and the reverse in winter, it would be better if the boys under 12 or 13 received their education during the winter months, restricting the labour to the elder boys and men, who would be better able to battle with the rough weather. I am aware how difficult it is for a labourer with a family to earn sufficient to enable him to do without his boys' earnings up to 12 years, but with better management it may generally be met."

On the subject of labourers' cottages, Mr. Brown says, "Does not every good farmer at the present day "demand more and better shelter for his cattle, and "conveniences for preparing their food, and does he "not insist that they are absolutely necessary to the "proper cultivation of the soil? If this be so, is "it not right that the man who is to till the soil and "look after these cattle should be treated equally "well; in fact, are not the dwellings of the labourers "part and parcel of the manufactory of the farm "..... These cottages cannot be erected in "this neighbourhood at a cost less than 250*l.* the "pair, which at 4 per cent. (treated as farm buildings), would make the rent 5*l.* per annum or say "2*s.* per week, and this the labourer, with such "conveniences and a garden at the rear of his house, "can well afford to pay, indeed better than half the "sum for a miserable cottage and scanty garden. I "approve of the allotment system near towns and "villages, but half the quantity of land at the rear of "the cottage is of as much value as double the quan-

" tity at a distance. The spare minutes of himself, " his wife, and family, can be better devoted to the " cultivation under such circumstances."

On the subject of wages, Mr. Brown quotes examples of wages paid on farms in Dorsetshire, Wilts, Bucks, Lincolnshire, and Yorkshire, tending to show that there is no such great difference as is supposed in the actual earnings of farm labourers and their families, or rather of the means of earning at their disposal if they choose to avail themselves of them, in the different counties named; that the cost of labour on farms does not vary with the nominal wage or the district but rather with the management, kind of cultivation, and merit of the labourers employed; and that the general tendency of increased means of communication is to equalize wages. In conclusion, Mr. Brown says, "Why do I advocate education, I " will not say better education because some do get " it, and I regret to add, abuse it afterwards; but " what I am contending for is a suitable education, " that a youth, when he approaches manhood, may " know how to read and write, that his spare time " may be devoted to the improvement of his mind, " and that he may comprehend why he does certain " things, and not move about very often with less " sagacity than the shepherd's dog. You cannot " fail to see that better stock, better implements, and " expensive machinery are being kept, and to whom " are these to be entrusted? To an ignorant la- " bourer who may ruin an animal or spoil an imple- " ment in a very short space? Again, why do I " advocate good cottages and gardens upon or near " the farms? It is to encourage the respectable, " honest, industrious man, to prevent his having to " pass a beershop every time he goes to his home " or to a crowded town or village where 'Evil com- " 'munications corrupt good manners.' . . . . . " Why have I troubled you at such length about " wages? It is because I believe it to be a pressing " matter, and that you will have to use greater dis- " crimination upon this point. A good, honest, in- " dustrious labourer, who does a fair day's work and " interests himself in his master's welfare, must be " treated differently to those who get through the " day as easy as they can and care but little about " the result. From what I have read to you the " highest wages are not the most costly per acre, " and from my own experience, good men at good " wages are cheaper in the end. I have lately seen " it stated that in certain localities the farmers, unso- " licited, have agreed to raise the rate of wages 1*s.* " per week all round, but I submit to you that this " is a mistake and wrong in principle. You cannot " make alterations all at once, or reduce some men's " pay to what they are actually worth, but you can " increase the wages of the deserving, whether he " be a married or a single man. I strongly advocate " paying men by piece-work whenever practicable. " I believe the farmer will get more for his money, " and the industrious the advantage to which he is " entitled over the indolent."

121. Copy of Letter from Mr. William Paxton, Land Agent, to Geo. Culley, Esq., Assistant Commissioner.

Gt. Berkhampstead,

SIR, June 6th, 1868.

I HAVE perused the instructions from the Commissioners, and am unable to see their applicability, as a whole, to this neighbourhood, as women and girls are not employed on the land, and few boys under the age of 13 go to daily labour.

This, no doubt, is attributable to their being engaged in straw plait making, and to their being able to earn, when the trade goes pretty well, much more money than they would if employed in farming work, also with less wear and tear of clothing, and not so large consumption of food.

The question as to what "legislation" is required for the protection of juvenile or female labour in agriculture, and for the promotion of the education of the young throughout the agricultural districts, may, I think, be answered in very few words, viz., "to pay " better wages, and provide decent accommodation in " the cottages."

The first step to be taken is to "humanize" the individuals by providing them with proper sleeping apartments to separate the sexes, and to effect this object no cottage should be allowed to be erected unless it contains three spacious and well-ventilated bedrooms.

Secondly, to regulate wages "proportionately to " the value of agricultural produce," and to fix as a standard one peck of flour, or the value thereof, to be paid for a fair day's labour.

If the Legislature can be induced, in the face of the supply and demand of the labour market, to remedy the two existing objections "of insufficient accommo- " dation in the cottages, and inadequate wages," there will, I believe, soon arise a more satisfactory state of things in the agricultural districts.

The late Earl Brownlow took very great interest in the welfare of the cottage tenantry on his estate, and forbad any cottages being let with the farms. He was continually directing improvements also to be made for better accommodation, and I am happy to say the present Earl is equally desirous to add to their comfort and improve their condition.

The proportion of Earl Brownlow's cottages to the acreage of the estate varies considerably in the different parishes, but I think if taken as a whole it is ample.

I remain, Sir,
Your obedient, faithful servant,
WM. PAXTON.

Geo. Culley, Esq.

122. Copy of Letter from Mr. Thomas Beards, Land Agent, Stowe, to Assistant Commissioner.

SIR, June 22nd, 1868.

I WAS not at home when your note and enclosures arrived, otherwise I should have called on you for a few minutes' conversation regarding the subject in question. I have not much time to write thereon, but having a large intercourse with agricultural labourers in many counties I do not believe they are so badly off and harshly treated as some would-be philanthropists represent them to be. No doubt there are many improvident farm-labourers, and some employers not exactly what they should be, but the same case applies to the manufacturing classes. My opinion is our legislators might find better employment for their talents, if they possess any, than to keep boys idle until 13 years of age, or to educate them by Act of Parliament.

I am, Sir,
Yours obediently,
THOS. BEARDS.

123. Answers to Assistant Commissioners' Questions by Rev. P. T. Ouvry, J.P., Wing, Leighton Buzzard.

1. Is legislation required for the purpose of fixing the age below which children should not allowed to be employed in farm labour?—Yes, for the purpose of securing for them a satisfactory elementary education. Boys over 13 are now discharged in favour of smaller boys at less wages. Boys are now employed at 7 years of age. I think it should be enacted that no boy should be employed in farm labour under 10.

2. There is no injury done to children employed in farm labour in this district through the hours not being limited.

3. As to the Factory Act principle.—Half-days, or alternate days, at school and work are quite impracticable. School attendance for a certain number of hours during preceding six or 12 months would do pretty well. The best plan I think would be alternate weeks. A farmer who now employs 10 boys would then employ 20; there should be a certificate of the past week's schooling to qualify for the week's work.

Buckinghamshire.

Mr. Culley.

f.

124. Answers to Assistant Commissioner's Questions by W. G. Duncan, Esq., J.P., and Chairman of Newport Pagnell Board of Guardians.

I do not think legislation is required in this county to fix the age below which children should not be allowed to work on farms. Farmers do not care to have a child about their premises who is so young as to be of no use; but at 9 years old, the time when they may be of use in odd jobs, they are better learning how to do work than at school, learning only to read and write. Labourers with large families cannot afford to lose what their boys of upwards of 9 years of age can earn for them. Besides, the boys are learning how to be good labourers. I never knew a boy kept at school till he was 13 that was any use as a labourer when he grew up. I have known several such cases.

I should say, as a general rule, 9 years of age is early enough for most boys to go out, but some boys at 8 are stronger than some at 9.

I should not advise any limitation to the hours of work of children.

Half-day at school and half-day at work is ridiculous, neither would any farmer employ a boy three days a week, nor is it necessary. In my opinion education should be left to the parents. It is impossible to enforce education. Lodges and cottages, lying two miles perhaps from the school, how is it possible for a child under 9 years of age to be frequently at school. If the State means to have education compulsory, the State must take the school to the child, and pay for its schooling.

W. G. Duncan.

125. Copy of letter from the Rev. J. Tarver, Filgrave, to Geo. Culley, Esq.

Dear Sir, June 24th, 1868.

I find that I cannot fill up the answers in the form you left with me, as to the employment of children in agricultural labour, to any purpose. Our numbers are really so small as to yield nothing. I cannot make up half a dozen boys of our own inhabitants, and we do not employ girls in the fields at all. The lace pillow is a great difficulty with us, as it draws off the girls almost at an earlier age than the boys are taken on to the farms, and I don't know where we could get a vote like that passed at the Newport Pagnell Union so as to affect them.

Believe me,
Faithfully yours,
J. Tarver.

126. Copy of Letter from the Rev. F. A. Faber to Geo. Culley, Esq.

Dear Sir,

So far as the *boys* are concerned I don't think that anything but compulsory education will be of any avail. They are taken away from school as soon as they can earn anything in the fields, either by tending animals or scaring birds. This applies even to the Sunday school, and prevents any regularity. The girls are not taken so early, and so they have a better beginning. They are, however, employed in weeding and stone picking, and if this were not the case there is the lace pillow at home. There is no doubt, however, that the girls, as a general rule, are more advanced than the boys.

Faithfully yours,
F. A. Faber.

127. Copy of Letter from Mr. E. M. Baynes, solicitor and clerk of the Magistrates acting for the Hundred of Ashendon.

Dear Mr. Culley,

Speaking solely as to this locality I do not think that legislation is required, except that I consider that no lad under 14 years of age should be allowed to have the sole charge of a horse and cart upon a public road; there is a penalty for allowing a child under 13 years of age to drive a cart or waggon on a turnpike road, seldom enforced and not applying to other public roads. I am not aware that any ground exists for limiting the hours of work of children, but, if there be, I should say let the limit be 10 hours a day between April 1st and Oct. 1st, and 8 hours for the rest of the year, including a proper allowance of time for meals.

As regards the education of the children of the labouring class, I think that is pretty well attended to *now* in most parishes; but it has frequently struck me, when seeing the children that are brought up in the union workhouse here and contrasting their clean, cheerful, healthy appearance with that of *most* of the children one sees running about the villages, what a good thing it would be if some plan could be devised and adopted by which such of the labouring population as thought well might be enabled to have their children, say, from 4 or 5 to 10 years old, maintained, clothed, and educated at some public establishment in the neighbourhood (totally unconnected with the union workhouse), the parents paying a small weekly sum for each child so taken off their hands. There would of course be a great prejudice, at first, with parents against such an establishment, and it is probably altogether impracticable, but could it be carried out, I think, in a great many cases, both parents and children would be great gainers, and society also. I would give every facility for parents, friends, and others visiting the children, and let them have two months' holiday, during July and August, if desired, and at other times on application under certain regulations.

Believe me, dear Mr. Culley,
G. Culley, Esq., Yours very truly,
&c. &c. E. R. Baynes.

ALLOTMENT SYSTEM.

128. Mr. Henley's allotments.

The following is a statement of the number, size, and rent of the allotments in Shabbington and Oakley parishes, provided by the Right Hon. J. W. Henley, M.P., from information given to the Assistant Commissioner by Mr. Higgs, of Oakley, who lets and collects the rents of these allotments :—

Parish.	Name of Field.	Total Number of Allotments.	Total Acreage.	Average size of Allotment.	Rent per Acre.	Rent per Pole.
			a. r. p.	a. r. p.	s. d.	d.
Shabbington -	Open wood - -	43	60 3 10	1 1 26	21 4	1¾
Do. -	Grubbing ground	29	11 1 27	0 1 27	28 0	2
Oakley - -	Oakley wood -	29	20 3 5	0 2 34	33 0	2¼
Do. - -	Burnt cover -	29	5 3 29	0 0 33	22 3	1¾

Total number of allotments, 130.
Total acreage in allotments, 98 a. 3 r. 31 p.

The following is the evidence of James, Cox, woodman, who showed the allotments to the Assistant Commissioner :

"Oakley was a wild blackguard place, and Mr. Henley have done it to cure the place; they are not allowed to plough, and that makes so much more work, you see, sir; I am certain the allotment system keeps down poaching and such like; the first as is caught poaching loses his allotment, and they be afraid to go a poaching for fear they should lose their land, and that be a wonderful good thought of Mr. Henley's, I reckon."

Dorton Estates.

129. The following is a statement of the allotment system in the Dorton estates.

Parish.	Acreage in Allotments.	Number of Tenants.	Number of Cottages.	Average size of Allotments.	Rent per Acre.
	a. r. p.			a. r. p.	s. d.
Dorton - -	4 2 0	24	21	0 0 30	23 8
Chilton - -	19 0 0	101	53	0 0 30	26 5
Boarstall - -	19 0 0	13	21	1 1 34	24 0
Brill - -	39 0 0	105	11	0 1 20	42 8½

Total acreage in allotments, 81 a. 2 r.
Total number of tenants, 243.
Total number of cottages, 106.

Oving.

130. Of the allotments in Oving the *Rev. W. H. Young* says, "They are not equitably distributed, "some have a good deal, some none. At rents vary- "ing from 2*l.* 10*s.* to 4*l.* 10*s.* per acre."

Aylesbury.

131. *Mr. Fowler*, occupier, gives his labourers 20 poles of his best land at 50*s.* per acre (his own rent) and returns the rent, with some addition in prizes for vegetables.

Stone.

132. *Mr. Joseph Hughes*, occupier, said, "Nearly "all the labourers have allotments, most have 40 "poles, many half an acre. A man should not have "more than a rood if he is to do justice to himself "and his employer. I think every man ought to "have 30 or 40 poles, but not more."

133. *Mr. Monk*, occupier, gave the same opinion.

134. *John Howlett*, a labourer, occupying two roods of allotment ground in Stone parish and unable to work much, gave evidence as follows: "I pay 40*s.* "for two roods and 3*l.* for my cottage, we could not "pay our rent if it was not for the allotment, to pay "our rent, 5*l.*, and keep us in vegetables is as much "as ever a man can do with two roods."

Dinton.

135. At a parish meeting four occupiers present agreed that 20 poles of good ground are sufficient for a regular farm labourer, and that he ought to have it.

Bierton.

136. *Mr. Bell*, occupier, said, "A few of my men "had not allotments and I gave them about 20 poles "each at 5*s.*"

Ludgershall.

137. *Mr. Stone*, landowner, says, "I let 30 acres "in allotments; the tenants are bound to spade hus- "bandry; the allotments are from half an acre to "two acres. This had great effect in depauperizing "the parish, this was begun just at the time of the "introduction of the New Poor Law in 1835."

Newport Pagnell.

138. *Mr. Chew*, relieving officer, says, "I consider "any allotment over 40 poles too much. I think 30 "poles the right size for growing vegetables."

BENEFIT CLUBS.

139. *Robert Fowler*, labourer, Great Brickhill. "There is a feast to-day of the Duncombe Arms "Benefit Club. I am the oldest member. The club "was formed 30 years ago and I think it will last "my time. Some years ago Sir Henry Foulis offered "through honorary members to secure the club 40*l.* "a year if we would meet at the school and have a "supper at 1*s.* a head instead of the club feast at "2*s.* 6*d.* They were as if they would swallow me "when I proposed this to the club, and they would "have nothing to say to it; they like to have an "'all joble,' and a good many young ones join for "the sake of the holiday and beer; we have about "30*l.* in hand and 55 members, we have had above "70 members. Sir Philip Duncombe has helped us "sometimes. I had eight children, and I had 'em "all taught to read and write, one of 'em can write "like a young lawyer. Plait is not good now, but "I have known it worse."

South Bucks Friendly Society.

140. There is a large friendly society called the South Bucks Friendly Society, having its centre at Great Missenden, about which the following statement was made to the Assistant Commissioner by the secretary, Mr. W. M. Clark.

"We have 894 ordinary and 80 honorary members, and invested capital of 11,280*l.* and a floating balance of 126*l.*

PLAITING SCHOOLS.

141. The Assistant Commissioner received from the chief constable of Bucks (Captain Drake) "A "Return showing the number of Plaiting Schools "in the Central and South-eastern Divisions of "Bucks," giving the name of the teacher, situation of the school, description of room, number and age of children employed, and time so employed daily. The following is a summary of this return:—

The number of schools in these divisions is 102 in 30 different parishes; the number of children attending these schools at the time the return was made was—

Children under 8 years of age -	658
„ between 8 and 13 years of age -	799
Total -	1,457

The parishes included in these returns are—

Princes Risborough.	Cheddington.
Monks ditto.	Horton.
Ellesborough.	Marseworth.
Stoke Mandeville.	Slapton.
Great Kimble.	Ivinghoe.
Little ditto.	Wingrave.
Buckland.	Aston Abbots.
Great Missenden.	Stewkeley.
Wendover.	Dunton.
Dinton.	Hogston.
Aston Clinton.	Chesham.
Weston Turville.	Amersham.
Wing.	Penn.
Cubbington.	Chesham Bois.
Eddlesborough.	Little Missenden.

The plaiting rooms are thus described:—

3	are described as	"Parish Schools."
2	„	"Large room."
20	„	"Schoolroom."
58	„	"Cottage room."
5	„	"Front kitchen."
1	„	"Back kitchen."
8	„	"Badly ventilated and crowded."
6	„	"Badly ventilated."

The sizes of rooms are only given in four instances. They are—

ft.	ft.
12	+ 12.
12	+ 11.
12	+ 10.
12	+ 9.

Buckinghamshire.

Mr. Culley.

f.

The number of hours the children are employed is given as under :—

In	6	schools for	12 hours.
In	2	„	9 „
In	6	„	8 „
In	1	„	7½ „
In	35	„	7 „
In	4	„	6½ „
In	34	„	6 „
In	2	„	5½ „
In	3	„	5 „
In	1	„	3½ „
In	8	„	the hours are not given.

Of the 21 schools in the parish of Chesham it is said, "Nearly all the schools in this parish employ "the children up to 9 p.m. when the trade is good ;" and the same might be said of many others, adding about three hours to the usual six or seven hours when trade, as at the time the returns were made, is not good. The usual hours returned as 8 or 9 a.m. to 12 noon, and 1 p.m. to 4 p.m., would be lengthened by adding 5 to 8 p.m. or 6 to 9 p.m.

Of two of the schools it is said reading and writing are taught.

Great Missenden.

142. *Mrs. Hall* has 22 children in her school now, used to have 30 or 32. "Some children come to me "half the day, and go to the day school half the day, "5 of the 22 do so. All these children can read ; I "teach them the lessons for next Sunday. It was "very close when we had 30 children."

At another plait school in Missenden visited by the Assistant Commissioner, the children were taught to read the lessons for the following Sunday.

Cheddington.

143. *Mrs. Tooley* :—"I have had a school off and "on for 30 years. I think to become good plaiters "they should begin at 5 years old ; they should "*not* begin before 5. I think if they did not begin "to plait till 8 they would take a long time to "become good plaiters. If a child begins at 5 it "takes 12 months before it can earn enough to pay "for the straws. There were 22 children in the "school ; the eldest girl I have in school is 15, the "youngest 8. Before the policeman came I had "five or six under 8. I have had 40."

144. Per-centage of males and females signing the marriage register with a mark in Bucks :—

In 1855, men, 39·2 ; women, 45·3.
In 1865, „ 28·4 ; „ 28·9.

Per-centage of improvement in 10 years in Bucks :—

Men, 10·8 ; women, 16·4.

Per-centage of improvement in England :—

Men, 7· ; women, 10·

Per-centage in England who signed with marks in 1865 :—

Men 22·5.
Women, 31·2.

Poor Rate.

145. Cost per head of population (census 1861) of charges for the maintenance and out-relief for year ending Lady-day 1868, in four unions in Bucks :—

Union.	In Maintenance.	Out Relief.	Total Relief.	Average per head of Population, 1861.
	£	£	£	s. d.
Aylesbury - -	1,827	9,483	11,310	9 7
Thame - - -	646	5,052	5,698	7 5
Winslow - -	452	2,606	3,058	6 7¼
Wycombe - -	2,318	11,070	13,388	7 7¾

EXTRACTS FROM RETURNS.—Mr. C. J. BOYLE.

(Compiled by Mr. P. Selby, Secretary to the Commission.)

HUNTINGDONSHIRE.

The illness and consequent resignation of Mr. C. J. Boyle interrupted the progress of his inquiry in Huntingdonshire. However, 26 returns to the circulars distributed by him have been received. These returns embrace a wide and important agricultural district; they include a population of nearly 14,000 people, and cover an area of about 50,000 acres.

Some of these returns come from parishes where private gangs are to be found, and the state of education among children employed in these gangs is generally admitted to be neglected, though some of the returns do not allow that "gang work" is the cause. The returns in many instances show that the school attendance is fair, but that the children leave school at too early an age in order to go to work, and that this loss is only partially, and at best inadequately supplied by evening schools.

The returns also show that the attendance of the children is very little affected either by distance from the school or by the inability of the parents to pay the fees.

The question is not the payment of the school pence, but the loss of the child's earnings. It was publicly stated at a recent meeting of the Peterborough Chamber of Agriculture, that "the supposed in- "difference of parents to the education of their "children was really a question of income."

Several witnesses speak strongly of the village beer-house as the great enemy of the school.

With respect to the employment of boys and girls in agriculture, 1st, as such employment affects their health; and 2nd, as it affects the morals of girls and their future aptitude for domestic duties, these returns disclose a striking unanimity of opinion on both points.

With the exception of children overworked in gangs under 10 years of age, it appears that field work is not only not detrimental to the health, but is by some witnesses pronounced to be highly beneficial. But the same witnesses, with scarcely an exception, agree in condemning the employment of girls in farm work, both as injurious to their morals, and as disqualifying them for home duties.

A large majority of the returns concur in recommending that a limit should be assigned below which children should not be employed; 10 years is generally taken as the limit, though some witnesses place it at eight years.

So far as these returns permit a conclusion to be arrived at, it appears that about one-fourth of the children and young persons employed in agriculture in that county, including those in private gangs, are under the age of 10 years, and many of these are under eight years.

In some brief notes, which Mr. Boyle's failure of health prevented him from expanding into a report, he has expressed his concurrence in the opinions on the subject of cottage accommodation either given to him personally or embodied in returns which are quoted below. With some exceptions, the cottages throughout the district visited by Mr. Boyle are insufficient in number, and defective in the accommodation they afford to their inmates.

Mr. Boyle quotes the words of a large farmer whose industry and skill had raised him from a humble origin to be the occupier of about 1,000 acres in the highest class of cultivation,—"Give them" (the labourers) "airy roomy houses and build them on the "farms near to their work, and you will find there "will be more cheerfulness *inside*, and less of the "beershop *out*. A man who comes home after a "long day's work to a clean comfortable room, will "not be wishing to run out again directly and leave "it; he will like to rest and sit down at his own fire-"side, and enjoy his bit of supper there."

PARISH OF BLUNTISHAM.

Population - - - 1,351.

Extracts from a Return sent in by the Rev. John Bumff, Rector.

Education among the young of both sexes employed in private gangs "is very much neglected. The gangs "work in the fields eight months of the year. Harvest "is two months, so that there is but two months for "school. The little gained in early days is lost by "disuse, except where adult schools are established, "and these very adult schools in some measure act "injuriously. The parents will not send their small "children to week day school, because the money "they earn goes into the family purse, and the excuse "they make is that when grown up and on their own "hook 'they can pick up as much larnin as they want "'at the night skule for northin.'"

"The half-day system as recommended in the report very good in theory, but impracticable. The girls return home very wet, and have to change everything and dry their clothes for next day. There is neither inclination nor time for the afternoon school at two o'clock, always bearing in mind that children who have enjoyed the liberty of the gang will not submit to the necessary subordination of the school, in fact they hate it."

The half day at school and half day at work system is "impracticable."

"Equally so the alternate whole day at work and whole day at school, in consequence of weather, upon which so much of out-door employment depends."

The school attendance is chiefly affected by "the "beerhouses, of which," writes Mr. Bumff, "I have "one to every 42 men, women, and children, or to "every eight families. Drinking therefore abounds "without much drunkenness. 'Lowance' is also "very common, three pints a day. This thins our "school. If it were not for drink all would be well "off and able to send their children pretty regularly."

With regard to cottage accommodation. "The "cottage property, as a rule, belongs to small trades-"men, and has been purchased for investment. I "have one with a single bedroom in which upon *two* "beds sleep father and mother, Mary aged 24, Lizzie "18, Sam 19, John 16, and till very lately *two other* "*young men*, one now dead and the other married, "and *the young woman to whom he was engaged.* "No curtains! When Mary was confined her two "youngest brothers slept at the bottom of the same "bed with her and her sister, their feet coming in "the middle."

A very interesting letter on the half-time system, addressed to Mr. Boyle by Mr. Charles P. Tebbutt, of Bluntisham, will be found in Appendix, Part I., p. 147.

PARISH OF UPTON.

Population, 152 - Acreage, 1,093.

Extracts from a Return sent in by the Rev. R. C. Dickerson.

"No case of injury to health or constitution from excessive labour has come under my observation. They themselves maintain that their life in the open air is healthful."

"The tone of morals is low." "Field work makes the woman's hands horny, which unfits them for needle-work. It also makes them averse to domestic duties."

"If any restriction is put on the employment of females in field work I would limit it to a defined age, say, for instance, that none should work in the fields till 17 years of age. This would induce parents to send their children to domestic service."

"The school attendance is not affected with us by the pecuniary resources of the parents." "The chief

g. difficulties are the want of efficient teachers and the disinclination to leave home at night when fatigued by the day's work."

PARISH OF PAPWORTH ST. AGNES.

Population, 165 - - - Acreage, 1,280.

EXTRACTS from RETURNS sent in by ARTHUR SPERLING, Esq., J.P.

"The only field labour injurious to health is weeding in high wet corn."

"Education is fair in this parish. It is quite the exception for a middle aged labouring man or woman to be unable to read."

"I think the employment of females in agriculture injurious to them. The girls are made coarse, the women lose more by neglect of their home duties than they earn in the fields. I would allow none to work under 8 years, and separate the sexes, and would prohibit females from working between 12½ and 18. I would also discourage but not prohibit all female labour in the fields."

"The half day at school and half day at work I think impracticable. The alternate whole day system might possibly answer."

'The school attendance is not affected by the pecuniary resources of the parents. The attendance at evening school is chiefly prevented by weariness after work."

PARISH OF HOLME.

Population, 644 - - - Acreage, 4,274.

EXTRACTS from a RETURN sent in by the Rev. EDWARD B. KNIGHT.

"The state of education of those who work on the land is miserable."

"I think the same restrictions necessary in the private as in the public gangs, especially as to the separation of the sexes and the character of the gang-master."

"The employment of females in agriculture unfits and indisposes them for domestic duties, and as a rule is unfriendly to morality. I believe the employment of girls is not necessary, and is most undesirable. Such labour sucks the blood of all social improvement, for even if they get no harm, I am certain they grow up to be the worst wives and mothers, helpless and ignorant in every domestic work. I would restrict their employment until the age of 14 or 15. This would encourage their being sent to school. No restriction should be placed on female labour in harvest time."

"I believe insufficient cottage accommodation to be decidedly prejudicial to the morality, health, and sobriety of the poor. It is impossible that a whole family can be brought up with the use of only one bedroom and escape injury. The depression and languor resulting from close and crowded rooms, especially in weak constitutions, is a great help to disease, and a great promoter of intemperate habits; I believe legislation is more needed here than in the matter of private gangs."

PARISH OF STILTON.

Population, 724 - - Acreage, 1,570.

EXTRACTS from a RETURN by the Rev. THOS. HUTTON, Rector.

"Field work as a regular system, is very injurious "to the morality of females. It unfits them for "domestic duties. In winter, when there is no field "work, they are thrown upon the streets, and thus "form the most serious obstacle to the moral elevation of the labouring classes." "I am inclined to "think that the labouring classes would be great "gainers in the end if all female labour in the fields "were prohibited except in harvest. The next best "step to this would be to prohibit all females under "18 except at hay and corn harvest. The prevailing "opinion among farmers here is that female labour is "unnecessary except at those busy seasons."

"An intelligent farmer here suggests that, in the case of boys, education should be made compulsory up to eight years of age, and also from 8 to 10 during the winter half year and from 10 to 12 during the three winter months; any further restriction he considers would be an undue interference with the claims of labour. He also thinks the half day and alternate day plans impracticable."

"The pecuniary resources of the parents affect "school attendance" to a large extent, not however so much from inability to pay the school fees as from unwillingness to exercise any self-denial to meet such a requirement. Every eighteenth house in this parish is a public house, and during the half year ending last Lady day 140 persons, or about one-fifth of the entire population, had recourse to parochial relief."

The want of cottage accommodation "has a most "injurious influence on the condition of the labouring "poor." "The moralities of life are not to be ex-"pected when its decencies are impossible. Ill con-"structed and unhealthy cottages have a most im-"portant influence on the self-respect and general "habits of the labouring poor. They tend to turn "wives into drabs, and husbands into drunkards; the "children even when not employed are kept from "school, either from want of decent clothing or "because the means which ought to have gone for "their education have been squandered in drink."

"The construction and drainage of cottages in many instances are very defective. There are 130 cottages in this parish, of these 64 have only one bedroom, 60 have two, and six three bedrooms; 40 have no back entrance; one family of five persons, four of six, two of seven, three of eight, two of nine, and one of ten persons occupy cottages with only one bedroom. The worst cottages generally belong to persons of limited means; nearly two-thirds of the whole are totally unfit for families to live in."

"The average rent is 1*s.* 6*d.* a week."

"It would be a great encouragement to industry and frugality, if every facility were given by law, and by building societies under the direction of the county gentry, to enable the labourer to purchase his own cottage in the course of a series of years by monthly or quarterly instalments."

PARISH OF ST. MARY, RAMSEY.

Population, 1088. - Acreage, 6,000.

EXTRACTS from a RETURN sent in by the Rev. WILLIAM COLLINS.

The state of education among the young of both sexes is "low, but not attributable to gang work."

"I consider that all children should attend school for four years at least before working in gangs or in field labour generally; that they should not work under eight or nine years of age; that from eight or nine to 13 children should attend school three or four months each year; this would keep up their learning, and be no hardship to either child or employer."

"I have not myself seen or heard of any evil or hardship arising out of the private gang system.

"I do not think that the employment of women in agriculture is hurtful to morality, but I do think it is not a good training for domestic duties; I do not recommend any restriction on such employment; it is an evil, but a necessary one."

SALMON FISHERIES (ENGLAND AND WALES):

160. SEVENTH ANNUAL REPORT of the INSPECTORS of SALMON FISHERIES (England and Wales) - - - - - 763

REPORT

BY THE

COMMISSIONERS FOR THE BRITISH FISHERIES

OF THEIR PROCEEDINGS

IN THE YEAR ENDED 31st DECEMBER 1867.

BEING THE FISHING OF 1867.

Presented in pursuance of the Acts 48 Geo. III., c. 110, sect. 7, and 55 Geo. III., c. 94, sect. 4.

THE Herring Fishery of 1867 was very abundant, and has been exceeded only by the Fishing of 1862, as yet the highest on record; in fact, the difference between the quantity of Herrings Cured in 1862 and in 1867 is only 5315 Barrels.

In 1867 the Totals Cured, Branded, and Exported were—

Barrels.	Barrels.	Barrels.
Cured,.....825,589.	Branded,.....317,421.	Exported,.....478,704¼.

Upon comparing these Totals with those of 1866, the year preceding, which was rather above an average Catch, it is seen that under every head there is a large increase in favour of 1867,—

Years.	Barrels.	Barrels.	Barrels.
1866,	Cured,.....658,146¾.	Branded,.....249,510.	Exported,.....380,066.
1867,	„ .....825,589.	„ .....317,421.	„ .....478,704¼.
Increase in 1867—	Cured,.....167,442¼.	Branded,..... 67,911.	Exported,..... 98,638¼.

When the comparison is made with an average of the previous eight years' Fishings, the increase in favour of 1867 is even somewhat greater,—

	Barrels.	Barrels.	Barrels.
Average of previous eight years,	Cured,.....656,348½.	Branded,.....245,402	Exported,.....380,151.
Year 1867,	„ .....825,589.	„ .....317,421.	„ .....478,704¼.
Increase in 1867,	Cured,.....169,240½.	Branded,..... 72,019	Exported,..... 98,553¼.

The Brand Fees collected in 1867 amounted to £5295, 19s. 8d., being an increase of £1132, 10s. 10d. over the Brand Fees of the year 1866, and an increase of £1201, 6s. over the average collection of Fees for the previous eight years. The collection of these Fees, representing as they do a close inspection of the Barrels of Herrings presented for Branding, imposes upon the out-door establishment of Fishery Officers, duties of an onerous and very responsible character, often attended with much anxiety and always requiring activity and diligence. The Commissioners gladly bear testimony to the careful and meritorious manner in which these duties have been performed by the Officers, and to the able superintendence of them exercised by Mr. Lamb, the General Inspector.

It is satisfactory to find that the Fishing Returns of 1867 show, that the increase of the year has not been caused by a glut at one particular Station swelling the gross amount and covering deficiencies at other Stations, but that upon both the East Coast and West Coast of Scotland there has been an increase at most of the Stations, and that comparatively few of them exhibit an opposite result.

The Stations with Increase are—

EAST COAST.

		Barrels.
Wick,	Increase about	11,500 Cured.
Lybster,		6,000 „
Helmsdale,		16,000 „
Cromarty,		9,000 „
Findhorn,		11,500 „
Buckie,		2,500 „
Fraserburgh,		10,000 „
Anstruther,		20,000 „
Leith,		1,300 „
Eyemouth,		25,000 „
	Increase,	112,800 Cured.

Fishery Board—875—July 1868.

EDINBURGH: T. CONSTABLE, PRINTER TO THE QUEEN, AND TO THE UNIVERSITY.

WEST COAST.

		Barrels.	
Stornoway,	Increase about	16,000	Cured.
Loch Broom,		9,500	„
Loch Carron and Skye,		26,000	„
Campbeltown,		500	„
Inverary,		6,500	„
Glasgow,		11,000	„
	Increase,	69,500	Cured.

At the Isle of Man also there was an increase of about 8000 Barrels.

The Stations with Decrease are—

EAST COAST.

		Barrels.	
Shetland,	Decrease about	3,000	Cured.
Orkney,		1,000	„
Banff,		500	„
Peterhead,		5,000	„
Montrose,		500	„
	Decrease,	10,000	Cured.

WEST COAST.

		Barrels.	
Rothesay,	Decrease about	12,000	Cured.
Greenock,		800	„
Ballantrae,		300	„
	Decrease,	13,100	Cured.

With respect to the Decrease upon the East Coast, it may be stated—

As regards Shetland and Orkney, that their Officers report—"That had it not been for "stormy weather towards the end of the season, the Fishing there would have been a good "one."

As regards Banff and Peterhead—

"That the Herrings had to be sought for further out to sea;" the Banff Officer stating "that the Fish did not draw towards the shore as in former years;" and the Peterhead Officer stating—"That from the commencement Herrings were very scarce on the "usual Fishing grounds, say within the limit of 15 miles, and in consequence the majority "of Crews went further off, in some instances to a distance of 30 or 40 miles, where "very regular though light fishings were made, and it is calculated that about one-half "of the catch of the season was brought from beyond the 15 miles limit. Frequent "calms and occasional fogs occurred in the period of this off-shore Fishing, and Crews "were frequently unable to gain the desired offing."

In Montrose District, the Decrease is only 500 Barrels, arising from the Cure in that District being somewhat less extensive than in the previous year.

With respect to the Decrease upon the West Coast—

The Rothesay Officer states—"That there was nothing like the body or shoals of "Herrings in the Kyles of Bute this year, compared with what there had been the two pre-"ceding years." But if this was the case in respect to the Kyles of Bute, it was the very reverse as regards the Gareloch a little higher up the Clyde. It is stated by the Assistant Inspector—"That no one remembers ever seeing such a quantity of Herrings "caught in Gareloch, and that it is at least 100 years since they were so abundant there; "large quantities were taken by buckets and baskets without a net of any kind; they were "sold very cheap, and were a most seasonable boon to the poor when all kinds of provi-"sions were high in price."

Upon the Ayrshire Coast, the Herrings never settle with any regularity during the summer months, and in the year now reported on they did not, as they sometimes do, collect in shoals towards the autumn and winter, which accounts for the slight decrease in pro-

duce of the Districts of Greenock and Ballantrae. Several of the Fishermen attributed the absence of the Herrings to a continuance of west-north-west winds, it having, as they say, been observed that Herrings only settle on this part of the coast when it is sheltered by east and south-east winds which blow off the shore.

The Commissioners having in their Reports for the years 1865 and 1866, printed Extracts from the Reports of the District Fishery Officers, deem it unnecessary to continue those Extracts for the year 1867, as in the communications they have received from Officers during that year, no new light has been thrown on any of the difficult and occult points which are known to exist in relation to the Herring Fishery. But a Report upon the Fisheries of Norway, by Mr. A. De C. Crowe, Acting Consul-General for the British Government at Christiania, contains observations so peculiarly applicable to the Fisheries of Scotland that the Commissioners introduce them here, as showing that the phases through which the Fisheries of Norway have passed and are passing, and the speculations which have been rife regarding them, are almost identical with what has been experienced in Scotland; and the Commissioners take this opportunity of expressing their obligations to Mr. Crowe for having supplied, in this Report and at other times, much interesting information upon the Fisheries on the Coast of Norway. He states that—

"The Herring Fisheries of Norway are divided into three distinct branches called the Winter or "Spring Herring Fishery, the Summer Herring Fishery, and the Pilchard Herring Fishery. It is "the Spring Herring Fishery which is the most important and gives rise to the large Export of "Herrings from Norway, the two others being comparatively insignificant and figuring but little in "the commercial annals of the country. The peculiarities of the Summer Herring differ in some "respects from those of the Spring Herring as regards size, appearance, spawning time, and even "in the shape of the fins and bone formation; these differences however are ascribed to the influence "of the local circumstances under which they have been developed, and although naturalists have "assigned to them different classifications as regards form, they have included them all in the genus "'Clupea harengus,' and consider them to be one and the same with the Herring found throughout "the North Sea."

He then says that he would probably be overstepping the limits of a succinct report such as he was rendering were he—

"To endeavour to elucidate the questions as to the causes of the irregular appearance of the "Herring and the unaccountable changes in the times and places of its apparition, or to dilate on the "theories advanced as to where this Fish sojourns during its long absence from the coast. The "solution of these queries is doubtless of importance from their close connexion with the question "as to where the Fish repair for spawning; but it must be left to science to solve satisfactorily these "problems.

"The belief was that the home of the Fish was in the North Arctic Ocean, whence they issued at "stated times to spawn on the shores of the Atlantic and North Sea; but it is now very generally "accepted that their home is in the depths of the ocean in near proximity to the coasts where they "spawn, and that their food are the crustacea and small sand eels abounding there. In common with "others of the finny tribes, each kind of Herring, impelled by a natural law, seeks at the spawning "time the spots where it was bred; this operation ended, it returns to its former haunts, which fact "explains the appearance near the land of the different kinds of herring at different times and places. "The fry remain for a while stationary near the place where they are hatched, but gradually return "to the depths of the ocean as they increase in size, remaining there until they are mature for pro-"creation, when they again visit the spot where they themselves first came into existence.

"Upon the working of this natural law depends the yearly yield of the Fishery, and it is not easy "to account for the occasional total absence of the Fish from their wonted haunts, and their subse-"quent as sudden re-appearance. This has at times not only been the case on the Norwegian coast "but also on that of Sweden, where the Herring disappeared in 1808 since which time they have "never re-appeared in any quantity. So large indeed was the Herring Fishery in Sweden previous "to that date, that in one year upwards of one million of Fish were alone used for pressing train oil. "It is a circumstance worthy of note that the same year in which the Herring disappeared from the "Swedish coast the large Fisheries commenced on that of Norway, and yet the Norwegian Spring "Herring is of quite a different form from the Fish taken in Sweden. There have likewise been long "periods in the last century during which no Herrings were seen on either the Norwegian or Swedish "coasts; but since the total disappearance of the Fish from the coast of Sweden, as before mentioned, "an uninterrupted and extensive Fishery has been regularly prosecuted on the coast of Norway.

"Although the Fishings on this long range of coast have been abundant during the greater part "of the present century, the Fish have been capricious in their appearance at the different points along "the coast, appearing in some years in large shoals at one spot, and totally abandoning others which "for years had been regularly visited. Explanations have not been wanting as to the capriciousness "of their migrations; the real cause, however, has yet to be discovered, and probably will be found to "be in close connexion with occult submarine agencies, with the abundance or scarcity of food, and with "the storms and currents affecting the ocean."

"The method pursued in Norway for the capture of the Herring is by means of Drift Nets, and "Seines or Enclosing Nets called also Trawls. The Seine or Enclosing Net was used in Norway as "early as 1820, since which time it has been employed side by side with the Drift Net in the Herring "Fishery. Fishing with Seines is more uncertain than with Drift Nets, and it frequently happens

" that owing to stormy weather and other causes, Seines catch nothing at all ; but on the other hand, " they can be very successful, and there are instances of one single Lock or Enclosure containing 20 to " 30,000 Barrels.

" Numerous and animated controversies have taken place on the relative merits of the two modes " of Fishing, with a view to determine their influence on the future permanence of the Fisheries and on " the ulterior quality of the Herring as a marketable article."

Into these controversies Mr. Crowe does not enter, but states—

" That in Norway there are no legal prohibitions against the use of any kind of Nets, either as " regards description, measurement, or size of Meshes."

Elsewhere he states—

" It has hitherto been believed that both the Cod and Herring at stated times seek the neighbour- " hood of the land to deposit their ova, which they do at the bottom of the ocean, and that the yield of " the Fisheries in great measure depended upon the suitableness of the localities they chose for this " purpose; and the irregular produce has accordingly been attributed to disturbing causes which " disquieted the spawn and interfered with its due development. In many cases the disturbance has " been attributed to human agencies, which it became of importance to investigate and control.

" When the recent legal enactments for the better regulation of the salt-water Fisheries of this " country were under discussion, arguments were adduced in favour of the complete or partial prohibi- " tion of the use of certain Nets and Gear which, it was presumed, interfered with the development of " the young fry. The use of Trawl Nets was especially considered baneful to the Herring Fishery, as " in drawing them the spawning grounds were swept, and the ova supposed to be disturbed and " destroyed ; and with respect to the Cod, the casting of the Net in the early stages of the Fishing was " believed to stay the rising of the Fish and their subsequent spawning.

" Science now appears to have arrived at a different conclusion, so far at least as the spawning of " the Cod and Mackerel tribes is concerned. The Norwegian Government have for some years annually " expended a sum of money for the purpose of investigating the habits of the Cod, and for obtaining " information with a view to improve and develope the Fisheries of Nordland and Finmark ; and last " year a Commission was named for the purpose of collating this information and proposing suggestions " for a revision of the laws regulating the deep-sea fisheries. These investigations, which have been " made with great care and patience and have extended over a considerable period of time, appear to " prove that the winter Cod, ' Gadus morrhua,' spawns in the open sea, at a considerable distance from " the bottom, and that the Spawn or Ova do not sink to it but go through the entire process of incuba- " tion floating about at no great distance from the surface. The same is believed to be the case with " the Haddock and Mackerel, and the numerous other species of the Gadus.

" It is yet doubtful how far this new discovery will affect the current opinion as to the injurious " effect of the use of deep-sea Nets ; but it is clear that, should further research tend to the same con- " clusion as regards the Herring, the old complaints against their use during the Herring Fishery will " likewise become groundless. The Government themselves have at any rate come to the conclusion " that the fewer restrictions that are imposed the better, and the evident tendency of their legislation " is to remove all existing barriers, and leave to the individual full freedom of action to carry on the " salt-water Fisheries in the manner expediency and his experience may suggest to him."

In a later Report upon the Spring Herring Fishery of 1868, although in consequence of excessively stormy weather the catch of that Fishery was short of former years, he states—

" That there was but one opinion with respect to the quantity of Fish upon the Coast, viz., that " in no previous year had the Fish been more plentiful ;"—

proof that the description of Nets used, however deadly they may be as instruments of capture, have no injurious effect in permanently diminishing, from year to year, the Shoals of Fish.

Turning from Norway to other countries, the policy of removing all restrictions upon modes of Fishing appears to be in course of general adoption. In the new Fishery Convention between France and Great Britain, both Countries have recognised this policy outside the Three Mile Territorial Limit ; the Convention, by the 10th Article, stipulating that " Fishing of all kinds, by whatever means, and at all seasons, may be carried on in the Seas " lying beyond the Fishery limits which have been fixed for the two countries," with the exception of fishing for Oysters which is specifically regulated by other Articles in the Convention ; and in Holland, where the Fishermen were formerly burdened with many restrictions, the Legislature has abolished them all, and left every one free to fish the Sea in any mode and at any time he deems most advantageous.

In Scotland a great step has been made in this direction in the year now reported on. In the Board's Report for 1866, it was stated to be the intention of Her Majesty's Government to prepare and submit a Bill to Parliament for removing all prohibitions against the use of the Seine or Trawl Net at the Herring Fishery. This Bill became the Act of 30 and 31 Victoriæ, cap. 52 ; by the 1st Section of which it is provided, that " it " shall be lawful to fish for and take Herrings at all places on the Coasts of Scotland, in any " manner of way and by means of any kind of Net having Meshes not less than that per- " mitted or required by law, and to sell, buy, or have in possession Herrings so fished for

" and taken." By this Enactment the Seine or Trawl Net, which had been prohibited for the capture of Herrings since the year 1851, was again made free to Fishermen. It was at once taken into use in Lochfyne and adjacent waters, and in Lochfyne its restoration was received with satisfaction as well by the Fishermen of the Upper Loch as of the Lower. In so far as can be judged by the test of one Season, the use of the Seine can be carried on along with that of the ordinary Drift Net, care being taken to exercise a close superintendence over the two sets of Fishermen; indeed many of the Fishermen were found using alternatively one or other kind of Net to their great advantage, according as the state of the Fishing rendered the one Net or the other the most successful and profitable to employ; for at times the Drift Net would catch Fish when the Seine would catch none, and *vice versâ;* while, instead of those bitter hostilities which the suppression of the Seine had created and which had, in former years on different occasions, led to confusion, riot, and bloodshed, the Fishing this past season was pursued in an orderly and quiet manner, and with very marked success. The Fish caught in Lochfyne in 1867 are described as having been of splendid quality and of large size, and the quantity cured there was the highest since the great Herring Fishery of 1862, the Fishing being altogether more abundant than for several years past. Some apprehension was entertained lest the active use of the Seine in the lower waters of Lochfyne should prevent the Fish getting to the upper parts of the Loch, and thus deprive the upper Fishermen of their share in the Fishing, but this apprehension is reported to have subsided, in consequence of Herrings, at the close of the season, having been found in abundance in the upper parts of the Loch. Further experience of the working of the Act, and of the diversities in the set of the Herring shoals from year to year, may bring out more fully than one year's trial could do, that for the preservation of order among the Fishermen and preventing injuries being done by them to each other's nets, precise fishing regulations require to be laid down. Indications of a desire for such regulations have been exhibited, and certain of the Fishermen have expressed opinion to this effect; but restrictive regulations would be premature until indispensable necessity for them be proved, neither would it be right to introduce them, merely upon such little inconveniences being suffered as are almost inseparable from the operation of Fishing particularly where the waters are narrow: the Commissioners are glad to be able to report that as yet no such indispensable necessity has arisen, and that during the year, not only in Lochfyne, but also in Kyles of Bute, Gareloch, and Clyde, in all which places the Seine was in active use, the Fishing was carried on without anything like disturbance or even brawls, and with only those petty disputes which could be promptly settled on the spot. It is due to Lieut.-Commander Dupuis and the Officers of H.M.S. "Jackal," and to her Tender, the "Cygnet," placed on this Station, as well as to the Assistant-Inspector, Fishery Officers, and Fishery Police, to state the credit which this reflects upon the vigilance and activity of their Superintendence over the Fishing grounds.

The Winter Herring Fishery prosecuted in the Firth of Forth was again excellent, as in the previous year. So likewise was the Sprat Fishery, both in the Firth of Forth and in the Beauly Firth, in which places its abundance proved a great boon to Fishermen of all kinds —to the Sprat Fishermen, making up by quantity and ease of capture for lowness of price from glut of Fish—and to other Fishermen, furnishing a plentiful supply of excellent bait for Cod, Haddock, and all sorts of white fish, at a time when mussels were scarce and the White Fishery in full operation but dependent upon good bait for productiveness. A trade is, to some extent, carried on in preserving the Sprats in tins after the manner of Sardines, both for home consumption and export; and in a simpler form of preparation, they are very extensively used by the working-classes and much prized as food. Upon the Outer Coasts, the Winter Herring Fishery was not successful; its results could not indeed have been other than disappointing and insignificant in the face of the extraordinary and continued succession of gales which prevailed.

The Cod and Ling Fishery upon the Home Coast, where it is carried on chiefly by open boats, was not so good as it had been in 1866; but the adventures to Iceland and the Faroe Islands from Shetland and other parts, which in 1866 had failed, turned out well in 1867, and made up for the short supplies from the open boat fishery, there being upon the total cure of Cod and Ling in the year an increase of 3819¼ cwts. cured and dried, and of 861½ barrels cured in pickle.

The application of Steam to the purposes of Fishing has been under the serious consideration of many persons. It takes two shapes: the one—the supplying of Steam Tugs to tow the Boats to and from the fishing grounds; the other—the placing of a Screw Engine within the Fishing Boat herself. Both modes are likely to be soon tried, as it is in contemplation to employ Steam Tugs at different places in aid of the Fishing Boats, and certain enterprising Fishermen have put a Steam Fishing Boat upon the stocks to be ready for the Herring Fishery of 1868; a Steam Fishing Vessel has also during the past winter been at work

at the deep-sea White Fishery. Steam Tugs in aid of the Fisheries have already been organized by the Norwegians, for Mr. Crowe states :—"That two or three years ago the "prejudice was so strong and so universally entertained by the Fishermen generally, that "steamers frightened and drove the Fish away, that there was a hue and cry to forbid "their plying near the Fishing grounds; but this year (1868) numerous small Steam "Boats from Bergen were advantageously and without any objection, employed in towing "the loaded Herring Boats into Harbour, and crossed through the shoals of Fish without "apparently any astonishment either to the men or fish."

The season was remarkable for many fewer difficulties and collisions, as between the French Fishermen and the British, than had been experienced in any previous year, which is to be attributed to the French having kept much further off at sea than usual. They were often fishing at such distances as not to come within sight of the British Coasts and the British Boats fishing there. It has been previously stated in this Report, as from the Officers at Peterhead and Banff, "that the Herrings had to be sought for in the season far "out to sea," and it is inferred that the French having fallen in with them there, felt no inducement to approach the land and get involved with crowds of boats and men swarming out of British Ports; so that a much more distinct and more easily maintained separation was kept up between the Fishermen of the two countries, and the annoying seizures and detentions, so frequent in former years, were avoided. The carrying out of the Regulations of the Convention was committed, in communication with this Board, to the Gunboats 'Netley,' Lieut. Hamilton Dunlop, and 'Erne,' Lieut. the Hon^{ble} Francis Crofton, Tenders to H.M.S. 'Trafalgar,' Guard Ship at Leith; and to H.M.S. 'Lizard,' Lieut. Stanhope Grove Price :—these Officers carried out the instructions given them with most commendable zeal and activity. The Fishery Cutter 'Princess Royal,' Samuel M'Donald, Esq., Commander, was, during the Summer Fishery, stationed as in former seasons at Stornoway and Wick, where she gave much assistance to the Fishing Boats, and there as well as at other Stations where she was employed during the year, Mr. M'Donald, by his immediate interposition and by the representations which he made to this Board, was successful in obtaining for the owners and crews of Fishing Boats full compensation for losses sustained at sea, in cases where passing vessels had run down or otherwise seriously injured the Boats, and where it was not likely that any such compensation would have accrued, had there not been on the spot a Cruising Officer in authority of so much fishery and coasting experience, to deal as a neutral between the parties concerned.

The Meteorological Department in London have been pleased, during the year, to allocate Fishery Barometers on loan to the following Stations, viz. :—Portsoy, in the county of Banff; and Avoch, in the county of Ross. The Barometers, upon being received from the Department by the Fishery Board, were put down at their respective Stations on its being certified that a suitable place for them had been provided and a proper person selected to look after them; and the Board can state with satisfaction the obligations which the Fishermen entertain towards the Meteorological Department for the loan of these instruments, there being no place to which one has been assigned where it is not highly appreciated and constantly consulted by the men. These loans from the Government have also, on several occasions, been the means of obtaining for Fishermen free gifts of Barometers to Fishing Stations from private parties.

The attention and care of the Norwegian Government in this direction are very marked. Mr. Crowe states—

"The Fishings have of late years extended over a longer range of coast than formerly, and the "want of proper lights and harbours of refuge has been much felt. The Government have now "decided upon expending a certain sum of money for the purpose of remedying the evils their non-"existence occasions; and when the works they have projected are completed (including a harbour "of refuge at Udsire), it is expected that the produce of the Fishery will be much increased. In the "interest of the Fisheries in general they have likewise decided on extending the telegraphic wires to "the Russian frontier, notwithstanding that this work will involve a large and unremunerative outlay, "for the line will pass through but few and unimportant towns, separated by large and sparsely popu-"lated tracts of country. Telegraphic Stations are now erected, or are in course of erection, at the "principal points along the Coast, and the Inspectors keep up constant communication with all the "Stations in operation. Field Telegraphs are kept in readiness to be joined on to the Main Line, and "the slightest movements of the shoals of Fish are carefully watched and communicated. The men "prize highly this valuable coadjutor; and when the catch is chiefly attributable to its agency, they "call the Fish 'Telegraph Herrings.'"

"As far as I am aware, the application of the Telegraphic Wire in aid of the Fisheries is peculiar "to Norway. The benefit likely to accrue from its use is incalculable, for it is not only likely to "increase the yield of the great annual Cod and Herring Fisheries, but it will enable the scattered "dwellers along the coast and on the shores of the large Fjords to assemble at given spots during other

" seasons of the year, and to prosecute with advantage the minor but numerous other Fisheries of the " country, especially that of the fat and much esteemed Summer Herring, which in plumpness and " delicacy of flavour fully competes with the Dutch or 'North Herring.'"

It will be observed in the above quotation that three separate things are spoken of as being provided by the Norwegian Government, viz.—Lights on the Coast, the Telegraph, and Fishery Harbours of Refuge. As regards Lights on the Coast, it is impossible to speak too highly of the care applied by our own Government to the Lights upon the British Coasts, of the ability displayed in their management, and of the pains taken to increase their number and to introduce and develope improvements in them year by year. As regards Telegraphs, should the transfer be made to Government of the whole system of Telegraphic communication in this country, it cannot be doubted, that without carrying the system in its application to Fisheries so far as it is carried in Norway,—which neither would be needed upon our Coasts nor be adapted to them,—the Telegraph might yet be so much further extended as to be made no less valuable to the Fisheries of Scotland than it promises to become to those of Norway. As regards Fishery Harbours of Refuge, the one constructing at Wick by the British Fishery Society has made great progress during the year, and although far from completion, no little shelter to Boats has been already derived from it. The Commander of the Fishery Cutter reported (1867) :—" We came into New Harbour, " Wick, on the 18th of August (the first vessel to enter it). Having it all to ourselves, we are " quite secure ; and if the works make progress next year as they have during the present, " I would not hesitate to run in in any weather if clear of other craft. Since we first used " it, about 200 Boats daily come under lee of it, thus keeping afloat and preventing a blocking " up of the Inner Harbour." The Local Newspapers also stated that—" On several occasions " when a smart south-easterly breeze threw in a heavy surf, Herring Fishing Boats rode in " perfect safety;" and that "by next season (1868), when it is hoped 250 feet will be added to " the Pier, leaving only 400 to be put up, steamers as well as sailing vessels will be equally pro- " tected." This great and arduous work, when finished, cannot fail to prove an inestimable boon, not only to its own District but to the Fishermen and trading vessels frequenting Wick from all parts. But to give real success to the Fisheries, to gather in against opposing elements the vast supplies of fish food to be found in the ocean, to bring it with rapidity to the railways, which carry it fresh and in the finest condition for consumption to the great centres of population throughout the kingdom, and to relieve the Fishermen's calling from that serious risk to life and property which now attaches to it, many more Harbours, safe and ready to hand are needed : the erection of these ought, without delay, to receive that fostering aid of Government which is being given in Norway, and the necessity for which has been annually represented by this Board in its Reports to Parliament, as well as by every Royal Commission which has investigated the Fisheries. The expenditure of funds for this purpose for a few years in succession, would complete all that is required, and Harbours properly constructed and of sufficient size, being once made, the Dues taken from the Boats for the use of them would, it is believed, be found amply sufficient to provide for their annual cost of maintenance.

With these general remarks upon the urgent necessity for Harbours and the expediency of promptly erecting them, the Board have only further to state that their small Annual Grant of £3000 has, according to the provisions of the Anstruther Union Harbour Act, continued to be applied to the construction of that Harbour. It has made rapid progress, 920 feet of the eastern Pier being completed, with the exception of the roadway ; other 298 feet have yet to be executed, which being in deeper water and requiring the constant use of the diving-bell, cannot advance so rapidly. A Breakwater has to be erected upon the west side, but in consequence of the prospect of a branch from one of the Fife railways being carried down to the Harbour, an accessory of the greatest importance to it both as a Fishery and a Trading Harbour, and to the raising of revenue to repay the loans for its construction, the commencement of this Breakwater has been deferred until it be seen whether the Breakwater ought not rather to be made a Pier and Landing Quay, if the means can be obtained to carry that alteration into effect. Anstruther was selected by the Royal National Lifeboat Institution for the building of one of their Model Fishing Boats, in which several new arrangements have been presented for the consideration and practical trial of Fishermen. These Boats have been placed upon different parts of the coast in order to be tested, and great interest has been excited amongst the Fishermen as to the relative merits of the Lifeboat Institution Boats compared with the ordinary Fishing Boats. The trials have not yet been sufficient to determine results, but nothing can be more laudable or more attach the Fishermen and coast population to this great and noble Institution founded for the preservation of life, than its presenting models and stimulating the skill of Boat Builders, as has been done by these Boats, to provide for the safety and for the protection and accommodation of the Fishing Crews. Whatever the immediate result as regards

these Boats, the endeavour cannot be without fruit in gradually making all Boats employed in fishing more seaworthy and better adapted to meet bad weather, while yet retaining in every respect, those properties which are indispensable to make a Fishing Boat upon these Coasts successful as well as safe.

The Report of the Engineers and General Account of the year's Expenditure of the Pier Grant, with the outlay upon Anstruther Union Harbour, will be found in the Appendix, along with the Returns and Statistics of the Fisheries for the year, in the following order :—

HERRING FISHERY.

No. 1.—Account of Vessels in Scotland and the Isle of Man fitted out for the Herring Fishery, with the Herrings Salted or Cured on board;

No. 2.—Account of Herrings Salted or Cured on Shore in Scotland and the Isle of Man;

No. 3.—Account of the Total Quantity of Herrings Cured in Scotland and the Isle of Man;

No. 4.—Account of the Total Quantity of Herrings in Scotland Branded, with the amount of Fees collected thereon;

No. 5.—Account of the Export of Herrings from Scotland and the Isle of Man; with a Supplementary Note showing, for the Export to the Continent, the Ports to which the Herrings have been Shipped;

No. 6.—Account of the Number of Cran Measures in Scotland adjusted and Branded;

Abstract of the Total Quantity of White Herrings Cured, Branded, and Exported, from 1st June 1809 to 31st December 1867, showing also the Countries to which they have been Exported.

COD AND LING FISHERY.

No. 1.—Account of Vessels in Scotland and the Isle of Man fitted out for the Cod and Ling Fishery, with the quantity of Cod, Ling, and Hake they Cured;

No. 2.—Account of Cod, Ling, and Hake, taken by Open Boats at the Cod and Ling Fishery in Scotland and the Isle of Man, and Cured;

No. 3.—Account of the Total Quantity of Cod, Ling, and Hake taken both by Vessels and Open Boats at the Cod and Ling Fishery in Scotland and the Isle of Man, and Cured;

No. 4.—Account of the Export of Cod, Ling, and Hake from Scotland and the Isle of Man;

Abstract of the Total Quantity of Cod, Ling, and Hake Cured and Exported, from 10th October 1820 to 31st December 1867.

FISHERY STATISTICS.

No. 1.—Account of Boats, Men, &c., employed at the Herring Fishery in Scotland and the Isle of Man, in one selected week for each District;

No. 2.—Account of the Boats, Fishermen, &c., with the estimated Value of Boats, Nets, and Lines employed in the Herring and Cod and Ling Fisheries of Scotland and the Isle of Man;

No. 3.—Account of the Tonnage of Shipping, and Number of Seamen employed in the Fisheries of Scotland and the Isle of Man;

No. 4.—Abstract of Tonnage of Vessels and Boats, and of the Seamen, Fishermen, and Persons employed in the Fisheries of Scotland and the Isle of Man.

Report by the Engineers of the State of the Harbour Works in charge of the Board of Fisheries.
General Account of the Expenditure on Harbours, Piers, or Quays.
Abstract showing the Expenditure on each Work.

SUMMARY.

In detailing the substance of these Accounts and comparing them with those of the preceding year, it will be seen that the total quantity of Herrings cured during 1867 was 825,589 Barrels, the total quantity branded 317,421 Barrels, and the total quantity ex-

ported, 478,704¼ Barrels: being an increase over the preceding year of 167,442¼ Barrels in the total quantity cured; of 67,911 Barrels in the total quantity branded; and of 98,638¼ Barrels in the total quantity exported.

In the Cod and Ling Fishery, the Returns show that in the year 1867, 119,638¼ cwts. were cured dried, and 10,819 Barrels cured in pickle; and that the total quantity exported was 46,225 cwts. cured dried: being an increase over the preceding year of 3819¼ cwts. in the total quantity cured dried; and of 861½ Barrels in the total quantity cured in pickle; but a decrease of 1528 cwts. in the total quantity exported.

From the Fishery Statistics, it will be seen that in the year 1867, 14,208 Boats, manned by 46,219 Fishermen and Boys, were employed in the Herring and Cod and Ling Fisheries; and that the total estimated value of Boats, Nets, and Lines employed in these Fisheries in the same period was £1,020,188: being an increase over the preceding year of 393 Boats and 749 Fishermen and Boys, and an increase of £30,723 in the estimated value of Boats, Nets, and Lines.

Report by the Engineers on the State of the Harbour Works under the Charge of the Board of Fisheries.

The only Work which has been carried on by the Board during the past year is the Union Harbour of Anstruther. The Contractors have made rapid progress, and there are now 920 feet of the Eastern Pier completed, with the exception of the Roadway. It is satisfactory to know that, excepting some trifling damage that occurred at the unfinished end in the month of April, the Works have stood well. There now remain to be executed the two outer kants, extending together to a length of 298 feet. As these works form the low-water part of the Pier, the Contractors are now taking steps for using the Diving-Bell in addition to the Diving-dresses hitherto employed.

The execution of the Western Breakwater has in the meantime been delayed, as some negotiations are on foot for enabling the East of Fife Railway Company to extend their line to the Harbour, in which case it will be necessary to alter the proposed Western Breakwater, so as to form a Quay for the accommodation of Shipping.

D. & T. STEVENSON,
Engineers.

Edinburgh, 1*st June* 1868.

REPORT

BY THE

COMMISSIONERS FOR THE BRITISH FISHERIES

OF THEIR PROCEEDINGS

IN THE YEAR ENDED 31ST DECEMBER 1867.

BEING FISHING 1867.

REPORT

OF THE

SPECIAL COMMISSIONERS

FOR

IRISH FISHERIES,

FOR

1867.

Presented to both Houses of Parliament by Command of Her Majesty.

DUBLIN:

REPORT,	3
APPENDIX,	24

REPORT.

TO HIS EXCELLENCY JAMES MARQUIS OF ABERCORN, K.G.,

LORD LIEUTENANT-GENERAL AND GENERAL GOVERNOR OF IRELAND.

MAY IT PLEASE YOUR EXCELLENCY,

WE have the honour to submit to your Excellency, the Fifth Annual Report of this Commission, arranged under the following heads:—

1. The General State of the Fisheries during the year, their Prospects, Funds, &c.
2. Fixed Engines in tidal waters.
3. Stone Weirs and Free Gaps.
4. Fish Passes or Ladders.
5. Mouths of Rivers and Estuaries.
6. By-Laws.
7. Close Seasons.
8. Local Management.
9. Legislation suggested.

1. *The General State of the Fisheries during the year, their Prospects, Funds, &c.*

Though it must be admitted that the capture of fish in Ireland during the last year has been below the average, (as appears both from the railway returns and the Clerks' report as given in the Appendices,) we think that the deficiency is not to be considered as indicative of a decline in either the produce or value of the Salmon fisheries, but may be accounted for by the very exceptional state of the weather and rivers during the fishing season. This opinion, adopted from our own experience and observation, has been confirmed by the answers to our usual inquiries addressed at the end of this year, not only to the Clerks of the districts, but to the Conservators individually. During the early and, indeed, until a very advanced period of the last season, the weather was, as will be recollected, unusually cold and harsh—a state of things which is generally considered to be prejudicial to fish entering the rivers; while in the spring of the year the heavy floods preventing nets from being used in the lower part of the tidal waters greatly facilitated the escape of the first run salmon to the upper waters, and at the same time were prejudicial to the rod-fishing; and though the capture by rods in the upper part of some of the rivers of fish during the early season, heavier than usual, would lead to the conclusion that several then got up, we have no reason to think that the number which at that time ascended the rivers was, comparatively speaking, large.

With weather propitious to the ascent of the fish, the heavy rains were succeeded by a long-continued drought, which reduced the majority of the rivers much below the summer level for nearly the entire succeeding part of the fishing season. During this time we have been informed that at the mouths of some of the rivers where nets were not used fish were seen at times in shoals sporting about; but the state of water in the rivers was such that they were unable to get up at all, and the fish became so much deteriorated by being kept out that the character of even fresh run fish, taken in the late part of the rod season, was quite different from that of the fish usually frequenting the rivers.

In one place, an experienced fisherman, to account for the disappearance of the fish after they had been so seen at the mouth of the river, suggested that in consequence of

their inability to get up their own river (which was a tributary) they had, after a time, passed it and gone to try their success in getting up the principal stream. We mention this to show that so exceptional was the state of the rivers last season that even the humbler classes of fishermen resorted to new theories to account for the deficiency of them.

Another reason for the paucity of fish taken during the last fishing season—one, too, of great importance upon a subject to which we have frequently adverted, viz., the over net fishing at the mouths of salmon rivers—may, perhaps, be found in the well-remembered drought of the season of 1864—the driest season which had been since the year 1826 ; for there is no doubt that by the excessive fishing at the mouths of rivers for the very large part of that season during which the fish were unable at all to get up the rivers, an unusually large quantity of the breeding fish whose spawn might be expected to stock the rivers last year and this was destroyed.

Whilst, however, the quantity of fish observed in the rivers during the season was not large, we are enabled to state that after, and towards the close of, the fishing season, the heavy water in the rivers which continued for some time previous to the general spawning months, permitted the access of the fish to the upper waters, and during the months of November and December, a number much larger than is usual in these months ascended the rivers ; and in the after season the rivers were so abundantly supplied with breeding fish that we are hopeful that the dry season of last year will not produce any permanent injury to the fisheries, and we notice with pleasure that during the part of this season which has passed, if the fish in the Dublin market have not been more numerous than usual, the proportion of large fish to be seen is much greater, and the fact of many of them having come from Limerick, is strongly corroborative of the statement of the fisherman mentioned in our last report, that the size of fish taken above the tidal waters of the Shannon is increasing.

Since writing the above, we have received from the Clerk of the Conservators of the Limerick district, his report to the Board for the past season, and we are glad to avail ourselves of the opportunity of referring to that report, which as one coming from a gentleman of long experience in the largest and most important district in Ireland, is entitled to the greatest attention, particularly when grounded, as it is, upon apparently very great personal observation, and the reports of his water-bailiffs in different parts of the district.

His remarks upon the last season coincide in so many respects with what we have above submitted to your Excellency, that we think it is right to give them in his own words. He says :—

"Our knowledge of the habits of the salmon, and of the influences that affect or govern their migration, is still too limited to enable us to account satisfactorily for the disappointment of those sanguine, and by no means unreasonable, expectations which were very generally indulged at the commencement of the open season. Several years of the most careful protection, and a succession of universally favourable spawning seasons, were sufficient to justify predictions very different from those which it was found at the close of the season had been verified."

"My experience induces me to ascribe the unproductiveness of the past season chiefly, if not altogether, to the prevalence during the spring and early part of the summer of a degree of cold not often experienced at such periods. The winter of 1866–7 was remarkable for severe and long-continued frost, which, setting in immediately after a heavy fall of snow, so hardened the latter as to keep it for some months from melting. After a short intermission we were again visited with severe frost during portions of the months of February and March, and I find, from a record kept by one of the water-bailiffs, that from the 27th February to 20th April, a period of more than seven weeks, a very harsh easterly wind was blowing. This wind is notoriously unfavourable to the capture of salmon in this district, either by net or rod, and has always been known to retard the approach of such fish to the rivers. The month of May, too, was remarkably uncongenial, from the frequent recurrence of heavy showers of sleet and hail, and even throughout the month of June a very sensible degree of cold was occasionally experienced ; and I think it will always be found most when the water is unusually cold, as from the causes enumerated it certainly was during the spring and early in the summer of last year, the supply of the salmon during the open season will be diminished, as the upward migration of the fish will be delayed beyond the usual period."

"The fact which I am happy to be able to record—that the supply of breeding fish during the past spawning season was *unprecedentedly* large—must be regarded as strong evidence in favour of this theory. Had not a large upward migration of salmon taken place last autumn, the stock of spawning fish, judging from the supply during the open season, must have proved seriously deficient. As, however, the breeding stock was more than ordinarily abundant, and as it certainly was not collected during the open season, it is clear that a larger run of salmon must have taken place at a later period. As the only cause to which this late migration can reasonably be attributed, is of an exceptional character, we are justified in regarding the comparative unproductiveness of the past fishing season as exceptional also, and in indulging expectations of a sanguine character respecting the future."

Speaking of the spawning season, he says :—

"The only complaints which I received were, that in some places the breeding stock was too large, and that the beds were turned up several times in succession by different shoals of fish. Considering the small proportion which the spawning ground of even our best breeding rivers bears to their entire area, I have no doubt that an over-supply of breeders proves injurious, because the earlier deposited spawn is liable to be rooted up, and only that which is latest deposited is likely to prove productive."

The interest in the fisheries, as shown by the amount of licence duties, is still on the increase. Last year we referred to a progressive increase in the sums paid for licences —these having then produced the largest sum before that time realized by them, and this year they have exceeded that by a further sum of about £218, of which £164 has been in the Limerick district. This has been principally the result of the increase of drift nets in the river Shannon, the number of which (93) in the last year was nearly double the number (47) in the preceding year. These engines, used by the humbler class of fishermen in the lower part of the river, were, until after the abolition of fixed engines, unknown in that river. Notwithstanding, however, this increase, the funds realized by the licence duties are not, nor with the present scale are they likely to be, nearly adequate to permit the proper remuneration of bailiffs for the protection of the rivers, and pay the other expenses incident to the advancement and preservation of the fisheries ; and were it not for the sums expended by the owners of the principal fisheries of some of the rivers, the stock of the rivers could not be kept up.

2. *Fixed Engines in Tidal Waters.*

The few of these which remained to be inquired into at the time of the last Report of the Commissioners, with one or two since sent back to us for further inquiry, have been disposed of. In some of them appeals are pending which will probably be decided during the next term. Of the decisions made during the year upon appeals from inquiries held before the Commissioners, one only requires remark, but some decisions have been otherwise made upon very important questions connected with the fisheries.

The way in which measurement of distances is to be made for the purposes of the Fishery Acts, though collaterally raised in more than one case, has not under the proceedings of the Commission required a decision, until the case of a bag-net situated in the bay, near the headland of Mullaghmore, in the county of Sligo, the property of Lady Palmerston, was brought before the Commissioners. The legality of that net turned exclusively upon the question whether the net was situated within three miles of the mouth of the river Bunduff, as defined by the Commissioners, for if it was, it was illegal by the provisions of the 3rd section of the Act of 1863. The net was situate at one end and the mouth of the river at the other end of a bay ; and it was admitted that, measuring by a direct line from the net to the mouth of the river, the net was within three miles of the mouth, but it was contended on behalf of the defendant that instead of adopting that, inasmuch as salmon is a fish which swims along the shore, the measurement should be made by some line on or near the shore round the circle of the bay. The Commissioners by analogy to the decisions made as to the measurement of distances on lands for other legal purposes, decided that it should be made by the direct line and condemned the net. This decision was appealed from, and after a very full argument and a careful hearing, the Court unanimously upheld the decisions of the Commissioners, stating that in all cases distance under statutes should be measured by the direct line unless some other mode is pointed out by the Act. By this decision the correctness of the decision of the Commissioners in Hodder's case referred to in the last report was upheld, they having in that case given a certificate to the owner, upon being satisfied that the net was beyond three miles from the defined mouth of the river, measuring the shortest *water* line by which the salmon could swim, excluding thereby intervening land as not being available for the purposes with reference to which the measurement was to be made.

This decision equally applies to the manner in which the mile distances from the mouths of rivers for stake nets, and the half-mile line for draft nets, are to be measured.

One of the earliest weirs on the Shannon inquired into—viz., that of Synan M'Auliffe (being No. 96 in the first Appendix)—has been lately brought before the Court of Queen's Bench in an unprecedented way. It was a stake weir situated in the county of Clare, and according to the requirements of the Act of Parliament a summons was issued to inquire into its legality in the county of Clare. The evidence given there was not sufficient ; and, at the request of the owner, the inquiry was adjourned to a meeting to be held by the Commissioners in the city of Limerick a few days after. At the further inquiry some additional evidence was given on behalf of the owner, but not sufficient to satisfy the then Commissioners, and a decision was made by them for the abatement of the weir, against which the owner did not appeal. The order, however, it appears from that document, was signed in Limerick ; and at the beginning of this year (nearly four years after the inquiry) an application was made to the Court of Queen's Bench for a *certiorari*

to bring up that order and have it quashed, on the ground that though in it the case was stated to have been heard in Clare, yet the Commissioners had no jurisdiction to sign it in the county of Limerick, and that the consent to try it there was, in fact, a nullity. The 8 & 9 Vic., c. 108, s. 22, provides that no order, decision, &c., of the Commissioners shall be removed by *certiorari* or otherwise into the Court of Queen's Bench; and the Act of 1863, sec. 40, provides, "nor shall any proceedings before them (*i.e.*, the Special Commissioners) be removable by *certiorari* or other writ of a like nature;" but in no part of the Fishery Acts is it required in terms that the order, &c., should be signed in the county where the case is tried, and if an order such as this requires signature in the county where the weir is situated, it might be contended that other orders, viz., for close seasons, bye-laws, warrants, and formal documents equally require it, a matter so practically inconvenient in its results as to require that such a construction should not be given to the statute unless the Court is coerced to do so. When the case was opened on the part of the owner, the Court seemed not disposed to yield to the motion, but afterwards affidavits were made to endeavour to show that the case was similar to some which had been decided upon appeal in favour of owners, with the view of getting the order of the Commissioners set aside by the Court and a new trial ordered, inasmuch as the owner had not appealed in consequence of his mistaking the law.

The Act of Parliament, however, (*i.e.*, the Act of 1863) s. 14, provides only one way for setting aside the order of the Commissioners, viz., by appeal, the application for which must be made to the Commissioners with certain prescribed formalities, "in writing seven days after the delivery of the decision *and not afterwards*." In that respect the jurisdiction of the Court is simply statutory, and it is difficult to see how it can in any other way, except that prescribed by the statute, interfere with an order of the Commissioners; or when, as in this case, the time pointed out by the statute has lapsed, if the order be formally correct. As no one appeared to oppose the application for the *certiorari* upon the second hearing, the Court granted the Order upon the technical ground only, for the purpose of having the point argued.

In the course of the inquiries under this Commission, a question has frequently been raised as to the effect of a conveyance of a several fishery by the Landed Estates Court, but never under such circumstances as to require a decision from the superior Court, and though this question has not yet been actually decided, the case of Gore *v.* M'Dermott, which was during this year brought before the Court of Common Pleas, led to so minute a consideration of the law on this subject, that it may be almost taken as a decision of that very important question.

It was an action of trespass, and the defendant claimed the fishing in one-half of the part of the river Moy, opposite the lands of C. under a fee-farm grant by which that part of the river was conveyed to him by the owner in fee. The plaintiff claimed under a lease made by the representative of the grantor in the fee-farm grant of the right and advantage, &c., of the several fishery in the river Moy within the limits of the same lands, "*as fully as the said lessor had power to demise the same.*" The interest of the lessor in the last lease was sold in the Landed Estates Court, and the Conveyance by the Judge, after reciting the fee-farm grant to defendant, conveyed the fee-farm rent, "and all the "estate of the grantor under said deed, and the right of fishing in the river Moy within "the bounds of said lands of C." to the plaintiff, and the question raised was whether the several fishery in the part of the Moy opposite to said lands of C. passed to the plaintiff under the Landed Estates Court Conveyance. It was held by the Court that under the circumstances stated according to the true construction of the deed, nothing passed by it except what the lessor whose estate was sold had at the time of the sale, viz., the fee-farm rent, and gave judgment for defendant. The general question, however, was much argued, in consequence of which the Judges of the Landed Estates Court were communicated with, and the Chief Justice Monahan, in giving judgment, says—

"It was argued that a grant cannot be made by the Landed Estates Court of an incorporeal hereditament, which did not exist at the time. . . . . .

"Now by the 1st section of the Act, the term 'land' is declared to mean any hereditament, corporeal or incorporeal whatever, held by lease or otherwise. There can be no doubt that a fishery, whether several or free, comes within this definition;" and speaking of the 37th section of the Act, by which the powers of investigating title, &c., is given to the Landed Estates Court, he says, "I do not think there is anything in that section of the Act confining their powers to landed property, as contradistinguished from incorporeal things. . . .

"The 61st section says—Every such conveyance purporting to pass an estate in fee-simple, shall be effectual to pass the fee-simple and inheritance of the land." . . . . "If any defined piece of land is conveyed, the fee and inheritance will pass, though, in fact, it did not belong to the alleged owner, but was the property of some third person. When the conveyance is in fee-simple, I see no distinction between a corporeal and an incorporeal hereditament."

"We have come to the conclusion that, however hard it may be on Mr. O'Grady, ...

if we find the conveyance by Judge Hargreave purported to convey a several fishery it must be held to be effectual for that purpose, and therefore the real and only question is what is the true construction of the conveyance? Does it purport to convey a several fishery in the part of the river Moy particularly described? If it does, we are of opinion he is entitled to have it." . . . .

Amongst the decisions, however, which have been made during the year, there is none perhaps which has attracted more attention or which is more important, whether considered with reference to the fishery laws or to its results as regards the proceedings of this Commission than one made in the Court of Queen's Bench, which has been the subject of observation in the report of the Clerk of the Limerick district, to which we have already referred. The case to which we allude is that of Stewart *v.* Cubitt, which came before the Court upon a case stated by way of appeal from a decision of the magistrates at Ballycastle Petty Sessions.

In our report of last year, we referred to this case as one in which a conviction had been obtained against a gentleman for fishing in the Ballycastle district. We referred to it then as one of "half-net" fishing, but though it was not we find, in strictness a case of that description, it may be looked on as ruling in a great measure the legality of that mode of fishing. At the time of the last report an appeal from that decision was pending before the Court of Queen's Bench and it has since been heard, and the decision of the Court will so largely influence the fishery interests that we think it right to call your Excellency's attention to it particularly.

The defendant was summoned for having in June, 1866, placed a fixed net in the tidal waters. The net as stated in the case "was fished at the pier of Ballycastle and was a draft net in a boat," the end of the warp of the net next the shore was fastened round a rock near the shore, and there was a buoy out from the pier fastened to an anchor—the boat was rowed to the buoy, and the buoy was taken into it, the bight of the net was then hauled tight out to the buoy, and the net was left fixed one end to the shore and the other to the anchored buoy. The buoy was then taken on board the boat and so kept in it for an hour and a half, during which time the net was stationary; one end being fixed to the rock, and the other to the buoy in the boat which was fastened to moorings. There was a rope to the sea end of the net, the end of which reached to and lay upon the shore, and at the end of the hour and a half the sea end of the net was hauled in, and the whole net drawn on shore by persons there for the purpose. It was not a bag-net, but was sometimes left out a whole night. It was then proved that this mode of fishing was the same as that in use at the same place before the year 1834, when Mr. Hector began to fish with bag-nets, and it was found that this net was not a fixed net used in the open season of 1862. Bag-nets were introduced in 1834, and were used in the fishery until they were condemned by the Commissioners in the year 1864, and before 1834 the mode of catching salmon in the bay of Ballycastle was the same as that complained of.

Upon the appeal the Court decided unanimously, in unison with the decision of the magistrates and with a decision in the Court of Queen's Bench in England, that this net was a fixed net within the meaning of the Fishery Acts.

Being a fixed net, in order to make it legal it is required by 26 & 27 Vic., c. 114, s. 4, that it should have been "legally erected for catching salmon or trout during the open season of 1862," and as it was not so erected during that season, the magistrates decided that it was illegal. At the hearing at petty sessions, evidence was offered to show that the place where the net was so fished in the month of June, 1866, was within the limits of a "several fishery," of which the party fishing was licensee of the owner, but as the above section admittedly contains no exception in favour of the owners of "several fisheries," the magistrates rejected the evidence, and the second question submitted to the Court in the appeal case being whether the magistrates were right in rejecting that evidence, though we believe that that question was scarcely argued by the appellants' counsel, two Judges, O'Brien and George, held that the evidence was material, and ought to have been received.

The grounds upon which this decision was made are more important than even the decision itself. Mr. Justice George, in giving judgment, says :—

"It was proved that this mode of fishing by a *similar net* was the same as was in use at the same place before the year 1834, at which time a person named Hector began to fish with bag-nets. Bag-nets were proved to have been introduced in the year 1834, and used in the same place till they were condemned by the Fishery Commissioners in 1864, but before that time the mode of catching salmon in Ballycastle was the same as that now complained of.

* * * * * * * * * * * *

"The appellant has not continued to use a bag-net. He has restored his mode of fishing to the old mode, which according to *the case*, was in use in 1834, and he has gone back to what was then a legitimate mode of fishing.

"The effect of the 26 & 27 Vic., c. 114, *is to prohibit totally the mode of fishing by bag-nets*, but the 4th section does not prohibit fixed nets, provided they were used in 1862. And although the identical stakes and ropes used in 1866 were not erected in 1862, *probably* the same fishing in the same place was carried on in 1862 by a bag-net.

"*That being then an illegal fixed net*, had to be discontinued, but there is nothing in the Act to prevent fishing by *legal* fixed nets, provided they were in existence in 1862. I am therefore of opinion that the mode of fishing by net used by the appellant on the 25th June, 1866, was legal in a several fishery, and had been enjoyed in 1862, and that, therefore, the evidence tendered by the appellant, to show that the *locus in quo* was the several fishery of Mr. Alexander Boyd was material, and ought to have been received by the Justices. The Act does not abolish the right of fishing. It only prohibits a certain mode, and gives the right to be continued under another form—*the ordinary fixed nets*—provided some fixed net of any kind was used in the same fishery and in the same place in 1862.

* * * * * * * * * * * *

"In this judgment Mr. Justice O'Brien concurred, saying, that the weir was used *for the purpose of* a bag-net in 1862, and legally used too—*it being found desirable to abolish bag-nets, and to prevent the erection of them in future the Act of* 1863 *was passed*, and then the bag-net was removed, and converted into another description of net that is strictly legal within the meaning of the Act.

"Mr. Justice Fitzgerald did not agree with the result, or the means by which it was arrived at, and did not concur in the judgment of the Court."

The importance of this decision, as well as its effects, is shewn by the fact reported to us that no less than five weirs have already been set up in the Shannon on the faith of it. It was not the decision of a full Court, nor an unanimous decision, and both Judges appear to have based their decision upon the supposition that since the Act of 1863 bag-nets are illegal, and that the Act was passed to prevent the erection of them in future. They are prohibited within estuaries and within certain distances of the mouths of rivers, and the case does not state this net to have been within that distance, or show the grounds on which it was condemned by the Commissioners. One of the weirs so set up in the Shannon a (stake net), has been brought before the magistrates by summons to inflict a penalty for setting it up, and they, guided by the decision of the above case, dismissed the complaint. From that decision an appeal is now pending in the Court of Queen's Bench which will call for the express decision of the Court on the question, one on which we hope that the public will have the benefit of the opinion of the full Court. If it be in unison with the opinions above expressed by the two Judges, it will be a question for the consideration of the Government how far it should be provided for by declaratory legislation.

Besides these cases relating to fixed engines, the case of Murphy *v.* Ryan, lately decided in the Court of Common Pleas, requires some observations as a decision upon a question not hitherto decided, viz., the right of the public, by usage alone, to establish a right to fish in fresh water rivers, though navigable.

The case arose from a right insisted on by the cot fishermen to fish in the fresh waters of the River Barrow. It was an action brought by a riparian proprietor of part of that river against one of the fishermen for fishing opposite to the lands, and the question arose upon the defence, which stated that the Barrow was a royal river, into which the sea ebbs and flows, and that from time immemorial—"throughout a great part of it above and below where the sea ebbs and flows, a common and public navigable river, in which every subject had 'the liberty and privilege of fishing,' and justified the trespass as a subject of the realm for the purpose of so fishing." On behalf of the plaintiff it was said that no such right of fishing as that stated can belong to or be acquired by the public in an inland river above the point at which the tide ebbs and flows; and after a very long argument of this question, the unanimous judgment of the Court was clearly given by Mr. Justice O'Hagan, from which, as fully illustrating the reasons for the decision at which the Court arrived, we give a few extracts. He says:—

"We have to deal with the case of a public navigable river, in which there has been, according to immemorial usage, the exercise of the liberty and privilege of fishing by the public at a place above and beyond the point at which the sea ceases to ebb and flow; and the question to be decided is,—whether in such a place, though the river be navigable for the purposes of communication, and in that sense may properly be called a navigable river, the public can legally assert a right of fishing, that right having been practically enjoyed from time immemorial. It is insisted that above the point of the tidal flux and reflux, the bed and soil of a river are vested in the riparian proprietors, those on either bank possessing it, *usque ad medium filum aquæ*; and that this is not the less because it is navigable for commercial and other purposes, and that above the flux and reflux of the tide the right of fishing is private and exclusive, and cannot legally be claimed by the public, even though they have been allowed the immemorial use of it.

"We are of opinion that the latter proposition, which is that of the plaintiff, has been sufficiently sustained by authority and argument.

"According to the well-established principles of the Common Law, the proprietors on either side of a river are presumed to be possessed of the bed and soil of it moietively, to an imaginary line in the middle, constituting their legal boundary; and, being so possessed, have an exclusive right to the fishery and the water which flows above their respective territories, though the law may secure to the community the right of navigation

upon the surface of that water as a public highway which individuals are forbidden to obstruct. According to our ancient system the public had not a right to fish in all waters, even if continually running, but only in those *publici juris*, as being in the sea, or an arm or estuary of it, or in a public navigable river. The true question before us is, whether a navigable river, for the purposes of the common and public right of fishing, may be merely a river capable of navigation by ships or boats, or must be a tidal river in which the sea ebbs and flows? I shall refer briefly to the authorities.

"Upon a full consideration of all the cases, it will, I think, appear that no river has been ever held navigable so as to vest in the Crown its bed and soil, and in the public the right of fishing, merely because it has been used as a general highway for the purpose of navigation, and that beyond the point to which the sea ebbs and flows, even in a river so used for public purposes, the soil is *prima facie* in the riparian owners, and the right of fishing private. * * * * * * * * *

"It has been argued that because the river in question here is described in the defence not only as a public navigable river, but as a royal public navigable river, and must upon the demurrer be admitted to be properly so described, the soil of it and the right of fishing must be considered to vest in the Crown and the public respectively. * * The designation 'royal' does not more than the description 'navigable' necessarily indicate a river of which the fishing is in the public, because the soil is in the King. The argument for the defendent, founded on the allegation that in the cases 'navigable' and 'tidal' are identical and interchangeable terms, has derived plausibility mainly from the fact that in several of the cases rivers in which the fishery was certainly *publici juris*, have been simply called 'navigable' rivers, without specific reference to the flowing of the sea; but it will be found that the word has a popular, and also a legal and technical meaning, and that whilst the former would be satisfied by the existence of a public right of transit on the surface of the stream, the latter involves the assumption *the fluxum and refluxum maris*, wherever the royal prerogative and the general right exist. I adopt the statement of Chancellor Kent (Comment. III. 412) which is fully sustained by the authorities:—'In the common law sense of the term those only were deemed navigable rivers in which the tide ebbed and flowed.' * * * * * * * * * * *

"On these grounds we think that the defence has failed to state any valid claim to a right of fishing in the public, and failing in this respect it fails altogether. For although it relies on an immemorial usage that every subject of the Crown should have the privilege of fishing in the Barrow, and although the existence of such a usage must be taken to be admitted on the pleadings, this amounts at most to the allegation of a custom that the public should have *profit à prendre* in the soil, which, according to our view, is private propriety, and not the property of the Crown. It is quite settled that such a custom cannot legally subsist. * * * No usage can establish a right to take a profit in another's soil, which might involve the destruction of his property, and such a profit would be the taking of fish. * * * * * * That principle is beyond controversy; and therefore the usage relied on in this defence cannot sustain the claim of the right in the public to fish in a river, the soil of which is not *publici juris*, but private property."

3. *Stone Weirs and Gaps.*

Since our last report we have concluded our inquiries into stone weirs and gaps, and have made decisions upon all except one.

The gap in the Lismore river, which was one of the first with which the Commissioners dealt, has during the last year been made the subject of two summonses before the magistrates. One of those cases raising a question of fact whether certain iron bars across the floor of the gap were or not an obstruction, under the circumstances would appear to be properly cognizable by, and a subject for the decision of the magistrates, but to the second of these summonses and the decision thereon, we think it right to call your Excellency's attention in connection with the sections of the statutes relating to them.

The 5 & 6 Vic., c. 114, s. 41, provides for making gaps in weirs, and lays down the rules by which the site, bottom, direction of the sides and breadth of the gap are to be fixed, and by which the breadth of the river is to be measured for the purpose of ascertaining the width of the gap, and enacts that in case of dispute relative to those matters, "the same shall be determined by the Commissioners;" and the 59th section makes it compulsory on the owner "to make the same" (*i.e.* the gap) "conformable to the provisions of the Act, *or to the orders and regulations of the Commissioners.*"

The powers vested in the Commissioners by that and the subsequent Fishery Acts, were by the 26 & 27 Vic., c. 114, s. 15, transferred to us, and all the Fishery Acts are by clauses in each of them required to be construed together as one Act.

In the month of June, 1861, in the case of the Queen *v.* Commissioners of Public Works, the power of the Commissioners under the first statute to change and fix the site of a gap was brought under the consideration and adjudication of the Court of Queen's Bench, and the Chief Justice in giving judgment, in reference to the sections above stated. Says:—

"Disputes having arisen in reference to the weir, *public notice was given, and a meeting of all the parties between whom the disputes existed took place, and after an adjournment and deliberation* quite sufficient to satisfy us that the determination come to was not a hasty measure, the parties having the fullest opportunity of laying before this tribunal all the circumstances of the case, they come to an adjudication which was literally not merely a determination but . . . . . it is a perect judgment *in rem. and therefore conclusive upon the parties,* . . . . . it is most important that there should be a tribunal so perfectly fitted to investigate the subject from time to time, and to be a mediator between the conflicting parties, . . . invested by the Legislature with that mediation, and when they make their adjudication that it should be held

conclusive as to the circumstances and nature of the recitals contained in it . . . . . I think they would have fallen short of their duty, and greatly mocked the duty imposed on them, if they had rested content simply with the declaration that the gap was not in conformity with the Act."

Similar sentiments were pronounced by every member of the Court.

The statute under which this Commission was appointed, was passed about two years after that decision, and so far from the 5 & 6 Vic., c. 106, being repealed by it, it is required "that so far as is consistent with the laws thereof it shall be construed with the Salmon Fishery Acts." By the 9th section, it is required that "in every fishery weir there shall be a free gap or opening, according to the regulations following." It then, as to site, direction of sides, bottom of the gap, and width of it, repeats almost verbatim the words of the 5 & 6 Vic., c. 106, s. 41, (which we have stated), and by the 12th section "if a legal free gap is not made in a weir within twelve months after the passing of the Act, the owner is made liable to a penalty of not less than £5 a day."

By the 7th section of this statute, a duty is cast upon the Commissioners subject to the appeal provided by the statute "to inquire into the legality of all fishing weirs throughout Ireland," and to remove such as were illegal; but if on such inquiry the weir appeared to be illegal only by reason of it not having a free gap, the Commissioners were prevented from removing such weir, "if an undertaking to their satisfaction was given" to make a *legal* free gap "within a time to be prescribed by the Commissioners, and a free gap was *made accordingly*," thus making their decision as to the legality of the free gap, and the making of it preliminary to their deciding the question of the legality of the weir, and making their adjudication upon the one as well as the other, according to the words of the Chief Justice, as it would appear, a perfect judgment conclusive on the parties. In former reports attention was called to the great difficulty of practically carrying out the requirements of this section of the Act, which render it in fact necessary that the Commissioners should have this power. For to use the words of Mr. Justice O'Brien in the case referred to, "What would be the result of any other construction? The Commissioners declare that the gap is not legal, the owner is sued for penalties, the proprietor may shift the gap, and the Commissioners may then say the gap, and therefore the weir is illegal." The owner would then say "What am I to do?" and the Commissioners would have to say "We cannot tell you."

Adopting the view of Mr. Justice Hayes, "that the Commissioners are formed into a tribunal for *deciding* and *determining*, from time to time, all disputes as they arise, relative to the *construction*, *width*, and preservation of free gaps, between the owners of fisheries on the one hand, and the persons who may be interested in the fishing of the river on the other;" one of the first duties which the Special Commissioners undertook was that of fixing the site and construction of free gaps, so as to enable the owners to construct them within the twelve months allowed by the statute; and among the first with which that course was taken *was the weir* of the Duke of Devonshire at Lismore, to certain proceedings with respect to which we now call your Excellency's attention, as illustrative of the provisions of the statute which we have stated.

Notice of the meeting for the purpose of fixing the gap was extensively published in the newspapers and by handbills. The meeting was numerously attended by conservators and parties interested in the fishing of the river. Several witnesses were examined and cross-examined on oath, suggestions were taken from everyone who pleased to make them, and the question being one of considerable difficulty, was fully canvassed in the presence of all parties, and of their counsel and solicitors. The meeting lasted for the greater part of the day and after it was over, the Commissioners went in company with the Duke's agent and the leading conservators to the weir, and after careful consideration of the evidence, assisted by their own observation for the purpose, they fixed the site and construction of the gap, and had the plan of it prepared by their engineer. After it was approved of by the Commissioners, tracings of it were sent to the Duke's agent and to the Clerk of the Conservators, and it was authorized to be made. When it was nearly completed, a flood swept it all away, with a part of the weir, causing not only delay in its completion, but great additional expense to the Duke. Shortly after it was completed, a complaint was made by some of the leading conservators, *that the gap was not made according to the plan;* in consequence of which a meeting, after notice to the parties, was held at Lismore, which was attended by the leading conservators, including the gentlemen who were examined before the magistrates, as hereinafter stated, and after a careful hearing and inquiry, it was admitted that the gap was according to the plan, and an inspection showed that it was executed with great care, of cut stone, as in fact was necessary to insure its standing. It is scarcely necessary to state that upon the lower side of every weir, more particularly in such a river as the Blackwater, with a gravelly bed, the water wears away a deep hole, and it was suggested upon that occasion, by one or two of the *upper water* Conservators,

that the bottom of the hole at foot of the gap, should be taken as the natural bed of the river, and that the bottom of the gap should be as low as that, a proposition so glaringly unjust, as to meet only very partially with support among those assembled, and the meeting terminated with the feeling that the Duke had fully carried out the plan of the Commissioners.

In the month of October last, the gentlemen who took such a prominent part respecting this weir, applied to us to send down our engineer to examine it, having previously summoned His Grace before the magistrates, under the 12th section of the Act of 1863, for having the bottom of the gap higher than the natural bed of the river, above and below the gap. That summons was heard at the Lismore Petty Sessions, on the 14th day of December last, before two stipendiary magistrates, Messrs. Ryan and Redmond, upon which occasion one of the Conservators, one of the parties prosecuting, and the engineer of the Commissioners who had prepared the plans, were examined; and the evidence given by them forcibly illustrates the hardship which would arise from the decision of the Commissioners not being held conclusive, and that without at all considering the question as to the correctness of the view taken by the Commissioners in fixing the gap. It was proved by the prosecutors' engineer that the relative level of the floor of the gap and bed of the river were substantially the same as they had been in the season of 1865 (the time when the inquiry was held), and that it was unchanged since then. Mr. Gray, the Commissioner's engineer, proved that in June, 1864, he made surveys and measurements for the Commissioners before they fixed the gap, and he proved the plan of the gap made by him and the Commissioners' order fixing it; he proved the examination of it in November last, "and that on that occasion he found the weir and gap *in exact accordance with the plan of the Commissioners and their directions, except being two inches wider;* that in point of *depth and position it was perfectly correct;* that the Commissioners had arrived at the conclusion that the level of the natural bed of the stream was the sill or floor of the collector hatch (showing that the Commissioners had actually decided that question), and that the level of the floor of the gap, as it now existed, was identical with the level of the floor of what had been the collector hatch; that when he measured it, in June, 1864, he was perfectly sure that the sill or floor of the collector hatch was not above the natural bed of the river; that had the formation of the gap been left to him he would, at first impulse, have adopted the sill of the collector hatch as the level of the bed of the river, and that upon taking the soundings and on full consideration he thought the position a fair one for the site of the gap. It was insisted for the Duke that as the gap was in conformity with the Commissioners' order (which was not disputed) the magistrates were bound by that, and ought not to convict, but the magistrates refused to be bound by it; and, upon extrinsic evidence given before them, convicted the defendant although they stated that the gap was *in exact conformity* with the plans and directions of the Commissioners. Upon appeal against that decision the Court of Queen's Bench, *i.e.*, the Chief Justice and Mr. Justice George (Fitzgerald, J. dissenting) affirmed the decision of the magistrates.

4. *Fish Passes and Ladders.*

Much as these are required in almost every salmon river in Ireland, we regret to say that, owing to the want of funds, the progress of them in the country is very slow; not only have no surveys for new passes been asked for during the year, but very many of those for which plans were prepared in the early part of this commission, which were paid for by the parties asking for them, still remain without any steps being taken to build the passes, and to complete even those which are most urgent will require not only an increase in the licence duties, but some assistance from the Government. Those upon the upper part of the Shannon at Knockvicar, Roosky, and Jamestown, which have so long been delayed in consequence of expected alterations in the weirs, consequent upon the contemplated improvement of the Shannon Drainage, have been, at your Excellency's desire, surveyed by our surveyor, who is making designs of passes for them, which are nearly finished, and when we have them completed, we hope that your Excellency will have the passes built by the Board of Works with the least possible delay.

In the Newport river, in the county of Mayo, we have approved of a pass which we expect will be built during the ensuing season. The passes for the Cork Waterworks and Ballincollig weirs, in the river Lee, were delayed last year by the bankruptcy of the contractor, before he had commenced them. Contracts have been entered into with a respectable contractor to have them completed before the 1st October next, and as he has already commenced the work we have no doubt that they will be finished in time.

These passes we consider of the greatest importance to the salmon fishing of that river, which has been gradually declining for some years past. The former of these weirs for the greater part of the year is a complete barrier to the ascent of the fish, and leads to poaching and over-destruction in the part of the river, immediately below it, to such an extent that we have been applied to by the Conservators to pass a bye-law to prevent net fishing there. Important, however, as they are, we have been only enabled to carry them out by an advance of £200 from the Corporation of Cork, and a large subscription from some of the upper water proprietors, and we experienced great difficulty in getting a contractor to do the work for the sum at our disposal.

5. *Mouths of Rivers and Estuaries.*

We have during the year been called upon to define, as we have done, the mouths of some rivers and their estuaries, as also the boundaries between the tidal and fresh waters. In doing this, so as to meet the requirements of the Acts, there is often a good deal of difficulty, particularly as to the points from which and the way in which measurements are to be made. This is in part, but not altogether, met by the power given us to define the spaces within which certain engines are to be used, as the Court of Queen's Bench decided that so far as we have that power our definitions are conclusive on all parties, for the purposes of the fishery laws. By an oversight in the statute, however, that power does not extend to the definition of the three-mile space from the mouths, within which bag-nets are prohibited by the Act. That omission would require to be supplied in any future legislation.

Owing to the difficulties which occur, it will not be surprising to find that some of those definitions of mouths which have been made, have for various reasons been found to create practical inconveniences, and to require alteration; and this has been particularly the case in the Drogheda district. In this district we have been applied to more than once by all parties, to alter the definition of the mouth of the Boyne, which it is said gives rise to disputes among the fishermen which it would be desirable to prevent. It is at least doubtful whether, under the terms of the statute, we have power to do so, and under such circumstances we have not attempted it. Some few alterations may perhaps be beneficially made, and there does not appear to be any good reason why the power of altering the definition of the mouth of a river should be withheld, more than that of altering close seasons, size of mesh of nets, &c., and we think that in future legislation power ought to be given to the Boards superintending the fisheries, to alter mouths, &c., from time to time.

6. *Bye-Laws.*

Our power of making bye-laws has during the year been often called into action, those most frequently asked for being for curtailing the angling season, and to prevent snatching. The former, as we have before stated, we have no power to make; and considering that the prevention of snatching should be general, we have felt no hesitation in passing a bye-law for the purpose when we have been applied to. We also passed in the Limerick district a bye-law to prevent shooting fish, a practice which had become very prevalent there.

The bye-law to prevent net fishing in the Bandon river, to which we referred in our last report as having met with so much opposition, was passed for a space of three years, and we look forward with confidence to its beneficial effects on the fishing of the river.

We have at present an application for a similar bye-law from the Conservators of the Cork district, to prevent net fishing in a resting hole of the fish at Wellington-bridge, just below the waterworks weir; and applications have been made to us to pass like bye-laws for the mouths of some rivers where net fishing is carried on by parties who oust the jurisdiction of the magistrates by a claim of title, leaving the parties complaining a remedy only by action.

7. *Close Season.*

The late Acts referring to the close season require that no alteration shall take place in any season that had been fixed by the Commissioners until after three years from the date of such alteration; and by the 26th and 27th Vict., c. 114, s. 21, the close season was extended from 124 to 168 days, the extension being made to affect the commencement of the open season only.

By this regulation a certain if not always a sufficient experience of the effect of any such alteration was ensured against repeated desires and applications from individuals or parties whose interests in either the upper or lower waters clashed in reference to the early or late closing times.

As this required period of three years had expired in all districts, and in some no change had taken place, except the extension to 168 days, for even six or seven years, applications were made for an alteration by different Boards of Conservators and individuals during the past two years. The Commissioners consequently held inquiries in those several districts and localities in reference to it, and orders authorizing changes have been made accordingly in several.

In some of the districts, Waterford and Limerick especially, very considerable interest in the question was manifested, and much conflicting opinion was found to exist and given in evidence regarding the proper time to commence and terminate the close season in the upper, middle, and tidal parts of the several rivers.

In others the application was either one-sided and too weak to be maintained, or it was met by strong and sound opposition, or by petitions numerously signed by the principal riparian proprietors interested in the upper waters ; and in others it was opposed by resolutions from the Boards of Conservators.

These inquiries have, therefore, extended over nearly the whole of Ireland, and have necessarily involved a good deal of thought and time to digest the evidence and facts resulting from them, as well as required a personal inspection of some of the localities; for the evidence, when reliable, and although given often more in support of the individual interests of the parties than the local interest of the fisheries of the district, had obviously a certain general bearing on the whole of the salmon fisheries of Ireland.

The result has been to show that where the matter has been keenly studied locally, and where disinterested evidence was given, our ancestors understood the proper periods for the close season commencement and termination better than what had of late been held to be so by the common practice and opinions in many localities. Since there is now an evident tendency in some to return to a more uniform approximation with those times, as far as consistent with the local peculiarities, viz., from the middle or end of August, as the *latest*, to the middle of February, as the *earliest*, for general opening.

The long neglect of our salmon fisheries and the indiscriminate fishing and poaching that in consequence followed at all seasons and with all manner of engines since the early part of this century, led to so great a deterioration of the fisheries—indeed their almost total extinction in some localities, that in the first effort to restore them the natural idea that suggested itself was for a change in the seasons.

A sufficiently long experience of some of these changes that then followed showed, however, that the deterioration was also due to some other cause as well as that resulting from injudicious seasons and neglect of protection.

After a full inquiry, and the tendering of much conflicting evidence upon it, the main cause was traced to the number of fixed engines for the capture of salmon that had been allowed to spring up in spite of the old Acts prohibiting them both upon the coasts and also within the estuaries and tidal parts of our salmon rivers. Since their removal or great reduction by the working of the Act of 1863 there has been a very evident improvement in the fisheries in general, and in consequence a considerable increase of fishermen in connexion with it, in the more important rivers and salmon fisheries of Ireland.

Some fluctuation in the take of each year must, however, be expected with salmon as with other fisheries, that are largely influenced by the contingencies of season or weather, both in the times of the return of the salmon to the rivers as well as in the maturity of the spawn and fry, since they are mainly dependent for their preservation upon floods, frost, and fine weather, as much as their successful capture by either weirs, nets, or rods, is dependent upon floods and weather in the season they are fit for capture.

It is, therefore, satisfactory to find from reliable sources, and from personal observation in several localities, that although the capture has been much lower then the previous year of 1866, the majority of rivers was never so largely stocked with fish in their *upper waters*, both in the open season and spawning time, as in 1867 and 1868.

This return of the salmon to their old spawning beds has, of course, been gradual; and with their development in increased numbers during late years, consequent upon their careful protection when most exposed to illegal capture, it has led to a better understanding in general of their habits and requirements.

Many errors and doubts that had become popular regarding them and their fry, to the prejudice of former experience and regulations governing the open and close seasons, have in consequence been removed in many localities.

It is therefore of much importance to the question of close season in finding that the weight of evidence of the most trustworthy witnesses went to show that there was a great uniformity in the time of spawning everywhere, viz. :—

That it commenced about the middle of November and terminated about the middle of January—the most spawning about the end of December, unless retarded by unusual droughts in November and December.

This important point being now, we may say, fully re-established rather than discovered throughout Ireland, we are in a better position for understanding how to regulate the close seasons, through having a definite time from whence to start, so as to meet the protective requirements of both the brood and spawning salmon, which is obviously the most important point in connexion with the interests of the salmon fisheries.

Now there needs no argument to show that the saving of a single spawning or gravid salmon is worth a dozen spent ones.

The balance of protection then should necessarily be more extended towards the time of the former than the latter, that is, the season should have a longer protection before the spawning season than after it is over. For the evidence went generally to show that the greater number of salmon frequenting the estuaries and lower waters where netting is chiefly carried on, are, in the month of September, breeding salmon having then the ova largely developed in them.

There are very sound reasons then for closing the netting season in September, for the fish are generally accumulating, and congregate in the lower and tidal waters during that month and the dry months of autumn, merely to await a flood or fresh of sufficient strength to enable them to run for the pools and deep streams within the fresh waters where shelter is afforded near their spawning grounds.

We have consequently found in support of this, that where the fishery interests are best understood, there has been a voluntary closing of it, even so early as the middle of August, as in the Galway, Ballina, and Ballyshannon fisheries, so as to preserve a sufficiency of breeding stock, although the season did not close by law until a later period.

In consequence of these facts and experience gathered from the evidence given at these close season inquiries over Ireland, the result has been to close all net fishing in September, except in a few rivers—these exceptional localities being still open until the 15th of September, to meet the weight of opinion yet existing in those localities against an immediate change.

In one of the most important of these, viz., the Lee, in the Cork district, the advantage of closing earlier than the 15th of September seemed well understood, but was opposed until two very important fish passes were made over two weirs, near the town of Cork, the Waterworks and Ballincollig weirs, that in their present state form two most obstructive barriers to the ascent of any salmon unless during high floods.

The other exceptions are the Blackwater, Slaney, and Bandon rivers, in which netting is continued to the middle of September. But we feel sure that it requires only time, and a little longer development of the fisheries in each of these localities, for the better understanding of the question, to bring about a uniformity in the time of closing the indiscriminate capture of salmon by nets, and with this uniformity, the prevention of poaching in the neighbouring rivers, both in the interests of the general fisheries throughout Ireland as in their own. Because at this season, although the salmon are chiefly brood fish, they are saleable to any extent, whilst any river is open for netting in any district of Ireland, for notwithstanding they are then gravid or stock fish, they may be so little discoloured as to bear exposure in the markets, whilst in the early spring the poacher has less means of disposing of the capture, except for private use, of either the discoloured spents, or of fish with full spawn, although then so much at his mercy.

These remarks cannot be concluded upon the commencement of the close season for nets and fixed engines, without noticing the very general opinion that now prevails, with anglers as well as with netmen, that the angling season should, in most places, close not later than the 1st or 10th of October, and, as this is also our own opinion, it is our duty strongly to support it in this report as in the former.

On the proper time for opening the Season.

Having shown in the foregoing remarks what recent experience of the habits of the salmon has indicated as the proper period for the termination of general net fishing in our salmon rivers, we next take up the facts and points bearing upon the question of the opening or commencement of the fishing season.

Now, we find that the weight of the evidence and opinions given at the inquiries we have held, as well as that given in former reports of such inquiries, has been to show that within about six weeks after the termination of the spawning season, the spent fish, more particularly the female fish, have all left the upper waters, that is, by the commencement of March, they have descended the rivers, although they may not have reached the sea.

This escape from the shallow spawning grounds they resort to, will of course depend upon the floods that occur after this operation is over, for the accomplishment of which the salmon, like all animals for the same object, seem to forget the necessary safeguards or natural instincts they at other times possess for self preservation.

As soon as a flood comes, however, after having completed spawning, they drop down with it to any deep or sheltered pool they can reach, but now ravenous for food, and eager for the opportunity of recruiting their spent condition on the feeding grounds within the estuaries and sea.

The length of time of their so reaching these grounds will, of course, depend upon the frequency and duration of these floods to help them over the shallows and obstructions that intervene, and of the distance to the sea from where they spawned; and it is doubtless from these circumstances that some conflict of opinion exists regarding some rivers in respect to the time the spent fish reach the tidal waters.

The conclusion from these facts is, however, clear that ample time for their escape from each river is a necessity of very important consideration, if we desire to increase the average size of salmon frequenting our rivers, as well as increase their quantity; for the protection of the spawning fish and fry tends most to increase or preserve the quantity of salmon each river is capable of producing, and a due protection of the spent fish tends most to increase or retain the average size and value of each salmon also, since it increases per pound in marketable value with increased size. It is therefore obvious that the time of opening or commencing the fishing season cannot be made so nearly uniform for all the rivers of Ireland as the time of closing, since the time of the escape of the spent fish will vary with the distances from the sea to their spawning grounds.

There are, moreover, several apparently anomalous conditions in connexion with some few rivers that cause them to be considered or locally known to be early or late rivers; that is, early or late in respect to the run of spring or early fish in them, silvery and fresh from the sea, and, in consequence, in the most fit condition for food and for the market; for it is now a well-established opinion or fact that some sound salmon enter some rivers from the sea whilst the spawning season is not over for the majority of fish within them, and that they remain quiescent in the deep pools or lakes in connexion with these rivers apparently without caring for food, and until the full development of their spawn in November makes them the early spawners of the next season. These spring fish consequently remain in the river fully nine or ten months without feeding, but sensibly deteriorate in condition and quality, as a natural result of their abstinence from food and their increasing development of spawn. The number of these spring fish seem to increase with each month, until the maximum run of such fish occurs, in April and May, in those rivers they frequent so early, or in any quantity.

Other rivers have no salmon within them until the great run of the peal or grilse occurs, the time of arrival of which upon the coast seems so remarkably regular in general, that they are looked for in some localities where their habits are best known, with an almost certainty, between the 20th and 25th of June, and to continue to run during July; sometimes even until the early part of August, if the usual midsummer rains and floods have been retarded and rendered the rivers too low in July. These also remain to spawn at about the same time as the former or spring salmon, which may be called the adult fish, whilst the peal or grilse are the first return of the fry to their native rivers, on the approach of first maturity of the female fish for reproduction, and on obtaining the requisite condition for it.

The next great run of salmon, and for the same object, occurs towards the latter end of August, or in September, unless retarded by a dry autumn, such as the last. These, in consequence, are known as the "blackberry salmon," from the run occurring in the blackberry season, and are, for the most part, then showing a good development of ova.

This apparent anomaly of times of entering the estuaries and rivers, and for the one great object, is evidently a provision of nature, both for their continuous supply and for the preservation of the species against the risks they have to run, in obedience to the instinct that induces or obliges them to run for this object from the deeps of the sea into such shallow rivulets and streamlets, to deposit their ova.

This succession, it is evident, cannot exist in all rivers with a sufficiency to afford a large supply, as it depends upon local conditions and circumstances fitting them for it; but as the salmon are known to be at certain times almost regardless of the size

or depth of the rivers they enter, provided there is sufficient water to cover them, it has led to much difficulty in understanding the exact conditions which constituted one river a very early river, and another a very late one; and, as was natural, the geological character of the rocks bounding or forming the beds of the rivers has been supposed to have had some influence in this. After a careful attention to this point, however, in many rivers, we are induced to give up the idea, beyond the simple fact that for a river to be a salmon river at all, it must have some gravel-bedded streams falling into it for the salmon to spawn in; for they neither spawn in mud or sand, or upon weed or rock, but in coarse gravel only, for the reason that it best admits of a sufficiency of pure water to percolate and filter through, so as to meet the resupply necessary for the respiration of the delicate fry as soon as they have burst the ova; and also for the reason that such coarse gravel-beds serve best as a protection from the powers of the other fish, perch, &c., from disturbing such grounds.

Some clear understanding of the apparent anomalies regarding early and late rivers is therefore necessary to enable the season to be so regulated for each, that in the endeavour to meet the public requirement for sound spring salmon as soon as they could be obtained, their capture would not interfere with the spawning fish, or tend to the destruction of them after spawning, and at a time, too, when unfit for food.

The adjustment of these times is a question of great delicacy and difficulty, from the nice balance of interests existing regarding it in certain rivers between the upper and lower proprietors; which is largely increased, too, in consequence of the ignorance and conflict of opinions in some localities, so that it may be considered more an approximation than a certainty at present.

As, however, good salmon can undoubtedly be obtained in the tidal parts of some rivers whilst the spawning fish are still within its upper waters, it is manifestly sound to admit that their capture is not to be prohibited if it can be done without injury to the fisheries of that river, and without the destruction of spawning or spent fish with such sound fish.

It has, therefore, required very considerable attention to their natural habits and instincts, and the physical peculiarities of each river also, before arriving at what seems safe conclusions, as rules by which these varied periods of opening of each river should in future be governed.

It is manifest, however, that early net fishing in the fresh waters of all rivers would be attended with considerable risk, especially in the upper parts thereof, and can in few instances be permitted until the spawning fish have returned into the deeps of the estuary, consequently not before the beginning of March.

This objection does not, however, so much apply to the tidal parts of certain rivers, since no fish spawn in the tidal part; and the objection is still less, as on consideration will be apparent, in those rivers and estuaries where there exists a large or deep water lake between the spawning beds and the sea, for this lake becomes a wide division between them, and likewise a safe retreat for the exhausted spent fish to lie and partially recruit in, until a flood comes sufficiently strong to carry them over the shallows that frequently intervene between the lake and sea.

All rivers with a lake near the sea are not, however, very early rivers, and the reason for this anomaly has required some consideration and examination, so as to fully solve the question, and this is shown to be the fact, in a remarkable degree, in three rivers which fall into the Donegal Bay, viz., in the Sligo and Bundrowse rivers, which issue from the Gill and Melvin lakes at only three or four miles from the sea, and which are proverbially early rivers, more especially the Sligo,—whilst the Ballyshannon fishery, with the magnificent chain of basins constituting the Erne lakes, the largest of which is only seven or eight miles from the sea, is considered a very late one, the lessee not commencing to fish before the month of March.

The explanation of this apparent anomaly, since we feel it necessary to entirely reject anything like a geological cause, as we at first were induced to believe probable, we conceive to be referable to two causes, or more properly to three: first, to the natural habits peculiar to the salmon; next, their natural instinct, and its influence upon them at DIFFERENT seasons of the year; thirdly, to the physical conditions of the locality in which they were bred. Now the natural habits of salmon are well known to be these: first, a certain period of metamorphosis and development for maturity of condition and for growth in accordance with age; next, a certain period of abstinence and tranquillity, but of deterioration of condition, although of development of the spawn or reproductive organs, somewhat analogous to the active and dormant periods of hibernating animals. During the first period they resort to and remain in the sea, and during the second period they resort to and remain in the fresh waters.

Their instincts now come into play to govern the times and particulars rivers they

resort to. First, the natural instinct for returning to their native rivers induces them as soon as mature in condition to seek them; but the instinct they possess for self-preservation, and which is naturally more predominant on their first return from the deeps of the sea, now guides them in the times of entering these rivers, for being then shy fish they are very chary of swimming into shallows and of struggling against obstructions known to be in their way to any sheltered deeps, such as lakes and pools, also known to them in their native upper waters, whilst later in the year, when developed or developing with spawn, they show no such shyness, but run into every kind of danger.

These points are well illustrated in the difference in the seasons between the Sligo and Bundrowse rivers, and the Ballyshannon river, which all fall into the same bay. For the two former rivers, having their sources in high mountains immediately surrounding the lakes, subject them to sudden and high floods with almost every rain-fall, and induce the early salmon, on feeling them, to run for the secure shelter afforded by the lakes so near to the sea, with almost every fresh. The Sligo river having also a very long and deep estuary, entices the early conditioned fish into it, to await the opportunities their instincts have led them to know will recur in the river in which they were bred. The double tide of each day rising nearly to the top of the Sligo weir, with its fish-pass also, afford facilities to help them over it; and the long and deep estuary gives the Sligo river a great advantage over the Bundrowse river, which has no estuary, but affords, nevertheless, great facility at times of reaching the lake within it with every favouring flood and high tide, and when there is *fair weather* on the coast, to induce the fish to approach the entrance.

Then in respect to the Ballyshannon, the conditions are somewhat reversed, for although it is the larger river, and has much the largest lake to invite salmon to run for it, there is a formidable obstruction in a high ledge of rocks or falls that exist close above the tideway and counteract these advantages, by deterring shy spring salmon from entering or ascending the estuary in such quantity as to become profitable to fish within it at that season—not until later in the season, when the river becomes sufficiently swollen, and the falls are more easily surmountable. For the Ballyshannon or Erne river having its sources in bogs and comparative lowlands, instead of high mountains like the Sligo and Bundrowse, is subject to no such high and very quick rising floods in the early part of the year as occur in them, inasmuch as frosts prevail on the land, tending to seal or retard the lowland drainage at that time. The Ballyshannon, too, has, in comparison to the size of its river, a very shallow and exposed bar at its entrance, as well as a short and shallow estuary, instead of a long and deep one like the Sligo. For shy spring fish seem to seek or require a deep estuary to shelter in, both for security, and from the storms of the sea, when waiting to run for their native waters.

These are the causes that operate against the Ballyshannon being a very early fishery, although it is one of the largest and most important fisheries in Ireland, whilst its two neighbouring rivers are early rivers, the Sligo river more especially so.

The same natural instincts and physical conditions are the causes that make the Galway river a comparatively late river, while the Laune is one of the earliest, although each have their large lakes of Corrib and Killarney so short a distance from their entrances to the sea. For the Laune has comparatively a very extensive and sheltered tidal estuary, and no serious obstruction between it and the Killarney lake. The Galway has, on the contrary, little or no estuary, and that little so very shallow that the high navigation weir which extends across the main branch, just above the tideway, forms a perfect barrier to the ascent of the salmon, except in very high floods that occur in general after the spawning season and frosts are over. There is, however, a good fish-ladder over the weir, that the salmon can avail of *when there is both water enough flowing over the crest of the weir* as well as through the pass, so as to supply a sufficient depth of stream in the broad bed below it. For without a sufficient depth of water in this part, no spring salmon would be induced to ascend above the tidal termination, this sufficiency of depth of water being the essential requisite to induce shy spring salmon to ascend the rivers, as well as to enter their estuaries or embouchures. An autumn salmon, on the contrary, under the instinctive desire to reach its spawning grounds, will do so in spite of the risk, as is most remarkably exemplified below this very weir at Galway during the months of August and September, when they are seen from the town bridge lying crowded together in the clear and shallow stream above it, to the number, sometimes, of several thousands, and for weeks awaiting a fresh that will enable them to ascend the ladder.

Another illustration in explanation of the main cause of the difference in regard to the early and late seasoned rivers will suffice for the objects of the report, enlarged almost into an essay, under the necessity of fully discussing it, since it will lead to a closer inquiry into the question, and draw forth further facts, either in confirmation or for

its modification, and essential in reference to the proper time of opening of any particular river.

In the western mountainous district of Mayo there falls into the head of the deep inlet and estuary of Tullaghan the Goolmore River, which, at about three miles above the estuary, divides into two branches, the Owenmore and Munhim. The Owenmore branch is much the larger and more extensive of the two, but it is also the shallower, except in late spring floods. The Munhim, on the contrary, is the narrower, but it is the deeper, especially in the earliest spring, and at between two and three miles only above the junction it issues from the Carrowmore Lake, a fine mountain basin, five miles long, and from one to two miles broad. A high mountain divides these two branches, and forms the sources that chiefly supply both. Yet the Munhim is notably a very early river, having good spring fish in January, and the Owenmore is as notably known to have no salmon until April, or even May. The evidence in respect to this fact was *first* given in the Report of 1846, and the two rivers still retain their relative values as early and late rivers.

The deduction is that very shallow, although comparatively large, rivers, and although having a large lake not far from the sea in connexion with them, are not frequented by early spring salmon, unless the lake is of *easy occasional access* by the aid of tides or floods; whilst a small but sufficiently deep river within its embouchure, and more especially if it is connected with a large and deep lake, will be more or less frequented by early salmon, and be more or less an early river *in proportion to the facilities of access* to the deep pools or lake within it. But without the existence of a lake near the sea, from the reasons before given, it is evident very early fishing in the part below it can only be prudently allowed under very rare and very exceptional circumstances, so as to meet all interests.

The evidence of former reports, however, as well as that taken before us, tends undoubtedly to prove that spring fish exist in all *deep* estuaries and rivers, as well as upon the coast, during most of the spawning season, or at least so early as January.

Therefore, in further illustration of the influence shallow or deep rivers have in the question of the entrance of salmon into the rivers of Ireland in early spring, we give the facts resulting from an inquiry as well as from a local examination of the insignificant rivers Castletown, Glyde, and Dee, which fall into the sea within five or six miles of each other on the east coast of Ireland;—the Castletown, although having a fine estuary, being a late river, and the Glyde and Dee, which have a common entrance and are without an estuary, are early rivers, spring salmon being caught in them as soon as the season opens in that district, on the 16th of February, whereas the Castletown is hardly considered a fishing river for salmon until the peal run at the end of June.

The explanation, on local examination, we found to be this—that in spite of the advantage of the long estuary at the Dundalk or Castletown River, the river becomes so subdivided at a mile or two only above the town, as to reduce each branch into mere shallow brooks, except in occasional floods, that it has, in consequence, no lake or pools sufficiently deep to tempt *shy spring salmon* to run for its estuary or river in the early part of the season.

The Glyde and Dee, on the contrary, are sluggish and comparatively deep rivers immediately within their common embouchure, and for some miles up are more or less so, and therefore induce the shy spring salmon bred in them to enter these rivers at high water when easy to do so and weather favourable, as is general here, whilst those bred in the Castletown remain in the sea until later in the season; for one of the important points, if it be not the *main key in the question of early and late rivers*, is, we believe, the *shyness of a spring salmon* as compared with a late season salmon, to enter shallow or obstructed rivers.

These facts and reasonings will, we think, sufficiently show, and will sufficiently justify, from its general importance, the extent and detail of the investigation, to illustrate that a uniform commencement of the fishing season in the lower waters would not be sound in theory nor wise in practice for the public requirements for food, as well as in the interests of the fisheries in general; also, that although some rivers may be productive fisheries in their lower waters in the months of January and February, others are not worth fishing, although we believe spring fish may be in them, before April and May, whilst some are only profitable fisheries on the arrival of the peal or grilse in June and July. Yet in consequence of there being only a late run of fish in such rivers, it is no valid reason for the extension of their seasons into the month of September, as too many interested desire, not only to their own ultimate injury, but also to the general interests, since brood fish mainly predominate then.

In regard to the upper waters also, indiscriminate net fishing can rarely be safely allowed before the spawn and spent fish have left them, which, as we have shown, is not

before the beginning of March, in general, and sometimes not before April, so as to prevent the indiscriminate destruction of both spawning and spent fish.

In conclusion, we may remark that as the above views refer mainly to the consideration of the relative seasons of individual rivers throughout the whole coast, they may, and no doubt are, all more or less influenced in some years by the earliness or lateness of the general season in respect to *temperature and weather*, which both affects the sea near the coast, as well as the rivers within it; and thus the early and later parts of the season will be correspondingly affected in some degree; but only as a secondary and occasional influence as compared with the primary ones of natural instincts and local features we have so fully dwelt upon, and which may be summarised in the words—Instinctive shyness and physical obstructions—instead of, as frequently supposed, specific properties peculiar to local species, in which we have no belief in respect to the salmon of our rivers, although there may be and are many varieties in respect to form and quality. Because in mid-summer, when the sea and atmospheric temperature and conditions are more *uniform*, we have the arrival of the peal or grilse so remarkably uniform, which is the natural explanation of this uniformity of the time of their general return to our coast and their native rivers, whereas if there were distinct species of late and early salmon we should have more certain facts regarding a *later*, as well as a July, run of peal upon our coasts and into our rivers, as an annual occurrence.

8. *Local Management.*

During the past year the triennial election of Conservators has taken place, and we are happy to be able to say that all the elections were conducted regularly, and without any complaint being made with respect to them.

In some districts our attention was called to the fact of persons holding at the same time the offices of conservator and clerk, and as those offices are manifestly inconsistent with each other, and therefore ought not to be held by the same person, we felt it our duty to apprize the Boards in which such a thing occurred of the *impropriety* of this, and to request them to rectify the error. All the Boards, except that of the Waterford district, acted upon our suggestion, and appointed other clerks, but the Waterford Board and clerk disregarded it, even though meetings of that Board have been held for the purpose of trying to get another clerk appointed; but the Conservators who supported the law being always in the minority, the clerk of the Board also continues conservator, and disregards our suggestion that he should resign one of the offices. How far the acts of the clerk are legal, or how far the acts of the Board may be valid if influenced by his vote, it is not possible to say, but we think that when such an anomalous state of things is allowed to exist, and is practically without control, the prudence will be seen of giving to some superintending body the power at least of a veto on such elections.

The scantiness of the information which we have been able to gain from the clerks of districts in general led us during the past year to inquire whether any annual or other periodical reports were made by them to their respective Boards. When the machinery by which the fishery laws are carried out is considered, it is obvious how accurate and valuable the statistical information which may be furnished by such documents, coming from different parts of the country, would be, and with how much more certainty it would enable Commissioners to speak in their annual reports; and yet but in one district out of the seventeen has it been the habit to make any such statement. That district is the Limerick; and we with great pleasure direct attention to the annual report of the clerk of that district for the last year, as worthy of imitation by the clerks of other districts, not more for the matter of it than for the means by which his information was obtained. His report appears to be founded principally upon "records kept" by his water bailiffs, and "reports" made by them. This system only requires to be systematically and carefully carried out through the country to place yearly before each Board the state of its own districts, and to supply for Commissioners a defect which we long since noticed of the means of getting information which could be relied on.

As illustrative, we may take the Limerick district, extending the whole length of the Shannon, and including all its tributaries; whilst, as it would be impossible for the clerk to have by his own actual inspection constant accurate information with respect to each portion of the district, he has his bailiffs in each part, whose duty it is daily to know the state of the rivers, the supply of fish, and the state of spawning beds, and who, without almost any additional trouble may enter these matters with the state of wind and weather in a register. By means of this machinery, so well suited for the purpose, he may be enabled to lay before the Conservators statistics and information valuable and accurate,

and enable each Conservator in his own locality to compare the statements of the bailiffs with his own information, and, if necessary, to correct them; such district reports would, in a few years, present considerations for the improvement of the fisheries, the seasons of the rivers, &c., &c., for which hitherto there has been no ground laid.

Having pointed out the importance of this document, we hope that the clerk of the Limerick district will perfect the system, and that the clerks of other districts will emulate, if they cannot equal him, by acquiring, in the same way as he has, similar information, and embodying it at the close of each year in the shape of a similar statement.

Considering the vast extent of the Limerick district we regret to find it stated in the report, and also by the water bailiffs, that the American weed, which first appeared in that district in the year 1864, is stated by one of the bailiffs at Athlone to have "made a terrible progress in growth all along the banks of the river there and on all still water."

The rapid growth of it in all parts of the district is alarming, if it turns out to be injurious to salmon or trout. At present that appears to be a matter of uncertainty; but the clerk of the district states that he "will from time to time endeavour to collect such facts as may lead to a correct conclusion." Accurate information may be expected from him.

9. *Legislation Suggested.*

On this subject we can add little to what we have stated in our former reports to be desirable, which we here recapitulate, viz.—

1. That votes for Conservators in respect of fixed engines should be allowed only in the electoral divisions in which they are fished and the licence is taken out.

2. That to entitle a person to vote, his licence should be taken out two months before the election.

3. That licences should be sold only by authorized persons.

4. That no officer or servant of Board should interfere in or vote at elections.

5. That the Commissioners should have power to inquire into and rectify proceedings at elections.

6. That the appointment of Clerks and other officers should be subject to approval of Commissioners, and that Clerks should be permanent, but be liable to dismissal by Commissioners for violation of statutes or neglect of duty.

7. That conviction under Fishery Acts should render Conservator, Clerk, or other officer, liable to dismissal by Commissioners, with consent of Lord Lieutenant.

8. That the Commissioners should have power to direct prosecutions.

9. That rod licences should be personal.

10. That they should be valid only in the district in which they are taken out, until payment of a small sum in addition in each other district in which they are used.

11. That there should be a uniform rate of rod licences, at £1 a rod.

12. That the onus of proving that any fish killed after netting season in a district was killed legally, should be on the parties having the fish.

13. That power be given to Commissioners to alter the rod season in same way as that for other engines.

14. To make it clear that penalties are to be divided, giving one-third to the informer and two-thirds to the Board.

15. That power be given to Commissioners to try the right of parties claiming as owners of several fisheries to use draft-nets within the forbidden distances of mouths of rivers, as in cases of fixed engines erected there.

16. That power be given to water bailiffs to search for illegal engines and seize them, as in the English Act of 1860.

17. That fishing within 50 feet of a fish-pass be prevented.

18. That funds should be provided by Government for building fish-passes, clearing obstructions, &c.

19. That the annual accounts of the districts should be audited by the Commissioners, with power to them to enforce any sum not paid to the Conservators, or disallow any sum illegally paid by them.

In addition to these particular suggestions we would again direct your Excellency's attention to the necessity for consolidation as well as amendment of the Fishery Laws, and urge the combination of the two in any legislation which may be adopted, repeating from our last report that "whatever difference of opinion there may be among interests as to the propriety of particular amendments, we believe that the question of consolidation will meet with the fullest approbation and co-operation of all parties."

We have again as on former occasions to express our obligations to Coast guard and Police for the assistance which they have readily given us both in our own business and in the prevention of poaching.

We add Appendices containing the annual statistics of the fisheries as accurately as we could collect them, and an account of the quantity and variety of the work done under this Commission.

We have the honour to be
Your Excellency's obedient servants,

R. J. LANE.
T. SPRATT.
JAMES PATERSON.

Dated at the Office of the
Special Commissioners for Irish Fisheries,
Dublin, 25th June, 1868.

NOTE.—Having by mutual arrangement prepared, as the Report of the Commissioners, the part of this Report referring to the close season question, it is necessary to state that I am alone responsible for the theories contained in the discussion of it.

T. SPRATT.

NOTE.—As most of the matters embraced in this Report had occurred and been disposed of before I became a member of the Commission, my signature applies only to the ninth head, as to the legislation suggested.

JAMES PATERSON.

APPENDIX, No. 3.

APPENDIX, No. 3

LIST of RIVERS, the MOUTHS of which have been defined by the SPECIAL COMMISSIONERS, one hundred and twenty-eight in number.

Section 22 of 5 & 6 Vic., c. 106. enacts "That where the breadth of the mouth or entrance into the sea of any river, the inl
"portion of which is frequented by Salmon, is less than half a mile, statute measure, at low water of spring tides, it s
"not be lawful for any person whatsoever (save and except the proprietor of a several fishery within the limits thereof
"place or erect any stake weir or fixed net within one statute mile, seaward, coastwards, or inwards, from or on eit
"side of the mouth or entrance of any such river into the sea."

Section 44 of 13 & 14 Vic., c. 88, enacts "That it shall not be lawful for any person, save and except the owner of a sev
"fishery within the limits thereof, at any time to shoot, draw, or use any net for taking Salmon at the mouth of any ri
"where the breadth of such mouth between the banks thereof shall not exceed a quarter of a mile statute measure;
"that it shall not be lawful for any person, save such owner as aforesaid, within such limits as aforesaid, to shoot, dr
"or use any net for taking Salmon within half a mile seaward, or half a mile inwards, or along the coast from the mo
"of any river."

Section 3 of 26 & 27 Vic., c. 114, enacts "That no bag net shall be placed or allowed to continue in any river, or the estu
"of any river, as such river or estuary has been defined by the Commissioners of Fisheries, or shall be defined by
"Commissioners under this Act, or within a distance of less than three statute miles from the mouth of any river
"defined."

Appendix, No. 8.

Applications for By-Laws, Rules, &c., received by Commissioners.

District or Place.	Nature of Application.	Observations.
Letterkenny District,	To alter the close season,	Inquiry held.
Coleraine District,	To alter the close season for pollen,	Ditto.
Sligo District,	To alter close season,	Granted for Sligo River.
Galway District,	Ditto,	Inquiry held.
Lismore District,	Ditto,	Ditto.
Waterford District,	Ditto,	Granted.
Coleraine District,	To prohibit the use of draft-nets for pollen in Lough Neagh,	Ditto.
Cork District,	To prohibit net-fishing in certain portions of the Bandon River,	Ditto.
Limerick District,	To prohibit net-fishing near mouth of River Cashen,	Consideration postponed.
Waterford District,	To prohibit snatching,	By-law in course of publication.
Wexford District,	To prohibit all net-fishing during salmon close season between new bridge of Wexford and bridge of Enniscorthy,	Not in power of Commissioners.
Galway District,	To prohibit snatching.	By-law made.
Derryinver River,	To remove obstructions,	Obstructions removed.
Londonderry District,	To inspect dam on Mourne River,	Inspected.
Coleraine District,	To remove obstructions at mouth of Cutts,	Removed.
Shimna River, co. Down,	To define mouth,	Mouth defined.
Limerick District,	To define boundaries between tidal and freshwaters of Rivers Feale, Geale, and Cashen,	Waiting inspection.
Cork District,	To form Argideen River into a separate district,	Requirements of Act not complied with by applicants.
Dublin District,	To prevent deleterious matter being allowed to flow into River Liffey.	Inquiry held; Conservators to attend to it.
Kenmare District,	To inquire into the fishing near the mouths of rivers,	Inquiry held, and measures taken.
Sligo District,	To have new fish-pass on Sligo Weir,	Money not provided.
Waterford District,	To build fish-passes on Weirs,	Survey made, but money not provided.
Skibbereen District,	To design new fish-pass for Lurrega Mill Weir,	Pass built.
Londonderry District,	To alter size of meshes of nets,	Not granted.
Bangor District,	Ditto,	By-law granted for portion of district.
Ditto,	To prohibit the removal of gravel from spawning-beds,	By-law granted for River Owenmore.
Ditto,	To curtail the open season for angling,	Not in power of Commissioners.
Galway District,	Ditto,	Ditto.
Waterford District,	Ditto,	Ditto.
Ballina District,	Ditto,	Ditto.
Ballyshannon District,	Ditto,	Ditto.
Limerick District,	Ditto,	Ditto.
Fergus River,	To prohibit all kinds of fishing within twenty yards of Ennis Weir,	By-law made.
Shannon River,	Ditto of Tarmonbarry Weir,	Ditto.
Drogheda District,	To survey White Mills Weir, River Dee, for fish-pass,	Pass built.
Waterford District,	To permit the use of small meshed nets in rivers running through Bessborough Demesne,	By-law made.
Bantry District,	To reduce the licence on nets,	Granted.
Ballinakill District,	To alter boundaries of district,	Ditto.
Bangor District.	Ditto,	Ditto.
Ballyshannon District,	To permit the use of small meshed nets in Loughhead River,	Not granted.
Ditto,	To define mouths of Oily and Loughhead Rivers,	Mouths defined.
Ballina District,	To define boundaries between tidal and fresh waters, River Moy,	Order made.
Wexford District,	To alter close season,	Inquiry held.
Cork District,	To define boundaries between tidal and fresh waters, River Bandon,	Order made.
Ditto,	To survey weirs on rivers for fish-passes,	Surveys made.
Ditto,	To prohibit snatching in district,	By-laws made.
Dublin District,	To alter close season,	Inquiry held.
Limerick District,	To define mouth of Clohane River, Co. Kerry,	Mouth defined.
Kenmare District,	To alter close season,	Inquiry held.
Killarney District,	To alter close season,	Ditto.
Lismore District,	To alter close season,	Ditto.
Limerick District,	To remove obstruction in Doonbeg River,	Removed.
Ditto,	To prohibit net fishing near Killaloe,	Not granted.
Ditto,	To alter fish-pass at Ennis,	Fish-pass altered.
Ditto,	To permit the use of small meshed nets in Lough Derravarragh, Co. Westmeath,	Inquiry held.
Wexford District,	To permit the use of small meshed nets in rivers running through Lord Fitzwilliam's property, Co. Wicklow,	Granted.
Waterford District,	To prohibit net fishing in fresh waters of River Nore,	Not granted.
Skibbereen District,	To prohibit net fishing within certain distance of Lurrega Mill Weir, River Ilen,	Ditto.
Waterford District,	To cause fish-pass to be built by the owner on St. Mullins' Mill Weir,	No money provided.
Lismore District,	To build fish-pass on Fermoy Weir,	Pass built.
Dublin District,	To prohibit removal of gravel in Liffey,	To be inspected.
Ballyshannon District,	To alter the close season,	Inquiry held.
Ballina District,	Ditto in Easkey River,	Inquiry to be held.
Coleraine District,	To increase licence on pollen trammel nets to £1, and draft nets for pollen to £1 10s.	Granted. (Draft nets since prohibited.
Cork District,	To build passes on Ballincollig and water works weirs,	Contracts accepted; works in progress.
Ditto,	To alter close season,	Inquiry held.
Galway District,	To define mouth of Crumlin River,	Mouth defined.
Killarney District,	To allow reduction of width between bars in Waterville Weir,	Not granted.
Limerick District,	To alter the close season,	Inquiry held.
Ditto,	To define mouth of Feohanagh River,	Mouth defined.
Ballyshannon District,	To define mouth of Marvaugh River, and reduce meshes of nets used therein.	Inquiry held; application to reduce mesh withdrawn.
Galway District,	To change season,	Granted.
Lismore District,	To survey Glandullane Weir,	Money not provided.
Londonderry District,	To change season,	Inquiry held.
Dublin District,	To define mouth of Vartry River,	Mouth defined.
Limerick District,	To prohibit shooting of fish,	By-law made.
Coleraine District,	To change boundaries of district,	Terms of Act not complied with.
Bangor District,	To sanction building of pass on Newport Mill Weir,	Sanctioned, and plan given.
Ballyshannon District,	To change season for rivers on north side of Donegal Bay,	Inquiry held.
Limerick District,	To define mouth of Loughill River,	Inquiry to be held.

APPENDIX, Nos. 9 & 10.

APPENDIX No. 8.

APPLICATIONS for BY-LAWS, RULES, &c., received by COMMISSIONERS—*continued*.

District or Place.	Nature of Application.	Observations.
Galway District,	To prohibit netting between Gaol and Regulating Weir in River,	Not granted.
Ballina District,	To increase licence on draft and drift nets,	Not in power of Commissioners.
Ditto,	To shorten season for angling,	Ditto.
Ditto,	To reduce size of mesh of nets,	Under consideration.
Sligo District,	To prohibit angling with worms,	Not granted.
Skibbereen District,	To extend angling season to 10th November,	Not in power of Commissioners
Ballycastle District,	To reduce rod licences to 10s.,	Granted.
Ditto,	To alter close season,	Inquiry to be held.
Limerick District,	To prohibit all netting in River Maigue above Ferry Bridge,	Ditto.
Drogheda District,	To alter close season,	Granted.
Sligo District,	To prohibit the mode of fishing practised in estuary of Drumcliffe River,	Waiting further inquiry.
Limerick District,	To alter the season for eel fishing,	Inquiry to be held.
Bangor District,	To prohibit the removal of gravel from the Glenamoy River,	Ditto.

Cork District,	To prohibit netting in River Lee in pool below Wellington Bridge,	Refused at present.

APPENDIX, No. 9.

BY-LAWS, ORDERS, &c., made by the COMMISSIONERS.

District or Place affected by By-Law, &c.	Nature of By-Law, Order, &c.	Date.
Moy,	Defining boundaries between tidal and fresh waters,	26th July, 1865.
Maine,	Ditto,	Ditto.
Laune,	Ditto,	Ditto.
Suir,	Ditto,	16th March, 1864.
Nore,	Ditto,	Ditto.
Barrow,	Ditto,	Ditto.
Shannon,	Ditto,	9th April, 1864.
Fergus,	Ditto,	Ditto.
Liffey,	Ditto,	12th August, 1864.
Maigue,	Ditto,	Ditto.
Lee,	Ditto,	Ditto.
Bandon,	Ditto,	19th January, 1865.
Curragh,	Ditto,	Ditto.
Inch,	Ditto,	1st February, 1866.
Slaney,	Ditto,	Ditto.
Boyne,	Ditto,	March, 1868.
Dublin District,	Prohibiting the use of draft nets of a greater length than 350 yards, in that part of the River Liffey situated between the Island Bridge weir and a line drawn due north from the Poolbeg Lighthouse.	19th January, 1865.
Limerick District,	Prohibiting fishing by any means whatsoever within twenty yards of the weir wall of Tarmonbarry, on River Shannon.	5th June, 1865.
Ditto,	Do. within twenty yards of weir wall at Ennis, on River Fergus.	26th June, 1865.
Cork District,	Prohibiting the use of otter, lyster, strokehaul, drew-draw, or gaff, &c., in any tidal waters within district.	31st May, 1865.
Ditto,	Prohibiting snatching, or attempting to snatch salmon with any kind of fish-hook, covered in part or in whole with any matter or thing, or uncovered.	1st June, 1865.
Killarney District,	Prohibiting the use of the otter, lyster, spear, strokehaul, &c., in any tidal waters in district.	8th February, 1865.
Galway District,	Prohibiting snatching, or attempting to snatch salmon in any tidal or fresh water in district with any kind of fish-hook, covered in part or in whole with any matter or thing, or uncovered.	3rd March, 1865.
Waterford District,	Ditto,	26th August, 1865.
Owenmore River,	Prohibiting the removal of gravel or sand from any part of the bed of the Owenmore River, in the county Mayo, where the spawning of salmon or trout may take place.	20th May, 1865.
Waterford District,	Permitting the use of nets having meshes of one inch from knot to knot for the capture of fish within the waters in, and rivers running through the demesne of Bessborough, in the county Kilkenny, provided that no net less than one and three-quarter inches from knot to knot shall be used during April, May, and June.	5th June, 1865.
Owenduff or Ballycroy and Owenmore and Munhim Rivers.	Permitting the use of nets with meshes of one and one-half inches from knot to knot within so much of these rivers as lies above the mouth, as defined, during June, July, and August, in open season.	10th February, 1866.
Bandon River,	Prohibiting for three years the use of nets (except landing nets as auxiliary to angling with rod and line) in any part of the Bandon River or its tributaries, above a line drawn from the northern point of the quay, at the mouth of the creek, between the townlands of Rockhouse and Kilmacsimon, to a point on the opposite shore in the townland of Ahern.	4th December, 1866.
Lough Neagh,	Prohibiting the use of draft nets for the capture of pollen.	28th February, 1867.
Drogheda District,	Prohibiting snatching, or attempting to snatch salmon in any tidal or fresh water in district with any kind of fish-hook, covered in part or in whole with any matter or thing, or uncovered.	30th October, 1867.
Limerick District,	Prohibiting the shooting of fish in that part of the River Shannon between Portumna Bridge and Shannon Bridge, and also in River Maigue.	5th June, 1867.

Appendix, No. 10.

Abstract of By-Laws, Orders, &c., in force, relating to the Salmon Fisheries.

Appendix, No. 11.

Place affected by By-Law, and Date thereof.	Nature of By-Law.
ver Liffey, . (9th Jan., 1865.)	Prohibiting the catching, or attempting to catch, Salmon with any Net of greater length than 350 yards, in that part of the River Liffey which is situated between the Weir known as the Island Bridge Weir and a line drawn due North from Poolbeg Lighthouse.
ver Slaney, Co. Wexford, (25th March, 1854, 14th March, 1862.)	Prohibiting, during the Close Season for Salmon, the use of Nets of any kind whatsoever, between Ferrycarrig Bridge and the Town of Enniscorthy.
	Prohibiting, during the Open Season for Salmon, the use of Nets with meshes of less size than one and three-quarter inches from knot to knot, between Ferrycarrig Bridge and the Town of Enniscorthy.
essborough Demesne, Co. Kilkenny, (5th May, 1866.)	Permitting the use of Nets for the capture of Fish with Meshes of one inch from knot to knot (to be measured along the side of the square, or four inches to be measured all round each such Mesh, such measurements being taken in the clear, when the Net is wet,) within the Waters in, and Rivers running through the Dèmesne of Bessborough, in the County of Kilkenny: Provided that no Net having a less Mesh than one inch and three-quarters from knot to knot, shall be used in the said Rivers during the Months of April, May, and June.
ork District, . (1th Sept., 1866.)	Prohibiting the catching or attempting to catch Salmon or Trout in any Tidal Water in the Cork District with a Spear, Lyster, Otter, Strokehaul, Dree Draw, or Gaff, except when the latter instrument may be used solely as auxiliary to angling with Rod and Line, or for the purpose of removing Fish from any legal Weir or Box by the Owner or Occupier thereof.
	Prohibiting the snatching or attempting to snatch Salmon or Trout in any Tidal or Fresh Water in the Cork District with any kind of Fish-hook, covered in part or in whole with any matter or thing, or uncovered.
ver Lee, Co. of the City of Cork, h January, 1863.)	Prohibiting, during the Close Season for Salmon, the use of Draft Nets, or any other Net or Nets used as a Draft Net, having a foot-rope and leads or weights affixed thereto, within the following limits, viz.:—in that part of the River Lee, situate between Patrick's Bridge, in the City of Cork, and a line drawn across the said River Lee, from Blackrock Castle, on the south, to the Western extremity of the Townland of Dunkettle, on the North.
gideen River, . 24th Feb., 1860.)	Prohibiting the use of Nets of any kind whatsoever in the tidal part of the river known as the Argideen River, in the County of Cork, situated between the junction of the Owenkeagh or Blind River with the said Argideen River and the Bridge of Timoleague, all in the Barony of the East Division of East Carbery, and County of Cork.
ndon River. . 4th Dec., 1866.)	Prohibiting for three years the use of Nets (except Landing Nets as auxiliary to angling with rod and line) in any part of the Bandon River or its tributaries, above a line drawn from the northern point of the quay, at the mouth of the creek, between the townlands of Rockhouse and Kilmacsimon, to a point on the opposite shore in the townland of Ahern.
ver Shannon, . (5th Feb., 1856.)	Prohibiting Net Fishing in that part of the River Shannon between Wellesley Bridge and the Railway Bridge, between 1st June and 12th February.
ver Shannon, . (22nd Nov., 1862.)	First.—Prohibiting, between the 20th day of July and 1st day of November in each year, the use of Draft Nets, or any other Net or Nets used as a Draft Net, having a foot-rope and leads or weights affixed thereto, within the following limits, viz.:—in that part of the River Shannon situate between the Fishing Weir known as the Lax Weir, and a line drawn due North and South across the said River Shannon at the Western extremity of Graigue Island. Second.—Prohibiting Draft Nets for the capture of Fish of any kind, of a mesh less than one and three-quarter inches from knot to knot, to be measured along the side of the square, or seven inches to be measured all round each such mesh, such measurements being taken in the clear when the Net is wet, in the tidal parts of the River Shannon, or in the tidal parts of any of the Rivers flowing into the said River Shannon.
Rivers Shannon and Maigue. (5th June, 1867.)	Prohibiting the Shooting of Fish in that part of River Shannon between Portumna Bridge and Shannon Bridge, and also in River Maigue.
River Shannon, . (5th May, 1866.)	Prohibiting the Fishing for Salmon or Trout by any means whatsoever, within a space of Twenty Yards from the Weir Wall of Tarmonbarry, on the River Shannon.
Lough Ree, River Shannon, (27th August, 1858.)	Permitting the use of Nets in Lough Ree, having a mesh of five inches in the round, measured when the Net is wet.
River Fergus, .	Prohibiting the Fishing for Salmon or Trout by any means whatsoever, within a space of Twenty Yards from the Weir Wall of Ennis, on the River Fergus.
River Maigue, . (17th Oct., 1864.)	Prohibiting the use of Draft Nets between Ferry Drawbridge and the old Bridge of Adare.
Killarney District, (8th Feb., 1865.)	Prohibiting the catching, or attempting to catch, Salmon in any tidal water with a Spear, Lyster, Otter, Strokehaul, Drew-draw, or Gaff, except when the latter instrument may be used solely as auxiliary to angling with rod and line, or for the purpose of removing fish from any legal Weir or Box by the owner or occupier thereof.
Castlemaine Estuary, (27th Oct., 1858.)	Prohibiting, during the Salmon Close Season, the use of Draft Nets having a foot-rope and leads or weights affixed thereto, in the Estuary of Castlemaine inside the Bar of Inch.
Lough Neagh, . (22nd April, 1846, and 24th Feb., 1860.)	Permitting Pollen to be taken by Trammel or Set Nets composed of Thread or Yarn of a fine texture, not less than ten hanks to the pound weight, doubled and twisted with a mesh of not less than one inch from knot to knot, from the 1st of March to the 29th September.
Lough Neagh, . (28th Feb. 1867.)	Prohibiting the use of Draft Nets for the capture of Pollen.
Galway River, Lough Corrib, &c., (24th July, 1846.)	Prohibiting the use of the Instrument, commonly called Strokehaul or Snatch, or any other such instrument, in River Galway, Loughs Corrib or Mask, or their Tributaries.
Galway District, . (11th Sept., 1866.)	Prohibiting the snatching or attempt to snatch Salmon in any Tidal or Fresh Water in the Galway District with any kind of Fish-hook, covered in part or in whole with any matter or thing, or uncovered.
Clare and Clare-Galway or Turloughmore Rivers, Co. Galway, (22nd Dec., 1862.)	Prohibiting the use of Nets of any kind whatsoever in any part of the Rivers known as the Clare and the Clare-Galway or Turloughmore Rivers, in the County of Galway, above the junction of the said Rivers with Lough Corrib, in the County of Galway.
Owenmore River, Co. Mayo, (5th May, 1866.)	Prohibiting the removal of gravel or sand from any part of the bed of the Owenmore River, in the County of Mayo, where the spawning of Salmon or Trout may take place.
Owenduff or Ballycroy, Owenmore and Munhim Rivers, (11th Sept., 1866.)	Permitting the use of Nets with Meshes of one and a-half inches from knot to knot (to be measured along the side of the square, or six inches to be measured all round each such Mesh, such measurements being taken in the clear, when the Net is wet,) within so much of the said Rivers Owenduff or Ballycroy, Owenmore and Munhim, as lies above the mouth as defined, during so much of the Months of June, July, and August, as do now or at any time may form part of the Open Season for the capture of Salmon or Trout, with Nets, in the said Rivers.
Teelin Estuary, . (24th Feb., 1860.)	Prohibiting the use of Nets for the capture of Fish of any kind, with meshes of less than one inch from knot to knot, (to be measured along the side of the square, or four inches to be measured all round each such mesh, such measurements being taken in the clear when the Net is wet,) on that part of the coast of the County of Donegal inside, or to the North-east and North of lines drawn from Rossan Point to Teelin Head, and from Teelin Head to Carrigan Head, and from Carrigan Head to Muckross Point, all in the Barony of Bannagh, and County of Donegal.

ABSTRACT of STATEMENTS from Clerks of Boards of Conservato

Number and Name of District.	General state of the Salmon and Inland Fisheries of Ireland.	Whether the take of Salmon in 1867 was more or less productive than in 1866, and to what is the increase or decrease attributed.	Any new modes of Fishing adopted.	Any Fish Passes built under the Fishery Acts.	Average price of Salmon obtained by the captors.	Whether Salmon purchased for Exportation, and if so, what proportion does it bear to that purchased for Home Supply, and to what Market is it principally sent.	The amount of Protection during Cl Season of 1867, as compared with preceding year.
1. Dublin, .	Tolerably good. Not improved as regards the take, owing to long drought.	Less productive.	None.	None lately.	From 1*s.* to 1*s.* 6*d.* per lb.	Generally for home supply.	About the same.
2. Wexford, .	Good. There is a prospect of further improvement.	Less productive.	None.	None.	From 10*d.* to 1*s.* 2*d.* per lb.	Generally for home supply.	About the same.
3. Waterford,	Not very satisfactory. The prospect of improvement, judging from past season, cannot be well calculated on.	Less productive, '67 being one of the most barren years known in this district.	None.	None.	11*d.* to 2*s.* 2½*d.* per lb.	Yes; the proportion being 100 lbs. exported to 1 lb. for home use.	About the same.
4. Lismore, .	Fisheries are in a good state, and it has been a fair average year.	Better.	Yes. Fishing with drift nets since the removal of stake nets.		—	Nearly all for exportation.	About the same.
5. Cork, .							
6[1]. Skibbereen,	Bad. No improvement since last year.	Less productive.	None.	Lurriga Mill weir.	5½*d.* per lb.	About one-half is exported.	The same.
6[2]. Bantry, .	Good. Much improved.	A good deal more productive.	None.	None.	6*d.* per lb.	Not exported.	The same.
6[3]. Kenmare,	Fair. Not so good as last year.	Much less.	Drag net in open sea.	None.	6¼*d.* per lb.	—	The same.
7. Killarney, .	A general decrease in quantity. No prospect of improvement.	Less.	None.	None.	To 1st May, 1*s.* 4*d.* per lb.; to 1st June, 10*d.*; to 1st August, 5*d.*	All for exportation.	About the same.
8. Limerick, .	Very satisfactory.	Less.	None.		1*s.* 6*d.* per lb. for spring fish, and 8*d.* for summer fish.	Nearly all.	Greater.
9. Galway,	Very good indeed.	Less productive. No improvement in Lough Corrib, but Ballinahinch fishery greatly improved.	None.	No new pass, but waterfall at Oughterard greatly improved, and salmon can now ascend with ease.	At an average of 10*d.* per lb.	About 90 per cent. exported.	About the same.
10.[1] Ballynakill.	Not very encouraging. There have been no improvements during past year.	A great deal less productive.	None.	None.	1*s.* 6*d.* per lb.	Two-thirds for exportation.	About the same.
10[2] Bangor, .	Inland good. No improvement since last year.	Much less.	None.	None.	6*d.* per lb.	All.	About the same.
11. Ballina, .	Very bad, and no prospect of immediate improvement. Take of fish much less than last year.	Much less than any year since 1850.	Netting in upper waters.	None.	From 9*d.* to 10*d.* per lb.	Very little for exportation.	Greater.
12. Sligo, .	Not good. No improvement.	Less.	None.		8*d.* per lb.	All.	The same.
13. Ballyshannon.	Not good. A great decrease since last season; and prospect not good.	Less productive by far.	None.		6*d.* per lb.	Nearly all.	Much the same.
14. Letterkenny.	Not so good as former years. No improvement since last year, and prospect not good.	Less.	None.	None.	8*d.* per lb.	Nearly all.	The same.
15[1]. Londonderry.	A considerable supply of breeding fish, but not so numerous as last.	Less.	None.		8*d.* per lb.	Nearly all.	Increasing.
15[2]. Coleraine,	Very prosperous. Every prospect of improvement.	Not quite so productive.	None.		8*d.* to 4*s.* per lb.	Two-thirds for exportation, one-third for home supply.	Greater.
16. Ballycastle,	Unfavourable. Have not had so unproductive a season for many years.	Much less productive.	None.	None.	10*d.* to 1*s.* per lb.	Nearly all.	Much the same; p haps a little bet
17. Drogheda,	Not near so productive as 1866; but there are hopes of improvement, from many causes.	Much less.	None.		1*s.* 2*d.* per lb.	Chiefly to England.	Not so much, fr want of funds.

o. 11.

to the State of the Salmon and Inland Fisheries.

Whether the quantity of Breeding Fish observed in the Rivers has been eater or less than receding Year.	Whether Offences against the Fishery Laws have diminished.	Whether the Fisheries have been more injured by pollution from Manufactories or otherwise, in 1867, than in 1866.	Suggestions from Conservators.	Number of Water Bailiffs employed.	Number employed by private individuals.	For what length of time employed.	Rate of Wages paid by the Conservators.
ess, owing to long drought last year.	Fishing for salmon under pretence of fishing for other fish is on the increase.	Yes. The tideway of the Liffey in time of drought.	An increase on the amount of seine net Licence Duty is advisable in future legislation.	10.	2.	5 for the whole year, and 5 during close season.	Permanent water-bailiffs 12*s.* per week.
ess.	Increased.	No.	None.	15.	None.	10 during close, and 5 during open season.	Bailiffs, 7*s.* to 8*s.* per week; Inspector, 12*s.* 6*d.* per week.
reater.	—	No.	—	Over 100.	None.	Varies.	Varies.
—	Poaching has not increased; but poachers appear much more daring, and in many cases have assaulted bailiffs.	—	That rod-fishing begins too early and continues too long, and net-fishing continues too late; and the duty on single rods should be equalized by Act of Parliament; and the millers, at their own expense, should be compelled to put a grating at head of mill-race and end of tail-race.	—	—	—	—
ess.	Diminished.	No.	That a small mesh net should be allowed for a portion of the coast.	4.	1.	All the year.	5*s.* per week to 1; 2*s.* 6*d.* to 3 others.
uch greater.	Diminished.	No.	None.	3.	2.	All the year.	4*s.* 6*d.* per week to 2; £3 per annum to 1.
uch less.	Diminished.	No.	To close fishing season for nets on 20th August.	17.	13.	All the year.	From £2 to £5 per annum.
ess.	Diminished.	No.	None.	76.	10.	From 3 to 12 months.	From £2 10*s.* to £10 per annum.
ather greater.	Diminished.	No.	That passes on navigation weirs in Shannon should be improved.	126.	1.	126 during close season, and 67 during open.	Nine at 5*s.* per week each for entire year; the remainder receive from 7*s.* to £1 each. Eight of the permanent bailiffs receive 15*s.* per week each, and one at £1.
ully equal to any previous year.	Diminished.	Only in one locality, where flax water was allowed to flow into Ballinahinch river.	None.	30.	Same as last year.	Some by the year, but greater number for about three months during the spawning season.	From £2 to £30.
uch less.	Increased.	No.	None.	30.	14.	1 all the year—the rest for the close season.	One £10 per annum; others £1 and £2.
he same.	Increased.	No.	None.	80.	—	Some for 6, and some for 12 months.	From 15*s.* to 18*s.* per week.
onsiderably less.	Greater in open season, and much the same in close season.	No.	Refers to suggestions made in three preceding annual reports.	56.	Over 250.	During close season.	Varies from £1 8*s.* to £5.
good supply.	Much the same.	No.	None.	30.	30.	For close season.	From £2 10*s.* to £5.
ess.	Diminished.	Considerable injury by flax-steeping.	None.	204.	None.	For whole year.	From £1 to £5.
n upper waters less, but in lower waters greater.	Diminished.	Less injured by flax water, owing to the floods.	None	Between 50 and 60.	About 12.	All the year.	From 10*s.* to £3.
ot so many in some of the breeding rivers.	Offences have decreased, but convictions have rather increased.	Except by flax water.	None.	170.	10.	From October to March.	From £2 to £12 for the season; some from 7*s.* to 10*s.* per week.
onsiderably greater.	Considerably diminished.	Very little.	None.	49.	8.	Whole year.	£5 to £30.
Much the same, as far as could be ascertained.	Very little change.	Much injured by flax water.	That there is little doubt that the decrease in last season was in consequence of the overstocking of breeding rivers, and the consequent increase of kelts and river trout, the taking of the latter by nets being now prohibited.	24 in spawning season.	None.	12 permanent, and 12 in spawning season.	Permanent, £19 to £25 per annum; extra, from 10*s.* to 12*s.* per week.
ess.	Increased much in the eases of flax-steeping.	By flax-steeping.	None.	13.	None.	7 during last year; 6 from 1st Oct., '67.	Head bailiff, £4 6*s.* 8*d.* per month; 11 under bailiffs, £1 per month; 1 under bailiff, £1 10*s.* per month.

APPENDIX, Nos. 13 & 14.

REPORT

OF THE

DEEP SEA AND COAST FISHERY COMMISSIONERS, IRELAND,

FOR THE YEAR 1867.

TO HIS EXCELLENCY JAMES, MARQUESS OF ABERCORN, K.G.,

LORD LIEUTENANT-GENERAL AND GENERAL GOVERNOR OF IRELAND.

May it please your Excellency,

We, the Commissioners for the Deep Sea and Coast Fisheries of Ireland, beg leave to submit to your Excellency our Report on the state of the Fisheries for the year 1867.

Although, as will be seen from the several returns and reports in the Appendix, the fisheries in general have not been attended with the same measure of success during the past as in the previous and several preceding years, yet we are satisfied that the diminished productiveness is not due to any falling off in the extent and value of the fisheries, but rather to fortuitous circumstances, which may, and indeed must, be of occasional recurrence. Neither do we think that the diminution in the number of the boats and men employed, as also appears from the returns of the Coast-guard officers, is indicative of a failing prosperity, but is more probably the result of a final abandonment of old and decaying boats on the introduction of a new, larger, and better-found class, and the growing disposition on the part of that portion of the men forming their crews, whose occupation is generally more of an agricultural nature, to leave to men who are disposed to give their whole time to it, and to become, in fact, fishermen by profession, the pursuit of the fisheries.

The herring fishery on the eastern coast has been comparatively unremunerative, owing to the late period at which the fish appear to have entered the Channel; but we have the satisfaction of observing that the enterprise of the Irish Sea Fishing Company in forming a curing establishment at Howth has been attended with marked success, a portion of their produce exported to Scotland having commanded a higher price in the markets of that country than native cured fish marked with the Crown brand.

The great mackerel fishery on the south coast has also been comparatively a failure, owing to the heavy gales which prevailed throughout the spring of the year, and the consequent dispersion of the fish. And here we may observe that at the head-quarters of that fishery—Kinsale—is to be found in the drunkenness and dissipation of the fishermen, and indeed of their families, the only exception to the good and peaceable conduct which everywhere else prevails and distinguishes the fishermen. In the ordinary and continuous fisheries round the coast, including those carried on by trawling, there is nothing special to note, but the indications are generally in favour of improvement.

In regard to the oyster fisheries, we have reason to believe that on the more important beds of common right to the public, the state of things is satisfactory, and that the regulations we have made from time to time with the view to their preservation in the interests both of the public and the fishermen, have been attended with success. On the smaller and more remote beds, however, we have reason to fear that in many cases the great demand and high prices have led to such excessive dredging as to leave them exhausted, if not entirely destroyed. With respect to the private beds for which we have granted licences (fifteen having been given during the past year) we have but scant

information, 22 only of the licensees having replied to our circular, requesting to be made acquainted with their proceedings and their results. In these few cases, however, there are indications of an improvement on the preceding year, but we feel that it is a drawback that we have not the means of making inspections and special inquiries in each particular case.

The measures which have been submitted to the Legislature having reference to the convention with France in respect of the sea fisheries, so far as they relate to oysters, have occupied our most serious consideration, and we have used our best exertions to preserve the Irish fisheries from the disastrous results which, in our opinion, would inevitably attach to the confirmation of the propositions which have been put forward. We beg to refer to the correspondence with the Board of Trade on this subject, which is given in the Appendix.

Together with the report of the Inspecting Commissioner will be found in the Appendix the usual returns and reports, some of them in a more amplified form.

With regard to the causes or circumstances which may have led to the decay or progress of the fisheries (for we cannot admit that all has been retrograde, as many have asserted) the regulations which should govern them, and the policy best calculated to give them encouragement and infuse energy, the further experience of the past year, as well as all the information to be derived from the lengthened examination of numerous witnesses before the Deep Sea Fisheries Committee of the House of Commons during last session have only tended to confirm the opinions we had previously expressed. We think it advisable that the recommendations we have made in our last reports for the past two years, as a preliminary step for giving effect to those views, namely, the appointment of inspectors, and the obtaining the more efficient aid of the Coast-guard Officers, by remunerating them for their services at certain stations, should now be taken into serious consideration, and we further have to submit that, in our opinion, great advantage would result from the employment of a Government tender, proceeding from one fishing ground to another, according to the season, for the purpose, not only of maintaining order and enforcing the law, but also of generally superintending the fisheries and aiding the fishermen, by giving notice when shoals of fish appear on the coast, and it might also be of service by occasional experimental trials, in discovering new grounds for the enterprise of the fishermen.

We have the honour to be

Your Excellency's obedient servants,

J. G. M'KERLIE,
WM. R. LEFANU, } *Commissioners of Public Works and Fisheries.*

15*th June,* 1868.

APPENDIX.

REPORT OF INSPECTING COMMISSIONER FOR 1867.

Report of Inspecting Commissioner for 1867.

More than a year has passed since our last report. To the public, as well as to our department, it has been a period of more than ordinary interest and excitement.

On the 22nd of February, 1867, a Bill was brought into Parliament by Mr. Blake, Colonel Tottenham, and Dr. Brady, "to amend the law of Ireland as to Sea Coast Fisheries," which, on the 15th of May following, was referred to a Select Committee, which commenced its sittings on the 23rd of May, Mr. Blake, M.P. for Waterford, having been appointed Chairman, and terminated on the 19th July, having in the interval examined sixteen witnesses, viz. :—Eleven from Ireland, three from Scotland, and two from England The inquiry was conducted with consumate skill and judgment, and with more than ordinary patience and courtesy, and in the 6,124 questions put and answered, little was left unexplained.

The report and evidence, with a most comprehensive index, forming a blue book of moderate dimensions, No. 443, 19th July, 1867, may well be considered entitled to a high place among the text books of the Irish fisheries, and may be referred to as containing most valuable statistical and general information. The heads of the Public Works and Fisheries department in Ireland, one of the Commissioners and the Secretary of the Scotch Board, the learned Professor, the most prominent member of the Royal Commission of Inquiry, were all closely examined in reference to their administration of the laws or their recommendations for improvements.

The report is well deserving a close and deliberate perusal by all persons entrusted either as legislators or as parties engaged in the cultivation or the promotion of our sea fisheries.

Pending this important inquiry, and before its proceedings had quite terminated, a measure of legislation, founded evidently on the recommendations of the Royal Commissioners, was introduced into Parliament, and a bill printed on the 2nd of July, "to carry into effect a Convention between Her Majesty and the Emperor of the French concerning the fisheries in the seas between the British Islands and France, and to amend the laws relating to British sea fisheries."

A more favourable opportunity could hardly have been offered for ascertaining the opinion of this Select Committee and the witnesses under examination; but it is a fact scarcely credible, that neither in the report nor in the evidence is there the most remote allusion to such a proceeding, although the honorable member for Reading, who had been one of the Royal Commissioners of Inquiry, was one of the most distinguished members of the Select Committee, and though there appears to be no official record of the fact, is said to have been one of the Commissioners appointed to prepare the Convention, which was signed at Paris on the 11th of November, 1867, by the respected plenipotentiaries.

This important measure, after having undergone numerous changes and modifications, is now fixed for a third reading in the Lords on the 8th instant; and as it will have to go back to the House of Commons for the confirmation of certain amendments made in the Lords, may be considered still in abeyance, therefore it would be premature to offer any observations upon its probable effects; but as our department has not been inactive during the progress of the Bill through Parliament, it may be seen by reference to the Appendix, that the subject up to the last moment has had our best attention.

It may become necessary, should this measure pass into law, to lose no time in communicating to the public the serious changes which it will produce, and I shall for the present avoid all further reference to it; but I should not omit to state that another Bill, as amended by Mr. Blake's Select Committee, is also before Parliament, and fixed for a second reading in the Commons on the 25th instant. I have more than once expressed my belief, that the great state of uncertainty which has prevailed for some time on the subject of fishery legislation has tended, among other causes, to do great mischief, and to retard the natural progress of improvement and of enterprise. After my own examination before the Select Committee I ventured to respond to a suggestion from the Committee, by offering a few brief suggestions which they have been pleased to consider deserving a place in the appendix to their report, No. 4, pages 307 and 308, a copy of which will also be found in our Appendix No. 8, page 48.

I see no reason to alter those opinions, and so long as our department is permitted to exercise the important functions with which it is charged, I hope they will consider seriously upon the expediency of seeking for the additional assistance which will be necessary to render the department effective. This aid was called for on the 9th of June, 1866, in the Board's report for 1865, and the necessity for it will, it is hoped, be found henceforward even more than at that time. Although we cannot boast of any increase in the numbers of boats and men employed since the last returns, but, on the contrary, there appears a further decrease of boats, men, and boys. I am still disposed, from a close analysis of the reports from the several divisions, to think that at least some portion of that decrease may be traced to a more accurate enumeration and a thoroughly corrected registry. I cannot sufficiently express the great satisfaction which I have this year experienced in the examination of the returns from the thirty-eight divisions, of our coast, there are, on the part of the officers, evident marks of increased vigilance, and of a deeper interest in the subject, than I have ever before observed; and I am bound to say that, so far as my own observations and experience enable me to form an opinion, it appears to me that a spirit of candour and zeal, I may say, uniformly prevails. We are especially indebted to our Chairman for the addition of four important new queries to the ordinary list furnished to the officers of the Coast Guard department in the divisions, and I am happy to say that they have most diligently responded to the call, and that the very judicious summary prepared by the gentleman upon whom that duty

APPENDIX.

Report of Inspecting Commissioner for 1867

evolved, has left little for me to say than to recommend the attentive perusal of the column containing "*the substance of observations made by Inspecting Commanders of the Coast Guard, and other registering officers.*"

It may be seen, not for the first time, that the sun seems to have shone with great favour on our eastern coast, while the south and west, even the north, have not participated in the advantages of a more prosperous season. From Lambay to the western boundary of the Waterford division, including the divisions of Howth, Kingstown, Gorey, Wexford, and Waterford, we are cheered by uniform assurances of improvement in every respect, with the best prospects of its continuance; while on the other sides of our island the depression arising from scarcity of fish, traceable no doubt to a severe season, increased poverty, and inability to procure boats and gear, an undiminished tendency to emigration, qualified by an anxious preference for profitable occupation at home if it could be obtained, the most gratifying feature which happily prevails through the length of our coast is the general and uniform absence of crime, even where modes of fishing have been introduced opposed to old prejudices; no class conflicts, no contention between trawlers and line fishers, though in many places it is believed that unrestrained trawling is injurious; the words "peaceable and orderly" are with scarcely an exception applied to all the divisions. I have heard of no instance of a fisherman having been found implicated in the wild and wicked projects of Fenianism. Take them as a class, and I boldly say that no class is more deserving of sympathy for their distresses and aid to their industry. Few can appreciate the risks, the perils, the uncertainty of the pursuit. Philosophers may repudiate the idea of promoting any branch of industry by national aid. The wise and far-seeing ruler of France does not model his fishery laws according to the strict doctrines of political economy, and we can see the results to his prosperous country, furnishing, as it does, an example to the world. But, again, I pray an attentive examination of the suggestions from thirty-eight unpaid and intelligent, and in most cases experienced and educated gentlemen, in close and constant contact with our coast population. Almost as a body, they recommend as the indispensable means of regenerating our fisheries, which have been progressively sinking for the last twenty years, loans, capital, money, to purchase gear. One gentleman tells us that at the eventful period of the famine, numbers having lost their all, and having no resource, vanished from the country, and have never been replaced; their habitations have been pulled down; there are no means of congregating, no houses to occupy, no boats to replace those that have rotted. Those gentlemen, for whose disinterested opinions I entertain the highest respect, as I read their statements, make me blush for my own over-sensitiveness or fastidiousness in expressing through my recent examination doubts of the expediency of loans. The registering officers further say that accurate statistics cannot be procured without the aid of authorized officers. The intelligent officer at Kinsale states the necessity of "*the appointment of such officers, whose duty it would be to pass constantly from place to place, who could soon organize a proper statistical system. One officer, for instance, should take under his charge say from Waterford to Bantry, and in that proportion.*"

Most of the officers seem hopeful, if proper means be supplied. One gentleman only states that "the people are too *lazy to fish*," but he adds "*are not poor, and are employed about the land*;" and my answer is, Small blame to them, if they have the land to look after. Another thinks the people are "*naturally a lazy race*, and the only way they could be encouraged to fish would be "*to give them new boats and gear.*" Another from the far west, Belmullet, "The cry of the fishermen is for assistance in money or gear; but I am sorry to say there is a want of energy, which may arise from their failing to catch fish, a bad season, want of gear, or being badly clothed or fed. One bad season is almost ruin to these poor people; *but, to their credit, it does not turn them to dishonesty.*"

Another gentleman so thoroughly desponds, owing chiefly to "the scarcity of fish," and winds up by stating that "he knows *of nothing that would give vigour and prosperity to the fisheries.*"

One officer at Donaghadee states, "The depressed state of the fisheries is owing to want of energy, together with the high scale of wages for farm labourers. The officer is not aware of anything that would give the fishermen more energy on this part of the coast so long as they can obtain £18 to £20 per annum, with their diet, as farm labourers."

And long may they continue to get it, and have the good sense to keep it in preference to the precarious pursuit of fish. But another officer at Seafield, on the coast of Clare, states, "Poverty, apathy, and a general feeling of insecurity as to the possession of their small holdings, operate most injuriously, and it cannot be disguised that disaffection prevails amongst the coast population. It is very difficult, under these circumstances, to suggest any means of improvement, *though, doubtless, if the fishery could be vigorously worked, it would prove a source of emolument to hundreds.*"

While I join most cordially in claiming credit for our poor fishermen for many qualities which entitle them to respect and attention, I deeply deplore that I am obliged to admit, that even in places where most prosperity prevailed the monster evil of the day had found its way, and produced habits of the most disgraceful intemperance. I am obliged especially to refer to the returns of the gallant officer at the head of the Coast Guard department in Kinsale, a most intelligent and respectable gentleman—his great efficiency, clearly evinced by his general returns, as well as by a special report furnished by him more recently, which will be found in the Appendix, No. 10. This further communication, as well as Commander Jones's former reports, had induced me to pay three special visits to this locality; and upon one of those occasions—29th January, 1868—I wrote on the spot a short report on the state of that place, most particularly interesting as the rendezvous of the South of Ireland Fishing Company, as well as of the joint fleet which had for some years congregated for the mackerel fishing, from Howth, from Cornwall, and the Isle of Man. To this report I now refer (see Appendix). Since then I have visited Kinsale, and I rejoice to have ascertained that things are much better among the fishermen; but here again would be felt the benefit of constant supervision and moral management, if proper officers were appointed in conformity with the suggestions of the registering officers.

In our more than ordinarily extended Appendix will be found much valuable and interesting matter.

J. REDMOND BARRY.

4th June, 1868.

Queries sent to the Coast-Guard Officers.

Queries sent to the Coast-Guard Officers from the answers to which the Registry Returns have been compiled.

District Letter

Return of Fishery Establishment in the district of extending from to up to 31st December, 1867.

Total Number actually in existence, year ending 31st December, 1867.

First Class.

Vessels.	Tonnage.	Men.	Boys.

Second Class.

Boats.	Men.	Boys.

Queries for Registering Officers.

1. What appears to be the general condition of the fishing establishment in your district compared with last three years, as to boats, gear, &c.?

Is there any sign of improvement within the last year, and what are the present prospects?

Is there still a spirit of emigration prevailing, or would the fishermen, if fully employed, remain at home?

2. Has the last year been more or less productive in the take of fish, than the preceding, according to the general opinion, and taking into consideration *the several modes of capture?*

3. What is generally the state of the oyster fisheries in your district; are there any great natural banks upon your shores or in the estuaries; are they improving in supply or otherwise; have any new natural banks been lately discovered; have any steps been taken to stock the ground where licences have been granted by the Commissioners for the establishment of private beds? What is the general quality and price of the oysters, whether from public or private beds?

Can you form an idea of the quantity sold within the year?

4. Have any curing establishments been formed within your district, or any attempts made to cure the fish, or is the fish sold in the fresh state?

Does any curing establishment at present exist within your district, or have any ice-houses been established?

5. Have the instances of conflicts between persons pursuing different modes of fishing been more or less frequent this year than the last? If there have been collisions, what is their cause, and what would you propose to obviate them?

6. Are the general habits of the fishermen in your district at present orderly and peaceable or otherwise, and are the able-bodied men among them generally employed in fishing?

7. Is the registry of vessels within your district perfect; or can you favour the Commissioners with any suggestions for a more improved system of registration?

8. Does the practice of trawling or the use of trammel set nets exist in your district, and where; and has it been the subject of any contention with the line fishers or others? And if you have formed any opinion on the subject of restraints upon those modes of fishing, be pleased to state them.

9. What is your opinion in regard to the effects of trawling on the general fishing interests, and state your reasons for such opinion

10. If trawling is practised, what are the tonnage and number of the boats so engaged, what is the size of the mesh, and in what depth of water is the trawl usually worked?

Is the number of trawlers greater or less than in the preceding year?

What are the tonnage and number of boats employed in seine, trammel net, and line fishing?

Is the fish captured by the trawl sold in the local markets or sent to distant places?

Is the fish captured by the seine, trammel net, and line sold in the local markets or sent to distant places?

11. State the kinds of fish captured in your locality by the trawl, and the kinds captured by the seine, trammel net, and line, and the periods when each kind prevails and is taken in best condition. Also the periods when found in the worst condition.

12. Do you know where, in what depths, and on what kind of bottom the fish are believed to deposit their spawn?

13. By what means do you think the most accurate statistical information could be had, periodically, as to the quantities of the different kinds of fish taken, and the disposal of it within your district?

14. Are there any suggestions or general observations with which you may be disposed to favour the Commissioners, with reference to the improvement of the fisheries, or the better preservation of peace and good order?

Additional Queries.

1. Looking to the vast disparity in number of fishing boats, men, and boys, stated to have found employment in 1846, &c., and those now stated to find employment, giving the numbers in each district, it is very desirable that it should be ascertained, from local inquiry amongst the seafaring or shore population, what is the cause to which the great falling off is ascribed; what was the character of the former fishing population; whether they pursued fishing as a means of merely adding to their other means of subsistence in conjunction with farming, or to supply the surrounding district or distant markets, or pursued it as their only or general means of gaining a livelihood.

2. Also the class of boats, their condition and fitments for the purpose of taking fish.

3. What has become of the boats, and are there any vestiges of them?

4. It is also very desirable that the feelings of the persons locally interested in the fisheries, as well as of the Coast-Guard officers, should be ascertained in regard to what is the cause of the depressed state of the fisheries and want of energy and perseverance on the part of the people employed in them, and in regard to what is required to give them new vigour and prosperity, and lead to their becoming a source of profitable employment to the population bordering the shores.

125	443	44	268	1,072	166	27	111	26	–	–	–	There is a decided, vast, and general improvement in both boats and gear. The old boats are rotting along the coast. Many are used as piggeries and fowl-houses. Many persons imagine that trawling destroys the spawn. Harbour much required at Greystones and Dalkey. The difficulty to give vigour and prosperity to the fishermen is the want of money to enable the poorer class of fishermen to procure or repair boats and nets, &c. If money could be borrowed, or if Irish gentlemen would invest capital in fishing plant, I think a great improvement would take place. The great cost of railway carriage for fish is also a great discouragement. The general condition of the fishing establishment about the same as in preceding year, as relates to trawlers and line boats. Great improvement in herring boats and gear. There are more boats, and more people making a living by fishing than formerly. Herring fishery is over, and cod fishing hardly commenced. Success in trawl fishing depends upon fine weather. No emigration amongst fishermen. There has been a slight increase in the take of trawl fish over previous year. The herring boats of the district follow the shoals of fish from Arklow to Ardglass. Herring fishing fairly productive this year, although the takes have not been very great in Dublin Bay. No mackerel in Dublin Bay this year, and only a few outside. On the whole, last year having been exceptionally good, and this year fair, the general fishery has been rather less productive. No oyster fishery in district. Four private beds off Pigeon House, where oysters are placed to fatten, or until required for market; and are sold at from 4*s.* to 4*s.* 6*d.* per hundred. No curing establishment or ice-houses in district. The New Fishery Company's boats (which sail from Dublin) cure their fish at Howth, where a large curing establishment has been formed. No conflicts or squabbling whatever; fishermen orderly and peaceable. One trawler fined £3, with forfeiture of gear, for illegal fishing in Dublin Bay. When not fishing the men go into yachts: at Greystones they combine farming with fishing. Registry of vessels perfect. Trawling carried on outside Dublin Bay, *i.e.*, a line from Howth to the Mugglins: no contention; but if they trawl inside this line, fishers inform on them. The officer considers the regulations very proper, and that trawling is not injurious. There seems to be an understanding that no trawling is to take place at night, where herring nets are down. It is probable that trawling is injurious, but we have no reliable knowledge on the subject. There are about fifty trawlers, from thirty to forty tons. Size of mesh from four to five inches and three inches in the cod, worked in ten to fifty fathom water. Trawlers about the same in number as last year. No trammel nets. All boats (except trawlers) employed indifferently in the fisheries, about 200 in number, from one to five tons. Fish captured by trawl sold in Dublin market, and is not to be bought, even at Kingstown. Seine fish being mostly salmon and trout, are sold in Dublin. Line fish sold locally, where boats belong to. Fish taken by trawl consist of skate, dog-fish, turbot, plaice, black and white soles, brit, gray gurnet, flounders, and occasionally whiting, hake, and a few oysters. Herring, mackerel, and whiting by net; salmon and trout by seine; cod, hake, ray, red and gray gurnet, bream, conger, plaice, flounders, and haddock (but few of late years) by line. Mackerel and gray gurnet by reeling. Cod, haddock, and conger are in best condition from February till May; herrings from June to November; mackerel during August and September. Fish are believed to spawn on sandy bottoms in from two to three fathoms, but this applies to migratory fish, and trawl flat fish, but do not know as to cod, congers, &c. To procure accurate statistical information respecting fisheries it would be necessary to keep a registry, under a penalty, of the amount of fish caught by each boat or vessel; or, if preferred, to deliver an account at the nearest coastguard station. This could easily be arranged with trawlers as they land their baskets at the coastguard stations of Kingstown, Ringsend, or Howth and Skerries. The laws relating to trawling and herring fishing are constantly broken. The only way to enforce them would be to have one or two small Government steamers constantly employed upon that duty and nothing else. Considers the laws relating to herring fishing ought to be reconsidered. There should be harbours at Greystones and Dalkey, which might be made at very little expense. The men at Greystones are very energetic, praiseworthy, and respectable. If there was no regular registry in 1846, I should doubt that any such great disparity exists. Have heard fishermen declare that the famine of 1846 so enfeebled the men that they could not fish, and consequently boats and gear fell into decay; that the spirit of the people was broken by that calamity. It is also stated that haddock fishing, which used to be most profitable and abundant, almost entirely ceased in '46. Fishermen now are fishermen only, and they catch fewer fish (each man), but get a better price.	1
204	1,151	–	350	2,016	12	36	–	–	–	123	37	Boats and gear of district greatly improved. Signs of improvement; prospects good. No emigration. Take of fish about the same as previous year, taking general average. Generally the state of oyster fisheries good; all natural banks; supply much the same. Two new banks discovered off Arklow. No private beds. Quality good—sold at 10*s.* per barrel; about 20,000 barrels sold. Curing establishment at Arklow; greater portion of fish captured sold in fresh state; no ice-houses. No conflicts or collisions between fishermen, who are orderly and peaceable. Able-bodied men generally employed fishing. Registry of vessels perfect. A few boats trawl during the close season for oysters. No trammel nets; no contention between parties pursuing different modes of fishing. No suggestion to make as to restraints upon present modes of fishing. Trawling does not affect the general fishing. Trawlers average ten in number, from seven to ten tons each; size of mesh two inches, worked in from six to eight fathom water. The number of trawlers greater than in preceding year: eighteen boats engaged in other modes of fishing, of from two to three tons. Fish captured by trawl sold in local and Dublin markets; that by seine, trammel, &c., in local market. Turbot, sole, brit, and plaice taken by trawl; salmon trout by seine; cod by line. Cod in best condition from October to January; herring in October and November. Fish spawn in from five to eight fathom water: bottom not known. Statistical information only to be obtained from fishermen, as quantities are caught and sold to steamers and agents at sea. The harbours are all bar harbours, and boats are often prevented from going out in consequence, also bad weather coming on. Coast dangerous. At Arklow fishing on the increase, sole means of gaining a livelihood: in other parts fishing and farming combined. Want of harbours the only drawback. Boats and fitments good for the purpose of herring fishing and dredging. No depression in the fisheries of this district.	2
203	890	28	238	1,095	33	–	7	–	5	–	–	Boats and gear considerably improved. Very few fishermen have emigrated from this district, all being fully employed. Last year not less productive than preceding. No improvement in the oyster banks. No new banks discovered. Steps taken to stock the grounds, for	3

2nd Class employed in 1867.			Total employed in 1867.			Increase since 1866.			Decrease since 1866.			Substance of Observations made by Inspecting Commanders of Coast-Guards and other Registering Officers, up to the 1st January, 1868.	No.
Vessels.	Men.	Boys.	Vessels.	Men.	Boys.	Vessels.	Men.	Boys.	Vessels.	Men.	Boys.		
												which licences have been granted. Quality of oysters good—sold at 10*s.* per barrel; 6,000 barrels sold. No curing establishment or ice-house in district. Fish sold fresh. Fishermen orderly and peaceable; able-bodied generally employed fishing. Registry perfect. Trawling and trammel nets exist in this district; but have caused no contention. No additional restraint necessary. Consider trawling is not injurious, as the ground is not overworked. Trawling practised by twelve boats of twenty tons each; mesh usual size, worked in five to nine fathom water. Trawlers increased in number since preceding year, twelve boats of one and a-half tons each employed in seine fishing, and fifty of from two and a-half to five tons each in long line. Part of the fish captured sold in local market, and remainder sent to distant markets. Turbot, brit, sole, plaice, skate, and gurnet taken by trawl; salmon, sole, herring, codling, gurnet, bass, and mackerel by seine; cod, hake, bream, conger, pollock, bass, codling, gurnet, and whiting by line; mullet, bass, &c. by trammel. Cod, hake, herring, codling are in best condition in winter; gurnet, pollock, bass, bream, &c., in summer. Do not know at what depth or on what bottom the fish deposit their spawn. Statistical information relative to the fisheries could be had by the appointment of a Government inspector. By the erection of a fishery pier in the South Bay of Wexford, and the improvement of those at Kilmore and Pulduff (Cahore), the fishery interests would be greatly stimulated, a larger class of boats would succeed those now in use; fishermen would not be so anxious in returning to shore in uncertain weather; more capital would be invested, and the neighbourhoods thereby greatly improved. No falling off in the number of fishermen. With the exception of Kilmore the number of boats has increased, and are of an improved class. No vestiges of old boats. No record of better boats having been employed. Cannot from inquiry or from observation state the cause of the depressed state of the fisheries. Capital is required to give them vigour and prosperity, and a person of energy to direct them.	
303	1,107	24	338	1,240	38	5	20	–	–	–	–	An improvement and increase in boats; gear worn out, and unable to replace it. No improvement; present prospects dull. Fishermen not generally inclined to emigrate; if employed would remain at home. Take of fish much the same as preceding year. One oyster bank in district, on the decline. No banks discovered. The licensed beds of Lord Fortescue and Mr. Power have been stocked and doing well; the quality is very good: oysters sold at 4*s.* to 5*s.* per hundred. No curing establishments or ice-houses. Fish sold in fresh state. No conflicts; fishermen most orderly and peaceable; able-bodied employed fishing when practicable. Registry perfect. Trawling practised at Fethard, Arthurstown, and Dunmore; and at Tramore where trammel nets are used. Is of opinion that trawling is injurious, as it destroys spawn and immature fish. There are thirty-five trawlers, from six to forty-two tons each, using a mesh from two to six inches, working in from five to fifty fathom water. One trawler less than last year: [illegible] boats engaged in other modes of fishing; sizes vary from one and a half to five tons. Fish captured sold in local markets. Plaice, sole, turbot, and brit taken by trawl; mackerel, herring, and sprats by seine; hake by trammel; and cod, ling, and hake by line. Flat fish best in spring; worst in winter. Seine fish best in autumn, worst in winter. Line fish best in autumn and winter, worst in spring. Large round fish are supposed to spawn in forty to fifty fathom water; flat fish in shallow water, and all on sandy bottom. Accurate statistical information could be had by the appointment of an officer under the Commissioners. No suggestions to make for better preservation of good order. Formerly there were two classes of fishermen on this coast, viz., the *bona fide* fishermen, who, when the year became bad, were unable to keep their boats and gear in repair, and had either to sell them, or allow them to fall in pieces; those who could emigrated. The second class pursued farming in conjunction with fishing, the fish taken used for their own consumption. The present first-class boats generally too small, and not properly fitted out for deep sea fishing. The second class boats in good condition, but it appears the fish do not approach the shore. Several of the old boats sold, others hauled up and useless, others broken up. Cause of depression in the fisheries is want of capital to enable owners to procure good boats and gear for deep sea fishing. The officer suggests that large companies be encouraged to provide and fit out good boats, remunerating crews by shares in lieu of wages.	4
167	893	15	211	1,164	15	–	–	–	11	49	9	No improvement. The present condition of fishery far from prosperous. Fishermen would emigrate if they had means, but are in general too poor. Last year less productive—there seems to be a greater scarcity of fish. No oyster fishery; good natural banks at Dungarvan, but not worked. No new banks discovered. A licence has been granted to Mr. Dower, of Dungarvan, but no steps taken to stock the ground. No curing establishments or ice-houses in district. Fish sold in fresh state. No conflicts; fishermen orderly and peaceable, who are generally employed fishing. To make registry of vessels perfect, a person whose special duty it would be to look after it is required. Both trawling and trammel fishing exists between Helvick Head and Knockadoon. No contention. No opinion to offer as to restraints upon those modes of fishing. Tonnage of trawlers vary from thirteen to sixteen tons in size of mesh four and a-half inches from knot to knot, which are worked in from twelve to fourteen fathom water. Number of trawlers same as preceding year. Size of vessels employed in other modes of fishing from one and a-half to five tons, of which there are 167. Where there is no railway the fish captured is sold in local markets. The fish taken in district consist of turbot, plaice, and sole by trawl; hake by trammel; herrings and sprats by seine; cod and ling by line. Flat fish best in summer; other sorts best in winter: cannot tell at what depth fish deposit their spawn. To obtain accurate statistical information it would require the observation of some one whose duty it would be to supervise this matter specially. Good order prevails among the fishing population; the fishery will improve when the state of the country encourages enterprise and capital. The falling off in the shore population is ascribed to emigration and want of capital. Twenty-five years ago the fishing population seems to have been much the same, as regards character, as at present. Those employed in boats pursued fishing as a means of adding to their subsistence in conjunction with other employment; those in hookers to supply distant as well as home markets, and as a general means of gaining a livelihood. The boats used are open four to eight-oared, in fair condition, and only used for seine fishing and drifting for salmon. No vestiges of old boats—decayed and used for firewood. The depressed state of fishing owing to want of capital chiefly, but unfortunately want of energy and perseverance also.	5

5th and 6th Vict., cap. 106, showing the Increase or Decrease in the different Districts since January, 1867.

2nd Class employed in 1867.			Total employed in 1867.			Increase since 1866.			Decrease since 1866.			Substance of Observations made by Inspecting Commanders of Coast-Guards and other Registering Officers, up to the 1st January, 1868.	No.
Vessels.	Men.	Boys.	Vessels.	Men.	Boys.	Vessels.	Men.	Boys.	Vessels.	Men.	Boys.		
187	641	22	204	728	22	–	–	15	58	280	–	Fishing establishment greatly improved at Ballycottin (the principal fishing station), but decreasing at the other stations—take of fish not sufficiently remunerative to enable men to keep boats and gear in repair. Spirit of emigration still prevails, but men would remain at home if fully employed. Take of fish same as preceding year. Oyster fisheries not very productive. Natural banks exist near Crosshaven, East Ferry, and at Ballinacurren river. Two licences granted, one at Rathcoursey, and the other at East Ferry. Some of the oysters of very good quality—price varies from 6*s.* to 8*s.* per hundred. No curing establishments or ice-houses in district. No conflicts; people of district generally very peaceable and orderly. Able-bodied men employed as boatmen and farm labourers. Believes the registry of vessels perfect; no suggestion to make. Trawling exists at all stations in district, except at Ballyoroneen. Trammel nets are used at Ballycottin: no contention between trawlers and line fishers. Has formed no opinion as to restraints; no necessity for such. General opinion is that trawling is injurious to fishing interests, as it destroys spawn by moving weeds and sand where spawn is deposited. Trawling carried on by sixteen boats, from fifteen to twenty-five tons; size of mesh from one and a-half to two inches, worked in four to six fathom water in harbour, and ten to eighteen fathom outside. Number of trawlers same as last year. Fish captured by trawl sold in local market, that by seine, trammel, &c. local markets, and part sent to Cork, Queenstown, &c. Sole, plaice, herrings, and sprats captured by trawl and seine: cod, ling, haddock, pollock, bream, whiting, and hake by line, fish captured by latter mode best in winter—that by former best in summer. Fish deposit spawn in seven to twelve fathom water about Ballycottin, and twelve to eighteen fathom off harbour mouth, generally on sandy bottom. Statistical information can be obtained by means now in use, namely, sending men from Coastguard Stations to every fishing village, &c., to make requisite inquiries. Suggests for improvement of fisheries that a place of safety for hookers, &c., at Ballycottin much required, and is of opinion that if the existing pier was extended, so as to make a small harbour, Ballycottin would soon become one of the first stations in Ireland. No suggestion to make as to better preservation of peace, as the men are not disposed to quarrel. The falling off in number of boys and men is ascribed to various causes—emigration, entry of boys and men into Royal Navy and Merchant service (the guard-ship at Queenstown enters on an average 250 boys a year). Scarcity of fish, attributable by some to the number of steamers constantly passing along coast, and want of money to keep boats and gear in order. Character of former fishing population said to be peaceable and orderly. Fishing was generally pursued as a means of adding to their other mode of subsistence, and not for supplying distant markets. The men in general worked at farming when not engaged fishing. Yawls and whale boats, four and six oared with trysail were used; they are broken up or changed owners—no vestiges of them left. Is of opinion that the depressed state of the fisheries is attributable to causes already stated—scarcity of fish some seasons, and want of means to keep boats and gear in good order. If money were lent to fishermen to procure these requisites and places of safety provided, as at Ballycottin, it would do much towards giving new vigour and prosperity to the Irish Fisheries.	6
326	1,662	90	380	2,032	114	–	–	94	90	435	–	Condition of fishing establishment at Kinsale improving in size of boats and quality of gear, in other places falling away. Steadier employment, more settled habits and perseverance in systematic fishing visible. Not so much emigration as formerly. If more capital was embarked, it would no doubt employ advantageously for the owners more men than at present. The take of turbot, gurnet, and mullet, greatly on the increase; hake much better than for many years; mackerel fishery bad, owing to scarcity of fish and heavy spring gales. Two small natural oyster banks in district, too unproductive to give steady employment. No new banks discovered: no steps taken to plant new beds. Oysters sold at from 2*s.* to 3*s.* per hundred; no idea of quantity sold, which is very small. Two roofless, unused curing houses exist. Fish sold partly fresh and partly salted. No ice-houses. No conflicts between parties pursuing different modes of fishing. Fishermen certainly peaceable, but very drunken; to this vice the officer attributes the non-success of owners and men. One day's good fishing makes all the natives drunk for three, leaving Scotch and Manx men the fishing. Registry of vessels perfect, but would recommend the entire abolition of the second class of vessels—of the 326 boats returned here, 200 have certainly not fished this year possibly for two or three years; they are used in connexion with agriculture. A little trawling exists between Old Head and Seven Heads; trammels are employed off Gally and in Oyster Haven. At the former place it has led to disputes with line fishers. Trawling on known or supposed spawning-beds should be prohibited, as it must in time cause fish to spawn elsewhere. Trammel nets are only objectionable across entrances to small harbours. Trawling in the open sea, except on known banks, is not objectionable; much harm is done by constant disturbance of the bottom by amateur fishermen in small harbours. Only two regular trawlers in the district of sixty-four tons, with four-inch mesh, which is worked in from six to ten fathom water. The number of trawlers same as preceding year. There are about 100 vessels regularly employed in other modes of fishing. Fish captured by trawl sold in local markets; that by seine, trammel, &c., sent to Dublin, Cork, and Liverpool. Herrings, pilchard, mackerel, scad, pollock, sprat, and sand-eel captured by seine; ling, cod, conger, gurnet, hake, haddock, bream, and whiting by line; cod and ling probably deposit their spawn in shoal water, on sand and shingle, as the greatest takes are in such places. Most other descriptions of fish spawn in deeper water, except small kinds, which probably spawn in muddy-bottomed harbours and estuaries. The most accurate statistical information could be had respecting the fisheries by the appointment of officers whose duty it would be to pass constantly from place to place, who could soon arrange a proper statistical system. One officer, for instance, should take under his charge, say from Waterford to Bantry. It would be his duty to know where the greatest take of fish was, and to notify all the fishing stations. He should make himself acquainted generally with the men, ascertain their grievances, real or fancied, find out by constantly availing himself of opportunities of fishing with the men, whether small takes of fish in certain localities is caused by apathy of men or absence of fish; and he should through "papers" advise the public accordingly, to give an opportunity of embarking capital, &c. Such officers should always be travelling; probably a well-found fishing hooker with office on board would be the best home to provide for him. The officer questions if the disparity in the present fishing establishment and that of 1846 is so great as supposed: thinks it has been, and to a minor extent still is too much the custom to class vessels as "fishing"	7

												which are only employed at rare intervals, say once in three years in the fisheries; but were really employed in connexion with farming, and so with the men. Of course all fishermen say "the fish have left the coast,"—believes the market statistics of those days and now would go far to modify the idea. The demand has of course gone on increasing, but the capital has decreased, and as a necessary accompaniment the *morale* of the men. The fishermen are now the main obstacle to success. Drunkenness and laziness prevents them availing themselves of good takes, and want of energy prevents them following the fish into strange waters, even when the owners have capital to embark in proper sized boats. The shores of Kinsale, Oyster Haven, Courtmasherry, and Clonakilty are disfigured by the wrecks of fishing boats of unknown ages, which but for the marvellous laziness of the inhabitants would have been broken up twenty years ago. Believes the effective fishing vessels are as numerous now as at any former period. The Coastguard officers say generally that want of energy is the main obstacle to success, who always find fish whenever they have leisure to catch them; but of different kinds from those most in favour among fishermen. The officer has known fishermen to throw red mullet overboard in disgust at not catching hake. Considers something could be done by Government rewards, through such an officer as referred to above, "To the greatest number of hours a boat was actually at sea in the year;" "The greatest number of hake taken by one boat," &c.; also by introducing young and fresh blood from Scotland and the Isle of Man.*	
541	2,498	178	550	2,579	186	–	–	–	56	76	194	Fishing establishment of district declining; no sign of improvement within the year; prospects bad. A spirit of emigration prevails. Those men who have no relations in the United States would probably stop at home if fully employed, but, as a rule, all intend leaving this country when they receive their passage-money from their friends. Last year more productive in line fishing than preceding; less productive by other modes. Natural oyster banks exist off Crookhaven, but are not worked. No steps taken to stock private beds. The quality of the oysters is good; price this year about 7*s.* per hundred; very small quantity sold. There is one curing establishment at Crookhaven; an attempt was made to establish one at Union Hall in 1824, but failed. The fish are salted in casks, but, as a rule, they are sold fresh. No ice-houses in district. No conflicts; the fishermen are a remarkably quiet and inoffensive body of men; the able-bodied are generally employed in fishing, but they also cultivate small holdings. Registration of vessels perfect; cannot suggest a better system. Trawling and the use of trammel nets exist in Ross Bay and in all the sounds and creeks between Cape Clear and the main, and they have not been the subject of any contention. Some fishermen are of opinion that trawling in shallow water destroys the spawn by tearing up the seaweed on which it is deposited; others say that it cleans the bottom, and the fish return to feed on the same place again. The opinion of the majority of the people the officer has consulted is, that trawling does not injure the fishing interests. Trawling practised by from ten to twelve Cork boats of from thirty to forty tons, using a mesh of from one and a half to three inches, working in from sixteen to twenty fathom water, in Ross Bay, and in eight to ten fathom off Cape Clear. Number of trawlers about the same as preceding year. The boats engaged in seine, trammel, net, and line fishing vary from one to three tons, but all boats on the coast are occasionally employed. Fish captured by trawl sent to Cork; that taken by other modes sold in local markets. Turbot, sole, plaice, hake, cod, conger, ling, and haddock taken by trawl; herring, scad, pilchard, pollock, and mullet, by seine. Plaice and haddock by trammel; cod, ling, conger, gurnet, hake, haddock, bream, and whiting, by line. Cod, whiting, haddock, and ling are in best condition in winter; worst in summer. Hake best in autumn; worst in spring. Turbot, plaice, mackerel, mullet, pollock, scad, herrings, and pilchard, best in summer; worst in winter. Fish deposit their spawn in Ross Bay on sandy bottom at from ten to fifty fathom, and in from four to five fathom water in the harbours and creeks of the coast, on a seaweed called "wool" by the fishermen. The most accurate statistical information relative to fisheries could be had by the officers of the Coastguard by frequent inquiries, and could form an approximate idea of the quality and description of fish caught within the limits of their stations, and a monthly register might be kept by them, but would suggest that they receive some remuneration from the Commissioners for the duty. As the coast and harbours are occasionally alive with fish, if fishing companies were established at Crookhaven and Union Hall, and managed by men who thoroughly understood the business, there is little doubt of their paying. A special system of carriage to the large markets would be indispensable. The cause of the falling-off in the fishing may be ascribed to the hopeless state of poverty, and consequent wretched condition of boats and nets, and also the steadily increasing emigration since the famine. The coast population before 1846 combined fishing with farming as now, but pursued the former with more energy than the present men. The fish were sold only in the immediate neighbourhood. The same style of boat as now was employed, and indifferently found. The old boats are decayed and broken up. The depressed condition of the fisheries arises from want of money and properly found boats, nets, &c. Many of the fishermen assert that the fish have deserted the coast, and that with present boats they cannot follow them into deep water. Capital, new boats and gear, and a certain market, might restore the prosperity of the coast population; but they must have help and direction, for they will do nothing of themselves. The desire to follow their relations and friends to the States yearly grows stronger.	8
204	700	100	208	716	104	–	–	104	11	160	–	No improvement in boats and gear; condition bad; a slight improvement in prospects. Spirit of emigration does not exist in this district; if the fishermen were employed they would not leave. Take of all descriptions of fish (except sprats) less than preceding year; of the latter 400 tons were captured, which could have been doubled had the men kept at work. No oyster fisheries. Two small private beds in district. One curing establishment formed, and five in existence previously. The greater part of fish salted; the remainder sold fresh. No ice-houses. General habits of fishermen orderly and peaceable; they fish in fine weather, and at other times are employed at farmwork. Registry of vessels perfect, but great difficulty experienced in getting owners to mark boats. Trawling and trammel nets used in district. No collisions. The officer is of opinion that trawling is not injurious to the fishing interests. Trawling carried on by three boats of thirty tons each. Size of mesh from one to six inches, working in twenty to thirty fathom water. Number of trawlers same as last year; 204 boats engaged in other modes of fishing, varying from two to eight tons each. The choice fish caught by trawl sent to Dublin; the remainder, as	9

												well as all taken by seine, trammel, and line, sold in local markets. Cod, sole, whiting, and hake captured by trawl and line; mackerel, herrings, sprats, and scad, by seine nets; and hake by trammel. Can give no information as to spawning grounds; accurate information could be had by authorized persons examining the boats when they return from fishing. No suggestion to make for the better preservation of good order. The cause of falling-off in number of fishermen, boats, gear, &c., is scarcity of fish of late years on the coast. Boats and nets were allowed to rot, and the men disappeared. Fishing was formerly pursued in conjunction with farming. The boats of the district well adapted for the capture of fish in the locality. Vestiges of some of the boats are still to be seen. Scarcity of fish of late years cause of depressed state of fisheries.	
536	2,908	402	542	2,938	408	23	111	16	–	–	–	No marked difference in the fishing establishment since last year. No improvement, present or prospective. Spirit of emigration continues, but fluctuates according to the reports received, especially from the United States. Take of fish rather less productive than in preceding year, mainly attributable to boisterous weather. No great natural oyster banks; in one instance an effort was made, but without success, to cultivate a bed of some fifty acres at Carryglass. The quality of the few oysters brought to market was good, and were sold at 3*d.* per dozen; the quantity sold within 10,000. No curing establishments or ice-houses in district. The individual efforts by fishermen at curing successful. No conflicts. Fishermen orderly and peaceable. Registry of vessels as nearly perfect as practicable. Trawling practised to a limited extent; trammel nets generally used. Some contention has arisen between parties pursuing different modes of fishing at south and east of Bere Island, which was inquired into by the Inspecting Commissioner. The officer thinks trawling injurious to the fishing interest, and ought to be restrained, both as to position and time, as it is destructive of large quantities of valuable and immature fish. Trawlers vary from seven to forty tons; the mesh used three to four and a half inches, and is worked in from ten to forty fathom water. Rather less number of trawlers than in preceding year. There are forty boats engaged in seine fishing, and 496 in trammel, net, and line. The mackerel captured are exported; the other kinds of fish taken disposed of in local markets. Hake, haddock, plaice, sole, and turbot captured by trawl; mackerel, herring, bream, and scad, by seine; hake, haddock, cod, and dog-fish, by trammel; sole, turbot, cod, ling, hake, haddock, and whiting, by line. Skate and dog-fish very numerous. Fish deposit spawn on clear sandy bottom at various depths. Knows no better system of obtaining accurate statistical information than through the Coastguard, as at present. The fisheries may be improved by the formation of companies, in which the fishermen should hold shares, as an incentive to diligence and a guarantee to fidelity. As regards the decline in the fisheries, the opinion generally entertained is, that the fish have deserted this part of the coast—that seasons of late have been unfavourable.	10
60	360	–	64	372	11	–	34	–	22	–	75	No improvement in the fishing establishment within the last three years; no sign of improvement. Spirit of emigration still continues, and all the fish in the sea would not prevent it. Last year about as productive in take of fish as preceding year. No improvement in oyster fisheries. No natural banks discovered. Can form no idea of quantity sold. No curing establishment in district. No conflicts or collisions. General habits of fishermen orderly. Very few constantly fishing. Registry perfect. Considers it advisable that an officer paid by Fishery Commissioners should examine all registered boats. Trawling and trammel net fishing practised. Where there is spawn, trawling is injurious. Trawling carried on by four vessels of from ten to twelve tons each, and two of five tons; the number the same as in preceding year. Trammel and line fishing carried on by vessels of from three to four tons each. Fish captured sent to Killarney and Dublin markets. Soles, plaice, brit, and turbot taken by trawl. Cannot say where or at what depth fish deposit their spawn. Correct statistical information relative to the fisheries could be obtained by an experienced person who would devote his entire time to the duty. Cannot suggest anything for the improvement of the fisheries. The people are too lazy to fish; are not poor, and are employed about their land.	11
205	820	–	205	820	–	–	–	–	10	140	–	If any change in the fishing establishment of this district, it is for the worse. Prospects bad, and fishermen complaining. Fishermen continue to emigrate when they have means to do so; would remain at home if fully employed. Last year rather less productive in take of fish than the preceding. No oyster fishery. A curing establishment on a small scale at Portmagee; fishermen cure their own fish. One ice-house at Killorglin for salmon. No conflicts; fishermen most peaceable; the able-bodied generally employed fishing. Registry tolerably complete. No set nets to any extent in division. Trawling inside of the headlands injurious to the fishing interests. Trawlers (which belong to Dingle) on the increase; all other kinds of fishing boats on the decrease. Fish captured, cured, and sent to distant markets. Ling, cod, hake, and haddock in best condition from January to April; worst condition in summer months; seine fish in good condition from July to October. Ling and cod said to spawn on sandy bottoms in about fifty-fathom water; hake and haddock spawn more in shore. Correct information relative to fisheries could be had by having a paid registering officer in each division. A great falling off since 1846 in quantity of fish captured. Some combined fishing with farming; others occupied solely at the former. Small yawls and canvas boats in bad condition are now employed. The old boats destroyed. Believes the present depressed state of fisheries arises from dearth of fish on coast, want of markets, and want of general prosperity in the country.	12
140	560	–	156	636	6	–	–	–	–	–	–	Boats and gear in very good condition. Improvement in deep sea long line fishing only. Emigration still prevails. The trawling about as productive as in preceding year. Capture of ling and hake better. No oyster fisheries. No curing-houses (though much wanted) nor ice-houses. The fish captured are dried on walls, rocks, &c.; some sold fresh. Fishermen orderly and peaceable. Registry perfect. Can suggest no improvement in system. Trawling exists in Dingle Bay. No contention between fishermen pursuing different modes. Is of opinion that close season should be from 1st May to 1st November for trawlers. Trawling is most productive. No encouragement for long line fishing. Trawling carried on by vessels of twenty-five to sixty tons; mesh, three to seven inches, worked in about twenty-five fathom water. The number of trawlers about the same as last year. Seine and other boats from four tons to canoes. Fish captured by trawl sent to Dublin; of that taken by seine, &c., some cured and some	13

th and 6th Vict., cap. 106, showing the Increase or Decrease in the different Districts since January, 1867.

2nd Class employed in 1867.			Total employed in 1867.			Increase since 1866.			Decrease since 1866.			Substance of Observations made by Inspecting Commanders of Coast-Guards and other Registering Officers, up to the 1st January, 1868.	No.
Vessels.	Men.	Boys.	Vessels.	Men.	Boys.	Vessels.	Men.	Boys	Vessels.	Men.	Boys.		
												sent to distant markets. Soles, turbot, brit, plaice, and several coarse fish, taken by trawl; scad, mackerel, herring, and mullet by seine; hake by trammel net; hake, cod, ling, haddock, &c., by line. Trawl fish in prime condition from November to May; other fish in good condition from May to November. Fish spawn on stony ground in shallow water. Statistical information could be had by employing persons duly authorized to take account of number and quality as boats come in. Suggests that encouragement be given for long line fishing. Cause of decrease in fishing population ascribed to famine of 1847-8; population then lived partly farming and partly fishing. Old boats destroyed. Depressed state of fishing owing to emigration, natural indolence, and indifference. To give vigour and prosperity deep sea fishing should be encouraged and curing-houses built.	
24	60	12	47	120	22	–	–	22	3	29	–	No improvement in boats or gear; no sign of improvement; prospects bad. Emigration prevails to a small extent. Take of fish about the same as previous year. Oyster fishery very good, and would be much better if the by-laws were strictly adhered to. Good natural banks; no licences granted; quality of oysters very good; sold at 21*s.* per thousand; about 914,000 disposed of during the year. No curing establishments or ice-houses. No conflicts or collisions between fishermen pursuing different modes of fishing; generally peaceable and orderly. Registry of vessels perfect. No trawling. Fish captured sold in local markets. Fish captured consist of mackerel, herring, sprats, cod, and whiting. Fish spawn on sand and gravel. Correct information respecting the fisheries could be had by the appointment of an agent. Present regulations quite sufficient for preservation of good order, &c. The officer finds by inquiry that the number of fishermen and boats were greatly overrated. Many boats belonging to farmers were employed gathering seaweed; most of these men were entered for the small and large boats. The small boats now in use in bad condition. Old boats used for firewood. The depressed state of fisheries owing to want of funds to enable fishermen to procure a better description of boats and gear. A loan society to advance money at a moderate rate of interest would be an advantage.	14
136	408	–	192	576	53	–	–	–	19	59	104	Fishing establishment in good order; no alteration in condition of boats and gear. No improvement: prospects good. Spirit of emigration still prevails; fishermen would not remain at home if even fully employed. Take of fish less productive than in preceding year. Oysters very scarce; no new banks discovered. Private beds are being stocked; the quality is rather coarse and large—sold at 3*s.* 6*d.* per hundred. No idea of quantity sold. One curing establishment at Glin: fish generally sold fresh. There are four ice-houses. No conflicts nor collisions. Fishermen orderly and peaceable, but they are lazy and disinclined to work. Registry of vessels perfect. No suggestions to make for its improvement. No trawling in district; boats employed in drift-net and line fishing. Fish captured, part sold in local markets, and part sent to distant markets. Herrings, cod, ling, and scate are the kinds taken. Unable to say at what depths or kind of bottom fish spawn. Statistical information relative to fisheries could be had if fishermen would report to local Police Station or at Coastguard Station, before sending off to markets. No suggestion to make for better preservation of good order. The cause of falling off in the fisheries is unknown: the fishermen pursue fishing as a means of getting a livelihood, but there are some who would fish only they dislike it. Most of the boats employed are canoes in good condition, but are unsuited for fishing at a distance from shore. There is a scarcity of fish; fishermen find it very precarious, as the coast is rocky and dangerous for canoes. Knows of nothing that would give vigour and prosperity to the fisheries.	15
98	259	–	98	259	–	33	74	–	–	–	–	No improvement in boats and gear. No sign of improvement: present prospects unfavourable. Spirit of emigration still prevails; fishermen if fully employed would probably remain at home. Last year on the whole more productive than preceding year. No curing or ice-houses. Fish captured sold fresh. No conflicts; fishermen orderly and peaceable; able-bodied do not solely depend on fishing for a living; most of them have small patches of land. Registry of vessels very imperfect; fishermen very careless in the matter, unless the law be put in force to compel them to register. Can offer no suggestion for a more improved system. No trawling or trammel nets used in district; ninety-eight boats engaged in line and seine fishing. Fish captured sold to hawkers on the spot. Mullet taken by the seine in November and December; cod, ling, haddock, and conger by spillard from December to March; bream and pollock from May to September; mackerel from September to November—they are in best condition during these periods. Unable to say at what depth fish deposit spawn. To procure accurate statistical information respecting fisheries very difficult, owing to manner in which fish are sold and the irregular manner in which fishing is prosecuted, as the fishing boats are distributed over a coast-line of fifty miles. The great falling off in the number of boats now as compared with 1846 and subsequent years attributed to famine and emigration, most of the boats being sold to add to fishermen's means of existence; those who survived found themselves without boats or gear and fled the country, so that at present the majority of fishermen are composed of the old and infirm. At no time did fishermen pursue their calling but as a means of adding to other modes of getting a living. Canoes and corraghs generally employed in this district; in bad condition, but are perhaps best adapted for this wild and rocky coast. Poverty, apathy, and a general feeling of insecurity as to the possession of their small holdings operate most injuriously, and it cannot be disguised that disaffection prevails amongst coast population. It is very difficult under these circumstances to suggest any means of improvement, though doubtless if the fishery could be vigorously worked it would prove a source of emolument to hundreds.	16
772	1,902	60	932	2,337	180	161	–	32	–	25	–	Fishing establishment much the same as last year. Arran islands not so prosperous; boats and gear in an indifferent condition for the most part. No improvement; prospects gloomy. Not quite so much emigration as previously; fishermen would remain at home if fully employed. Last year generally more productive in the open bay, particularly in line fishing, than previous year, but not as good as usual about Great Man's Bay and in upper portion of Galway Bay. Slight improvement in oyster fishery; no great natural banks; no new banks discovered. A few private beds have been restocked. Quality of oysters very good; sold at from 6*s.* to 11*s.* per 100: no idea of quantity. No curing establishment or ice-house in district; fish sold fresh. No conflicts: threatening notices posted by Claddagh men to intimidate trawlers, but no disturbance. Lord Wallscourt's agent reports being fired at. Fishermen orderly and peaceable; able-bodied	17

												partially employed, few fishermen doing more than fish occasionally to eke out a living. Cannot suggest any better mode of registry. Trawling carried on in Galway Bay: no trammel nets. No contention, but bad feeling between line fishermen and trawlers. Trawling does no harm, as there are as many fish as usual, though trawlers are more numerous. Eight vessels employed trawling of from thirty to fifty-five tons each; mesh two and a half to five inches, worked in forty fathom water. Six more trawlers than last year. About 132 hookers of seven to ten tons and 770 corraghs half a ton each employed in seine and line fishing. Fish captured by trawl sent to Dublin; the other fish disposed of in neighbourhood. All fish that frequent the bay caught by trawl, viz., cod, ling, hake, bream, haddock, mackerel, and all kinds of flat fish; codling and sole the chief kinds taken by line—line fishing not carried on between January and March. Cod and ling in best condition from December to May; pollock and turbot from May to September; hake from July to September. The officer is unable to state positively in what depth fish spawn, but thinks it is in shallow water and on rocky or gravelly bottom. It is impossible to obtain correct statistical information relative to the fisheries in this division, as there is no regular market and the greater portion of the fish captured is consumed by fishermen. Suggests that the poorer fishermen be supplied with lines at moderate prices on credit. Two classes of fishermen live in this district, the "Claddagh" who depend entirely upon fishing for a living, and the shore population who have small patches of land which they farm when not fishing; the falling off in numbers is nearly all in the former class, and is attributed to want of proper boats and gear. One bad fishing season would ruin these people and deprive them of the means of renewing their gear or repairing their boats; they have now better opportunities of disposing of their fish than ever before, having railway communication to the Dublin and English markets; but they are in a wretched state of poverty and yearly decreasing in numbers. The hookers employed are well adapted for the bay fishing, but not for deep water, which they never attempt. A few years ago the Claddagh beach was covered with the remains of rotting boats, few of which are still there, but enough to show the past prosperity of the village, which contained about 3,000 able-bodied men, but now numbers only 200 or 300. The officer suggests for the improvement of the fishing that loans be made to fishermen to enable them to buy gear and repair their boats.	
434	1,137	–	469	1,247	–	11	–	–	–	807	–	A very slight improvement in boats and gear, owing to premiums given at annual regattas. No sign of improvement; prospects bad. Emigration still prevails: if fish were as plentiful as formerly and the fishermen fully employed they would probably remain at home. Take of fish last year less productive than in preceding ones. Oyster fisheries at a very low ebb; one natural bank at Ballinakill Bay. No new banks discovered. Steps taken to stock private beds. General quality of oysters good, which are sold at 24*s.* to 32*s.* per barrel—sixty barrels sold. No curing establishments or ice houses. No collisions; fishermen orderly and peaceable. Registry perfect. No trawling or trammel nets in district; 409 boats employed in line fishing. Fish captured sold in local markets; they consist of cod, ling, bream, and gurnet, with occasional turbot and sole. Fish in best condition from November to March; but generally taken when in worst condition, from March to November, as the weather is usually too bad to fish in winter. Do not know at what depth fish spawn. Information relative to fisheries could be obtained by appointing persons to attend local markets, as the fish taken are all sold within district. The quantity taken is so small that it would not repay the trouble. The great cause of the falling off in the fishery on this coast is principally ascribed to the fish having left the coast. Former fishermen were industrious and hard-working; generally farmed and fished, and supplied surrounding district. Present class of boats good and well fitted for fishing. Many of the old boats still remain, but many were burned for want of turf. The depressed state of fishery arises from scarcity of fish. The shore population find burning kelp and attending their land more profitable than fishing.	18
207	621	30	226	678	35	–	–	–	3	2	165	Fishing establishment declining. No improvement. Spirit of emigration prevalent; fishermen would remain at home if employed. Last year less productive in take of fish than preceding. Oyster fishery in a fair condition. No new banks discovered. The private bed at Murrisk has been restocked. No curing establishment or ice-houses. Fishermen orderly; able-bodied employed fishing. Registry of vessels perfect. No trawling in district: 126 boats of fourteen tons each occasionally employed in line fishing. Fish captured sold in local markets. Cod and ling in best condition in the spring months. Unable to say what would be best means of obtaining correct statistics respecting fisheries. No suggestion to make for the better preservation of good order. The officer is informed that the present depressed state of the fisheries arises from want of gear and clothing. The coast population formerly pursued fishing solely as a means of gaining a livelihood. The present boats in poor condition.	19
216	880	30	216	880	30	39	170	8	–	–	–	The general condition of the fishing establishment very bad; boats and gear on the decline. No sign of improvement; prospects unfavourable. Emigration still prevails. Most of the fishermen go to England during harvest, and return in November when fishing is over. Take of fish this year very productive, chiefly owing to fine weather. Oyster fisheries very flourishing, there being large quantities on the beds in Achill Sound. All private beds well stocked. A pernicious and illegal system carried on—that of taking hooker loads of small oysters away, which, if not stopped will destroy the fishery. Quality very good—sold at 3*s.* 1*d.* per 100. Impossible to say what quantity sold. No curing establishment; fish sold in fresh state. Mr. Hector has a curing establishment for salmon at Achill Sound, but no ice-houses. No conflicts; fishermen orderly and peaceable, able-bodied men when not engaged farming are employed fishing. Registry of vessels perfect, but very stringent means have to be adopted to make the people observe the law. Trawling or trammel nets not practised in district: no data to form an opinion on effects of trawling. Fish taken by line generally consumed by fishermen. Salmon and mackerel taken by seine, in best condition in June and July. Cod, ling, coal fish, and haddock in best condition in January and February. Unable to state at what depths fish spawn. It is impossible to say how the most accurate statistics could be had in consequence of the irregular manner in which fishing is prosecuted. The only way to improve the fisheries is by supplying the fishermen with proper boats and gear; and then it is doubtful if they would use them. The great falling off is ascribed to emigration, the fishermen who pursued their fishing merely to add to their means of subsistence, not being able to earn a livelihood, and from their	20

												extreme poverty were unable to purchase gear. The boats employed on this part of coast are of the worst description, and their condition and fitments very bad. Many of the old boats rotten and worn out. The depressed state of the fisheries on this part of the coast is caused by scarcity of fish; but the people are naturally a lazy race, and the only way they could be encouraged to fish would be to give them new boats and gear.	
178	589	30	178	589	30	–	–	–	13	79	–	Great falling off in boats and gear. Good prospects of fish; no chance of improvement in gear unless assisted by money. Many fishermen would remain at home if employed, although it would not influence others. Several families have returned to Blindharbour, our best fishing station. This year not so productive in take of fish as preceding, owing to want of proper nets. Great show of fish at times which would not mesh, caused it is said by unsuitable gear. Great quantities of oysters dredged in Blacksod Bay and at Belmullet, where excellent breeding-grounds exist. No new banks discovered. Licensed oyster-beds protected, but not stocked; quality of oysters good—sold at from 7*s.* 6*d.* to 9*s.* 6*d.* per barrel. No curing establishment; fish sold plain salted or fresh. Fishermen orderly and peaceable. Registry of vessels perfect, and the system good. No trawl or trammel nets in district; considers trawling injurious in destroying small fry and should not be allowed in Blacksod or Broadhaven Bays, where so many small salmon rivers enter. Boats average two tons; fish captured sold in local markets, and also taken in quantities salted to Ballina and other distant places. Cod, haddock, bream, conger, herrings, and mackerel are the kinds of fish captured. Fish spawn in from thirty to fifty fathom water. For the improvement of the fisheries the officer recommends loans or gear be granted to the fishermen on the security of the landlords, to be repaid in seven years, and if hemp were supplied the families of the fishers could make the gear. The great falling off in the take of fish arises from various causes, such as emigration, bad harvests (rendering them incapable of keeping up their gear), and improvidence. All farm more or less. Is of opinion that there has not been anything like the quantity of fish off the coast of late years that there was in 1846. Boats mostly in use are corraghs, which are cheap and light. The fishermen generally are unacquainted with the management of larger boats. No vestiges of the large boats now remain. The cry of the fishermen is for assistance in money or gear but am sorry to say that there is a want of energy, which may arise from their failing to catch fish, a bad season, want of gear, or being badly clothed and fed. One bad season is almost ruin to these poor people, but to their credit it does not turn them to dishonesty.	21
182	760	–	184	765	1	3	12	–	–	–	–	No improvement in fishery; present prospects very gloomy. Emigration still continues; cannot say if men would remain at home if fully employed. Take of fish last year less productive than preceding. No oyster banks in district. No curing establishment or ice-house in district; fish captured sold in fresh state. No conflicts; fishermen orderly and peaceable. Registry of vessels perfect; no suggestion to make for improvement. No trawling in district. There are 182 boats employed in the fisheries; fish sold in local markets: they consist of pollock, bream, mackerel, turbot, sole, and plaice, in best condition in summer months; herrings from September to November; cod from November to January. Fish spawn about five miles off land on sand banks, in about fifty-fathom water. Accurate statistics respecting the fisheries could be had through the Royal Irish Constabulary. No suggestions to make for the better preservation of good order amongst the fishing population. The falling off in the number engaged in the fisheries is owing to emigration. Formerly fishing was carried on in conjunction with farming. Corraghs principally used; a better class of boats needed; the old boats broken up—no vestiges. Probably a curing establishment with trawlers might benefit the people.	22
82	425	1	82	425	1	7	27	–	–	–	1	Condition of fishing establishment much the same as last year, without any improvement. No fishermen in district; the little fishing carried on is by farm labourers, &c., and in fine weather, and after their day's work is over: very few fish caught. No great natural oyster banks in district. There are private beds at Cullanmore; about three hogsheads sold weekly during open season; the quality is good and sell at 5*s.* 6*d.* per hundred. No curing establishments or ice houses; fish sold in fresh state. No conflicts; no instance of disorderly conduct amongst people when fishing, but it must be borne in mind that the boats constantly change their crews. Registry as nearly perfect as the means at disposal admit of, but the number of men employed is very uncertain. No trawling. From six to eight trammel nets fished in Killala Bay in summer; no contention with line fishers. Fish captured sold in local markets; they consist of turbot, plaice, and bret taken by trammel nets; cod, sole, flounders, whiting, conger, and rough fish by long line and spillers. Cod fish in best condition in December; turbot and flounders in August. Unable to state at what depths fish spawn; statistical information could be had by the appointment of a person to keep a strict supervision over fishermen, and compel them to report the take and disposal of their fish. There is less fish now than formerly; the old fishermen have died off, and the present class are chiefly employed in tillage, and are unable to keep their boats and gear in good order: thus it happens that when fish appear in any quantity off the coast, nothing is ready; the crews are hurriedly selected for boats that have been beached for months, and they are put off with nothing in order for the occasion. Should they be successful in the take of fish, so as to keep them at it for several days, it is often detrimental to their employers, who require their services it may be to save the harvest. Formerly farming and fishing were carried on in conjunction; the fish captured was sold locally. Boats now in use are four-oared without sails, and can only fish near the shore. When the Registry was established every boat was included, though many seldom fished, and the same boat registered under different names through change of owner and the applicant for fresh registry not giving the coast-guard the necessary information, which it is frequently difficult to obtain. Fish not being as abundant as formerly—no mackerel, and but few herrings—has made the people indifferent as to fishing, and boats and gear are neglected. Under such circumstances it is difficult to say what would give vigour and prosperity, but fishermen who understand their work will be required whenever fish return to the shores.	23
154	801	52	158	814	52	20	102	31	–	–	–	There does not appear to be any material improvement in the fishing establishment, for although there are several new boats they are of the same class as the old ones, and as wretchedly found in gear of all kinds as formerly. Emigration rather less this year; the officer believes this sad drain might be stopped by more profitable employment at home	24

												than fishermen enjoy at present. Fishery much less productive than last year. The herrings visited this coast very late in the season, when the weather was too stormy to go to sea—the fish taken in bad condition. The oyster fishery less productive than last year. The Cumminer, as natural bed in Sligo Harbour, is again being dredged by all comers; the productiveness of this bed is enormous; two years ago it was thought to have been utterly swept, yet last year a good many oysters were got from it, and this season the quantity is astonishing. It is a great pity this fine bed is not protected from undue fishing. Quantities of brood sold to stock Oyster Island, Drumcliff Bay, and Lissadill beds, price from 1*s.* to 4*s.* 6*d.* per 100; 250,000 sold from Lissadill, and 14,000 from Moneygoold. No curing establishment; one ice-house for salmon at Ballyshannon; fish sold in fresh state. No conflicts; fishermen orderly and peaceable, equally employed in farming. Registry perfect. Trawling practised at Mullaghmore, and attempted at Rochley by Mr. Gore Jones, which appears to have failed; the men cannot or will not go in the vessel, nor permit skilled hands from Galway or elsewhere to do so, having threatened violence. The officer states that he would not permit trawling in harbours or estuaries, as it causes great destruction of spawn in such places, and on spawning grounds. Trawling carried on by four boats from seven to fifteen tons each, mesh four to eight inches, working in from five to sixteen fathom water. The number of trawlers the same as last year; 154 boats employed in other modes of fishing, from two and a half to three tons. All fish captured sold fresh for local consumption, or inland markets; turbot, sole, plaice, and John Dory captured by trawl; herring and mackerel, by seine; codling, whiting, pollock, haddock, and bream by long lines and spillers. Sole, plaice, and turbot in best condition from August to November. Codling and haddock spawn on shelly bottom in thirty-two to thirty-six fathom water. Statistical information could be obtained by employing men to examine the boats returning from fishing. The officer suggests for the improvement of the fisheries the formation of small piers, however rude, at exposed fishing villages, to afford shelter and protection to boats; also the appointment of some leading men to direct operations and preserve order, by establishing rules and seeing them carried out. Such piers are absolutely necessary on this coast; no effective fishery could be maintained without them. The falling off since 1846 is lamentable—not only have men and boats disappeared, but fish also: at that time trawling was not used on this coast, and it is asserted that it has destroyed the fishery, as proved by the fact that since their introduction fish have annually decreased; where they were once plentiful there are none now. At Rochley one-third of the men live by fishing; in other parts of district partly aided by farming. Hucksters buy the fish fresh for local and inland markets. There are contracts for supply of oysters and lobsters for Dublin, Liverpool, and Glasgow. The new boats are fine Greencastle yawls, twenty to twenty-four feet keel, a great improvement on the old boats; the gear as bad as ever. No vestiges of the boats of 1846. The universal reply to inquiries as to what is wanted to give new vigour and prosperity to the fisheries is, "If we could get loans of money, repayable in two or three seasons, according to success, to buy the best herring and other nets, and the best lines; to provide better boats, better found than ours ever can be, to enable us to follow the fish into deep water, the fishery would support us all right well, and we would repay the money honestly, and give good security." It is a curious fact that since 1846 fish have gradually quitted this coast. The officer suggests that by-laws counteracting inveterate slovenly habits and bad management of boats and gear should be enacted to govern the fishermen; that leading men should be made overseers, and their authority be supported by law: then by judicious grants of loans, hookers with all requisites should be supplied. By degrees a deep sea fishery might be created, and poverty, with its attendant evils, discontent and emigration, would give place to prosperity.	
365	1,634	344	374	1,668	344	69	590	–	–	–	18	No improvement in the state of the fisheries; no sign of improvement. A spirit of emigration still prevalent; men would not remain at home if fully employed. Last year about as productive in the take of fish as preceding; no oyster fisheries in the district. There is a curing house at Teelin for cod and ling—fish generally cured by those that catch them. No conflicts; fishermen orderly and peaceable. Registry perfect. Little or no trawling in this district; the officer is of opinion that trawling does little or no harm. The vessels employed in this district vary from one to two tons each. Fish captured sold in local markets; fish taken consist of mackerel, scad, cod, ling, whiting, hake, and bream. Fish spawn generally on rocky bottom. The most accurate statistical information relative to fisheries could be obtained through the coast-guard. Suggests for the improvement of the fisheries that a small steamer be placed off the coast, and that a small reward be offered for the greatest number of fish taken by any one boat. Falling off in numbers since 1846, owing to emigration, and partly to the fish deserting the coast; fishing and farming were carried on conjointly. Boats better built now than formerly; a number of the old boats lie rotting on the beach; others that were employed fishing are now used collecting sea-weed. The herrings have almost entirely deserted this coast, and as the fish become scarce, the fishermen have little inducement to look after them, especially as the bulk of the population do not depend on fishing for a livelihood.	25
110	290	70	110	290	70	–	–	–	–	–	–	Little or no change in the fishing establishment during the year. Not quite so many men employed owing to emigration. No improvement, nor any sign of improvement. Fishermen not so much disposed to emigrate as formerly. As many of the friends that did so have been disappointed in their expectations. If a fair prospect of employment was given very few would emigrate, and not a few would return from America. Last year less productive in the take of fish than preceding year, especially in white fish and lobsters. No oyster fisheries in district. No curing establishment; each man cures his own. Lobsters sent by steamer to Liverpool, but owing to the uncertainty of shipping them, not more than one-fourth get safe to market. There are ten ice-houses for salmon. No complaints as to conflicts between parties pursuing different modes of fishing. The men both orderly and peaceable. The majority are holders of small farms, and are consequently obliged to attend to the cultivation as well as fishing. The officer suggests that the registry of the districts should be kept at Burton Port. No trawling; no seines or trammel nets. About 110 boats engaged in line fishing of about two tons each. Part of the fish captured sold in local market. Cod, ling, and haddock, captured by line, in good condition in February, March, and April. Falling off in number of fishermen, owing to emigration. The boats used are four-oared yawls, in good condition; fitments very bad. Emigration	26

												is the chief cause of the depressed state of the fisheries; the men remaining want funds to enable them to follow their vocation of fishing as heretofore.	
265	799	105	268	818	106	–	–	–	80	165	80	Fishery in a depressed state, except North-west of Ireland Fishing Company improvements. No improvement as regards quantity of fish taken. Fish appears scarcer. No emigration amongst fishermen, who have taken to farming and other pursuits. No oyster fisheries in the district. Fish captured sold in a fresh state, except what is cured by North-west of Ireland Fishing Company, who have a curing establishment at Portnableagh, and purchase locally from fishermen, independently of their own take. No conflicts or collisions. Fishermen orderly and peaceable; only a few of the able-bodied generally employed fishing. Registry of vessels complete; no suggestion to make for its improvement. Trawling to a small extent for bait in Downey's Bay; not the subject of contention. No cause for further restraint. The officer is of opinion that trawling does not interfere with the fishery interests. One trawl boat of twenty tons occasionally works, with a five-inch mesh, in three to ten fathom water. Boats engaged in other modes of fishing are skiffs, of two and a half tons each, and corraghs. Fish taken by N. W. I. F. Company sent to England; the remainder of the fish sold in local markets. Flounder, sole, and turbot taken by trawl, and are in best condition in autumn; codling, haddock, and halibut by seine, and in best condition from November to March. Fish spawn on sandy bottom in from three to five fathom water. Statistical information respecting the fisheries could be had by the appointment of trustworthy persons at Dunfanaghy and Downey's Bay. The only suggestion the officer can make for the improvement of the fisheries is to provide better boats, as the men are so poor as to be unable to repair their present ones, or replace gear when lost. Fishing is carried on by the coast population in conjunction with cultivating small plots of potatoes and flax land, but fishing is their general means of livelihood. The present boats are quite unfit to fish off shore in deep water or on the banks. Vestiges of old boats are on the shore, quite useless. Suggests that a supply of good boats and gear be given to the fishermen, their cost to be paid for by instalments; this would invigorate the men, who are wretchedly poor and unable to purchase gear alone.	27
94	392	40	102	416	47	63	235	37	–	–	–	Fishing establishment in about the same condition as last year. Some indication of improvement. Emigration still continues to a great extent. Labourers are very scarce and wages high—1*s.* 6*d.* per diem. Last year more productive in the take of fish than the preceding. Oyster fisheries in bad condition. The natural bed off Rathmullen has greatly fallen away. The oysters are small, but good; sold at about 4*s.* to 6*s.* per hundred. No idea of quantity disposed of. No curing or ice-houses in district. Fish sold in fresh state. Fishermen very peaceable; most of the able-bodied are small farmers or farm labourers. Trawling and trammel nets exist in district. The general fishing interest is not in the least affected by trawling, which is carried on by eight vessels from eight to twelve tons each; mesh, two and a half inches from knot to knot, and worked in seven to twelve fathom water; ninety-four boats employed in other modes of fishing, varying from one to one and a half tons. Fish captured by trawl sent to distant markets; the remainder disposed of in local markets. Plaice, sole, dabs, and turbot taken by trawl; herrings, ling, and all kinds of rough fish by trammel nets—in best condition from November to January; except herrings, which are best from June to September. Fish spawn all along coast on sandy and mud bottom covered with seaweed and sweet grass, at a depth of about twelve feet. The quantity of fish taken could be had best of the fishermen if they could be induced to keep tally and give it either to the police or coast-guard. Four-oared boats generally employed are in bad condition, but only used at certain seasons. The fishermen are nearly all small farmers.	28
218	1,250	10	232	1,295	14	–	49	–	48	–	136	Boats and gear much the same as last year; no improvement. Not so much emigration among fishermen this year as in previous ones; many of them would remain at home if they had profitable employment. Cod fishing much more productive; other fishing much the same as in preceding year. Oyster fisheries pretty good, but from the number of fishermen employed the oyster beds can get no rest, and are being dredged out; they never get a chance of forming new beds from the same cause. The demand for oysters being so great, selling at 5*s.* 6*d.* per 112, and an ordinary and general day's work for a boat and four men is 130 oysters. No new banks discovered. Cannot state what quantity sold. There is a curing establishment at Moville belonging to a London Company who during the year formed an ice-house. The greater portion of the fish captured exported to England and Scotland, and a portion sold in local markets. No conflicts. Fishermen orderly and peaceable; able-bodied jointly employed fishing and farming. Registry of vessels perfect; no alteration necessary. Trawling exists to a great extent, and is the subject of much contention between those engaged in it and the proprietors of the Foyle Fishery. Trawling carried on by twelve boats, varying from ten to eighteen tons; mesh, two inches from knot to knot, worked in from three to eight fathom water. Number of trawlers same as in preceding year; boats engaged in other modes of fishing from one and a half to two tons each. No seine or trammel net used in the district. Sole, plaice, and ray are taken by trawl; cod, ling, and turbot by line. Sole and plaice in best condition in August; cod and ling best in January. Statistical information could be had by fishermen reporting periodically the number of fish taken each day. The fishermen are too numerous in this district to make a livelihood solely by fishing; they all assist on small farms which are rented by some member of their family, so that between fishing, farming, and going out as labourers they have a very good way of living. Fish must have been more abundant in 1846 than at present. Were the fish to return in any quantity, there is ample means for taking them. The present class of boats and condition well adapted for fishing. Few boats of 1846 remaining; they have been replaced by better ones. The fish in all probability have eaten all there is for them on this part of the coast, have given it a rest, and when their feeding ground is again ready for them they will return. There would be greater prosperity were the fish more abundant.	29
182	576	37	183	579	37	–	–	8	41	96	–	General condition of fishing establishment slightly improved; prospects fair. No emigration amongst fishermen. Last year more productive in take of fish than preceding one. No oyster fishery in district; no curing establishment. Fish sold in fresh state. No collisions; fishermen orderly and peaceable; the able-bodied generally employed fish-	30

												ing. Registry of vessels perfect. No trawling in district. Trammel nets employed at Cushendall. Twenty-four boats engaged in seine fishing—average, one and a half tons each—and 158 in line fishing. Some of the fish captured sent to distant markets, and the remainder sold locally. Herrings, bream, and glasson taken by seine nets; mullet and flat fish by trammel net; ling and cod by hand line. Herrings in best condition in summer; bream, in autumn; glasson, throughout the year. Ling and cod fish spawn on a bank fifteen miles N. E. of Ratlin in from thirty to sixty fathom water. Statistical information respecting the fisheries could be had by personal observation of Coast-guard men, and also from the reports of fishermen. The officer suggests that the landing places for boats be improved. Nearly all the fishermen are small farmers. Boats of the second class in fair condition. Old boats broken up. The fishermen of this district are not in a depressed state.	
126	190	48	136	230	48	–	–	–	84	264	20	No change in fishery establishment. Prospects at Carrickfergus fair; generally no improvement. No emigration. As a rule, the old men and boys the only fishermen, they pursue fishing when not employed farming; this does not apply to Glenarm or Carrickfergus, where there is more activity. Average take of fish much the same as preceding year. There is a natural oyster bank off Carrickfergus, which produces good oysters; supply improving. No new banks discovered. Oysters sold at 8*s.* to 10*s.* per hundred; from 15,000 to 20,000 sold during the year. No curing establishments or ice-houses in district. Fish sold in fresh condition. No collisions. Fishermen orderly and peaceable; they are generally old men. Registry of vessels perfect; see no need of improvement in system. Trawling carried on at Carrickfergus. Small nets set between sunrise and sunset in some places for pollen. Trawling considered injurious to the spawn. There are ten trawl boats of six tons average; mesh, one and three-quarter inch from knot to knot, working in five to seven fathom water. Number of trawlers greater than last year; eight seine boats from one and a half to two tons each; ten trammel boats of one ton each; and 125 boats engaged in line fishing, from half a ton to three tons each. Some of the fish captured sent to Belfast market and the rest sold in local markets. Plaice and sole taken by trawl; herrings, pollock, and flat fish, by seine; cod, ling, haddock, mackerel, conger, skate, and ling, by line. Herrings in best condition in June and July; pollock, from September to March. Cod and ling spawn in deep water; plaice, in shallow water on mud. Statistics relative to fisheries could be had from the station officers of Coast-guard making inquiry, and from observation. The officer considers that a great deal more fish might be taken at Carrickfergus, of good quality, if capital for boats and labour was forthcoming. Glenarm and Carrickfergus are the only places in this district where there was ever any important fishery. At Glenarm there are quarries and works which employ men more profitably than the fisheries; at Carrickfergus the young men go to sea more than formerly. There is a general statement that fish are scarcer; that may appear so from their not being sought after. The boats at Glenarm are too small; those at Carrickfergus very fair and in good condition. The Glenarm boats are so small that they cannot be employed in winter. In general, fishing is not remunerative, and there is no energy or perseverance amongst the men.	31
582	1,069	184	644	1,291	204	–	–	–	11	49	6	No alteration in boats or gear; no sign of improvement; present prospects bad. No spirit of emigration. Men when not fishing get good wages from farmers. The take of fish much the same as in preceding year. One natural oyster bank in district, which is not improving in supply. No new banks discovered. No private beds. The oysters are coarse—price, 3*s.* to 6*s.* per hundred—of which about 250,000 were sold in the year. No curing establishment, nor ice-house. No attempt to cure the fish, which are sold in fresh state. No instances of conflicts. Fishermen orderly and peaceable; generally employed fishing during the season. Registry of boats perfect. Trawling carried on, but has caused no contention. Trawling is not injurious to the general fishery interests; it is practised by six boats, from ten to twelve tons each, with a four-inch mesh, working in seven to eight fathom water. The number of trawlers same as last year; 140 boats, from one to three tons, engaged line fishing. Fish captured sold in local markets. Turbot and plaice taken by trawl, in good condition from March to October; cod and ling by line, in good condition from November to March. Flat fish spawn in shallow water on the banks, and cod-fish in deep water. Statistical information relative to fisheries would be difficult to obtain unless a proper superintendent was appointed and the fishermen compelled to report to him. The chief impediment to improvement in the fisheries is owing to the high wages given by farmers. The officer is of opinion that the falling-off in the number of men and boys engaged in the fisheries on this part of the coast is owing to the increased scale of wages for farm labourers; they find that more remunerative than fishing, and can afford to live without it. Yawls from one to two tons employed in line fishing; those for herring fishing are luggers from ten to twelve tons each, and all in good condition. Many of the old boats broken up, and some lying on the beach rotten. The depressed state of fisheries is owing to want of energy, together with the high scale of wages for farm labourers. The officer is not aware of anything that would give the fishermen more energy on this part of the coast so long as they can obtain from £18 to £20 per annum with their diet as farm labourers.	32
81	276	4	101	415	21	–	–	–	5	–	30	No alteration; no improvement; prospects not good. Spirit of emigration prevalent. If fishermen were fully employed, would remain at home. Last year less productive in take of fish than preceding year. No oyster fisheries in district. No curing establishment, nor ice-houses. Fish sold in fresh state. No conflicts. Fishermen orderly and peaceable; the able-bodied generally employed fishing. Registry perfect; no suggestions to make for its improvement. No trawling in district. The officer is of opinion that trawling injures the spawn and also the fishermen, by carrying away their long lines, which is their general mode of fishing. Fish captured sold in local markets, which consist of whiting, haddock, small cod, and flat fish, in good condition from	34

Vessels.	Men.	Boys.	Vessels.	Men.	Boys.	Vessels.	Men.	Boys.	Vessels.	Men.	Boys.		
												October to March. Round fish spawn on hard ground in from twenty to thirty fathom water. Flat fish close in land on sandy bottom. Whale boats are those now in use; in good condition and fit for fishing in the bay. If the fishermen had a larger class of boats, they could then proceed to the outlying adjacent fishing ground.	
286	1,040	6	294	1,082	8	–	–	–	1	63	15	Fishing establishment rather on the decrease; not any sign of improvement. Last year about as productive in take of fish as preceding. Oyster fishery declining. No new banks discovered. Several private beds are being stocked. Oysters very good; vary from 5*s.* to 6*s.* per hundred. No idea of quantity sold during the year. No curing establishments or ice-houses in the district. No conflicts. Fishermen orderly and very peaceable; the able-bodied partly engaged fishing and partly farming. Registry of vessels perfect. No trawling or trammel nets in the district. Trawling unsuited for Carlingford Lough. Fish captured sold in local markets. The fish taken are herrings, pollock, and a few hake—they are in best condition from September to November; also whiting, haddock, and cod—best in winter months. Unable to state where or at what depth fish spawn. Correct statistical information relating to fisheries only attainable by the appointment of inspectors in each district for the express purpose. The officer suggests that the dredging should be discontinued, say one year in three, otherwise there will not be an oyster in the Lough of any value. The boats generally very good, but fitments as a rule not so. The falling-off in the fisheries is generally ascribed to the fact that the fish are not now so abundant as formerly.	35
215	688	19	218	705	21	35	–	–	–	5	94	No improvement; no sign of improvement. The spirit for emigration does not appear to be on the increase. The take of fish less last year than in preceding one. No oyster fishery in the district. No curing establishments or ice-houses in the district. Fish sold in fresh state. Fishermen orderly and peaceable. Registry perfect. Little or no trawling, and it does not interfere with line fishing. The officer can offer no opinion as to effects of trawling upon the fishing interests. Three vessels of sixteen tons each occasionally engaged trawling; 215 boats of the second class chiefly employed in the Boyne salmon fishery. Fish captured sold in local markets. Flat fish taken by trawl, in good condition in autumn; cod and haddock by line, during the winter. Unable to state where or at what depth fish deposit their spawn. Cannot suggest any means for obtaining correct statistical information relating to fisheries. The fish do not appear to be as abundant now as in 1846, which will probably account for the falling-off in the number of men and boats. Second-class boats generally in fair condition. The officer ascribes the depressed state of the fisheries to the scarcity of fish.	36
35	137	21	112	611	100	–	–	–	10	92	–	Fishery establishment stationary; no sign of improvement. No emigration. Take of fish less productive last year than the preceding. There are two curing establishments at Rush, but during the summer fishermen cure nearly all their own "shares." No ice-houses in the district. No conflicts; fishermen very orderly and peaceable. Registry of vessels perfect. Trawling practised at Balbriggan, but no contention. There are fourteen trawl vessels at Balbriggan of twenty-five tons each—use a four-inch mesh, worked in seven to twenty fathom water; one boat engaged in line fishing. Fish captured sent to Dublin. Sole and plaice taken by trawl—in best condition in July and August; cod, ling, and skate, by line—in best condition from November to March; herring by seines. Information respecting fisheries could be had from boat owners. The officer states that if a better harbour was made at Rush, the fishing could be carried on as extensively as ever. Falling-off in number of young men owing to a wish to go to sea in foreign-going vessels. The present vessels are the old class of smacks and wherries with some herring luggers. Many of the old boats still in existence. There is a fair amount of energy and perseverance amongst the fishing population of this district. Harbour at Rush much required. Great complaints made of trawlers carrying away buoys and lines of fishermen.	37
13	50	–	62	367	40	5	23	4	–	–	–	Great improvement in boats and gear. Fishing establishment much improved. Signs of improvement. Prospects fair. No emigration. More fishermen required. A very great failure in the herring fishery with the Irish boats; not so with Manx and Scotch. One licensed oyster bed in district, which is being stocked. The West Pier at Howth has been set in lots for curing purposes, and a curing establishment would have been formed but for the failure in the herring fishery. The Irish Sea Fishery Company cured many casks; they have very extensive premises for curing, smoking, &c. No conflicts. Fishermen much improved; all the able-bodied employed fishing. Mode of registering very good; it would be more convenient if removed to Howth. No trawling—a mode of fishing the officer believes to be very injurious to the long line fishers, and destructive to a very great quantity of immature fish, as each trawl brings up for every good fish 500 small ones, which are destroyed. Cod, ling, haddock, and whiting are the kinds of fish taken in this district by lines. From the conflicting opinions on the subject the officer is unable to state where or at what depth fish deposit their spawn. Accurate information could always be obtained if a fishery register was kept by the Coast-guard at the different fishing stations. The officer suggests that a small steam vessel be kept to follow the fishing fleets from port to port, and to see that the Acts of Parliament be strictly carried out as regards the time of shooting nets, &c. The falling-off in the fishing population is owing to the famine of 1846, which caused many to emigrate. Fishing is the only means the people have of obtaining a livelihood in this district. At present the general class of boats are from eighteen to twenty tons each—in good condition, and generally well formed. Three of the old class of boats remain, which are employed long line fishing in the winter months. Want of means is one of the chief causes of the decline of the fisheries, and the low price given for fish when brought into harbour.	38

APPENDIX, No. 2.

ABSTRACT of BY-LAWS, ORDERS, &c., made by the COMMISSIONERS OF FISHERIES IN IRELAND, to 31st December, 1866.

Place affected by By-Law, and Date thereof.	Nature of By-Law.
	TRAWLING.
Dublin Bay, . . (10th Oct., 1842.)	Prohibiting Trawling inside lines drawn from the Bailey Light-house at Howth, to the Easternmost point of the rocks called the "Mugglins;" thence by a straight line to the Southern point of Dalkey Island; thence by a straight line across Dalkey Sound, in the direction of the signal station on Killiney Hill.
East Coast, . . (14th Feb., 1851.)	Prohibiting Trawling within a line drawn from the Nose of Howth, to the Eastern point of St. Patrick's Island (Skerries); thence to Clogher Head; thence to Dunany Point; thence to Cranfield Point, in the County Down.
Dundrum Bay, &c., (3rd Dec., 1851.)	Prohibiting Trawling from Hellyhunter Rock, off Cranfield Point, to St. John's Point, both in the County Down.
Belfast Lough, . (25th Oct., 1854, and 16th Feb., 1857.)	Prohibiting Trawling within a straight line drawn from the Castle of Carrickfergus, to Rockport, in the County Antrim, altogether from 1st December to 1st April, and the use of Nets of less mesh than one and three-quarter inches from knot to knot (except Draft Nets for Herrings).
Lough Swilly, . (27th June, 1844.)	Prohibiting Trawling within a line from Knockalla Battery on the West side, to Linsfort Church on the East side of the Lough.
Donegal Bay, . (16th Feb., 1857.)	Prohibiting Trawling within a straight line from the Bian Rock, to a place called Doorin Point; and from a place called the Blind Rock, to the Northern point of the Townland of Rossnowlagh, Lower; and from thence to Kildoney Point; and from thence to a place called Pointinchose.
Galway Bay, . . (22nd March, 1843, and 9th Jan., 1854.)	Prohibiting Trawling within a line from Barna Pier to Gleninagh Castle. Also when large shoals of Herrings shall have set in in the Bay, and while Boats are engaged in Drifting for Herrings or Mackerel, and when Boats shall commence Fishing for Herrings or Mackerel, that Trawl Boats shall keep at a distance of three miles from them.
Brandon Bay, . (23rd Aug., 1860.)	Prohibiting Trawling within a line drawn from Brandon Point to Coosanea.
Dingle Bay, . . (2nd March, 1852, and 28th Jan., 1862.)	Prohibiting Trawling within a straight line from Bull's Head, near Dingle, to Cununna, near Valentia. Repealing By-Law prohibiting Trawling.
Bantry Bay, . . (27th March, 1858.)	Prohibiting Trawling within a straight line from Crowdy Point to Carrigskye Rock; and from thence to Reenavanny Point, on the North Shore of Whiddy Island. Prohibiting Trawling between sunset and sunrise.
Glandore Harbour, (11th Sept., 1861.)	Prohibiting Trawling between the 1st day of May and the 1st day of October in each year, within that part of the Harbour of Glandore lying to the northward of a straight line from the Telegraph or Signal Tower at "Foilnashark," or "Filenashawk," on the north-eastern point of the entrance to the Harbour, and Sheela Point, on the western shore.
Waterford Harbour, (2nd March, 1852, and 18th June, 1860.)	Prohibiting Trawling by Boats exceeding five tons measurement, within a line drawn from Creden Head to Temple Church.
Wexford Coast, . (20th April, 1849.)	Prohibiting Trawling in all places where there are Boats engaged in Herring or Mackerel Drift Net Fishing; and that Trawl Boats shall keep at a distance of at least three miles from all boats fishing for Herrings or Mackerel, with Drift Nets. And whenever Herring or Mackerel Boats shall commence Drift Net Fishing in any place, on or off the Coast of Wexford, the Trawl Boats shall depart therefrom, and keep at least three miles distant from the Drift Net Herring or Mackerel Boats.
Estuary of Kenmare River, (10th Nov., 1865.)	Prohibiting Trawling within the Estuary of the Kenmare River, in the County of Kerry, and eastward or inward of a line drawn from Herring Rocks on the north to Feorus Point on the south, from the hour of Three o'Clock in the Afternoon of any one day to the hour of Nine o'Clock in the Morning of the day next following, during the months of October, November, December, January, February, and March, in any year (being the periods within which the use of Trammel and other Moored Nets for the capture of Sea Fish within the Estuary of the Kenmare River has been duly authorized and permitted); and from the hour of Five o'Clock in the Afternoon of any one day to the hour of Seven o'Clock in the Morning of the day next following, during the months of April, May, June, July, August, and September, in any year (being the further
Estuary of Kenmare River—*continued.*	periods within which the use of Trammel and other Moored Nets for the capture of Sea Fish within the Estuary of the Kenmare River has been duly authorized and permitted.)
	TRAMMEL NETS.
Dungarvan Bay, . (4th July, 1849.)	Prohibiting the use of Trammel and every other Fixed or Moored Net (except Bag or other Nets for the taking of Salmon) in Dungarvan Bay, within the limit formed as follows, namely, the space lying between a line passing due East and West, through the Northernmost point of Helvick Head, and a line passing due East and West through the Southernmost point of Ballinacourty Head, in the Co. Waterford; but to the North and East of the line through Ballinacourty Head, and to the South and West of the line through Helvick Head, such Trammel or Moored Nets may be set, and remain set in the water from Three o'Clock, p.m., of one day, until Nine o'Clock, a.m., in the following day, during January, March, October, November, and December in each Year; and from Five o'Clock, p.m., of one day, to Seven o'Clock, a.m., in the following day, during May, June, July, August, and September. Also prohibiting such Nets athwart or within 200 yards of any boat, which at the time of setting such net shall be moored, and the Crew thereof engaged in Line Fishing; and to every train of such Trammel or Moored Nets shall be attached at least one floating buoy or board, upon which shall be painted in legible characters not less than one inch in length, in white upon a black ground, the Letter of the District, and the name of the Owner to which such Net belongs.
Inver Bay, . . (24th Sept., 1860.)	Prohibiting the use of Trammel Nets within or to the North-east of a line drawn from the Mouth of the Bunlaghy River to Doorin Point.
River Slaney, Co. Wexford, (25th March, 1854, and 4th March, 1862.)	Prohibiting, during the Close Season for Salmon, the use of Nets of any kind whatsoever, between Ferrycarrig Bridge and the Town of Enniscorthy. Prohibiting, during the Open Season for Salmon, the use of Nets with meshes of less size than one and three-quarter inches from knot to knot, between Ferrycarrig Bridge and the Town of Enniscorthy.
River Lee, Co. of the City of Cork, (7th Jan., 1863.)	Prohibiting, during the Close Season for Salmon, the use of Draught Nets, or any other Net or Nets used as a Draught Net, having a foot-rope and leads or weights affixed thereto, within the following limits, viz.:—in that part of the River Lee, situate between Patrick's Bridge, in the City of Cork, and a line drawn across the said River Lee, from Blackrock Castle, on the South, to the Western extremity of the Townland of Dunkettle, on the North.
Argideen River, . (24th Feb., 1860.)	Prohibiting the use of Nets of any kind whatsoever in the tidal part of the river known as the Argideen River, in the County of Cork, situated between the junction of the Owenkeagh or Blind River with the said Argideen River and the Bridge of Timoleague, all in the Barony of the East Division of East Carbery, and County of Cork.
River Shannon, . (5th Feb., 1856.)	Prohibiting Net Fishing in that part of the River Shannon between Wellesley Bridge and the Railway Bridge, between 1st June and 12th February.
River Shannon, . (22nd Nov., 1862.)	First.—Prohibiting, between the 20th day of July and 1st day of November in each year, the use of Draught Nets, or any other Net or Nets used as a Draught Net, having a foot-rope and leads or weights affixed thereto, within the following limits, viz.:—in that part of the River Shannon situate between the Fishing Weir known as the Lax Weir, and a line drawn due North and South across the said River Shannon at the Western extremity of Graigue Island. Second.—Prohibiting Draught Nets for the capture of Fish of any kind, of a mesh less than one and three-quarter inches from knot to knot, to be measured along the side of the square, or seven inches, to be measured all round each such mesh, such measurements being taken in the clear when the Net is wet, in the tidal parts of the River Shannon, or in the tidal parts of any of the Rivers flowing into the said River Shannon.

APPENDIX, No. 2—*continued.*

ABSTRACT of BY-LAWS, ORDERS, &c., made by the COMMISSIONERS OF FISHERIES IN IRELAND, to 31st December, 1866.

Place affected by By-Law, and Date thereof.	Nature of By-Law.	Place affected by By-Law, and Date thereof.	Nature of By-Law.
Lough Ree, River Shannon, (27th August, 1858.)	Permitting the use of Nets in Lough Ree, having a mesh of five inches in the round measured when the Net is wet.	Cork Harbour, . (28th Oct., 1853.)	First.—That between the 1st May and 1st September, no boat shall have on board any dredge or other implement for taking Oysters. Second.—Every fisherman shall, on the fishing ground, cull all Oysters, and shall not remove any Oyster of less dimensions than two and a-half inches at the greatest diameter thereof; and shall throw back into the Sea all gravel and fragments of shells as he shall raise while engaged in such fishing. Third.—All persons are prohibited from throwing into the Sea, on any Oyster Bed or Oyster Fishing Ground, the ballast of any boat, or any other matter or thing injurious to the Oyster Fishery. Fourth.—No person shall, between Sunset and Sunrise, dredge for, take, or catch any Oysters within the Harbour of Cork.
Castlemaine Estuary, (27th Oct., 1858.)	Prohibiting, during the Salmon Close Season, the use of Draft Nets having a foot rope and leads or weights affixed thereto, in the Estuary of Castlemaine inside the Bar of Inch.		
Lough Neagh, . (22nd April, 1846, and 24th Feb., 1860.)	Permitting Pollen to be taken by Trammel or Set Nets composed of Thread or Yarn of a fine texture, not less than ten hanks to the pound weight, doubled and twisted with a mesh of not less than one inch from knot to knot, from the 1st of March to the 29th September.		
Galway River, Lough Corrib, &c., (24th July, 1846.)	Prohibiting the use of the Instrument, commonly called Strokehaul or Snatch, or any other such instrument, in River Galway, Loughs Corrib or Mask, or their Tributaries.		
Clare and Clare-Galway or Turloughmore Rivers, Co. Galway, (22nd Dec., 1862.)	Prohibiting the use of Nets of any kind whatsoever in any part of the Rivers known as the Clare and the Clare-Galway or Turloughmore Rivers, in the County of Galway, above the junction of the said Rivers with Lough Corrib, in the County of Galway.	Tralee Bay, . . (28th Sept., 1860.)	First.—That between the 1st day of April and the 1st day of November in any year, being the Close Season for Oysters in the said Bay of Tralee, no boat, in the said Bay of Tralee, shall have on board any dredge or other implement for the taking of Oysters; and if, between the periods aforesaid, there shall be on board any boat any such dredge or other implement for the taking of Oysters, the master or owner of such boat shall, for each such offence, forfeit and pay a sum of Five Pounds. Second.—All persons engaged in fishing for or taking Oysters in said Bay of Tralee, shall cull all such Oysters as may be taken or caught; and shall not remove from any fishing ground or Oyster Bed any Oyster of less dimensions than two inches and one-half, at the greatest diameter thereof, and shall immediately throw back into the Sea all Oysters of less dimensions than aforesaid, as well as all gravel and fragments of shells as shall be raised or taken while engaged in such fishing; and no person shall take from any rock, strand, or shore of said Bay of Tralee, any Oyster of less dimensions than two inches and one-half, at the greatest diameter thereof; and any person offending in any respect against this By-Law, Rule, or Regulation shall, for each offence, forfeit and pay a sum of Two Pounds. Third.—All persons are hereby prohibited from throwing into the Sea, on any Oyster Bed, or Oyster Fishing Ground in the said Bay of Tralee, the ballast of any boat, or any other matter or thing injurious or detrimental to the Oyster Fishery; and all persons acting contrary hereto shall, for each offence, forfeit and pay a sum of Two Pounds.
Teelin Estuary, . (24th Feb., 1860.)	Prohibiting the use of Nets for the capture of Fish of any kind, with meshes of less than one inch from knot to knot (to be measured along the side of the square, or four inches to be measured all round each such mesh, such measurements being taken in the clear when the Net is wet), on that part of the coast of the County of Donegal inside, or to the North-east and North of lines drawn from Rossan Point to Teelin Head, and from Teelin Head to Carrigan Head, and from Carrigan Head to Muckross Point, all in the Barony of Bannagh, and County of Donegal.		
Kenmare River Estuary, (31st Dec., 1864.)	Within the Estuary of the Kenmare River, in the County of Kerry, and eastward of a line drawn from the western point of Lamb's Head to the western point of Cod's Head, the use of Trammel and other Moored Nets for the capture of Sea Fish is authorized and permitted, from the hour of Three o'Clock in the Afternoon of any one day to the hour of Nine o'Clock in the Morning of the day next following, during the months of October, November, December, January, February, and March, in each year; and from the hour of Five o'Clock in the Afternoon of any one day to the hour of Seven o'Clock in the Morning of the day following, during the months of April, May, June, July, August, and September.		
	OYSTERS.		
Coasts of Wicklow and Wexford, (22nd April, 1846.)	Permitting, during the month of May, the Dredging for Oysters from any of the Public Beds below level of lowest water of Spring Tides, on that part of the Coast between Wicklow Head and Raven Point, north of Wexford Harbour, for the purpose of replenishing and supplying Artificial Oyster Beds or Layings, or other Beds or Layings, the exclusive property of any person, *but for no other purpose whatever.*	Achill Sound, Clew Bay, & Blacksod Bay, (15th Dec., 1860.)	First.—That between the 1st day of April and the 1st day of October in any year, being the Close Season for Oysters in said Clew Bay, Achill Sound, and Blacksod Bay, no boat, in the said Clew Bay, Achill Sound, and Blacksod Bay, shall have on board any dredge or other implement for the taking of Oysters; and if, between the periods aforesaid, there shall be on board any boat any such dredge or other implement for the taking of Oysters, the master or owner of such boat shall for each such offence, forfeit and pay a sum of Five Pounds. Second.—All persons engaged in fishing for or taking Oysters in said Clew Bay, Achill Sound, and Blacksod Bay, shall cull all such Oysters as may be taken or caught; and shall not remove from any Fishing Ground or Oyster Bed any Oyster of less dimensions than two inches and one-half, at the greatest diameter thereof, and shall immediately throw back into the Sea all Oysters of less dimensions than aforesaid, as well as all gravel and fragments of shells as shall be raised or taken while engaged in such fishing; and no person shall take from any rock, strand, bed, or shore of said Clew Bay, Achill Sound, and Blacksod Bay, any Oyster of less dimensions than two inches and one-half, at the greatest diameter thereof; and any person offending in any respect against this By-Law, Rule, or Regulation shall, for each offence, forfeit and pay a sum of Two Pounds. Third.—All persons are hereby prohibited from throwing into the Sea, on any Oyster Bed, or Oyster Fishing Ground in said Clew Bay, Achill Sound, and Blacksod Bay, the ballast of any boat, or any other matter or thing injurious or detrimental to the Oyster Fishery; and all persons acting contrary hereto shall, for each offence, forfeit and pay a sum of Two Pounds. Fourth.—No person shall, between sunset and sunrise, dredge for, take, or catch, any Oysters within said Clew Bay, Achill Sound, and
Wexford Coast, . (8th April, 1862.)	First.—All persons engaged in fishing for or taking Oysters off the said Wexford Coast, south of Raven Point, shall cull all such Oysters as may be taken or caught; and shall not remove from any Fishing Ground or Oyster Bed any Oyster of less dimensions than three inches, at the greatest diameter thereof, and shall immediately throw back into the Sea all Oysters of less dimensions than aforesaid, as well as all gravel and fragments of shells as shall be raised or taken while engaged in such fishing; and no person shall take from any Oyster Bed, Rock, Strand, or Shore, off said Wexford Coast, south of Raven Point, any Oyster of less dimensions than three inches, at the greatest diameter thereof; and any person offending in any respect against this By-Law, Rule, or Regulation shall, for each offence, forfeit and pay a sum of Two Pounds. Second.—All persons are hereby prohibited from throwing into the Sea, on any Oyster Bed, or Oyster Fishing Ground off the said Wexford Coast, the ballast of any boat, or any other matter or thing injurious or detrimental to the Oyster Fishery; and all persons acting contrary hereto shall, for each offence, forfeit and pay a sum of Two Pounds.		
South-east Coast of Ireland, from Wicklow Head to Carnsore Point, (11th April, 1865.)	That the Close Time, during which it shall not be lawful to dredge for, take, catch, or destroy any Oysters or Oyster brood, on or off the south-east coast of Ireland, between Wicklow Head and Carnsore Point, shall be between the 30th April and the 1st October in each year.		

APPENDIX.

Abstract o By-Laws, Orders, &c.

APPENDIX, No. 2—*continued.*

ABSTRACT of BY-LAWS, ORDERS, &c., made by the COMMISSIONERS OF FISHERIES IN IRELAND, to 31st December, 1866.

Place affected by By-Law, and Date thereof.	Nature of By-Law.	Place affected by By-Law, and Date thereof.	Nature of By-Law.
	Blacksod Bay; and every person acting contrary hereto shall, for each offence, forfeit and pay a sum of Five Pounds.	Carlingford Lough —*continued.*	shall, for each such offence, forfeit and pay a sum of Five Pounds. Second.—That between the 1st day of March and the 1st day of November in any year, no boat, in the said Lough of Carlingford, shall have on board any dredge or other implement for the taking of Oysters; and if, between the periods aforesaid, there shall be on board any boat any such dredge or other implement for the taking of Oysters, the master or owner of such boat shall, for each such offence, forfeit and pay a sum of Five Pounds. Third.—All persons engaged in fishing for or taking Oysters in said Lough of Carlingford, shall cull all such Oysters as may be taken or caught; and shall not remove from any Fishing Ground or Oyster Bed any Oyster of less dimensions than two inches and one-half, at the greatest diameter thereof, and shall immediately throw back into the Sea all Oysters of less dimensions than aforesaid, as well as all gravel and fragments of shells as shall be raised or taken while engaged in such fishing; and no person shall take from any rock, strand, or shore of said Lough of Carlingford, any Oyster of less dimensions than two inches and one-half, at the greatest diameter thereof; and any person offending in any respect against this By-Law, Rule, or Regulation shall, for each offence, forfeit and pay a sum of Two Pounds. Fourth.—All persons are hereby prohibited from throwing into the Sea, on any Oyster Bed, or Oyster Fishing Ground in the said Lough of Carlingford, the ballast of any boat, or any other matter or thing injurious or detrimental to the Oyster Fishery; and all persons acting contrary hereto shall, for each offence, forfeit and pay a sum of Two Pounds.
Clew Bay, County Mayo. (1st April, 1865.)	That, for the sole purpose of replenishing and supplying licensed Oyster beds and other Oyster beds, the exclusive property of any person or persons within Clew Bay alone, in the County of Mayo, and for no other purpose whatever, it may be lawful for any person to dredge for and take Oysters from any natural public bed in the said Clew Bay lying below the level of the lowest water of spring tides, between the 1st and 15th April and the 20th June and 1st October in each year, such periods being respectively included within the Close Time at present fixed for the Oyster fisheries within the said Clew Bay: Provided always, that if any Oysters dredged or taken during such part of the Close Season shall be brought to shore, or sold or offered for sale, or be found in the possession of any person on land, or be used for any other purpose than the replenishing or supplying any such artificial or other bed as aforesaid, every person so offending shall forfeit all such Oysters, and be subject and liable to the same penalties and forfeitures as by said first-recited Act (5 and 6 Vic.) prescribed in cases of offences against the provisions of the said first-recited Act for the observance of the Close Season in respect of Oysters.		
Carlingford Lough, (17th April, 1860.)	First.—That between the 1st day of March and 1st day of November in any year, it shall not be lawful for any person to dredge for, take, catch, or destroy any Oysters or Oyster Brood within the said Lough of Carlingford, or off or from any of the shores or rocks of said Lough, and any person offending against this By-Law

NOTE.—To all licences granted since the 2nd February, 1864, a condition has been attached, that unless the bed shall be properly stocked within a specified time, and to the satisfaction of the Commissioners, the licence shall be null and void.

Cultivation of Oyster Beds.

LICENSED OYSTER BEDS. OPERATIONS of PROPRIETORS and their RESULTS, as communicated by the PERSONS who obtained the LICENCES or by their representatives.

Beds Nos. 8 and 64.—Mulroy Bay and Carlingford Lough.

SIR,—In reply to your letter respecting my proceedings under the Oyster Licences of the 22nd September, 1853, and 4th June, 1866, I beg to inform you for the information of the Commissioners that I have not anything at present to add to my report as to the Mulroy Licence of the 22nd September, 1853, since I last wrote. But as to the Carlingford Bay Licence of 4th June, 1866, I have my beds sufficiently marked out, and have been vigorously engaged in forming sea protections, and in stocking the beds, and have retained all the oysters already collected on the beds, without, for so far, allowing any to leave the Lough. The slime of the Newry river will, I fear, be an injury to that part of my bed in the townland of Drumulla. But the bed at Ballinterkin is doing very well, and the young oysters increasing rapidly; and when I get my sea defences further enlarged I have no doubt it will turn out a most successful project. I have at present about 100,000 oysters on the Ballinterkin Bed.

I regret to say that I have received obstruction in the management and protection of my beds from a quarter where I might have expected support and assistance, and which prevents me at present laying down dredge oysters for spawning next year, and may oblige me to ask for an extension of time for stocking the beds. I have already mentioned the particulars of this matter on personal application at your office.

I regret to say that the export of small oysters in the close season from the County of Down side of the Lough still prevails to a great extent, and is a great injury to the fishery of the Lough.

J. O. WOODHOUSE.

30th January, 1868.

Bed No. 9.—Carlingford Lough.

SIR,—With reference to the request contained in your letter of the 31st ult. that I would furnish the Board with a statement of any proceedings connected with the oyster bed granted to Mr. Bindon in the year 1854, I beg leave to inform you that when I purchased that oyster bed in the year 1866 it had been almost denuded of oysters by over dredging; and that consequently there has not been any yield from it either last year (1866–67) or during the present season of 1867–68; nor can any be looked for under two years more. In the autumn of 1867 I caused a quantity of oysters, 68,000, to be laid down on the bed, choosing the most suitable parts of the bottom for that purpose out of the entire surface of about fifty acres, and there is reason to hope that by rest, and in consequence of this addition to the breeding stock, the bed may eventually become productive, and may help to prevent the extinction of the oysters in Carlingford Lough, which the excessive dredging carried on both for sale as food and for removal to other ports as stock has every tendency to produce.

CLERMONT.

January 27th, 1868.

Bed No. 13.—Berehaven.

SIR,—I duly received your circular calling for a report on the oyster bed in Berehaven, granted to me by the Fishery Commissioners. On receipt of your letter I forwarded it to my agent, Mr. Wright, of Clonakilty, as I felt he could better report on it than myself, as he has had more frequent opportunities of seeing it and judging of its condition than I have, as I have no residence on the property.

I write these few lines accompanying the report to give me the opportunity of indorsing all that Mr. Wright has said in the following report, and in particular the recommendation that he has given the Board that some competent person should be appointed by the Government not only to inspect and report on the fisheries, but who should also hold the office of *instructor* in order to give facilities to the owners of oyster beds to improve, indeed to "preserve" their fisheries, for in nine instances out of ten they have no knowledge of the Act. Another great drawback to the increase of and proper attention to these oyster fisheries (indeed fisheries in general) in that locality is, as Mr. Wright remarks, the entire absence and want of any market where the oysters and other fish may be disposed of when grown or caught. If the Government would extend or give facilities for the extension of the railway system to those parts and make the Harbour of Berehaven a naval station for what it was by nature intended, and will before long become a necessity for the protection of our vast transatlantic commerce; there would then be some inducement for the proprietors of estates along that coast to take up and improve the oyster and other fisheries. I for one would be ready to lay down other oyster beds along my coast property should the Board grant me further licences and the above facilities be carried out by Government.

If the Government could obtain the services of Mr. Frank Buckland he would no doubt soon effect a most slutary reform and a vast increase to the productiveness of both the oyster and salmon fisheries with which the coasts of Ireland abound.

CHARLES P. CLINTON.

14th January, 1868.

A REPORT OF WATERFALL OYSTER BED.

The oysters at Waterfall have not increased in number, owing in a great measure to the fact that from the month of October to the early part of April a river which flows from the mountains on the north side of the Berehaven Harbour is very often swollen and brings with each flood quantities of earth and gravel which overflow the oyster bed, and destroy the oysters in large quantities. This river, which becomes rapidly swollen, rushes down from the mountains with such force that every embankment raised to divert it from the oyster beds was from time to time swept away; but in the early part of the month of October last a new embankment was constructed, which, up to this, has successfully resisted all the floods, and saved the oysters from being covered with earth, gravel, and rubbish. It is too soon as yet to notice the effects produced by the embankment; but from what has been reported to me I am led to believe that the oysters are already moving to their old haunts which they were formerly obliged to leave. In other words, the oysters were lately getting into deep water, so as to avoid the floods, but now they are coming nearer to the land in low water.

In the latter end of 1865 I read M. Coste's plan of laying down oyster beds, and I was greatly struck with his idea of affording the young ones or the spat a resting place. I therefore got some trees cut down, and the trunks and branches firmly placed on the strand with some furze bushes and some large stones, to which the seedling oyster might become attached. I also gave directions that the star-fish which destroy the oysters in large quantities, should be looked after; and I have every reason to believe that the simple and inexpensive measures to which I have had recourse would be successful but for the floods to which I have before referred. There is however very little to encourage any person to invest either labour or capital in the culture of oysters, as the distance from any market

town is very great, and the want of railway accommodation is sorely felt. I however believe that if a railway once opened up that country, or if the Harbour of Berehaven with its many natural advantages attracted the attention of Government, that the oysters at Waterfall would become very valuable.

In order therefore to make oyster fisheries profitable I would take the liberty of suggesting that the Government should appoint men of character and experience whose business it would be to inspect the several oyster beds on the coast, and from time to time to give such information and directions as may be necessary.

THOMAS R. WRIGHT,
Agent to Lord C. P. Clinton.

10th January, 1868.

Bed No. 14.—*Ardbear Bay.*

DEAR SIR,—I have forwarded your communication respecting the oyster fisheries at Clifden to Mr. Kendall of Lincoln's-Inn, London, who has been tenant for some years of both salmon and oyster fisheries. He will furnish the information you require.

WILLIAM FOREMAN.

December 31st, 1867.

Beds Nos. 14 *and* 36.—*Ardbear and Mannin Bays.*

SIR,—In reply to your inquiry respecting the oyster licences granted to William Foreman, esq., in 1856 and to myself in 1864, I beg to report that during the past year I have been fortunate in obtaining a good fall of spat upon such portions of the ground as were in a fit state to receive it. I am now cleaning more ground, and laying down more oysters purchased in Clew Bay. I have just laid down fifty barrels, and purpose laying more in March. In reply to your invitation I beg again to suggest that if the natural breeding beds of the country are ever to be turned to account for the public good, the dredgers must be prevented *by law* from removing young oysters below a certain size.

20th January, 1868. JOHN KENDALL.

Bed No. 17.—*Killary Harbour.*

SIR,—In reply to your letter of 21st instant, inquiring as to the state of my oyster beds, &c., at Dernasliggan, or the Killeries, Co. of Galway, I am glad to be able to report that I consider it satisfactory, as wherever the rapid tides have not affected them, the oysters have increased largely, and are in character, size, and quality, the best I have ever seen in the West of Ireland, and I am borne out in this opinion by all who have had an opportunity of enjoying them.

However there is a large portion of the shore unsuited, and it is only where the beds have been protected by headlands from the force of the tide, that I consider the result has been satisfactory.

29th January, 1868. A. C. LAMBERT.

Bed No. 21.—*Achill Sound.*

GENTLEMEN,—Yours of 27th ultimo, sent to the Co. Mayo, has arrived here this day. Two years ago I planted one of the oyster beds, and tried them last month. The success far surpassed my expectations. I am now getting a Company formed for planting all the beds granted, and hope they will give satisfaction.

2nd January, 1868. WM. M'CORMICK.

Bed No. 25.—*Achill Sound.*

SIR,—In reply to your circular respecting the oyster fisheries, I have the honour to inform you that the breeding season of 1867 was equal to that of 1866, which was the best known on this coast for many years.

In consequence of the great quantity of small oysters adhering to the larger ones, I have again determined to continue laying them on my own beds, rather than selling, and I expect by this means to have a large stock in a short time, as they are breeding quite as well on the beds that are dry at spring-tides, as they are in deeper water.

I regret to say that the dredgers on the public beds are taking oysters without reference to size, nor do they throw back the shells, gravel, &c., as required by the Act, as parties were found to buy the oysters, shells, &c., as dredged, for the purpose of laying in other localities. This has been carried to such an extent, that I can name one hooker-man who went to the Co. Clare with a cargo, but on arriving he was only paid for five out of every nine measures.

The coast-guard officer had some of the small oysters seized, but as he did not obtain permission to prosecute, the case fell through.

This I much regret, as one conviction at Petty Sessions would have, I consider, settled the matter.

I fear unless a stop is put to this systematic robbery, the public beds will soon be useless.

The coast-guards are able and willing to put an end to this, if power be given to them to search hookers, and prosecute parties for infringing the law.

The price is fully a shilling per measure more than it was last year.

22nd January, 1868. WILLIAM PIKE.

Bed No. 30.—*Achill Sound.*

SIR,—In answer to your circular of 29th December, 1867, I must say that I have kept no minutes of my proceedings in laying down oysters, but can give you only a general result, which however is now of such a nature as to induce me to take a good deal of pains with parts of the beds granted to Mr. Clive in 1863, and by him leased to me at a nominal rent.

In the autumn of 1863, I laid down about fifty or sixty bushels of oysters in the part No. 1 (about seven or eight acres), which could be most easily watched, and which I thought most likely (from the run of the tides) to insure moderately quiet water at spawning time. I also put a few bushels in several other parts, 2, 3, and 4, which I have not since disturbed. Into *No.* 1, I have every succeeding year, at least in 1864, '65, and '66, put about twenty bushels of oysters from the public beds (which are all but destroyed by unfair dredging); but I have in every year, in the end of December and January, fished up again for my own use from ten to fifteen bushels of the largest oysters I could get for my own consumption. In the last year I also returned to deep water about twenty bushels of oysters, about 1¼ inches diameter in size, which I collected from the rocks at low water adjoining the bed No. 1, my attention having been directed to them by scores of women and children coming down to gather them. Going over the ground in a boat on a still day, I see millions of small oysters covering the bottom, and I have no doubt that in a very few years the whole of the seven or eight acres will be a mass of oysters, and very valuable, not only for their own area, but as providing a nursery for oyster spat for a mile or a mile and a-half in every direction, in which the spat might settle and adhere in a slack tide. In 2, 3, and 4, there is also a manifest increase in the number of oysters, and many young oysters may be seen adhering to the rocks. I have obtained oysters from two other localities of a larger size, and apparently of a different breed, and sown them broadcast among the common oysters, with a view to improving the sort, *if there be anything like impregnation from one oyster to another*, and certainly many of the apparently four year old oysters in No. 1 bed look like an improved breed. This however, is very likely only the effect of locality. When I dredge them from the bed in No. 1, where I originally deposited them, I frequently put three to four bushels in a brackish pond for seven or eight days, *i.e.* a pond covered by the sea at every high tide, but through which a number of my land drains

Appendix.

Cultivation of Oyster Beds.

empty themselves; and I find the oysters fatten and improve from day to day until about the 7th day, after which they fall off and die. I think of making other similar ponds, which would be of different degrees of saltness from time to time, but have so much to attend to on land, and so little time and such a scarcity of labour that I can do no more than lay rows of large stones against which the sea may throw up a bank of greater or smaller height, and occasionally improve such bank. Ten years ago there was a very capital oyster bank here, of perhaps a mile in length, and a quarter to a half mile broad, on which I have frequently seen 50 to 100 boats at work for weeks at a time, when weather was sufficiently calm. These oysters were almost all shipped in sloops for Galway, and men earned 2*s.* 6*d.* to 3*s.* per day dredging. Now when oysters are all but exterminated, as many as 100 boats have been at work in a day this year, *but only for a very few days*, the men earning from 5*s.* to 8*s.* at first, and dropping off to nothing per day. When Mr. Clive applied for a grant of oyster grounds with a view to prevent the whole fishery here being destroyed, he was met by a strong opposition from Achill and other places, by people who objected to the sites being granted, *as being public beds*; to my certain knowledge not an oyster has been dredged on many of the parts so objected to for at least fifteen years, but there is a part in which if granted to Mr. Clive, an invaluable nursery might be established, which would go far to stock all the neighbourhood. At present the bottom is so foul with large stones, that no dredge could work effectively, and might easily be kept so by tumbling in large stones wherever there is a vacant space; hardly an oyster can be seen there even in the stillest weather, because it is out of the current from the old oyster bed, the tide simply rises but does not run into the little bay. But if oysters were laid down then the same causes would keep the spat at home, and only stray spat would go out in a falling tide, to plant beds outside. I will as far as my own avocations on *terra firma* admit, take the best care I can of beds No. 2, 3, and 4, and I have no doubt that all those beds would become in three or four years very valuable, *if they were protected*, but there is no protection. A sloop which can carry away 100 to 120 tons of oysters comes into the bay; by some electrical means all the population who have boats are aware of it in two hours, and there are, or were, 100 dredging boats on the spot next day, all work on land being suspended until she has her cargo. Last year I defeated two attempts on my private bed. I did not secure the dredgers, and was glad not to do so, but I got two dredges *new*, and about forty fathom of new line for the dredges, which have not been inquired for. This year small as my interest in the success of the oyster bed is, I have had a watch on the ground at all times when it would be likely to be profitable for oyster dredging by moonlight, and I believe that hitherto no attempts have been made. But protection does not exist. The coast-guard eight miles off never sends a boat to examine the size of the oysters dredged, nor to inquire whether the boats are on public or private water, and I could not expect more service with the limited public and private fishing grounds. But I think much good might be done if the coast-guard were instructed to act under special orders from a magistrate. I could at almost any time communicate by signal to the officer at the Bull's Mouth, such messages as these: "A fleet of 100 boats dredging oysters below the size," or "Six or seven boats coming to dredge my private beds at o'clock" (according to the tide). There would I believe never be a collision but two or three ineffectual chases of plunderers, and two or three dredges and ropes dropt overboard confiscated, and the whole locality would in three or four years get a winter employment in good weather, when they cannot get employment *generally* on land. With my own arrangements it might interfere on land, as I never can get labourers enough, they cannot come long distances on the chance of being turned back on account of a bad day. More come to me than I might fairly expect from a distance. If I could build *houses* not *merely cabins* for them, I could get a great number at all times but I cannot build houses in sufficient numbers, and my work is undone. The men do not like working in the field at ordinary wages, but they will work at *extra-ordinary* wages at oyster fishing. I should like to establish in the different bays here very extensive oyster grounds, which might afford any amount of winter employment to not only the population on the coast here, but to hundreds who might come in to share the spoil, if there should be established a trade for oysters. I am only a tenant here, with fifteen years' lease unexpired, but I would invest in oyster beds had I sufficient protection, and I am quite sure that my landlord would back me.

T. J. Birch.

25th January, 1868.

Bed No. 33.—*Poulnasherry Bay.*

Sir,—In reference to your inquiries respecting the state of the oyster fisheries on the Lower Shannon, I find it will take a much longer time than was supposed to re-stock the natural beds that have been exhausted by over dredging, and have not allowed any oysters to be sold or disturbed since the licence was granted to me. From the great demand and scarcity, the price of oysters out of the boats has doubled in the last three years, and the only remedy I can suggest is the formation of breeding beds.

C. M. Vandeleur.

24th January, 1868.

Bed No. 34.—*Newport Bay.*

Gentlemen,—In reply to yours concerning oysters I beg to inform you that nothing has been done (since my last) on the bed (of mud) licensed to Captain Wyndham on the 10th June, 1864, except to ascertain that the oysters deposited there have mostly perished, the fact being that this place is not fit for oysters. I do not know whether Captain Wyndham will make any further attempt; but I believe that if he does it must end in failure. The public beds in the vicinity are being daily dredged by a large fleet of boats. I have inquired of several of the men, and they tell me that the average daily take of a boat is six stones weight, for which they get six shillings, being at the rate of two shillings per man per day. The weather has of late been very fine, so that if it got to be at all inclement the men could not earn so much, and many of them would probably cease fishing and take to employment on shore.

Whether the public beds will by the present system become exhausted is a question on which the dredgers do not agree; it is however certain that very few full-sized oysters are now obtained, nor can the men earn more than one-half of the wages they earned two years ago.

John Oram.

27th December, 1867.

Bed No. 37.—*Lough Hyne.*

Sir,—I have the honour to acknowledge your letter of the 27th December to which I delayed sending a reply until I made inquiries to enable me to give a satisfactory answer.

I regret to say that owing to the great influx of mussels into Lough Hyne I could do little more than carefully preserve the beds I have from trespassers. There is a fair quantity of young brood from the old oysters, and I have made an arrangement with a neighbouring gentleman for a supply of young oysters for seed to lay down.

The beds belonging to the Carbery trustees suffered more than mine did from mussels, but still more from the neglect of the keeper through trespassers.

The mussels have unaccountably disappeared as they came; and as the same occurred about twenty years ago, and as their disappearance was succeeded by a great increase of oysters, may we hope for a similar result.

Lough Hyne presents greater facilities for studying ıe habits and peculiarities of the oyster than any ther place I know on the Irish coast. There are four istinct varieties on the lake—first, the old tub oyster, ɔth shells similar in shape like a walnut, very fat and f perfect flavour, and frequently containing pearls; econd, a small oyster fat and of fine flavour, the riginals of which were brought by the late Lord arbery or his predecessor from Kerry; third, a small at and poor oyster well flavoured, and I think if emoved to a better fattening ground capable of imrovement. This I mean to try. There is another ariety in the still water of my beds large with good avour, and I would say the best in the lake; they ere very scarce, but I have preserved them, and they re on the increase. I purpose to lay down oysters in is bed, as the feeding ground is superior, and I have ɔ doubt but the result will be satisfactory.

I have heard from old people that the varieties of ysters I have mentioned have existed in the lake uring their remembrance; and specimens of the tub yster are found in all parts of the lake.

I do not believe that oysters are hermaphrodites, as have found a mixture of the peculiarities of each ariety in some oysters I examined.

The Colitrum beds near Skibbereen are the principal ource from which oysters are now obtained in this ecality; they are sold from *5s.* to *7s. 6d.* a hundred, id many are sent to Cork. Others are sent from allydehob and farther westward, but that is beyond y observation.

ROBERT T. ATKINS.

29th January, 1868.

Bed No. 40.—Dungarvan Harbour.

GENTLEMEN,—In acknowledging the receipt of your rcular letter respecting the oyster ground licensed to ıe, I have the honour to state for the information of ıe Commissioners of Sea Fisheries that there is every rospect of good success in the oyster ground at Dunarvan Harbour.

The locality is well suited both for culture and yster feeding, and there is ample evidence that a ıat has taken place annually during the last two easons.

The oysters that have been laid down are improving quality; and I have no doubt that by careful attenon to the ground in the summer season the undertakıg will be eventually remunerative.

A. BOATE.

7th February, 1868.

Bed No. 43.—Ballinakill Harbour.

SIR,—Yours respecting the fishery has been forarded to me, and I beg to state that I was down at arraunbaun for a fortnight the beginning of Novemer last, but there was no spring tide during that time sufciently good to enable me to form an accurate judgment especting the oysters. Within the last week however have received a letter from my caretaker stating that ıere was an excellent spring tide which enabled him to ake a very good survey of the bank. That the increase f the oysters deposited by me has been very considerable. beg to state that I purpose going down there in Iarch next, being the time of year that the spring des are best, but fear the information then derived ill be too late for the present report. I have a very rge bed immediately adjoining the licensed ground. ifty acres, or more, are usually uncovered at spring des. The oysters on it are of the best quality; lack fin, and the flesh remarkably white, thick, and olid—fully equal in quality to the best Red Bank urren—which I attribute to the coral sand of which ıat bank is composed; and also to the circumstance f the bank being completely dry at certain seasons, nd leaving the oysters at these periods for a considerble time exposed to the influence of the atmosphere.

CHARLES P. ARCHER.

31st December, 1867.

Beds Nos. 48 and 65.—Drumcliff Bay.

SIR,—I beg to forward the following report made by Mr. James Martin, who has had the charge of my oyster beds for some years. Unless the Government make some very stringent regulations with regard to *public* oyster fisheries and carry them out, such cannot long exist in this district, nor anywhere I believe in Ireland.

Mr. Martin forgot to mention that the sea had thrown up sand over a considerable portion of the bed, licensed April 13th, 1865; but this may be again altered in *two* or *three* tides. One great difficulty I have to contend with is keeping the fisheries properly buoyed; the fishermen when herring fishing, frequently, I *have* got their nets foul of the buoys and the chains they immediately cut, and let the buoys float away, thus destroying a certain amount of property, and leaving it impossible to prosecute for trespass until, at considerable expense, a surveyor replaces them in their exact position.

ROBERT GORE BOOTH.

February 1st, 1868.

Report on the Oyster Fisheries, Drumcliff Lay.

BALLYGILGAN OYSTER FISHERY.

Licence dated 13th April, 1865.—*Bed No. 48.*

I have to report that the above oyster fishery in every respect is in satisfactory order. The bed has been fully stocked with oyster spawn since the date of the licence being granted, the spawn being chiefly obtained from the north of Ireland and the public oyster fisheries in Sligo Bay. It is satisfactory to think that the oyster spawn on the greater portion of the bed are thriving exceedingly well—those planted in deep water being best.

The severity of last winter acted very seriously to the oysters planted between high and low water mark, in fact destroyed the greater portion of them. I have, in consequence, this season, planted none whatever on that particular portion of the bed.

It will only be the work of a few years to bring the fishery in question into thorough working order.

FINNED OYSTER FISHERY.

Licence dated 15th June, 1867.—*Bed No. 65.*

I have to report that this fishery (since the date of the licence being granted) has been fully stocked with oysters, in quantity about two millions, which seem to thrive remarkably well.

The bed before the oysters were planted underwent a thorough cleaning in every portion of it, which will be to the great advantage of the oysters planted thereon.

PUBLIC OYSTER FISHERIES.

The public oyster fisheries in the bay, owing to bad management on the part of the fishermen, have, in most instances, been dredged clean of marketable oysters and also the spawn, leaving no oysters whatever to produce stock for the following seasons.

The produce of the beds has been very limited this season.

The quality of the oysters is superior to those of past seasons.

The market demand is unlimited. The price realized is from *4s.* to *6s.* per hundred.

JAMES MARTIN.

Lissadell Office, January 2, 1868.

Bed No. 57.—Ballinakill Harbour.

SIR,—In reply to your communication of the 27th December relative to the licence granted me to form an oyster bed, I beg to observe that the first oysters I laid down in the early part of last month were destroyed in consequence of being too near the mouth of the Shanboolard River.

APPENDIX.

Cultivation of Oyster Beds.

Those which I have laid down since then appear to be doing well.

There are several natural oyster beds in my neighbourhood; but owing to the fact of the proprietors not taking an interest in the beds, the oysters are for the most part unclean, and the shells so mis-shapen as to cause to be sold at odd times for about half what they would otherwise produce.

A. E. ACHESON.

4th February, 1868.

Bed No. 68.—Blacksod Bay.

SIR,—In answer to your circular letter of the 27th of December last addressed to me at Belmullet, I beg to say that having been granted on the 10th of July last a licence for an oyster fishery on my property near Belmullet, in the county of Mayo, I immediately got buoys laid down and properly moored to mark the beds.

I then published advertisements offering to let the beds to a tenant. The distance at which Belmullet is situated from any railway station presents a difficulty in disposing to advantage of the produce of the beds, and as yet I have not concluded any arrangement with any of the parties who responded to the advertisements.

ELIZABETH ATKINSON.

29th January, 1868.

Bed No. 71.—Howth Strand.

SIR,—I have to acknowledge the receipt of your letter of the 27th December, 1867, on the subject of the oyster fisheries, but having only got the licence on the 10th July, last year, I am unable to give you any result of my proceedings thereunder. I may however state that previous to the obtaining of the licence, I laid down 10,000 oysters, obtained from the Co. of Clare, and 7,000 from Arklow, in the Co. of Wicklow (on the grounds named in the licence), but a severe storm having come on shortly after laying them down, they were considerably scattered by the action of the sea, and a strong current running over the beds, so that I had considerable difficulty in collecting a portion of them afterwards. I hope however to be able to lay down some more oysters in the ensuing season, and to protect them from the action of the current, by which means I hope to be able to give a more favourable account of my proceedings on a future occasion.

RICHARD D. KANE.

22nd January, 1868.

Bed No. 75.—Trawbreaga Bay.

SIR,—In reply to your letter of the 27th, I beg to say that I regret very much that I have unexpectedly met with the greatest opposition by the tenants on my own glebe, who threatened violence to anyone making the necessary arrangements in reference to the oyster beds. Under these circumstances I have not been able to do any more than place posts to mark out the portion of shore intended for oyster culture. The excuse made by the tenants was that the planting of oysters would interfere with their seaweed; but this was only a vain excuse, as I offered to have the sea manure valued, and its value taken off the rent. I consulted Mr. Ferris of Dame-street, and he advised me that if I was to summon before the magistrates, a question of title would be raised and I would be defeated. The only course I considered open to me was to serve the tenants with notice to quit, which I cannot do until May next, as their rents are paid. Any advice you are good enough to give me will be most acceptable.

N. C. MARTIN.

28th December, 1867.

Bed No. 76.—Midleton River.

SIR,—In reply to yours of December 27th, about 250,000 oysters have been laid on my bed, about half that number have been placed during '66, in which I have noticed a great increase in size, and their general appearance is that of very good health.

There has been an extensive spatting covering the undersides of many of the stones on the shore with young oysters, and numbers on the oysters themselves.

The natural oyster beds in this vicinity were very productive in '66, and reasonably so in '67; the boats in '66 taking sometimes 1,000 per day, many of which I have purchased and laid.

The prices now may be quoted at from 4*s.* per 100 of long count (126 to the so-called 100) for small *i.e.* those of from $2\frac{1}{2}$ to 3 inches diameter to 8 inches for the largest size. Cork and Queenstown are the general markets for the oysters dredged here.

For the extending and improving the oyster fisheries generally, I would propose to the Fishery Commissioners for their deliberation, and I am sure for their full approval also, loans of money easily obtained for the purchase of stock, tiles, &c., for the saving of spat on the best and most scientific principles, tending to raise them by millions, and bring them within the reach of all. The poor man should not be forgotten if the loan was granted. I would suggest that he should get a portion equal to his wants, for mending his boat and gear, and raise him out of the poverty that many of his class are sunk in. Our rulers should keep a friendly and watchful eye on our fishermen, furnishing as they do annually, so many hardy sailors to our fleet.

JOHN SMYTH.

22nd January, 1868.

Bed No. 67.—River Shannon.

SIR,—In reply to your circular of the 27th December last, requiring a statement of what I have done in reference to the licence granted to me on the 10th of July last, with an account of the results that have followed, I beg to state that I have had the shore buoyed according to the map supplied to me, and that I have occasionally dredged for oysters with varying success, and that I have reasonable prospect that the fishery will become valuable in time, the present price of oysters in this county being about 2*s.* 6*d.* the hundred. The bed will probably require replenishing.

I have taken the opinion of Mr. Buckland on the fisheries, and probable result after replenishing them, and have delayed this reply in hopes of getting his opinion, which I have not got as yet, but if I receive it in time I will forward it to the Board.

F. SANDES.

15th February, 1868.

Bed No. 78.—Roaringwater Bay.

SIR,—I beg to apologize for not replying sooner to your circular of the 27th December last, which has been occasioned by various unavoidable circumstances.

In reply to your request on the part of the Commissioners of Sea Fisheries, that I would furnish the Board with a statement of my proceedings in reference to the licence granted to me on the 16th July last, I beg to state that having selected several acres of ground which appeared the most suitable for the formation of a bed, I have laid down thereon as many oysters as I have at present been able to procure, and hope shortly to lay down more.

I also hope when visiting London in the course of the coming spring or summer, to obtain information as to best mode of proceeding in reference to propagating oysters on this very rough and boisterous coast.

THOMAS HICKS.

February 13th, 1868.

Bed No. 29.

SIR,—I am in receipt of your circular requesting an account of my operations in oyster culture during the past year.

In my last report to you I stated that I was then about making an experiment on a small scale, on the process now so successfully carried out by the South of England Oyster Company at Hayling Island, under the able management of Mr. Hart, by forming reservoirs or tanks inside my embankment (having reclaimed some years ago about 200 acres from the sea). In the early part of the month of March last year I commenced the work, and in less than two months finished two tanks, and before the 1st of May stocked them with oysters of various ages, from one to seven years, on a hard shingly bottom. In the month of June I laid down hurdles and tiles for the spat to adhere to, and, in fact, I spared no trouble or expense in completing these tanks in the most improved manner, which are supplied by means of sluices and a tube by which the water can be conveyed into the tanks through an empty hogshead, half filled with small stones for the purpose of filtration, almost every tide if necessary. All are so situated that not a drop of fresh water, except in rain, can enter them, I having been informed that oysters will breed only in pure salt water; and in addition carried out the other conditions for the successful propagation of oysters according to Mr. Frank Buckland's instructions kindly supplied to me:—

1. Heat.
2. Tranquillity.
3. No wind.
4. Clean cultch.
5. No current of water.

I formed the tanks in the warmest and most sheltered part of the ground inside my embankment where the sun had full power. I also tried the experiment of placing a melon frame in a part of a tank, covering some oysters with the appliances for collecting spat, under the full rays of the sun, and where the water reached one degree beyond any other part of the tank, as my caretaker tried the temperature of the water in both tanks, as well as outside the embankment in the open sea, every week during the months of July and August, and I find by his memorandum the average to be—

	In the tanks.		In the open sea.	
For July—	84 Max.	61 Min.	77 Max.	58 Min.
To August—	85 Max.	76 Min.	81 Max.	74 Min.

My oysters are all living and thriving, but I am sorry to say the only result I can discover as to the breeding is a fall of the saddle or crow oyster spat.

Being determined to persevere in my experiments, I intend constructing a tank for lobster culture, and still hope for success in my experiments for oysters of last year.

My marketable oysters continue to give the same satisfaction as stated in my former reports to your Commissioners. They readily bring seven shillings a hundred, the flavour being fine; but some persons object to the size being too large.

(Signed), EDMOND POWER.

29th February, 1868.
E. Hornsby esq.,
&c., &c.

Bed No. 35.

March 5th, 1868.

DEAR SIR,—In consequence of a delay in forwarding your circular from Ireland and my absence from home, I have been unable to reply at an earlier date.

I have the pleasure now to report, for the information of the Commissioners, that I have expended on the licensed beds during the present season between £4,000 and £5,000; and as this has been entirely laid out in labour amongst a peasantry where much poverty existed, it has been a great boon to the neighbourhood.

There has been rather more than the average spat fallen this season, and the quality, from the more general working on the beds, has also improved.

I regret to say the prejudice existing amongst the people has prevented me taking advantage of the permission of the Commissioners to fish during part of the close season, for the stocking of the licensed beds. I could only, therefore, fish on a few spots not usually fished by them.

But the wisdom of the granting such permission has been most abundantly proved to everyone near those spots, it being apparent to all that, on the commencement of the open season, the brood was much more abundant, and of a far superior quality in those places—in fact, as good as on the licensed beds where it had been worked. The fishing on those spots kept them clean, and cleared them of the accumulations of filth, and weeds, and decayed and putrid substances, as well as removed that numerous tribe of animals that feed on spat, and are harboured in such filth; and I believe that this proof *must* do something towards removing the prejudice to which I have referred.

I see no diminution in the produce on the public beds adjacent: the price and quality are both an improvement on last year.

The greatest drawback to the cultivation, to any great extent, of the Irish oyster fisheries, consists in the unprincipled manner in which the licensed beds are plundered, the very great difficulty in obtaining a conviction, and the consequent very heavy expense of numerous watchmen and boats, to be obtained from other and distant places.

I have the honour to be, dear sir,
Your very obedient servant,

GEORGE AUSTIN.

Edward Hornsby, esq.,
Secretary, Board of Works, Dublin.

APPENDIX, No. 7.

IRISH SEA FISHERY COMPANY (LIMITED).

Dublin, 21st January, 1868.

DEAR SIR,—I had the pleasure last year to forward you an account of the proceedings of this Company, and I now beg to give you an outline of our transactions for the past year.

My anticipations for curing operations have proved correct, and Irish cured herrings are now coming into general consumption, and had the season unfortunately not been a very bad one both for quantity and quality of fish, this Company would have been enabled to cure very largely, thereby giving a great impetus to the fisheries from the certainty that a safe and profitable market existed for the sale of the fisherman's produce; as it was, we cured nearly 1,400 barrels of herrings, and I am happy to be able to report, that even at this early period of the season we have disposed of more than half.

In October last, we exported nearly 300 barrels of cured herrings to Scotland, and found a ready sale at fully 25 per cent. higher prices than we could have then purchased *best crown branded Scotch herrings.* This is a new feature in the business, and gives great encouragement for future operations both in Scotland and on the Continent. But the latter can only be successfully carried out under the protection of a government brand, and until this is effected it would be unsafe to venture on shipments.

With regard to manufacturing red herrings, kippers and bloaters, we have done a large and steadily in-

APPENDIX.

Irish Sea Fishery Company (Limited).

creasing business, and notwithstanding the popular Irish prejudice in favour of a large red herring, we are evidently gaining a trade from the superior quality of the *Howth* herring.

In July last, I suggested the idea of direct steam communication between Howth and Holyhead, and the Directors of this Company entered into an arrangement with the London and North-Western Railway for through rates to all parts of England, and put on their screw steamer *Shark* on the line. The result has been most satisfactory, and numbers of *English* buyers now make Howth their head quarters, and are enabled to get their fish delivered within twenty-four hours of being caught, and at far less expense, and with much greater certainty than *viâ* Dublin. The greatly increased competition has had a most beneficial effect upon prices which were certainly increased fully 20 per cent.

With regard to the fishing generally, it has been perhaps the worst season ever experienced, both with regard to the mackerel and the herring fisheries, principally caused by continuous bad weather. But the result has more than ever convinced me that in a business where an owner has to follow his boat from Kinsale to Arklow, from Arklow to Howth, thence to Carlingford and Ardglass, and back again to Howth, that in this country, where the fishermen have not the means to buy boats and gear, it is only by means of public Companies owning not less than sixteen or twenty boats, that the fisheries can be properly carried out. It will not pay a party to invest in one or two boats, and incur the expense of *following the boats*, as he must do if he wishes them to be properly worked.

I have watched with much interest the proceedings of the Committee on Mr. Blake's Bill, and do not regret that even as amended it did not become law, because I feel that the most important point of all, and that is, the enactment of some stringent regulations relative to the fishermen was comparatively not touched upon.

The proposal for a form of agreement will in practice be found to be a nullity, for as a general rule the fishermen employed in the herring and mackerel fisheries, will not sign any form of agreement, and for this reason, that unfortunate habits of intemperance among a great number of the fishermen have caused them to desire constant, almost weekly change of boats; and that it is simply a question on Monday morning, as to what skipper will give most drink, to induce men whom you have been feeding for weeks to desert their employment, and thus they go from one boat to another serving the new master as they have done all former ones; under such a system there is no identity of interest, and the men become reckless of damage done to their employer's property.

Feeling convinced that some immediate steps ought to be taken to protect the interests of those who have invested their capital in the fisheries and to encourage their extension, I have after the most careful consideration come to the conclusion that it can only be met by some stringent legislative enactment, and would suggest a clause to the following effect, in any new Bill which may be brought forward.

"That the clause as amended in Mr. Blake's Bill shall be part of a new Bill with the following addition, viz:—

"That failing the signing of an agreement between the owners of boats and the fishermen, the act of shipping in a fishing boat shall be construed into an agreement for not less than twenty-eight days, with seven days' notice of the intention of the fisherman to leave his employment."

If this is done a great impetus will be given to the fisheries, and an incalculable benefit conferred on everyone connected with them, for I am sorry to say this system of drinking is demoralizing the men and wholly changing the character they once had; nothing but the protection I have suggested can remedy matters.

I have the honour to be, sir,
Your obedient servant,

ROBERT FORSTER,
General Manager.

91, South Mall, Cork,
5th February, 1868.

DEAR SIR,

In compliance with your request I have made a few notes of our doings as a company, and have to apologize for not having sent it before this, but I have been engaged on very important business which absorbed all my time. I have also to apologize for the crude way in which I have jotted them, but trust that you will glean from them some little matter that may be of use in the object you have in view.

I remain, dear sir,
Very faithfully yours,
GEORGE PURCELL,
Secretary.

James Redmond Barry, esq.

South of Ireland Fishing Company.

This company was established in December, 1865, under the conditions of the Joint Stock Companies' Act.

In the spring of 1866, when the company commenced operations, mackerel were most abundant on the coast, and, notwithstanding that a large fleet of fishing vessels from the Isle of Man, Cornwall, Dublin, &c., together with the local vessels were all engaged in mackerel fishing, *good prices* ruled for nearly the entire season, which lasted about nine weeks, and this, we believe, was merely owing to the facilities given buyers for procuring ice, a large cargo having been imported by the company, which was sold at the wharf at a moderate price, and enabled the dealers to deliver the fish in good condition in the different markets through the United Kingdom.

The spring of 1867 was unusually severe, and although it was known for several weeks that mackerel were in abundance off the coast, continuous gales of wind prevented the fishermen shooting their nets, and as invariably follows, the frequent gales drove the mackerel off this coast; the shoals were broken up, and they were subsequently taken in enormous quantities on the Cornish coast. Owing to these circumstances the spring fishing out of Kinsale for the past year was the worst known for many years.

Since the company commenced operations, herrings have been very scarce on the coast, and the haddock seem to have disappeared. Very few of either have been taken, but the fishermen are quite satisfied that the herrings will again and again visit our coast, and that the haddock will follow in their wake.

At the close of the mackerel season the men are employed at long line fishing or herring fishing, according to circumstances. During the past winter hake has been very plenty, and the prices obtained far beyond the usual average. Though this latter branch of fishing is not very remunerative to the company, the fishermen are greatly benefited by it.

The vessels of the company being sea-worthy and well found, the men are able to continue at sea a greater number of days in each month than heretofore, and their proportion of the receipts for fish being large, they have been earning fair wages.

It being all important to have ice on the spot for packing mackerel, the company have converted one of their stores into an ice-house, and have ordered a large cargo for the coming season.

The property of the company at present consists of sixteen vessels full found in mackerel nets, herring nets, long lines, &c.

The success of the company has been variable, as such operations necessarily are; but, remembering that the past year was the worst for fishing known on the coast for many years, the result may be deemed satisfactory. The average dividend paid on the two years' operations has been 10 per cent. per annum, with a balance of £1,131 18*s.* 7*d.* to credit.

Kinsale, 29th January, 1868.

Dear Sir,

The general circumstances of this place as one of the most important fishing towns in Ireland, the centre of an important district and the head-quarters of a wealthy and influential fishing company, have, in addition to a careful perusal of the answers to queries and the special report furnished by the Inspecting Commander, induced me to devote more than ordinary attention to endeavouring to unravel the causes of the most intense state of miserable destitution, which prevails at present in this locality among the fishing classes. I have known Kinsale for more than half a century, and at no former time have I ever seen it in a more miserable state.

I have been in personal communication with the practical managers of the "South of Ireland Fishing Company;" they have rebuilt the stores which had been burned down; they have taken another extensive concern, formerly a Government dock-yard, with extensive wharfage and storage; they have constructed an ice-house; they have ordered a large cargo of foreign ice; they have gotten a very fine additional vessel, making their present fleet sixteen; they have five thousand substantial new boxes ready for the next season of mackerel, for the capture of which they have every necessary appliance in the way of gear and implements. The sad and melancholy deficiency is in man. They have, with rare exceptions, a depraved, demoralized, drunken community of operatives, incorrigibly debased men and women generally. The time was when the fisherman who committed his earnings to the care of his female helpmate, was sure to find them applied to useful and necessary purposes—was generally sure to find a comfortable, though an humble, home; change of clothes for himself, and his children well reared. Such scenes are now but the exceptions, and generally one finds misery, wretchedness, beastly drunkenness, and most among the women.

The company's managers have been free to admit that those evils now exist to a much greater degree than before the company was formed, and it is a sad reflection to think that even those intelligent persons are ready to trace to the change much of the improvidence which prevails; formerly most respectable fishermen were either the owners or part owners of the boats in which they worked. It was an object of ambition to increase one's property in the boat, and it stimulated industry and a desire to save; and although each man generally earns more money now than under the former system, there is the absence of an immediate object for which to save; the wages are given to the wives, or rather the earnings, for the company deal most liberally with them on shares; but they often say what are we but servants, slaves, and the public-house is the only depository resorted to.

All parties suffer—nobody has reason to be satisfied—and there unhappily prevails among all classes an utter hopelessness of any remedy.

I regret to think that in that change which I so ardently desired to promote, I can, myself, trace some of the evil. I consider the case in some respects analogous to the transition among agriculturists, from the class of small holders to that of labourers, under the consolidation system; the produce of the land may have increased, the skill of the labourers with improved implements and skilled direction may have advanced, but the labourers of the present time, though perhaps better off, feel themselves to be without a stake—without an object for more than a bare existence; they are neither so provident nor so trustworthy as the cottiers of old. But I should be sorry to despond altogether; there is a remedy, and I had long since suggested it to this same company; there is a want of discipline, a want of moral control in the management; they have, it is true, a most respectable secretary resident in Cork, who, doubtless, manages their financial concerns. They have at head-quarters two very intelligent and respectable practical men who fully understands everything connected with vessels, with gear, and with fishing; but there is no moral control, and I have been told by those persons that the control of a most amiable Pastor of their own faith is wholly disregarded. I have seen and conferred with this best and holiest of men; he is persuaded that there is much exaggeration, but he is obliged to admit that the monster evil prevails to a most deplorable extent, and most especially among the women. He has communicated with a body of Sisters of Mercy—perhaps the most remarkable for their great piety and indefatigable exertions—ladies of the very highest order of mental acquirement; they are quite willing to do all they can, but feel that they can do but little with such persons.

Some of the most intelligent and truly benevolent heads of the company have long felt and deeply deplored this state of things, and in the course of last season I was consulted about finding a well qualified person to assume the office of resident moral Governor or Superintendent. It struck me that some retired officer of the Navy, who had filled the office of Inspecting Commander, with the education and feelings of a gentleman, and the heart of a Christian, would be best suited for the duty, and after taking some trouble among the order, I found one who, so far as I could judge from testimonials and correspondence (for I never saw him) seemed quite unexceptionable; but, from what cause I cannot tell, it was never consummated, and the evil grows.

It is now so bad in the town that a number of respectable gentlemen have been meeting for the purpose of establishing a refreshment establishment, where coffee, soups, and dinners may be procured at a minimum price, it being quite notorious that the pursuit of fishing being especially cold and comfortless, requires more than ordinary exhilaration, and at present the public-house is the only resource. I have strongly recommended this as a palliation, and an influential meeting was held this day for its promotion; but, without moral government of the company's affairs by a constant resident, all will not do, and I have plainly told some of them that without it they had much better prepare for dissolution or wind up.

Some trial boats have already found mackerel on the grounds, and there are some indications of a favourable season.

The English buyers, and the Welsh and Manx fishermen have already signified their approach; but I was very sorry to hear a most unfavourable character from unprejudiced persons of the people of the Isle of Man.

In Howth they have been much more unexceptionable than the Scotch, but here the converse is asserted.

The company have been paying their expenses through the winter by the inshore and cod fishery, but through the whole season there have not been more than a score haddock taken, which produced fabulous prices. They are very badly off for even muscle bait, and though the harbour is peculiarly well calculated for the formation of muscle beds, like all the rest of Ireland, in no single instance has there been a case where the 13th section of the 5th and 6th Victoria, cap. 106, has been availed of. I expect that the company will be induced to make an application for permission to form beds in the harbour, and as the power has never been exercised, I beg to suggest that it be referred to the solicitor to say whether there is any objection under subsequent enactments, or the Oyster Fishery Laws to such applications being entertained.

Cork was never so badly supplied with fish; everything good is sent to Dublin, and the weather has been very wild.

J. Redmond Barry.

E. Hornsby, esq., Secretary,
Board of Public Works.

Appendix.

Oyster Fisheries.

Report of Commander Jones, R.N., on the Kinsale District.

Sir,—I have the honour to transmit herewith an amended fishery return for the Kinsale Division.

1. It will be borne in mind that for the previous two years I have forwarded the Station Officers' Reports in *extenso*. I did so because I was unable to reconcile their various and conflicting statements, and, too little experience of the fisheries here for my own opinions to be of any value.

I have, however, paid considerable attention to the whole subject during the last two years, and have recently put myself into personal communication with all the fishing gentlemen as well as working owners in this district, and the report is the result of their experience, and my own opinion.

2. I cannot too strongly recommend the appointment of such person as is recommended in Answer 13, and in as far as the desirability of collecting statistical information and local opinion is concerned, the necessity is constantly increasing, because, whereas until recently, an Inspecting Commander, on first coming to a division, had the experience of the Station Officers to guide his report; now they are so constantly changing that their opinion is of no value. For instance, of the nine station officers in this division seven have been moved during the last four months, and are replaced by men for the most part profoundly ignorant of the whole subject.

3. Also, I am assured that Government could, in many ways, give most valuable assistance to the fisheries. For instance—

(*a.*) Officers commanding small war vessels should have orders to assist fish vessels in every way, especially in distress—(quite the contrary is the usual practice).

(*b.*) Government vessels—gun-boats—should be sent out to *discover* fresh fish rendezvous by fishing on certain lines (as Surveyors do), and ascertain the present location of particular fish. In other places the cloud of fishing vessels who make such discoveries for themselves renders such Government assistance unnecessary.

(*c.*) By the formation of at least one oyster fishery by artificial beds, a little capital would, by example and the employment of men, give a great impetus.

(*d.*) A Government vessel might trawl (in deep water) until a good trawling ground was found.

4. All my researches go to prove that the fish are in the sea to as great an amount as formerly, but the kinds most plentiful have changed, and on the whole have moved farther out to sea, and the fishermen have lost the ability and the energy necessary to making new fishing grounds, and remaining farther out to sea.

Charles G. Jones,
Inspecting Commander.

December 20th, 1867.

No. 2. Report on Arklow Oyster Fisheries from Harbour-Master of Arklow.

Arklow, 10th January, 1868.

Sir,—I feel much pleasure in sending you the following report on the oyster fishery of this town up to the 31st ult., in continuation of my report, dated the 23rd of last May.

Oyster dredging for this short after-season commenced on the 1st of October and was discontinued on the 24th of that month, owing to the circumstance of herrings having been brought in on that day, when the winter herring fishing began. This latter fishing was brought to a close on the 10th ult., and oyster dredging was again resumed, and finally ended for the year 1867 on the 21st ult.

The total quantity of oysters taken, during the two short periods above mentioned, was 9,160 barrels, and the average price at which they sold was 10*s.* 6*d.* per barrel nearly, the total sum which they realized being £4,050 exclusive of freight, packing, and carriage to railway. These oysters were disposed of as follows, viz. :—

London and Kent,	4,160 barrels.
Dublin and Clontarf,	5,000 „

By far the greater portion of those placed on the beds in the latter places are, after some time, disposed of in the English market, as Dublin itself is supplied, to some extent, from other localities.

On comparing my returns and figures for the year just closed with those for the previous year, it is very satisfactory to find an increase of not less than 10,134 barrels in the total catch for 1867 over that for 1866. It is equally satisfactory to find there was a corresponding increase in the sum total received in 1867 for oysters. I here insert the figures for the two years, viz. :—

		£	s.
1866, total catch,	15,790 barrels, realized	8,693	0
1867, „ „	25,924 „ „	13,001	4
Increase,	10,134	5,308	4

I am clearly of opinion, sir, that this increase and returning prosperity in the oyster fishery is entirely due to your fostering care in preventing over-dredging. There is great reason to believe that dredging on these beds in September has heretofore done much injury to the growth of oysters.

Respecting the winter herring fishing just closed, I am sorry to report it was not so productive as that of either of the two previous winters. The total catch was only 16,000 mease, and the average price 11*s.* per mease, realizing a sum total of £8,300.

Unfavourable weather for dredging has now forced the fishermen into three weeks' unwilling idleness, but I hope it will soon take a favourable change, so as to enable them to resume their useful industry.

The large fishing fleet of this town is now in first-rate order, and well found in all necessary gear; but, for the first time during several years, the building of new boats and enlarging of old ones has ceased, at least for the present. There are several causes combined that might be stated to account for this; the subject, however, being outside the scope of my present report I have confined myself to stating the fact.

It may not be out of place, at this particular time, to state that this large community of fishermen, always loyal and peaceable, were never more so than at the present; and that, as far as I am able to judge, they have not the slightest sympathy with the cause which I regret to hear has been *marked* by *serious crime* even in England, where they always find a sure reward for their peaceful industry—a ready market for at least three-fourths of all the oysters and herrings they can catch.

I am, sir, your obedient servant,

P. Maher.

James Redmond Barry, esq.,
Commissioner of Fisheries, Dublin.

Arklow, 28th February, 1868.

Sir,—I beg to acknowledge the receipt of your letter, and its enclosure, of yesterday's date; also the chart; and I now return the latter, marked in pencil, as desired. The spaces marked and coloured, numbered respectively 1, 2, 3, and 4, show the position and extent of the *Old Oyster Beds*, and the space coloured, extending from Mizen Head to the Blackwater Lightship, Number 5, is that on which oysters of a very large size have *lately* been discovered. I had several of the most intelligent fishermen with me when marking this chart, and it was, of course, on their information I have acted in the matter, and they tell me that in any part within the red lines referred to in which they have tried oysters were found, except within the small space coloured,

Number 6. It appears, however, that oysters are much more plenty in some parts than in others, but all agree that oysters are to be found close to the Arklow banks in deep water. But I find, from what these men tell me, that there are small spots here and there on the old beds, which they cannot very clearly define as to situation, on which they are unable to get oysters.

Dredging since the commencement of this season was very much retarded by bad weather. On this week, however, the fishermen have done pretty well, and I expect, when I make up my returns, that I shall not find the total catch for the week much under 2,000 barrels. The *new ground* has contributed largely to this, and the larger description of oysters found on it are in much request by local buyers, and the smaller ones got here and elsewhere are taken by English buyers. In fact, I believe both classes of buyers are pleased with their week's purchase.

We have several English buyers here now, and expect some French buyers when the season advances a little, and all will be willingly supplied to the utmost extent. The beds can yield as they have been heretofore, and my returns and reports for the last five years show the result on these beds of trying to supply the great demand. The truth of my reports, sir, was fully borne out by the fishermen themselves, who came before you in April, 1865, and gave evidence on oath (evidence that they knew would doom them to two months unwilling idleness in each year) that these beds required *rest from over-dredging*. The same state of things still exists; and this being the case, all I have spoken to on the subject agree with me in thinking that any change in the law by which a greater *strain on these beds* could take place would destroy them totally. I am told by one of the English buyers that this was the result of over dredging on one of the large English beds with which he was acquainted.

I am, sir, your obedient servant,

P. MAHER.

Jas. Redmond Barry, esq.,
Dublin.

Arklow, 8th June, 1868.

APPENDIX.

Oyster Fisheries.

SIR,—I feel great pleasure in sending you the following report on the oyster fishery of this town, brought to a close last month.

Oyster dredging this year commenced on the 27th of January and ended on the 15th of May. The total catch during this period was 21,644 barrels, and they were disposed of as follows, viz.:—

	Barrels.
London and Kent, . . .	8,110
Dublin, Sutton, and Clontarf, .	12,334
Holland, *i.e.*, Hamburg, . .	710
Beaumaris, ...	240
Carlingford, ...	250

The sum total which they realized was £13,601 4*s.*, showing the average price per barrel to have been 12*s.* 6¾*d.* nearly.

By far the greater part of these oysters were caught on the recently discovered beds, and they were mostly of a large size, and hence the reason the English buyers did not purchase so much this season as our local buyers.

Great anxiety and uneasiness was felt here by the fishermen, and in fact by all men interested in the locality, respecting the Fisheries Bill, lately before Parliament; but now that the matter (as we are told) is left as heretofore altogether to the discretion of Her Majesty's Commissioners of Fisheries in Ireland, the feeling is one of gratitude and thankfulness towards the Commissioners, who, from the commencement of this question, never relaxed their efforts until it was settled in a manner that will save our oyster beds from destruction—the inevitable fate that awaited them if the Bill passed unaltered, as at first proposed. All the English buyers here joined in this opinion.

The fishing fleet is now being overhauled, and active preparations are making for the summer herring fishery, and never was the fleet in a more effective state or better found in all necessary gear for the purpose.

I am, &c.,

P. MAHER.

J. Redmond Barry, esq.

No. 3. LETTER from THOMAS BATT, esq., D.L., of Rathmullen House, on Lough Swilly Fisheries, 1867.

SIR,—Allow me to send you myopinion of the present state of the above fisheries, to see if the Fishery Commissioners can do anything for their improvement, all being in a declining state.

The Lough Swilly fisheries are confined to the inside waters of the lough, the *deep sea* fisheries being too far off to be easily available to the inhabitants of the shores of the lough itself (Innistrahull Island and Tory Sound).

They consist of—

Trawling.
Line fishing.
Herring.
Oysters.

Trawling is carried on by vessels of twelve to fourteen tons, four belonging to Buncrana, and two to Fahan. As the ground inside the lough is not extensive, this mode of fishing has not improved for the last sixty years (see *Fishery Reports*). It remains stationary, or has perhaps retrograded, nor is it capable of much development. The trawling vessels are stationed either at Rumeraw point, at Fahan station of Derry and Lough Swilly railway, where the anchorage is good, and perfectly safe and sheltered, with deep water close in shore, or else in the tidal harbours at Buncrana, where there is no anchorage, nor shelter outside the *bar* for small boats, where the shore is much exposed to the ocean swell, as well as a long reach of sea from the west and south-west.

They are managed by three or four men, and represent a population of, perhaps, fifty persons, resident in Buncrana and in Fahan.

Long and Hand Line.—Line fishing is carried on by the inhabitants of the west side of the lough principally, there being few fishermen, if *any*, resident in Buncrana, and but one family at Fahan, and below Buncrana the ocean swell is so great in bad weather as to prevent fishing by the inhabitants there, except in calm and settled weather.

The best ground for *hand-line* fishing is in the channel and anchorage off Rathmullan, where lie the bait beds of scallops, generally used for long-line fishing.

Buncrana Bay formerly was used for hand-line fishing, but constant trawling in it has destroyed this fishery.

Long-line fishing is best in the winter season off the Swilly rock, near Doaghbeg harbour, but the want of shelter for boats *there*, prevents this fishing, except in fine weather. An improvement to the natural harbour of Doaghbeg, would be a boon to these boats, and much required.

Both *cod* and *haddock* and *whiting* have diminished in quantity much in the last five years.

In stormy weather these fish are usually caught off Rathmullan, in that sheltered roadstead and channel.

Herring fishing was formerly of great value to the inhabitants of this locality, and of Lough Swilly generally, giving great employment to the people, and food also of a cheap and wholesome kind. It has steadily declined, and is now worse than I have known it for thirty years.

When herring fishing is good, the population of the upper parts of the lough prosecute it with great energy; there are now few men who prosecute it for their support in those parts, but in the lower and middle parts of Lough Swilly there are some. These parts are Island of Inch, and west shore from Rathmullan down the bay. In Buncrana there are none. I have no doubt but that trawling in August and September *over* the *spawn beds* injures it. These lie above Knock-a-mish battery on the west side, and in Owenamara Bay below it.

The Oyster Fishery is nearly extinct in consequence

APPENDIX. Oyster Fisheries.

of the total want of protection afforded the young shell fish by the Commissioners. I drew their attention to this subject, and a meeting was held in Rathmullan in June, 1866, attended by Mr. Redmond Barry, at which a mass of valuable evidence of practical men was given, but *nothing* has been done, and no improvement even been attempted.

I recommend the Carlingford Lough bye-laws to be imposed in Lough Swilly to protect the young shell fish now carried away in thousands to stock beds in other countries, thus preventing any large ones growing for *spawning*, and the beds thus becoming annually more exhausted.

Collecting these small oysters gives employment to perhaps *six* persons throughout the year.

Twenty years ago these oysters were famous throughout the North, and were excellent. The best beds of them lie above Fortstewart Ferry, in the "Lough side" estuary, and one in Ramelton River.

The general state of the Lough Swilly Fisheries I consider therefore is that *Trawling* remains in a stationary state; *Herring* fishing has materially declined; *Long line* fishing worse than for some years; *Hand-line* not so good as usual; *Oysters* nearly extinct as an article of food within my own experience of thirty years.

As facilities I recommend—

1st. An improvement of the boat harbour of Doaghbeg (near the Swilly rock) as a shelter to herring and long-line fishermen in the winter season; a little clearing of rocks and stones and dredging would suffice.

2nd. A land place or slip at Rumeran Point, close to Fahan station on the Lough Swilly Railway—a small one at a moderate cost would answer perfectly for fishing boats and trawling vessels.

3rd. Trawling prohibited and means taken to carry out the prohibition upon the beds where the herring spawn, and a close time enacted from 1st November until 1st April.

4th. Protection to be afforded the young oysters to prevent their exportation so that they may grow to a proper size previous to being taken.

Your obedient servant,

(Signed), THOMAS BATT.

Rathmullan House, Letterkenny,
December 31, 1867.

Fishery Piers.—N.B.—I may add that Rathmullan Pier, built in 1847 for this purpose, is very useful as far it extends, but it is not long enough to give shelter to boats at low water of spring tides, and should be extended say 50 feet or 100 feet.

There is no pier on the east side of the Lough except Farland Point, near *Burt*, too high up to be of use to fishing boats.

Rumeraw Point at Fahan will be found the best place for a landing slip or pier, as the deep water is close in shore, and the point affords the requisite shelter, and the railway at Fahan station is very convenient for market.

(Signed), T. BATT.

No. 4.—LETTER from BANTRY on the SPRAT FISHERY in 1867.

Bantry, December 31, 1867.

SIR,—I would have written to you before this, but I was anxious to supply you with the best information I could procure about the take of sprat in Bantry Bay during the time it continued there.

The following columns show the names of the parties owning seines, the number of nights engaged, number of men employed by each, the quantity taken in tons, value of each ton, total value, and the proportion of the proceeds paid to the men.

The first man on the following list lives in Glengariff, and was taking sprat ten days before the others, who live in Bantry, knew of any sprat being in the bay, and he took some herring and mackerel, which enhances the value of his fish. They could all have taken a great deal more only their seines were in bad order, and they had not a sufficient number of boats. It will give me pleasure to supply you with any information that I will be able to procure for you at any future time.

Owners of Seines.	No. of Nights engaged.	No. of Men employed.	Quantity taken in tons.	Value of each ton.	Total Value.	Proportion of Proceeds given to Men for Labour

APPENDIX, No. 8.

Sea-Coast Fisheries (Ireland) Bill, 1867.

SELECT COMMITTEE on SEA-COAST FISHERIES (IRELAND) BILL, 1867.—Paper handed in by Mr. J. REDMOND BARRY, July 5, 1867.

SUGGESTIONS FOR THE CONSIDERATION OF THE COMMITTEE.

The Chairman of the Select Committee on the Sea-coast Fisheries (Ireland) Bill, having kindly afforded me an opportunity of offering such suggestions for the Committee as may be the result of my experience, and, taking into consideration the information furnished in the evidence which I have had the advantage of either reading or hearing, I avail myself of this permission to record my humble opinion upon the subject.

1. I am quite willing to admit that there is a great and urgent necessity for a change in the system of management and administration of the sea-coast fisheries of Ireland.

2. That they should be more than they are a source of increased employment, of cheap food, and of considerable wealth to the country.

3. That, excepting only the east-coast herring and the south-coast mackerel fishery, the sea fisheries of Ireland are in an extremely languid and declining state.

4. That, amongst other causes not under human control, this state of things is to some extent attributable to a deficiency of active and vigorous management, supervision and encouragement.

5. That a remedy, as regards management and supervision, might have been sufficient at an earlier period, and before decline had so nearly approached to extinction; but that this branch of industry has so fallen away as to require stimulants and aid, which, under other circumstances, may be regarded as exceptionable, or not in accordance with modern principles of political economy.

6. That the subject of improved or altered administration would appear to be the first and most important object for the consideration of the Committee.

7. That in determining upon this question it is desirable to keep in view three objects,—speed in the application of the remedy,—efficiency,—and economy.

8. That while I fully admit that the non-interference principle seemed to have been unfortunately the ruling condition under which the Board of Works Department originally accepted the important trust of the management of the fisheries of Ireland, I am equally convinced that in the skeleton to which that Department has been reduced at present, there may be found quite as much knowledge, judgment, and zeal as in any new Department that could be formed. Its services would be, in some of the most important points of aid to the fisheries, not only valuable but indispensable;

and I do most sincerely and conscientiously believe, that if a little more steam were let on by the higher powers, and the requisite means were afforded, a most useful and valuable system of management may be established without very much increased expense.

9. That I still adhere to the opinion expressed by me to the Committee, that in addition to the two present Commissioners of Public Works, whom I know to be men of sound judgment and great industry, there should be appointed a third, with coextensive powers, or, like myself and my former colleague, solely confined to the fisheries; but in either case that he should be well qualified, and of a position to command respect. That the chief government of the fisheries should be vested in this officer, aided by myself, for the short time that it may be permitted, and by the counsel, upon important questions, of the two other Commissioners, and that for that purpose it should be competent to one or all to call for a Fishery Board when required, but at least once a week, attended by a principal clerk of experience in the matter, whose duties, under the present Secretary of the Board, shall be to record the proceedings at the Board, to receive and act upon instructions, to report the proceedings at public inquiries, and to conduct the correspondence, the other officers of the present Board being, as usual, available for aiding the Fishery Department.

10. That as an extern staff there should be appointed four local inspectors, one for each province, whose duties should be active and vigilant supervision of their respective coasts, each making himself well acquainted with the several places where a fishery may be prosecuted, and with the efficient aid of the Coast-Guard Department, promoting industry and preserving order, by means more effective than force, by counsel and instruction, and by securing the confidence of the different classes.

11. That in addition to the enlargement of the Piers and Harbours Fund under the management of the Board of Works, there should be placed at the disposal of the Fishery Board, a sum of money as a Fishery Loan Fund, to be managed under their direction by the staff herein proposed, with the aid of the Coast-Guard; and that it may be competent to them, upon the recommendation of their extern officers, and a due inquiry by the Fishery Branch of the Department, to award to any member of the Coast-Guard, who during the preceding year had evinced extraordinary zeal and activity in the promotion of the fisheries, a fair and reasonable remuneration proportionate to the trouble which he had taken, or to the assistance he had afforded.

12. That the several sections relating to the Sea Fisheries of the 5th & 6th Vict., c. 106, the 7th & 8th Vict., c. 108, the 8th and 9th Vict., c. 108, the 11th and 12th Vict., c. 92, the 13th and 14th Vict., c. 88, and the 29th & 30th Vict., c. 97, should, after mature revision, be consolidated into one simple and intelligible statute, from which should be excluded all minute details in reference to restraint, but that full and ample powers be given to the governing department, after public meeting duly advertised and inquiry, to frame such bye-laws and regulations as they shall from time to time consider necessary; but subject to the sanction and approval, in all cases, of the Lord Lieutenant in Council.

13. That on the requisition of any five persons interested in the fisheries, addressed to the governing department, with the approval of the Local Inspector, and of the Inspecting or Divisional Officer of Coast-Guard, stating the necessity for either the exploration of any fishery bank, or the making an experimental trial of the nature and bottom of any fishing-ground where injury was stated to have taken place through any particular mode of fishing, to call upon the Lords Commissioners of the Admiralty for the aid of a suitable vessel, or, if necessary, to hire a well-equipped vessel with trawling or other apparatus with which to make such experimental trial, either in ground open, or ground where trawling or dredging is, or may hereafter be interdicted, or in any time or seasons, whether close or open; and that the result of such experimental trial shall in each case form a part of the annual report of the governing body to the Lord Lieutenant, to be laid before Parliament, and that such annual report shall also contain a distinct and separate report from each of the Local Inspectors relative to his own district.

In this paper the expediency of granting loans to individual fishermen is, in some degree, a deviation from the views expressed by me on the first day of my examination, and requires an explanation, so far as an assurance, that I never at any time doubted the value of such aid to the people, or its importance in resuscitating our fisheries; but I feared the practicability of its administration without a staff that would not, in other respects, be necessary. I am, however, on consideration, quite confident that much good in that direction may be done to a limited extent, even by the staff that I propose; and upon this subject I beg to subjoin a letter which I have received from a most intelligent Roman Catholic pastor of a sea-girt parish in the county of Cork.

I am, &c.,

4 July, 1867. (Signed), J. REDMOND BARRY.

Barryroe, Timoleague,
5th March, 1867.

MY DEAR SIR,

In reply to your letter of the 27th ultimo, in which you inquire how far, to my knowledge, have loans in aid of fisheries been useful to those in this parish who received such accommodation, I must say that they have been useful not only to the parties so favoured, but to many poor families also in their neighbourhood. A seine, for instance, purchased with money advanced to a farmer, becomes in a degree a joint-stock property, in which twelve poor men become working partners; for these get an equitable portion of the fish directly they bring it ashore. I would suggest that loans to a large amount be given to such only as could pay the instalments from other sources, should the fishery for a season turn out a failure. With respect, however, to poor men, who fish with lines and trammels, I have to state that these, by reason of their poverty, buy their fishing-gear at 30 per cent. above cash prices, and are moreover sometimes constrained to borrow money at an enormous rate of interest to pay for what they had bought on terms so disadvantageous. I would regard as a boon any well-organized system which would, above all, provide for trammel-men small loans not exceeding five pounds.

I am, &c.,

(Signed), JEREMIAH MOLONY,
P.P., Lislee.

James R. Barry, Esq., Commissioner,
&c. &c. &c.
Office of Public Works,
Custom House, Dublin.

APPENDIX, No. 9.

CORRESPONDENCE RELATIVE TO CONVENTION WITH FRANCE.

French Convention.

(H. 3369.)

The ASSISTANT SECRETARY to the BOARD OF TRADE to the SECRETARY to the COMMISSIONERS OF PUBLIC WORKS, Dublin.

Board of Trade, Whitehall,
23rd October, 1867.

SIR,—I am directed by the Board of Trade to inform you, that in view of proposed legislation in the ensuing Session of Parliament on the subject of laws relating to British Sea Fisheries, the Board are desirous of coming to an understanding with the Commissioners for the execution of the Acts regulating the Irish Fisheries upon the subject of Irish Oyster Fisheries, so that the law in Ireland should, as far as practicable, be made uniform with that which will probably be very shortly the law in England.

Appendix.

French Convention.

The Commissioners of Public Works are doubtless aware that in the course of last year an International Commission assembled in Paris for the consideration of the then existing Fishery Convention of 1839 between Great Britain and France, and that the members of that Commission recommended certain articles as the basis of a new Convention to be entered into by the United Kingdom and France, in lieu of the former one.

A Convention founded on those articles has been agreed upon between the British and French Governments, and it will be necessary to re-introduce into Parliament the Bill for confirming it, which at the latter end of last Session was withdrawn in consequence of the numerous other claims upon the attention of Parliament. Two copies of that Bill are enclosed for the consideration of the Commissioners, and I am to request that the Commissioners may favour the Board of Trade with their views upon the subject of Oyster Fisheries in Ireland, and more particularly on the question of assimulating, as far as practicable, the law in one country to that of the other.

It will be seen that the Schedule of the Bill proposes to repeal so much of the existing Act regulating Irish Fisheries (5 & 6 Vict., c. 106), as is inconsistent with the proposed new law, and so much as authorizes any bye-law inconsistent therewith.

A recent case has occurred off the coast of Wexford, which would appear to illustrate the inconvenience of the absence of a uniform law and practice on the subject. On the 21st ultimo, some Welsh boats were found dredging for oysters near the Blackwater Bank; they were detained by the Collector of Customs, and taken into Wexford, where the oysters were forfeited, and the master of one of the detained boats fined. The masters of the boats have stated to the Collector of Customs at Carnarvon that they were four and five miles from land when boarded by the officer.

The Board of Trade have been informed that, the close time being by law variable in different parts of Ireland, the Commissioners of Public Works have extended the fence months in this particular locality to the 1st October; and I am to request that the Commissioners would favour the Board of Trade with a Report upon this case, and also inform them what are the limits of the Act to regulate Irish Fisheries (5 & 6 Vict., c. 106), in pursuance of the provisions of which this Board presume the Commissioners are acting, and whether the oysters in question were captured within those limits.

I am, &c.,

(Signed) C. Cecil Trevor.

The Secretary, Commissioners of Public Works, Dublin.

(H. 4133.)

The Assistant Secretary to the Board of Trade to the Secretary to the Commissioners of Public Works, Dublin.

Board of Trade, Whitehall, 13th December, 1867.

Sir,—With reference to my letter of 23rd October, I am directed by the Board of Trade to state that they are anxious to lose no time in the introduction into Parliament of a fresh Bill for carrying into effect the Fishery Convention recently concluded between this country and France, and are desirous of availing themselves of the opportunity which is thus offered of repealing obsolete enactments on the subject of sea fisheries.

With this view they direct me to request that you will call the attention of the Commissioners of Public Works to the second schedule attached to the accompanying draft Bill, and to inform them whether there are any, and if any, what reasons why the enactments, as far as they relate to the Irish coasts, should not be repealed.

I am to add that this Board have no wish to interfere with the laws which govern local fisheries within the limits of British jurisdiction, but that as already intimated they are anxious to avail themselves of the present opportunity of clearing the Statute book of enactments which are obsolete or useless.

The Board of Trade request the favour of an early reply.

I am, &c.,

(Signed) C. Cecil Trevor.

The Secretary, Commissioners of Public Works, Dublin.

The Secretary to the Commissioners of Public Works, Dublin, to the Assistant Secretary to the Board of Trade.

Office of Public Works, Dublin, 6th January, 1868.

Sir,—With reference to your letter of the 23rd October last, transmitting copy of the Bill proposed to be introduced in the ensuing Session of Parliament for the purpose of regulating the British Sea Fisheries, and of giving effect to the new Fishery Convention based on that of 1839, recently entered into between the British and French Governments, and expressing the desire of the Board of Trade, that the Irish Sea Fishery Commissioners would state their views upon the subject of oyster fisheries in Ireland, with a view to an understanding being come to by which the law in Ireland should as far as practicable be made uniform with that which will probably very shortly become the law in England; and further requesting information in regard to a recent case of infraction of the law, as regards the oyster fisheries off the coast of Wexford, and a statement of the distance to which the Commissioners consider their jurisdiction to extend from the Irish coast, and whether the case in question occurred within those limits; and referring also to your further letter of the 13th ultimo, in which, by direction of the Board of Trade, the Commissioners' attention is called to the several obsolete enactments on the subject of the fisheries, which it is proposed to repeal under the Bill before referred to; and they are requested to inform the Board whether there are any, and if any, what reasons why the enactments, so far as they relate to the Irish fisheries, should not be so repealed—

I have now to state, by desire of the Commissioners, with reference to the first point adverted to in the former letter, namely, their views on the subject of oyster fisheries in Ireland, that these views are set forth with considerable fulness, in the report for 1865,* paragraphs 6 and 11 (a copy of which is herewith forwarded), and the result of their action, based on the principles they have adopted and advocate, is further referred to in their report for 1866,† a copy of which is also transmitted.

The Commissioners have no reason to depart from or qualify those views. Further experience has only tended to confirm them in these opinions, and they feel it their duty now to express the decided opinion, that if the proposed legislation for doing away with all close season in the seas around the British Isles, the English Channel excepted, was carried into effect, the Irish public oyster fisheries, now so great a source of profitable employment to a numerous class of fishermen, would in a very few years be utterly annihilated.

With regard to the second point, the recent infraction of the law at Wexford, the Commissioners beg to enclose a series of papers, containing a full report of the case, from which it will be seen that the defendants were fully aware of the bye-law, and knowingly and wilfully contravened it.

It further appears that the bed on which the illegal dredging took place was only two and a half miles from the shore; but with reference to this point, and the question as to the distance from the shore, or the limits to which the Commissioners' jurisdiction extends, they beg to observe that the most extensive and valuable

* The Report of the Deep Sea and Coast Fishery Commissioners, Ireland, for 1865. Presented to both Houses of Parliament by Command.

† Thirty-fifth Report from the Board of Public Works, Ireland, with the Appendices, 1866. Presented by Command.

oyster beds on the east coast of Ireland lie at a distance of from five to ten miles from and parallel to the shore, and so far as these or any other beds are within the reach of ordinary shore boats, and are habitually frequented by and afford the means of living to a shore population, the Commissioners conceive they are justly entitled to be considered Irish beds, and to come within their control.

In further explanation of the bearing of the whole of this most important subject as regards the interests and prosperity of Ireland, the Commissioners desire me to enclose a copy of the report of Mr. Commissioner Barry, whose long experience, and the close attention he has devoted to it, entitle his opinion to no ordinary degree of credit.

With reference to the purport of the second letter, the Commissioners would only beg to say that while they can see no benefit which would accrue to Ireland and the Irish fisheries from the proposed measure, yet they would be reluctant to put forward any objection in the absence of any positive inquiry, (as may be the case in the ordinary fisheries), where any positive general advantage is to be gained. They would, therefore, merely confine themselves to the request, which they most urgently make, that whatever legislation may be deemed necessary for the oyster fisheries of the coasts of England and Scotland, it may not be extended to Ireland, but that the fisheries of that country may be left under their present salutary laws and regulations uninterfered with.

I am, &c.,

(Signed) E. Hornsby,

Secretary.

C. Cecil Trevor, Esq.,
Board of Trade, Whitehall.

Enclosure 1, in above.

Inspecting Commissioner's Report on Letter of the Board of Trade, of 23rd October, 1867.

The object of the letter seems to be to make the law in Ireland, as far as practicable, uniform with that which will probably be very shortly the law in England, for the regulation of the oyster fisheries.

With this view a Bill has been forwarded with the letter, intituled "A Bill to carry into effect a Convention between Her Majesty and the Emperor of the French, concerning the Fisheries in the Seas between the British Islands and France and to amend the Laws relating to British Sea Fisheries."

Three and twenty years ago, when the Bill "to carry into effect a Convention between Her Majesty and the King of the French, concerning the fisheries in the seas between the British Islands and France," was under discussion, a strong and well-founded remonstrance was made by our department against being subjected to the regulations of that Bill, which afterwards became the law, 6 & 7 Vict. c. 79; and the consequence of that remonstrance was, the introduction of the 6th section into the Act, enabling the authorities "to suspend the operation of the Articles of Convention with respect to the fisheries of the coasts of Ireland, or any part thereof, so long as such fisheries shall be carried on exclusively by the subjects of Her Majesty;" and on the day following the passing of the Act, 23rd August, 1843, an Order in Council was passed, directing "That the said Act and Articles of Regulation shall be suspended with respect to the fisheries of the whole of the coasts of Ireland, so long as such fisheries shall be carried on exclusively by the subjects of Her Majesty."

Now, so far as the oyster fisheries were concerned in those Articles of Convention (and to the oyster fisheries alone I shall confine this report), there were several good and useful regulations most necessary for the preservation of the brood and the increase of the supply. From Article 45 to 49, were most necessary, inasmuch as that, antecedent to the adoption of those regulations, there was no statute law for a close time, in the oyster fishery extending to England. In Ireland there has been since the 25 Geo. 3, c. 35, s. 46, a close time established, and generally strictly observed; and so necessary has it been found, that in aid of it we have introduced into most of our bye-laws nearly "*totidem verbis*," the 46th, 47th, 48th, and 49th Articles of the Convention; and I am fully persuaded that if we had not done so, all attempts at the conservancy of our principle oyster fisheries would have been wholly unavailable. I am very anxious to confine myself to our own immediate duties, and to avoid any observations in reference to mismanagement elsewhere; but it is quite necessary for me to remind the Board that it is a matter of notoriety that neither before nor since the Convention of 1839 has the fundamental regulation, Article 45, been observed in England. In many of the fish shops, and in the open streets of London, one may find oysters freely and openly exhibited for sale through the whole summer; in short, no close season was observed; and whatever may be the wild and visionary notions put forward by speculators and philosophers, most rational men believe that, to over-dredging and total disregard for close time may be attributed the oyster famine which now prevails.

Among the 41 Articles of the proposed Convention of 1867, and the 34 sections of the Act confirming the same, I find one single Article (11) professing to be of a conservative character.

> "From the 16th of June, to the 31st August, inclusive, fishing for oysters is prohibited in any part of the Channel outside the exclusive fishery limits of the two countries, between a line drawn from the North Foreland Light to Dunkirk, and a line drawn from the Land's End to Ushant.
>
> "During the same period and in the same channel, no boat shall have on board any dredge, unless the same be tied up and sealed by the Customs' authorities of one of the two countries in such a manner as to prevent its use."

In short, a close time is fixed in the English Channel from 16th June to 31st August, and that exception only is made to the 10th Article, which directs,

> "That fishing of all kinds, by whatever means, and at all seasons, may be carried on in the seas lying beyond the exclusive fishery limits which have been fixed for the two countries."

Those exclusive limits are, I presume, the three mile line prescribed in the first article of the new convention, together with the hair-splitting regulation about the mouths of bays.

The 33rd section of the Bill proposes the abolition of powers and bye-laws inconsistent with the Act, and the schedule proposes to repeal, either partially or in the whole, 77 statutes presumed to be in existence; but still confining myself to Ireland, I come at once to the 5 & 6 Vict. c. 106; 7 & 8 Vict. c. 108; 8 & 9 Vict. c. 108; the schedule proposing to repeal so much of each of those Acts as is inconsistent with the new Act, and *so much as athorizes any bye-law inconsistent with the new Act*, and especially the 16th section of the 5 & 6 Vict., under which the whole of the registry and organization of our Irish fishery vessels has been effected.

In order to illustrate the necessity for establishing a uniform system in both countries, the Board of Trade letter refers to a transaction which occurred on the coast of Wexford in September last, when a most outrageous raid was perpetrated on some of the natural beds on our eastern coast, in defiance of a bye-law passed by our Board on the 11th of April, 1865, at the earnest desire of all the oyster fishers on that coast, and after public meetings held at Arklow, at Gorey, and at Wexford, after the examination of several witnesses on oath, and with the full concurrence of all. The proceedings and evidence at those meetings, and the reasons for this bye-law, will be found in the Appendix to the report of the Fishery Commissioners for 1864, printed in 1865, page 46 to 53; and I submit that it be forwarded to the Board of Trade with the answer to their letter. I further beg to call attention to page 56 of the same Appendix, being the copy of a letter from Mr. P. Maher, Harbour Master of Arklow, showing the extent of the oyster trade, and the readiness of our fishers to supply their neighbours fully and fairly

This bye-law has afforded universal satisfaction along the whole coast, except, perhaps, to the agents of some English and French dealers, who would prefer free trade in fishing all the year round, with a most reckless disregard for any provident measure of conservation. I also submit that the Board's Report for 1865 be sent to the Board of Trade, and that they be referred to the Appendix to that Report, page 42, No. 7, where another letter from Mr. Maher may be found showing the progressive increase in our trade since 1863, and using the following remarkable observations:—

> "If anything was wanted to prove the wisdom, nay more, the absolute necessity, of the course you have taken, my returns for the three years just ended clearly prove it."

The whole of the above letter will be found most interesting, and should be referred to.

It must not be forgotten that so far back as 1846 (22nd April), in order to encourage the legitimate trade in oysters with England, we permitted the fishers on the coasts of Wicklow and Wexford to dredge for oysters, *for brood only*, during the whole of the month of May, and that it was the

alarming exhaustion produced by this relaxation of the statutable close time which called forth the unanimous cry for the bye-law of the 11th of April, 1865.

In Clew Bay a similar bye-law was called for, and passed on the 16th of December, 1860.

In Cork Harbour a restrictive bye-law was passed on the 28th of October, 1853.

28th September, 1860. In Tralee Bay, a bye-law similar in restrictions, and extending the close time to the months of April, September, and October, with the most beneficial results.*

In Carlingford Lough a bye-law was passed on the 17th of April, 1860, adding the months of March and April in spring, and the months of September and October in the autumn, to the statutable season, leaving only four months in each year open to dredgers, and the consequence has been the rapid regeneration of the beds.

It may be seen that in all those bye-laws we have adopted the very salutary regulations of the French Convention of 1839, Articles 46, 47, 48, 49, which appear to have been wholly omitted in the new Convention; but I should like to know what the French people will do on their own shores.

We have, at the earnest request of some of the most respectable inhabitants of the vicinity of Galway Bay, fixed a meeting there for the 10th of this month, preliminary to a bye-law to the same effect restrictive of the size of oysters taken, but leaving the original statutable close time.

We never have yet received from any place to which those bye-laws extend any other complaint of them, except once from Courtown on the coast of Wexford, and from Arklow on the Coast of Wicklow, and in both cases only a prayer for a temporary suspension of the restriction as to September, on the plea that the previous time had been boisterous, and that the dredgers were in great distress at the moment.

In reference to the transaction of September last off the coast of Wexford, referred to in the letter of the Board of Trade, I have taken every means of ascertaining the circumstances accurately, both from the Collector of Customs at Wexford, and the Clerk of Petty Sessions in the same place, and I submit that copies of the written communications from these gentlemen be sent to the Board of Trade.

It appears by the Collector's letter that the transaction complained of occurred "on the Ballyvaden Beds, about 2½ miles from the shore," instead of "five miles," as stated to the Board of Trade by the Collector of Carnarvon, who appears to have been the cause of the whole affair.

In answer to the question of the Board of Trade, "What are the limits of the Act to regulate Irish Fisheries, 5 & 6 Vict. c. 106, in pursuance of the provisions of which they presume that the Commissioners are acting?" I beg to state that the powers of the Commissioners to fix or alter the close time for dredging for oysters may be found in the 33rd, 34th, and 35th sections of the 5 & 6 Vict. c. 106, and that I presume it extends to all those natural beds within the bays and on the shores of Ireland which have time immemorial been resorted to by the oyster dredgers of the country, or by any of Her Majesty's subjects.

Here it may be observed that the most important of those natural beds on our east coast are, in many cases, considerably outside the three-mile line, and would therefore be thrown completely open and unprotected by the 10th Article of the new Convention.

I have wholly abstained from any allusion to any other branch of fishery than that of oysters, because to that the letter of the Board of Trade especially refers; but I am prepared to show that in other respects the extension of this Convention to Ireland would be attended with the most disastrous consequences; and as I cannot persuade myself that any department of the Government would deliberately inflict so heavy a blow upon our already depressed fisheries, I would earnestly implore the Commissioners to adopt the same vigorous course pursued by their predecessors in 1843, and obtain the total exclusion of the shores of Ireland from the operation of this Bill, and, if legislation be necessary, that it be substantive and separate.

We have had twenty-five years experience of exclusion from a bill not half so mischievous as the present, and we have had good reason to congratulate ourselves, so far at least as the oyster fisheries are concerned, upon having worked under our own laws.

Any diminution in our supplies of which we have reason to complain is attributable to the drain from our sources of supply for England and France; and we don't grudge it to them provided they will only be satisfied to observe provident regulations; but if all our powers of making salutary laws suited to the peculiar circumstances of several localities be abrogated, and if our most valuable natural oyster beds are to be left outside the pale of protection, I cannot answer for the consequences.

I must not conclude without calling the attention of the Commissioners to the Appendix to our Report for 1863, printed in September, 1864, page 9, under the head of "Oyster Fishery on the Coast of Kent." I beg especial attention to my recommendation in the second column of that page. This article terminates with a copy of a letter, page 11, dated the 29th of April 1864, from Sir Emerson Tennent to Messrs. Smythies, Goody & Son.

This correspondence furnished us with reasons for our bye-law of the 1st of April, 1865, in Clew Bay, clearly proving our readiness to adopt any reasonable relaxation for the promotion of culture, when sustained by so high an authority. The arguments used in the whole of this correspondence are highly deserving attention.

(Signed) J. Redmond Barry.

4th December, 1867.

Enclosure 2, in above.

Correspondence relating to Breach of Bye-Law on Wexford Banks, in September, 1867.

Deep Sea Fisheries.

Customs, Wexford, 11 November, 1867.

Sir,—With reference to your letter of the 8th instant, requesting to be furnished with a detailed report of the seizure of oysters referred to in my letter of the 25th September last,—

I beg to refer you to a copy of my report to the Commissioners of Customs (herewith), dated 5 October, 1867, on a reference from the Board of Trade on the subject.

It was on the Ballyvalden Beds the parties were found fishing, at a distance from the shore of about 2½ miles. The justification offered by them for the breach of the bye-law was, that the Collector of Customs at Carnarvon informed them that there was no prevention from dreding for oysters. The parties themselves were perfectly aware of the existence of the prohibition.

I am, &c.,

Wm. Coghlan, Collector.

Secretary, Board of Works, Dublin.

Customs, Wexford, 5 October, 1867.

Honorable Sirs,—With reference to the above order of your Honors of the 3rd instant, on the foregoing letter from the Board of Trade,—

I beg to state that in the year 1865, the Board of Public Works in Ireland, under whose control the Irish Fisheries are placed, made a bye-law rendering it illegal to dredge for oysters on this coast from the 1st May to the 30th September, inclusive. Since this bye-law was made, English and Welsh fishing boats have on several occasions broken the law by dredging here, and taken the oysters away, and great discontent has been caused amongst the Wexford fishermen in consequence.

On the 21st ultimo six Welsh and Jersey boats were found dredging on the prohibited beds; and, at the urgent request of the Wexford fishermen, I sent the examining officer to board the boats and seize the oysters, in accordance with the Act 5 & 6 Vict., c. 36, sec. 32.

The examining officer seized the oysters, and did not detain the boats, but the masters preferred coming into the harbour to giving up the oysters. Eventually five of the boats ran away. The men of the sixth were prosecuted by the constabulary, and were fined each £1 1s.; the oysters were forfeited, and have since been sold by order of the Board of Public Works.

In this case I acted, as there was no other way of preventing a gross breach of the law, and a manifest injustice to the fishermen of this coast, who, to the number of 1,500, were lying idle, waiting for the commencement of the open season; but as there is some doubt as to our authority, I beg to request your Honors' directions for my government in future similar cases.

Respectfully submitted,

(Signed) Wm. Coghlan, Collector.

The Honorable Commissioners,
Customs, London.

*See Proceedings of Tralee magistrates and Report of Mr. Nelligan, 29th November, 1867.

Report of an Investigation held on the 23rd of September, 1867, at the Mayor's Office, Wexford, by John Greene, J.P., Mayor of Wexford, Samuel Johnson, J.P., and Francis J. Connell, J.P., esquires, in the Matter of a Prosecution by Patrick Callaghan, Police Constable at Wexford, against Uriah Hearde, Master of the Boat *Anne and Charlotte*, of Carnarvon, with John Banks, William Hearde, Thomas Clarke, John Hearde, and George Hearde, the crew of said Boat, for unlawfully Dredging for Oysters in the Bay of Wexford, between Wicklow Head and Carnsore Point, on the 20th September, 1867, in contravention of a Bye-Law of the Fishery Commissioners, passed on the 11th of April, 1865.

A written information of John Fanning, an officer of Customs of the port of Wexford, acting as collector's clerk, and another by Patrick Callaghan, police constable at Wexford (a copy of each of which is hereunto annexed, were submitted to the magistrates). It appeared that on Friday, the 20th of September last, said John Fanning saw six strange boats dredging for oysters in the bay of Wexford, between Wicklow Head and Carnsore Point, and that on the same day he boarded two of them, and Mr. Mathew Carr, examining officer of Customs at Rosslare, boarded the others; that on the next day, Saturday, 21st September, Constable Patrick Callaghan seized some of the oysters, and arrested Uriah Hearde, master of the boat. Uriah Hearde was brought a prisoner to Wexford by Constable Callaghan, late same night (21st September), and was allowed to stand out on his own recognizance until Monday morning, the 23rd of September, when he and his crew, viz., John Banks, William Hearde, Thomas Clarke, and John Hearde, all belonging to Carnarvon, were brought before John Greene, J.P., Mayor of Wexford, Samuel Johnson, J.P., and Francis J. Connell, J.P., esquires; and the defendants being unable to find bail for their appearance at the petty sessions on the next court day (Wednesday), the case was then investigated by said magistrates, John Greene, esq., J.P., in the chair, when the aforesaid John Fanning and Constable Callaghan were sworn and gave parole evidence in addition to what appears in their informations. William Coghlan, esq., Collector of Customs at Wexford, was also present and gave evidence to show that the defendants must have had knowledge of the existence of the bye-law of the 11th of April, 1865. The clerk of petty sessions was not instructed to take down the parole evidence in writing, but the substance of it was as follows, viz.:—That said John Fanning, on Friday, the 20th of September last, proceeded from Wexford in the steamer *Ruby* (supplied by the Wexford fishermen for that purpose) into Wexford Bay, and there he, with Mathew Carr, another officer of Customs, boarded six boats, known as Jersey boats, and put men in charge of five of the boats, one man in each boat, and detained the five boats in the bay, the sixth boat having sailed away, there being no one under the command of Mr. Fanning to take charge of her to detain her. That Mr. Fanning returned to Wexford on Friday night, leaving a man in charge of each of the five boats; that on Saturday morning, 21st September, the five boats were brought from the bay into Wexford Harbour, and that Sub-Inspector Fitzgerald, of the Wexford constabulary, was brought by Mr. Fanning early that morning to the said five boats in the harbour. That Mr. Fanning and Sub-Inspector Fitzgerald on that occasion returned to Wexford without making any seizure, but Mr. Fanning then withdrew his men from the boats, and sanctioned their going away; that the five boats accordingly prepared to sail off, and four of them actually got under sail and were proceeding to sea, when Mr. Fanning, with Sub-Inspector Fitzgerald and Constable Patrick Callaghan went out again after the boats at eleven o'clock, a.m., when they boarded one of the five boats, called the *Anne and Charlotte*, of which Uriah Hearde was the master, the other four boats having got out of their reach and proceeded to sea; that Sub-Inspector Fitzgerald then made a seizure of oysters that were in the *Anne and Charlotte*, and returned back to Wexford without leaving any one in charge of the boat. Soon after which the boat *Anne and Charlotte* proceeded to sea, but in going over the Wexford Bar, she struck on the bar, there not being then a sufficient depth of water on the bar to carry her over it. That in the afternoon of the same day Constable Patrick Callaghan reported the matter to the Mayor, and was ordered by the Mayor to proceed at once and make a second seizure of the boat *Anne and Charlotte*, with her crew and the oysters on board. That Constable Callaghan accordingly proceeded with other constables to the boat *Anne and Charlotte* and seized some of the oysters on board, and brought the master of the boat, Uriah Hearde, a prisoner to Wexford the same night, as more fully detailed in the written information of the constable. The bye-law of the 11th of April, 1865, was produced to the court by the Collector, William Coghlan, esq., in a printed list of bye-laws kept at the Wexford Custom-house. The defendants, Uriah Hearde, John Banks, William Hearde, Thomas Clarke, and John Hearde, after the evidence against them had been concluded, severally pleaded guilty of having dredged for oysters in the month of September, in the Bay of Wexford, between Wicklow Head and Carnsore Point, but pleaded ignorance of the bye-law, and asserted that they had been told by the Collector of Customs at Carnarvon that the season for oyster fishing was open in September, and that they might proceed to dredge for them; and in explanation of their attempting to leave the harbour, after being arrested and the oysters seized, they stated that Mr. Fanning had given them permission to depart. Mr. Fanning stated that he released the five boats as he did not see that he could detain them. The magistrates fined each defendant in the sum of 21*s.* and costs, and awarded one-third of each fine to the complainant, and they further ordered that the oysters seized be forfeited. They praised the conduct of Constable Callaghan, and attributed the merit of the seizure to his exertions. Uriah Hearde represented to the magistrates that 3,000 of the oysters had been caught at Carnarvon, and requested that they might be given up to him. He stated that there were over 10,000 oysters on board his boat, worth at least 28*s.* per thousand.

Mr. Greene, J.P., stated that the Commissioners of Fisheries might dispose of them as they pleased.

An application was then made by Mr. Joseph Harvey, solicitor, on behalf of the Wexford fishermen, that the sum of £5 paid by them for the use of the steam tug-boat *Ruby*, hired by them to bring Mr. John Fanning out in the bay on Friday, the 20th of September last, for the purpose of seizing the six strange boats that were there dredging for oysters, and the Court stated as their opinion that, on the forfeited oysters being sold, whatever necessary expenses had been incurred might be legally paid out of the proceeds, but they made no order on the subject.

Mr. Connell, J.P., stated that Mr. Fanning should have detained the six boats and not have allowed any of them to escape; to which Mr. Fanning, and also Mr. Coghlan, collector, replied, that Mr. Fanning had given the boats into the charge of the Sub-Inspector, and the constabulary had taken down the names of the boats and crews before Mr. Fanning withdrew his men from the boats, and told the fishermen that they might depart. Mr. Connell, J.P., then told Mr. Fanning that when he declined to act himself he should have thrown the responsibility of detaining the boats on the constabulary, and should not have stated that he gave his permission for the boats to depart. The Collector of Customs took the custody of the forfeited oysters and advertised them for sale. He has, as yet, made no return on the subject to the magistrates.

The sixth defendant, namely, George Hearde, was not required by the magistrates to attend and answer to the prosecution on the 23rd September. He being the only person left in charge of the boat *Anne and Charlotte* while the prosecution was proceeding, and not having been present to be arraigned, he was not fined.

COPY OF ORDER in the foregoing Case, as entered on the Petty Sessions Order Book.

Date of Order.	Magistrates Present.	Parties.	Cause of Complaint.	Order.	—
1867: 23 Sept.	John Greene, Samuel Johnson, and Francis J. Connell, esqrs. Out of Petty Sessions, the defendants being unable to find bail for their appearance at next Wexford Petty Sessions.	Patrick Callaghan, police constable, at Wexford, *Complainant.* Uriah Hearde, master, and John Banks, Thomas Clarke, John Hearde, and William Hearde, fishermen, on board of the fishing boat *Anne and Charlotte*, of Carnarvon, *Defendants.*	That the defendants on the 20th and 21st September, 1867, being fishermen on board the boat *Anne and Charlotte*, of Carnarvon, unlawfully did dredge for oysters, and had oysters in their possession in said boat, off the coast of the county of Wexford, and in Wexford Harbour, between Wicklow Head and Carnsore Point, it being in the close season for oyster fishing.	That the defendants each pay the sum of one pound one shilling for fine, and sixpence costs, and the oysters so found in possession of defendants be forfeited, and one-third of the fines awarded to complainant.	Paid same time by all the defendants.

I certify the foregoing to be a true Report.

9 *November*, 1867. (Signed) THOMAS M. O'LEARY, Clerk of Wexford Petty Sessions.

APPENDIX

French Convention.

PETTY SESSIONS (IRELAND) ACT, 1851, 14 & 15 Vict. c. 93.

Petty Sessions District of Wexford, County of Wexford.

Patrick Callaghan, Police Constable at Wexford - - - - - - - - Complainant.

Uriah Hearde, of Carnarvon, Master of fishing boat *Anne and Charlotte*, of Carnarvon, and Others - - - - - - - Defendants.

The information of John Fanning, of Wexford, Officer of Customs, who saith, on his oath, that—"I am an officer of Customs at the port of Wexford. On Friday last, the 20th instant, I saw six boats inside the north end of Blackwater Bank, which is between Wicklow Head and Carnsore Point, in the act of dredging for oysters. I knew them not to be boats belonging to Wexford or the Wexford coast, and believed them to belong to Jersey or Carnarvon. I boarded two of the boats and found oysters on board, and Mr. Mathew Carr, Examining Officer of Customs at Rosslare, boarded the others. The boat now in the harbour, of which Uriah Hearde is the master, is one of the six boats that I saw on Friday last with dredges on board, and some of them in the act of dredging for oysters.

"And the said informant binds himself to attend at the Petty Sessions, to be held in Wexford County Court House, on the 25th September, 1867, at twelve o'clock noon, to give evidence against the said Uriah Hearde and others, for the said offence, or otherwise to forfeit to the Crown the sum of £5.

(Signed) "JOHN FANNING, Informant."

Taken before me this 23rd day of September, in the year 1867, at Wexford, in the said county.

PETTY SESSIONS (IRELAND) ACT, 1851, 14 & 15 Vict. c. 93.
FORM Aa.—INFORMATION.

(Stamp Sixpence.)

Petty Sessions District of Wexford, County of Wexford.

Patrick Callaghan, Police Constable at Wexford - - - - - - - - Complainant.

Uriah Hearde, master; John Banks, William Hearde, Thomas Clarke, John Hearde, and George Hearde, crew of the fishing boat *Anne and Charlotte*, of Carnarvon - - Defendants.

The information of Patrick Callaghan, Police Constable at Wexford, who saith, on his oath, that—"I am a constable of police stationed at Wexford. On Saturday last, the 21st instant, I was present when Sub-Inspector Fitzgerald made a seizure of oysters in a fishing boat in Wexford Harbour, at about eleven o'clock in the day; and I was then told by the men on board of said boat that Uriah Hearde was the name of the master of the boat, and that he was then ashore. On the same day I followed the same boat outside of the harbour, when I went on board her with Acting-Constables William Dwyer and John Heffernan, and Sub-Constable Benjamin John Henderson, and Marcus Boyle, of Her Majesty's Customs, and I there demanded the oysters that were on board, they being illegally in said boat in the close season for oysters, between Wicklow Head and Carnsore Point, when the master, Uriah Hearde, who was then on board as well as his crew, viz., John Banks, William Hearde, Thomas Clarke, John Hearde, and George Hearde, all refused to give them up; and some of them said they would die before they would give them up. After remonstrating with them for nearly an hour I left the boat to go for assistance, leaving the two acting-constables and sub-constable in charge. After leaving the boat a short distance I was hailed to go back, and I did so, when the master and some of the crew said that they had taken 3,000 of the oysters in Carnarvon Bay, and that if I allowed them to retain them they would give me up the remainder of the oysters, and stated that they had upwards of 10,000 of oysters on board in all. On account of believing that I had not sufficient assistance to enforce my demand without violence, I told them to cull out what they claimed, and of which I took a sample, and to give me the remainder; and I then got the oysters that they allowed me to take put into another boat, and laid down inside of Wexford Harbour, near the Fort, to preserve them, as directed to do by the Mayor of Wexford. After I had the oysters laid down, I arrested the master of the boat, Uriah Hearde, and brought him before the Mayor of Wexford the same night. After the first seizure, which was made by Sub-Inspector Fitzgerald on Saturday last, the boat in which Uriah Hearde is master attempted to sail away, but stuck upon the bar in attempting to go out, and it was after that I took the oysters and arrested Uriah Hearde.

(Signed) "PATRICK CALLAGHAN, Constable."

(A true copy.)

(Signed) THOMAS M. O'LEARY,
Clerk of Petty Sessions.

Office of Public Works, Custom-House,
Dublin, 2nd March, 1868.

I have just learned that one of the highest authorities in England had distinctly stated that, "under the existing laws the Irish Fishery Department had no right whatsoever to exercise any jurisdiction, or to extend the operation of any of their restraints, or by-laws, *outside the three-mile limit along our shores;* and that the waters outside were, *the open sea*, common to all nations of the world, over which there was no exclusive national jurisdiction."

This statement, if true, opens a question of serious consideration mainly in regard to our oyster fisheries on the east coast.

The close season for oysters, under the 25th Geo. III. cap. 35, section 56, from 1st May to 1st September,* has, ever since the passing of that Act, been uninterruptedly in force in Ireland, excepting only the few years during which we permitted oysters to be taken *for brood only* on the shores of Wexford, and the regulation has been generally observed. The consequence is, that we still have valuable and productive natural beds upon our eastern shore—some of them ten to fifteen miles outside our shores.

No such restriction ever existed in England till the passing of the Convention Act in 1843, which it is now proposed to repeal; and the oyster close time, established by that Act, has been very badly observed, their public grounds are consequently nearly barren.

The words of the restrictive section, 25th Geo. III., cap. 35, sec. 46, are:—

"And be it further enacted by the authority aforesaid, That any person who shall dredge for or take oysters in any part of the Lough of Carlingford, between the Bar of Carlingford and the Castle of Narrow Water, from and after the first Saturday in the month of March, until the first Monday in the month of November, *and in any other part of this kingdom*, between the first day of May and the twentieth day of August in any year, shall forfeit the dredge net or other machine with which

* By the 5 & 6 Victoria, cap. 106, sec. 32, this season has been made uniform from 1st May to 1st September.

the same shall be dredged for or taken, as also the sum of forty shillings, to be recovered and applied in the same manner as the other forfeitures and penalties in this Act mentioned."

It extends to any part of "*this kingdom*" except the Lough of Carlingford, in which there is a special law.* But it is alleged, I presume, that this kingdom is limited by the three-mile coast line, and I have been referred to a law authority, "Chief Justice Hale, *De Jure Maris*," but I find in Hargrave's "Collection of Tracts relative to the Laws of England, a Treatise, in three parts:" No. 1, "*De Jure Maris et Brachiorum Ejusdem*," cap. 4. page 10, from a manuscript of Lord Hale, concerning the king's interest in salt waters, the sea and its arms, and the soil thereof," the following words:—

"The narrow sea adjoining the coast of England is part of the waste and demesne and dominion of the King of England, whether it be within the body of any county or not." Now, it can scarcely be denied that the Irish Sea, or St. George's Channel, is a narrow sea adjoining the coast of England, and was under no such limitation as would nullify the close season and all other jurisdiction outside a three-mile line.

I have every reason to believe that every means that could be resorted to by parties interested in the oyster fisheries of England and Wales, have been used to influence the authorities in England to make the bill now in progress through Parliament, available to throwing our natural beds open all the year round outside the three-mile limit for the purpose of stocking their own exhausted beds, and that the French, with a similar object, have readily adopted the same view; therefore I beg to propose that the whole case be referred to the Board's Solicitor, with instructions to obtain from counsel the best information on the present state of the law and on the most effectual means of saving this country from the disastrous effects of such a change.

Those measures have evidently originated in the recommendation of the Royal Commissioners.

They have attributed the great scarcity of oysters, which is admitted to prevail, to "a succession of bad-breeding seasons for the oysters, for which no well-ascertained cause can be assigned."—See report, page 15.

In their "General Conclusions," page 105, section 10, report—

"We have made diligent inquiry into the condition of the oyster fisheries, and have devoted a large section of our report to the discussion of the evidence which we have obtained." We find:—

"That the supply of oysters has very greatly fallen off during to the last three or four years.

"That this decrease has not arisen from over-fishing, nor from any causes over which man has direct control, but from the very general failure of the spat, or young of the oyster; which appears, during the years in question, to have been destroyed soon after it was produced. A similar failure of the spat has frequently happened before, and probably will often happen again.

"That the best mode of providing against the effects of these periodical failures of the spat, is to facilitate the proceedings of those individuals, or companies, who may desire to acquire so much property in favourably situated portions of the sea bottom as may suffice to enable them safely to invest capital, in preparing and preserving these portions of the sea bottom for oyster culture. By which term 'oyster culture' is implied, not the artificial breeding of oysters, in the manner in which salmon are bred artificially; but the collection of the brood in years when that brood is plentiful, and its preservation by the application of due skill and care, as a source of supply during the years when the spat fails—a practice in vogue among British fishermen from time immemorial.

"That no regulations or restrictions upon oyster fishing, beyond such as may be needed for the object just defined, have had, or are likely to have, any beneficial effect upon the supply of oysters."

The utmost alarm prevails at Arklow on this subject, and the people look anxiously to the protection of the Board.

Since writing the above, I have received the altered bill brought into the House of Commons by Mr. Cave, the President of the Board of Trade, who distinctly stated that the bill was not to affect Ireland in any way either in the bill or the Convention.

† I find that some changes have been made which may have the effect of excluding Ireland from its operation, at least so far as the oyster fisheries are concerned, but in other respects it would seem to me very probable that the shores of Ireland *are not unequivocally* excluded from all the complex, and in many respects objectionable, regulations, which have been deemed necessary for the preservation of order between the French and English in the seas between England and France.

This bill commences, sec. 4, with reference to "the exclusive fishery limits of the British Islands." Now, I want to know what this means. Does it refer to this three-mile line which I cannot find in any authority connected with our fisheries, and which seems to have originated with the first Convention with France in 1843. Page 5, article 2:—"The oyster fishery within three miles of the Island of Jersey, calculated from low water mark, shall be reserved exclusively to British subjects."

The third article makes the ground outside common to both countries. In short, this point of a three-mile exclusive limit seems, throughout the whole bill and Convention, to have been a recognised principle, as if it had been the common or statute law of the land extending to all the "British Islands," and ignoring any authority in the Crown or Parliament to interfere with ground outside this.

There is a kind of definition of the terms, "exclusive fishery limits" of the two countries, given at page 2, lines 30 to 35; but what have we to do with those limits, or with the Convention at all.—What we want to know is—

Is there any common or statute law limiting the exclusive rights of the public or the Crown to a distance of three miles from low water mark of our shores? and if there be, does it prevent the Irish authorities from making regulations or enforcing them in the waters outside that three-mile limit, and can Parliament supply a remedy, if it be so?

(Signed), J. REDMOND BARRY.

Office of Public Works, Dublin,
23rd April, 1868.

SIR,—Referring to my former communications upon this important subject, I now beg permission to request the immediate attention of the Board to the present critical position of this case, and to express a hope that such course may be taken as shall prevent the disastrous consequences likely to follow from the measure now under consideration, to one of the few sources of profitable industry in this country, at present progressing rapidly in prosperity under a system of management which has afforded general satisfaction to the public as well as to the parties directly interested.

The Bill for confirming the Fishery Convention with France, after having passed through the House of Commons with all the celerity which generally attends Government measures, was brought into the House of Lords on the 27th March, read a second time on Monday, the 30th ult., and now stands for "immediate committal."

It appears by a Bill, ordered by the House of Commons to be printed, on the 2nd of July last, intituled "A Bill to carry into effect a Convention between Her Majesty and the Emperor of the French, concerning the Fisheries in the seas between the British Islands and France, and to amend the Laws relating to British Sea Fisheries," brought in by Mr. Stephen Cave, Mr. Hunt,

* But now uniform, 5 & 6 Victoria.

† We have, since the above was written, ascertained that the exclusion is confined to the third part of the Bill, with which Ireland has no concern whatsoever.

Appendix.

French Convention.

and Mr. Shaw Le Fevre, that certain articles of Convention appended to the Bill were "recommended by the Members of the International Commission as a basis of a Convention between Great Britain and France, for the amendment of the Convention of 1839, and the regulation of 1843, and for the reciprocal admission of Fishing Boats into the Ports of England and France for the sale of Fish."

The first official intimation received by the Irish Fishery Board of the existence of the "International Commission," or the intention that the Irish sea fisheries should be in any way affected by a Convention upon which they never were consulted, was a letter received from the Board of Trade, under date the 23rd October last, conveying to them, with a copy of the Bill and Convention, the first announcement of the intention to repeal several of those statutes, most especially referring to the Oyster Fisheries, under the authority of which the Irish Fishery Commissioners had prosperously and satisfactorily managed that branch of the sea fisheries in Ireland.

This unexpected communication from the Board of Trade very naturally excited the more surprise, as it had not been deemed necessary to consult the Irish Commissioners on the expediency of adopting for their shores all those theories propounded in the report and suggestions of the Royal Commissioners of Inquiry, some of which seemed to them more than questionable, and wholly unsuited to Ireland, but most especially those relating to the most practical mode of counteracting the great failure in the produce of oysters, which only extended to their shores *very partially*, and which failure may have been traced to an unusual drain for the supply of England and of France. It, therefore, required serious deliberation, and communication with several parts of the Irish shores, before so important and unexpected a proposition could be answered in full detail; and I beg to refer to the copies of those communications, dated respectively 23rd October, 1867, and 6th January, 1868, forwarded for the information of the Lords of Her Majesty's Treasury, in your secretary's letter of the 14th February. To their answer to the Board of Trade the Commissioners of Fisheries have never been favoured with any reply, but it appears by reference to the repealing schedule of the Bill as lately brought into Parliament, that the Board of Trade have omitted from their repealing clause several statutes and parts of statutes, under which the powers of the Irish Department have been exercised, but that the unqualified application of all the terms of the Convention to Ireland has been retained to the fullest extent, and that amongst the statutes which it is still intended to repeal is one, the 29th and 30th Victoria, cap. 85, the 28th or last section of which was introduced at the especial instance of the Treasury in 1866, for the purpose of specifically excluding Ireland from any inconvenience from the previous provisions of that Act.

This 28th section was in the following words:—

"Nothing in this Act shall extend to Ireland, or to any oyster or mussel fishery on the coast of Ireland or in any estuary thereof, or in any way to prejudice or affect the owner of any such oyster or mussel fishery, or to authorize the taking of oysters or mussels from any natural public oyster or mussel bed in Ireland, or any estuary thereof, by the grantees of any oyster or mussel bed under this Act, or by the owners of any private beds lawfully formed independently of this Act, or by any other person or persons whomsoever, nor shall this Act alter or repeal any law, rule, or bye-law, now or hereafter to be in force having relation to Irish fisheries."

Amongst the variances between the Bill as originally printed and forwarded to this Board in October, 1867, and the Bill now under consideration before Parliament, the latter contains what is intituled the 3rd part, page 9, commencing with the 27th section.

The honorable gentlemen who seemed to have charge of this Bill in its progress through the House of Commons, and who may be properly considered promoters of the Bill in every stage of its progress, most unequivocally declared that it should in no respects affect Ireland, and the Bill as lately introduced contained what *prima facie* would seem to be a section wholly excluding the oyster fisheries of Ireland from its operation, and this section was still further apparently strengthened by the introduction of certain words on the motion of Mr. Blake, M.P. for Waterford, reserving the rights of the Irish Commissioners.

This 27th Section was in the following words, and the portion in italic between the words Ireland, line 1, and the Isle of Man, line 3, was added by Mr. Blake.

"Part III.—Oyster Fisheries.

Preliminary.

"This part of this Act shall not apply to Ireland, *or interfere with the jurisdiction or powers now possessed by the Irish Fishery Commissioners with regard to Oyster Fisheries*, the Isle of Man, or the Islands of Guernsey, Jersey, Alderney, or Sark, or their dependencies, or to the seas adjoining the same, within the exclusive fishery limits of the British Islands, or to any seas outside of those exclusive fishery limits."

On a close examination of this section it was soon observed by the Board's legal advisers and others that Ireland was excluded only from the operation of "this (3rd) part" of the Bill, and further, that this part of the Bill referred exclusively in its thirty sections to the administration by the Board of Trade, of the powers conferred on them for granting concessions for private layings, under the 29th and 30th Victoria, cap. 85, which it was intended to repeal, and that the thirty sections of *this 3rd part*, consisted of a re-enactment of those powers, omitting only the 28th section before referred to as affecting Ireland.

To all the remainder of the Bill Ireland was still made subject by the 6th section of the Bill, and consequently to the whole of the provisions of a Convention upon which the Irish Department have never been consulted. I beg especially to call the Board's attention to the 3rd article of the Convention, extending its operation to "*the seas surrounding and adjoining Great Britain and Ireland*," to the 10th and 11th articles of the Convention, leaving the whole of the Irish waters, in which are some of our most valuable and productive natural beds, wholly exposed to encroachment at times which all parties unanimously agree in thinking it indispensable to their preservation to have them close, while the whole of the deep-sea banks of the British Channel are especially made the object of strict preservation for a fixed time.

The answer of the promoters of the Bill to our remonstrances is, that we have, in preserving our natural beds outside of the three-mile line, been exercising a power contrary to "international law." I would respectfully observe that it seems rather strange that the question, whether well-founded or otherwise, should have been raised *for the first time* by functionaries of our own Government. Our law advisers consider the subject doubtful; but there are strong opinions that the waters of the Irish Sea or St. George's Channel, bounded on both sides by the territory of the same Sovereign, are wholly excluded from those principles of international law which govern the wider seas.

Here I beg to disclaim on my own part, or on that of the whole community interested in this important question, any monopolizing or inhospitable spirit towards either our fellow-subjects in England, or even the industrious inhabitants of France. We are conscientiously convinced that indiscriminate dredging, without due regard to a reasonable close time, will in a few years bring those beds to the same state of barrenness which prevails on the shores of England. We seek to avert this disastrous state of things, and the utter ruin of a large and industrious and prosperous community. We ask for no restraints to which our own people shall not be subject. We firmly believe that England is truly interested in permitting our poor, hard-working fishermen to pursue their trade, and to furnish, as they are ready to do, abundant stock for both countries by *provident arrangements*.

It has been said in the recent discussions on this important question, that the Convention has been adopted and signed by the respective plenipotentiaries of both countries, and therefore must be confirmed by Parliament; but it is to be hoped that Parliament, the safe-

guard and protector of our rights, will take into consideration and fully inquire into all the circumstances of this Convention, which, so far as it affects Ireland, I most decidedly but respectfully repudiate.

It is a remarkable fact that not only was our Department not consulted on it, but although a Select Committee of the House of Commons, on Mr. Blake's Bill, was sitting from the 30th of May to the 19th of July last—although the honorable Member for Reading, who had been one of the Royal Commissioners of Inquiry, and a Member of the International Commission for the Convention, was also an active member of that Select Committee—neither he nor any other member ever asked from one of the sixteen witnesses who were examined on that occasion a single question relating to the proposed Convention which was calculated to revolutionize the Oyster Fishery Laws in Ireland, the most important and conservative feature of which, that of close time, was in force without interruption 83 years, or since the 25th of George III. On that occasion, the Chairman, the Inspecting Commissioner, and the Secretary of the Irish Fishery Board were examined and were in occasional intercourse with the honorable Member for Reading.

I beg further to state that the deepest dismay prevails among the oyster-fishers on the east coast and their friends and advisers; that for a short time they were deluded by the utterly fallacious 27th section of the Bill, but that they now confide in our Department, whom they have at all times found ready to promote their interests. It is no exaggeration to state that a population of more than six thousand souls will be affected by this measure.

In the end of March last, and before the Bill had reached an advanced stage in the House of Commons, it was judged expedient to send me over to endeavour to procure some alterations in the Bill; and I was especially advised to obtain a restoration of the 28th section of the 29th and 30th Vic., cap. 85, which it was determined to repeal. I arrived in London on the morning of the 9th of March, the day fixed for the second reading in the Commons. I waited on the Chief Secretary for Ireland, and was by his lordship referred to the Vice-President of the Board of Trade, with whom I had a short interview, when I put into that gentleman's hand a verbatim copy of the 28th section above referred to, stating that I was instructed by the Board to give no further opposition to the measure if that clause was added. On the following day, Mr. Cave, who had consented to postpone the Committee for a few days, returned the paper to me, stating that he saw no objection to substitute it, with a trifling verbal alteration, for the 27th section, being the 1st section of the 3rd part of the Bill. I pressed that it should be added to the Bill, but ineffectually, and on looking at the paper I found to my great amazement that "the trifling verbal alteration" consisted of the addition of the words "this part of," in the first line, and the erasure of the words "shall this Act" in the latter lines, rendering the clause *an utter nullity*. Of course, I took back the paper, and it afterwards constituted the subject of a notice given by General Dunne, for the 17th of March, but he never moved on the notice, having been absent when the Bill was passed through Committee on the 17th March.

The Act, 29th and 30th Vic., cap. 85, was afterwards produced at a meeting at the Board of Trade, with the Noble President, the Vice-President, the Chief Secretary for Ireland, Mr. Hamilton of the Treasury, Mr. Farrer, the Secretary of the Board of Trade, Mr. Hornsby, your Secretary, and Mr. Stewart, who was instructed by the Treasury. The section which I sought to have restored was read and fully approved of, and its restoration to the Bill fully assented to by the Noble Duke and the Vice-President; but the Chief Secretary, earnestly and sincerely anxious for the preservation of the Irish beds on the east coast from the effects of international law, and believing that the introduction of the 28th section would be insufficient for the purpose, required that some further provision should be introduced into the Act with that object, and I was informed by Mr. Stewart that an arrangement was made between Mr. Farrer and him for the preparation of a case to be laid before the law officers. I have since seen two cases, but they seem to me to be quite wide of the object, and do not present, so far as I can understand them, any prospect of a satisfactory termination to the matter. I have devoted much thought and attention to the subject since the recess, and I have conferred with the Board, as well as with many of the friends of the parties most interested, and after the most deliberate consideration, I have come to the following conclusion, in which I believe the Board fully concurs, and which I respectfully beg to suggest should be immediately submitted for the consideration of the Lords Commissioners of the Treasury, earnestly imploring of them upon this occasion to interpose their high authority to prevent the sad consequence which must result from the passing of the law in its present shape:—

1st.—I entertain no doubt that in fulfilment of the promise given at the Board of Trade, the 28th section in its integrity should be added as the last section in the Bill.

2nd.—As the recent discussion of the question of the three-mile limit may have created doubts as to the power of the Superintending Department to exercise any jurisdiction outside that limit, it will be quite necessary for the prevention of encroachment or litigation that an additional section be introduced into the Bill, establishing a specific close time in the western moiety of the Irish Sea or St. George's Channel from the 1st of May to the 1st of September, except when the same may be altered by the Commissioners whose jurisdiction shall extend to a longitudinal line mid-channel, and defining that space by a line drawn from Fair Head, in the county of Antrim, to the Mull of Cantyre on the north, and from Carnsore Point, in the county of Wexford, to St. David's Head on the South. This if not binding on the French will bind all British subjects.

It may be proper to state that the Commissioners have ascertained on the authority of Mr. Wyld, of Charing-Cross, that by accurate measurement the British Channel, as defined by the Convention, actually contains an area of 30,930 statute miles; while the Irish Sea, as defined above, contains 16,260 statute miles.

I feel no doubt that all that is required on this occasion to induce Parliament to do justice will be fair and deliberate inquiry. But it has been stated that "a Select Committee cannot sit in judgment on a Convention, being an act performed in the exercise of the Royal prerogative." I beg to quote the opinion of an eminent barrister on this point, well acquainted with Parliamentary usage:—

"A Bill is now before the Lords, and although the object of that Bill is to give effect to the terms of a Convention, I apprehend it is competent for their lordships to pronounce any opinion upon that Bill, or any part of it, to modify or to reject it altogether, or even to suggest to Parliament the propriety of addressing the Crown with a view to amending the Convention. For those reasons your friends of the Irish oyster fisheries ought to be heard, and could be heard, before a Select Committee."

I have the honour to be, dear Sir,

Faithfully yours,

(Signed), JAMES REDMOND BARRY.

Edward Hornsby, esq.,
Secretary,
Commissioners of Irish Sea Fisheries.

APPENDIX, No. 10.

OYSTER FISHERIES.—GALWAY BAY.

MEETING to consider certain BY-LAWS proposed for the PROTECTION and IMPROVEMENT of the OYSTER FISHERY in GALWAY BAY.

COURT-HOUSE, GALWAY, Tuesday, 10th December, 1867.

J. R. BARRY, esq., presiding. *Present*—John Redington, esq., Captain J. W. Lynch, Mr. John Keevan, and a numerous body of the fishermen. Mr. Michael Regan, Solicitor, appeared for the latter. The following documents were read.

Oyster Fisheries.—Galway Bay.

Whereas certain parties interested in the Oyster Fishery of Galway Bay have submitted for the consideration of the Commissioners of Sea Fisheries the expediency of making the following by-laws, rules, and regulations, for the improvement and security of the oyster beds in that bay, viz. :—

1. That every fisherman shall, on the fishing ground, cull all oysters, and shall not remove from any fishing ground or oyster bed any oyster of less dimensions than two and a half inches at the greatest diameter thereof, and shall throw back into the sea all oysters of less dimensions, as well as all gravel and shells that shall be raised while fishing.
2. That all persons be prohibited from throwing into the sea, on any oyster bed, or oyster fishing ground, the ballast of any boat, or any other matter or thing injurious to the oyster fishery.
3. That no person shall, between sunset and sunrise, dredge for, take, or catch any oysters within the bay of Galway.

Notice is hereby given that a public meeting will be held at the Court-house, Galway, on Tuesday, the 10th of December next, at the hour of one o'clock, P.M., for the purpose of inquiring into the expediency of making the aforesaid by-laws, rules, and regulations, of which all parties interested are requested to take notice, in order that they may tender such evidence as they may consider necessary.

By order of the Commissioners of Sea Fisheries.

(Signed), EDWARD HORNSBY, Secretary.

Dated at the Office of Public Works, Dublin, this 22nd day of November, 1867.

TO THE COMMISSIONERS OF FISHERIES IN IRELAND.

Galway, 9th November, 1867.

We, the undersigned proprietors of oyster beds, respectfully submit for the consideration of the Commissioners of Fisheries in Ireland the following by-laws, which we consider necessary for the improvement and security of the oyster beds in Galway bay; and should they meet with the approval of the Commissioners, we request they will issue an order that they should be henceforth observed.

(Signed), BERNARD O'FLAHERTY, J.P.
J. WILSON LYNCH, J.P.
JNO. REDINGTON, Agent to Christopher T. Redington.
JOHN KEVIN, Agent to Lord Wallscourt, Ardfry, county Galway.

By-Law No. 1.

Every fisherman shall, on the fishing ground, cull all oysters, and shall not remove any oyster of less dimension than two and a half inches at the greatest diameter thereof, and shall throw back into the sea all gravel and fragments of shells as he shall raise while engaged in such fishing.

No. 2. All persons are prohibited from throwing into the sea, on any oyster bed or oyster fishing ground, the ballast of any boat or any other matter or thing injurious to the oyster fishery.

No. 3. No person shall, between sunset and sunrise, dredge for, take, or catch any oysters within the harbour of Galway.

(Signed), BERNARD O'FLAHERTY, J.P.
J. WILSON LYNCH, J.P., Renmore, Galway.

Public Oyster Fisheries.

We, the fishermen and several others residing along the shores of the public bank known from time immemorial as the Stradbally Bank, do hereby apply to the Inspector of Irish Fisheries and his assistant, and also to the gentlemen in this meeting to enforce a by-law limiting the size of oysters to be taken in on the public bank.

We propose two and a half inches in diameter, and we also propose to enforce a law prohibiting any person or persons not to dredge or take away any oysters of said oyster bed after sunset until sunrise.

We further propose and unanimously agree to levy annually four shillings on each boat dredging, and six pence on each person handpicking for the salary of a water bailiff to prevent any trespass, and prosecute any person or persons who shall, or may hereafter violate the laws enacted by the Commissioners of Fisheries. Without a proper bailiff being appointed the bye-laws never can be put in force. Bailiff to carry a ring to pass the oysters through.

We appoint —— as a fit and proper person to discharge the duties of a water bailiff on said oyster bank.

Honoured Commissioners and gentlemen in this meeting we hope that you will take it into consideration, for the last thirty years we, the tenants of the landlords whose property adjoins the public bank, have defended the rights of it, and hope that the Commissioners and gentlemen at the present meeting will confine the bank to our benefit.

Honourable gentlemen, we all subscribe ourselves your obedient servants,

The Body of Fishermen of the Clarenbridge Bay.

Mr. *Regan*.—I altogether oppose the last proposition in that memorial. That is a public bank and cannot be allocated to any individual or any number of individuals for the exclusive benefit of the tenantry of Mr. Redington's estate. I protest against that as one of the public.

Mr. *Redington*.—I never saw that memorial before, and do not know by whom it was prepared. It is well known that Mr. Redington spent a great deal of money in establishing this as a public bed, and it certainly is not the intention of the present proprietor to undo that which has been done at so much expense, and to hand over to individuals what was established for the public good.

Mr. *Barry*.—It is not competent for us to enter into the consideration of any such question. This is a meeting held for the purpose of considering the propriety of making certain by-laws, and we cannot at such a meeting at all consider the question of appropriating a public bank to any particular person or any set of individuals. The two first propositions are quite in accordance with the memorial on which this meeting has been called; the third contains a suggestion which I should very much desire to see carried out. They say that there should be a small charge upon every boat for the payment of an officer to carry out the by-laws. That is a most judicious and proper suggestion, because laws are always best enforced and observed by having properly paid persons to see to

their observance. But such an arrangement must be conventional, and cannot, I apprehend, be made the subject of a by-law to be passed by the Commissioners. The 21st section of the 8th and 9th Vic., c. 108, gives full power to parties interested in the oyster fishery to appoint water bailiffs, and the payment for services and the mode of obtaining the money rest entirely with the parties without any interference on the part of the Commissioners. [21st section read.]

Daniel M'Hugh sworn (examined by Mr. *Regan*).

I know well the oyster beds in the bay of Galway for about thirty-five years. I have fished the bay for oysters constantly during that time. It has been a public bank during that time. The fishing bank is now in good order and is improving very much. I was in court on the last day of the meeting, and heard the swearing on that day.

Mr. *Regan*.—Was that swearing true?

Mr. *Barry*.—I cannot allow such a question to be put. The evidence on the occasion to which you allude has nothing whatever to do with the subject under consideration, and I must insist on your confining yourself to the subject of this day's inquiry. Is there a necessity for the by-laws proposed? How is the taking away of small oysters likely to affect the fishery, and if it injuriously affects it will the proposed by-laws tend to remedy the evil? Confine yourself to that and keep clear of matters which have no connexion with the subject.

Mr. *Regan*.—I admit I am wrong and will do as you direct.

Witness.—I state from my own positive knowledge and experience that the oyster fishery is in a good state, and is improving much, but it would be much more improved if there was a law against the taking of small oysters, and if this law was properly enforced, which cannot be done unless there are water bailiffs appointed and paid for carrying out the law, because there is such a number of boats and persons engaged in the fishing that you could not depend on their keeping the law unless there are persons to watch them. We have been endeavouring ourselves to enforce a regulation against the taking of small oysters, but it is no use unless it is made a law and there are proper persons to enforce it. Here is a ring (produced) which we have been in the habit of using for measuring the oysters which might be taken and the oysters which should be thrown back; here are also oysters of the different sizes showing those that pass through and those that do not.

(Mr. *Barry* examines the ring and tries the process of measurement or test. The diameter of the ring is of $2\frac{1}{2}$ inches, and an exhibition of the oysters which pass through and those which do not demonstrates that an oyster of less than $2\frac{1}{2}$ inch diameter is not a marketable oyster for purposes of consumption.)

Witness (examined by Mr. *Barry*).

I think it is most desirable and necessary to prevent the capture of oysters that pass through that ring, and that if this be not prevented the consequence will be the ruin of the oyster fishery. It is the present practice to take and sell all oysters, of whatever size, and only for that the bay would be much better than it is. They take them so small that I could not describe them—down to the size of my nail. All these small oysters are sent off to London and other places in England by their agent, who lives here and buys them for the purpose. I think that oysters of the size that pass through the ring spat, and have young, because by opening them in June and July we find the milk in them just like the old oysters. All the oyster dredgers and pickers work by day. The most of the small oysters are taken by hand on the banks that strip at low water; it is there the pickers go and take the small oysters. They never take them at night. I have heard of boats going out to dredge at night, but it is not the practice. We attempted to summon parties for it since you were here at the last meeting, but as this meeting was going to be held to settle the matter we did not proceed further.

Mr. *Barry*.—You have already heard read the by-laws which have been proposed by persons interested in the oyster fishery of this bay for the improvement and protection of that fishery; but I will read them again in order to get your opinion upon them. The first is—

"That every fisherman shall, on the fishing ground, cull all oysters, and shall not remove from any fishing ground or oyster bed any oyster of less dimensions than two and a half inches at the greatest diameter thereof, and shall throw back into the sea all oysters of less dimensions, as well as all gravel and shells that shall be raised while fishing."

Do you consider that the observance of that regulation would be beneficial to the oyster fishery of the bay?

Witness.—I am sure that it would be most beneficial; and unless the small oysters are thrown back on the banks the whole fishery will be destroyed.

Mr. *Barry*.—Do you think it would impose too much trouble and inconvenience upon the fishermen to oblige them to cull the oysters and throw back the small ones?

Witness.—Indeed I do not. It would be no trouble at all to do it, and all the fishermen are willing to have the law made and to be compelled to do it.

Mr. *Barry*.—Is there any person in this court who objects to this first proposed regulation?

No one objects, but several fishermen express their concurrence.

Mr. *Regan*.—The fishermen are unanimous in wishing for this regulation, for they are convinced it is the only way of saving the fishery.

Mr. *Barry*.—The second regulation is—

"That all persons be prohibited from throwing into the sea, on any oyster bed or oyster fishing ground, the ballast of any boat, or any other matter or thing injurious to the oyster fishery."

What do you think of that?

Witness.—I know it is a very mischievous thing to throw ballast upon oyster ground, and that it is very desirable to stop it, and that it would be very beneficial to the oyster fishery to stop it. We all wish for that regulation.

Mr. *Barry*.—Is there any person who objects to that regulation?

No response.

Mr. *Barry*.—The third proposition is—

"That no person shall, between sunset and sunrise dredge for, take, or catch any oysters within the bay of Galway."

Do you think it desirable to pass that law, or do you think it too stringent a regulation?

Witness.—I think that law will be a benefit to the fishery. I think it is right to put a stop to the night work, for when people go out to fish for oysters at night, when they have the whole day to it, it is for no good purpose.

Mr. *Barry*.—Do you think it would be an improper interference with the oyster fishermen to prevent them fishing at night?

Witness.—I do not, and it would benefit the fishery to prevent them.

Mr. *Barry*.—Having disposed of that part of the subject I would like to get some information from you, as an experienced fisherman, on the general subject of the oyster fishery. Is there any close season observed, and if so, what is it?

Witness.—We always had a close season, why not? We always begin to fish on the 1st of September and stop on the 1st of May. I think that is a fair season, and should not be altered because we find the oysters milky in May, and spawning from June to August.

Mr. *Barry*.—Do you think it would be advisable to change that?

Witness.—I do not. I think it is well to let very well alone, and that season is a good and proper one.

Mr. *Barry*.—If any man was to tell you that you should fish for oysters all the year round and take up all you got, large and small, and sent them away

to—God knows where—what would you think of that opinion?

Witness.—I am sure that the man who would say that could have no interest in the oyster fishery of the country, and that he only wanted to take his dealing trick out of the place and walk off when there were no more oysters to be had.

Mr. *Barry.*—You think, then, that the observance of a close season is necessary, and that that close season ought to be the spawning season?

Witness.—I think a close season is absolutely necessary, unless the object is to sweep away the whole fishery out of the country. How could you have an oyster at all if you don't let them breed and recover? You might go on that way for a couple of years and then you'd have an end of it, and you need not trouble your head any more about oysters. I never heard of such a thing as that before, and I have been dealing with oysters these thirty-five years.

Mr. *Barry.*—Such opinions have, however, been expressed, and expressed with stated authority, but I hope it is unnecessary for me to say that I do not concur in them. I now again call upon any person who has any objection to make to the proposed by-laws to come forward and express his views.

There is no response.

Captain *J. Wilson Lynch.*—All are unanimous in the desire to have these by-laws made as the only means of securing the improvement of the oyster fishery. The fishermen are anxious for them to a man, and the memorial calling upon the Commissioners to make these by-laws has been signed by all the principal proprietors of oyster beds in the bay except Mr. St. George, who was from home when the memorial was prepared, but he is now here to express his entire concurrence in the measures which we propose as necessary to arrest the destruction of the oyster fishery of our bay.

Mr. *John Redington.*—There is one question I would wish to ask, suggested by the subject of this meeting, and by information which I have received: Is it true, Sir, that there is a bill in progress through the House of Commons which, if carried into law, would be very injurious, if not destructive, to the fishery of this bay, and of the coast generally? Is there a bill now before the House to allow Englishmen, Frenchmen, and every other man to come upon our shores and fish for, and take away oysters at all times and seasons? If there be such a bill, it is hardly necessary for me to say it would work the ruin of the oyster fishery of this country, and it will be the duty of every man in Ireland to use every legitimate means to prevent the passing of an Act fraught with such wide-spread evil, and it will become the imperative duty of our representatives to resist such a measure by every possible means.

Mr. *Barry.*—I have to thank you, Mr. Redington, for calling attention to this very important matter, as it gives me an opportunity of saying a word or two upon the subject. I cannot answer the first question as to whether there is a bill before the House which, if carried into law, would be injurious to, if not destructive of, the oyster fishery of this country. Upon the merits or effects of the bill referred to it is not within my province to offer an opinion; but it is my duty to tell you that a bill was brought by the Government into the House of Commons at the end of last Session which, if passed into law, will have a most material effect upon the oyster fisheries of this country. The bill was printed on the 2nd of July last, and has been consequently since that time available for the consideration of all parties interested in the subject of the fisheries. By the proceeding adopted—by printing the bill in July, and not pressing it on the House at that late period of the Session—the Government have given every fair play to all parties interested in the question to weigh the subject thoroughly, to examine the measure in all its bearings, and to take such action in reference to it as their conclusions and convictions shall warrant. It would be indelicate in me to express my individual opinion upon a measure which has been submitted by the Government of the country, and it is unnecessary to analyse it for those who can judge for themselves and who have large practical experience on this subject; but, though thus abstaining from all criticism, I do not hesitate to say that a more important measure in reference to the oyster and general fishery of Ireland was never contemplated. It is a most serious and important measure, and demands the close attention and consideration of every man who has an interest in the fisheries of Ireland. It is entitled a Bill to carry into effect a convention between Her Majesty and the Emperor of the French concerning the fisheries of the seas between the British Islands and France, and to amend the laws relating to British Sea Fisheries, prepared and brought in by Mr. Stephen Cave, Mr. Hunt, and Mr. Shaw Lefevre, and ordered to be printed on the 2nd July, 1867. I will repeat that I will not offer any opinion upon the merits of the bill, but I tell the gentlemen here that they will have great cause to regret if they do not direct their attention seriously to the propositions contained in it. Every fair play, every opportunity for a full consideration of the measure has been given by the Government; the bill is printed, and is open to all; it is in the next Session its fate will be decided, and I hesitate not to say the fate also of the fisheries of Ireland.

To return to the object of this meeting, there seems to be entire unanimity as to the by-laws which ought to be passed for the protection and improvement of the oyster fishery of your bay, but in the memorial of the fishermen there is the proposition with regard to the appointment of a water bailiff to carry out the law which meets my entire approval. That proposition is as follows:—

"We further propose and unanimously agree to levy annually four shillings on each boat dredging, and six pence on each person handpicking, for the salary of a water bailiff to prevent any trespass and prosecute any person or persons who shall, or may hereafter violate the laws enacted by the Commissioners of Fisheries. Without a proper bailiff being appointed the by-laws never can be put in force. Bailiff to carry a ring to pass the oysters through."

It is creditable to the fishermen to have made that proposition of themselves, and I hope it will be carried out; but it must be a voluntary act on their part, and cannot be introduced into the by-law passed by us. It is a most judicious proposition, and shows that the fishermen are desirous that any by-law that may be passed shall be duly enforced.

Mr. *Regan.*—Unless a proper man be appointed to carry out the by-law there is no use in making it—no use whatever, without having a competent person to see that it is enforced.

Mr. *Barry.*—I quite agree with you as to the importance of appointing such a person whose sole duty it will be to see that the law is observed; but such an appointment cannot be made the matter of a by-law. Any arrangement such as is proposed, must be a conventional arrangement between the person employed and those who employ him; and there are full powers and authorities for such an appointment given under the section of the Act which I have already read. It is, I repeat, very creditable to the fishermen that they have made that proposition of themselves, and it is gratifying to us to find that the restrictions proposed are those which the fishermen have endeavoured to carry out of their own accord, and that in making the proposed by-laws we are not now about to impose any restraints but such as have been acted on by themselves with a provident care for the improvement of the fisheries.

Mr. *John Keaven* tendered himself for examination, and on being sworn said—I am at present agent to Lord Wallscourt, and I beg to hand in a memorandum of seed oysters planted on his licensed shores in the years 1861, '62, '64. In '64 I planted 140,000 oysters; in '62, 249,000; in '61, 20,000, making a total of 410,000, of six score, and six in each hundred, and such as were in clusters were not separated but each counted in one. The license was obtained in 1864, and I have endeavoured to stock the bed thoroughly, and I

must say that the oysters have propagated and grown in very great abundance. Some of the fishermen who are poor, sell the small oysters to me, but others refuse to do so and throw the small ones back upon the bed. I deem it most essential, for the protection of the beds, that night fishing should be put a stop to, for night fishing is dangerous to life and property; and I think that if the by-law against fishing at night be carried out with the assistance of the Police and the Coastguard, we will be able to protect the beds, but without that all attempts at protection will be fruitless. For instance, last night, or rather this morning at one o'clock, we saw four boats come upon the bed, and we started in pursuit of them. They immediately put up their sails and went round to the northern shore; we were gaining on one of them, and they fired a shot from one of the boats; soon after that another shot was fired, and then several shots were exchanged on both sides. In fact this night fishing is dangerous to life and property; it is the cause of the greatest mischief, and a by-law to prevent it is absolutely necessary. I am aware of the close season which is observed in this bay; it consists of May, June, July, and August. I think it quite indispensable, for the prosperity, or in fact the existence of the oyster fishery, that this close season should be strictly maintained. If that close season were abolished and fishing allowed all through the year, the effect would be that we should very soon have that part of the bay that I know without an oyster at all. Any statement to the contrary can only come from persons who are totally ignorant on the subject, or if not ignorant, are only anxious to obtain some little present gain without any regard whatever for the future or for the existence of the fishery when their own immediate ends are gained. From Black Head to Slyne Head are, in my opinion, the boundaries of Galway Bay.

William St. George, esq., sworn—I have been for several years engaged in the cultivation of the oyster fishery. I have been so engaged for the past fifteen years. In fact I have spent my whole time at it, and devoted all my energies to this subject both in theory and practice. I have visited every place in Europe where an oyster bank could be found, and have a thorough practical knowledge of the subject. I have more personal interest in the prosperity of the oyster fishery and more personal interest and property at stake than any of those who have, with what views I do not know, expressed opinions favourable to open and indiscriminate fishing at all times and seasons. I have heard read the by-laws which it is proposed to establish for this bay, and I think, in fact I am certain, that they will be highly beneficial to the oyster fishery. I am of opinion that it is absolutely necessary, for the maintenance of the fishery, that a close season should be rigidly enforced and strictly upheld. In fact the abolition of a close season can only be attended by the total abolition of a fishery at all. I think the present close season of May, June, July, and August should be strictly upheld. I would even go still farther, and am clearly of opinion, from practical experience, that the month of September should be added to the close season, because in that month the oysters are full of spawn, or have not fully recovered from the effects of spawning. I would sooner allow dredging in May than in September, because in May there is much less spawning and less weakness than in September, and the young spawn of July is only attaching itself to the shells in the month of September. Supposing the close season abolished, and dredging all through the year permitted, in nine or ten years, or perhaps less—for in a matter of this kind you cannot fix a precise time—you will not have an oyster in Ireland. As it is, the oysters are going fast, and are in much need of rest and protection. I am now paying 33*s.* a thousand for oysters which a few years ago I used to get for 5*s.* a thousand. I attribute that decrease to over dredging and non-cultivation. The men do all they can to take all they can during the open season, and in the close season they do nothing whatever for the cleansing of the beds and getting rid of weeds and vermin. In other places this is different. At Whitstable, for instance, the men constantly work over the beds during the close season to get rid of the dirt and the many enemies of the oyster, returning to the bottom all the oysters taken up. This has a most salutary effect. I know Galway Bay as well as I know the way to my bed. The western boundary of the bay is from Hags Head to Slyne Head, leaving Arran six miles to the right. That is the general repute of experienced men of what constitutes Galway Bay. It is my full conviction that it is necessary for the welfare of the fishery that the by-laws proposed should be carried into effect, and in addition that the regulation against night fishing cannot be enforced unless there be a penalty against having any dredge on board a boat between sunset and sunrise, because you cannot convict under the third regulation unless you actually find the person taking oysters between sunset and sunrise. You may come up to him at night and find plenty of oysters on board but the dredge not out, and when you go away he immediately begins to dredge again. There might be a practical injustice in imposing a penalty upon all persons having a dredge on board between sunset and sunrise, because a man might be either going to or returning from the fishing ground between these two periods; and I would, therefore, give him time to go and return with his dredge. With that view I would fix the period between nine o'clock at night and six o'clock in the morning as the time during which it should not be lawful to have a dredge on board. That would answer all practical purposes, impose no hardship, and be an effectual means of carrying out the law. If a law of that kind be not made it is useless merely to prohibit dredging at night.

Mr. *Barry*.—That seems to be a very good and reasonable regulation, and I shall submit it to the Commissioners with the other propositions made. Our business seems now at an end, but before we close I will read for you the following letter, which I received from Mr. Wray, the lessee of the Island Eddy bed:—

"Coosheen, Schull, Co. Cork,
"December 8th, 1867.

"MY DEAR SIR,

"Respecting the restrictions about to be placed upon the oyster fisheries in Galway Bay, I think that *in the main* they are wholesome and loudly called for.

"I can only suggest that no small oysters shall be taken and removed for the purpose of consumption, but that it may be lawful to take such small oysters (say two years old), provided they are laid down again immediately within the said bays of Galway, and allowed there to remain until of full and proper size for consumption. For instance, the small two year oysters which I bought two years ago are now bedded still in the same waters which bred them, and have consequently been breeding these two years."

Mr. Redington then moved a vote of thanks to Mr. Barry for all the trouble he had taken to promote the oyster fishery of Galway. This was passed with acclamation.

After the meeting and before leaving Galway, the following letter from Mr. Wray was received:—

"Coosheen, Schull, Co. Cork,
"December 9th, 1867.

"MY DEAR SIR,

"I wrote you a brief note yesterday, the purport of which I beg to explain more fully now. You must not class me amongst the complaining ones in making the observations I do, these being, I hope, both practical and useful to the interests sought to be protected. In the case of a licensed oyster bed holder it becomes a matter of great importance to him, whether the stock he lays down on his beds be TWO year old or FOUR year old, inasmuch as the *former* costs many times less than the *latter*.

"If I can buy young two year old oysters from the dredgers at Clarenbridge, and lay them down at once on my beds at Island Eddy, the *public* beds still have the advantage of the spat or spawn from these young oysters, until they have grown into large marketable

oysters at least, at the age of say four or five years. Thus practically no harm *can* accrue to the fine public beds; and, at the same time, both dredger and licensed bed owner are benefited by the transference. On the other hand no *young* oysters should, on any pretence, be sold for consumption, or for removal out of the haven where they are dredged, thus reconciling and conserving all interests concerned.

"This is, I hope, a fair and a practical view of the case.

"Again, if the French mode of artificial breeding be carried out at Island Eddy, the young spat may be in such multitudes as to allow of their being removed to other beds.

"This will strike your own mind.

"Very truly yours,

(Signed), "Wray.

"J. R. Barry, esq., Commissioner."

13th December, 1867.

J. P. Brophy.

Letter from J. A. Blake, esq., M.P., addressed to the Editor of "The Irish Times."

The Irish Oyster Fisheries.

TO THE EDITOR OF THE IRISH TIMES.

Whitstable, 6th June, 1868.

Sir,—Whilst the necessity for protecting the oyster banks of the Wicklow and Wexford coasts is still under discussion, permit me to say a few words on the subject from the metropolis of the English oyster fisheries.

During the last week I have been engaged in a renewed inquiry into oyster culture on the Essex and Kent coasts. I have had the advantage of seeing the old and new systems under the most advantageous circumstances, through the kindness of those who have been engaged all their lives in oyster breeding and capture.

I am more thoroughly convinced than ever of the wisdom of the course the Irish Fishery Commissioners have adopted in imposing a close time. Much credit is due to them also (especially to the inspecting Commissioners) for the efforts made to confirm the jurisdiction they claim over the outlying banks on the east coast.

For nearly eight years there has been a failure in the spatting on the English coast, and except at Hayling the attempts at artificial breeding have not been successful.

With undiminished dredging and little or no replenishment of the beds, a tremendous scarcity has taken place, and should there again be a failure of spat this season, which the same cause that prevailed for years back may bring about, the oyster fishers will be driven, both for purposes of sale and brood, to take oysters wherever they can be found. I have little doubt under such circumstances, that the Irish outlying banks if left unprotected, would soon be denuded of their stock.

It is impossible to overrate the importance of protecting our oyster fisheries outside the three-mile limit.

Whilst there has been hardly any fall of spat on the English coast spatting has gone on with little diminution on the Irish oyster grounds, arising probably to the nearer proximity of our shores to the Gulf stream.

The higher temperature of the water in Ireland, particularly on the west coast, renders it peculiarly favourable for oyster culture, and to the banks on the east coast we must look for breeding oysters and brood to stock new beds and replenish exhausted ones.

It would be too bad, therefore, to leave those valuable sources of supply to the mercy of those whose own banks have become exhausted in some measure from want of care.

The best authorities admit that no part of the kingdom offers more inducements for judicious oyster culture than Ireland. The entire yield from our beds at present does not exceed forty thousand pounds in the year, whilst the people of the little town from which I write have some years realized upwards of three hundred thousand pounds from the two and a half square miles of oyster banks which belong to them.

Through the efforts chiefly of Lord Clanricarde in the House of Lords, an important amendment to the bill for carrying out the convention with France has been obtained, which would protect most of the east coast banks, but a further protection towards the north-east would be desirable.

I therefore trust that you and other Irish journalists will continue to advocate whilst the question is before Parliament the justice and expediency of giving the fullest protection, the only industrial resource of value free to our people to avail themselves of without the payment of rent or taxes.

Yours faithfully,

John A. Blake.

SEVENTH ANNUAL REPORT

OF

THE INSPECTORS OF SALMON FISHERIES (ENGLAND AND WALES).

(*Presented pursuant to Act* 24 *&* 25 *Vict. cap.* 109.)

Ordered, by The House of Commons, *to be Printed*,
23 *March* 1868.

To the Right Honourable *Gathorne Hardy*, M.P., Secretary of State for the Home Department.

Sir,

In placing before you the 2nd Annual Report which I have now the honour to present as Inspector of Salmon Fisheries, I would beg to state that during the past year my colleague or myself have visited most of the salmon rivers of England and Wales. Some of these I have inspected conjointly with Mr. Walpole; some by myself. For my own part I now submit an account of the present condition of the rivers that I have inspected.

In the following pages, therefore, will be found my reports on the undermentioned twenty-six rivers, viz.:—

> The Arun, the Aln, Clwyd and Elwy, the Conway, the Glaslyn, the Itchen, the Cleddy, the Coquet, the Dee, the Dovey, the Ellen, the Exe, the Frome, the Ribble, the Sciont, the Severn, the Stour (Kent), the Stour (Dorset), Taw and Torridge, the Tees, the Thames, the Test, the Teivy, the Towey, the Tyne, the Wear.

I have endeavoured to give an abstract of most of the important facts that came under my notice, and to record faithfully the main features of what I saw and heard.

After the reports on rivers will be found observations on Returns of salmon sold in Billingsgate Market; Salmon passes; Lead ore pollutions; Fixed obstructions; Close seasons, as well as other matters of interest to the friends of salmon cultivation.* I conclude, by giving statistical tables, as far as I have been able to obtain particulars, of the number of engines used in salmon fisheries; the amount of licenses paid thereon; the number of men employed, as well as the number of prosecutions instituted under the Salmon Acts.

That the English and Welsh Salmon Fisheries are on the increase there can, I think, be no doubt. There can also be no doubt that a continuous and diligent inquiry, carried out in a scientific spirit, will demonstrate to us what are the requirements necessary to bring rivers to the highest state of cultivation and development of which they are capable, and thus eventually bring an increased supply of good and nutritious food within the reach of classes who have hitherto been unable, through its high price, to obtain it.

Human knowledge of the details of the management of salmon fisheries, under the great variety of circumstances in which they exist throughout the kingdom, is by no means as yet complete. To perfect it, a constant study of the questions of Engineering, of Manufacturing interests, of the Rights of Property and of Law, must be pursued. Above all, the habits, instincts, and natural history of the salmon itself must be accurately observed, in order to ascertain what are Nature's laws, so that human laws may be framed in accordance with them.

I have the honour to remain,
Sir,
Your obedient Servant,
Francis T. Buckland.

14 March 1868.

---

* In some of these latter chapters I have repeated remarks which have been made in reports on various rivers. I have done this in order that the subjects may be read as a whole by those who do not take interest in all rivers alike.

SEVENTH ANNUAL REPORT

OF

THE INSPECTORS OF SALMON FISHERIES

(ENGLAND AND WALES).

MR. BUCKLAND'S SECOND REPORT.

The Arun, Sussex.

There are several small rivers on the south coast of England which are at present quite uncultivated. Between the North Foreland and the Salisbury River Avon (except the Canterbury Stour) no rivers are as yet under the protection of the Salmon Act. The rivers in question are the Rother (joining the sea at Rye), the Cuckmere, the Ouse, the Adur, the Arun, the Itchen, and the Test; and here we join with the Avon and Stour (Hants) District.

Though great results, as regards the salmon, may not be expected from the Rother, the Cuckmere, the Ouse, or the Adur, yet I think I have sufficient evidence to prove that migratory salmonidæ—sea or bull trout—naturally run up these rivers, and that therefore they are quite worthy of protection. I have inspected, with my colleague, three of these rivers, the Arun, the Itchen, and the Test. Of these latter rivers reports appear in their proper place. The Arun is but 51 miles long, and although it has, so to speak, no estuary at all (the river joining the sea abruptly), the spawning grounds are better than I expected to find them. In former times there used to be a fair stock of fish in the river, and the Fishery at Amberly was rented at 70*l.* per annum; the number of fish lately caught remain about the same. There are many obstructions. The first obstruction is Pulborough Mill, where the miller has a trap which he works by a string out of a window, and catches all he can. This weir may be easily made passable. There is likewise a trap at Fittleworth. I inspected a sea trout of five pounds weight, which had been caught at the former mill; a 10 pound fish had been taken there some time previously. The fish mostly run up in June. In the winter the water runs over the weir and allows the fish to pass, and this fact accounts for there being any fish whatever in the river, and shows that improvement would be likely to take place if good working passes were erected on the whole extent of it. Above Pulborough there are other great obstructions, viz., Fittleworth, Coultershaw, and Midhurst Mills. The small stock of fish which now exist in the river are, I am informed, solely kept up by the fish that spawn between Pulborough and Fittleworth.

G. S. Constable, Esq., of Arundel, takes the greatest interest in this river, and for the last three years has been endeavouring to stock it by rearing considerable numbers of salmon artificially. He hopes shortly to form this river into a district, and I sincerely trust his praiseworthy efforts may be supported by the country gentlemen around.

The Aln, Northumberland.

The estuary of this little river is not in a promising condition; the water runs through an immense sandbank, and the sand sometimes accumulates at the mouth of the river, so much that it is found necessary to use ordinary ploughs to keep the channel clear. Not far from the estuary there is a mill: the weir, at the time that I and my colleague examined it, was perfectly dry. In the park of the Duke of Northumberland at Alnwick there are two weirs. By the side of the lowest a ladder had been placed, the entrance of which has been admirably arranged so as to prevent too great a rush of water down it. At the further end of the park is a perpendicular weir, called the "Abbey Weir"; this is nine feet high, and perfectly impassable for fish. The Duke of Northumberland intends to cut a by-wash by the side of this. Salmon, I believe, are seldom, if ever, killed in the Aln. Four were caught in April 1859, and it is supposed here (as in the Coquet), that bull trout have exterminated the salmon. I believe it is the Duke's intention to stock the Aln with salmon and attempt to exterminate the bull trout. He has established in his park a series of breeding boxes, with a rearing pond. I confess I would much rather have seen the young fish reared in slate trays instead of in out-of-door boxes.

Clwyd and Elwy.

I began the examination of these two rivers at the estuary at Rhyl with R. C. Wright, Esq., Hon. Sec. of the District Board, of Rhyl. I regret to observe that the estuary and the lead from it into the river is very bad; this is, however, compensated by the fish having good feeding ground among the extensive sands at the mouth of the river, and although I have no facts to prove it, I think that it is exceedingly likely that the "Clwyd and Elwy" fish find their way up into the "Dee," for during sixteen hours out of twenty-four (or thereabouts), they are unable to get up the "Clwyd" at all.

This estuary is exceedingly shallow—at the high spring tides it is about 100 yards across, at low tide between 20 and 40 yards only; and sometimes at low tide people can walk across the river in many places. The sands are often exposed for nearly a mile and a half seaward. Three years ago the fish were regularly gaffed at low tide in the shallows near the estuary.

The salt water runs up as far as Rhuddlan. Mr. Wright informs me that 10 nets are worked in the estuary; they are draft nets, from 30 to 50 yards long. A 2 *l.* license duty was paid on each of these nets last year (the fishing season was far advanced when this district was formed). Three water bailiffs are employed on the river.

There are no obstructions at all on the River Clwyd, except a weir at Pontriffith Bridge. I have suggested a slight alteration here to help the fish over. The Clwyd is a slower and more muddy stream than the Elwy, but there are good breeding grounds on the upper part of it. The use of trammel nets has been stopped.

The first obstruction on the Elwy is the St. Asaph mills. I have reason to believe that poaching goes on at these mills; and also at the "Abbey Pool," the "Big Pool," and "Junction Pool" between St. Asaph and Rhyl. I would suggest that all the pools above Rhuddlan Bridge, in the waters where netting is not allowed, be carefully staked. I am informed that Mr. Wright had a quantity of barrels filled with gravel and tenter hooks driven on the outside, put into the pools this season, but he was unable to find out whether the experiment proved successful.

I also regret much to hear that many of the inhabitants of the neighbourhood are in the habit of purchasing young salmon and trout from known poachers: the effect of so doing needs no comment from me.

There are no pollutions on the river Elwy, but the torch-burning at night to kill spawning fish is very bad. Above the upper mill at St. Asaph there is a weir: the entrance is composed of loose stones, and the predominant current is on the side nearest to Mr. Ormiston's house. I explained to Mr. Wright how a pass might be made at this corner by simply adapting the loose stones to the pool system. I have great hope the fish will thus be assisted over the weir at a small

small expense to the Conservators. The head of this mill-leat requires a grating placed across its mouth in a diagonal form ; last year 10 salmon were killed in the month of February in this leat; the miller let off the water and destroyed them ; a grating therefore is highly necessary. I also advised that the wood-work at the head of this leat should be painted with white paint or white wash.

The next weir is Captain Thomas's weir : this is not formidable ; I have suggested that a pool should be made by means of a large tree and heavy stones in the centre of the weir, at a point 30 yards from Mr. Ormiston's bank.

The third weir is at Wigfair : the weir was in process of reconstruction ; the upper surface of the weir is made of slate slabs resting against oak piles. I have pointed out the proper place for a pass on the pool system to be made over this weir at a point where the alterations of the weir have been left off for the present, and have written a letter to the owner, H. R. Hughes, Esq., of Kinmel Park, St. Asaph, who has promised that an efficient pass shall be made. Mr. Ormiston has kindly promised to look after the erection of this pass.

The next obstruction is at Pont'ralltgoch ; the fish trap at this mill should certainly be removed ; many smolts must be destroyed by it ; a grating should be placed at the head of the mill leat, as it is a most dangerous place. At the weir the predominant current is on the south side ; a good pass may easily be erected here by means of trees placed in the manner which I have pointed out.

The next obstruction is the Pontnewydd mill, an awkward weir built in a semicircular form with stone, four feet high, the pool is eight or nine feet deep ; the salmon, however, manage to get over this pretty easily ; the keeper saw eight fish get over in 20 minutes during a fresh in October ; the fry, however, are destroyed in the irrigation channels leading to the meadows. A grating should therefore be placed at the head of the mill-leat. The weir I understand was built about three years ago ; in the summer there is hardly any water running over the weir.

The next obstruction is Pont-y-ddol : I do not think this presents any serious difficulty to the ascending fish. There is nothing serious after this till we come to Llanfair-Talhaiarn ; there is here a very awkward obstruction indeed. B. W. Wynne, Esq., the owner of the property, has placed a broad stage-like pass, without stops, upon this weir, which I do not think is very efficacious. I have pointed out how this weir may be made passable ; the plan which I have advised, will, I think, enable the fish to get over with ease. Great credit is due to Mr. Wynne for the efforts he has already made to cause this weir to become passable to the excellent spawning grounds on his property.

Above this I found at Llangerniew a stone weir built right across the stream, about 15 feet high ; over this it is impossible for the fish to pass, but the river above becomes too small for good spawning ground. Mr. Wright informs me that the river is very late ; the fishermen never think of using a net until nearly the end of June ; the main body of the fish come up in the month of September, and are then, I am told, in fair condition. The fishermen complained to me "that the close season begins too early for them, and that they cannot catch fish in any quantities during the month of August ; they are very anxious to be allowed to fish in September."

The Conway.

The Conway is 78 miles long, having a catchment of 224 miles ; its origin is from mountains, and it has a quiet and extensive estuary.

Many miles of spawning ground are cut off from this river by the well-known Conway Falls. Immediately on arriving at this district, I proceeded to examine the ladder lately erected there, and regret exceedingly to have to report that in my opinion it is utterly useless. It is so exceedingly steep that it is perfectly impossible for fish to get up it ; the steps are too narrow, and when the water is low, the fish have to jump about two feet six to get into the entrance. The water was low at the time I visited it, and the ladder was perfectly dry ; there is just a possibility of its being made efficacious, but I fear it will be a difficult task ; I am glad to say, however, that I do not think the passing the fish over these falls is hopeless. Close by the side of the ladder there is a natural "bye-wash," which takes the surplus water that

does not go over the waterfall; this passage has in it three natural, deep, and quiet pools which may be made available to the fish going up; there is a deep pool at the bottom of the precipice, from which the fish might easily jump into the lowest of the three pools in this bye-wash; having rested here, the fish would find no difficulty in passing into the two pools next above it. At this point, there will be some difficulty in enabling the fish to ascend into the main stream, as the slope is steep, and when there is a fresh in the river the current is rapid. I cannot but think that these difficulties may all be overcome by judicious engineering, and I have made arrangements with H. Wynn Finch, Esq., and J. Blackwall, junior, Esq., and other gentlemen interested in the matter, to join them next summer in an attempt to adapt this bye-wash so as to become a pass for the fish. I do not think that the expense will be very great; it is, however, one of those cases where inexpensive experiments should be carried on till a success is obtained.

At Llanrwst, I had the pleasure of meeting the Board of Conservators of the Conway district; they are exceedingly anxious to be allowed to angle with the rod during the month of November. The evidence that I obtained was that the earliest fish killed in 1867 was on the 11th of July; Mr. Blackwall, who has great experience with the rod, informed me that "on two occasions only he has killed fish in June, and both on the 15th of June. A clean fish has never been known in the river before May, and the chief or great run of large fish comes in November, many of them bright-scaled fish and in excellent condition." Mr. Blackwall suggests, and he is backed by the opinion of other Conservators, that "it" should be made legal to fish with the rod in the month of November, with a provision that no gaff be allowed after October, a landing net being alone used to prevent real injury being done to the fish. It is also suggested that the male fish caught with the rod should be killed, but that all the females heavy in spawn or out of condition should be returned to the river. At the same time (if it were thought best) all females should be returned to the river. Such is my confidence in Mr. Blackwall, the Board of Conservators, and the anglers of this river, that I feel convinced if they made promises to carry out the above arrangements, it would be done. There is a superabundance of males (at least six to one female in the river), and the idea is that the male fish should be kept down. This is a question deserving consideration. In a letter to me, Mr. Blackwall says, "In my opinion, there is no doubt that killing some of the male fish is a step in the right direction towards the cultivation of our salmon rivers, especially in such rivers as the Conway, where it can be proved that the males are so greatly in excess of the females, and where the spawning grounds are so limited."

It appears to be a fact that the fish do not ascend the river till very late in the season; they remain as long as they possibly can in the large and quiet estuary at the mouth of the river, and do not ascend to spawn until the latest possible period, because their instinct teaches them that in a river like the Conway, which has no lake and but few pools for them to get into in its course, and which, moreover, runs extremely low in the summer, they would either be left high and dry on the shallows, or else be liable to capture.

About 20 gentlemen pay 10 guineas each for their tickets for rod-fishing in the Conway, and one guinea for a rod license; but the subscriptions are fast falling off, for two reasons: first, the sport is getting worse instead of better every year, and the tickets with license more expensive; and, secondly, because most of the old anglers who were not residents in the neighbourhood, and who had subscribed towards the preservation of the river for 20 years, at once gave up their tickets, and all interest in the river, when the best angling month of the season, during which the Conway was worth fishing, was taken away from them.

When I stated at the meeting of Conservators that sufficient protection had not as yet been given to the river by the Act of Parliament, I was informed that the close time has now been observed for six years; and though the river has been much more strictly preserved than ever it was before, it has not only not improved, but has gradually deteriorated, and the fish come up the river no earlier than before they were protected by the Act. If the river does not improve, or some alteration is not made as regards extension of close time for rods, the residents and landowners on the banks of the Conway will cease preserving, and leave Conway to its fate: many of the old anglers who used formerly

formerly to come to the river, and who took great interest in its welfare and preservation, have even now left the neighbourhood.

If November were given for rods, the funds of the Board of Conservators would be very much increased, and more protection would thereby be afforded to the spawning fish. The river being almost entirely private property, and the persons who angle upon it being gentlemen whose sole object is sport and not gain, it becomes a consideration whether, with the understanding that the conditions above stated be truthfully carried out, the angling season should not, under these peculiar circumstances, be extended for a few days.

The Glaslyn.

This river drains a portion of Snowdon, and runs down one of the ancient glacier valleys of this celebrated mountain. It is in every way suited for the cultivation of salmon; there are no obstructions, and two good lakes, Llyngwynant and Llyn Ddinas, near its origin. My colleague and I began our examination of the river at Portmadoc. Here there are tidal gates connected with the harbour of Portmadoc. I do not think they practically impede the upward progress of the fish; at all events it is impossible to alter them, as they are most important to the district, for they command the drainage system of a considerable tract of country. At Portmadoc we held a meeting of Conservators, D. Williams, Esq., in the chair. I learnt that the salmon had gradually increased the last three years on account of a better system of protection being instituted by the Salmon Acts.* The preservation of the river is carried out in the most able and praiseworthy manner by Captain Peel, of Talgwyneed, near Carnarvon, who spares neither time nor trouble in looking after its interests.

The Glaslyn is also much indebted for its improvement to John Legge, water-bailiff. Gangs of men from 7 to 11 in number, disguised, have, during the last spawning season, made inroads at night on the fish engaged on the spawning beds; no prosecution has taken place as the men were not identified, but their efforts were frustrated by the energy of this water-bailiff.

The old close season of this river was from November to March. They do not begin to fish now before March, as the kelts are not all out of the river. Fresh run fish are rarely caught (so I was informed by the Rev. T. S. Kiffin, a great angler) before July; the main body of fish come up in September and October, the larger fish in December. There are two copper mines on the river; neither are said to be detrimental to the fishery. The owners have made catch-pits; no fish have yet been known to be destroyed by water from these works.

Passing up the stream, Captain Peel showed us a most ingenious contrivance for preserving the fry of salmon from being left high and dry in the summer months, when the fish have spawned in sharp running brooks, from which the water is apt entirely to run off in dry seasons: the plan consists of taking stones from the middle of the brook, and building them across the stream in the form of low weirs. These weirs obstruct the water, so that there shall always be a pool in which the young fish may live even in the driest months of the year. I commend this plan to other Conservators; it is most useful in small streamlets in mountainous countries.

At Pont Aberglaslyn Bridge there is a natural salmon pass, worthy of careful study of all those who are interested in this important subject. At Beddgelert there is a mill weir which in low water doubtless "facilitates the catching of fish" by poachers. I myself saw a man trying to catch them among the big rocks. My colleague and I have explained to Captain Peel how easy it will be, by shifting some of the big stones which are lying about, to form a series of pools which will enable the salmon to pass the weir at all times.

The

* The latest report received, 4th February 1868, from this river, states: "A continuation of high water has enabled the spawning fish to ascend without difficulty to the upper beds, which have been thoroughly watched, but I am sorry to report a diminution in the number of breeding fish upon the spawning beds this last season; but as the same complaint was made to me of the Ogwen, which is most strictly preserved by Lord Penrhyn, and where there is not one fish killed for every hundred going up, we will hope that many fish went up with the early floods, and spawned before we were aware of it."—W. Y. Peel.

an ordinary obstruction; it is built of strong masonry, and in a curved form; this was built, I believe, in 1758. I walked to the top of the dam in order to take its measurement, and found it to be, as nearly as possible, about 11 feet perpendicular; this was the exact height at the north corner, where I had a better opportunity of measuring than when on the dam itself. At the foot of the weir is a large pool, the depth of which I had no means of ascertaining, but I understand it is at least 30 feet deep; the presence of this deep pool enables the fish to get over the weir at certain times of the year. I observed a vast number of fish jumping at this weir; the water was then low; 30 jumped in a minute and a half, but not one got over; their jump was level with a certain mark on the face of the dam. I was determined to see what was the actual height of this jump, so, walking along the slippery top of the dam, I ascertained by a tape measure that some of the fish jumped as much as from 8 to 9 feet straight into the air out of the pool. The action of these fish (they were all bull trout) at this weir gave us two very important lessons: first of all, the necessity of having deep pools at the foot of every weir; in fact, when we have more facts and accurate observations, I think that a formula will be enabled to be constructed, showing that the height to which a fish can spring will be in proportion to the depth of water from which he takes his impetus.

We also learn the great advantage of having a "predominant current" running over a weir, especially in times of low water. The centre of the stonework of the Acklington Weir is rather more depressed than the sides, the consequence is, that the water, from the form of foam and thin broken sheets, solidifies itself as it were into a glass-like mass. Into this solid water, and this only, the fish made continuous efforts to jump; if, therefore, in all future weirs, the centre of the weir be left a little depressed, the ascent of the fish will be much facilitated, and they will have a much better chance of passing than if the top of the weir be built quite level.

The difficulties of passing the fish over this Acklington Dam are very great. It has been proposed (I believe by Sir William Armstrong) to utilize a deep pit on the lower side of the dam, so as to make a by-wash available for the fish. The working of Dinsdale pass and the Warkworth pass, however, renders me rather fearful that this plan will not succeed. Another plan is to make a second weir at a little distance below the main weir, but I fear the floods would take it away. The third plan is to build a ladder on the principle of the Ballosydare pass, namely, one set of steps taken from the top of the weir a certain distance down by the side, another set of steps being made to join it at an angle, the foot of this second set being so constructed as to come into the pool where the fish are lying. The best plan, however, would be to blow the weir up altogether, and substitute steam power. The mill is worth, I believe, about 250 *l.* a year, and should the Coquet ever become a salmon river, I think the produce of the salmon would be worth more than the produce of the mill power. At about 100 yards below Acklington Dam there is a wooden salmon ladder; the rush of water in this is too great, and the pass is in such a place that the fish which come to the pool at the foot of the weir do not easily find it; still I understand that many of them, after staying at the weir, go back and ascend through the ladder.

Anxious to know what has been done at Acklington since our visit, I wrote to John Tate, Esq., of Barnhill, near Acklington, who replies, 6th February 1861, as follows: "A great deal has been done to a new pass at Acklington Dam, on the Coquet, but it will not be in use for another year. The bull trout took the old pass last autumn in extraordinary numbers, and every spawning bed on the river has been used, I am afraid, more than either once or twice. The new pass is to discharge into the deep hole close at the foot of the dam where you saw such numbers of fish leaping, and I have not the slightest doubt as to it succeeding; the inclination is about 1 in 10, and the supply of water will be regulated by a moveable board at the upper end of the pass."

The next obstruction is Felton Mill Dam. My colleague and I here inspected a newly-built ladder cut out of the solid rock. This works well when there are 8 inches of water in the river; if there is more there is too much "boil" in the ladder. The opening of this ladder is 8 feet wide, the slope about 1 in 9. We recommended flood-guards to be placed at the head of the ladder,

ladder, and also certain alterations to be made at the foot.* I should also recommend that in the course of next summer rough stones should be built in the face of the weir itself, and that a plank should be fastened diagonally across it. Mr. Harkus, of the county constabulary, who acts as water-bailiff at this part of the river, informed me that he had good reason to believe that fish had gone up the ladder when first erected; for no fish since its construction, have been seen at the pool at the bottom where (before the ladder was built) they used to congregate.

At the exit of the mill-race of Felton Dam, there is an admirable guard to prevent ascending fish getting under the mill-wheel. At the time I examined it, it was a little out of order, but nevertheless I believe its principle to be sound. The idea, I believe, was first brought out by T. Brady, Esq., the present Secretary to the Special Commissioners. This Felton guard has been fully described by Mr. Benjamin Woodman, of Morpeth, and I shall be very happy to send plan and description to any Board of Conservators who may wish to try it.

The Coquet is now occupied by the "bull trout," to the almost entire exclusion of the salmon. Salmon, however, as proved by ancient documents, once were found in considerable quantities in the river. (*See* Report of Commissioners, 1861.) To what extent of the extinction of salmon can be laid to Acklington dam, I am not prepared to say; it doubtless helped considerably to bring this about. "In 1858, 73 stone of salmon were taken; in 1859, 83 stone of salmon; in 1860, 112 stone of salmon." There cannot be any doubt whatever that the bull trout have at present gained the day in what is scientifically called "a struggle for existence." Mr. William Dunbar, lessee of the Thurso, has issued a report upon the Coquet, at the request of the Duke of Northumberland. He writes: "I think I have never seen a river better adapted for salmon breeding, feeding, and salmon angling, and if I were not told otherwise, I would at once pronounce it to be an excellent salmon stream. It is a larger river than the Thurso, where thousands of salmon are killed every season. That there are thousands of bull trout in the Coquet, I have seen with my own eyes, What, then, is the reason that there are no salmon? Some say it is the nature of the water; this I do not believe, as I know many rivers in this kingdom, and many more in Norway, where the salmon and bull trout inhabit the same stream. My belief is that, through some cause or other which I am unable to explain, the bull trout have got the ascendancy in the Coquet—in fact the sole control, and they are vermin equally as voracious as pike, and where they predominate they will allow no other fish to live. That the River Coquet is well adapted for salmon, I think I can prove. It has fine spawning fords; deep pools, with large stones for shelter, and fine, strong streams for salmon to sport in; its woods and other shelter abounding with flies and other insects, afford ample foodfor old and young of the salmon." I agree with Mr. Dunbar's recommendation that an attempt should be made to exterminate these bull trout, of which there are vast quantities in the river, and that salmon hatched artificially be turned into the river *in the upper waters.* A breeding establishment, on a large scale, should be instituted, and continued every year for five or six years in succession. I have had an interview with Mr. Dunbar on these points.

Again, if the Duke of Northumberland and the Board of Conservators agreed upon all points, special permission might be granted to destroy the bull trout during the winter months. Should this course be determined upon, it would not be advisable to put any pass whatever over Acklington Dam, as its present construction facilitates the catching the fish in large numbers. The experiment is well worth trying, though I fear it will be some time before the salmon will again get ahead of the bull trout.

The fishery at the estuary, as well as that of the Aln, is held by the Duke of Northumberland, under the Crown. I was sorry to hear that a great deal of poaching goes on on the sea coast. There is great difficulty in identifying the poachers, and the Conservators propose to request the Admiralty to allow the Coast guard to assist in salmon preservation, the acting officers and men to be paid

* Mr. Tate informs me that the flood-guards are now in position, and the pass has acted most efficiently.

paid by the Board of Conservators. The system of employing the police to act as water-bailiffs works very well in this district; I do not see why the system of employing the coast guard should not also work well, if the Admiralty would grant permission for it to be done.

The men who catch the fish on the sea coast should be forced to take out licenses; the number of the license should be painted in large white figures on the outside of each boat, and also the name, or a letter signifying the district from which the boat is licensed.

Another question has arisen in this district, viz., whether Coquet Island can or cannot be included in the district; it is some little way out to sea.

The Dee.

I look upon the River Dee as one of the most promising salmon rivers in the kingdom; its spawning grounds are of great extent and of a fine character. The water itself is naturally pure and deep, and, if not diverted or dammed up by weirs, &c., particularly calculated to afford protection to the travelling fish; it is therefore with pain that I have to report that the prospects of this river are in a questionable condition. The mischief, however, I am happy to say, is by no means irremediable. The entrance to this fine river is completely blocked for many months in the year by a weir at Chester; this I have examined twice. Except at high tide, the fish cannot pass over it. I consider that the River Dee possesses naturally capacities equal, if not superior, to any river of its size I have visited, for the production of salmon.

In spite of the difficulties under which it labours, I am informed that its productiveness is increasing. It is certainly capable of further improvement from its great extent of spawning ground, both in the river itself and its tributaries. The fine lake of Bala (nearly five miles in length) tempts the fish up, and it is well known that a lake in the course of a salmon river is of great advantage to that river. I am told also that two lakes on tributaries of the Dee might be made accessible to salmon at a small expense.

The Dee has an estuary and navigable channel of 20 miles; these are bounded by the Chester weir over which fish can only swim when the upper or unnavigable river is in flood, or when a tide of 16 feet enables them to pass.

The value of fish taken on this lower portion of the river last season is, I have been informed, estimated at 15,000 *l.* The nets, 47 in number, worked by boat, pay a license of 5 *l.* for each net.

There is no fish pass on the Chester Weir, consequently the Commissioners authorized the Conservators to close a fishing trap that was in use here until they give their decision upon it. In consequence of the proprietor of the weir refusing to allow any interference with the weir, the obstruction is complete, except in conditions of the river as above stated; and unless the Commissioners have powers to compel the weir owner to allow the construction of a pass, the men on the next 30 miles of river, where coracle nets are used, will not continue to take fish to the value of 2,000 *l.*, which they are said to have done last fishing season. It appears, from the above, that in 40 miles of water where nets are used, 17,000 *l.* represents the present value. But now we must look to the interests of the upper proprietors and their 500 miles of spawning grounds in the river besides tributaries. There are three weirs above the water where nets are available. On these weirs fish passes are erected, and work well; but as it is only when a flood of sufficient height occurs to prevent the coracle nets taking fish, that any number escape, the upper proprietors reap no benefit, notwithstanding the care they have hitherto taken of the breeding fish during the annual close time, and are therefore, with a good show of reason, dissatisfied with the state of affairs in the lower waters. It is true that, in September and October, the nets are taken off, and as floods generally occur about that time, large numbers of fish ascend, and are bent on reaching the highest and cleanest waters for spawning; but coming so late in the year they do not repay the upper proprietors for the pains they have taken to preserve the river. The take of fish *below* Chester last year was so great, that I was informed (December 1867) that many new boats were preparing for the season of 1868. As I have said, except at high tides, the fish cannot pass over this Chester Weir, and a 16-foot tide is necessary to pass the fish

fish over. In ordinary states of the water they are, as it were, imprisoned below it, and those that have run the gauntlet of over 40 nets and arrive at this weir, being unable to get over are obliged to fall back, and are again liable to be taken by the nets. This goes on during the whole fishing season, so that unless a very high tide and a fresh in the river from rains occur at the same time, very few fish get over till the time for netting salmon ceases—on the 1st of September.

At the southernmost end of the weir there is a mill which formerly contained a fish-trap; this has been directed by the Special Commissioners to be made incapable of taking salmon, but still the weir itself acts almost as a trap, inasmuch as the ascending fish are stopped by it and driven back towards the estuary below, so that they are taken by the nets. The Special Commissioners have inquired into the legality of the Chester Weir, but as yet they have not given their decision. It would appear to me, that as the law now stands, if they were to order a pass to be made in the weir, that the trap at the mill would be legalised, and I also understand that the owner of the weir is unwilling that his property should be interfered with; the immediate consequence of this state of things is that the proprietors of the river above Chester (that is, the proprietors who hold the spawning ground of the river) are getting exceedingly careless about protecting the fish. In illustration of this, I beg to mention that I have requested influential proprietors, living in the upper part of the river, to erect fish-passes to allow the spawning fish to pass over weirs situated on the Ceriog River—a very important tributary. This might be done with ease and at very little expense, but in both cases I have met with an absolute refusal, as these gentlemen do not see why they should be called upon to preserve and breed fish which will all be caught by the fishermen in the lower waters. The upper proprietors, who seldom see a fish in their water (inasmuch as they are stopped by the Chester Weir), do not at all feel themselves called upon to increase the produce of the river for the benefit of people who live a long way below them. As far as I can understand, the discontent upon the part of the proprietors of the upper Dee is very great indeed. Not that they are unwilling to breed fish to any extent, provided that the fish have free access to the upper waters during summer and spring, and not, as they have now, only during the spawning months. It is avowed by some of these gentlemen, that they have not the slightest intention of going to any expense or trouble in preservation. I therefore candidly confess that I am becoming seriously alarmed about this noble river (the Dee): the causes of itsperil being—

1st. A barrier, in the form of Chester Weir, blocking up the river.

2nd. Hard-netting below.

3rd. A careless and discontented preservation of the breeding grounds, in consequence of the two first causes.

It is not fair upon the upper men, in whose waters all the fish are bred, that they should have no fish, or next to none, for their trouble in preservation. There are few rivers that produce so many fish for the public markets as the Dee, and unless a passage over Chester Weir is speedily given, there will be a terrible reaction, and the fisheries of the Dee, which have improved so rapidly, will again recede in value, whereas, with the hearty co-operation of all parties, they would soon become very greatly increased.

The Honorary Secretary of the Board of Conservators, Mostyn Owen, Esq., is getting disheartened at the deferred opening of this Chester Weir, which is the cause of all the discontent on the part of the upper proprietors, and talks of giving up his present position. To this gentleman the greatest praise and credit are due for his continuous exertions, both in-doors and out-of-doors, in fair and in foul weather, to see that the river has a chance. I trust Mr. Owen will remain at his post, in spite of all the difficulties which he has to encounter. It appears to me that the simplest and most effective way to benefit the Dee would be, that the Board of Conservators should purchase the mill at which the machinery for the trap now exists, and that they should convert the trap into a salmon pass, thereby allowing the fish a clear passage at all seasons. That the Conservators should have power to borrow money for the purchase of the mill and the trap, and for construction of the pass; the interest of the borrowed money to be provided for by the increased license duty; the great take of

fish in the last two years proves the possibility of the licensees being able to pay this with ease. Another plan would be to substitute steam for water power at the mills, and remove the weir altogether. Anyhow, I feel it incumbent upon me, in my official capacity, to call the most serious attention to the present perilous condition of the Dee Fisheries.

The matter of licenses on nets in this river requires attention. The nets fishing the lower part of the estuary are taxed only 5 *l.* each. The Conservators think they should have power to raise the license duties on all nets and rods (subject to approval of the Home Office), in a fair proportion to the increased quantity of fish produced in the river, as at present the sum raised by licenses is not sufficient to meet the expenses of protection.

Again, they do not think that the 34th section of the Act of 1865 contemplates that net licenses should be transferable, any more than are rod-and-line licenses.

In the estuary of the Dee the licenses for nets in practice are made transferable. There exist, in the above-mentioned locality, a class of persons locally called "scowbanks"; these are men who do not take out licenses to fish, and they bargain for small sums for the use of a licensed net for a few hours. The consequence is, that this licensed net, for the sum of 5*l.* (as fixed by the Conservators and sanctioned by the Home Office), does duty day and night nearly all the season, and is practically let out for hire, when the man who pays the 5*l.* license has done fishing with it. The men who hire it from its rightful owner in fact pay no license at all towards conservation. If overhauled by the water-bailiff, they are ready to swear they are using the net for the licensee.

This difficulty, it has been suggested, might be met by obliging every man actually using or working a net to be obliged to pay a small personal license, the sum to be fixed by the Board of Conservators, subject of course to the sanction of the Home Office. This is thought only fair, inasmuch as a license of 5 *l.* is much too small when *one* net will take salmon worth more than that sum the first day it is used. Mr. Owen informs me that last season one net took 99 salmon in the river below Chester, another 87, in one day; these are of course, exceptional cases, but nets frequenly take 10 and 15 salmon and more a day.

The idea of making the "scowbanks" (who use licensed nets without paying) take a license themselves is, I think, tenable. We have a parallel case in legislation which has long been in force: I mean that of cabmen. The master of the cab has to pay a license to the Government, and the driver has also to pay a license of 5 *s.* per annum. This system works, I believe, very well, and it would probably answer (though of course it would be opposed by the scowbanks themselves) in the case of net licenses. The fishermen, in cases of this kind, should recollect that the money paid for licenses is not actually a tax upon themselves for the benefit of others, but amounts to an investment of capital for which good interest will eventually be paid in the form of increased quantities of saleable salmon caught in their nets. I was sorry to hear from the Honorary Secretary, that proprietors of chemical works are discharging (by means of a channel through the sands of the foreshore into the estuary of the Dee), their poisonous refuse directly into a portion of the river where the "up fish" rest for a while on their journey. (*See* Appendix "Dee," Answer 8.) We have opened up a correspondence with the Board of Trade on this subject. This matter requires the immediate and earnest attention of the Conservators, and also the attention of the Pollution Commissioners.

The Dee is decidedly against the use of trammel nets: the arguments adduced are, that the framers of the Act of 1861 made them illegal for the taking of salmon; and that if used when there is a fresh in the river, by swimming them down stream, or in the estuary of a river when the tide is out, they become most deadly implements. Supposing a flood to take place, and some of the fish to pass over Chester Weir, they would be met by descending trammels, and the upper proprietors thereby despoiled of the few fish which might probably reach their waters, some of which might probably be taken with the rod and line, but most of them escaping the angler, would supply the early spawning fish; whereas if trammels are legalised, the spawners will be destroyed.

Upon this point one of the Conservators writes to me as follows:—"Trammel nets, if legalized, would quite frustrate all our efforts to increase the breed of fish, and what has already been done in that direction would end in a return to that state of things which existed in 1860."

While

While the Dee has suppressed trammel nets, and attributed much of the increase of fish to their suppression, it is remarkable to find the use of these nets advocated on a part of the Wye. These nets are, I believe, prohibited in Norway and Canada.

I hear that a Bill is about to be brought before Parliament by the Shropshire Union Canal Company to enable them to take a large quantity of water from the Dee. This is likely to be most prejudicial to the salmon fishery; and the matter should be brought before the serious notice of the Houses of Parliament.

The Dovey.

I attended a meeting of the Conservators of this district with my colleague on the 12th August; Colonel Pryse, M.P., in the chair. A number of influential gentlemen were present. I was much grieved to hear the report of their fishery. Twenty years ago the stream was perfectly pure, and there was a large number of salmon and sewen in it, affording excellent fishing; the last 12 or 15 years it has been gradually dropping off, and the last four or five years the fishing has been very bad indeed; many anglers used formerly to come to this river to fish; they now come no more, as there is no fishing to be had. A gentleman present, Sackville Phelps, Esq., informed us that he came for a few days fishing 17 years ago to Machynlleth, and remained ever since; the fishing is now so bad, that he is thinking of leaving the place.

The cause of this terrible destruction is, doubtless, the impure water from the lead mines, and large numbers of fish are frequently found dead in the river; that many of these are fresh run from the sea is evident from the sea lice that are found upon them.

The day before our visit a great destruction of fish had taken place, and large numbers had been suddenly killed. The principal spawning ground of the Dovey, namely, the Twymin, is utterly made barren by lead mines; a few years since there was good fishing in the Twymin; now there is not a fish in it; the water coming down the Twymin into the main stream, is of a milky colour; and I heard stories of cattle, and more particularly horses, having been destroyed by eating the grass that had been touched by this lead water. When the mineral washing is let out in flood time the water is not so highly discoloured; since the working of the mines has increased, and machinery has been introduced (so as to crush the ore smaller), the mischief to the fishery has also increased; if it were not for the fact of there being spawning grounds still unpolluted by mines—above the junction of the Twymin with the Dovey—there could not be any fish in the river, and it would shortly become as barren of fish as the adjoining rivers, the Ystwith and Rheidol.

There are two mines upon the Twymin which do all the mischief, and these are the Dylife mines and Sir Edward Conroy's mines. I first proceeded to examine the mines belonging to Sir Edward Conroy, which are situated on the stream three or four miles below the Dylife. The Dylife crush 150 tons of ore per month, Sir Edward Conroy's mines about 40 tons per month. There are here 11 catch pits, the largest 30 feet long by seven feet wide, the smallest four feet wide and five feet deep; these pits are cleared twice a year, still the water running out from these catch pits is exceedingly dirty. I suggested two plans whereby larger catch pits might be made upon pieces of ground which are comparatively waste; and I also suggested that the water might be filtered through a kind of bituminous shale, of which a considerable quantity was lying about. The great fault of these catch pits is, that they are all used at the same time, and a stream of water is allowed to run perpetually through them; the mud, therefore, is never allowed to settle. If the pits could be so arranged that the water could be allowed to collect in one set of basins, and the mud allowed to settle and the clean water run off, I think that the river would shortly be benefited.

The Dylife mines upon the same stream, above Sir Edward Conroy's mines, are much more extensively worked than the latter; and the manager remarked that it will be of no use for him to go to more expense to catch the lead ore if the Dylife continue to place their pollutions in th river, but that if the Dylife mines will take means of stopping the impure water from going into the river, they will do the same. I examined the

Dylife mines; they are very extensive works, and a few small catch pits are in use, but they do not seem to be of much service. I walked a considerable distance down the brook, and found the whole of the bed one mass of lead debris, and thick, dirty mud upon the banks, the result of the crushing operations. I understand that in consequence of communications from the Conservators, the lead washings were once conducted to a morass, at the cost of about 500 *l.*, and filter pools. These works were suggested by Mr. Eden in consequence of a hint from Colonel Pryse and Mr. Sackville Phelps. There can be no doubt whatever but that these two mines are doing an immense amount of injury to the fish in the river; and I have written to the proprietors of these mines calling their attention to the facts, and earnestly requesting them to take measures to keep the lead washings out of the river; and I do trust they will follow the good example shown by Mr. Beaumont in his lead mines on the Wear and Tyne. The very day before I was there, almost every pool in the Dovey contained dead sewen, and a large number of them were brought to me for examination. (*See* Article, "Lead Ore.")

One important question arose, on this river, relative to close time; the Dovey, I was informed (*see* also Report), is naturally a late river, and before the mines were opened it was always late; before the passing of the Salmon Act, it opened on the 2nd of April and closed on the 14th of December. The fishery club then shifted the close time from the 2nd of April to the 2nd of May, on account of the smolts and kelts being killed. The fresh-run fish do not, I hear, as a rule, begin to come into the river till May and June; occasionally a fresh-run fish is killed before this; they come up in larger quantities in the month of August, but the main bulk of them run in November and December, when, according to some, they are in good condition; but I have not had an opportunity of examining into this point myself. I was sorry to hear that anglers are not particular about killing kelts in the spring months when rod-fishing is legal.

The reason why fresh fish do not come up early in the year is probably that the fish know perfectly well that they have not sufficient water and places where they can hide themselves, and that they are safe in the estuary; in fact there is seldom water enough to bring them up at all till the autumn months, and if perchance they attempt to come up when the river is low, they will be met by the concentrated hush from the lead mines, and will be destroyed.

The Ellen, Maryport, Cumberland.

This river has, for years past, been terribly neglected, but there is no reason why it should not be properly cultivated. I have inspected it with my colleague, and we have recommended certain alterations in various ladders, &c. to be made. A grating should be placed at Blennerhasset Mill, and also at Arkleby Mill. The tributary which runs in at Ellenhall Bridge should be blocked out altogether, as the fish thereby are only led into a country where they will be destroyed by the population. At Oughterside Mill there is a mill dam of solid stone work, six feet high, with three steps; over this a ladder on the Forsyth plan has been placed; it must, I think, be inoperative for various reasons, the chief of which is, that the foot of it does not join the pool; the miller has promised to raise his hatchway at the side of the weir whenever the mill is not at work, and also every night when he can spare the water; if this be regularly done, the difficulties at Oughterside Mill will not be so very great. At Crosby Mill there is a mill dam $5\frac{3}{4}$ feet high. A ladder, is in preparation, and I understand from the secretary of the Association, will be shortly fixed. At Birkby Mill there is a very difficult mill-dam of solid masonry, about eight feet high, in the shape of a horse shoe. A pass was excavated in the summer of 1865, in the rock on one side, where it cannot be reached by poachers; it is almost impossible to bring the foot of this pass into the pool at the foot of the weir; there is, however, a second pool a few yards distant from the present end of the ladder. We have advised that an inexpensive experiment should be tried of prolonging the foot of the ladder into the second pool, and I see no reason why the "up fish" should not then take it. At Ellengrove I was sorry to see a great deal of small coal in the river. I also observed that the grass had been killed by water which had been ponded up in the time of flood; this probably was caused by some soluble mineral pollutions

lutions escaping from the coal mines above; this matter should be looked to by the members of the Association. At Ellengrove there is a tan yard; the owner faithfully promised he would never allow any lime from his works to go into the river, but would place it on the midden instead. There is a Forsyth ladder (erected in 1865) at the weir of Ellengrove Tannery; its incline is small, its foot is directly over the pool; and from what I hear it is perfectly efficacious in its operation I should, however, suggest that a flood guard should be placed upon it. At Netherhall, close to Maryport, there is a milldam about $5\frac{3}{4}$ feet high, with a fishing trap in the middle, the property of J. P. Stenhouse, Esq. This fishing milldam has formed a subject of inquiry by the Special Commissioners, and they have given their orders concerning it; which orders, I am sorry to hear, have not yet been carried out. In 1865 a salmon ladder, on the Forsyth plan, was erected at this place, the expenses being defrayed by subscription. The cultivation of this river has been energetically taken up by George Moore, Esq., of Kensington Palace Gardens, and Aspatria, near Maryport, by Jackson Gilbanks, Esq., and other gentlemen residing in its neighbourhood. I trust, under their judicious management (when the fish have been allowed to pass Netherhall), to be enabled to report that this river has made progress, and I sincerely hope that the present Association will shortly form themselves into a Board of Conservators, and place the Ellen among the official fishery districts.

The Exe, Devon.

The river Exe is naturally a salmon river. It has excellent spawning grounds up the country, and a fine protected estuary. For many years past the products of this river have been very small. In the reign of Queen Elizabeth salmon were plentiful in the river. There are a few pollutions, so that I think it more than probable that the extinction of the salmon is owing to their exclusion by weirs; and if this be the case, I trust that soon we shall see the river re-stocked. The lowest weir, "Countess Weir," exists no longer in a form to obstruct the fish, and numbers of them come up to the next weir. The salmon rest in a hole by the Countess Weir Bridge. About a year since I was informed that numbers of them were poisoned by some deleterious substance from the paper mill just above the bridge; this accident has not happened since, and the owners of the paper mill are well inclined to the cause of salmon preservation, and will not, I feel convinced, allow chloride of lime or other noxious material again to flow into the water from their premises. The second weir on the river (or rather the first, that offers any serious obstruction) is "James' Weir," a very steep weir, over which it is almost impossible for the salmon to ascend without assistance. It is sometimes perfectly dry in the summer months, but occasionally, when there is a flood in the river, and a high spring tide at the same time, the ascent of the fish is made more easy. The salmon assemble at the west corner of the weir. At my first visit I suggested that a pass should be made at this point; at my second visit I was much pleased to find that this had been done. The pass is formed after the fashion of a free run, with a long arm of timber stretching over the face of the weir, so as to concentrate the water into the pass. The foot of this pass is not quite satisfactory, and I fear the pass is rather a long run for gavid fish to ascend. One fish has been seen to get through it, and several fish have been seen at the foot of the next weir, it is probable therefore that they ascended through this pass. I have suggested certain alterations in this pass, and have no doubt but that it will eventually prove a success.

The next weir the salmon would have to encounter would be the weir below the City of Exeter, viz., "Trew's Weir." There is a mill here occupied by Mr. Blackburn; I am informed that he does not allow any pollutions to escape from his mill; he uses every possible portion of chloride of lime, and also avails himself of an "antichlore." The slope of this weir is about 26 feet, and it has a long apron. I saw several fish trying the weir; they got over the apron up to the foot of the weir, but no further. In the middle of this weir is a vacant space left between the headboards of the weir and the foot of the weir. This space is admirably suited for the formation of two or three pools, which may be constructed at a reasonable cost with rough timber. Were this done, I believe many fish would easily pass over it. I should also advise that a plank or board

be placed diagonally on the face of the weir. The west side may also be made available for a pass, but the fish in this place would be liable to be killed by poachers.

Above this weir are several small streams, branches of the river, which runs through the City of Exeter.

The next weir is the "Black Aller Weir." Over this weir a ladder has been erected. In my opinion this ladder is useless, inasmuch as the foot of it extends too far out below the foot of the weir, and the quantity of water should be controlled in it in the time of a fresh. The fish endeavour to ascend from the west corner; the ladder might therefore be shifted to this corner, but I fear the planks are too much decayed to allow of this. The west corner might be made available for the ascending salmon; and I have suggested an inexpensive alteration for the present, but it is all-important to pass the fish over the lower weir first.

Mr. Tremlet, the occupant of this mill, has a "dip net" close to the foot of the weir; he intends to demand a license for it, as there is an old private right of fishery attached to the mill. I tell him the dip net is, in my opinion, "a fixed engine," and illegal. He intends to refer the question to legal authorities. He has not, he informs me, used it for some time. On both occasions when I examined it there was no net on to the ring, and the iron chain used for lifting it was rusty. This gentleman has done away with an eel trap in his bone mill, and has promised to make the bye-wash of his mill available for the ascent of the fish whenever the mill is not at work. He is favourably disposed towards the fishery of the river.

Above Mr. Tremlet's mill is another weir, the "Head Weir," which offers no obstruction to the fish. There is here an admirable natural pass on the west side of the river, well worthy of the study of those interested in the question of giving salmon a free run up rivers. Just above this weir the stream divides, and a grating should be placed at the head of the smaller stream, so as to prevent the "gravellings" or young salmon, and the kelts, going down this stream and being destroyed by the mill wheels in the city of Exeter. The grating need only be placed here during the months that the kelts and gravellings are descending. The Exwick Weir, above Mr. Tremlet's mill, need not be mentioned, as I hear the fish do not attempt to ascend.

I understand that Trew's Weir and Black Aller Weir belong to the Town Council of Exeter, and I have written to them urging them to come forward with their influence and assistance to enable the Board of Conservators to make efficient passes over these weirs.

The next obstruction is at Cowley Bridge, where the North Devon Railway joins the Great Western; a ladder has been placed here, but I do think that it is efficacious. In low water the fish cannot get into the ladder, and in high water the torrent running down it is so great that if they got in they would be swept out again.

The Railway Company, with the best possible intention, have altered this weir, making a sloping apron, over which the water runs at a great speed; to reach this the fish, except in flood time, must jump; this they can do with difficulty, because in making the alterations the pool at the foot of the weir has been unfortunately destroyed. Three plans may be adopted here:—

1st. Build a wall across the river just above the bridge, the wall to be three or four feet high, thereby to form pool.

2nd. Place trees or banks across the wooden portion (now doing no work) in the middle of the weir, so as to make a series of three pools or resting places.

3rd. Build a dwarf wall from the present end of the newly-made run some 15 feet out into the stream, so as to back up the water on the slope, and shorten the run of the fish over the weir.

The next weir is Pyne's Weir, a long weir with a slope of 33 feet, and an apron of 28. This weir has lately been repaired. I advise that some big stones now lying at the foot of the weir should be piled up, so as to form a series of checks or pools over the surface of the apron of the weir, and that other big stones be built above the surface, *i.e.*, let into the apron of the

the weir. A spur wall should also be built out at the end of the weir on the west side, according to Mr. Ford's plan. These two plans together would, I think, enable the fish to pass over this weir. Near to Pyne's Weir water is taken for the supply of Exeter by the waterworks. The lead to these comes in close above the weir; there is no grating. By the 13th section of the Act of 1861, the company is bound to put up a grating; I have called their attention to it, and sent them down a model of that exhibited by Mr. Lloyd at the congress, and now in operation on the Usk.

"Thorverton Weir" may be ascended by the fish in floods, but a pass should be placed over it at the cast corner, the point at which the fish would evidently attempt to ascend. The keeper of the inn at Bickley Bridge informs me that he has seen salmon ascend the Bickley Weir, and four salmon were seen in November 1866, near Bickley Mills. One salmon, which had jumped out of a little stream in a meadow, weighed six pounds. This proves that salmon occasionally ascend as high as this point, in spite of all obstructions. No salmon has ever been seen to spawn about here, though it is a favourite place for spawning trout. The Tiverton and all the other weirs above this can be passed in flood time. From Tiverton upwards, I hear that no river keepers or anglers have ever seen an adult salmon, but they have seen smolts or gravellings descending; not many in 1866, but in 1865 a considerable number.

From Tiverton up as far as the junction of the Barle there are alternations of deep pools and magnificent spawning grounds. As the young are seen to descend, I have taken great pains to ascertain where they have been born.

Probably the fish do not spawn in the small streams on Exmoor, and all the evidence goes to prove that this operation is carried on in the streams above Dulverton, where they are protected from their enemies at this dangerous period of their existence by brushwood, which comes down close upon the water's edge.

I am happy to be able to report that the Exe already shows symptoms of improvement, for F. W. Knight, Esq., of Simon's Bath, near South Molton, writing on the 11th November 1867, informed Mr. Ford, the honorary secretary of the Board of Conservators, that several salmon had been seen in the Barle, the first which had presented themselves during the present century. The river Exe is one of the most promising rivers of Devonshire, and I sincerely trust that a passage for the fish over the weirs, which have caused the ruination of this fine river, may soon be effected.

The Frome, Dorsetshire,

Is 34 miles in length, and has a catchment bason of 206 miles. It is naturally a salmon river, but has been terribly neglected. Up to three years ago, a barrier, called a bar-net, was placed across the river at Wareham, and stopped almost every fish that came up; the use of this is happily obselete. This formidable obstruction being done away with gives great hope that the damage done by it may in time be repaired. This fishery used to begin at Whitsuntide and end in the fall of the year; the fish running up the river mostly when the water is mud-coloured and thick. Since the net has been taken away, the fish have been slowly increasing. Three or four years since no fish were caught between the estuary and Wareham. In the beginning of the year 1867 a salmon supposed to weigh about 16 lbs., was seen floating down the stream; and this year, though many have not been caught during the fishing season, more fish than usual (according to the water-bailiff's report, as many as 120 to 140) have been seen on the spawning beds; and one weighing about 25 lbs. was taken by him out of a side stream and put into the main river. In order to have fish in a river, two conditions are necessary—viz., breeding beds in the upper streams, and feeding grounds at the mouth of the river; the Frome has both. Poole Harbour forms a magnificent feeding ground, and there are many fine spawning beds in the upper waters.

The tidal water is said to flow up as far as Holme Bridge, and up to this point there is no obstruction whatever. Arriving at East Stoke, the salmon would find a mill. There is a ladder affixed a little above the mill; no fish has ever been seen to go up this ladder; it is rarely kept full of water, and it appears

to me to be a great deal too steep and too short: it has three steps, the openings are 10 inches, and the width of each box is 4 feet 10 inches.

Turning back from this point, the salmon would attempt to ascend the main stream; they would there meet with a weir with four iron hatches, through which it would be very difficult for them to pass. I think it most desirable that a salmon ladder should be erected at this point, and that the fish should not be allowed to ascend the backwater of Mr. Foote's mill. Fortunately for the fish, there are fine reaches of spawning ground just below the bridges; one of these is just by the mill, and the other by the railway. Two years ago a fish of 20 lbs. weight was accidentally killed in the hatches of this mill, and last month a fish of about 6 lbs. in the eel-racks. Passing upwards from Stoke Mill, we come to Bindon Abbey Mill, in the occupation of Mr. Sly. Here there is a ladder 47 feet long; the chambers are 4 feet 2 inches, the steps 1 foot 8½ inches in length, the bottom opening 1 foot 2 inches. It cost 26 *l.*, but the material to make it (of stone and brick) was on the spot. I regret much to say this ladder is totally useless, as the lower opening is so placed that no fish can discover it, and if he did find it he would have some difficulty in going up it (at least at the time that I inspected it), for the simple reason that a great deal too much water was allowed to come down it. This ladder, I think, might still be made serviceable, if a passage were cut from its lower end, so that the fish in the mill-tail might find it out. This has, since my visit, been done. Mr. Sly informed us that some years ago four salmon of 20 lbs. weight were caught in the eel-rack of the mill in one night. Last season four fish were seen making their nests near the mill, two above and two below, and Mr. Sly thinks the fish will pass through his hatchway.

Smolts have been seen going down in the months of April, but not many of late. There are fine spawning beds above this mill as far as Moreton, and a particularly good one, with a deep hole as a resting-place, above Wool Bridge.

The salmon that get above *Stoke* Mill have two great dangers to encounter: they get enticed into the streams used for irrigation purposes, and when the water is turned off, the watermead men can easily catch them; these men were also in the habit of destroying all the spent fish they saw. I strongly advise Boards of Conservators, on rivers of this description, to take all these watermen into their employ in some way or another, on the condition that they do not disturb the spawning fish when making their nests—prevent the smolts and kelts from getting into the water carriers—and return them into the main stream should they get into the water carriers. This is a most important point in the cultivation of such rivers as the Frome, and should be seriously attended to. I am glad to hear that since this river has been made into a Salmon Fishery District, these men are regularly paid an annual gratuity as long as they behave well. Mr. Sly thinks that the fish are sometimes killed by the red or iron-water, which comes off the bogs after heavy rain; he has known jack killed by it.

Taking all things into consideration, I have a high opinion of the capabilities of this pretty little river the Frome. The estuary is good; the obstructions by no means insurmountable; there are no pollutions; and the landowners and tenants seem favourable to the idea. The greatest credit is due to Charles Hambro, Esq., of Milton Abbey, for the energetic way he has already worked in the interests of the river, and for his setting an example to others of establishing an apparatus for hatching fish by artificial means. By his exertions also, sufficient annual subscriptions have been raised to keep a water-bailiff on the river, and to pay rewards to the watermead men.

The Ribble.

The Ribble is a river which, under proper management, would become one of the most productive rivers in the kingdom. There are two reasons for this: firstly, that its natural advantages are very great; and secondly, that its preservation is carefully looked after by a most energetic Board of Conservators. There are, nevertheless, many difficulties which still remain to be solved. Notwithstanding the amount of the great drains upon the fisheries previous to the Act of 1861, the Ribble seems to have held its own better than any other river

river against all modes of fishing. I cannot but believe that the Ribble has won the day against the nets in consequence of the destruction of the stone weir at Brockholes, which was formerly situated a short way above the point of spring tides; the fish, therefore, have access to about 30 miles of good spawning grounds. If, therefore, the absence of this one weir can produce such a good effect upon a river, it would follow that if more of the river were opened up, the produce of the fishery would be increased in proportion. With this idea, I have examined a large portion of the Ribble. There are some small brooks, especially "Grindleton Brook," that are well adapted for spawning grounds for "morts" and "sprods," and although these may be considered as somewhat inferior in value to salmon, yet every opportunity should be given them to increase in the rivers to which they resort. I have, therefore, advised an inexpensive plan, upon the pool system, to be adopted at Grindleton Brook, as well as at many others which flow into the river.

The first and most important obstruction in the Ribble is the weir at Low Moor, near Clitheroe. This is a solid wall of masonry built right across the river. It is almost impossible for a salmon to jump over this weir, though, in rare instances, I have been informed this has been done by "fresh run" fish. When I was there not a drop of water was running over the weir, except a small stream at the mill side. Upon the top of the weir, planks, adding about 20 inches to the height of the dam, had been erected so as to pond back the water: they were fixed upon hinges in such a manner so as to give way when heavy floods come down. Mr. Thomas Garnett, the proprietor of the weir, pointed out and explained the action of a board or hatchway which, although forming part of the weir, could be made moveable upon its further end, and be lifted up like the blade of a knife from the handle. This baulk is 17 feet long, and 30 inches deep: when it is lifted up it makes an opening in the dam itself. I was informed that often when this baulk ought by law to have been up it was shut down. Below this pass large beams are fastened across part of the bed of the river so as to cause a run of water 61 feet in length, at an angle of one in 21. Mr. Garnett informed me that he caused this hatchway to be raised day and night when the mill could spare the water, but that during the dry months the mill absorbs the whole of the water of the river; and since the year 1838 the pass had been opened 181 days out of the 365. When the water is low the pass is closed. Mr. Garnett argues that the fish are not then running, and that therefore the closing of the pass does no injury to the river. Nevertheless, I consider this dam, for this very cause, to be the more dangerous, inasmuch as when the moveable baulk is opened the flow of water down the natural bed of the river entices the fish which are lower down the river up to the dam. If this baulk were suddenly closed, the water would at once run off from the places where the salmon had assembled, and they would be left stranded in the shallows, or in the pools below, where they could be captured with the greatest ease. I therefore look upon this weir as worse than a "fishing mill-dam": for it is capable of being used as a "fishing trap" of a deadly character.

This matter has been under the inquiry of the Special Commissioners, who, considering that the evidence that this weir had been used for the "facilitating the catching of fish" had been well established, ordered: "That the planks on the top of the stonework of the dam, which were shown to be first used since 1827, shall be removed, and also that the baulk be removed, and two inches more under the baulk along the whole length of such baulk, and that this opening shall be permanent during the year." Mr. Garnett appealed to the Court of Queen's Bench, and the decision of the Special Commissioners was, I much regret to say, reversed. I now beg to quote in full the decision:—

After fully hearing the counsel for the Conservators, the Lord Chief Justice said it was not necessary to hear the counsel for the Appellant, the mill-owner, as the Court were of opinion that the order of the Commissioners could not be sustained, and that, therefore, their judgment must be in his favour. The case was one of great importance to the mill-owners on the one hand, and the salmon fisheries on the other. It was clear that the Legislature, in the Salmon Act of 1861, had in contemplation three classes of obstructions or nuisances to the salmon fisheries, of which it was only necessary to mention one—namely, "fishing milldams," defined to be dams used or intended to be used partly for the purpose of supplying mills with water, and partly for the purpose of catching fish. But a dam might be erected for the legitimate purpose of turning the water on to the mill, which would be perfectly lawful so that it did not interfere with the rights of other riparian owners. Such a dam, indeed, might in its consequences or effects upon the bed

of the river—by means of making pools—render it more easy to catch salmon. And if the dam was erected or maintained partly for the purpose of enabling the mill-owner so to catch the fish, it would be within the Act and within the powers of the Commissioners. It was not, however, alleged that the dam in this case had been so erected or maintained, although it did appear that occasionally the owner took advantage of the facilities it afforded for the catching of the fish. But as he had a legal right to use the dam for the purpose of turning the water on the mill, the Commissioners had not—merely because he occasionally took advantage of the state of the river which it caused in order to catch the fish—the power to deprive him of the dam. The question was whether it was wholly or in part maintained for the purpose of catching fish. If so, then no doubt it was within the powers of the Act; for it would be a "fishing milldam." And the Act said that if the dam were used for the twofold purpose of the mill and of the fishery it was such a dam. But such was not the state of facts here. The dam was not erected or kept up for the purpose of fishing, and although now and then used to catch fish, such use was casual, incidental, and it might be almost said "accidental." The case, therefore, was not within the Act, so far as regarded the power to make such an order as this; and the Commissioners in making such an order had gone beyond the limits of their authority. The appeal, therefore, must be allowed, and the order set aside.

Mr. Justice Shee and Mr. Justice Lush delivered judgment to the like effect.

Appeal allowed. Judgment, for the appellant, that the order be set aside.

This decision has been most unfortunate for the interests of the salmon fisheries throughout the kingdom. It is a precedent which is and will be continually quoted. Upon this decision the Ribble Conservators remark: "Prior to the passing of the Act of 1861, all such dams in the Ribble and its tributaries might have been diminished, at the expense of the owner, under 1 Geo. 1, s. 2, c. 18, this statute was repealed by the Act of 1861. In this particular, therefore, recent legislation has worked an injury to the fisheries of this and other districts." They then go on to recommend that the powers of the Special Commissioners should be extended to all weirs and dams. In this idea I cordially agree with them.

If the recommendations of the Special Commissioners had been carried out, I think the Board would have been satisfied; at all events, they were willing to have tried for a time the plan recommended. I do not think matters will be allowed to remain *in statu quo*, but that further action will be taken eventually.

Since the decision in favour of the legality of the Low Moor Weir, I have received a letter from Mr. Garnett, in which he states that "he is, as he always has been, desirous that the weir at Clitheroe should have as good a fish pass attached to it as can be devised, provided that the fish pass does not affect the stability of the weir, the supply of water to the works, and, at the same time, has the sanction of the Secretary of State." I am now in communication with Mr. Garnett on this subject, but the great difficulty is in allowing the salmon a passage at "all times of the year." A free passage may be possible in times of abundance of water in the river, but in the summer time the mill takes the whole of the water, and if it be desired to catch the salmon, the facility for so doing will still remain, unless there is a full supply of water *always*, or at least 12 out of the 24 hours, running down a good and effective pass into the river.

The next barrier in the river is Sawley Weir, but this is not a very great impediment. Above this is a tributary, "Holden Brook," which is blocked by a natural waterfall, and I fear will be difficult to "bridge" for the ascending fish; but there are about two miles of fine spawning ground above. At Gisburne there is a weir, the property of John Peel, Esq. A tree or a plank fastened diagonally across this weir would concentrate the water upon it, and assist the fish considerably; a grating is also much required at the mill-leat at this weir, and I have explained the kind of grating best suited for the purpose. At Settle there is a weir 4 feet 6 inches high in the middle, and 6 feet at the sides, which quite stops all further progress of the fish upwards; there is, as far as I can observe, no pool at the foot of the weir, and the fish being headed back, I was informed, spawn in large number near a tree on the lower side of Settle Bridge. I think that a pass may be erected on the town side of this weir—or, better still, in the centre—upon the principle of that which has already proved to be successful on the Canterbury Stour. I shall press the Conservators to make a pass over this weir. The proprietor has offered to make a sluice during the next summer in this weir under certain conditions; but the working of Dinsdale pass makes me fearful of the expediency of doing this. I learnt from an old man that two salmon, one about

about 6 lbs., the other about 15 lbs. to 20 lbs in weight, had been caught above the falls. This was in a year that Settle weir had been swept away by a flood. Below the bridge at Settle, viz., King's Mill, a grating is much required for the mill-leat. The up fish sometimes ascend an underground covered channel of considerable length, nearly a quarter of a mile long; a grating at the lower end of this underground passage is most desirable. The law would do well to compel millers to put up these gratings at their own cost. These mills cause much danger to fish; it is reasonable that the mill-owners should provide against it. I was much surprised to find that a short distance above the weir at Settle the whole bed of the river was perfectly dry for about a mile in distance. The water which should go down the bed of the river I found was blocked up by a stone weir which had a slope of 15 feet, and made a difference in the depth of the water of about 5 feet, and upon the top of the weir had been placed thick boards 14 inches high, which of course further impeded the water As there is a fish trap affixed to a pond which is kept supplied by water headed up by this weir, it ought to come under the denomination of a weir that "facilitates the catching of fish." Whether this be the case or not, it is another instance of the necessity of powers being given to the Special Commissioners to inquire into the legality of *all* weirs.

The stream of the river was diverted by this weir entirely out of its course into an artificial channel which worked two mills. The mill wheels and the weir above mentioned, combined with the obstruction of the Settle Weir below, quite prevent any fish making use of the twelve miles of spawning grounds above Settle. I nevertheless examined the remains of a weir which had been thrown down by the floods, belonging to Mr. Ovenden, and called his attention to the provisions of the 25th Section of the Act of 1861. Nothing as yet has been, I understand, done towards rebuilding this weir.

Higher up the river, the river (now narrow) falls over a rock into a deep pool, forming " Stainforth Force :" it would be desirable, if possible, to pass the fish over here. I explained to the Conservators how it might be possible, by taking advantage of a natural reef of rocks a few yards below the waterfall, so to raise the water that the fish being assisted by a deep pool might be enabled to pass up it when there happened to be a fresh in the river. I also explained a plan whereby it might be possible for this fall to be made available for fish in the winter only, as the proprietor was unwilling that the beauty of the falls should be injured. Many visitors come to it in the summer, and he was unwilling that it should be permanently lowered. Next summer the Board hope to be able to effect these alterations, thus opening up the entire river.

There appears to be some objection among some of the proprietors above Settle to allow any salmon to come up into their property at all, as they seem to fear the trout fishing thereby may be injured.

In the neighbourhood of Clitheroe, I was grieved to find great pollutions. There is a paper-mill at Pendleton Brook. The water in this brook was formerly pure, now it is terribly polluted. I was informed that on the 4th of November 1866, during a flood, salmon ascended it from the Ribble; they were seen spawning at night, and the next morning 13 were picked out of the brook dead, and several were found dead below the junction of Pendleton with the river. I learnt also that the late Mr. Thompson caught the refuse that causes this pollution from the mills with catch-pits, but that these are now no longer in use. The pollutions placed in this brook are, I am informed, soda used for washing Esparto grass, chloride of lime, and boiling water.

The pollution from this brook affects the river for a considerable distance from the point where it joins it; people cannot drink the water, and the "up fish" always avoid that side of the stream, and fly-fishing is often spoilt for many miles down the river. I can see no reason why the catch-pits should not again be put into operation, and the law ought to be such as to compel the abatement of these public evils. I went a long way up the River Calder, a fine tributary of the Ribble; the water here is totally unfitted for fish to live in. I trust the Pollution Commissioners will shortly examine and report strongly upon this terrible evil. It is a question not of fish alone, but of the health of the inhabitants on the banks; and the population on the banks of this river is very dense.

There are other matters connected with the Ribble that require serious consideration. 1st. The question of "haaf" nets. These are nets somewhat like an

enormous landing-net. Men stand in the river (in the estuary) and catch the salmon as they swim with the tide. It has not yet been decided whether these are or are not "fixed engines." They pay each a license of 2 *l.* 10 *s.*, and 77 "haaf" nets are licensed, producing the sum of 192 *l.* 10 *s.* towards conservation. One argument adduced in their favour is, that the amount they produce towards conservancy is an equivalent to the number of fish caught. It must be recollected these "haaf" nets cannot be used every year, nor every day in the legal fishing season.

2nd. The question of licenses. It appears that the draft nets at Preston have caught, during the last year, salmon to the extent of many tons weight, and yet the owners of these nets pay only a 5 *l.* license. The owners of the upper nets, who catch only a few fish, have to pay the same sum of 5 *l.*, and do not get anything like the same amount of fish. One "haaf" netter cleared 100 *l.* in the season, and many others made large sums. It is proposed by the Conservators, to request the Home Office to be allowed to reduce the licences of the upper proprietors and to heighten those of the lower proprietors, if this be legal, a point not determined, the construction of par. 2, sec. 34, Act 1865, being doubtful.

3rd. The upper proprietors do not get their fair share of the fish, and it is on their property that the stock of fish is reproduced. They consider that an alteration of weekly close time may be desirable, giving the fish a run, unobstructed by nets, either as proposed by the Conservators, from 6 p.m. on Saturdays to 6 p.m. on Tuesdays, or a close time in the middle of the week, say from 6 p.m. on Tuesday night to 6 a.m. on Wednesday morning. The first plan some of the Conservators prefer, because it would enable the fish to get well up the river to the upper proprietors; and, 2ndly, because it is more convenient to the fishmongers at Preston. The anglers, the real supporters of the rivers, would then have a chance of catching fish and be in some measure rewarded for their trouble in preserving. The feeling on the part of the anglers is so strong that everything should be done to conciliate them. This matter should be left to be decided by a Bye-law passed by the Conservators, subject to sanction of the Home Office.

I had a long discussion with various conservators relative to the alteration of the mesh of the net after the 15th of July;—they wish that a three-inch mesh should be used after this date. The smaller fish (say under 7 lbs.) would thus escape the net. They would go up the river, where, either, 1st, they would be caught by anglers; 2nd, deposit their ova and increase the stock; or 3rd, return to the sea, and come back the following year, increased both in size and value. The legalisation of the three-inch mesh would also increase the number of sea trout in the river. This point also, as well as the use of trammel, armour nets, &c., should be determined by a Bye-law, subject to the sanction of the Home Office. There are other matters which as they bear equally upon other rivers as well as the Ribble, I shall not here mention, but would beg to refer to the suggestions of the Ribble Conservators.

I cannot, however, conclude this report without bearing my testimony to the very able and energetic way in which the welfare of this most valuable and productive river is guarded by the Conservators, both as a body and as individuals.

Rivers Sciont, Gurfrai and Llynfi District.

These rivers were only formed into a district in April 1867: I look upon two of them, viz., the Sciont and Gurfrai, as most promising salmon rivers. They not only have natural capabilities, viz., four lakes, pure water, and nice tributaries, but the advantage of a most energetic Secretary, H. P. Manley, Esq., of Bryuteg, Caernarvon. My colleague and I first examined a waterfall at Nant-y-Betws, which, except at time of floods, does not allow the fish to get up into Quellyn Lake; and we explained to Mr. Manley how it would be easy to adapt the natural conformation of the rocks so as to make a series of pools* and enable the fish to pass without difficulty. This is important, as there are many tributaries fit for spawning fish above Nant-y-Betws. Near Pont Sciont a ladder had been affixed on the

Forsyth

* This has been done at a considerable expense, but no estimate can be yet formed of the numbers of fish passing these falls.

Forsyth plan; my colleague and I agreed that it was useless; it is 14 feet long and 3 feet 6 inches wide. "When the fish began to run, from the frequency of the divisions, the water (when high) became so twisted and troubled that fish of any size could not get up. The lowest compartment was so deep in the pool that fish, in attempting the ladder, struck their noses against it, and turned away; however, when each alternate division was removed, the fish got up pretty freely; still it is too narrow, and not by any means perfectly constructed to assist the numerous fish, heavy with spawn, which exhaust themselves in vain efforts to ascend the weir." A baulk of timber has been placed diagonally across the weir, with spurs at intervals of five feet, or thereabouts, attached, to check the continuous flow of the water; this, I hear (although placed during a heavy flood, and therefore not so perfect as it will be arranged when the water becomes low), was of great assistance to the fish, and many have been seen to avail themselves of this simple device. This plan was suggested at our visit by Mr. Walpole and myself, and certainly has proved to be a success. These rivers have been carefully watched, and the number of "Redds" have been greater than ever was known in the district. Some 14 or 15 illegal nets have been seized, as well as other illegal instruments, so that the poachers have been rather at fault, having lost their tools and implements of destruction. This season has been favourable for spawning, the rivers were full of water and free from ice. The River Llyfni has not been considered worth so much attention as the rivers Sciont and Gurfrai: it is short, very rapid, and has few pools, and it rises and falls rapidly; but when funds are more abundant the Conservators hope to give it more care and watching.

The Severn.

I began the examination of this district in conjunction with my colleague at Powick Weir, on the River Teme, an important tributary of the Severn. There is a handsomely built stone salmon ladder here, but it had two serious faults; the opening at the top admitted too much water, and the consequence was that the fish were knocked back.

The second fault was that the salmon found great difficulty in getting into the bottom of the ladder, another step must therefore be placed to help the fish when the water is low; this difficulty does not exist when the water is high, but the principle that fish should be allowed to pass "at all times" should be observed. We also advised that certain alterations should be made by means of boards placed upon the stops towards the upper part of the ladder so as to deepen the pools. We explained the details of what was wanted to Mr. George, the clerk of the Board, and to Mr. Willis Bund, the proprietor of the weir. On my second visit to this weir, in February 1868, I was well pleased to find that the alterations (which it is only fair to say had also been suggested by Mr. George, the Hon. Secretary of the Board of Conservators), except the alteration at the foot of the ladder, had been carried out, and there can be no doubt but that these alterations have been effective, for Mr. Bund informs me that, "After the alterations in the Powick Pass there was no fresh on the Teme till the 14th January 1868 that would take salmon over the weir. In the first week in January Mr. Youl, with the permission of the Severn Board of Conservators, endeavoured to take some salmon at Bransford, the next weir, and at the first haul of the net caught 17." Mr. George also informs me that three and four salmon have frequently been seen at the same time in different chambers of the ladder. He himself saw, on December 25, a fine fish take it. This proves, therefore, that in some instances, the Forsyth ladder may be altered at a small expense, so as to pass fish over. The flow of water through this pass has been regulated by a flood guard upon the plan suggested by Mr. Alexander Miller of Chepstow (the writer of an able report on the Severn), and it has proved to be a perfect success.

The apron of the weir by the side of the ladder varies from 40 to 45 feet. We recommended that a natural hollow in the weir should be slightly increased so as to give a run for the fish. We have also recommended that a board should be placed diagonally upon the weir. These plans will be put in practice next year by Mr. Bund, and he deserves the thanks of the Board for the pains he has already taken with this weir.

At this weir there is an eel-trap, the construction of which I cordially recommend to be adopted by all Boards of Conservators. By a simple and inexpensive contrivance the gratings can be lifted up (somewhat like the wings of a bird opened over its back), and taken entirely out of the way of the fish; they can as readily be restored to their places. I understand that Mr. Bund raises these gratings from Christmas to the 15th of July, so that they in no way interfere with the descent of the smolts or kelts; these gratings are used for catching eels during the autumn months only.

I next proceeded to examine the weir near the City of Worcester, namely, *Diglis Weir*, this is a navigation weir, and I regretted to observe that a baulk of timber had been placed upon the top of the sill of the weir. In low water this weir is a complete barrier to the further progress of the fish. I was informed that in slight freshes the fish get up the weir as far as the sill, but are knocked back by it; this sill should certainly be made of the same shape and angle as the face of the weir itself, and fish should be allowed a free passage at all times.

There is a salmon ladder built upon this weir; the rush of water down this is too great for the ascending fish, and there is an objection to place a flood guard at its entrance, inasmuch as it would interfere with the navigation. Nevertheless as the river (as I understand) at this place is never navigated, except in very high floods when the water is many feet above the top sill of the weir, I think that this objection can hadly be urged. The guard might be made so high that everybody would see it even in the highest floods.

Diglis Weir is one of the most important obstructions in the district, as it keeps many valuable fish back when water is low. The weir is very long, and even should the Severn Navigation Commissioners consent to erect a flood guard, I think, with Mr. George, that it is very advisable that the western angle of the weir should be contracted and lengthened out (after the manner of Bevere) and a low weir erected across its corner at its foot. Baulk's of timber might also be tried, placed diagonally across the face of the weir.

In the west corner of this weir, fishermen are in the habit of setting wicker baskets for lamperns; these are a great obstruction to salmon going up, and sometimes catch the fish in their ascent. The management of these should be seen to, and the time of fishing regulated. The conservators should have power to make Bye-laws to apply to such cases as this, subject to the Home Office.

The next weir upon the Severn is *Bevere* Weir; this offers no obstruction to the fish, inasmuch as a space of 10 feet has been cut away from the baulk at the top of it on the east side, and the baulk at this place happening to be at a considerable angle with the weir, causes the water to flow in a steady and deep stream, through which the fish can ascend without difficulty. I look upon this weir as most instructive, inasmuch as a free passage for the fish is given at all times at a small expense; the only objection to it is that the fish may be subject to poachers, but the stream is so rapid that poaching would become difficult.

Above Bevere we come to *Holt Weir*; here also a ladder has been erected, but I fear it must be defective in operation for obvious reasons. There is a natural lead for the fish in the west corner of the weir, and Mr. Williams, the resident engineer of the Severn Navigation Company has cut out (according to his promise made to myself and my colleague), about four feet from the baulk at the top of the weir, so as to make a natural pass somewhat resembling that at Bevere; this is a decided assistance to fish going up. This ladder also requires a flood guard. I regretted to see a baulk of timber on the top of this weir also. It is a question whether the placing of these baulks on either of the weirs is legal or not, inasmuch as they increase the height of the weir, and have all been, I am informed, erected since the passing of the Act of 1861.

The next weir is *Lincomb*, it is composed of large stones; at the west side there is a good lead for the fish, but the water bailiff complains that the fish are knocked back; re-arrangements of the stones here is desirable. With a flood of water coming from the upper country down the river the fish pass easily: as many as ten salmon have been seen to go over in ten minutes; there is no lead on the east side of the weir, the fish have good hiding places among the big stones at the foot of the weir. Since our visit I have been informed by Mr.

Mr. George, that this weir has become much worse for the passage of fish. A pass of some kind should be made here.

At Shrewsbury I inspected the New Park Chemical Works, where tar is made to yield creosote, naphtha, and sulphate of ammonia; I examined some catch pits and a ditch, and although occasionally a certain amount of pollution may get into the river, I do not think much injury can be done to the river by these works if the catch pits are constantly properly attended to. Most serious mischief, I understand, was done to the river in the winter of 1866, by these works; but this was before the catch pits were made.

From Shrewsbury we proceeded to Welshpool and examined the Weir at Pool Quay; there is a well-built ladder upon this weir which is deficient in action; there is either too much water in it flowing down from above, or the water below is not sufficiently high to enable the fish to get into it; the first fault has been remedied by a flood guard. After a careful examination my colleague and I came to the conclusion that the best and cheapest way to assist the salmon over the weir would be to raise a second weir at a point where the river narrows; this would have the effect of raising the water to a considerable distance up the side of the weir, and enable the fish to get into the ladder. This, we trust, will be done in the course of the next summer as soon as the water will permit. Lord Powis has kindly approved of the plan.

Near Newtown, there is a weir belonging to Major Drew, of Milford; the weir is perpendicular to the bed of the stream, and fastened to the top of it is a coping projecting outwards and downwards like the eaves of a house roof. This coping is about four feet wide, and must act as a most perfect obstruction to fish; the weir is between five and six feet high. Nearly 20 salmon were caught between Milford Weir, and a distance of five miles down the river this season; this is an exceedingly difficult weir upon which to erect a pass. I have, however, suggested that pieces of board should be nailed upon the top of the coping, so that when the floods are up nearly to the level of it the fish may have a chance of ascending; and I think it advisable that a second weir should be built at a point selected by my colleague and myself, at a bend in the river below the weir. We should, however, much like the opinion of an engineer on this point. There are one or two weirs at Newtown, but I do not think they present much obstruction to the fish; several improvements have been recently made in them. At Llanidloes the weir was in process of alteration, and my colleague and I made arrangements with the builder to dispose some large stones which lay at the foot of the weir in such a manner that the fish should be able to pass up easily by means of a series of pools; should this pass answer, a large amount of spawning ground will be opened up in the tributaries, viz., the Hafran, the Briw, the Brochan, and the Tylwch. Near Llanidloes is a lead mine called Bryn Postig; this was said to be doing mischief to the river; we found, however, that it is perfectly harmless; the washings of the lead-ore being sent directly on to a waste piece of bog land which acts as a filter, and the water from the mines escapes through this filter down the brook which communicates with the river; it was interesting to observe that rushes were growing on the ground, watered with drainings from the lead-ore, and that they seemed to do well; experiment may prove that rushes may form a valuable addition to any catch-pits that may be made for the purpose of collecting washings from mines.

At Llanidloes the tributary Clywedog falls into the main stream; close to the junction is a very bad weir, and there is a question if it has not been raised in height these last few years. It would not be a difficult task to make a pass over this weir on the west side; but supposing the fish to have got over the weir, they would meet with another a little way further up, which can certainly not be passed except in time of flood. The upper grounds of the Clywedog, I understand, contain better spawning grounds than the Severn itself above Llanidloes; but unfortunately at the head of the Clywedog there are lead-mines, called the Dyfugyn Mines, the property of the Cambrian Mining Company; and I fear, therefore, that even if the fish were passed over the two weirs just mentioned, either they or their ova might be destroyed by the lead mines; we were informed that the stream is now quite barren of fish, although a few years since both salmon and trout abounded there.

From Llanidloes I proceeded to examine a lead mine, the property of Earl Vane. At Vane-hill, on the Caeryst Brook, a series of five catch pits have been

erected, but the water running out of them into the main stream was highly charged with mud in the shape of impalpable powder. I observed that the water used for washing the lead is kept distinct and separate from that which drives the wheel, and thus the catch pits act very much better than when the two waters are mixed together.

I have suggested that the water from these five catch pits should be taken down the side of the field by means of a new ditch which might be easily made with a plough on to a piece of waste land at the bottom of the field, where it might be made to filter through it into the brook.

We next proceeded to examine the Dyfugyn Mines; these are not very large mines; the manager informed us that if the men left off work at 12, and the water in the catch pits was allowed to settle, it might be run off nearly clear at 4 p.m.; this is most important, inasmuch as it would lead to the idea that a system of double catch pits would be of great service to the fisheries.

We made suggestions as to improvement of the catch pit system at this locality, and have written to the owners to say what plan we think would be desirable.

The Severn is the largest salmon producing river in England; its catchment basin is about 4,400 miles, and the extent of spawning ground upon it which might be made available is very great. The tributaries, however, are much blocked by mill weirs; there are said to be 73 of these (see Mr. Miller's report). Of these there are about 40 over which some salmon could pass in time of flood, while others afford more serious impediments. If these mill weirs were made passable for fish, no doubt the produce in salmon would be much increased. It has been estimated that less than one year's rent of these mills would make fish passes over every weir, and without materially interfering with the water power of any mill.*

The spawning stock in the Severn this year has been very great. Mr. George writes me: "December 1867.— We have an immense quantity of fish in the river now; high up a tributary of the Severn, in Derbyshire, my brother counted 1,044 leaps of salmon at one weir in two hours."

The Canterbury Stour.

This pretty little river is, I am pleased to say, now under cultivation. In the commencement of 1866 I gave a public lecture in the city of Canterbury on the "Cultivation of Salmon Rivers." At this lecture most of the influential gentlemen of the neighbourhood were present, and I think I can fairly say, without boasting, that this lecture was the commencement of the formation of the Stour into a fishery district.

The total length of the Stour is 52½ miles, and in its course it is joined by the Lesser Stour, 12 miles long; the catchment basin being 291 square miles. It rises from chalk hills, and the water is naturally pure and sparkling. There is a good estuary in Pegwell Bay, in which the food of the smolts (shrimps, sand eels, &c.) are found in abundance. Stake nets, for the purpose of catching flounders, &c., are erected in this estuary. They are carefully watched by the head water bailiff, who informs me that, as yet, he has no proof that they have done harm, but when a good stock of salmon is made for the river, these nets should be inquired into. For many years past the Stour has been worse than neglected. I shall proceed to point out some of the disadvantages under which it has laboured.

The fish running up to the sea arrive at the town of Fordwich, now only a village in size; here they meet with gratings placed right across the river, and fixed by means of posts; these gratings were so arranged as to leave an opening in the centre, and into this a net was fixed, and it was at work every night from the month of June to September. There were 14 claimants to fish captured in this net. The result, of course, of this terribly destructive mode of fishing was to destroy nearly every fish in the river; and from the man who had

* *See* "The Salmon Fisheries of England." 1868: Lewis, printer, Bath. Price 1*s*.

had the management of the net I obtained the following return of fish caught for the last 28 years.

RETURN of FISH caught at the FORDWICH FISHERY on the STOUR.

Year.	Number.	Year.	Number.	Year.	Number.	Year.	Number.
1838 -	9	1845 -	52	1852 -	89	1859 -	3
1839 -	12	1846 -	20	1853 -	6	1860 -	13
1840 -	37	1847 -	63	1854 -	28	1861 -	4
1841 -	13	1848 -	35	1855 -	24	1862 -	30
1842 -	26	1849 -	122	1856 -	29	1863 -	141
1843 -	23	1850 -	34	1857 -	25	1864 -	6
1844 -	120	1851 -	81	1858 -	12	1865 -	3

I am happy to say this fixed engine is now utterly abolished, and a lease of the right of fishery has been obtained by the Board of Conservators from the Mayor and Corporation of Fordwich, of which lease M. Kingsford, Esq., Hon. Sec. of the Stour Fishery Association, has given me the heads, as follows:

By indenture dated the 28th of June 1866, the Mayor, Jurats, and Freemen of the town of Fordwich have demised to the, most honourable the Marquess of Conyngham, the right honourable Earl Mount Charles, Matthew Bell, Esq., and Francis Philips, Esq., as trustees for the Stour Fishery Association, the fishing weir and fishery and the exclusive right of fishing in the river Stour, within the town and liberties of Fordwich, as held and exercised by the lessees or their predecessors from time immemorial, for the term of 21 years from the 21st day of May 1866, at the yearly rent of 10 *l.* during the first two years, and during the remainder of the term the yearly rent of 5 *l.* and the royalty of the first salmon or salmon trout caught, and the further royalty of one salmon or salmon trout in every 10 caught by any net or fixed engine within the said liberties. The lease binds the trustees to preserve the fishery and use the weir as before accustomed, subject to the Salmon Fisheries Acts.

Supposing a fish to have somehow passed this Fordwich net, its further progress would be stopped by two mills, one on each of the branches into which the Stour here, for a short distance, divides itself. These mills are called the White and the Black Mills. At the Black Mill there was formerly a trap; this is now done away with. Both mills were perfectly impassable to the fish. A ladder has been erected at the White Mill; it is of an expensive character, and well built; its plan is that of Mr. Forsyth. It is defective in action, and the fish will not (or more probably cannot) ascend through it. The defective mechanism of the ladder is under an archway, and cannot be seen unless the person descends into the ladder and crawls down the arch. I have suggested that this ladder should be so altered as to form the lower portions of it into two pools, and I shall be much disappointed if the fish do not use it when the alteration has been made.

At the White Mill a ladder, or rather a pass, has been placed, after a design by myself and M. Kingsford, Esq., the Hon. Sec. of the Association, and I am happy to say it has proved of great use. In the last annual report of the Committee of the Stour Fishery Association to its members the following statement is made:

"A salmon ladder has been erected at the Black Mill at Sturry, upon a plan recommended by Frank Buckland, Esq., and which has assisted in opening up a large spawning ground reaching nearly to the city of Canterbury. The entire cost of this ladder, as will be seen by the accounts, was 15 *l.* 8 *s.* 6 *d.*, being 37 *l.* less than the one constructed on the Government plan at the White Mill at Sturry, and both being on the same levels. This new ladder has been proved to answer its intended purposes exceedingly well, as four fish have been seen by the keepers in the act of ascending it, and from very few remaining long in the pool below, there is no doubt that a large number of fish have ascended through it to the spawning ground above. Although the White Mill ladder has been watched at night, only one fish has been seen to pass through it, and many have been seen for days in the pool below. Your Committee, therefore, confidently recommend the adoption of Mr. Buckland's plan in all future constructions of salmon ladders over mill weirs."

Above these two mills the "up fish" would meet with a mill just below Canterbury, also with two mills in the city of Canterbury, and the sewage of Canterbury. Above Canterbury is a paper mill at Chartham. All these mill-weirs, it is hoped, will gradually be opened up as the stock of fish increases, for there is admirable spawning ground at and above Chartham.

The salmonidæ indigenous to the river are what are called by the local name of the Fordwich trout, mentioned by Isaac Walton. They are probably S. Eriox. There are also in the river, I believe, *salmo trutta*, the sea trout, but nets having been carefully kept off the river, I have only been able to examine two specimens. It is a question whether as yet there are any salmon proper in the river. The Association and Board of Conservators have been most desirous to stock the river with salmon if possible, and have acted together for that purpose. An ingenious invention is used by the Commissioners of Sewers on this river called a "blow boat." It is a large barge, from which boards or wings are projected so as to touch the sides of the bank. The water ponding up behind these wings drives the boat forward, and cleanses the river from mud. When the boat is at work a water bailiff is stationed in the boat, and with a landing net catches all the fish that come to the surface in front of the boat; the "Fordwich Trout," and other salmonidæ, he places back in the water on the upper side of the boat, and the jack he retains. In the month of October 1866, no less than 21 fish were thus passed over the boat; two were unfortunately killed, one weighing 17 pounds, the other seven pounds, and in January 1868 a "hook bill" of 21 pounds was found dead. Casts of these are to be seen in my museum. Large numbers of jack have also been destroyed by this means, and also by netting. By the books of the water bailiff I understand that no less than 1,505 jack have been destroyed in the year 1866 and 787 in the year 1867.

Early in the month of May 1866, I presented to the Board of Conservators 20 salmon smolts, ready to go to the sea, hatched by myself at the Horticultural Gardens. They were taken down alive to Sturry on the 28th of June 1866. Some of these smolts were seen for some time in the pool below the Sturry Mill, they then disappeared. On the 13th February 1868 one salmon of about 7 lbs. weight and on the 15th of the same month, four salmon of about the same weight were lifted over the blow boat, before mentioned, by the water bailiffs, and were placed in the river above the boat. This took place about 16 miles distance from the sea. The water bailiffs vouch for these fish being the "*Salmo Salar*," and I trust they are the first instalment of many future arrivals.

In the winter of 1866 I sent to the Association, on behalf of the Acclimatization Society, 10,000 fully developed salmon ova, which were placed in hatching boxes admirably arranged for the purpose, on the grounds of M. Kingsford, Esq., and G Dowker, Esq., and the experiment succeeded admirably, the fish hatching out with the loss of about 1,000. When sufficiently developed, these fish were placed in a rearing pond, admirably constructed at the cost at 49*l.* 17*s.* and fed through a pipe from the main stream. Several of the young fish escaped into the river, through an accident to the gates, and though it is feared that some of them became a prey to eels, that unfortunately made their entrance, there can be no doubt but that a considerable number of these young salmon are now in the river.

In the winter of 1867 hatching salmon ova was instituted by the Stour Fishery Association on a larger scale than the previous year, and the number of about 50,000 salmon are now in the hatching troughs. Many of these I had the honour of presenting, through the French Fish Culture Establishment of Huningue, as well as some spare ova not wanted, for shipment in the "Celestial Queen" for New Zealand. These were presented through W. C. Young and J. Youl, Esqs., by the Government of Otago, New Zealand. Besides these, no less than 17 nests were reported by the water bailiffs in the river between Canterbury and Sturry; the fish deposited their ova in these without molestation.

During the years 1866 and 1867 no fishing by net or rod for the salmonidæ has been allowed in this river, and the Honorary Secretary of the association informs me that the association and the Corporation of Fordwich have now made arrangements for a further jubilee for the fish, so far as all nets are concerned, for the years 1868 and 1869.

Thus, then, it will be observed that in this river the most laudable efforts have been, and are now being made, under the immediate direction of M. Kingsford, Esq., Hon. Sec. to the Board of Conservators, Colonel Cox, of Fordwich

Fordwich, the Earl of Mountcharles, and other gentlemen, and they deserve the greatest credit for their persevering efforts in the cultivation of their river; I trust their endeavours to restore the fisheries may be rewarded with success.

Stour (Dorset and Hants).

A question has arisen whether this is naturally a salmon river or not. The stream is slow and sluggish, and comes from a chalk district; and there are many white fish, such as jack and tench, in it. Salmon, however, are to be found in the estuary, and there are spawning beds high up, on which salmon have been seen. The waterman at Ham Mill told me that formerly salmon in considerable quantities used to be caught in the pound. In 1866 he saw one fish; in 1865, 10 fish; in 1864, 10 fish; five or six years ago 20 fish were seen. For many years he has always seen more than one, and he has seen them making their nests in the month of November. He has also seen them jumping at the bay. He has seen smolts come down in the spring, and has caught them in bait nets. He has seen none this last five or six years; before that he has seen a great many. He thinks the jack eat them. The "racks" at Throop mill have been used ever since he was a boy. There are few trout about. The miller at Mr. King's mill, at Long Ham, has seen a salmon go over the dam when there has been one foot of water coming over it. He has never seen a fish go up the ladder; the top step of this is about four inches below the level of the weir sill, therefore there is nearly always water running over it.

Hatches at Throop Mill.—There are seven passages in the weir, the total length of which is 98 feet; these passages vary from 10 feet 1 inch to 10 feet 8 inches across. There are five bars in each rack. Each rack is 2 feet 7 inches wide and 4 feet 8 inches high. The space between each bar is $3\frac{1}{2}$ inches. Racks cannot be used when there are floods. When we were there (March 30th) the racks were out and a flood was coming down. There is a ladder fixed to one of the passes; it is 15 feet 5 inches long, and in breadth 4 feet 6 inches. It is faulty in construction. The keeper says four salmon only were caught last year in the pool, and not above 20 in the last 20 years. He had never seen a salmon go up the ladder. He has seen a few smolts on the shallows. Fifty years ago many old fish were caught and put over the weir.

On examining the junction of the Stour with the Avon at Christchurch, it was very curious to remark the difference of the colour in the water, the Avon being clear and brilliant, like clear soup, the Stour thick and muddy, like pea soup. A fresh run fish in a flood might prefer the Avon to the Stour. After a flood, the Stour will remain muddy for a fortnight. The Avon will clear itself in three or four days. When the nets are drawn, many more fish are found in Clay Pool Hole, at the mouth of the Avon, than at Swiney Hall, at the mouth of the Stour. During the summer months the Stour sends but little water down into the estuary.

The fish, in order to ascend either the Avon or the Stour, have to pass the fishermen's nets at the narrow entrance of Christchurch Harbour. The fishermen complain that a 5*l.* licence is put by the conservators on the nets in the estuary. I should recommend that this duty should be levied; more fish will then be able to get up both the Avon and the Stour; and if the upper tributaries be well watched, and passes afforded to the fish over the weirs, the salmon will most certainly increase.

Taw and Torridge.

I visited these rivers, principally with a view of settling a question which had arisen between the Board of Conservators and the owner of a weir at Great Torrington. I shall not here enter into details of the question in point, viz., "whether the weir had actually been raised." Suffice it to say that I was present at a meeting of a Board of Conservators, and explained how matters stood. I proposed an arrangement which I believe to be satisfactory both to the owner of the weir and also to the conservators.

I also visited the Umberleigh Weir on the Torridge, and examined the free pass lately made by order of the Special Commissioners in the fishing mill-dam. The water rushes through it with considerable velocity. A second grating has been placed at the end of the mill-leat, to keep the fish from under the wheel. The owner of this weir is, I am glad to find, anxious for the welfare of the salmon fishery of this river, and especially that salmon shall become cheap enough to be food for the poorer classes.

At the weir above Umberleigh, I examined a grating on the mill-leat: it is one of the best I ever saw. It is made on the principle of a Venetian blind, and the bars are horizontal.

Under the able and energetic care of the Board of Conservators, especially Commander Whyte, of Instow, the interests of these two valuable salmon rivers are carefully watched. The night poaching in the estuary is also greatly prevented by the presence of water-bailiffs, who row about in a boat; though they have often difficulty in detecting offenders, yet that they do much good there can be no doubt.

The Tees.

My colleague and I found the upper waters of the Tees devoted to lead mines, but at the same time there are no doubt tributaries to the river in which the fish can breed. The natural bed of the river appeared to me, as I crossed it at various places, to consist of alternate streams and pools on a gravelled bottom, and there is no doubt that if the lead pollutions could be diminished, the fish would be much increased in this river.

From evidence I obtained, it appears pretty nearly certain that trout will rise when the lead washings are not in the water; Monday morning is the best time for catching them, but directly the hush comes down, they leave off rising.

During our visit to the Tees, we confined our visit principally to the examination of lead mines, and we visited the Wiregill lead mines, the Colbery mines, the Newbiggen mines and the Piklaw mines: the proprietors and agents of all these mines gave and allowed every facility for us to examine them, and we pointed out in almost every case localities where additional catch-pits could be made at reasonable cost. (*See* article, "Lead Ore.") There is a great obstruction in the Tees, namely, Dinsdale Dam: by orders of the Special Commissioners a pass has been made in this dam, but neither my colleague nor myself deemed it advisable to inspect it personally, as the matter was in the hands of the Special Commissioners. (*See* "Salmon Ladders.") High Force is a precipice, and it would be useless to attempt a pass over it, even were it desirable to do so. Joseph Dodds, Esq., is most energetic in the conservation of the Tees.

That the Tees would tell under treatment is evident, for the salmon naturally run up it. In November 1867, the *Durham Chronicle* says: "The Tees is literally alive with fish just now, and on Wednesday they leapt at the rate of a score per second for a couple of hours." This was at the Dinsdale Dam. These fish were beaten back, and doubtless much injured. It seems a great pity that this should be the case, for even if we consider the question in a money point of view, to say nothing of the actual cruelty to the fish, I believe it possible that if steam power were substituted for the water power, now used to drive the mill, and the dam made passable for fish, the gains which would eventually be derived from the salmon fishery would far exceed the gains at present derived from the mill.

The Thames.

Although not as yet a salmon river, the Thames is of considerable importance, inasmuch as it is a source of great amusement to anglers from London, and also to the inhabitants of Windsor, Reading, Oxford, and other large towns upon its banks.

The Thames Angling Preservation Society has now been established for upwards of a quarter of a century under the auspices of the Lord Mayor and the Board of Thames Conservancy, during which period it has carefully protected the fishing interests of the waters in the following manner:

1. By the employment of a suitable number of keepers.

2. By

2. By staking the deeps and the sinking of punts.

3. By the prosecution of poachers.

4. By the cultivation of salmonidæ.

The committee is composed of gentlemen having a thorough knowledge of the river and the fish in it, and they perform the work entirely gratuitously; the river being free for any one to angle in it.

There is little doubt as to the success of the society's operations; and, as a result, where one person formerly fished, there are many now.

The fishery gives employment to a large number of fishermen, who supply punts, and attend upon the anglers.

There is scarcely a river in England which gives such a variety of fishing, from the small gudgeon to the large and magnificent trout peculiar to the Thames. Ultimately it is hoped that salmon may be taken in it.

The society is entirely supported by voluntary contributions, and it deserves public support to keep up its increased staff of river keepers.

Since the winter of 1861, S. Ponder, Esq., of Hampton, and I, have been doing our best, under the auspices of the Thames Angling Preservation Society, to re-establish salmon in this noble river by means of artificial propagation. I subjoin a return of our operations from 1861 to 1868.

Seasons.	Salmon.	Salmon Trout.	Common Trout.	Great Lake Trout.	Charr.	Grayling.	Total.
1861–2 - -	2,300	1,500	30,000	- -	150	- -	33,950
1862–3 - -	7,000	- -	40,000	- -	3,000	2,000	52,000
1863–4 - -	5,500	750	29,700	1,500	3,500	- -	40,950
1864–5 - -	19,500	800	17,000	900	1,200	- -	39,400
1865–6 - -	14,500	900	20,700	1,350	1,300	- -	38,750
	49,800	3,950	137,400	3,750	9,150	2,000	205,050

Many of these ova have been collected by myself through the kind permission of fishery proprietors, but we have received the most generous support from the French Government Piscicultural Establishment at Huningue. This season (1867-8) we have upwards of 70,000 salmon ova in our hatching troughs, as well as a large number of the ova of other salmonidæ. Two ladders have been erected on the Thames, one at Teddington and the other at Moulsey. The Thames Conservancy Board have most liberally paid for their construction.

I cannot help mentioning that an important case was brought before the magistrates at Gravesend in December 1867, when proceedings were instituted under a bye-law of the Court of Aldermen of the City of London, bearing date October the 4th, 1785, which defines the size of various fish that may be taken in the waters of the Thames and Medway. The defendants in this case had taken whiting "under eight inches long from the eye to the end of the tail," the size specified in the bye-law. Large quantities of these whiting had been destroyed, and sold, under the name of "muck," as manure. Upwards of 29,000 bushels, at the rate of from 6*d.* to 9*d.* per bushel, had thus been disposed of. Among the "muck" were also large numbers of young flounders, sprats (called whitebait by the fishermen), herrings, smelts, and lamperns. The prosecution was undertaken in a most praiseworthy manner by the Thames Conservancy Board.

A few days afterwards, 10 other fishermen were summoned before the magistrates at Orsett, in the county of Kent. An attempt was made to show that the fish in question were not young whiting, but "sullock,"—evidence that was at once confuted by John Keast Lord, Esq., the well-known naturalist, and a conviction was obtained of a fine of 50*s.* and costs. Other fishermen, whose cases were to be heard at Dartford, pleaded guilty.

I must congratulate the Thames Conservancy Board upon the praiseworthy and energetic manner in which they carried this trial to a successful issue. We may hope that a large number of these fish, now spared from the hop grounds, may in time grow up to be of real practical service as good and whole-

some food for the people of London and its neighbourhood. The presence of these fish is a most encouraging sign of the improvement in purity of the Thames water, and I trust that the hosts of fry now in the estuary may be the forerunners of shoals of salmon and shad again making their way up our noble river.

I am sorry to hear that a bank of offensive mud is accumulating at the mouth of the main drainage sewer.

The Test.

The Test is 35¼ miles long, and drains 544 miles of a chalk country. It is, like the Itchen, naturally a salmon river, but is terribly obstructed by mills. There is a fine pool at Testwood Mill, out of which salmon are frequently taken, both by net and rod. There is a salmon ladder here, built at the head of a back stream; I do not think it to be of any practical use. The fish can easily be allowed to pass the weir at Testwood, if the hatches are allowed to be opened when the tide is up. Miss Bourne, the proprietor of this fishery, will give every facility in her power to open up the river. Her keeper uses a mode of fishing which is probably illegal, as the net is made a fixture. Between Testwood Mill and Nutshalling Mill there are some fine reaches of spawning ground, and it is these which my colleague and I believe to be the places where the salmon principally spawn. Just below Nutshalling Mill is a series of hatches called "Conninger Hatches." These are shut down during the winter months, and the fish are thus prevented from ascending the river, and are obliged to spawn in the water meadows, where large quantities of fry are destroyed by eels; and those that escape are left dry, and perish in the summer. This evil, I believe, can be easily remedied. I do not see why these water meadows should not be made available for salmon cultivation, if the owners will only assist this desirable object. At Nutshalling Mill the fish are completely obstructed by the mill wheels, and are obliged to go round by the backwater. Formerly there was a tumbling bay here; this has now been built up, and a ladder placed instead. The miller says he has never seen a fish go up the ladder, but they sometimes succeed in going up through the hatches. I believe great improvements may be made at this place, and the fish allowed to pass over with ease.

At Romsey there are four or five mills. There is a ladder at Mr. Brunt's mill, and also an eel trap. I fear the ladder is not efficacious, and it is very possible that poaching goes on here.

At the Abbey Mill they are now erecting a new set of hatches, and the manager has kindly consented to make a pass for the fish. There is also a brown paper mill, which sends no pollution into the river, but which completely obstructs the passage of the fish.

We hear that the fishery in the Test has been increasing for the last few years up to the year 1867, when it has fallen off very much. The cause of this is very uncertain. Considering the number of obstructions in the river, it is wonderful that any salmon whatever frequent it. The salmon that are caught are heading up to the proper spawning grounds of the river at Whitchurch and below Andover, and until they are allowed to reach these, and are carefully protected, the river will never carry a plentiful stock of fish. It will be the duty of the Board of Conservators to provide means to enable salmon to pass up to the spawning grounds, and protect them when they arrive there. If this be faithfully carried out, we see no reason why the Test should not produce a very much larger quantity of salmon than it does at present. I have examined the upper waters of the Test; the nature of the soil would be most favourable for spawning salmon, especially the waters on the property of the Earl of Portsmouth at Hurstbourne Park, near Whitchurch. I should be glad to see the Itchen and Test united into one official district, and trust that this idea will some day be carried out.

The River Tivy.

I began my inspection of the River Tivy by examining the natural waterfall at Kenarth; this is a natural obstruction of rocks which extends right across the river; in a small flood the fish take the south or Caermarthenshire side; in heavy floods they go over on both sides; when the water is low the "predominant current

current" is on the Caermarthenshire side, and the fish follow it up till they arrive at a break in the rocks, at which they may be easily poached. I was sorry to learn that poachers are in the habit of standing at this spot and catching the fish as they attempt to go over; the obvious way of remedying this evil is to cause the predominant current of water rushing down the stream to be diverted to a point, in the centre of the obstruction, as the poachers cannot obtain access to this place; there is a ledge of rocks which if blasted away, would allow the predominant current to change its course from its present line, and to empty itself into a deep pool from which the fish could easily spring and escape danger. I have pointed out the details of this plan to Mr. Brigstocke, a conservator, residing near the spot.

There is a small fishing trap close by the waterfall, but this, I believe, is opened by the proprietor during the legal close time.

The fishermen of Kenarth complained to me that they have not a longer time allowed them to catch the fish, and that they only first begin to come up in the months of September, and October, being detained in the tideway by want of water during the legal fishing months; they beg hard to have September and October opened, and have stated that if these months were allowed, they would all become preservers of the fish in the spawning time, and would give in the coracles to be locked up by some responsible person, from the 1st of November to the 1st of February.* They tell me that there are floods in February and sometimes in March, but that few fresh fish come from the sea at this period, and that in the months of June, July, and August, they catch no fish, except when floods occur, and this is very seldom the case. The chief run of fish is in September and October.

From Kenarth, I proceeded to examine the weir at Newcastle-Emlyn. Poaching was formerly carried on here, and a large number of smolts caught in baskets at the outlet by the mill wheel, but this is now put an end to. There is a grating at the head of the mill leat, to prevent the fry entering, but this requires certain alterations, which I suggested should be made. As regards the weir itself, which is made of loose stones and woodwork, I suggested that a free pass should be always left in it, and that a very inexpensive experiment should be tried, in such a manner as to utilize the many streamlets of water which now pass through the interstices of the weir, and which are of no practical use for the fish. The weir at Newcastle-Emlyn is not nearly so serious an obstruction as that at Kenarth, but still it requires careful attention.

Between Kenarth and the town of Cardigan, I examined an obstruction which is annually increasing in magnitude; it consists of slabs of slate which have accumulated to a very serious extent in the bed of the river. The owners of the Kilgeran slate quarries select the best portions of slate, and pile that which they cannot use in large masses by the side of the river; when the floods come down, they loosen these slates, and they slide into the river; the consequence is, that the bed of the river is almost entirely choked up, in many places narrowed to one-third of its breadth, and at the foot of "Castle Quarry" it is so shallowed that a person might almost walk across it. Mrs. Gower, a lady residing at Castle Malgwyn, near Llechrhyd, has gone to great expense in instituting legal proceedings against Mr. Stephens the proprietor of the quarry, and he was found guilty on an indictment, and fined 100 *l.*, and costs. It is to be hoped that this result will prevent further damage being done; but clearing the bed by dredging would be an enormously expensive process, and unless the river clears itself by the action of the current, which is doubtful, but little chance exists of the obstructions being removed.

The fishermen in the estuary below Cardigan applied to the Home Office to be allowed to fish in the month of September; this was petitioned against by a large and influential body of upper proprietors; I was therefore anxious to examine the condition of the ovaries and milt of the fish at the close of the present legal fishing season, and in the last week of August, attended the working of a net at the mouth of the river. The mode of fishing is destructive, a large net upwards of 400 yards long is stretched across the river as the tide is ebbing,

* I have been informed that the fishermen of Kenarth have kept their word in this respect, and all the coracles have been locked up in a storeroom at the top of Kenarth Mill since November, Mr. Brigstocke having charge of the key.

ebbing, and this of course stops all the fish that are returning from the river to the sea. I think that the attention of the Special Commissioners should be called to the mode in which this net is worked. Five salmon were caught while I was present, four hens and one cock, their weights being respectively, 8 lbs., 14½ lbs., 11¾ lbs., 15 lbs.; 15½ lbs.; of these, four were bright and in very fair condition; one, on the contrary, was beginning to lose its colour and get red. The ova of the 14½ lbs. fish, weighed 9 oz.; that of the 11¾ lbs. fish, weighed 11¼ oz.; that of the 15 lbs. fish, weighed 9½ oz. These ova were not so much advanced as in fish that I examined the next day, which were taken in the estuary of the Wye.

In the town of Cardigan I had an interview with Mr. Asa Evans, solicitor, and with Captain Bowen, the salesman to the fishermen. I was informed by these gentlemen that the estuary fishermen were most anxious to be allowed to fish in the month of September; and that if this month were allowed, the fishermen would consider it most advantageous to their interests to take care that the fish were better preserved during the close time than they are at present, this was also the doctrine of the coracle men generally; and they stated that if the month of September was not granted them, they would continue to go on poaching in close time. The fishermen attempt to justify this mode of proceeding by referring to the extended open time given to anglers by the Act of 1861, and argue, that if fish are fit to be taken with hook and line, they are equally fit for being netted. They also complain that the act unduly favours those who angle for mere amusement, without sufficiently regarding the interests of the poor man who has to live by his netting; they seem to have no objection to exchange the month of February for September, as in February they get 20 bad fish to one good one. A large number of these fish caught in the Tivy are sent to market as salt fish, and many kelts are killed in the spring and salted; the excuse for killing them is, that the men fish at night, and in the darkness kill all fish alike that they get into the nets. I hear that in 1868 there has been great destruction of unclean salmon in February. The fishermen wish to have the month of February closed.

I have not at present sufficient evidence to warrant my advising the Home Secretary to grant the request of the fishermen and their representatives to fish after 31st August, for I consider that as yet the river has not been sufficiently long under the protection of the Act to warrant any alteration in the close season. The fishermen would do well to obey the law, and not set it openly at defiance, as they do at present.

I look upon the Tivy as one of the most promising salmon rivers in the kingdom; its produce might be much increased by a system of preservation effectively carried out.

The Towey.

The Towey, running through the town of Carmarthen, appears to me to have every natural requisite for a good salmon fishery. The first tributary the ascending fish meet is the Cothi. A mill weir is built perpendicularly across this stream: it would be a difficult place in which to put a fish pass. I saw several fish taking about a four foot jump at this weir, but only one got over. The miller informed me that in winter time the weir is quite covered with water, and the fish go over easily. The head of the mill-leat by the weir must be prejudicial to descending fish and smolts, and I have recommended that a grating should be placed there at once. There are no obstructions on the Towey, but a lead mine at Llandovery sends the unclean water into the river. I was, however, pleased to see that the mines were situate some distance from the river, and that catch-pits are at work; some amount of mud is therefore deposited from the water used to wash the ore. I was pleased to hear that the preservation about Llandovery was well carried out.

In the town hall of Caermarthen I held a meeting of fishermen; they are nearly all coracle men. There are 50 coracle nets worked in the river, and also one long draft net worked in the estuary. I was unable to examine this net, but was informed by one of the fishermen (a coracle man), that one end is fixed by a pole, and remains stationary for half an hour. The attention of the Special Commissioners should be called to this point. The fishermen all complained of great poverty, and say that they are much poorer now than before the passing

passing of the Act. They argue that the close time deprives them of their best fishing in September; they told me none of them had taken out licenses; they were legally advised to take this step, because they fancied it would be an equivalent to giving up their claim to public rights. I explained that they were entirely mistaken on this point, and I think they quite understand it. They told me that the Conservators had put a 1 *l.* license upon each net, and that about 50 fishermen had offered to pay a license of 10 *s.* 6*d.*, on condition that the fishing season should be prolonged to the month of September and if this request was not granted they would not take licenses. The whole meeting asserted that the Towey was a very late river, and that the fish do not actually arrive in the river till about September, and they are then in good condition, and that they do not begin to get red till October. The meeting did not at all approve of the theory of making a late river an early one by protection. They complain of the farmers and the farmers' boys killing the spawning fish when up in the country.

Another cause of complaint is that by the present Act they cannot catch the sewen which come up in the months of June and July; these sewen ought to be marketable as well as salmon. The legal two-inch mesh allows these sewen to pass through, and they are not caught at all. They want permission to use an inch-and-a-half mesh during these months, and they would be very glad if the conservators had powers to make Bye-laws to regulate matters of this kind.

I confess I was exceedingly pleased with the manner in which these fishermen behaved: they feel exceedingly aggrieved by the Act, and attribute their poverty to the shortening of the close season. Many of them, though very poor, seem highly respectable, and willing to do what is right towards the improvement of the fishery if they be only allowed a little more license than is at present given them by the Act. With judicious management I believe that these men might be persuaded to do what is right towards the public fishery, and become personally interested in preservation during the winter, and thereby escape from the poverty by which they are now depressed.

The Tyne.

I look upon the Tyne (catchment, 1,053 square miles) as one of the most promising of English salmon rivers, and this chiefly on account of its very great capabilities of carrying a large head of fish. If the watershed of the Tyne be marked out upon the map, it would appear somewhat pear-shaped: the thicker or upper portion of the pear is full of spawning grounds of a very first-class character. The North Tyne rises in the Cheviot Hills, and again is subdivided by a range of mountains, so that there are, in fact, two catchment basins in the North Tyne: this is the principal nursery for the fish. The South Tyne is smaller than the North, and is, I fear, much polluted by lead washing. The Tyne receives the sewage of the towns of Hexham, Newcastle, Gateshead, Yarrow, North Shields, and a number of large villages, and there is, I hear, an alkali work at Felling that does the river no good.

My colleague and I held a meeting with the conservators at Hexham, where we discussed, among other subjects, the matter of general licenses, and the advisability of employing the coast-guard to protect the fish in the estuary. From thence we proceeded to examine the Warden Paper Mills; from these, I fear, from time to time considerable quantities of chloride of lime is let into the river, and we suggested that catch-pits should be made. The proprietor promised to take the matter in hand, and do what he could towards the preservation of the river. There is a long and steep weir at Warden Paper Mills. The ordinary winter water at this weir is, I understand, 9 inches; in ordinary floods, 3 feet; and in extraordinary floods, 5 feet; so that I do not see that it practically offers any very great obstruction to the up fish. I learned that a ladder was about to be erected on this weir by Mr. Horsfall of Leeds, a professional gentleman who has taken a considerable interest in the question of salmon ladders. I trust that his plans will meet with every success.

The South Tyne might be made available for spawning ground if the lead washings were kept out of it, and the fish passed over the Warden Dam. There are so many fish in the river that more spawning-ground is wanted. I should be inclined, therefore, to get an effective pass fixed on Warden Dam as soon as possible. The Tyne is the best example that I know of a river telling imme-

diately under judicious treatment. The cause of the decrease of the quantity of fish was once attributed to the presence of steamers at Newcastle and to the pollution from the alkali and other works situated upon its bank. I do not think this was the real cause of the decrease. Bywell Dam, formerly situated 23 miles from the mouth of the river, obstructed the passage of nearly all the ascending fish, and these being stopped became the prey of the nets which were continually at work at them between the dam and the river. The nets, the pollutions, and, above all, the want of spawning-grounds, soon brought the Tyne down to a very low ebb. The proprietor of this dam, G. Beaumont, Esq., in a most noble manner caused it to be demolished in 1862, and since this date the fish immediately had free access to 38 miles of the North Tyne, and a certain part of the 33 miles of the South Tyne. The result has been a very large increase in the take of fish. (*See* article, "Fixed Obstructions.)

A clergyman residing at Cullercoats, and who takes the greatest interest in the fishery and the welfare of the fisherman, sent me the following particulars in May 1867 :—

"In 1865 the take of salmon in the Tyne, exclusive of those caught in the sea outside the bar, roughly but accurately ascertained, was as follows :— Salmon, 4,827 ; grilse, 1,169 ; trout, 807 ; average weight of the salmon, 9½ lbs. ; grilse, 3½ lbs., and of trout, 2 lbs. The greatest haul in that year, I believe, was on 30th May, when, within six or seven miles of Newcastle, between Benwell and Ryton, 603 fish were taken, the largest weighing about 19½ lbs. I have not been able to ascertain the take for 1866 with so much detail, but still I believe that the following is a very close approximation to the truth : The takes at the two principal stations, in 1865, amounted to 56 per cent. of the whole produce of the river. In 1866, at these stations, 79 per cent. more fish were taken than in 1865, and there is the best reason to believe that they were equally productive, so that we may fairly calculate the whole produce of the river was well over 10,000 fish."

Again, in the *Times* of July 1867 we read, that "on Tuesday fully 400 prime salmon were caught in one tide at the mouth of the Tyne. One boat caught 300 in two shots upon the Herd Sand, and another boat caught 112 on the north side of the water. At least 500 salmon would be caught at the various fishing stations on the Tyne on Tuesday morning. Very prime fish was selling wholesale, at from 7*d.* to 8*d.* per lb., and good cuts of the choicest quality might be bought retail at 10*d.* per lb."

As regards the state of the fish after the last spawning season, I am enabled, by the kindness of his Grace the Duke of Northumberland, to give the following interesting information, on the authority of a gentleman residing at Mark Hexham :—

"Mark Hexham, 18 January 1868.—Salmon have never been so numerous, for very many years at least, as at present. The spawning-beds have been turned over and over; but there are numbers of dead fish. In one little spot near this 40 were counted ; and similar accounts reach me from the higher parts of the river. The water-bailiff stationed here tells me that all the fish he has examined are males, not a single female, and that they had milted. Ice is usually supposed to be the cause of this destruction, but it cannot be blamed this year ; nor can the taking spawn from the fish, for the proportion of deaths is quite as great in the brooks where no spawn has been taken. Some think there are too many fish for the spawning-beds, the males are so scarred by fighting ; others fancy that there may be an unusual excess of males, as they are still seen on the spawning-beds (in a weak state), though there are no females with them. It would no doubt be of much advantage to remove the dam in the Reed at Woodburn, thus throwing open much and very good spawning-ground. All agree (in spite of much spawn being destroyed by the repeated turning of the beds), this ought to be a most prolific year; for, owing to the summer size of the river, many fish spawned in the deeper water, thus leaving the ordinary gravel beds for the later fish.—*Hugh Taylor.*"

In a second letter Mr. Taylor writes :—

"I have made further inquiries about the salmon in the North Tyne: it is agreed that there are 50 salmon this year for one last. But accounts of the number

number found dead are still alarming. Below the Greensford (Birtley Chapelry), last Thursday we counted within half a mile 142; of these, three weighed (even after milting) nearly 19 lbs. Reed and Tyne are equally bad. The high floods immediately after the spawning season have broken up many of the "reds," a large quantity of the ova has been washed down, and thrown out on the sand-banks. Some salmon were seen to die very suddenly at Falstone, and there was an impression that poison had been thrown into the river. I have sent one of the water-bailiffs to make an investigation. I also called upon Dr. Charlton upon the subject, but he does not suppose that the fatality is owing to anything but the extraordinary increase of the fish.—*Hugh Taylor.*"

This is valuable and important information. I have during the past season examined many kelts that have been found dead, and can find no post-mortem recognisable cause of death, except very great debility, shown by general emaciation of the tissues, want of fat on the pyloric appendages, pale and flabby appearance of the heart, &c. It would almost seem to be a law of nature (as is the case in insect life), that a large number of the parents, especially males, should die when the breeding season is over. The same thing occurs, I am told by J. K. Lord, Esq., the well-known traveller and naturalist, in the great salmon rivers of British Columbia. The fact of the salmon nests being crowded, renders the opening up and the purification of the South Tyne the more desirable.

I am glad to be able to report that His Grace the Duke of Northumberland is about to take into his own lands all his fishery property on the Tyne, Aln, and Coquet, and that he has appointed Mr. William Dunbar, of Thurso, as his factor and superintendent; the great experience and practical knowledge of this gentleman lead us to expect great results from this step in the right direction on the part of His Grace the Duke.

The Wear.

There are three weirs at Durham. Ladders have been constructed on the Abbey and the Keepier weirs; they are all on the same plan; these weirs are sloping, so easy that in floods fish pass over them in many places. The Secretary of the Association informs me that fish occasionally go through the ladders.

The weir at the manufactory dam is easy; there are wooden slopes up which the fish run easily, but they get over at other places.

Upon the Abbey dam, below the Cathedral, a ladder has been placed *diagonally*: its length is 25 feet, breadth 4 feet 6 inches, the openings 9 inches, and the stops 18 inches; the fish sometimes go up this ladder, but they generally run by the side of it; it affords a most valuable lesson to all those who wish to pass fish over sloping weirs.

Croxdale Beck joins the Wear three miles above Durham; it is at present polluted by red water from two collieries, and is useless as a spawning ground. As the water, by being exposed to the atmosphere and allowed time to subside, becomes perfectly pure, catch-pits might be efficacious in this case. Seeing the immense injury this water does to the river, the owners of these collieries ought certainly to try this simple remedy.

The Browney, another tributary, has four obstructions and three paper mills. The Association expect to be able to make all the weirs passable this year (1868); then all above the paper mills will be good spawning beds. Fish get up the Dearness, which cannot be called useless for fishery purposes even now.

The next obstruction going up the river is at Bishop's Auckland, upon which a ladder has been erected: the miller has made some alterations in the boards in the lead of this ladder, and my colleague and I have been in correspondence with him upon this point. We also suggested a grating at the end of the tail-race. Mr. Caldcleugh, the Secretary of the Association, informs me, "there is no doubt the fish do get up, from the large quantities that have been seen on the spawning beds above; whether they go through the ladder, over the weir, or up the race," he "cannot tell, but it is certain they pass over."

Rookhope.—The Waskerley is a fine stream unpolluted. This year, when the river was in flood and the Waskerley low, the Honorary Secretary of the Association took above 90 fish of the salmon kind from below a natural obstruction at the foot of the Waskerley, and returned them to the river. He writes: "There are more bull trout than true salmon in the river; but whenever we have been able to examine a lot of Wear fish, as in the above-mentioned instance, we have found the salmon trout or sea trout in greater numbers than either. We have had other opportunities of proving this, at the manufactory mill-race, when the river has been very low."

The Stockley Beck is unpolluted, has no obstructions, and is well filled this year with spawning fish. There are several other brooks well adapted for spawning beds; they are all more or less polluted, but the worst is the Croxdale Beck. There is another, called the Black Burn, or South Burn, at Chester-le-street polluted by the same kind of water. Within the last six months an action was commenced against the owners of Sacriston Colliery; the water was taken away from the burn, and it became full of fish; it now comes into the burn again, and the fish are all gone.

The great cause of the retardation of productiveness of the River Wear is doubtless the hush coming down from the lead mines in the upper waters, which are naturally adapted for breeding grounds. My colleague and I examined the Bollyhope Lead Mines, belonging to the Messrs. Walton, and afterwards the Cornish hush mine, the property of the London Lead Mining Company, where the process was kindly explained to us by R. W. Bainbridge, Esq. (*See* article, Lead Mines.) From thence we proceeded to examine the Birtree Pasture Lead Mines, where the pollution is bad. I feel convinced, however, that when a cheap and efficient mode to get the impure water out of the lead mines is discovered, that this river will increase in value.

A greater evil than the lead ore water is the system of "tipping" all the refuse of the mines into the river and brooks. For this there is no excuse, the bed of the river, being covered with large sharp angular stones, is utterly destroyed as spawning ground.

I am much pleased to be able to report that the pollutions of the Wear at Sunderland—viz., refuse from the lead mines, cinders, washings from the paper mills, coal washings, &c., which have hitherto gone into Sunderland Harbour, and have done no good either to the fish or the inhabitants of the town—are about to be taken seriously in hand by Mr. C. Tone, of Sunderland. Under this gentleman's judicious management, backed by the public opinion of the locality, I trust that we shall soon hear that the old state of affairs, if not entirely remedied, is greatly altered for the better. I seriously wish he would turn his attention to the state of the upper waters of the Wear, as well as to the harbour.

I am glad to hear that great numbers of fish have been seen to go up over the weirs on the Wear during several floods, from October to January 1867–8. The anglers also report better sport. In January 1868 there was a very heavy flood: it has thoroughly cleaned the river out, which it sadly wanted. William Henderson, Esq., and the Honorary Secretary, John Caldcleugh, Esq., of Durham, are most active and energetic in watching the interests of this river.

HAVING thus, Sir, laid before you detailed reports on the rivers which I have visited, I would now venture to make the following comments and remarks, classifying my observations as much as possible under appropriate headings:

RETURNS of SALMON SOLD at BILLINGSGATE MARKET.

BY the kindness of Mr. Ridpath, of the firm of Messrs. Forbes, Stuart, & Co., I am enabled to give the following returns of salmon sold in Billingsgate Market from all quarters. They were compiled for private use and not intended for publication. Very considerable sales are made in other markets, but it is not probable that any returns are to be obtained.

ABSTRACT of BOXES of SALMON Delivered in BILLINGSGATE from 1834 to 1867.

Average Weight of Each Box, 112 lbs.

YEAR.	Scotch.	Irish.	Dutch.	Norway.	English and Welsh.*	Total Number of Boxes.	Total Weight.	Total Value.
							Tons.	£.
1834	30,650	350	- -	- -	- -	31,000	1,550	173,600
1835	42,330	470	- -	- -	- -	42,800	2,140	239,680
1836	24,570	430	- -	- -	- -	25,000	1,250	140,000
1837	32,300	400	- -	- -	- -	32,700	1,635	183,120
1838	21,400	900	- None admitted -		No account kept.	22,300	1,115	124,880
1839	16,340	2,500	- -	- -	- -	18,840	942	105,504

* In his original document Mr. Ridpath has placed at the head of this column the word "Welsh," but he informs me that when he first began his records, scarcely any salmon at all came from England, and were not consequently worth notice.

We, therefore, now perceive with great satisfaction that the produce of the English and Welsh rivers shows a great progressive increase, and this especially during the last three years, the very time about which the beneficial effects of legislation would show themselves. To put this clearer, I select the following figures from the table above given:—

In 1864 the number of boxes from English and Welsh rivers were	-	752
In 1865 - - - ditto	-	868
In 1866 - - - ditto	-	1,563
In 1867 - - - ditto	-	2,405

I have every reason to believe that under judicious management, and the protection afforded by the law, the increase will be greater year by year.

On the returns of the Scotch and Irish fisheries I shall not comment. The Norway and the Rhine fisheries I should think might be improved, but I have no knowledge of the details. I have carefully observed the Rhine salmon in the shops of the London fishmongers during the past winter; they have been for the most part exceedingly handsome fish in the best condition. At least four of these, I am informed by Mr. Ridpath, have been brought to market weighing over 50 lbs. each, and of one of these I have made a cast, which is now at the Horticultural Gardens. A large number of these large Dutch fish, weighing between 40 and 50 lbs., were also sold. On the 10th January 1868, three Rhine fish, weighing altogether 63 lbs., were sold at 7*s.* 6*d.* per pound by Forbes, Stuart & Co., the highest price salmon had ever attained at Billingsgate, making 23 *l.* 12 *s.* 6 *d.* for the three fish.

A sharp system of observation has been set on foot at Billingsgate for the prevention of the sale of unseasonable fish, and my colleague and I have in person brought the matter before the "Markets Committee" of the City of London sitting at Guildhall. Mr. William Deering, clerk to Billingsgate market, has been unremitting in his efforts to assist in the carrying out of the Acts of Parliament, and by his efforts two consignments of unseasonable fish were seized in the month of February 1868. Information was received of the dispatch of the first lot. On their arrival from a certain river Mr. Deering sent for the inspectors appointed by the Fishmongers' Company, who at once condemned the fish. Sometime afterwards Mr. George Stevenson and Mr. Richardson, fish salesmen at Billingsgate, sent for Mr. Deering of their own accord to request him to inspect some salmon, some of which were spent and unclean fish. I regret to hear that in this second instance there was doubt as to the fact whether the fish in question were fit or unfit for human food. Nevertheless I think the gentlemen above mentioned deserve the thanks of the public for their efforts to assist Boards of Conservators by discountenancing in every way the consignment to them of fish out of season. The necessity of carrying out the law to its fullest extent is now seen by the chief of the London fishmongers. I have been in frequent communication with them, and am glad that their spirit of salmon conservation is so strong; for if there is no demand for unseasonable fish, they will soon cease to be sent from the rivers. Still I think more powers are required to be given to stop the trade in other quarters.

Clause 17 of the bye-laws of Billingsgate Market, 1867, reads thus:—"In cases in which fish that is unseasonable, unwholesome, or unfit for food, shall be sold or exposed for sale by any person in the said market, any inspector of fish appointed by the wardens and commonalty of the mystery of fishmongers of the City of London for the time being, or any inspector duly authorised in that behalf by the Commissioners of Sewers of the said City, shall also from time to time, as occasion may require, proceed on behalf of the said Mayor, Aldermen, and Commons, against any person or persons who shall sell or expose for sale any fish that is unseasonable, unwholesome, or unfit for human food, in the said market, for the recovery of the penalty or penalties hereby imposed in the manner provided and specified by the 'Billingsgate Market Act, 1867.'"

The inspectors above mentioned have powers of search outside the market, but they have no such powers within the market. I should beg therefore strongly to recommend that such powers of search on suspicion be given to Mr. Deering, the present clerk of the market. The French law of the importation of salmon is now such that the temptation to send over unseasonable fish is much reduced. I have, nevertheless, reason to believe that unseasonable fish are, at the beginning of the salmon season, sent abroad, being shipped direct from the railway stations, the boxes not going near Billingsgate at all.

Salmon Passes.

The great and important question as to the construction of salmon passes has, since my last report, made considerable advance. The merits and demerits of various plans have been freely canvassed, and the attention of Boards of Conservators has been fully aroused to their immense importance in the cultivation of the rivers under their charge.

I have examined several ladders built with stops according to Mr. Forsyth's plan, and which are generally known as "government ladders," and I am bound to admit that they are generally faulty in action. The chief defects seem to be three, viz.:—

1st. That there is either too much or too little water running down them: the consequence is that, in the former case, the fish—not being able to face the stream—are either hurled backwards at once, or else, having ascended a little way, are turned bodily out of the ladder by the boil of the water created by the stops.

2nd. Many ladders that I have examined have been placed at such an acute angle that it is perfectly impossible that the fish can ever get up them. The Conway ladder is a case in point; it cost a large sum of money, and is now practically useless.

3rd. Ladders have often been built in the wrong place, *i.e.*, the foot of the ladder has not been near the principal pool, in which the fish not only rest, but from which they attempt to make their ascent.

Nevertheless, in spite of all these faults, I do not unreservedly condemn the principle of these ladders. They are suited for certain localities and circumstances, and they are totally unfitted for others. The first ladder, on the plan of alternate stops, was erected over the dam at Deanston, in 1827, by the late Mr. Smith. The space of about 10 feet nearest certain flood-gates was lowered about 13 inches, with the idea of deepening the water for the passage of the fish. It was soon found that no fish could stem the current for more than about one-third of its distance, and the accident of an observer placing stones in the current, on which he might stand to watch the fish, gave the hint of creating resting-places for the fish. This idea afterwards took the permanent form which is now so well known. The angle of the incline where this kind of ladder first succeeded was very slight; it was admirably adapted for the position in which it was erected, and will be so again for similar circumstances, but if the conditions are changed the plan becomes at once useless. Mr. Forsyth's ladders having been erected often at considerable expense, and being now in position on many English rivers, it becomes our duty to see if we cannot so adapt them to the habits of the salmon that they may become useful. Among other plans proposed to effect this, the following may be mentioned:—

1st. To knock away all the stops so as to create a free run throughout the extent of the pass.

2nd. To prolong the end of each stop to the wall opposite it, so as to form a series of distinct pools.

The first plan may answer in cases where the passage is short, and the pass constructed at not too great an incline. A salmon may be compared to an arrow projected from a bow; the impetus he gives to his body by means of his tail will carry him a certain distance, but no further. If the distance in a pass be too long, the force of the current of water predominates over the upward impetus and strength of the body of the fish, and throws him backwards. In this case some obstruction to the force of the current, which at the same time shall afford a rest to the fish, is required, in fact is absolutely necessary.

The second plan, viz., to prolong the ends of each stop to the wall opposite, has some advantages; the water, instead of coming down with a serpentine rush round the ends of the alternate stops, is formed into a series of pools, and the superfluous water finds its way *over* the obstructions, which thus become a series of miniature weirs. I have tried several experiments with both these

plans, using models and living fish. The fish seldom or ever succeed in getting up when the stops are knocked away; they generally do succeed when the stops are prolonged to the walls opposite, but even in this plan there is a serious fault, viz., that the inclination of the pass causes the water at the *lower* side of each of the barriers across the pass to be shallow; and this is the very place where it ought to be deepest, in order to give the fish water from which he may spring. This may be partially remedied by boards placed three-parts of the way across the upper side of the stops, so as to impede the water and make it deeper; but I confess I should like to see the floor of a pass made, if possible, level between the stops. A Forsyth ladder, altered with boards at a very small expense, can be examined at Powick Weir, near Worcester. I was pleased to learn in February 1868, that the fish have used this ladder freely during the last season. A modification of the two plans is sometimes necessary; some of the stops—which, depends on circumstances—should be taken away, and those remaining, blocked; thus, by judicious contriving, a ladder may be formed into a series of two or three deep pools which the fish can hardly help taking. The best plan by far, in cases of this kind, (especially where the ladder is steep), is to endeavour to make certain of there being always pools in the ladder, and this can be effected by that most ingenious and useful plan of a "ladder within a ladder," brought forward by Mr. Bateson at the last Congress, and which he himself has proved to be so highly efficacious in actual operation during the last two seasons.

To remedy the fault of too much water running down the ladder in flood time, I cannot too highly commend the flood guards, invented by Mr. Alex. Miller, of Chepstow. They allow just sufficient water to go into the ladder to fill it, and no more. The salmon, therefore, are not hurled back, as is the case where the full current of water meets them in their upward progress. A flood guard has been placed on Powick Weir, and also on "Pool Quay" Weir on the Severn.

The working of the Dinsdale Pass is most instructive; hitherto both my colleague and I have abstained from visiting it, as we were unwilling to interfere in any manner with the orders of the Special Commissioners. The length of the pass is 26 feet 4 inches, and the fall 1 in 18; it is seven feet wide at the top and nine feet at the bottom; the sill which allows the entry of the water into it is four feet below the dam. There is *no pool* from which the fish can start, and to get at it at all, the fish must swim as it were sideways. If the reader will mark out the above spaces on the ground with pegs, he will at once see how difficult it must be for the salmon, especially gravid fish, to get through this pass; in fact it is next to impossible that they should pass up a continuous current of 26 feet without a break. I know cases where fish pass up mill-leats of somewhat similar dimensions as this Dinsdale Pass, but then the mill-wheel breaks the force of the water; I do not, therefore, think that Dinsdale is altogether incurable, but that by a judicious conversion of this strong current of water, by means of stones or wood, into a series of pools or breaks, and an alteration of the bed of the river at the lower end of the pass, salmon may be assisted past this great obstruction. I confess, however, that I would much rather see the Special Commissioners' first order (viz., to make an open or natural pass in the middle of the weir) carried out, or, still better, if the owners will pardon my viewing the subject in a strictly salmon-question point of view, the weir taken down altogether.

I must now consider other points in the salmon-pass question. Most weirs are made with a slope facing down stream, and the angle which this slope is made to assume with the level of the bed of the river is more or less acute. Some weirs, however, I regret to report, are built like walls (sometimes curved) right across the bed of the stream, and the height of both of these, as far as salmon are concerned, of course depends upon the quantity of water that happens to be in the river. I will take the case of the sloping weirs first. Several plans may be tried to assist the fish over these. From what I have observed to be the case in natural weirs of rocks, &c., over which the fish easily ascend, I would advise that artificial obstructions should be so placed on the face of any and every artificial weir as to break the force of the current impinging directly against the body of the ascending fish. This plan will also assist it, by giving, as it were, resting-places. This object may be attained by building stones into the

the face of the weir at proper intervals one from the other. These stones should be so arranged that the water shall, if possible, be made to form a series of pools. I have myself examined the falls at Oughterard, in Connemara, and consider the natural disposition of the rocks in this place is most suggestive. A photograph of these falls is given in a most valuable little work.* Mr. Ashworth thus writes: "The fall is less than one foot in five; the fish first leap from a deep hole at the foot of the fall, and by a succession of short leaps from irregular resting-places at the backs of prominent rocks, by which the current is split, they are enabled to pass up step by step to their breeding grounds. The stream is about 30 feet wide, and has three lakes above the falls, with various tributaries in which the salmon deposit their ova." At Longleat, near Warminster, the Marquis of Bath pointed out to me some waterfalls which connect a series of lakes in his park. The current of water running down the incline between the lakes is broken up by stones projecting some six or eight inches from the face of these weirs, which are made simply for the sake of ornamenting the grounds. Of course no salmon exist in this place, still the lesson taught thereby is very valuable, inasmuch as it directs the thoughts of observers to building stones into the face of mill weirs, placing them alternately, so as to form eddies and pools, by which the downward force of the current would be broken, and "perches" (if I may use a simile) afforded to the ascending fish. These stones could not possibly interfere with the milling power above, and I should imagine the millers could not object to these slight, but valuable additions being made to the sloping face of their weirs.

Another plan, which may be adapted to sloping weirs, is the placing of an obstruction diagonally across the face of the weirs.

In low water there are often two or three inches only of water going over the edge of the weir down its slope; the miller cannot spare more from his wheel, but he can have no possible objection to this thin sheet of water being utilised, provided that his milling power is not interfered with, and the stability of the weir is not imperilled. In fact, the moment the water has passed over the edge of the weir he can use it no more, for he has no longer any power to utilise it. At the congress last year I exhibited a working model of what I would propose to do in cases of this kind, viz., to affix on the face of the weir a stout board. This board should be at the easiest posible angle for the fish to ascend, and its lower end should always meet the pool where the fish assemble. Supposing three inches of water to be coming over the weir, this board, which need not be more than a few inches high, will concentrate the three inches of water into a depth corresponding to the height of the board, the fish will perceive the "predominant current" over the weir, and follow it upwards. A second board may be placed on the weir in the form of an arm, so as still more to concentrate the water. Another advantage of the board (the diagonal) plan is, that even supposing the currrent to be very swift, the fish will, I imagine, be simply forced on to the side of the board, and receiving immediate support from it, will be enabled to continue its efforts to ascend.

It may be advisable to place small pieces of wood not more than three inches in height, as first pointed out by Major Scott, at proper intervals, by the side of the board, so as to give the fish a "fin hold;" for that the salmon makes great use of its pectoral muscles, to extend its pectoral fins and use them as grasping organs, I am convinced by observation, and I am moreover not at all sure but that the false fin behind the ventral fins may not in some cases act as a prop to help the fish in ascending weirs, though I cannot as yet prove this point. That the plan of a diagonal obstruction is sound in principle I felt certain, when I examined the ladder which has been erected on a weir just by the bridge at Durham. This ladder has not been built parallel to the face of the weir, but diagonally across it. Some of the fish take the ladder, but most of them run up the side of it.

In proof of this, William Henderson, Esq., of Durham, thus writes me, 21 December 1867:—"The ladder has been altered, and now acts very well; any fish may pass up it, but, as the floods have hitherto been small, they have been able to avail themselves of the projecting stone ledge of the ladder,

* The Salmon Fisheries of England, 1868, by B. Thomas Ashworth. W. Lewis, 12 Northgate-street, Bath. Price 1 *s.*

ladder, and run by its side upwards. At the dam below, the wooden rail placed on it has done its work admirably. When the water is merely trickling on the dam, this rail gathers sufficient water to tempt the fish to run, and they have been seen to take it in numbers, following each other rapidly.

"Rely upon it, whenever the gradient rise of the dam is not too great, the cheapest and most efficient plan is a piece of timber, four or five inches deep, placed at a long angle on the slope of the dam. I think that you would do well to get this simple and cheap ladder placed on many dams, so as to test how far the plan can be made to work well."

Mr. Manley, of the Sciont district, also writes as follows:—"The baulk of timber was placed, after your visit, where we found the Forsyth ladder a failure; the force and twisting of the water in the stops quite prevented the fish getting up. The fish at once availed themselves of the baulk of timber, and got up, although it was placed clumsily during a flood. You will be glad to know that fish are spawning in *great* numbers in our long-neglected district."

I have therefore proposed to a meeting of a Board of Conservators of the Taw and Torridge, that the plan of a diagonal obstruction shall be tried at the canal weir at Torrington. These gentlemen (Commander Whyte especially) expressed their approval of the suggestion, and it will at once be carried into effect. One of the gentlemen connected with the Canal Company has proposed a slight modification of the plan, but the principle of concentrating the water, and affording a series of resting-places is the same. The experiment is inexpensive, and if it be found to act, it will afford great facilities to fish to pass over sloping weirs, particularly when they are heavy with spawn towards the end of the autumn. It will of course be objected that the diagonal plank is liable to be carried away by floods; certainly it is, but anyhow let the experiment be tried, as it will not cost much, and, if it succeeds, a permanent iron or stone structure may be placed on the weir. If it succeeds, a cheap and effective mode of passing salmon over the commonest forms of weirs in this country, *i. e.*, sloping weirs, will have been brought to the notice of the public.

Another form of water concentration on sloping weirs* I should suggest to be adopted in any weirs that may be built hereafter. It is lowering the edge of the weir gradually from each side, so that the very centre of the weir shall be the lowest point, thus, whatever be the depth of the water coming down over the weir, the deepest part will always be in the middle; thus a "predominant current" will always be flowing, which will attract the fish to the safest place for them, viz., the middle of the stream. This plan is about to be tried on a weir erected in the place of a structure that has been taken away by the current on a tributary of the Severn. I am in communication with Mr. George on this point. It may be found that this current will be too strong for the fish; if so, stops of some kind must be placed, to break the velocity of the water, and afford resting-places; this is a matter which can be met, if the true principles of the construction of salmon ladders, and the wants and instincts of the salmon themselves be kept in mind. Although it is advisable at all times to avoid making a fish pass by the side of a weir, it is sometimes, from the peculiarities of the locality, necessary so to do, even though there is risk of the fish being destroyed by poachers. In cases like these, it may sometimes be found of advantage to build a spur wall out from the bank at the lower edge of the weir. This should project some little way outwards into the stream. The water will thus be concentrated, a pool will be formed, and according to the depth of the pool, so will the length of the weir (and therefore the run for the fish) be diminished. I have never yet tried this plan, but merely throw out the suggestion. It was first hinted to me by B. Ford, Esq., Honorary Secretary of the Exe Board of Conservators.

Yet another suggestion remains to be noticed; it is that recommended to me by J. W. Malcolm, Esq., M.P.; it is to lighten the whole of the weir by means of boards placed upon the sill, leaving a gap in these boards, down which the water, which otherwise would flow over the face of the weir, might be concentrated;

* I shall be happy, through the kindness of Colonel Tottenham to put any Board of Conservators, who wish to try this plan, in communication with a gentleman who has invented a good kind of nail for fixing planks, &c., on to weirs by driving them firmly in between the stones of which the weir is built.

trated; Mr. Ashworth showed a plan of this at the last congress. I think the principle is good, but details must be adapted to local circumstances. The gap should be in the middle of the weir, if possible.

The case of upright weirs is still more difficult than that of sloping weirs. I will instance two; the Acklington dam on the Coquet, and the Milford weir on one of the tributaries of the Severn. Millers' sluice gates (as on the Canterbury Stour), and most of the Hampshire and Dorsetshire rivers, come also under the same category of upright weirs. Many natural waterfalls are also found blocking tributaries which would otherwise become very valuable spawning grounds. This class of weirs is by far the most difficult to deal with. I must at the onset lay down an axiom, viz.: to get fish over a perpendicular weir, either the weir ought to be lowered or the water raised. I therefore look upon Mr. John Lloyd's pool system as a valuable addition to our resources, as by raising the water we shall often be able to pass the fish over the dam without interfering the least with it. Supposing we have a weir across a stream, say four feet in height, which the fish cannot surmount, we make an obstruction at the nearest convenient point below the weir, raising the obstruction to such a height as to pond up the water and bring it to a level (say of two feet) by the side of the weir above. If necessary, we make a second, or even a third obstruction, lower down the stream; each weir having a pool left at its lower side. The localities of course must be judiciously chosen, and the secondary weirs (for such they are in reality) may be formed of rough and cheap materials; planks, fastened with iron bolts, large stones cemented together with Roman cement, plugs of wood, &c. The work should be done during the summer months when the water is low, and should the floods carry the structure away during the first season of trial, it may be replaced (if not made absolutely permanent by a builder) during the ensuing summer. Trees growing by the bank side may also be utilised by being partially or wholly chopped down and jammed firm into the bed of the stream.

In all cases where there are loose stones laying about the bed of a river, I should advise that they be so arranged that the water be ponded up by them, and a series of large pools formed. If this plan be adopted, the stones which hitherto have been of no service, will be utilised for the ascending fish, and this often without moving them very far from their original places.

This pool system is naturally best adapted for *small* streams; but nevertheless it is very useful, because it is in these very small streams that the stock fish are concentrated after they have surmounted all other difficulties and dangers in their journey from the sea to the river, for in them they make their nests and the young are hatched; they are at this time comparatively fearless of danger, and being heavy with spawn are readily caught by poachers. The pool system therefore, will not only help stock fish over obstructions, but also afford them places of concealment, of course under a proper system of vigilance on the part of water bailiffs.

This pool system may also be adapted to millers' dams: here we have a wall across the stream, generally with hatches in it; the fish assemble in the pool below, but cannot surmount the obstruction, except in time of heavy floods. I would propose, in a case of this kind, the plan which has already been accepted by the fish themselves, as suitable to their purpose, and which I have put into operation on the Canterbury Stour. There we have an important branch of a river blocked by a perpendicular weir, in which there are hatches. Mr. Kingsford and myself devised the following plan. We obtained consent of the miller that he would give the fish the use of the water that comes through one of these hatches at all possible spare times. By means of boards we then divided off the space intervening between this hatch and the pool below into two pools, and the results (*see* Report on the Canterbury Stour) have hitherto been most satisfactory. The floods do not interfere with this pass in any way; they go down through the hatches which are not utilised, and do not tend to injure the pass in the least. I cordially commend the idea of this pass to Boards of Conservators, and shall be pleased to send them details.

As a principle, I think it should be remembered that in cases of millers' weirs in small streams "up fish" in reality do not require a vast body of water to allow them to pass through a weir; it must be a very large salmon indeed that will not pass through a space of from 12 to 20 inches, and he must be a very ungenerous miller who will not give as much water as this for the passage

of the fish when the mill is not at work. Let the fish waiting in the pool below only feel a predominant current, and be assisted by pools, and they will certainly pass on upwards.

It will be objected, that these pools at millers' weirs are liable to be poached; I therefore suggest that they should, if possible, be placed in the middle of the weir.

The most difficult weirs of all are the large perpendicular weirs often found near the mouths of rivers, and sometimes even somewhat up country. Cases of this kind I am as yet hardly prepared to meet; yet I cannot help thinking that I see a way out of the difficulty, but shall at present refrain from any remarks. Suffice it to state, that the pass should always be in the centre of the weir where poachers cannot touch it. In the most difficult cases of this kind another plan presents itself, viz., the formation of a bye-wash; this should be cut at an easy slope, and upon an approved pool plan, so as to take the fish round the obstruction. I am by no means convinced but that a culvert may be found hereafter to succeed in some cases. It need not be very large, and this culvert may be covered over. Salmon will head up into dark mill races; why should they not head up a covered culvert, and so pass round the side of a difficult obstruction, provided that the stream is not too strong, and that its force is broken as in the case of a mill leat? Where the soil by the side of a difficult perpendicular dam will allow of digging, a culvert might be easily made, and even where the adjacent ground is made of rock a rough passage might generally be cut out without much expense.

Lead Ore Pollutions.

The mischief done to salmon rivers by the washings of lead ore deserves the most serious consideration. I have examined the following localities: the "Dyliffe Mines," and the "Caeconray Mines," on the head water of the Dovey; the "Bollihope Mine," on the head waters of the Wear; the "Burtree Pasture Mines," near Stanhope, on the head waters of the Wear; the "Wiregill Mine," near Middleton, on the head waters of the Tees; also the "Newbiggen" and "Pikelaw Mines," in this district; the "Vane Mines," and the "Dyfwm Mines," and the "Brynpostig," on tributaries of the Severn.

In all these localities, very much the same kind of operations are being carried on. The lead ore, as found in its matrix, is brought out of the mine, and, if mixed with other substances, is crushed and comminuted by iron rollers or stamps. This crushed matter is then divided into various sorts of grain of equal sizes: this process is called "dressing." The pure ore is separated from the stony matter by a variety of processes, the principle adopted in all of them being that the ore sinks by its own weight to the bottom of the water in which it is washed, while all other material is washed away. At all these mines there are long and narrow troughs called "settling pits;" through these the powdered material is carried by water, and the lead ore is gradually dropped in its course. The "settling pits" which are nearest to the crushing machinery of course catch most lead, those which are furthest off the least. At the Wiregill Mines there are three sets of "settling pits," and Mr. Bainbridge, the manager, informed me that, from experiment, it had been found that the slime in the first series of pits contains five per cent. of lead ore, in the second only two per cent., and in the last only a quarter per cent.

The water that passes out of the last set of pits appears to the eye like water saturated with a dark-coloured mud, and this mud can be seen rolling along in thick clouds. It is also found on the banks in the form of a powder as fine as wheat flour; this dirty water runs away from the mines down the tributaries into the main river, and does a great amount of mischief to the rivers, often, as in the case of the Dovey (*see* Dovey), suddenly destroying a great number of fish.

The question now comes as to what are the best means of remedying the evil; the first thing, therefore, to be done is to ascertain what is the immediate cause of death in the fish. In 1862 a number of samlets and a 15 lb. salmon were destroyed in the Dovey, and sent up for analysis to Professor Church: he reported

reported to the Dovey Conservators that he could discover no traces of lead in the fish, and, from their appearance, was led to think that the immediate cause of death was sulphuric acid; the water which killed the fish caused litmus paper to turn red; he therefore suggested that the lead should be made to flow through a filter of lime-stone or chalk. I have brought home specimens in bottles of the "hush"* from lead mines, and tried experiments in them with minnows; I did not find that this dirty water was fatal to the fish in the manner I anticipated, nor did the lead ore itself do the fish much injury; I placed minnows in water, and with it mixed pure lead ore till the water became quite cloudy; this I stirred frequently; but still the minnows were not affected by it. I had observed that in the case of the Dovey fish, the only external recognisable cause of death was that the gills, instead of being of a blood-red colour, were quite pale and bloodless; I therefore, as an experiment, added a small quantity of sulphuric acid to the water; I found that fish placed in it immediately sickened and shortly died, and that their gills exhibited the same post-mortem appearances as the gills of the Dovey fish. I think it may be possible, therefore, in this individual case, sulphuric acid might have been present in the water.

I confess, nevertheless, that I am often at a loss to determine, as a question of "medical jurisprudence," what is the immediate cause of death in cases of fish being poisoned by lead pollutions; in the cases of men, quadrupeds, and birds, the lead is introduced into the system through the stomach; thus cattle have been known to be destroyed (*see* the evidence of Colonel Pryse, M.P., Commissioner's Report, p. 171), and the disease called "belloning," is well known in lead-mining counties; ducks and geese frequenting streamlets containing lead "hush" have been destroyed, and cage birds have also been poisoned by the gravel placed in their cages, this gravel having been taken from the beds of streams down which lead-mine water flows. In the case of fish, I cannot see how the lead can get into the system through the stomach, as the fish does not swallow it, and, as my experiment shows, water containing a large quantity of pure lead in powder does not materially affect them. I fancy, therefore, that the dirty water from lead mines acts directly on their respiratory organs. In the upper waters of the Tees the fish would rise freely to the fly on a Monday morning, when, in consequence of Sunday having intervened, the water had several hours to drop the matter which it held in solution. Immediately the lead water began to come down the river the fish ceased to rise. This is important evidence.

I have consulted several geological as well as chemical friends as to the cause of death of fish in lead mine water, and they have, for the most part, been very shy of giving a direct answer. Professor Frankland, of the Royal College of Chemistry, 315, Oxford-street, who has lately been brought much into contact with the question of river pollution in connection with the Royal Commission on Water Supply, has kindly listened to all the evidence I brought before him. He informs me that it is much more likely that the fish suffer in their respiratory organs† than by the act of an irritant poison, and that the cause of death is therefore probably mechanical, not chemical. If, however, the cause be chemical, it is possible that the decomposition of iron pyrites may be productive of acid sulphate of iron,‡ the sulphide of lead and sulphide of zinc (Black Jack) being insoluble in water. Samples of water from lead mines, taken at the moment that fish are dying in it, should be submitted to Dr. Frankland.

I would now proceed to point out the remedies which occur to me. The owners of lead mines wash and purify the ore so long as it will pay them, and the residue, which in some places is called "slime," is allowed to go into the river, and the proprietors of mines, I fear, care not what becomes of it; this slime, nevertheless, goes down the river, and does mischief to the men and animals who live on the banks, and also to the fish which try to live in

* I am informed that the word "hush" is, among engineers, an inappropriate term to apply to the dirty and impure water that comes from lead mines.

† The lung affection among the Sheffield knife-grinders, caused by the inhalation of minute particles of steel dust, is a somewhat analogous case.

‡ The system of filtration, proposed by Mr. Pow, of Worcester, is deserving of careful consideration from those interested in this subject.

in the water. I cannot help thinking that the least expensive way to cleanse the river of this hush is to continue to treat it as it is already treated when considered profitable, namely, to utilise the principle of gravitation. As far as I have observed, water is generally *moving* through the catch-pits when the mine is at work; the consequence is that the mud has not sufficient time to settle; and dirty water is therefore always running out of the catch-pits. I happened to visit the Dyfwm Mines at the head waters of a tributary of the Severn, late on a Saturday afternoon, when the mines were not working; I was much pleased to see that the water in the catch-pit was perfectly clear and bright, the hush having all settled to the bottom by its own gravity. The manager informed me that if the water was allowed to remain still in the catch-pits, it would clear itself in about four hours; this fact, therefore, I think, may be applied to practice by making a double series of catch-pits, each sufficiently large to hold the workings of one day. All the hush which is formed, say on a Monday morning, should be allowed to collect in one pit. This should be allowed to remain quiescent on Tuesday; for the Tuesday working a second catch-pit might be made use of; and on Wednesday the first may be used again, the water having been allowed to run off during the course of Tuesday; if this system of double catch-pits on the quiescent system be adopted, I see no reason why clean and life-supporting water should not be sent into the river.* In localities where the conformation of the ground will allow, I think it would be a good plan to dig along the side of a hill a long and wide ditch, and to allow the dirty water to flow over its edge into the river below; as this water passes along the side of the hill from the ditch to the stream, it must of necessity deposit a large quantity of the material held in mechanical solution; it may also possibly, by coming in contact with the soil, become further purified, for there is no mode of purifying so cheap or efficacious as the use of earth or peat. In the neighbourhood of lead mines, I have often observed considerable spaces of bog land which yield nothing at all, and which might easily be made available as purifiers; I am, moreover, not at all sure but that the common rush would thrive in boggy lands which are used as filters for the lead hush; if so, these rushes would afford additional facilities for the purification of the water.

The owners of mines will ask what they are to do with the slime after the catch-pits have become full of it. The cheapest and most efficacious way would, I think, be to have this slime placed upon the river bank, about the level of the highest winter floods. When the heavy waters come down from the mountains, the accumulated slimes of the summer and autumn would be taken down stream, and become so distributed that they would have little or no injurious effect upon the fish, whereas by the present system the slimes are allowed to go into the river in the summer time, when the water is at its lowest, and the pollutions come down in a concentrated form. I would rather that the slimes should not go into the river at all, but for the present it would be much better that they were put in in winter, during floods, than in summer at low-water time. Care should be taken in all lead mines to keep (as is done in the Vane Mines) the water which drives the water-wheel, separate from that which is used for washing the slimes; the catch-pits would by this means be enabled to catch the mud more readily than when the two systems of water supply are mixed together.

Whatever may be the actual substance that destroys the fish in water from lead mines, one thing is certain, that as the impure water flows along in its course, it deposits its mud upon the gravel where the fish naturally make their nests; the gravel which ought to be pure and bright is thereby "mudded up," and miles of what ought to be good spawning grounds in the upper waters of tributaries are thus made waste and barren. The South Tyne suffers much from lead pollution, and this may be one of the immediate causes. If the hush were kept out of the rivers, not only would the lives of many fish be spared, but a vast amount of good breeding ground at once opened out.

The question, therefore, of lead pollution is one of great public importance; and it is most gratifying to my colleague and myself that our official visits to the lead-mining

* Dr. Frankland writes me:—"I am strongly of opinion that there is no lead poisoning in the case, and that reservoirs of subsidence, such as you propose, would completely remedy the evil."

lead mining districts have already done good. I am informed that W. Beaumont, Esq., M.P., is contemplating the expenditure of several hundred pounds in making a further series of extensive catch-pits on his mining property, in order to attain the utmost amount of the purification of the water. These measures have been advised by Thomas Sopwith, Esq., F.R.S., F.G.S., one of the first of the authorities on mining matters to perceive the vast importance of the cultivation of salmon fisheries. Salmon fishers of England, therefore, owe Mr. Beaumont a second debt of gratitude; the first for taking down Bywell dam, on the Tyne, the second for showing such an excellent example to other owners of mining properties. While endeavouring to rescue the rivers from unnecessary mining pollutions, I am also anxious to consider the interests of large populations residing in upland districts where lead mining is the only employment of the people.

Fixed Obstructions.

It is important to remark the progress of the development of salmon rivers, as compared to each other, and to ascertain if possible what are the most destructive causes that affect them, in order that those causes may be removed or abated, by improved legislation.

"Fixed engines" were doubtless formerly the cause of much injury being done to the stock of salmon. These have now been abolished from the estuaries, but there is another form of "fixed engine," which although not directly destructive to the lives of salmon, acts as a great onus upon the development of the rivers.

In the case of a fixed net in an estuary, some fish may possibly escape destruction, but in the case of an obstruction built right across a river *all* the fish are hindered in their upward progress, and if these obstructions do not actually destroy the fish which confront them on their upward journey, they do what is worse, for they keep back the stock of parent fish from ascending to the spawning beds; so that if it were desired to utterly exterminate migratory salmonidæ from a given river, the best thing to do would be to make obstructions impassable by the fish right across it, so as to bar them out entirely.

The fixed obstructions to which I now allude are weirs, whether they be used for manufacturing, canal, or irrigation purposes; and to my own mind an impassable obstruction across the inland and therefore narrower portion of a river is much more injurious to the stock of fish in it than a fixed net or engine in the estuary, where the river is broad.

In the latter case the fish have some chance of escape, for the length of the fixed net is generally small as compared to the breadth of the estuary; in the former case the fish have no option, they all must be stopped.

I will give instances of the great increase of fish that will follow upon the removal of an obstruction across the river from bank to bank. The upper waters of the Tyne were formerly barred out by the Bywell dam, and the fishery was comparatively small. This dam was in a most liberal spirit removed by W. Beaumont, Esq., M.P.; the immediate result has been an immense increase of fish, and this in the face of the pollutions which affect the river at Newcastle; pollutions therefore (in this river at least) have been proved to be of minor importance compared to a permanent barrier in the course of the river, which blocks the road to the breeding grounds. The case, however, is different if the pollutions exist in the upper waters where the fish spawn.

Another instance is the Teifi; here, with the exception of Kenarth falls (which are easily passable in floods), the débris from the slate quarries and the small mill dam at Newcastle-Emlyn, (*see* Report on the Teifi,) there are no formidable obstructions. Poaching and fishing out of season have long been rife on this river, and yet the fishery has not been destroyed, simply because the fish have had free run to their spawning grounds. In the year 1862, Messrs. Ffennell & Eden report that the Teifi yielded a return amounting to 3,000 *l.* annually; this amount might be considerably increased if the system of protection was rigidly carried out; the Teifi, therefore, is a good example of what a river will produce in the shape of valuable property if only the fish have access to their spawning grounds.

The hand of man is against the salmon, but the hand of nature is held out to assist them. If, therefore, the only present drawback to the full development of

the river, the capture of fish when out of season, were prevented, this river would soon tell under the treatment, and reward the fishermen fourfold.

The Wye, in its lower course, has no mill weirs; it is a very productive river. Three of its tributaries, the Munnow, the Lug, and the Lynfi are closed by weirs. If these were made passable, and the parent fish protected, the supply would increase in proportion: our Report of last year (*see* page 48) goes so far as to say, "nearly doubled."

We will now take cases of rivers that are kept at a comparatively low state of development by "fixed obstructions."

The Dee is a marked instance. I have elsewhere shown (*see* Dee) that the Chester weir acts, for many months of the year, as a barrier to the fish; they become an easy prey to the nets. The upper proprietors find but few fish in their private waters, and therefore become careless of assisting them over the weirs which bar out the nursery grounds, and are getting careless about preserving them. The consequence is, that the fish are netted in the estuary, and not preserved in the head waters of the river; and the sole cause of all this mischief is the "fixed obstruction" in the form of Chester weir. If but the fish be allowed a pass over this, the upper proprietors will again begin to catch fish, and will therefore preserve; the net men will, in time, find the produce of their nets greatly increased, and the general public will reap the benefit by a larger supply of salmon being sent to the markets.

Another river that labours under a "fixed obstruction" is the Ribble. The weir at Clitheroe forms a barrier against ascending fish, and although there is a "quasi pass" built in it by the owner, the fish have not "at all times" a free passage up the natural bed of the river. If the fish were allowed to pass this obstruction, the anglers would at once get more sport, and the nets below eventually increased profits.

The Severn has many fixed obstructions upon it. The ascent of this magnificent river is guarded by the Diglis weir, and above this again there are other weirs which stand as permanent sentries over the spawning grounds; according to Mr. Miller's Report, there are 73 of these weirs.

I mention now only some of the rivers which I have personally examined, but there are several others, the entrance to which is barred by a large weir; most of our rivers have many weirs, not only in their course, but also in the tributaries. That these weirs keep back the stock of ascending salmon there can be no doubt; they are also injurious, inasmuch as they are serious hindrances to the effective drainage of the main valleys of England, and thus detrimental both to their agricultural value, and to the health of the people who inhabit them. Another injury they bring about (in a piscatorial sense) is that the water, which may be naturally more or less rapid above the weir, is impeded in its course, and becomes sluggish; the consequence is that the water is ponded back, jack and coarse fish therefore increase, to the detriment of the salmonidæ, and the growth of the new and terribly obstructive weed *Anacharis alsinastrum* is encouraged.

Again, it sometimes happens that a large number of fish collect at the foot of a weir, and if they are not able to pass over it, they will make their nests one over the other, and when the next fresh comes down the river, more fish are brought up by it to the weir; these then spawn in the gravel already replete with eggs and of course destroy them. This process may be repeated over and over again, till a vast number of eggs are utterly lost as stock to the river. If these fish had been able to pass the weir, they would have spread themselves (like bees from a hive) over the various tributaries, and found abundance of room to make their nests, and give the eggs a good chance of being properly hatched. It becomes us therefore not to lose sight of the fact, that weirs form at present one of the most serious drawbacks to the development of British salmon rivers, and then boldly to consider what is to be done to remedy the evil.

Weirs are made generally for manufacturing, navigation, irrigation, or for milling purposes. These are all important interests in our national wealth, and must be duly considered. The Special Commissioners have powers to inquire into the legality of certain forms of weirs; powers should, in my opinion, be given them to inquire into *all* weirs and obstructions, and to so deal with them that the public interest be not made subservient to private gain, and a law should be enacted that *a free passage to salmon should be enforced over all weirs.* This feeling is very strong among fishery proprietors throughout the whole kingdom,

kingdom, I would refer to the printed opinions given in our Appendix from the various Boards of Conservators

The difficulty of dealing with weirs seems to resolve itself into a question of "Bread *v.* Salmon." Many of the mills are corn mills; the public require bread; the miller's business, therefore, becomes important, and in one sense even more important than salmon. For my own part, I conceive that (failing compulsory legislation) if a system of "give and take" be established, the public will have their usual amount of bread from the mills, and an increased supply of salmon from the river. The property of the miller will not be interfered with, and the property of the fishery proprietor will be more fully developed. This is to be done by arranging that the salmon shall have the use of the water when the mill is not at work; *i. e.*, let the miller utilise the water during the day, but allow the salmon to utilise it during the night. The miller will therefore have the use of the water for *his* interests during six days, and the fishery proprietor have the use of the water for *his* interests during six nights. The mill does not work on a Sunday; on that day, therefore, the water should be also given up for the use of the fish.

I do not wish that the weirs should be destroyed; I wish only that a free passage over them, by means of an effective ladder or pass, should be made compulsory. In most cases I believe this desirable end might be readily accomplished if only an effective, and at the same time inexpensive, pass were constructed* over every weir on every salmon river in the country.

That the productiveness of a salmon river depends entirely upon the area of its catchment basin in square miles, is, I believe, hardly the case. Due consideration should be given to the geological features of the ground from whence any river is drained; for rivers (however large they may be) that take their origin in a flat country, will never be as productive as those that rise from a mountainous district. A salmon is naturally a mountain fish, and where there are no mountains or hills at the head of a river, there will never be a very large supply of salmon, though the inferior kinds of salmonidæ may exist in greater or less numbers.† This fact therefore will be useful in the consideration of the question of weirs; for in rivers which drain a flat country, there will be no ground fit for the spawning of salmon; weirs therefore, in these instances, do no injury to our salmon fisheries. Weirs, on the contrary, which are built across salmon rivers, whether in the main stream or on the tributaries, should be certainly "bridged" for the passage of the migratory inhabitants of the water, for in proportion to the amount of spawning ground opened up, so will be the number of tons of food made available for the people. American laws compel a "fish-way" to be made and maintained by the owner over every weir.

An able pamphlet before quoted (page 43), has been published by T. Ashworth, Esq., whose zeal for the development of English fisheries is highly commendable. This gentleman gives a table showing the amount of salmon spawning ground lost to 17 rivers through weirs and pollutions. According to his calculations salmon are excluded by weirs from an area of 7,991 square miles, and by both weirs and pollutions from an area of 3,649 square miles, leaving accessible to salmon an area of 6,607 square miles. He also argues that steam power has gradually superseded water power, and that some of our salmon rivers would become more valuable by substituting steam for water power.

Thus he writes:—"There are 73 mill-weirs on the Severn, the rental of the water power of which, as compared to steam power, we may estimate at from 40 *l.* to 50 *l.* each, or say 3,650 *l.* a year; and to produce this amount of power the salmon have been excluded from 324 miles of streams. The money value of salmon produced from the remaining streams (of 344 miles) we may estimate by Mr. Miller's report at from 6,000 *l.* to 7,000 *l.* a year, but if all the former breeding grounds had remained accessible to salmon over an area of 4,400 square miles, it is possible that the gross produce of the Severn might have been similar to the rivers at Waterford, the income of which, as stated by Mr. Ffennell, is 40,000 *l.* a year." The question of substituting steam for water power is most worthy of consideration, as, if the idea could be carried out,

* Of course the design of the pass must be accommodated to the circumstances of the locality.

† I regret I have not space to show how that the best salmon rivers take their origin from formations (geologically speaking) of nearly the same age.

out, the necessity for the further existence of many weirs could not be substantiated.

Close Seasons.

By the Act of Parliament 24 & 25 Vict., c. 109, s. 17, salmon are not allowed to be killed by the net "between the first day of September and the first day of February following, both inclusive." Rods, however, are allowed to continue fishing "between the first day of September and the first day of November following, both inclusive." This law is made to apply equally both to large and small rivers in all parts of England and Wales, and no allowance seems to be made for the habits of fish in different climates, and under different circumstances. From evidence I have obtained personally, and from the returns of various rivers appended to this report, it appears that this universal close time has been found in practice not to be applicable to all rivers alike. Legislation will never alter the habits of a wild animal like the salmon. Its object in ascending rivers is not to be caught, but to multiply its species. Local circumstances therefore must have great influence upon the time of its migration. The object of the fish is to spawn, and to conceal itself till the spawning time arrives; it will not therefore venture up rivers that are shallow and narrow, and where there are no deep pools in which it can hide itself, and at times when floods seldom occur to tempt it to undertake its upward journey. The temperature of the water also has, I believe, influence upon the salmon; they are naturally cold-water fish and do not care to face water at a high temperature, when the temperature of the water in which they naturally spawn is about 48°. If, on the contrary, the river be deep and of considerable length, the fish will begin to run up it early in the year. Again, the presence of a lake (which is an exaggerated hiding pool) has, I think, much influence upon the migration of these fish; the "up fish" run at once for the lake, and will remain therein till the time has arrived for them to ascend the small tributaries of the lake and make their nests.

This is the general rule, though there are exceptions for which I cannot as yet account: doubtless there must be good reasons which future investigations will make patent,* and upon which I am daily making diligent inquiry.†

In the case of short and shallow rivers, these circumstances are exactly reversed in operation, for here the estuary at the mouth of the river acts as a lake, and the fish remain in this *quasi* lake till floods come to tempt them up the river: these floods do not generally occur until after the legal fishing season is over; they therefore remain in the estuary, or even among the sand-banks further out at sea. As they do not come into these rivers until after the legal fishing season is over, the fishermen cannot catch them legally. Nevertheless, I have reason to believe that cases do occur in which these fishermen continue to fish in spite of the law, after the fish are unfit for food. There is therefore, practically, no close time at all observed, and the river suffers accordingly.

Again, the actual condition of the fish is different in different rivers, those in some of the smaller and later seasoned rivers being not so much advanced as in the larger rivers. In the last week of August I weighed eggs from a river in West Wales, and from the mouth of the Wye, and proved by weight that the ova from the former river were proportionately not so advanced as in the latter river. I trust to be able to carry my observations much further the next year, as it is only from a mass of data that any safe conclusion can be made. From the report of the Commissioners, 7th February 1861, it appears that the close time as it now exists was made universal, on the theory that artificial causes have had much more concern in producing differences of seasons in certain rivers than the laws of nature; that is, by making the close time to begin earlier, and by enabling the fish that breed early to ascend early a river that has become late, that river may be made early. My own opinion is, that no Act of Parliament can alter the laws of nature, and that although under certain conditions it

* The salmon caught in the estuary of the Rhine in Holland, in the months of November, December, January, are fresh run fish; I have made casts and preparations to show this; from their anatomy, I think, they will not spawn till the following winter.

† I shall be much obliged for any accurate information from Scotland, Ireland, or Norway on this point.

it may be possible that a few fish may run up early in the season, yet the main bulk of them will continue to act under the instincts of self-preservation which nature has implanted in them.

It is my duty, as Inspector of Salmon Fisheries, to take evidence upon every point connected with the main objects of the Act, "namely, the increasing the supply of salmon;" and when I understand from fishermen as well as from gentlemen who live on the banks of certain rivers, and who have therefore of necessity local knowledge and the experience of years to fortify their statements, it would not only be rude, but even unjustifiable to disbelieve them.

I would here beg to refer to the printed official reports, as to the times at which the fish ascend various rivers, as given in the answers to question 5 in the Appendix.

In fact (as far as I have examined personally) all the rivers in Wales, beginning at the westernmost boundary of the Dee down till we come to the Usk, seem to be naturally late rivers. My colleague informs me that the Devonshire and Cornish rivers can be placed under the same category. I think it hardly fair that these rivers should—as they say they do—suffer by the working of the Salmon Acts, whose enactments apply in practice admirably to the big rivers, but apparently not to the smaller ones. And it is interesting to compare the old close seasons of various rivers with the present statements of Conservators to see how legislation has improved the produce of some rivers, but has had little effect on the produce of others.

By the 18th Section of the Act of 1861, the Home Office has power to extend or vary the time during which it is prohibited to take salmon; hitherto the Home Office has not allowed any river to catch their fish with a net in the month of September, and for my own part I shall be exceedingly careful in recommending that such a course should be adopted. It must never be done without the fullest inquiry and the most ample and satisfactory evidence, not only from all persons personally interested in the matter, but also an anatomical examination of the fish themselves must be made in order to solve this most difficult question. I have already in my museum a series of casts of milt and ova, taken at various seasons of the year, which I myself have made in the hope of elucidating the question. This series is already most instructive, and I trust will eventually throw some light upon the subject. I shall feel obliged for the milt or ovaries of any salmon at any time of the year, as I am endeavouring to work out, by anatomical evidence, a definition of an "unclean and unseasonable" salmon.

A most important point relative to the alteration of close season should be considered, viz., the disposal of the fish, supposing that permission had been granted to any river to take salmon with the net after the usual close season had finished.

The 19th Section of the 1861 Act places the burden of proof of the locality from whence salmon have come, which are sold between the 3rd of September and the 2nd of February, on the person who sells or exposes for sale, or has them in his possession for sale; and if this law acts well as regards Irish and Scotch fish from rivers which close late, I do not see why it should not apply equally to the rivers in England and Wales.*

* I have consulted a gentleman who is doing a very large business as wholesale fishmonger in Billingsgate; he informs me that there would be no difficulty in the case if it were made law that with every consignment of fish sent from a district (the season of which had been prolonged), a magistrate's certificate be sent certifying officially the locality in which these fish have been taken. In the case of fish exported from London after the commencement of September, which fish have been caught in rivers in Scotland that remain open late, the custom-house officers require to see the certificate sent with the fish, and if the certificate is not forthcoming on the spot, the fishmonger who exports the fish is bound to give a 10 *l.* bond for the production of such certificate.

Another plan was proposed at a meeting at Bodmin, in January 1865, by Jonathan Couch, Esq., the well-known ichthyologist, to whose printed opinion on close times in the Fowey and Looe, I would beg to call attention. Mr. Couch writes:—"It has been urged in favour of the general extension of the close time that is at present enforced by law, that without it a system of poaching would be practised in the north, and the fish thus caught would be offered for sale in London and elsewhere under the denomination of Cornish salmon. But there need not be any real difficulty in this

The Salmon and Trout in Tasmania.

On the 1st of May 1864, the ship "Lincolnshire" reached Hobart Town, Tasmania, with a consignment of salmon eggs, which had been packed in ice under the superintendence of J. Youl, Esq. Of these, 6,000 salmon and 1,000 trout were hatched out, and throve exceedingly well. The first detachment of smolts left the ponds in October 1865. From a report of the "Salmon Commissioners of Tasmania," dated 18th September 1867, I am enabled to condense the following information as to the possibility of success of this important national experiment:—On the 14th February 1867, four gentlemen, riding close along the bank of the Derwent, at a place called the "Dry Creek," several miles beyond the reach of the tide, and above several rapids, saw a large fish leap twice from the water. One of the party who had been familiarly acquainted with salmon in Ireland, recognised the fish as a salmon. On the 21st of February a large fish was seen leaping two miles above Dry Creek. On the 28th of February, at a spot a mile still further up the stream, a gentleman who had been a salmon angler in Scotland, saw a large fish leap, which he at once identified as a salmon or a grilse. On the 15th of March, Mr. Ramsbottom, superintendent of the ponds, saw a fish, which he considered to be either a salmon or grilse, a short way below the mouth of the Plenty (a tributary of the Derwent). On the 18th of March, seven distinct rises were seen again at this place. On the 1st of April, near the same spot, Dr. Officer, one of the Commissioners, and two friends, observed shoals of fry endeavouring to escape from some large fish; these, rising in rapid succession from the water, proclaimed themselves to be real salmon. Again, on the 3rd and 5th of April, salmon were seen in the same part of the river; this consists of a reach of deep still water, 400 or 500 yards in length, bounded at each extremity by a rapid, passing over a bed of gravel; it is close to the mouth of the Plenty, in which they were hatched. The progress of the salmon has thus been clearly traced from New Norfolk to the mouth of the Plenty, a space following the course of the Derwent of upwards of eight miles in length. Although no salmon have yet actually been caught, the Commissioners believe that the evident "return of the salmon from the sea to the river is complete and irrefragable." They report that the only enemies to the salmon in the fresh water in the Derwent are eels, a small fish called a mullet, and some predacious birds; in the estuary there are vast numbers of fry of various kinds of fish which have increased since the passing of the Salmon Act, and which would afford food for the growing smolts. One smolt has indeed been caught by a young gentleman angling at Newtown Creek; it must have descended into salt water, after a journey of upwards of 30 miles from its birth-place, and then reascended another stream in the form of a smolt and not a grilse. Upon this point I have sent my opinion to the Tasmanian Commissioner.

The river trout hatched from the eggs taken out by the "Lincolnshire" are doing very well. These eggs I myself obtained from a branch of the Itchen, which runs through the garden of Admiral Keppel, at Bishopstoke, in Hampshire; these I believe are the only river trout which were sent out to Tasmania, though I understand that the eggs of the sea trout were sent out at the same time by Mr. Francis Francis. The river trout in Tasmania have not only increased in size and weight, but likewise have bred; one of them (although out of condition, having just spawned) was 22¼ inches in length, and weighed four pounds; these trout, being then about two years old, bred for the first time in June 1866; some of their ova were sent to Melbourne, in Victoria, and others to Launceston, Tasmania. They spawned for the second time on the 23rd of June 1867, and not only deposited their eggs in the artificial water-course attached to the pond, but those that were at liberty in the river were also seen to

---

this matter, and the fishermen have themselves suggested what they believe would prove a sufficient protection against the fraud. It is, that every salmon which is sent out of the county, shall be brought to the custom-house, and there marked with an official stamp on the tail, gill-cover, or dorsal fin, an imitation of which should be punished as a misdemeanor.

to make their nests. The season for spawning extended to six weeks, terminating on the 6th of August. From this crop of eggs, a supply was sent to the Victoria Acclimatisation Society of Melbourne, and also the Acclimatisation Societies of Christchurch and Otago, in New Zealand. It is highly interesting to observe how that these trout have accommodated themselves to the seasons at the Antipodes, their winter months corresponding to our summer months; but it will be still more interesting to find out how the salmon will accommodate themselves to this reversion of their natural seasons. A second series of breeding ponds have been erected in Tasmania, on the South Esk, in the North of Tasmania, under the direction of Mr. Charles McArthur, so that attempts will be made simultaneously, both in the North and South of Tasmania, to produce this valuable fish, and I sincerely trust that the experiment will eventually succeed. My friend, J. Gould, Esq., F.R.S., considers that salmon will never succeed in Australia.

Salmon to New Zealand.

There are three rivers in New Zealand which promise well for salmon namely, the Waitangi, the Molyneux, and the Matura. Having learnt the success of the transport of salmon ova to Tasmania, the Provincial Government of Otago voted the sum of 1,000 *l.* for the experiment of introducing salmon into one or the other of these rivers. The mode of packing them was the same as that adopted in the Australian experiment; a compartment, measuring 16 feet by 12 feet, and 11 feet high, was constucted on board the clipper ship "Celestial Queen," commanded by Captain Watt; the ova were packed in boxes of moss, and placed at the bottom of this chamber; ice in blocks was then placed over them to the amount of several tons, and all hermetically closed up. The entire arrangement of this experiment was left to J. Youl, Esq., who was so successful in packing the eggs for Tasmania. The arrangement of the business part of the experiment was entrusted to William Carr Young, Esq., who has resided 13 years at Dunedin, in Otago, and by his kindness I am enabled to give the estimated quantity of salmon eggs:—"Sent out from the Severn, 113,000; from the Wye, 1,000; Major Horsfall's stream, Galway, 50,000; Scotch, 56,000; total, 220,000. There were also sent out sea-trout eggs; from the Hodder, 4,000. *Salmo Umbla*, a species of charr from the royal lakes in the neighbourhood of Munich, collected and brought over by E. V. Lindon, Esq., 9,000; from Lord Essex's fishery, river trout, 1,500; total number of eggs, 234,000. These eggs have been given in charge to Mr. Dawbin, who will look after them on the voyage, and who has been engaged for two years to superintend the hatching establishment in New Zealand. Living fish were also sent out, namely, gudgeon, carp, and tench, and also several preparations by myself to illustrate the development of the salmon. I confess that I do not quite approve of the plan about to be adopted in New Zealand, in hatching out these ova in boxes let into the ground after the manner of the Stormont-field-ponds, and would much rather have learnt that slate troughs had been adopted instead. From what I can understand, the rivers in New Zealand seem adapted for the well-being of salmon. I have, however, cautioned those who have the management of the experiment not to place the young fish in rivers, the upper waters of which are liable to be choked up by washings from the gold diggings, but to place them in rivers where the spawning grounds are free from sediment. We must all look forward with great anxiety for the result of this important experiment, in the forwarding of which, as far as England is concerned, I have been allowed to participate.

Transport of Trout to India.

The Government of Madras having determined, at the suggestion of Governor Sir William Denison, to carry out the experiment of transporting trout to India, entrusted its management to Dr. Francis Day, Surgeon of the Madras Army. By the kindness of Melville Portal, Esq., and E. Pye, Esq., I was enabled, in January 1866, to collect a good supply of trout eggs from the upper waters of

the Test; these were carefully packed in ice, and immediately taken (in about five weeks), by Dr. Day himself from Southampton to Madras and thence to Koimbatur, at the foot of the Neilgherry Hills, whence they would be taken to Ootacamund, to which place slate hatching boxes had been previously sent out to be in readiness to receive them.

I received, in June 1866, a detailed account from Dr. Day of the difficulties he had to encounter. He arrived in safety, with the boxes of ova, at Ootacamund, on the 15th March. The average temperature of the water in the hatching boxes Dr. Day found to be from 51° to 66°; out of doors the stream in the sun stood at 72°. Dr. Day tried every possible experiment to cool the water, which proved fatal to many of the ova when placed in it. At the same time a deposit of red sand took place upon the ova, and this in spite of every attempt to filter the water. On the 29th of March the eyes were visible in the eggs. On the 1st of April a great mortality commenced among them; a very fine species of leech, scarcely thicker than a horse hair, after a thunder storm invaded the troughs, passing through the filters, and making a bite in the egg, sucked out the juices of the embryo fish. On the 20th of April the last ova died. Dr. Day remarks: "It has, however, been proved that trout ova, properly packed in ice, and carefully attended to, will survive a journey overland from England to India; also that their vitality has remained until the development of the eyes and the form of the embryo fish have been visible in the egg. Here the first experiment ceases; the heat of the water alone, irrespective of anything else, would, I believe, have precluded success, even if the onslaught of water insects had not taken place. The period of the year chosen was evidently not the best suited, but it was only in the months of January and February that leave was obtained from the Directors of the P. O. Company to try the experiment. This brings the ova to India at the commencement of the hot weather on the hills. The latest period for leaving England should be at the end of October, or beginning of November, when trout ova may possibly be obtained in some parts of England, the Thames trout, for instance; they would then arrive in Ootacamund in December, and during the following month all showers are absent, whils it is the coldest period of the year."

Although the experiment has failed, the greatest credit is due to Dr. Day for his energy and perseverance in the matter. I have, since January 1867, learnt that a gentleman named Mc Ivor, has succeeded in carrying to Ootacamund, tench, gold fish, perch (*quære*), silver eels, and 15 great lake trout.

Museum of Economic Fish Culture.

Being exceedingly anxious that the public should have a good idea of the nature and importance of the British salmon fisheries, I am happy to be able to report that I have now got together a "Museum of Economic Fish Culture." Under the sanction of the Lords of the Committee of Council on Education, space has been afforded by the authorities of the Science and Art Department, South Kensington, and my collection is now open free to the public at the Royal Horticultural Gardens, South Kensington. The natural history of the salmon as well as of other products of the waters of economic value (especially the oyster), is illustrated by plaster casts and preparations, all of which I have made myself. and mostly at my own expense. There will be found in my museum models of salmon passes, and modes of salmon capture, nets, &c. The process of hatching the ova of salmon, trout, &c., is also carried on at the Gardens on a considerable scale. This is now the third year that I have been enabled to distribute, on the part of the Acclimatisation Society, a considerable number of ova* to various rivers in England. Although the judicious cultivation and opening up of natural spawning grounds will in my opinion be always preferable to hatching the salmonidæ by artificial means, yet inasmuch as the transport of large numbers of salmon and trout, in the embryo state, to places where they did not exist before, and also improvement in the breed of fish may be readily effected by the artificial process, I trust that my efforts have done good, and will continue so to do for the future.

* For many of these ova I am indebted to the authorities of the French piscicultural establishment at Huningue.

Statistics of Engines and Men employed in the Salmon Fisheries of England and Wales.

Analysis of Prosecutions.

The reports sent in from the Boards of Conservators, of various rivers, are most interesting and important; and in order to give some idea of the value of the salmon fisheries of England and Wales, at the present time, I now give a table of statistics showing the number of engines of various sorts in actual use, the amounts of licenses paid for their use, the number of men (as far as can be ascertained) employed in the salmon fisheries, and the number of prosecutions instituted. From this table it would appear that the total amount of money paid for licenses is no less than 4,807 *l.*, and that the number of men employed is nearly 4,000. These facts will, I think, show the great importance of our salmon fisheries, both as giving occupation for poor fishermen, sport to the angler, and good food for the public.

MR. WALPOLE'S SECOND REPORT.

Sir,

When I submitted, in June last, my first annual report, I had been in office so few weeks that I had not had any personal opportunity of inspecting many of the salmon rivers of England and Wales, and I purposely deferred making any observations upon those which I had visited, because it appeared to me that "an account confined to a portion only of our river system would give an incomplete and possibly erroneous impression of the general prospects of our salmon rivers." This deficiency I am now able in some measure to supply, as either my colleague or myself have visited most of the rivers under our superintendence. On those rivers which Mr. Buckland has visited alone, I have of course no remarks to offer. On those which, either with him or by myself, I have personally inspected, I propose making some observations, the more so as practically no detailed official account has been published of them since the year 1862.

There are three ranges of hills of peculiar interest to the salmon cultivator: the first, the Pennine Alps, runs southwards from the Cheviots to the Peak in Derbyshire, and forms a sort of backbone to England for that distance. The second, the most casual reference to the map will show, running from north to south down the centre of Wales; Plinlimmon is the most important, though not the highest, point of this range. The third is Dartmoor. Without disparaging the importance of a few other rivers to which I propose also to advert, it is, I think, no exaggeration to say that the most valuable rivers in England and Wales rise in one of these three ranges of hills. This consideration will be clearer, if it is remembered that, generally speaking, the most important rivers of each of these districts rise not only in the same range of hills, but absolutely in the same hill. The head waters of the South Tyne, the Wear, and the Tees are within a short distance of each other on the east of Cross Fell, while some important tributaries of the Eden rise on the west of that hill; the head waters of the Ure, the Nidd, and the Wharfe on the east, and of the Lune and the Ribble on the west, converge on the same hill. The Wye, the Severn, the Dovey, the Teify, and the Towy rise, within a short distance of each other, in the hill of which Plinlimmon is the highest point; while the Taw, the Okement, the Teign, the Dart, the Erme, and the Avon all draw their head waters from a few square miles of Dartmoor.

In a geological point of view, it will be observed that these three ranges of hills are the source of the mineral wealth of this country. Roughly speaking, coal and lead is the product of the first range, lead of the second, tin and copper of the third. On this fact one of the great difficulties attending salmon cultivation depends, as this mineral wealth has, by the pollutions which, both directly and indirectly, it has occasioned, seriously injured our salmon rivers.

The rivers rising in the east of the Pennine range are the Tyne, the Wear, the Tees, the Swale, the Ure, the Nidd, and the Wharfe. The rivers which rise in the Cheviots, between the point at which they are intersected by the Pennine range and the sea, are the Aln and the Coquet; the rivers which rise between the Pennine range and the east coast are the Wansbeck, the Blyth, the Esk, and the Derwent.

Northumberland Rivers.

The length of the Tyne, a river by nature admirably adapted to the cultivation of salmon, is 73 miles. Its catchment basin is 1,053 square miles.* The Tyne is particularly interesting, from proving, firstly, the comparative unimportance of pollutions in tidal waters; secondly, that an active shipping trade does not deter salmon from entering a river; thirdly, that weirs have been the chief

The Tyne.

* These figures, and the similar ones throughout the Report, are taken from the Report of the Royal Commissioners of 1860.

chief cause of the destruction of our salmon rivers. Whether the salt water floats, without mixing with it, over the polluted river water, or whether the tide flows first along the sides of the river where the current is less strong, and where it consequently meets with less resistance, is a matter of comparatively small importance. The important point is, that the fish pass Newcastle, the chief home of our chemical factories, and that we may therefore infer that pollutions in tidal are of less consequence than those in non-tidal waters. The river at Newcastle is crowded with shipping, so much so that my predecessors, in their first report, thought it necessary to dispose of the argument that the shipping had destroyed the salmon in the Tyne: the improvement which has since taken place in the river shows the correctness of their views, and proves that we need not apprehend that the increase of trade will in any way affect the production of a river.

Previously to 1861, Bywell Dam, an almost insurmountable obstruction, blocked the Tyne 23 miles from its source. The fisheries below it were gradually deteriorating; they were let in 1840 for 800 *l.*, in 1860 for 550 *l.*, and in 1861 for still less. In 1862, Mr. Wentworth Beaumont threw down Bywell Dam. The improvement in the Tyne since that date has exceeded every expectation. "It was currently reported and believed," say the Conservators in their official report on the last year, "that as much as 700*l.* worth of Salmon was caught in one flood." In other words, the value of the fishing for a few hours was more than the total amount of rents received for the whole fishery only six years before.

On the Tyne a system was adopted in 1861 by which the riparian proprietors voluntarily agreed to contribute a frontage rate towards the protection of the river. Some little difficulty occurred in continuing this rate under the new law, which does not contemplate any system for raising funds of this description. But a little consideration showed that the 4th part of the 34th section of the Act of 1865 was sufficiently elastic to prevent the abandonment of a system which on this river has worked admirably. By that paragraph regard is to be had in issuing a general license to the extent and productiveness of the fishery, and under the name of a general license the rate has accordingly been continued to be paid.

Above Bywell the fish have a clear run up the North Tyne; the result is that the Tyne is one of our earliest angling rivers. The most important tributaries of the Tyne are, however, blocked; the Reed by a dam at Woodburn, to which our attention has been directed by a gentleman in the neighbourhood, but which the Conservators are not yet in a position to deal with; the South Tyne by Warden Paper Mill, a factory where Esparto grass is used, and where considerable pollution is occasioned. A ladder is about to be erected on the dam belonging to this mill, on a plan furnished by Mr. Horsfall*.

The Aln.

The Aln—which is, I believe, entirely the property of the Duke of Northumberland—is 24 miles long, and has a catchment basin of 102 square miles: it is blocked by six weirs; the lowest of these is a mill dam, the other five have been erected in the Duke's park to dam up the water for ornamental purposes. A side-cut, with a ladder at the head of it, conducts the fish round two of these weirs. Those fish that find the entrance to this cut, which is too much below the lowest of the two weirs, pass with ease up the ladder, which is constructed on the usual Government plan, with an easy gradient, and has two peculiarities; viz., that it extends across the entire breadth of the leat, so that all the water flowing down the leat must pass through it; and, that it has a hatch at the top which only allows a limited quantity of water to pass down it.

The Coquet.

The Coquet is 45 miles long, and has a catchment basin of 215 square miles. There are weirs at Warkworth, Acklington, Morwick, Guisnes, and Felton. At Warkworth, the Duke of Northumberland has converted a side leat, originally constructed for a salmon trap, into a pass. In floods the volume of water that passes through this run is very great, so much so as to have washed away the water-breaks which were originally in it. The entrance to the run is too far below the weir, and the pool in which the fish usually lie. Mr. Buckland and I suggested that this defect should be remedied by cutting a new channel from the

* I understand that this ladder has since been completed. But, except in those cases where I have subsequent *official* information, I have always described the state of things I saw myself.

the run into this pool: and as the run is passable in moderate water, and as the weir itself is no obstruction in high floods, Warkworth will cease, we hope, should our recommendation be carried out, to be any impediment to the free run of fish.

Neither Morwick nor Guisnes Dam are any serious obstruction; the dam immediately above Guisnes, Acklington, is, however, the key to the whole river. It is a perpendicular stone weir, 11 feet in height, and has, I was assured by the keepers, never been passed by any fish. There is indeed a by-wash, or artificial channel, flowing from the river above, and rejoining the river below, the dam; but the point, at which this channel, which in itself is a practicable pass, rejoins the river, is too far below the dam to make it of any real service. The fish, as will be readily understood, pass by the mouth of the by-wash and exhaust themselves in vain efforts to surmount the dam itself. When I was there I counted upwards of 20 fish in a minute leap at the dam. Any plan for assisting the fish over this dam must necessarily be expensive. Mr. Buckland and I have explained to the Conservators that which seemed to us most advisable.

Felton Dam has a ladder attached to it; the ladder is not entirely satisfactory, but we have suggested one or two alterations which we have reason to believe will make it efficient. But, before any steps are taken with regard to these Coquet weirs, a preliminary question will, in all probability, have to be decided; viz., whether it is possible to make this river, as well as the Aln, a purely salmon stream. At present it is full of bull trout (indeed bull trout are known on the Tyne as "Coquet fish"), and it is almost entirely deserted by salmon. The Duke of Northumberland has been endeavouring, at considerable expense and on a very large scale, to breed salmon proper to turn into it and the Aln; but a difficulty arises from the fact that bull trout are by law equally protected as salmon, and that His Grace cannot therefore legally take any measures for extirpating bull trout from it.

That the Aln or the Coquet will ever take high rank as salmon rivers I do not suppose; neither river has a good estuary; both are blocked by extremely difficult weirs; both are in some places slow and muddy streams; but because a river is not of the highest class it is no reason that it should not be cultivated. The problem to be solved is not whether the Coquet is capable of producing as many salmon as bull trout, but whether it is capable of producing salmon whose value shall be equal to the value of the bull trout now in it.

The value of the bull trout in the Coquet as a sporting fish is nil. It will not take a fly. I have never tasted one myself, but I am informed that it is a muddy flavourless fish. It commands an inferior price to salmon, and those that are sold are chiefly sold as salmon to inexperienced purchasers. It seems, therefore, reasonable to urge that the destruction of these fish should be permitted by law, but the destruction of them should in that case be limited to those rivers where it may seem advisable to the Secretary of State. Salmo Eriox is the most puzzling of all the species into which the genus salmo is divided. Sewin in Wales, Peal in Devonshire, are included by some authorities in this species, and care must therefore be taken in rooting out the worthless to spare the lives of the valuable fish.

Durham Rivers: The Wear

The Wear is 70 miles long, and has a catchment basin of 455 square miles. The Wear, for a fine river, has a singularly poor estuary; naturally, its spawning beds are excellent. I shall have occasion to show later on how they have been destroyed. The Wear was originally a salmon river, so much so that in the lines which Mr. Couch places at the head of his account of the Salmo Salar, "Tivy or Wear" are the rivers instanced as the abode of the fish. But everything which causes the deterioration of spawning beds is, it should be distinctly borne in mind, far more destructive to salmon than to their coarser relation bull trout. The latter are less dainty in their selection of a place to deposit their ova, and the ova apparently live under circumstances which prove fatal to the ova of salmon.

The main cause of the destruction of the Wear are lead mines. The manner of destruction is twofold:—1st, the hush* from the lead washings taints and discolours

* I use the word "hush" because it is generally employed to designate the refuse slime from the settling pits of a lead mine. But I am informed that this use of the word is inaccurate, and that a hush is properly an operation in mining, where a large quantity of water collected in a sort of reservoir is allowed to burst through one of the sides of the reservoir, and so disclose any veins of ore which may exist in the place.

discolours the stream for miles, and is so nauseous to fish that they drop back before it: 2nd, it has been the habit to tilt the matrix in which the ore is found into the river, and this, in large jagged masses, has settled on the spawning beds, and has utterly ruined them.

It will be seen that I have not adopted the usual view that the fish are actually poisoned by the hush. I venture with great diffidence to think that it has not been proved that hush is in all cases fatal to fish. It does not seem possible that so heavy a substance as lead should be carried without subsiding down a stream for miles in sufficient quantities to cause, as is the case on the Dovey, the death of fish many miles below the spot in which it is turned into the river; and, without positively asserting that a poison, soluble in water, must in the case of some mines be present with the ore, it seems well worth the consideration of our chymists whether, *e. g.*, the sulphur in iron pyrites so extensively met with, might not, under certain conditions, be oxidised on exposure to damp and air, and a soluble poison, sulphuric acid, be thus formed. Should this surmise prove correct, filtration, through an alkali, would be the remedy which it would be necessary to apply.

This, however, is an excellent proof of the extreme weakness of the present law as to pollutions. That the spawning beds have been destroyed, and that fish drop back before the hush is not difficult to prove; but there is no legal remedy against the mine-owner, because, though the river is destroyed, fish are not actually poisoned.

Fortunately on the Wear the mine-owners are willing to do more than the law has directed. Mr. Wentworth Beaumont and the London Lead Company have both expressed themselves ready to do all they can to decrease the injury which their mines occasion, and we have reason to hope that the pollution will be considerably lessened by the measures which they are taking.

The weirs on the Wear are not very numerous. I wish specially to refer to two of them. The Museum Dam at Durham has had a ladder attached to it, in accordance with a plan furnished by Mr. Ffennell. The weir is a steep sloping apron of stone, and, in order to obtain an easier gradient, Mr. Ffennell directed that the ladder should be constructed, not straight from the top to the bottom of the apron, but diagonally across it. He placed it in an excellent position, with a good pool below it. No fish have been seen to go through the pass, but they all pass with ease up the upper side of the ladder, which, a little reflection will show, collects the water which flows over that portion of the dam.

I inferred from these facts that fish could be easily passed over many sloping dams by a baulk of timber being pinned diagonally across the apron of the weir. The idea had been previously suggested at the Congress last year both by my colleague and other persons, but the Museum Dam at Durham was, though an accidental one, the first instance of its successful application. The remedy has the additional advantage of being extremely inexpensive, and I have since recommended its application in many cases.

A ladder has been attached to the dam at Bishop Auckland; Mr. Buckland and I found that a board had improperly been placed at the head of it, the removal of which we directed. We are also in correspondence with the owner of the weir as to some modifications which we think might with advantage be made in the ladder.

The Tees.

Equally with the Wear, the Tees, a river 95 miles long, with a catchment basin of 744 square miles, is polluted by lead mines. The mines, however, are on tributary streams, and seem to do less injury to the Tees than they do to the Wear. At one of these, at a place called Coldbery, the produce of the mine has greatly increased during the last few months, so much so that the existing catch-pits are inadequate to catch the ore to an even remunerative point. The agent of the London Lead Company, to which the mine belongs, expressed to me his readiness to adopt additional precautions in this case. The estuary of the Tees is considerably finer than that of the Wear, and the improvement which has been effected in this river is most encouraging. Dimsdale Dam, a weir which the Salmon Acts has made famous, is the key to this

this river. My colleague and I considered that, as it was under the consideration of the Special Commissioners, it was unadvisable that we should visit it.

There is no other artificial obstruction on the Tees; but there are two natural falls, the highest, High Force, is from 60 to 70 feet high. It is fortunately situated within a few miles of the source of the river, and it is therefore neither necessary nor advisable to undertake the costly task of making it practicable for fish. Winchbridge Force, a few miles below High Force, is at present impassable, but it would not be difficult or costly to take the fish easily round by a sort of secondary fall, which is admirally adapted for the purpose.

The Tees is a river well adapted to salmon. The spawning grounds are extensive, and it promises, under the management of the able and energetic clerk to the Board of Conservators, Mr. Dodds, to take high rank among our northern rivers.

Yorkshire Rivers.

Descending southwards, and passing over the Esk, with which I am unacquainted, I arrive at the noble group of rivers which flow into the estuary of the Humber. "The estuary of the Humber," in the words of the Royal Commissioners of 1860, "drains the largest basin in all England. On the one side the Ouse and its larger tributaries, and on the other the Trent, flow conjointly from an area of 9,550 square miles."

Fixed engines for the capture of salmon have of course been abolished, but some most destructive nets still remain for the capture of the sea fish.

The Ouse.

Of the rivers which constitute the Ouse, the Wharfe, the Nidd, the Ure, and the Swale rise in the Pennine range. There is no obstruction in the Ouse below Cawood, at which place the Wharfe enters it.

The Wharfe.

The first weir on the Wharfe is at Tadcaster. This weir is a fishing mill-dam; the cruives have not been used since 1861, but hecks or gratings are placed in the openings when the sluices are drawn, and the pool, below the weir, is fished with a seine.

A ladder has been built on the weir near the right bank of the river, but it is ill-constructed, and the position it has been placed in is a bad one. I was informed that Mr. Ffennell had pronounced it useless. It has of course never been approved by the Home Office; indeed, as the pool which is fished is more than 50 yards below the weir, it has not been necessary, as the law now stands, that it should be so approved. The two next weirs on the Wharfe, Thorpe-Arch, and Flint, are both fishing mill-dams, and call for no particular observations. The fourth weir, Wetherby, a terrible obstruction 10 feet in height, was also a fishing mill dam; but before 1861 the cruive which was next the mill was walled up, as the water rushing through it was found to be injuring the foundations of the mill.

These four weirs are all to be placed under the Special Commissioners.

Harewood Bridge Weir was built to support the bridge. It is a very low weir, but from its peculiar construction (it is built in two long steps) is a great obstruction, as, though the salmon easily reach the top of the lowest step, they have no depth of water to assit them in springing up the highest one. The county to whom the bridge belongs, however, might, I am given to understand, probably be induced to make this weir practicable if those below it were dealt with first.

There are three weirs between Harewood and Otley, but none of these offer much difficulty. At the latter place there is a sloping stone weir, supplying two mills, a paper mill and a corn mill, with water. Not a drop of water was, when I was at Otley, flowing over this weir. No precaution has been taken to prevent the refuse liquor from the paper factory flowing into the river, and loud complaints are made in Otley of the nuisance which this refuse occasions.

Near Otley the Washburn enters the Wharfe. The Leeds Corporation propose to supply Leeds with water from this brook, storing the water in a series of compensating reservoirs. The scheme will destroy the Washburn as a spawning tributary; but I do not refer to it in consequence of this loss, but as an illustration of the necessity of keeping water pure. The Aire, which naturally should supply Leeds with water, and did partially do so up to the year 1841, is so polluted, that the town is obliged to go to another river for its

supply. No one, indeed, can visit the rivers of England without observing the growing demand for pure water, and the decreasing number of rivers from which pure water can be obtained.

I found at Messrs. Forster & Fyson's wool mill, at Burley, above Otley, three distinct pollutions; (*a*) the vitriol employed, by a process into which it is unnecessary for me to enter, to recover the soap from the water, in which the wool is washed, was percolating into the river; (*b*) the gas tar (the gas used in the factory is made on the premises) was flowing into the river; (*c*) the ashes, which in a large establishment are of course considerable, were tilted into the river. I notice the case not because it is of great importance, but in testimony of the ready manner in which the owners promised me to keep all three of these objectionable substances out of the river.

Their weir, which is built in steps, and has a fall of 12 feet, is impassable by fish; as, however, a few miles above it there is another weir at Addingham, which is one of the most formidable I have ever seen, and, as some time must elapse before the fish can be brought up as far as Burley past the obstructions to which I have already alluded, it is not at present necessary to take any steps towards dealing with this obstruction.

The Ouse.

To return to the Ouse, the fish encounter no difficulty till they reach Naburn, up to which the tide flows, and where there is a weir erected for navigation and milling purposes. The weir is the property of the corporation of York, who, I understand, intend to erect a pass on a plan furnished by Mr. Brady a few months ago.

Linton, the second weir on the Ouse, is a navigation weir; it has latterly attracted attention from the alleged failure of the ladder which has been attached to it. Yielding to the objections of the Navigation Commissioners, who strenuously resisted any meddling with the weir, Mr. Ffennell consented to place the ladder, of which he furnished the plan, in its present position, instead of, as he had desired, in the centre of the weir. The ladder is on the usual Government plan; "the squares," or steps, are a little larger than it has unfortunately been too frequently the habit to make them, but it is too steep, and its foot projects too far below the foot of the weir. A few fish do pass through the ladder, since fish were found in a net purposely placed at the top to test its efficacy; but I hear that many fail to find it, and that some of those which do find it fail to pass through it. As I shall give my views on ladders later on, I do not now propose to advert to the means which should be taken to remedy the defects at Linton.

I noticed at a flax yard near this weir that the water in which the flax was steeped was being permitted to flow into a small ditch which falls into the Ouse. The smell was extremely offensive, and might, I should think, be injurious to the health of the immediate neighbourhood. I had an interview with the manager, and received his assurance that he would endeavour to use the waste liquor as manure, for which he confessed it was admirably suited.

The Nidd.

On the Nidd, the next tributary of the Ouse, besides a weir at Kirk Hammerton, there is a tremendous mill dam at Goldsborough, which it is, however, not very difficult to deal with effectually, as there are some enormous stones a few yards below the weir, upon which a footpath is carried across the river. These stones might easily be converted into a second weir, and one impracticable weir could thus be exchanged for two low ones, which would be easy to deal with effectually. Two other weirs, one at Plumpton, and the other at Knaresborough, deserve attention, but the weirs on this river do not present such formidable difficulties as those on the Wharfe, nor is it advisable to deal with them until the weirs on the Ouse at Linton and Naburn have, to use a technical word, been effectually bridged.

The Ure.

The Ure and the Swale unite below Boroughbridge, and form the Ouse. Of these the Ure is the finest river; it possesses the characteristics of a fine spawning stream, and, notwithstanding the serious impediments which they have to encounter, I am informed that on the Cover, one of its tributaries, the fish spawn by hundreds. Before 1861 the Ure was a famous smolt river, so much so that the rigorous regulations in regard to their capture have excited no little discontent in the neighbourhood, though, to the credit of the anglers, I must add that they have been always complied with. The lowest weir on the Ure, at Boroughbridge, is built, like many others in Yorkshire, in steps, and is a most formidable

formidable obstruction. It would be easy to construct an effective pass near the left bank, where, in consequence of the angle which the weir makes with the bank, the cost would be lessened, but the fish usually do not go there, though by slightly lowering the top of the weir at this point, it would be possible, I think, to attract them to it. Westwick, the second dam on the Ouse, is less formidable, though it is impassable to the majority of fish, except in floods. Still, from being a sloping stone weir, it will not be difficult to attach a suitable pass to it.

These two weirs, however, have dammed up the water so seriously, that the river between and above them is little better than a pike pond, and I am informed that, when the smolts are going down, scores of pike may be seen lying in wait for and preying on them. Some steps must be taken for the destruction of these fish before the Ure can be properly cultivated as a salmon river.

The next dam on the Ure, Mickley, was being rebuilt in an altered form when the Salmon Act was passed, and it is consequently a matter of doubt whether the 13th section is applicable to it or no. It diverts an enormous amount of water into the mill leat. Neither to it, nor to the dams at Masham and Tanfield, and the two dams on the Cover, have passes been attached.

The Swale.

The first dam on the Swale, the second branch of the Ouse, is at Topcliffe; it is connected with a valuable corn mill, and represents a considerable income, but the Swale runs here through a level country, the drainage of which is much impeded by this dam; there is, therefore, I hope, some chance of an arrangement being made between its owner and the landowners above it for its entire or partial demolition. As long as any such prospect exists, it seems unwise to recommend that a pass which, in this case, must be costly, should be attached to it.

There are considerable pollutions at Richmond, which, however, it is difficult to deal with under the present law, as the river is almost depopulated. Richmond is built on a considerable elevation above the river, the drainage into which is consequently easy. I observed that everything (even the tar from the gas works, which are under the control of the corporation) was being turned into it. I should add, that the corporation, to whom I wrote on the subject, assured me that the escape was accidental, and that it should in future be prevented. The great injury at Richmond is, however, occasioned by a large paper mill, where the refuse is turned into the river. Nor is the pollution the only evil that this mill occasions. Not a drop of water was flowing over the weir when I was there in September, and I was informed that water had been over it only once in the last three months. It is useless, therefore, to endeavour to restore the Swale till some arrangement is made for allowing some portion of the river to flow down its natural bed.

The Derwent.

The Derwent, another tributary of the Ouse, but, unlike the others, flowing south instead of east, has been formed into a separate district from the other Yorkshire rivers. The arrangement, however, has not worked well, and there is some intention of uniting all the Yorkshire rivers in one district. The Derwent is blocked by five weirs, to none of which have passes been attached. Those at Sutton-on-Derwent and Stamford Bridge, are the most formidable. The first, which has a fall of 10 or 11 feet, consists of a long slope, a perpendicular step, and a second slope; a board is placed on the top of this to further heighten the weir. The weir at Stamford Bridge is built in steps; it has a fall of between seven and eight feet, and, like Sutton, is utterly impracticable except on very high floods. The weirs are built partly for navigation and partly for milling purposes. That at Sutton has a fishing cruive, which, though disused since 1861, will enable it to be placed under the Special Commission. Lord Leconfield, who owns Stamford Weir, has intimated his readiness to attach any pass to it which he can be assured is certain to succeed; but there is still so much question as to the true requirements of a salmon pass, that, though I explained the manner in which it seemed to me that Stamford could best be dealt with, I felt that the pass would in some measure be experimental, and I am not inclined to recommend that experiments should be tried in cases where they must prove as costly as at Stamford. The matter is, however, of great importance, as for breeding purposes the lower portion of the Derwent is worthless, and its whole power of reproduction depends on the fish succeeding in reaching its tributary, the Wye.

In concluding my notice of the Yorkshire rivers, I must express my regret that so little should have been done to reclaim the important river property of this great county. My predecessors were able in their second report to speak of the steps about to be taken for this purpose; only one ladder has since then been erected. And yet, as salmon producers, these rivers are not surpassed by any group of rivers in England. The Wharfe especially is naturally a picture of a fine salmon river. It has a noble estuary, it is one long series of streams and pools, the gravel is clean, the water is of that peculiar coffee colour that the fish are so fond of, and the weirs alone prevent it from taking a place in the front rank among our English rivers.

The Trent.

It will be more convenient to deal with the Trent, the remaining tributary of the Humber, now, though it can hardly be included amongst the group of rivers whose source is in the Pennine Alps. The Trent has not naturally the same advantages as the Yorkshire rivers. It flows through a flatter country; its spawning beds are consequently inferior. It is navigable for a considerable distance, and is studded with busy hives of industry, that incessantly pour their pollutions into it. But, notwithstanding these disadvantages, the Trent has, thanks to the energetic efforts of those interested in it, improved rapidly since 1861. At Averham, the Trent (Newark) Navigation Company are proposing to restore to its alleged original dimensions a gap made in the weir, which is constructed to divert the main body of the river into an artificial channel carried through Newark. Their right to do so involves many nice points, not only in connection with the private Act of the Navigation Company, but also with the exact meaning of the 25th section of the Salmon Fishery Act; but their doing so would be injurious, because so much water would be diverted from the main channel of the river that the fish would inevitably be led into the artificial cut, and this cut is full of the most impassable obstructions. I have been in correspondence with the company and the adjoining landowners on the subject. If this question is satisfactorily arranged, there is no serious impediment to the fish till they reach Donnington Weir, a fishing mill dam, the cruives in which have not been fished since 1861. In one of these disused cruives a ladder has been erected. The ladder is steep, and too small in all its measurements; it is not in the place where the fish usually are, and a flat stone placed below it has reduced the depth of the water at its foot to a few inches, and effectually deters any fish from entering it. The Derwent, an important tributary, is terribly polluted by the sewage of Derby. On the Dove, another tributary of great importance, a ladder has been constructed at Tutbury on the usual Government plan, through which a few fish pass, but a secondary ladder has just been constructed by Lord Vernon's agent, which, I think, if a few trifling alterations are made in it, will be more successful.

West of the Pennine Alps is the most mountainous district of England. For the purposes of this report, I may consider it divided into two parts by the Cumbrian range of mountains. The rivers rising in the Pennine range, and flowing westward, are the Line, a tributary of the Esk, the Eden, the Lune, and the Ribble. The rivers rising in the Cumbrian range are more numerous, though necessarily only small. The most important of them are the Ellen, the Weaver, the Derwent, the Ehen, the Duddon, the Leven, and the Kent. With the rivers of this district I am but slightly acquainted.

The Ellen.

The Ellen is a good sea-trout stream, 20 miles long, with a catchment basin of 54 square miles. It has been much neglected, but considerable pains are at present being taken with it. The chief difficulties to contend with in the Ellen are its mill weirs; the lowest, a fishing mill dam at Maryport, has lately been inquired into by the Special Commissioners, and I purposely therefore avoid any further allusion to it. The other weirs of most importance on the Ellen are Ellengrove, where there is a very fair ladder, Birkby, Crosby, Allerby, and Oughterside. In attaching ladders to these weirs, no attention has been paid to the necessity of placing them in the proper position, and the ladders are too steep to be practicable to the majority of fish. My colleague and I personally visited these dams, and made in regard to them such suggestions as appeared the most efficacious that we could devise without incurring any large expense, and we hope that some improvement may by this means be made in this very pretty little sea-trout stream.

The

The Lune, a river 53 miles long, and with a catchment basin of 434 square miles, rises in Crossfell; its spawning beds are extensive, and most excellent in quality; the take in the lower fisheries has increased, but no great improvement has hitherto been effected in its upper waters, as two weirs, Skerton and Halton, near Lancaster, the owners of each of which fish, effectually bar the passage of the river except in high floods. Halton Weir had, many years ago, a fish pass, or what was then considered a fish pass, attached to it; Skerton Weir has had a ladder attached to it under the new law; the ladder is built at a gradient of about one in three, a gradient at which no ladder should be constructed, and is, I regret to say, inefficient; a circumstance which I regret the more, as for reasons, to which I shall afterwards advert, I do not think that even a good ladder can effectually meet the requirements of a fishing mill-dam. The Lune.

The discontent among the upper proprietors of the Lune is very great. In consequence of representations which were made to me, I attended a meeting of proprietors on the Lune held at Lancaster last October, but, as they had decided to place these weirs under the Special Commissioners, it did not seem advisable to make any suggestion in regard to them.

The range of mountains which runs down the centre of Wales furnishes the head waters of the Dee, the Elwy, the Conway, the Seiont, the Gwyrfai, the Glaslyn, the Dwyryd, the Mawddach, the Dovey, the Teivy, the Cleddy, the Towy, the Severn, the Usk, and the Wye. The whole of the rivers in this list, with the exception of the last three, are considerably "later" than the rivers I have been previously describing. Salmon are rarely ever caught before the latter end of June; they are said to be in good condition when the fish of other rivers are quite out of season; and considerable discontent consequently exists in Wales in regard to the present law, which many persons insist not only acts unfairly, but has actually a prejudicial influence upon the Welsh rivers. I shall not further anticipate the remarks which later on, under the head of close time, I propose to make on this important subject. Wales.

There are two mill dams on the Seiont, a river 14½ miles long, with a catchment basin of 36 square miles, each of which has been provided with a ladder; these ladders have not been constructed on very good principles. The stops, or waterbreaks, are only two feet apart, and this reason would alone appear sufficient to prevent a fish of such size as a salmon passing up them. The Seiont.

My colleague and myself made a few suggestions by which we thought that the ladders might be improved; but I am afraid that no improvement can make them thoroughly efficient.

We suggested, however, that a board should be placed diagonally across the face of the most difficult of these two weirs, in accordance with a plan which I have already explained in my account of the Museum dam at Durham. It is extremely satisfactory to find that this plan has proved successful.

On the Gwyrfai, a river 10¾ miles long, with a catchment basin of 28 square miles, there are fewer difficulties, the chief one being a natural fall, which at present is insurmountable, but which it appeared to my colleague and myself might, by a slight cost, be easily made passable. The Gwyrfai.

Both the Seiont and the Gwyrfai are rivers of considerable promise, and great pains are being taken to insure their successful cultivation.

The Glaslyn is 18½ miles long, and has a catchment basin of 142 square miles; it has, in miniature, all the elements of a good salmon river—an estuary for the fish to grow in, spawning beds for them to breed on, and a lake for them to rest in in their upward course; and, as there are not many difficulties to be encountered, the river, thanks to the attention which has been paid to it, is making a considerable improvement; the fish, indeed, have only an access to the river at certain periods, as floodgates, closing with the floodtide, have been erected for the protection of Port Madoc; but, as these gates are necessarily opened to let out the fresh water every ebb, the difficulty is not so serious as might at first have been supposed; a small weir above Bedgellert is of more importance, from the facilities it affords to poachers, than from the actual obstruction which it offers to fish; my colleague and I have furnished the Conservators with a plan for a pass for this weir, which will, we hope, remove the slight difficulty that now exists. The Glaslyn.

The Dwyryd.

The Dwyryd, a river 14¾ miles long, has a common estuary with the Glaslyn, and is, in fact, treated by the Commissioners of 1860 as part of the same river; it is a fine spawning stream, but unfortunately the principal landowner has hitherto declined to join the association for the preservation of the river, and in consequence there is more poaching on the Dwyryd than on any other river of the district.

The Mawddach.

The Mawddach is 21¼ miles long, and has a catchment basin of 147 square miles; besides the Board under which this river has been placed, it has the advantage of being protected by the Dolgelly Fishery Association, who own the chief netting stations on the river.

The monetary crisis of 1866 has had indirectly a most salutary effect on this river, for its stringency was the cause of the closing of all the mines which had been opened upon it. It has been often urged that mines are of such importance that other interests must give way to them; and with a few old established mines this may be true, but the argument has not the same force in the case of new mines, which are frequently speculative ventures, opened with the certainty of injuring a certain portion of river and agricultural property, and which, in 9 cases out of 10, collapse at the first approach of difficulty.

The Dovey.

There is no part of the country in which so much harm has been and is being done by pollutions from mines as in this portion of Wales. The Ystwyth and the Rheidol, two rivers which flow into the sea at Aberystwith, and which are by nature admirably adapted to salmon, are entirely destroyed. The Dovey, naturally one of the most important rivers in the kingdom, 35 miles long, and with a catchment basin of 264 square miles, is being terribly injured by two mines on one of its tributaries, the Twymyn. When I was in Merionethshire last August, fish were lying dead in the river, poisoned by pollutions, miles below the point at which the hush enters the river. I have already stated, in my account of the Wear, that it seems worthy of consideration whether some soluble poison may not possibly be present with the ore in these mines, to which the peculiar destructiveness of the hush flowing from their slime pits may be attributed. In that case it will probably be necessary to filter the poisonous water through an alkali, which will retain the poison in the water, and let the pure water alone flow on.

The Teivy.

The difficulties on the Teivy, a river 70 miles long, and with a catchment basin of 389 square miles, are of a different description: they arise from the discontent which the Salmon Act has occasioned among the fishermen themselves. The population of Cardigan and St. Dogmaell's are all more or less fishermen, the little tradesmen of the town supplementing their scanty earnings in trade by the few shillings which their coracle and net are able to bring them. The fishing population of Cardigan is therefore greatly in excess of the requirements of the Teivy; or, to put it in another way, more nets are probably used to catch the same amount of fish on the Teivy than on any other river. It is clear, therefore, that the system of license duties must press heavily on the men, who also complain that under the new close time they are not allowed to fish when the fish are really running up, and that the two-inch legal mesh is not applicable to sewin, a fish with which the Teivy abounds. The law has, however, been so constantly trangressed by these men, that my colleague and myself agreed that we should not be justified in recommending you, Sir, to approve any change in the existing close season for this river, at any rate until we had some guarantee that the law would be more properly observed.

Bristol Channel.

I have now the pleasant duty of referring to the three rivers which flow into the Bristol Channel, the Severn, the Wye, and the Usk. The estuary of these rivers furnishes, perhaps, the best example of the different modes of fishing that can be seen at any one place; seine nets, stopping nets, cleaching nets, trammels, putts, and putchers, can all be seen here to great advantage. The last have already been described so fully by my predecessors, and by the Royal Commissioners of 1860, that, beyond expressing my regret that a system of fishing so injurious to the fish should be allowed to be carried on, I will not offer any remarks upon them

The Severn.

The Severn is 178 miles long, and has a catchment basin of 4,437 square miles. It is navigable for some distance, the lower portion of the river flowing through a flat

a flat country. There are five navigation weirs, Tewkesbury, Diglis, Bevere, Holt, and Lyncombe. Though they are great obstructions in low summer water, they are all passable in moderate floods. Spring tides flow over Tewkesbury Weir, and as, on the only occasion I have been at Tewkesbury, I passed over it in a boat, a ripple alone showing me where the weir was, I do not attach so much importance as some persons do to Tewkesbury. Of the others, Diglis and Holt are the most important: both these weirs are provided with ladders, but the ladders are too steep, and, I believe, impassable. The Navigation Company have expressed their readiness to incur any slight expense at Diglis, provided that they receive the assurance of this office that the alteration will be certain to succeed, and Mr. George, the energetic clerk of the Severn Fishery Board, is most anxious that we should press upon them the adoption of an ingenious plan of his own. But my colleague and myself agree that (though it would not be difficult to deal with the weir *ab initio*), hampered as we are with the defective pass, and therefore unable to insist on more than a mere patchwork undertaking, we should not be justified in vouching for the success of a plan which, though promising, must be in some measure experimental, and the adoption of which will still further hamper this office in future years. Holt Weir is more easily remedied, and we have received an assurance that the remedy shall be applied. Bevere is provided with what I may almost call a natural salmon run, and Lyncomb, which is much out of repair, is no obstruction to fish. There is no weir on the Severn between Lyncomb and Pool Quay. The latter is a sloping stone weir, with a fall of 12 feet 8 inches in height; one of the most expensive ladders in England has been attached to this weir. The ladder is a little too steep; there are no means of controlling the water passing through it, and there are below it some sloping flagstones over which no fish could possibly struggle. Lord Powis, at the suggestion of my colleague and myself, has consented to construct a second weir about four feet high. This will practically reduce the height of the old weir by four feet, and will carry the fish over the flagstones, which will thus be covered with water. The plan is cheaper and more effective than an alternative one, which had been proposed, of lengthening the ladder, taking its foot into the pool. The weir at Penarth, above this, I have not seen; but I understand that, like the weirs at Newtown, which I have seen, it is no great obstruction to fish. Milford Weir is a most serious obstruction, almost always impassable. My colleague and I have been in correspondence with the owner, and have made certain suggestions to him in regard to it. We found that the weir at Llanidloes, above Milford, was in course of reconstruction, and, as the owner was raising it a few inches, we were able to insist on an effective pass being attached to it. Taking advantage of some natural rocks on the left side of the stream, in the natural run of the fish, we directed the formation of a series of pools, and we are very sanguine that the fish will find little difficulty in passing from pool to pool and thus surmounting the weir. I cannot close my account of the Severn without some reference to two of its tributaries: the Teme is a fine spawning stream, practically closed by Powick Weir; the remarks which I have made on the ladder at Pool Quay are applicable to the ladder at Powick, which is rather steep, has some large flat stones below it, and is in the wrong place. I cannot help thinking that, as Powick is a fishing mill-dam, it would have been possible, even under the present law, to have insisted on a more effective pass than a ladder being attached to it. It is impossible now to ask the owner to make a new pass, but he has very kindly undertaken to make a few alterations and to construct a sort of run on the right bank, which may assist a few fish to reach the upper waters. The Severn is polluted by the Stour (which falls into it near Kidderminster, and flows positively blue with the pollutions from the factories at that place), and by the lead mines on the Caersyst and on the Clwydog, a river which is completely blocked by two weirs, close to Llanidloes, at which place it falls into the Severn.*

The Wye.

My chief object on the occasion of my visit to the Wye, a river 148 miles long,

* These, of course, are not the only pollutions on the Severn, but in this and all other places I have confined my remarks to facts which have come under my own observation.

long, with a catchment basis of 1,658 square miles, was the inspection of certain fixed engines called cribs, near Chepstow, the property of the Crown. A crib is a bank or wall, at right angles to and projecting into the stream, by means of which the current is diverted, and a pool of slack water formed in which the fish rest. This pool is then fished with a stop net. A crib may therefore be either natural or artificial. The cribs on the Wye were, in 1866, the subject of inquiry before the Special Commissioners, but the cribs belonging to the Crown were excepted from this inquiry: the law officers having decided that the Commissioners had no power to inquire into Crown property. Considerable dissatisfaction existed on the river in consequence of this decision; and I trust that the Office of Woods, who represent the Crown in this matter, will consent to allow the Crown cribs to be the subject of inquiry. There are no weirs on the Wye, but two important tributaries, the Munnow and the Lug, which have been sometimes called the right and left arms of the Wye, are entirely blocked by weirs. Forge Weir, near Monmouth, which blocks the Munnow, is 10 feet high, and is a very formidable obstruction, an obstruction which perhaps is even more difficult of remedy than Lug Mill, the key to the Lug. The Wye, however, is a river which is being cultivated in so enlightened a manner that I have little fear that every obstruction on it will be dealt with in due course.

e Usk.

The Usk, which is in some respects the model river of the whole country, is 76½ miles long, and has a catchment basin of 650 square miles. Naturally a fine stream, though not finer than its sister river the Wye, careful cultivation, commenced, to the credit of the neighbourhood, before 1861, has placed it in the front rank among our English rivers. The river above Newport has hitherto been entirely reserved for anglers, but is now so well stocked with fish, that it will probably be thought advisable to net it, with certain restrictions, during the next season, and as the object of salmon legislation is the production of food for the public, I should learn with pleasure that the Conservators felt that it was possible to do so. Trostre Weir is a long weir of irregular height, with three runs; 18, 24, and 36 inches, respectively, broad. The height of the weir at each pass is 3 feet 2 inches, 3 feet 8 inches, and 3 feet 4 inches, and the depth of the 3rd run, which is the one which the fish chiefly use, is 3 feet. The runs are entirely successful. Not a fish is found now in the pool below the weir, once a favourite spot for anglers, and with hardly an exception the runs are left open all the year round. Trostre therefore is important, from proving not only that a free run is the best form of fish-pass, and that fish can make their way against almost any weight of water; but that such a pass can exist without doing any serious injury to the milling power. The same principle has been adopted at Newton Canal Weir, a sloping stone weir, which the pass, erected at a cost of only 7 *l.* 10 *s.*, has not injured in any way. An expensive grating has been placed at the head of the stream which feeds the canal. It is made of perpendicular iron bars, half-an-inch apart, in the form of a Venetian blind. It is a fair success, but, as some smolts get through it, I think it furnishes a proof of what I ventured to advance last year, that the bars of a grating should be horizontal and not perpendicular. The pass on Cynrig Brook was so fully described by my colleague last year, that I need not further allude to it. The Hondhu, a fine tributary falling into the Usk at Brecon, is blocked by three weirs. The first of these is no obstacle; but the second and third, which are respectively six and nine feet high, are serious difficulties. I visited these weirs last July with Mr. Lloyd, a gentleman to whom the Usk is greatly indebted, and I arranged with him the plans which appeared to be the most advisable to add this fine brook to the available breeding grounds of the Usk.

evonshire.

The third of the districts into which I have divided the country has hitherto been too lightly regarded: there is no other portion of England which is so intersected with rivers, as Devonshire; Dartmoor is a natural sponge feeding the rivers of this district. The principal of these rivers are the Taw, the Okement (a branch of the Torridge), the Tavy (a branch of the Tamar), the Plym, the Yealm, the Dart, the Erme, the Avon, and the Teign; the other rivers of the district, and these are more or less connected with Dartmoor, are the Exe, the Otter, and the Axe. The rivers of Cornwall which have their source in the range of hills which is a continuation of Dartmoor, are the Camel

Camel and the Fowey. The whole of this district resembles Wales in the lateness of the period at which the fish run.

The Taw and Torridge have a common estuary near Barnstaple, which is fished by the Appledore, Bideford, and Barnstaple fishermen. The fishermen complained to me of the hardship which the present close season occasions, and urged the advisability of opening September. I am informed that the estuary was full of smolts last May, and that in the preceding winter it was so full of running fish that they resembled a school of herrings. It is thought that in consequence of the new law the fish run up slightly earlier than they used to; clean fish were caught in the Torridge above Dolton Weir in May this year. The Taw and Torridge.

The Taw is 48¾ miles long, and has a catchment basin of 77 square miles. The lowest weir on the Taw is Umberleigh fishing mill-dam, where a right of fishing is claimed by two individuals, Mr. Bassett and Mr. Rolle. Mr. Bassett's portion of the weir extends from the left bank to the bottom of a long island near the right bank of the stream. The Special Commissioners have admitted Mr. Bassett's claim to a cruive, but they have forced him to place it in the weir itself, and not, as it had been for some years, in the mill leat. At the head of the island which forms the extremity of Mr. Bassett's weir are Mr. Rolle's hatches, and these hatches form his weir. The Special Commissioners admitted Mr. Rolle's claim to them, but they directed the construction of a free gap in connection with them. But they disallowed his claim to some other hatches which had been made by one of his predecessors, who cut for the purpose a channel through a narrow portion of the island, and ordered their removal. The decision, which was appealed against by Mr. Rolle, has given rise to the important case of Whyte *v.* Rolle. To this case I shall allude later on in this Report. It is sufficient here to say that not only have Mr. Rolle's claims been allowed, but the Lord Chief Justice denied that gentleman's liability to construct a free gap in his weir, as it extends only from the right bank of the river to the island, across less than one-half of the breadth of the stream. The other weirs on the Taw which require immediate attention are Brightley, Collaton, Rashleigh, Eggesford, and Brushford. The three first are sloping stone weirs, and could be dealt with, comparatively easily. The two last are more formidable obstructions; but, there is a side leat at Eggesford which might be made available for the passage of fish, and it would not be difficult, though it would be expensive, to attach a suitable pass to Brushford Weir. The Yeo, a favourite white trout stream, falls into the Taw at Barnstaple: it is blocked, except in floods, by a weir which might easily be got over, and I have suggested a plan with this object to the owner. The Mole, another tributary, is also blocked by a weir to which a pass was attached some years ago. The plan furnished for the pass by Mr. Ffennell is lost; but the owner insists that the pass was erected in conformity with the plan; a statement which the Conservators deny. The pass itself is a failure. Fish have never been up it except, if I may trust the local report, on one occasion, when a high flood knocked out all the water-breaks, and thus afforded a clear run of deep unbroken water. As, however, I cannot obtain any evidence beyond the assertion of one of the Conservators, of the nature of Mr. Ffennell's plan, I am unable to advise you, Sir, to insist on the alteration of the ladder, but I have been in communication with the owner of the weir, in the hope that some improvement may be made in the pass, a matter about which I am the more anxious, as some of the weirs above have been furnished with passes. The Taw.

The Torridge, naturally an extremely fine river, is 52½ miles long, and has a catchment basin of 349 square miles. Beam Weir, or Wear Gifford, is the first obstruction on the Torridge: originally a fishing mill-dam, it has been placed under the Special Commissioners, whose inquiry into it has not yet taken place. The sluices at the head of the crib were, when I was at Beam, removed, and the weir consequently did not then present any obstacle to the passage of fish. Fishing used also to be carried on in the mill leat, but the needles which formed the base of the trap were removed some years ago by Mr. Ffennell's directions, and have not since been replaced. The other weirs on the lower part of the Torridge, are Torrington Canal Weir, Beaford, Dolton, and Newbridge Weirs. None of these weirs have passes attached to them. The first, I am informed, in summer turns the whole of the river down the canal leat: there is a fair grating at the entrance of the leat. Fishing used to be carried on in Beaford Mill Leat; but the needles by which the fish were caught have been removed since The Torridge.

since 1861. This weir has, however, also been placed under the Special Commissioners. Dolton Weir was originally a brouse weir: a brouse weir, I ought to explain, is built of faggots and stones, and resembles in some measure (at least I know of nothing else to compare it to) a wattle fence 20 feet thick. It has this year been rebuilt and is now a stone weir, but, as the alteration did not increase obstruction to fish, you, Sir, decided that the 25th section of the Act of 1861 was not applicable to it. Newbridge Weir is a brouse weir: as it had been heightened from time to time since 1861, an action was in 1866 brought against the owner, under the above section. The action was successful, but the fine was not enforced, on the owner undertaking to construct a suitable pass in the summer of 1867. The owner informed me last May that he proposed, in lieu of maintaining his old weir, to build a new stone weir in a different position, and for this weir I furnished him with a plan for a pass; from circumstances, however, to which it is unnecessary to refer, he abandoned his intention of changing the position of the weir, and consented to make a free gap in his old brouse weir, which is consequently no longer an obstacle to the free passage of fish.

The Okement.

A little above Newbridge the Okement, almost as large and quite as important a spawning stream as the Torridge, falls into the latter river. The two first weirs on the Okement, Idsleigh, and Monks Mill, are no obstruction in themselves, though the second peculiarly facilitates poaching, which I regret to say is prevalent in the neighbourhood: the third weir, Monk Okehampton, a perpendicular weir, with a fall of above eight feet, is the key to the Okement; and I fear that some little time must elapse before the Conservators will be in a position to deal with it.

The Tamar.

The Tamar, the largest river in Devonshire, is 55¾ miles long, and has a catchment basin of 381 square miles. Naturally, the Tamar possesses in perfection all the qualifications of a good salmon river, but it has been almost ruined. The first weir on the Tamar, Head Weir, is a fishing mill dam, and has been provided with a ladder, which, though slightly steep, is well constructed. I cannot help, however, repeating the remark which I have already made, that in my opinion no ladder is sufficient for the requirements of a fishing mill dam. Hawkmoor Weir is provided with a pass or run, which might easily be much improved, but which even now is practicable at certain periods. Latchley Weir has had an iron ladder attached to, or rather placed on it. The ladder is, I am afraid, useless, as it is very steep, very cramped in all its dimensions, and not in the right position. I ventured to make a suggestion, by which I think the fish might easily be got over this weir without any great expense being incurred. Four mines discharge their hush into the Tamar in the short distance in which these weirs are situated. One of them, the Devon Great Consols, the richest mine in England, has set a praiseworthy example, in expending large sums of money in purifying their refuse hush, which consequently flows into the river discoloured but comparatively pure. The other mines have done nothing to abate the nuisance they occasion, and it is extremely difficult to force them to do anything in the present unsatisfactory state of the law; but, though I am aware that I am advancing a somewhat novel doctrine, I cannot help thinking that the real cause of the decay of the Tamar, is not the pollution which the mines occasion, but the diversion of water from the bed of the river. When I was at Latchley not a drop of water was flowing over Latchley Weir, and I found that the weir had been illegally raised by a board placed along the top of it. This board I, of course, had removed, but it is impossible for a river to improve if any single weir is allowed to divert the whole of the stream from its natural channel. The chief tributary of the Tamar is the Tavy, a river 23 miles long, with a catchment basin of 87 square miles. Tavistock Abbey Weir is provided with a ladder, but the ladder is too steep, and does not work well. The channel which is fed by this weir, and which supplies a canal, is not guarded by a grating; I have drawn the attention of the Conservators to this, in order that the 13th section of the Act may be complied with.

The Plym.

The Plym is a beautiful little sea-trout stream, 15 miles long, and with a catchment basin of 73 square miles. The peal in which it chiefly abounds cannot be caught in a legal net. Bickley Weir is rented by the Chairman of the Tamar Fishery Board, who has, in lieu of exercising his right of fishing, furnished the fish with a free run through the cruive. I found that the weir had been temporarily raised, and I have drawn the owner's attention to the fact: but

but a greater evil has taken place, which there is unfortunately no power to prevent under the existing law; the leat has been gradually deepened, so much so that it draws into it infinitely more water than originally was intended. A little reflection will show that this evil, which ought certainly to be guarded against, is possible in every leat where there is a fall between the weir and the mill. No water was flowing over the weir when I was at Bickley. Sir Massey Lopes is about to open some clay works on his estate adjoining the Plym, but he has kindly assured me that they shall be instantly closed should any pollution result from them.

The Yealm.

The Yealm, the remaining river of the district, is 14 miles long, and has a catchment basin of 38 square miles; it is unfortunately much neglected. I am unable to give any opinion as to Kittle Weir, a fishing weir in the estuary, as a particularly high tide entirely covered it at the period of my visit. The other weirs at Yealm Bridge and Yeo Ford, do not offer any very serious difficulty, but a paper mill at Lea Bridge has, I fear, almost entirely destroyed the Yealm. The pollutions from the mill are so distasteful that the fish have dropped back before them. The proprietor promised me, in addition to passing the refuse through some catch pits which he has lately constructed, to filter the water over some land which adjoins the factory, and, I trust, if this precaution is taken, that the present evil will be considerably lessened.

The Avon Fishery District.

The Erme.

The Erme is 15 miles long, and has a catchment basin of 41 square miles. There is a fishing weir at Fleet, near Modbury, on this river; it is a stone weir, constructed simply to stop the fish, which are then taken by a seine in the pool immediately below. I found on my visit to Fleet last September that, in the six years which have elapsed since 1861, no steps have been taken to comply with the provisions of the law, and I have informed the owner, with whom I am in correspondence, that, as the weir is constructed solely for fishing purposes, it must be provided with a free gap, under the 27th section of the Act of 1861. Very serious difficulties exist at Ivybridge, a few miles above Fleet, both from pollutions and from weirs. The former are caused from a tannery and two paper mills. One of these mills is one of the largest paper factories in the country. The measures at present taken to remedy the pollutions all paper mills occasion, are not sufficient for the purpose, but the law is at present so weak that I was able to do little more than endeavour to persuade the owner to take additional precautions.

The Avon.

The Avon, which is included in the same district, but which in other respects does not resemble the Erme, is a river of high character 23¼ miles in length, and with a catchment basin of 55 square miles. Aveton Gifford, the lowest weir on the Avon, is a fishing mill dam, the right of fishing being not only exercised in the pool below the weir, but also in the mill race under the mill wheel. This is the only instance I have met with of a recognised right of fishing in the tail-race of a mill. It is a case, therefore, where the recommendation which I have elsewhere made for a free gap in a fishing mill dam is inapplicable, as the dam in this case is practically the mill wheel. It is a case, too, in which it would be impossible to close the tail-race with a grating without interfering with a recognised right of fishing. A ladder on the Government plan has been erected here, which fish can pass up with ease. The pool below the weir is more than 50 yards from it, so that under the existing law no ladder need have been attached to it. A ladder has, however, been erected, but, as it is too steep, it is not so successful as the ladder in the mill leat. A few fish, however, are said to pass up it. There are two weirs at Loddiswell, the lowest of which I found at the time of my visit had been temporarily heightened, I gave directions to have it restored to its original height; there are weirs at Gara Bridge and Deptford (where the leakage from the Head Race is so great, in consequence of the ill state of repair into which its banks have fallen, that far more water than is necessary to supply the mill is diverted from the main channel of the river); and there are three weirs at Brent. As it had been represented to me that considerable pollution was occasioned by a flax mill at the latter place, I called upon the manager, and received his promise that he would prevent the water, in which the flax saturated with vitriol is steeped, passing into the river. None of these weirs have passes attached to them, but they are none of them very formidable obstructions, though they all, from the amount of water they divert from the true channel of the river, inflict great injury on the Avon. I regret to be unable

to conclude my notice of the Avon, without mentioning the very disagreeable circumstance that poaching is probably more prevalent on this river than on any other in the country; the poachers openly boasted in the winter of 1866–7 that they had destroyed upwards of 1,000 fish. It is difficult to provide any other remedy for this state of things than the appointment of additional water bailiffs, a remedy which involves an expense which it would be impossible for the Avon Board to incur. But I cannot help thinking, that, without interfering with their ordinary duties, it would be possible for the police to render very material assistance to the cause of salmon preservation. In some counties they have received specific instructions to do so, and the result, as far as poaching is concerned, has been excellent.

The Dart.

The Dart is 37¼ miles in length, and has a catchment basin of 179 square miles. Increased preservation has, since 1861, effected considerable improvement in the Dart, while the partial destruction of Totness Weir, by affording the fish, for the first time, a temporary passage to the upper waters, has given a stimulus to increased exertion among the upper proprietors. Thirteen Seine nets fish the Dart between Dartmouth and Totness Weir; the tide flows, and the river is navigable, up to this point. Totness Weir, which is being rebuilt, is held in trust for the charities of the town, and the trustees decline, in rebuilding the weir, to attach a pass to it. As, however, the weir was originally a fishing mill dam, the Conservators propose to place it under the special Commissioners; pending the inquiry which will, therefore, take place into it, I have suggested their attaching a temporary pass, which can be constructed for a few pounds, and which will I think facilitate the passage of fish; this pass, however, will only be approved on condition that a right of fishing is not exercised, and that it shall in no way interfere with the decision the Commissioners may arrive at. A peculiar point has been decided at Totness, in reference to the right of fishing in the tail race of a mill. A small ditch, containing the drainage of a few fields, falls into the tail race of Totness Mill; and the magistrates have decided that, from where it is joined by this ditch, the tail race is a separate stream, and that therefore netting is allowable in it. Such a decision could never have been contemplated by Parliament when it passed the 12th section of the Act of 1861. The weirs at Stafferton and Stafferton Bridge are without passes. Buckfastleigh Weir has been raised since 1861, and a ladder has consequently been attached to it. The ladder is strongly built, but it has an incline of one in four, and, though it is said to succeed, I must decline to vouch for its efficacy. Buckfast Weir, above Buckfastleigh, requires a pass, as it is at present impracticable, except in high floods.

The Otter.

The Otter, a river 27 miles long, and with a catchment basin of 95 square miles, is particularly rich in spawning beds; it was at one time strictly preserved, and a capital brown trout river. This fish runs to so large a size, and salmon remain for so short a time in the Otter, that less attention was paid than might have been to the latter fish. Unfortunately, from causes which it is unnecessary for me to enter into here, some of the landowners withdrew a few years ago from the association, which was protecting the river; since then it has been terribly poached, and the pools which were once full of fish are almost depopulated. I was present in September at a meeting at Ottery St. Mary, and this meeting I am in hopes may lead to a better state of things, as it is lamentable to see a river of such considerable spawning capabilities so neglected as the Otter.

Cornwall.

No official description has ever yet been published of the rivers of Cornwall. And it seems to have been assumed that they are so destroyed by mines that no official description of them is necessary; but, though unquestionably mines have inflicted serious injury on the Cornish rivers, the mischief is not irreparable; and the interest taken in the county in the matter deserves at least a passing acknowledgment, the more so as the salmon law is considered wholly inapplicable to that county. The Cornish argument is, that salmon do not enter the Cornish rivers until after the beginning of the close season, and that sea trout, which do run, are too small to be caught in the legal mesh.

The Camel.

The most important rivers of Cornwall are the Camel and the Fowey. The Camel is 28¼ miles long, and has a catchment basin of 155 square miles. A few miles above the tide-way, a little stream polluted by the washings from a tin mine, falls into the Camel. This pollution, which deters the fish from

from ascending the river, is not simply a fishing question: the fine clay in which the tin is found is gradually forming a bar at Padstow, and seriously injuring the harbour there. Boscarne Mill is a great obstruction. This mill has two old-fashioned undershot wheels, which require far more water to work them than would be necessary for a better constructed machine of the same power, and the leat which conducts the water to the mill is so much out of repair, and leaks so considerably, that far more water, than even these wasteful wheels require, is diverted from the natural bed of the river, which in summer is almost entirely dry. The weir, which is nothing more than a pile of loose stones, constantly destroyed, but as easily repaired, is no obstruction to fish. Above this weir, a company, formed to supply Bodmin with water, are building a weir at Blackpool of considerable height. I found that Mr. Eden had furnished a plan for a pass for this new weir. A few fish run up the Camel every year. The spawning beds are fair; the brown trout, though small, are of excellent quality, and there is no reason why the Camel should not contain sufficient fish to furnish occupation to a few fishermen, and diversion to the gentlemen who reside on its banks.

The Fowey is 27 miles long, and has a catchment basin of 117 square miles. It is more polluted than the Camel, but the existing depression of the mining interest has occasioned the closing of many of the mines, and the Fowey may consequently form another illustration of the old adage, and derive a benefit from the ill wind which has been so disastrous to the Cornish miners. The Fowey.

Besides a natural fall, which is represented to me as no obstruction, there is no difficulty to contend with on the Fowey, and the whole of the case of that river turns on the question as to whether the close time for salmon should be varied or no. I attended a meeting on this subject at the end of August at Lostwithiel; but, unfortunately, from the extreme drought of the autumn, I was only able, in the most limited way, to obtain the evidence which I most desired, the fish themselves. I was, however, much struck with the patience displayed by the fishermen at the meeting, which afforded an agreeable contrast to what I have elsewhere met with.

I have now finished this brief notice of the rivers with which I am personally acquainted in the three districts which I ventured to describe as the most important in England. There are only seven other rivers which I shall have occasion to mention.

The Frome is 34 miles long, and has a catchment basin of 206 square miles. A few fish have spawned annually for some years in the Frome, and considerable attention is now being paid to it. Ladders have been constructed over two weirs, Wool, and Stoke, but they are not wholly successful; that at Wool, though constructed on a model approved by Mr. Ffennell, has been placed, contrary to his instructions, in a side stream, where fish never are, and where it is consequently useless; that at Stoke is also unsuccessful. I was unable to take its dimensions when I was at Stoke, but I have no doubt that it is too steep for the ready passage of fish. The Frome.

The Stour and Avon flow into a common estuary at Christchurch, and Christchurch salmon enjoy, as is well known, a reputation for peculiar excellence. The mouth of these rivers has gradually shifted further eastwards, and runs now less directly than it originally did, into the sea. The estuary, such as it now is, is a narrow channel, capable of being almost entirely swept by seine nets, with which it is most perseveringly fished. The Avon and Stour Fishery District.

The Avon, a clear stream well adapted to salmon, is 67 miles long, and has a catchment basin of 666 square miles. The Avon.

The two lowest weirs on the Avon, Knapp, and Winkton, are hatch weirs. Both weirs are fishing milldams. Racks or gratings are fixed before the hatches throughout the open season, so that when the hatches are raised the water has a free passage, but the fish cannot possibly pass. Both weirs are provided with ladders, which, as ladders, are certainly not without merit, but which offer a good illustration of what I have before insisted on, the inadequacy of a ladder in the case of a fishing milldam. Fish rarely, if ever, pass Knapp, in the fishing season, except during the weekly close time when the racks are drawn. There are eight weirs between Winkton, and Salisbury, viz., Ringwood, Ibbesley, Bickton,

Bickton, East Mill, Burgate, Breamore, Downton and Trafalgar. To four of these, viz., Ringwood, Burgate, Breamore, and Downton, ladders have been attached. The ladder at Ringwood has been placed in a bad position, where no fish would find it, and that at Downton is slightly steep; but all the ladders on this river are roomier than is generally the case with our English ladders. The weir at Bickton was raised last year; and I arranged with the Conservators to wait till the dry weather of the summer before deciding on the pass which it will be my duty to recommend should be attached to it. Lord Nelson has promised me to slightly alter his weir at Trafalgar, and this alteration will, I hope, make it perfectly practicable. The only other question to notice in connection with this river, is the system of irrigation by which a large portion of the valley of the Avon is cultivated. As long as this system, which it would be impossible to explain shortly, continues, considerable destruction of down fish must ensue; but, notwithstanding this, I should have little fear for the future of the Avon, if the fish could be given a free passage through the two fishing milldams, Knapp and Winkton.

The Stour.

The Stour, is 64 miles long, and has a catchment basin of 479 square miles. It is a sluggish stream, with a considerable number of pike in it, and has not the same capabilities as the Avon for salmon cultivation. Still, as a few fish have turned up it, and spawned in it every year, and have thus afforded a proof that it is capable of producing this, the most valuable of fish, I am ready to second, so far as I am able, the efforts which some of its owners are making to cultivate it, even at the risk of destroying the river as a pike stream. The lowest weir on the Stour, Throop, is of similar construction to that at Knapp, and the pool below is fished in the same way as the pool below Knapp Weir. A ladder has been attached to the weir, as also to the weirs at Long Ham and Canford Magna. The first of these weirs, at which there is a disused salmon pond, fish leap in a flood.

The Test and Itchen.

Like the Stour and Avon at Christchurch, the Test and Itchen flow into a common estuary at Southampton. The former is 35¼ miles long, and has a catchment basin of 544 square miles. The latter is 27¼ miles long, and has a catchment basin of 137 square miles. The case of these rivers is very disheartening. The improvement which took place in them has not been sustained; for the last year or two they seem to have been gradually deteriorating; mill weirs and want of protection have almost denuded them of fish. There seems, however, to be some prospect of a better state of things, as many of the gentlemen in Hampshire are anxious to take steps to improve them. Wood Mill, a fishing milldam, is the first obstruction on the Itchen. The pool below the weir is fished with a seine. A ladder has been constructed in one of the disused cruives of the weir. It is too steep and too small; in fact, the only fish that pass Wood Mill, pass it when the hatches in the weir are raised. None of the weirs on the Itchen, of which there are five between Wood Mill and Winchester, are provided with ladders. The Test divides before entering Southampton Water into two channels. Each of these is blocked by a fishing milldam. Testwood Milldam, like Wood Mill, is now fished with a seine, and the cruives in it have been disused since 1861. The ladder erected, under the new Act, is too steep and too small, and is in a position where it is of little or no use. Fish rarely pass Testwood except when the hatches are up; some of these are, however, opened at every tide. Nurstling fishing weir has, since the new law, been only used for catching eels, and the lessee has promised me to close the eel-traps during the first six months of each year. At the milldam at Nurstling, or Nutshalling, as it is sometimes spelt, a very fair ladder has been erected. Ladders have been erected at Sadler's Mill in Romsey and at Kembridge Weir, but the first is ill constructed, and the second is placed in a backwater, where, I fear, the fish would never be.

The Test.

The Arun.

The Arun is 51½ miles long, and has a catchment basin of 349 square miles. It is not a river naturally well adapted to salmon, but it is not unsuited to some migratory sea trout, which, under the name of Amerley trout, have the recommendation of having been noticed by Isaac Walton. A few of these fish are annually caught in the river, and, as the fisheries were at one time let for 70 *l.* a year, there is every reason why the zealous efforts of some of the residents on its banks should be seconded by this office. Unfortunately the estuary of the river at Littlehampton is a narrow and bad one. Between this and the

the junction of the Rother with the river at Pulborough there is no obstruction. At and above Pulborough, there are three weirs on the Rother, viz., Pulborough, Fittleworth, and Coultershaw, which require attention; all these weirs are provided with fish traps, and, as none of them have passes attached to them, I have recommended the gentlemen connected with the river to place them under the Special Commissioners, and forbear to spend money on them, which the judgments of the Special Commissioners may render unnecessary.

The Canterbury Stour, a river 52¾ miles long, with a catchment basin of 271 square miles, is probably best known from the excellent Fordidge trout which Isaac Walton has celebrated. Fordwich trout, as they are now called, take their name from a town below Canterbury, where Fordwich Weir, a fishing weir, is situated. This weir, the association which is preserving the river, has taken a lease of, wisely considering that it is the key of the whole river; and to this association I must add a word of praise. The cultivation of the Stour is being conducted on principles which do them the highest credit. Beginning at the sea, they are advancing slowly but surely. They have formed an excellent rearing stream in connection with their river. They have built a ladder over one of the Sturry mills, and they have constructed, during the last year, leaping boxes over the second. It is a pleasure to see a stream by no means destitute of natural qualifications for sea trout so judiciously and energetically taken care of as the Stour. The Stour.

I am unable to report that any additions have been made to the fishery districts which I enumerated last year. Various alterations are, however, in contemplation. At a meeting attended by my colleague and myself at Maryport, it was resolved to form the Ellen into a district. Our inspection of the Teste and Itchen will, we believe, immediately result in the formation of those rivers into a fishery district. We advocated, and we believe successfully, a similar policy with regard to the Arun, and we have reason to hope that these two last districts will be made sufficiently extensive to protect the whole coast from the East of the Avon and Stour district to Beachy Head.

A petition has been presented to Quarter Sessions, the hearing of which has been adjourned, for the formation of the Eden into a fishery district.

There is some probability of the union of the Derwent with the other Yorkshire rivers in one district, and of a more equal division of the estuary of the Humber between the latter and the Trent. The first arrangement promises to work well; the second is advocated by both the Boards interested in the matter. The boundaries of the Tees, the Tyne, and the Coquet will probably be made coterminous, and a considerable amount of poaching, which it has been hitherto no one's duty to take steps to guard against, will, I trust, be in this way prevented.

It seems right to supplement the account which I have thus endeavoured to give of the present position of the various salmon rivers, with which I am acquainted, in this country, with some general remarks in regard to the effect of recent legislation upon them, though peculiar circumstances to which I shall shortly advert, have caused those remarks to be less favourable than I could have wished.

It is thought, it is true, that there has been an increase of fish in the Wharfe and Derwent Fishery Districts. The take of fish has increased in the lower waters of the Lune and of the Ribble, and "below Chester" on the Dee; and there has been an increased take in the Severn, the Dart, the Trent, the Tees, and the Tyne. Take of fish.

But, as a set off against this increase, the take in the upper waters of the Lune and of the Ribble has diminished; "the take by the rod" on the Dee "last season was very small." "The take of fish in 1866 was small, and in 1867 it was smaller still" in the Clwyd and Elwy; it has greatly diminished on the Conway; it "has certainly not increased" in the Dovey Fishery District, and "has much diminished in the Dovey, the largest river of the district;" "it must undoubtedly be decreasing in the East and West Cleddy." "The past season has not been nearly so good as 1866 for angling" in the Usk; "the take of fish has decreased" in the Taw and Torridge. "The legitimate take of fish has diminished" in the Avon and Erme. The take on the Exe "has decreased." The Otter appears to be almost denuded of fish; and the take of fish has diminished in the Frome.

It is clear, therefore, that the improvement which has taken place in some rivers has not been common to all, and that the results of the past season offer but little encouragement to the Conservators of many of our English rivers.

It is satisfactory to find that in those rivers in which an improvement has taken place, the improvement is, with the single exception of the Dart, attributed to the new law and the increase of protection which the new law has occasioned. The rivers which, on the other hand, have no improvement to report, are not so unanimous as to the cause of their decline. Some refrain from offering a reason, others attribute the decrease of fish to exceptional causes connected with the weather; while not only the inadequacy but even the inaptitude of the present law, have been advanced by some Boards as the cause of the decrease of fish. A decreased take of fish arising from so exceptional a cause as a long drought, affords but little occasion for anxiety. There can be little question that, particularly in our smaller rivers, the salmon harvest must always be more or less dependent on the state of the weather; but the decrease in the take is probably fully compensated by the increase of fish who, saved from the nets by which they would otherwise have been taken, later on fought their way up to the spawning beds. The proprietors have had a bad dividend; but their capital is increased. But the other reasons, the inaptness and the inadequacy of the present law, are more serious. Since, if the law is inadequate or inapt, we are actually remaining in the very state from which we had fancied that the legislation of 1861 had rescued us.

I shall endeavour in the remainder of this report to state the points in which the law appears to me inadequate. Under the head of close season, I shall discuss the question whether it is applicable to all rivers or no.

Price of fish.

Before proceeding, however, to the discussion of these questions, it may be interesting to state the wholesale price of salmon in London during the last year, a price of which, I believe, that the public have little notion. This information I have obtained from a fisherman whose business is extensive, and whose fish command, and deserve to command, the top price at Billingsgate.

The average price which this man obtained for salmon at Billingsgate per pound was—

	s.	*d.*
In February	2	3
In March	2	1¼
In April	2	–¼
In May	1	8¼
In June	1	5½
In July	–	11
In August	1	1

a price which, though I hope it may be materially reduced, is certainly far below that which has over and over again been quoted to me, as that to which legislation had reduced the value of the fish.

Unclean and unseasonable fish.

It may be pertinent to remark, that my colleague and I have been in communication with the Market's Committee at Billingsgate, and that the committee have consented to adopt in their bye-laws the words of the Salmon Act, "Unseasonable Salmon," so that their officers are now instructed to prevent the sale of such fish, and not only of fish unfit for human food. The importance of the alteration will be apparent to everyone who has paid attention to the very difficult question of the prohibition of the sale of unseasonable fish in the close season.

Prosecutions.

Though it is not a pleasant task to have to refer to a list of offences against the law, yet it may be accepted as a proof of the advantage of the appointment of Boards of Conservators, that no less than 260 prosecutions were instituted during the last years for offences against the Salmon Acts, in the 26 districts from which we have returns. That these prosecutions were not lightly undertaken, I think, is evident, from the fact that 197 of them were successful That they were justified by the importance of the interests they were undertaken

taken to protect, is equally evident, from the fact that in these districts licenses were issued for nets employing no less than 2,165 men.* This number, however, of men who are dependent in some measure on the preservation of our fisheries, does not represent the full amount of persons interested in salmon preservation, 1,807 rods were licensed in these districts. Many of these rods, it must be remembered, are used by poor men, some by professional anglers, as anglers fishing for profit are called. The importance therefore of salmon preservation may be assumed when it is seen that in 26 out of the 34 districts already formed, while the fisheries are still in their infancy, 3,972 men are more or less dependent for their livelihood or their amusement upon them.

Number of men engaged in fisheries.

I trust that these observations may be considered to lead naturally to the recommendations which I now venture to make for the amendment of the present law.

And in these recommendations I wish at first to confine myself to what appear to me to be the principles on which our legislation should rest, and without which the details to which I shall afterwards advert, are comparatively unimportant.

My colleague, in his Report of last year, insisted on the necessity of pure water. I am far from denying the importance of what he said, but I venture to add that our salmon rivers are thirsting not only for pure water, but for water at all.

Diversion of Water.

It has been the habit to divert, for milling and other purposes, so much of a river from its natural bed, that it is marvellous how salmon continue to exist. Take the case of the rivers which form the estuary of the Humber. When I was in Yorkshire not a drop of water was flowing down the Wharfe over Otley Weir; not a drop of water was passing down the Ure over the weir at Boroughbridge; not a drop of water was passing, or, with one exception, had passed for three months, down the Swale over the weir just above Richmond; not a drop was passing down the Nidd over Goldsborough Weir. To show that these are not isolated cases, when I was in Devonshire I found the bed of the Tamar dry for some distance below Latchley Weir. At Ivybridge the Erme had been dry for weeks; and on the Plym not a drop of water was passing over Bickley Weir. Much has been written against the pass at Pool Quay, yet there is a greater evil than the pass. Pool Quay weir was diverting when I was on the Severn, with the exception of a little streamlet, trickling through the ladder, every drop of water from the natural bed of the river. I could multiply the cases, which I have already quoted, but I think that I have already written enough to prove that the first thing to which the attention of our Legislature should be directed is the provision, not of pure water, but of water for our salmon rivers. It may, however, be urged that certain individuals have, or have acquired, a right to the water they are using; and that it would be therefore unjust to deprive them of it.

The question of the legality of weirs is a very difficult one. It has received within the last few weeks an official interpretation in a decision of the Court of Queen's Bench in the case of Rolle *v.* Whyte; and the remarks of the Lord Chief Justice on the occasion are deserving of great attention. Analysing most carefully the old Acts, which are generally quoted as bearing on the subject, his Lordship stated that all of them, not excepting the 12 Edw. 4, c. 7, had reference to the "great rivers," or the navigable rivers of the kingdom. The Lord Chief Justice therefore drew a distinction between weirs in navigable and non-navigable rivers, implying that those erected in the first case after the time of Edward I. were illegal, but that the right of placing obstructions may be acquired in "private waters by grant from the riparian owners, or by enjoyment, or in short by any means by which such rights may be constituted."

The law therefore seeems to be—

1st. That in navigable rivers, all weirs erected since the time of Edward I., with the exception of those specifically authorised by Act of Parliament, are illegal.

2nd. That

* In the few cases where no number is stated, I have assumed that four men are necessary for a draft and two men for a coracle net.

2nd. That in non-navigable rivers all weirs are legal which exist (a) in consequence of a grant from some private person, or (b) which have obtained under the Prescription Act of William IV. by long usage a right of existence.

With those weirs which legally exist, it would indeed be neither just nor politic to interfere; but it seems neither unjust nor impolitic for the future to place the riparian owner in the non-navigable, on the same footing as the riparian owner on the navigable, river, and to restrain him from granting the right of erecting a weir.

The Lord Chief Justice, indeed, observed that, "obstructions, except on navigable rivers, could be of no public detriment. As the public have a right to fish in navigable rivers, destruction of the fry by means of weirs in such rivers was a matter of public concern, and became a matter fit for imperial legislation; but, as in other rivers the riparian owners were alone entitled to take the fish, and could prevent any interference with the general rights of the riparian proprietor by action, there was no necessity in the case of such rivers for any statutory protection." But as salmon may be bred in a non-navigable river in the several fisheries of some individual, and be caught in the arm of the sea into which the non-navigable river falls, and where a public right of fishing exists, the placing an obstruction which may impede the breeding fish may, in a non-navigable as in a navigable river, interfere with the rights of the public. Indeed, in the estuary of the very non-navigable river to which the Lord Chief Justice was referring, no less than 30 nets, 28 of which are worked by four men each, were licensed in 1867 for the capture of salmon.

I venture, therefore, to suggest—

1st. Not that the erection of a weir should be actually prohibited in a non-navigable river, but, which so far as fishing is concerned would be equally advantageous, that no new weir should be allowed to be built across more than nine-tenths of the stream.

2nd. That all weirs which in such rivers existed by virtue of neither grant nor prescription, or which had been proved to be raised without having obtained a new grant, or having acquired a prescriptive right by long usage to their increased height, should, in the event of their not having already been provided at the expense of their owner with an approved pass, have a free gap made in them of such size and depth as the Home Office might determine.

3rd. In the event of the weirs having been provided with a ladder under "The Salmon Fishery Act, 1861," to allow the Conservators to make such a gap.

4th. To empower the Secretary of State to grant a certificate describing, by reference to local marks or in any other way, the height of a weir, such certificate to be for ever evidence of the height to which, in the event of repairs, such weirs could be raised.

The object of these recommendations is, in some measure, to abate the nuisance of allowing any weir to divert the whole of a river from its natural channel, by the addition of a gap of sufficient depth to insure some water always passing through it. Weirs, so far as my experience goes, have been raised by little and little so constantly, that I believe such a provision would be found to be applicable to many more than would generally be supposed. The ordinary courts of law might safely be allowed to decide on the matter of fact alluded to in the second suggestion.

Nor is the question, as it has been often the habit to suppose, simply one between mills on one side, and salmon on the other. All new weirs, and all additions to old ones, render the drainage of land more difficult and more expensive. In the course of my inspection I have received complaints from landed proprietors of the injury done to their property by the existence of weirs, and I feel bound to notice their complaints as a proof that the question of weirs is not simply a question between salmon and mills.

Pollutions.

Next to a constant supply of water, pure water is the essential qualification of a salmon river; and, though I am aware that it is impossible to deal with the question

question of the pollution of our rivers simply as a salmon subject: yet I think that there is no reason why the salmon law should not be made less defective than it is now on this point. It would be a poor compliment to this scientific generation to assert that the pollutions, to which public attention has at last been aroused, are irremediable. On the contrary, there are few pollutions which do not actually imply waste, and which a system of truer economy would not have guarded against.

Pollutions may be divided into three classes: 1st, from sewage; 2nd, from factories; 3rd, from mines. With the first, no Salmon Act can properly deal. Sewage is not, certainly not under ordinary circumstances, poisonous to fish, and there is therefore no sound reason for inserting in a Salmon Act any provision in regard to it. The two last are very different. There are probably few factories which do not use some poisonous substance in their process of manufacture, and there are few indeed which have taken any steps to keep such poisons from the rivers on which they are situated. The case of mines is equally serious. If the process of washing by which the ore is recovered is carelessly performed, a large quantity of ore flows away with the hush into the river, and though it seems doubtful if any mineral in a solid state, or held in suspension, is poisonous to fish; the injury which the mines occasion is none the less serious: 1st, the hush fouls the water, and deters fish from facing it; 2nd, it settles on the spawning beds, chokes the spawn, and gradually ruins the bed. I understand that the Duke of Northumberland stipulates, in all leases of mines, that the lease shall be granted on the understanding that no pollution is allowed to enter into the river. What a private individual can do, the law may surely call on all to do, and separating, as I have already proposed in the case of weirs, the old from the new.

I would suggest in all salmon rivers,—

1st. That before any new factory or any new mine is opened, the lessee should submit to the Home Office the measures which he proposes to render the pollutions harmless.

2nd. That, within a time to be fixed by law, the Home Office should either approve the measures, or name others to be substituted for them.

3rd. That no factory or mine should be allowed to be worked until such precautions as the Home Office had directed, had been adopted.

For factories already opened, the present law is defective,—

1st. Because it takes from the ordinary local courts the power of directing the application of a remedy of greater cost than 100 *l.*, instead of merely giving the appeal from the decision of the local to the higher court.

2nd. Because it requires proof that fish are actually poisoned by the pollution, and is not therefore applicable to those rivers which have been entirely destroyed by the pollution.

3rd. Because it does not provide against putting in substances which foul the water so considerably as to prevent fish from facing it, or which ruin the spawning beds.

4th. Because, in the case of a company, it does not name any individual who shall be held responsible for the acts of the company.

These defects should be remedied,—by making it penal to put into any salmon river, or its tributaries, any solid or liquid matter in such quantities as may be proved to make that portion of the river uninhabitable by fish, or as may be proved to be destructive of the spawn or spawning beds; by making the manager of a company responsible for the acts of the company; and by allowing the magistrates in petty sessions to adjudicate on each case as it arises.

I hope that I may not be understood to imply that the above is a sketch of the law which I consider sufficient for the cleansing of our polluted streams. On the contrary, I trust that the growing demand for water, and the increasing appreciation of the fact that foul water is the parent of disease, may ultimately lead to a far more stringent measure than that which I have ventured to pro-

pose. But such a measure is of too great importance to be tacked on to a Salmon Bill, and will have to be dealt with separately, in order that it may separately receive the attention it deserves.

Passes.

The provision of water, and the purification of that water, are hardly of more importance than the discovery of the best method of assisting the fish over the obstructions which have been placed in their path.

The first object of the builder of a ladder should be to lead the fish into it. Its foot, therefore, must be placed in the pool below the dam, where the fish are observed to be. An inattention to this requirement has caused the failure of many salmon ladders. The next object is more difficult to attain. It is to throw through the ladder a quantity of water sufficient to lead the fish into it, but insufficient to wash them out of it in their way upwards. To lead them into it, there ought to be more water flowing through the ladder than over any other portion of the weir. In other words, if the ladder is a straight one, there must be a cut into the weir.

It has, however, in practice been found that, if more than a certain quantity of water passes through ladders, as they have hitherto been constructed, the fish are liable to be washed out of them in passing up them, and there is therefore this dilemma, that, if sufficient water passes through the ladder to lead the fish into it, the water is so broken that the fish is unable to work its way up it, while, if the water in the ladder is sufficiently quiet to enable the fish to pass up it, it will not be sufficient, except in peculiar instances, to attract the fish into it.

From experiments, however, which I have seen made, I think that this difficulty may be obviated by closing the openings through which the water flows, and thus forcing it to fall from step to step in a series of cascades. The flow of the water being straight instead of, as in the present form of ladder, circuitous, it is less liable to become broken and frothy than it is now. The floors of ladders, have hitherto been constructed, on a slope, and the water has consequently been most shallow at the top of each square, or at the very place where the salmon requires most water to assist him in his passage up the ladder. It seems, therefore, to be a matter for consideration whether in future the bottom of each step should not be made flat, and the bottom of the ladder in the shape of a flight of stairs. But a ladder should not be the only resort of the salmon cultivator. The best of all passes, it should be remembered, is a free gap, and the more nearly the pass resembles the free gap, the better it will be. The lowering the practical height of the weir, by the construction of a second weir below it, so as to divide one impracticable into two practicable leaps, is the next best form of pass ; and, when the apron of a weir is of a proper inclination, a board placed diagonally upon it, if I read the lesson of the pass on the Museum Dam at Durham aright, is superior to a ladder. But there are many cases where no contrivance but a ladder is possible, and where a ladder must consequently be resorted to, and it is with a view to these cases that I have explained the way in which, in my judgment, ladders should be constructed. I have done so because I thought that on such a question the public had a right to be made acquainted with my views. But I have done so with hesitation, because I confess that I think that the whole matter is so little understood, that we have all so much to learn upon it, that it is the height of presumption in any one to insist on the correctness of his own opinion. It is because I think that we have all so much to learn, that I have welcomed with pleasure the able discussion which has been going on for months on the subject. To that discussion I have not space to advert in detail, but I shall be glad if anything that I have written may contribute to its continuance ; as I am certain that nothing but the interchange of ideas and free expression of opinions can enable us to arrive at a proper solution of this important subject.

Close time.

I have thus dealt with the great requirements necessary to insure the increase of salmon. The provision of water, the purification of that water, the abatement of obstructions. It remains to be considered under what regulations the fishing for salmon should be conducted, and on the very threshold of this inquiry we have to consider during what seasons salmon should be caught. The English Act of 1861 provided that no salmon should be caught between the 1st September and the 1st February ; and that no salmon caught within the operation of the Act should be sold between the 3rd September and 2nd February.

February. To meet the cases of certain rivers, it gave the Secretary of State power to alter or extend this close time, but it did not give him power to sanction the sale of salmon caught under such alterations in the period during which the sale of clean salmon is prohibited. The law, therefore, is to some extent inconsistent, since it is impossible that the Legislature could have intended to give the Secretary of State power to vary the time for taking salmon, and to have enacted that the sale or even possession of the salmon so taken should be illegal.

Hitherto, however, the inconsistency has not been brought prominently to notice, as the Home Office has declined to throw open any portion of the close season. Numerous applications have, however, been made with this object, and great discontent exists in some parts of England from their not having been answered more favourably. It is stoutly contended that the present close time is wholly inapplicable to the case of some rivers, and that it even interferes considerably with their preservation.

There are two districts from which these applications emanate: the west coast of Wales, and the counties of Devon and Cornwall. I will take one river in each of those districts to illustrate the argument used.

On the Dovey, salmon do not begin to run till the beginning of June; the fish then are few and small. Sewin begin to run about the same time, and come up in great quantities in August. In October larger salmon run, but the best rod fishing is in the last week of the rod season, and the largest salmon, and those in good condition, do not run till November; when fishing is resumed there are only foul fish in the river, and, so confident are residents in the neighbourhood that they never have a chance of killing these fish clean, and that the latter destroy the sewin, which are the only early fish, that the destruction of these foul fish is universally winked at. On the Fowey, since the Act of 1861, no salmon net has ever been used except by poachers. There are no salmon in the river till the end of August or September, and the bulk of the fish do not run till November.

If reference be made to the close times fixed for the various rivers before 1861, it will be found that in these two districts, Wales, Devon and Cornwall, the close time was far later than in the other English rivers. It has been often stated that the magistrates, from a mistaken point of view, were destroying our fisheries by their ill-considered decisions as to close time. In some cases this may have been the case, but it is worth observing that from this point of view the magistrates in these two districts were uniformly mistaken, while those in the rest of England were almost as uniformly wise, and that not only did the wiser decisions in other counties result in no better success, before the new law came into operation, than the unwise decisions in Wales and Devon; but that, since the new law has been in operation, and the whole country has had the advantage of the increased protection it occasioned, the Appendix to this Report seems to show that, while the rest of England has uniformly reaped the advantage of this increase of protection in an increase of fish, the salmon fisheries in Wales, Devon, and Cornwall, which, rescued from the improvidence of their magistrates, should have shown a still greater improvement, have almost alone and almost as uniformly continued to decay.

If it be urged that, in order to protect the interest of the most important English rivers, *e. g.*, the Tyne and the Severn, it is necessary to enact that close time should be uniform, it may be fairly answered that it is not just to destroy the property on one river in order to increase the property in another; and still more forcibly, that, if this is the object, the object has not been attained, as Scotch and Irish fish are both saleable during portions of the English close time, many of the Scotch rivers being open till the 10th, and many of the Irish rivers till the 28th of September, while Dutch and other foreign salmon is saleable, and is constantly sold, in the English market during the whole year.

The law, therefore, seems to be either too stringent, or not stringent enough. It is too stringent if it is intended to deny to the exceptional English river the market accorded to the foreign; it is not stringent enough if it proposes to prohibit entirely the sale of salmon in England during the close season.

The latter is a regulation which I am aware is recommended by many persons who advocate a law similar to that by which the sale of game is regulated. Their recommendations are thoroughly consistent, but they are, I fear, impracticable. It seems doubtful policy to attempt to exclude from the English market

the excellent salmon which arrives all the year round, in the best possible condition, from abroad: it seems unfair to prohibit the sale of English salmon, in an equally good condition, caught in a river, which I may term A, and to place that river under a disadvantage, in order that the task of protecting a river, which I may term B, may be made easier. That there is a difference in the season when salmon run up our rivers, there can, I think, be little question. Fishing in some rivers commences successfully in February; in others you might fish every day till June without catching anything but a kelt. Severn and Tyne fish at the end of August are redder, more mature, and less fit for the market, than Fowey fish at the end of September. Protection may in some cases result in making a river earlier, but there is no proof that protection ever can or will make a late river an early one. If these conclusions are sound, if it is intended to legislate for the whole country, and not to sacrifice the less important for the more important interests (there can be no question that the most important rivers are among the earliest), it seems necessary not only to have a close time variable, as it is now, by the Secretary of State, but to allow the salmon caught in such close time to be sold.

To make, however, this concession less liable to abuse, two things are requisite: 1st, the power of the Secretary of State should not be capriciously exercised; he should be required, in sanctioning the alteration, to state *in extenso* his reasons for sanctioning it; and, 2nd, under no circumstances should the close time be ever less than it is now. The sale of the fish caught in the varied close time might also be confined to a local market, the limits of which would be decided by the Secretary of State. I am aware that in the foregoing recommendation I am acting in opposition to the opinion of many whose judgment I value, and who are adverse to any such change as I have alluded to; respect for them has made me enter at considerable length into the reasons on which my opinion is founded; but it is some satisfaction to me to know that the views which I have advanced are supported on the incontestable authority of Mr. Couch, the eminent author of "The Fishes of the British Islands," who, from residing in Cornwall, and from the attentive observation he has long given to the subject, is peculiarly qualified to form an opinion upon it.

Nets.

The object of the framers of the Act of 1861 was to establish an universal close time; in a corresponding spirit they succeeded in establishing an universal salmon mesh; experience has, however, proved that one mesh is not applicable to every river; the compromise which the law sought to establish has broken down; the mesh is either too large or too small. In purely salmon rivers, if it be intended to save a fair proportion of the grilse, the mesh is too small, as a clever fisherman will easily catch any fish of three pounds weight, while in sewin and peal rivers the mesh is too large, as almost any fish can struggle through it and escape. When I was in Devonshire the pools on the Plym were literally alive with peal, unable, from want of water, to get up higher in the river, and reddening from their long detention. These little fish, averaging about a pound in weight, it would be impossible to catch in a legal mesh, and they therefore enjoy a life free from all human enemies save the angler and the poacher. The case is a still harder one, as it happens that salmon in sewin and sea-trout rivers are usually particularly late, so that these rivers labour under a double disadvantage; it is useless to fish for salmon in them, for salmon do not run until after the close season has begun, and it is waste of labour to fish for sewin or peal, as these fish cannot be caught with the only net the use of which the law allows. The defect is so glaring, that in lieu of the present law I propose that the Secretary of State should have power, on the recommendation of the Conservators, to vary the mesh to be used in each river, giving him power also to decide on the use of a larger mesh at the end of the season should he think such a regulation advisable.

That a mode of fishing applicable to one river is inapplicable to another has been proved this year by the effect of a decision given in the Court of Queen's Bench on trammel nets. The Lord Chief Justice pronounced these nets illegal, on the ground that the armour of the net practically reduced the size of the mesh, and so was in contravention of the 10th clause of "The Salmon Fishery Act, 1861." The decision was hailed with delight on the Ribble, the Dee, and many other rivers, where the net is used in the centre of the stream, and stops the running fish; but it was received with consternation on the Wye and the Usk,

Usk, where it is used, under the name of beating net, to fish the pools at the side of the river, a mode of fishing of the most harmless description: there can be little doubt that its use should be allowed to be resumed on these rivers.

Fishing for other fish than Salmon.

The most difficult regulation remains to be considered: the greatest injury is now inflicted on our salmon rivers by the fishing for other fish. It is useless to say that no salmon net shall be used on the salmon Sunday during each week; if scores of other nets with smaller, and consequently more destructive, meshes are fishing at the same time: even if any chance salmon taken in them was scrupulously returned, the fact of so much fishing carried on in the run of the salmon could not fail to scare the salmon, and to prevent them entering the river; but it need hardly be added that practically salmon are taken in the weekly close time, and by a double infringement of the law are taken with an illegal mesh. Nor is this the only difficulty which this fishing question contains; netting for coarse fish in fresh water is too often an excuse for poaching, and for poaching of the description most difficult to be guarded against.

It did not fall within the province of the Royal Commissioners of 1860, in the course of their inquiries on sea fish, to investigate the effect on salmon of fishing in the estuaries of rivers for other fish; their report had solely reference to the effect of fishing on sea fish; and, as they considered that it was not proved that the present system of estuary fishing, though admittedly destructive of young fry, was decreasing the produce of our seas, they naturally concluded that it was not proved that legislation was necessary to preserve these fish. But the case of salmon rests on distinct grounds; we know, the manner in which this fish is produced; the necessity, therefore, of its ascending our rivers year by year; the power which man has to prevent its ascent: we know, too, that those proprietors whose goodwill is most important, who own the nurseries of the river, meet at best with the smallest return for the trouble that they are put to. Legislation is therefore necessary for salmon to secure the passage of the fish to the only places in which the species can be reproduced; and to secure the upper proprietor a fair proportion of fish in return for the advantage derived from the spawning beds on his property. The case of the sea fish is, in fact, reversed. The Royal Commissioners stated that no legislative interference was required in the case of sea fish, because over fishing will produce its natural checks; "fish will become scarcer, and the produce of a day's work will diminish until it is no longer remunerative. When this takes place (and it will take place long before the extinction of the fish), fishing in this locality will cease, and the fish will be left undisturbed until their great powers of multiplication have made good their losses, and the ground again becomes profitable." "But," they added, "there are other cases alleged to exist in which the operation of the natural check would be unsatisfactory and inadequate; suppose, for example, it could be shown that the weirs in Swansea Bay destroyed such an immense quantity of useless fry of flat fish as to impoverish the grounds of the trawlers in the Bristol Channel, then the natural check could no longer be entrusted with the correction of the evil; for the weirs might well take a sufficient quantity of fish to repay their owners, and yet furnish a very far less quantity of food to the people in general than could be supplied by the trawlers thrown out of employment; and, indeed, it is quite conceivable that the profit to the weir owner might be enhanced in proportion to the damage done to the trawlers. Supposing such a case as this to be clearly made out, it would be the obvious duty of the Legislature to interfere."

Now the allegation of the salmon conservator is, that he is only allowed to fish with a net of certain stated dimensions; and that he is forced to give up fishing for 42 hours in each week; that it is practically impossible to prevent his neighbour, who is fishing for other fish with a small meshed net, and through the whole week, taking the salmon which he happens to catch; that the latter's profit is consequently "*enhanced in proportion to the damage done to the*" salmon conservator, and that, in addition, the salmon are scared in the weekly close time, and prevented from entering the river.

Here, therefore, is a case similar to that contemplated by the Commissioners, a case where the loss occasioned by one man falls upon another, and which cannot, therefore, be left to natural checks. But, as in many instances the fishing for other fish is of infinitely more importance than the fishing for salmon, as it

employs more men, and employs them more continuously, any legislative interference must be slight. The regulations that commend themselves to me are as follows:—

1st. In a salmon fishery district, all fishing should be placed under the Board of Conservators.

2nd. To meet the case which I have alluded to in the Humber, all fixed engines capable of catching salmon, though ostensibly used for the capture of other fish, should be placed in the same category as fixed engines for the capture of salmon.

3rd. All nets, of whatever description, used should be registered, and should pay a license duty, the amount of which should be settled by the Conservators, with the Secretary of State's approval.

4th. No nets of any description should be allowed to be used in the weekly close time.

5th. But, in return for this, salmon taken in such nets, though not of a legal mesh, should not be required to be returned.

I am aware that the last provision is not one on which I can expect every one to agree with me. I am of course aware of the objections to it; but, on mature reflection, I think such a provision preferable to the present system. Small mesh nets will not supersede the legal mesh, for the clear reason that the legal mesh net is lighter, and can be worked to greater advantage. Nor is there any practical power now to enforce the return of salmon caught with an illegal mesh. The temptation to keep the fish is almost irresistible, the chance of discovery is almost nil, and, consequently, from every side of England, there come to this Office the same complaints of the injuries occasioned by these small mesh nets. What I consider it impossible to prevent, I propose to allow. Not because I think it desirable in itself, but because I think it still more undesirable to have a law which it is impossible to enforce, and because, in allowing it, I think it possible to obtain a real weekly close time, in which there will be no net fishing at all.

Fishing milldams.

The only other regulation in regard to fishing is that affecting fishing weirs and fishing milldams. I have already stated that I do not consider that a ladder is sufficient to meet the requirements of a fishing milldam, but that every fishing milldam, where the right of fishing is carried on, should be provided with a free gap. So far as fishing is concerned, a fishing milldam is precisely similar to a fishing weir; each are weirs for catching or facilitating the catching of fish. Whatever kind of pass is therefore required in one case is required on fishing grounds in the other. If nothing but a free gap is sufficient for the fishing weir, a free gap alone can meet the requirements of a fishing milldam. The fact that a mill is worked in connection with the latter has nothing in reality to do with the fishing question. If the mill is very valuable, and if the free gap would be very injurious to it, it may be a reason for preserving the milling power, and abandoning the fishery; but it can be no reason for allowing a fishery to be worked with a pass inadequate for the purposes proposed. At the same time I cannot think that those proprietors who have, in obedience to the law, constructed a pass which has been approved by this Office, should be required to incur the expense of a new pass; and in such cases I would simply permit the Conservators, should they think fit to do so, to make the gap at their own expense.

It remains to be considered, what is a fishing milldam? a question which is not clearly answered by the present law. There can be little question that any dam detaining the fish assists the fishermen; and that the fisherman, if he wishes to catch the fish, will net the pool below the weir in which the fish are lying. This pool is often more than 50 yards below the weir, so that the present law is in some measure defective; and it appears consequently advisable to extend to 100 yards the present provision, a distance which will, I think, be sufficient.

General suggestions. Gratings. Close time for eels.

I have thus alluded to the chief points on which it seems to me that salmon legislation should rest. I need not here repeat the arguments which I used in my Report of last year in support of the necessity for fencing mine and mill leats, and the enactment of a close time for eels. I stated then that the Larceny Act

Act seemed to confer *on any person* a power which is over and over again demanded of us, to arrest night poachers. I find, however, that I was so far in error in this statement, that I had overlooked the possibility of poaching in waters where a public right of fishery exists; an offence with which of course the Larceny Act, an Act framed to protect private property, does not deal. The offence, to which the name of poaching is not very appropriate, consists of fishing with legal instruments but without a license, or of fishing with illegal instruments. There cannot, I assume, be any serious objection to subjecting the man found fishing at night with an illegal instrument to arrest; but it seems very doubtful whether the same power should be conferred in the case of a man fishing with a legal instrument, and only suspected to be fishing without a license. If, however, all boats and instruments licensed were duly marked, a power of arrest might be conferred in all cases, as from the easily ascertained fact that the man was fishing with unnumbered implements, the water bailiff would be able to see whether the fisherman had a license or no. Night poachers.

The possession of a barbed spear, and even of a gaff, by any person who has not a rod license, might also be in itself made an offence. Fish spearing without a barb is practicably impossible. The possession, then, of such an instrument might fairly be assumed to be a proof of the intention to use it illegally. Nor should the provision stop here. A regulation which has been voluntarily adopted on some rivers should be made compulsory on all, and the angler should be prohibited to use a gaff after the close of the netting season. The lives of many ripe fish would be saved by such a provision, whose slaughter is not justified by the inconvenience the sportsman might feel from being obliged to substitute a more cumbrous landing-net for his handy gaff. Spears and gaffs.

Last year I ventured to suggest that magistrates should be allowed to grant a warrant enabling water bailiffs, when there was ground for suspicion that illegal acts were being committed, to enter upon land for one month in lieu of the 24 hours, the limit sanctioned by the present Act. I made this recommendation in lieu of that which has generally been advanced, and which is in accordance with the Irish and Tweed Fishery Acts, that power should be given to water bailiffs to enter upon land at all periods and all seasons, because it seems desirable to interfere as lightly as possible with the objections which landowners may entertain to a free right of way being granted at all times through their fields and coverts to any person, and because it seems to me that the object of all legislation should be to throw on a local court—a court, therefore, influenced by local opinion—the right of deciding whether there is reason to confer any extraordinary temporary privilege. In short, it seems right to throw the decision on a local court, just as it is right that the management of our salmon rivers should be vested in a body of men living in their neighbourhood; and just as the decision of a local court is subject to revision by the higher court of law, so the proceedings of the Conservators should be subject to the approval of the Secretary of State. Water bailiffs' powers.

Many of the recommendations which I have ventured to suggest—viz., those affecting close season and nets—are framed in accordance with this view; but to carry out the suggestion, it seems right that the supervision of the Secretary of State should be a real and strong one. It may seem presumptuous in me to suggest that greater powers should be given to the Inspectors of Fisheries than the present law has delegated to them; but the fact is, that our present want of power is so palpable that it is absolutely necessary that additional powers should be accorded to us. Inspectors.

The courtesy with which I have always been received has prevented my feeling the necessity of claiming as a right an access to weirs and other places accorded to Conservators; but it is none the less clear that it is an omission—and an omission which, in some cases, might be fatal—that the inspectors have no right of access to the very spots which it is their duty to be continually inspecting; and, though I am disinclined to take the burden actually from the shoulders of the neighbourhood, I think that it would be most advantageous to allow us ourselves to take legal proceedings in some cases where we met with a clear breach of the law. If our inspection is to be real, it is clear that persuasion ought not, as it is now, to be our *dernier ressort*. I say as it is now advisably; for prosecutions for pollutions are so costly (and only in the case of pollutions or illegal height-

enings to or erection of weirs should the power be given), that it is practically impossible for any Board of Conservators to take any legal proceedings in regard to them. The cost of these prosecutions, if they were taken with discretion, ought to be *nil*, as the costs of the case would, in the event of conviction, fall on the proprietors of the weirs and the mines. The very fact of such a prosecutions being possible would probably induce the latter to comply, without any legal proceedings, to the law; and as a guarantee that they should not be undertaken indiscreetly, the inspectors should not be allowed to initiate any proceedings without the written directions of the Secretary of State.

Constabulary and Coast Guard.

Two other matters remain for consideration. The rural police and the coast guard are two bodies of men who might, with slight inconvenience, as far as their other duties were concerned, render material assistance in the task of preserving our rivers. The former are frequently obliged to pass the spots where illegal acts are committed, and have facilities, from the nature of their organisation and duties, of ascertaining who the men are whom it is desirable to watch. Nor is it enough to say, as is said certainly in one county, that, as the police have instructions to notice all infringements of the law, it is unnecessary to furnish them with specific directions for enforcing the observance of the salmon law, as it is clear that there are many offences under the latter, such as fishing without a license, which the police could not be expected to notice, unless they were specifically instructed to do so. The coast guard might still more usefully be employed to prevent illegal fishing. In some parts of England fishing is carried on almost openly without a license; and the scanty force of water bailiffs, unprovided, as in most cases they are, with a boat, is totally unable to prevent this illegality. The coast guard, however, might easily do this. In their patrol of our coasts they have opportunities of observing the objects and purposes of every boat; and if each licensed boat was, as I have already suggested, numbered, there would be little difficulty in their dealing with the matter.

Solway Fisheries.

It is impossible to conclude this Report without some allusion to the fisheries on the Scotch side of the Solway Frith: it was palpably the intention of Parliament that the Special Commissioners should be empowered to inquire into the fixed engines on both sides of the Solway, and it is only from an accidental omission in the law that they have found themselves powerless to adjudicate on those on the Scotch side. The Scotch side of the Frith bristles with fixed engines set to catch the salmon in their homeward journey to our English rivers; this state of things, though perpetrated on Scotch ground, represents an English grievance--a grievance, therefore, which I should not be justified in omitting to notice. It is possible that the Scotch courts of law may be able to deal effectually with the matter; but, should they be unable to do so, the grievance could easily be redressed by a short Act, placing the Scotch side of the Frith under the Commissioners specifically, *and directing where the appeals from their decisions should be heard.* I venture, however, to think it worthy of consideration whether the opportunity should not be chosen for amalgamating the Scotch and English Salmon Acts.

This Report has already so far exceeded the limits to which I had proposed that it should extend, that I refrain from pointing out how this should be done; but I have carefully compared the Acts with this view, and I am prepared to show how an arrangement which, it appears to me, would be beneficial to both countries, could best be undertaken.

I have the honour to be,
Sir,
Your obedient Servant,
S. Walpole.

Fishery Department, 4, Old Palace Yard,
14 March 1868.

APPENDIX to Mr. *Walpole*'s Report.

* It is impossible to calculate accurately the amounts from the Returns in these two cases. I have therefore omitted them.

APPENDIX.

QUESTIONS forwarded by the Inspectors of Salmon Fisheries to the Boards of Conservators.

1. WHAT instruments for the capture of salmon were licensed in 1867? How many of each of these instruments were licensed? How many men are required to work each of them?

2. Have any general licenses been issued; if so, how many have been issued; and what is the amount of revenue raised in this way?

3. Has the take of fish increased or diminished? What are the causes to which you attribute such increase or diminution?

4. Can you give any idea of the number of fish caught in the district—(*a*) with net, (*b*) with rod?

5. At what period of the year, in your district, are the first clean fish taken? When is the main harvest taken? When do the grilse run? When are the majority of fish observed spawning? When are the "Kelts" (fish that have spawned) well out of the river? Give as near as possible the date of the descent of the smolts to the sea.

6. Have any prosecutions been instituted under the Salmon Acts? For what offences were they instituted? What has been their result?

7. Have any new weirs been erected in 1867; or have any old weirs been altered so as to create increased obstruction to fish? If so, have any steps been taken to ensure the erection of passes upon them, under the 25th Section of the Act of 1861?

8. Have any new mines or factories using deleterious substances been opened on your river in 1867?

9. Have any ladders been built, or have any old ladders been altered in 1867? If so state whether the new ladders, or alterations in the old ladders, are successful? *

10. Have passes on any other plan been constructed, or have any old passes been altered in 1867? If so, have the new passes, or alterations in the old passes, proved successful?

11. Have any gratings been attached to mill or mine lades, or other artificial channels? Are they effective?

12. Have any steps been taken to prevent pollution from mines and factories, and towns, entering your rivers; and have such steps proved successful?

13. Are there any other matters to which you desire to draw the attention of the Inspectors?

Note.—The answers from the various Boards are arranged in geographical order, commencing in the north-west of England.

* By ladders, the Inspectors mean a gradient with stops, or water breaks in it.

REPLIES to the foregoing QUESTIONS.

N.B.—The Inspectors, in publishing this very valuable information, must explain that they do not necessarily agree with all the opinions advanced in it.

KENT, BELA, &c.

1. None; the district was not formed until after the season of 1867.

2. None.

3. The Board of Conservators of the Rivers Kent, Bela, Winster, Leven, and Duddon, was only constituted in the autumn of 1867, and therefore there has been no time to speak as to the increase or decrease of fish. Local associations within the district have preserved some of the rivers for many years, but the result has not been so satisfactory on the increase of fish so marked, as was expected.

4. No general record has been kept of the take in the rivers of this district with one exception, the River Leven; the returns of the river can be obtained if required.

5. Seldom before June; the great take is in August. Both grilse and salmon seem to commence running about the same time, from the middle of November to the middle of January. Kelts are not wholly out of the rivers till May; the majority go down in March, and the beginning of April.
Smolts are assuming the silvery scale early in April, and from the middle of this month to the middle May go to sea; their departure depends upon the state of the rivers, as does also the departure of the kelts. It has been observed that the largest fish often run very late, even into December.

6. Only one prosecution for taking salmon in close season; convicted in a small penalty. One seizure of illegal nets.

7. None. No weirs are known to have been altered, except one in the Kent.
There are scarcely any fish-passes, and none of good construction.

8. Not that is known.

9. None.

10. No change has taken place of any kind.

11. None. In answer to this or the foregoing it may be stated, that the income of the Board will be so small, that in all probability it may be some time ere any great improvement in weirs or fish-passes can be effected.

12. None.

13. The attention of the fishery Inspectors is desired to the prayer of the memorial forwarded to them by the Board of Conservators of the rivers Kent, Bela, Winster, Leven, and Duddon. The Legislative improvements as suggested would, in their opinion, add greatly to the efficient protection of rivers, and the prevention of illegal practices. All reasonable aid should be given by law to the funds of Boards of Conservators through as large an extension of the licensing system as may be practicable both for rods and other engines. The Board of the Rivers Kent, Bela, Winster, Leven, and Duddon, are not yet in a position to judge exactly what their licenses will yield. Their district is very extensive, but the fear that the product of the licenses will do little beyond allowing them to appoint an officer whose duty will consist principally in seeing that the licensing system is properly carried out, and superintending the water bailiffs and watchers, most of whom are the servants of private gentlemen, or the paid watchers of small angling associations. This Board purposes to devote its surplus funds (if any) to the improvement of rivers by attaching fish passes, and facilitating the progress of breeding fish, but it must be years before much can be accomplished with the apparent probable yield of the district licenses.

LUNE, WYRE, KEER, AND COCKER.

1.—

Name of Instrument.	Number.	Rate at which Licensed.	Number of Men required to Work each.
		£. s. d.	
Baulk - - - - - - - - -	1	10 – –	1
Draught nets - - - - - - -	9	5 – –	4
Heave nets - - - - - - - -	34	2 – –	1
Rod and line - - - - - - -	55	1 – –	1

2. Five general licenses were issued. The amount raised 40 *l.*

3. There was decidedly an increase of fish in the tidal water of the Lune, but not so in the upper (or non-tidal) waters. At the period when the fish were "running," there was not sufficient water to enable them to pass the weirs at Skerton and Halton, consequently a greater "take" resulted below the above-mentioned weirs, not merely at the weirs, but lower down towards the estuary, where heave nets are used. The increase spoken of is attributable to the protection afforded to the pinks and smolts and the removal of fixed engines in the estuary. Unquestionably if sufficient "passes" were put in at Skerton and Halton, we should have a great increase of fish. It is well known that many fish spawned in the tidal waters this season from their inability to ascend to their natural beds.

4. We have no means of ascertaining the quantity of fish taken by draught or heave nets. The fishermen are very reticent upon this point, but they are said to be quite satisfied with their "takes," *i.e.*, in the tidal waters.

About 60 fish were taken by rod and line in the upper waters, and 30 to 40 by draught nets in the same locality.

Upwards of 80 *l.* was paid for licenses.

5. A few clean fish are taken in February, increasing gradually to the main takes in June, July, and August. The grilse run in July, but last year they ran a month or six weeks earlier than they ever have done for the last 35 years. This circumstance is accounted for (by an old fisherman of that period) by the fact that the Skerton Weir was "down" (a part having been washed away in a flood), from February till May. Fish were also spawning early in October last year. This is also very unusual, and supposed to arise from the same cause as the early run of grilse. The majority of the adult salmon are on the "rid" from the end of November to the middle of January. There are fish on the "rid" in Halton Water at the present time. The kelts are well out of the upper streams early in April, but have to wait for floods to pass the weirs, illustrating the old adage here—

"The full floods of May
Take all the smolts away."

6. Smolts in the Lune.

Offences Charged.	Number for each Offence.	Convicted or Acquitted.	Penalty, if Convicted.
Taking smolts - - - - -	1	Convicted -	Very poor old man; discharged with reprimand.
Taking unclean fish - - - -	2	Ditto - -	One, 4 *l.* One, 2 *l.*

The above convictions took place at Kirkby Lonsdale Beach (Westmoreland), its jurisdiction extending chiefly over the spawning grounds in the River Lune.

7. In some modern repairs at Skerton Weir the new part is made higher than the old weir. Mr. Garnett, the owner, stated he was not aware of it, but the fact is so, I believe.

8. None whatever.

9. None.

10. None whatever.

11. No.

12. Not necessary.

13. We think that further legislation is indispensably necessary after the recent decisions in the Court of Queen's Bench, limiting most materially the jurisdiction of the Special Commissioners.

We think powers of control should be given over mill-dams, subject to the rights of mill owners to a sufficient water supply, and no more.

That millers should be compelled to place gratings on the head and tail-races of their mills.

That water-bailiffs should have authority to search suspected poachers found on lands upon which the water-bailiffs have the owner or occupier's permission to patrol.

That the use of a gaff be declared illegal between the 2nd of February and 1st of May.

May. Under the Salmon Act, 24 and 25 Vict., chap. 109, sec. 14, any person wilfully taking any unclean or unseasonable salmon, is liable to a penalty of 5 *l.*, but he is exempted from liability if "he takes such fish accidentally, and forthwith returns the same to the water with the least possible injury."

As a rule the very object of this provision is defeated, inasmuch as landing the fish with a gaff generally inflicts mortal injury.

RIBBLE.

1.—

Name of Instrument.	Number.	Rate at which Licensed.	Number of Men required to Work each.
		£. s. d.	
Baulk nets	2	10 – –	2
Draught nets	42	5 – –	4
Heave or haaf nets	77	2 10 –	1
Shackle net	1	2 10 –	1
Jack	2	3 – –	1
Rods	323	1 – –	1

2. Seven general licenses have been issued, and the amount of revenue raised by this means is 54 *l.*

3. The quantity of fish taken with the net has increased, but of those taken by the rod has decreased. The cause of the increase in the number of fish taken with the net is attributed to the dryness of the late summer, which prevented the fish from ascending the river, and made them fall an easy prey to the heave or haaf net fisherman at the mouth of the river. The same cause has diminished the number of fish in the upper waters of the river, and consequently the take of fish by the anglers.

4. There are no means of ascertaining the number of fish taken; but from the best information we have, it is estimated that 15,000 to 16,000 fish were taken by the nets, and about 100 by the rod.

5. The first clean fish are taken in this district about the latter end of April or the beginning of May. The main harvest is in July. The grilse begin to run about the 10th to the 15th of July. The majority of fish are observed spawning the latter end of November and in December—most in December. The kelts are generally well out of the river in March. The smolts descend to the sea in the latter end of April or beginning of May.

6.—

Offences Charged.	Number for each Offence.	Convicted or Acquitted.	Penalty, if Convicted.
Having in possession unclean salmon	1	Convicted	Ordered to pay expenses.
Taking young of salmon	1	Ditto	Ditto.
Fishing without license	4	Ditto	1 fined 2 *l.*; 1 fined 1 *s.*; 2 fined 10 *l.*, or 3 months.
Using fixed engines	2	Ditto	1 fined 10 *s.*; 1 fined 2 *s.* 6 *d.*
Taking unclean salmon	1	Ditto	Fined 5 *l.*
Fishing with illegal net	7	Ditto	2 fined 5 *l.*; 5 acquitted.
Fishing during close time	5	Ditto	1 fined 5 *l.*, or 2 months; 2 dismissed; 2 fined 10 *s.* each, and 5 *s.* for each fish.

7. No new weirs have been erected, and no old ones have been altered so as to cause increased obstruction to the ascent of fish.

8. No such mines or factories have been opened in the year 1867, but several have been opened within a short period.

9. There are no ladders in the district.

10. No passes have been constructed or altered in the year 1867.

11. No such gratings have been attached to artificial channels.

12. No steps have been taken to prevent pollution except that a riparian proprietor on the banks of the Darwin, a tributary of the River Ribble, has commenced proceedings in Chancery against the Corporation of Blackburn for turning the sewage of that town into the river, which proceedings are still pending, and except that the attention of the Royal Commission on Rivers' Pollution has been called to the subject, and they are about to visit the district.

13. The Board of Conservators of the Ribble Fishery District beg to express their strong conviction that in order fully to attain the object for which the recent Fishery Acts were passed, further legislation is indispensable. The Board venture to urge the Inspectors of Salmon Fisheries for England and Wales to prepare and lay before Parliament during the present Session a Bill in which the shortcomings of the Salmon Fishery Acts of 1861 and 1865 may be made good, and such further provisions as enlarged experience has shown to be expedient may also be introduced; with this view the Board ventures to offer for the consideration of the inspectors the following suggestions, together with the reasons on which they are founded.

Upper and lower proprietors.

The usual antagonism between the upper and the lower proprietors exists in full force in the Ribble district; here, as probably elsewhere, it would seem a necessary preliminary to the development of the capabilities of the river that the conflicting interests of these two parties should be dealt with and equitably adjusted. The upper proprietors breed and rear the fish, but the lower proprietors monopolize the great bulk of the supply. The existing enactments made apparently with a view of securing to the former a fair share of the produce of these nurseries are utterly inadequate for the purpose. Even in a single fresh the fish are often taken by tons in the estuary and at the head of the tideway, few, if any, escaping the deadly devices there used for their capture and de struction.

Remedy.

A probable remedy for this unfair distribution of the supply of fish would be found in a *general extension of the weekly close-time*. The Board, therefore, propose a weekly close-time of not less than 72 hours, commencing at 6 p.m. on Saturdays, and ending at 6 p.m. on Tuesdays, thus securing a free run of *three nights* and three days every week throughout the netting season.

Alteration of mesh.

The Board also beg to suggest that on and after the 15th July in each year no person shall be allowed to fish for salmon with a net of less dimensions than three inches from knot to knot, and also that sec. 10 of "The Salmon Fishery Act, 1861," be amended by leaving out the words "in such manner as practically to diminish the mesh of the nets used."

Net duty.

The present net duty is felt as a serious grievance by the upper proprietors, on whom the prosperity of the fisheries greatly depends. Several tons weight of fish have been taken by two nets in a single fishery at the head of the tideway in a single night, while in the upper waters instances are known where a single net has failed to take even half-a-dozen fish during the whole season. Each of these nets pays the same duty. The net with its thousands, and the net with its modest half-dozen fish, are assessed alike at 5 *l.* each.

Maximum duty.

The Board would, therefore, suggest a revision of the statutory scale of duties, that a *maximum duty* of not less than 25 *l.* be fixed for draft or hang nets, and that power be given to Boards of Conservators, subject to the approbation of the Home Office, to graduate the scale of such nets, *and assess them according to the value* of the fisheries in which they are used.

Under the Act of 1865, sec. 34, clause 1, the license for the use of a rod and line is personal, and not transferable. Under clause 2, however, by which the license for nets and other instruments is made "available only for the use of the persons within the districts to whom the same are respectively granted," a great abuse has arisen. The use of a net by the hands of his servants is no doubt a use by the licensee himself. A single net is now made to serve many masters. Those who use it call themselves the servants of the licensed owner. Proof to the contrary is, for the most part, impossible, and thus both duties and penalties are constantly evaded. Under this clause it would even seem competent to any man to advertise his services, and fish for hire with absolute impunity. These results can scarcely have been intended or foreseen by the Legislature. Some remedy should, as if seems to the Board, be found for such an evasion of the law, which is not only at present practised, but is likely to be very greatly extended,

Dams.

The recent decision of the Queen's Bench in the Clitheroe Weir Case (Garnett *v.* Backhouse), appears to have greatly narrowed the supposed jurisdiction and limited the action of the "Special Commissioners for English Fisheries." There are many dams and weirs in the Ribble Fishery District besides that of Mr. Garnett. In some cases the run of the fish is greatly hindered, and in others entirely prevented. Many of these weirs are believed to be illegal.

See Act.

Prior to the passing of the Act of 1861, all such dams in the Ribble and its tributaries might have been abated and diminished at the expense of the owner, under 1 Geo. 1, stat. 2, c. 18. This statute, however, was repealed by the Act of 1861. In this particular, therefore,

therefore, recent legislation has worked a direct injury to the fisheries of this and some other districts. Under these circumstances, and especially as the inspectors have power to insist on fish passes and free gaps in weirs, &c., to be erected hereafter, the Ribble Fishery Board are anxious that the jurisdiction of the commissioners *should be extended to all weirs and dams*, that they should have full power to inquire into the legality of all such works of obstruction; in short, that the provisions of the *Act of Geo.* I *should be revived* and carried into effect under their authority.

Netting above dams.

It is presumed that the 12th section of the Act of 1861 will apply to catching fish in the pool formed above the dam equally with that formed below it. Many of the fish that have surmounted the obstacle, finding themselves at rest in deep water, commonly remain in the pool and are taken then by nets as soon as the water has sufficiently subsided to allow of their use. Were there no dam there would be no pool in which the fish could stay, the dam, therefore, by detaining the fish, certainly facilitates their capture, and thus the case would seem to come within the Act. Should there, however, be any doubt as to the construction of this clause of the statute, it would be well that the intention of the Legislature should be now clearly defined.

Pollutions.

Owing to the difficulty of producing actual proof that fish were poisoned by matter flowing from the works of the particular defendant, where more than one such establishment pours its refuse into the water, the provisions of the Act of 1861, in this behalf, have become practically inoperative. The Pollution of Rivers Commissioners are now understood to be at work on this subject, which has become one of vast general importance. A Fishery Board can, however, only seek to provide a remedy against any injury to the interests under their care. In order that the fish may be protected against injuries of this class, the Board see no other alternative than to make it penal to put or allow to be put into any river any matter whatever which may be found to be poisonous or deleterious to fish. And we beg further to suggest that the maximum penalty for any offence under section 5 of "The Salmon Fishery Act, 1861," be 100 *l.*, and the minimum penalty 5 *l.*

We beg further to suggest that a minimum penalty for all offences against the Salmon Fishery Act be fixed.

We beg further to suggest that section 13 of "The Salmon Fishery Act,1861," be amended by striking out the words "used for the purpose of supplying towns with water or for supplying any navigable canal."

Great difficulty and inconvenience has been felt by the water-bailiffs, in consequence of not having the power to enter upon lands on the banks of the streams without the permission of the owners. If the bailiff is unable to walk continuously along the river's bank, it is impossible for him properly to protect the fish. In some instances the bailiffs have been served with a formal discharge in writing, after which they cannot set a foot upon the land without the certainty of being prosecuted for trespass. It is always in the most suspicious localities, where the services of the bailiffs are most needed, that this happens. The discharge is thus resorted to as an efficient means of screening the illegal practices of the occupier from observation. Unlawful fishing is often known to be thus carried on from time to time, but prevention and detection so as to ensure the conviction of the offender are alike impossible. It is essential to the efficient discharge of their duties that the power of entry in all cases should be conferred upon the bailiffs, and the Board accordingly suggest that a provision to this effect be embodied in any new Bill that may be brought forward.

It may be observed that it might be found of great general advantage if the English Fishery Acts were made more elastic, and rendered capable of a more complete adaptation to the peculiar necessities of each fishery district. This might easily be effected by giving power to the various Boards of Conservators under such supervision as the legislature should think fit, to have bye-laws for the regulation of the fisheries under their care. Ample machinery for this purpose is now in existence. A permanent staff of officers has been already appointed in whom might be vested the authority to give to such bye-laws as they approved of, the full authority of law. Were the inspectors of English fisheries enabled to exercise at least some of the power which, by the Acts of 25 & 26 Vict. c. 97; 26 & 27 Vict. c. 50; 27 & 28 Vict. c. 118, were, for a limited period, vested in the Scotch Commissioners, many difficulties in the general administration of the laws might be remedied, and the necessity for future legislation could scarcely again arise.

In conclusion, the Ribble Fishery Board beg to express their hope that the present earnest effort to re-stock our rivers, lakes, and coasts, to protect the fish from exhaustion by taking them at improper seasons by destructive methods and in entravagant quantities, and thus make good the recent prodigal waste of the gifts of nature, and restore the primitive abundance of the healthful food our waters furnished, may be favourably regarded and efficiently promoted by the Legislature.

RIVER DEE.

1.—

Name of Instrument.	Number.	Rate at which Licensed.	Number of Men required to Work each.
Draft nets - - - - - - -	47	5 *l.* each -	Not less than two men, but often two men and a boy.
Coracle nets - - - - - - -	18	2 *l.* each -	Two men.
Rods and lines - - - - - - -	32	1 *l.* each.	—

2. None.

3. The take of fish *below* Chester has very much increased. This is attributable to the increased care taken of the spawning fish in the upper parts of the district, and the stopping of the use of stake and trammel nets, which latter were used so as to be as obstructive to the run of salmon as stake nets, and would be so again if allowed to be used. I would rather see [a limited number of] stake nets at work than an unlimited number of trammel nets. For fair fishing they are not required in English, any more than Scotch, Irish, Canadian, or Norwegian rivers, in all of which they are and have been illegal.

4. It is impossible to give a correct account of the number of fish taken with nets last season. The fishermen do all they can to prevent a correct account being known, under the idea that they will thereby keep up the price of salmon.

The take of salmon by the rod, last season, was very small. Owing to the dry summer, very few fish got over Chester Weir till after the netting season, and even then the river was very low till far on in September or beginning of October.

5. Some clean run fish are taken as soon as netting begins in February. The main harvest, I should think is in July; grilse seem to be running at all times. The majority of salmon spawn about Christmas; kelts are not well out of the river till May. The smolts descend toward the sea at different times. I have seen them in this river and *ready for the sea* during all months up to September, but the great descent is before June.

6.—

Offences charged.	Number for each Offence.	Convicted or Acquitted.	Penalty, if Convicted.
Killing kelts - - - - -	3	Convicted, 2 -	1 *l.*
Killing fry - - - - -	1	Acquitted, 1.	—
Killing salmon near Chester Weir -	2	Convicted, 2 -	5 *l.* and costs.
Leistering - - - - - -	5	Acquitted.	—
Salmon in possession in close time -	1	Convicted of having 3 fish.	2 *l.* 10 *s.* for each fish and costs.
Poisoning water - - - -	1	Acquitted.	—

Prosecutions have been instituted for killing kelts and salmon fry; for taking salmon within 50 yards of the Chester Weir; for killing salmon with lights and spears; for having salmon in possession in close time. The five charged with leistering the salmon were (three of them) sons of the man convicted of having the fish in possession. Poisoning the river Allyn for 14 miles with petroleum refuse, killing every fish in the stream for that distance or further.

7. None.

8. Though in existence before 1867, the works for making various alkalis and acids have increased in 1867; the quantity of poisonous refuse they now send out of these works into the river is frightful, and is so strong that it burnt the shoes, stockings, and hands of a water-bailiff taking samples of it. The poisonous refuse from the petroleum works is most destructive. The section relating to poisoning operations is not at present sufficient to prevent it, and if this state of things goes on as it is or increases, I fear the salmon will refuse to enter the river from the sea.

9. There is a ladder with steps in it at the Gibistock Weir; it answers well when there is sufficient water; but at low states of the water the fish are scared from entering the pass by persons who pretend to be fly-fishing, but are really only intent on preventing the

the fish going through the ladder, in order that they may be taken with the nets 50 yards below the ladder and weir. This ladder could be easily improved, but so long as there is no passage for the fish over Chester Weir, there is no use in taking any trouble about the matter.

10. The pass at Pentrefellyn Weir has been made several years, and answers well; it is over a weir near eight feet high, is of wood, nine feet broad, 24 feet long, and in four compartments of six feet each, and from two feet to three feet six inches deep. Fish seldom stop long at this pass, and it could be improved easily.*

There is a pass on an enlarged pool system at Llangollen. This could be easily improved; but I have seen salmon go over it at all states of the water, as it is. They are now prevented doing so by the rod-fishers. No rod or net fishing should be allowed within 100 yards of any weir, or a pass or ladder is comparatively useless.

11. No gratings have been attached to mill or mill ladders, there being no clause in the Act authorising the Board of Conservators to place them; they are much required at all the mills, as very great quantities of salmon are known to be killed by getting under the wheels; besides, their being able to get there, induces the millers' men to destroy them. I have known this autumn five large salmon killed by one wheel in one day, and many others at different times. It would be no detriment to the mills to put a grating similar to one I have put by authority of the Special Commissioners at the tail race of the trap at Chester, which answers perfectly, and does not interfere with the mills in the least.

12. This Board prosecuted the party who polluted the river Allyn with petroleum refuse, killing every fish for 14 miles, or the whole length of the stream (below his works). This prosecution failed. The river is much polluted from drains, &c., from the town of Chester, which contain all sorts of poisonous refuse.

13. I have before stated that the real increase of fish in this river is attributable to the stoppage of stake and trammel nets; and I wish here to repeat that I know and believe that trammel nets can be so used as to damage a salmon fishery as effectually as stake nets; though not actually *fixed* so as to come within the section relating to *fixed* engines; they can be used and moved so slowly as to be just as *destructive* and *obstructive* in the lower parts of rivers, and if used in the upper parts scarce a fish can escape them; so that all the early spawning fish, fish that have got to the upper parts early in the season, and would be the first spawners, will be destroyed, and none but late spawners left to restock the rivers. I would direct the attention of the inspectors to the fact that such treble nets, three nets behind and near to each other, have always, so far as I can learn, been illegal in Scotland, and are so now, and would not be tolerated for a moment there; they are also illegal in Ireland, Canada, and Norway, and if they were legalised in this country, I believe all the early spawning fish which now find security in some few rocky pools would be destroyed, if the trammels below ever permitted them to go so far. I would like to draw the attention of inspectors of fisheries to the practice of using a number of nets (though not trammels), so close together as actually and practically to stop the passage, as effectually as if it was done with a stake or fixed net. Last season, on this river, below Chester, there were more than 40 nets frequently at work *so close together* that the passage was frequently stopped; no net should be allowed to be put into the water within a specified distance of another until *that other net was out of the water.*

CLWYD AND ELWY.

1.—

Name of Instrument.	Number.	Rate at which Licensed.	Number of Men required to Work each.
		£. s. d.	
Draft nets - - - - - - - -	10	2 – –	2

2. Fifty issued at 1 *l.* each, 50 *l.*

3. The take of fish in 1866 was small, and in 1867 it was smaller still. I attribute this decrease in both years very much to the dryness of the seasons, there being no floods in the rivers.

4. In

---

* *The Pass at Pentrefellyn.*—I do not quite agree with Mr. M. Owen as to this pass; it is useful at a certain condition of the river, but the foot of the ladder does not rest in the main stream; and, therefore, when the water is low, the fish pass the foot of the ladder along the deeper river course at the side, and must remain at the foot of the weir until the water rises. One of the water-bailiffs reported to me, when the river was low last summer, that he saw about 100 salmon at the foot of the weir waiting for a fresh.—*Charles J. Tottenham.*

4. In 1866, about fifteen or twenty with the rod. In 1867, I cannot say with any certainty.

5. Clean fish are taken from the middle of June in the estuary of the rivers; seldom sooner. The main harvest, if nets were allowed, would be in September. The grilse run up at the end of August and in September, if there is water in the rivers. The kelts are out of the river at the end of March, if there are floods to carry them down. The smolts go down in March and April. This year the greater number of fish did not run till December (1867).

6. Five prosecutions have been instituted. Four for fishing during the fence months, and with illegal nets. Three were fined 5 *l.* each. One was fined 1 *l.* One was fined 3 *l.* for using a gaff. One was acquitted.

7. One new weir is now being erected, and a pass will be put in. No old ones altered.

8. No.

9. No.

10. No.

11. None as yet.

12. None.

13. I would draw attention to the uncertainty and lateness of the fish running up the rivers Elwy and Clwyd, and would suggest that nets be allowed to draw till the middle of September, and fly-fishing be allowed till the middle of November, with a penalty if unclean fish are not returned to the rivers. It is a privation to the neighbourhood to refrain from taking fish with the nets after the 1st of September; the take will always be inconsiderable, and closing the fence day so early is provocation to poaching.

CONWAY.

1.—

Name of Instrument.	Number.	Rate at which Licensed.	Number of Men required to Work each.
Rods and line	137	1 *l.* for season 10 *s.* per month 3 *s.* per week 1 *s.* per day	1
Nets	7	3 *l.*	2
V Weir	1	3 *l.*	2
Box	1	3 *l.*	2

2. Yes; one granted for the sum of 5 *l.* 5 *s.*

3. Greatly diminished; one of the great causes for which is from the fact of the anglers not being allowed to angle in November, when the great run of fish comes up the river, and another is the great preponderance of male fish which disturb the spawning beds, and do infinite harm; these fish used many of them to be taken when the river was fished in November.

The netters also, though their time is made shorter, have redoubled their energies and use much larger nets, which take almost all the earlier fish.

4. Can't say how many with nets; certainly not six fish to each rod during the whole season; whereas a few years ago from 70 to 100 fish used to be taken to one rod.

5. Some very few clean fish are taken with the net at the latter end of May, but scarcely ever with the rod till the middle of June. The main harvest is now taken in September by the anglers, and of course in August by the netters. October is here a very poor month, as the weather is generally bright and dry, and when we have a flood the river is always filled with leaves and unfishable; when we fished in November we used to kill, if we had a favourable month, more fish than during the whole of the season put together, and many of them splendid clean fish. We have now scarcely any grilse in the Conway; not more than half-a-dozen are taken in a season; we used to have plenty, and they came up the river in July and beginning of August. The majority of fish spawn,

spawn, if the water suits, about Christmas; if the water is not right, they do not spawn till later. The kelts are not well out of the Conway till the middle of May; we have seen scores of them in the river late in June, but if there are good floods the great bulk go down at the latter end of April and beginning of May. The smolts go down to the sea in May if the water is favourable; if not, as soon after as they can; we often have them in the river in June.

6. There have not been any prosecutions by the Board.

7. No.

8. No.

9. No.

12. No.

13. We wish particularly to draw the attention of the Inspectors to the extreme lateness of the Conway as a salmon river, and to point out to them that the Salmon Fisheries Act of 1861 has done it more harm than good, for while the new Act gives us greater powers over poachers and netters, it takes away from the anglers the best month of the season; in fact almost the only one during which the Conway is worth fishing; consequently, the anglers, from whom we get our chief support, are all deserting us for earlier and better waters, and our funds will of course decline in proportion; whilst the netters, as their time is shorter, will redouble their exertions and take all our earlier fish out of the water.

The Conway, from its conformation, can never be made an early river; if it were possible to carry the fish over the *Falls of the Conway* it perhaps might become slightly earlier, but not much. In our opinion, the month of November should be added to the open season for anglers, and the netters should have till the middle of September; during October and November, no angler should be allowed to use a gaff; all fish should be landed with a landing-net, and every female heavy in spawn or at all out of condition should be put in again, but all the males killed. Now, as four or five males would be taken for every female, this would in a slight degree help to equalise the sexes and would do a great deal of good; and as the angling water is all private property, might very easily be carried out. Unless the fishing improves, or something of the proposed kind is done to help us, even the resident anglers will cease to take an interest in the river, and the Conway will be deserted.

SEIONT.

1.—

Name of Instrument.	Number.	Rate at which Licensed.	Number of Men required to Work each.
Net - - - - - - - - - -	2	3 *l.* each -	5
Rods - - - - - - - - - -	20	10 *s.* 6 *d.* for season, 5 *s.* for month.	20

2. None.

3. Too soon to form an opinion. This is the first season of our operations, but from the vigilance with which poachers are watched, and the number of fish preparing their beds to spawn *in safety, for the first time for very many years,* we are confident that fish will rapidly increase in future years.

4. With nets, no. With rods from 30 to 40 salmon.

5. Clean fish are first taken in June. The main harvest in July and August, by *nets* in *the estuary.* Salmon have not hitherto taken the fly during these months, but when the rivers are well stocked, things will be different. The grilse run in August, September and October; the majority of fish spawn in December. The kelts are well out of the river in April. Smolts descend to the sea in two shoals, one *in February*: these fish are larger than the April smolts; they are about the size of a moderate herring, and are strong and vigorous. The second and most numerous batch descend *in April,* and "the first flood in May clears them all away."

6.—

Offences Charged.	Number for each Offence.	Convicted or Acquitted.	Penalty if Convicted.
For killing the "young of salmon" - - -	1	Convicted -	5 *s.*, and costs.
Ditto - - ditto - - - - - -	1	Convicted -	1 *s.*, and costs.

Two others were summoned, but they left the country, one paid a small fine to our charities to stop a prosecution for fishing after the close time. Numerous search warrants were taken out and 13 illegal nets seized, besides spears and gaffs, all of which have been retained.

7. Old weirs are in the course of alteration. The passes, or ladders, suggested by the late Mr. Ffennell proved a failure.

8. None.

9. Old ladders are being altered. (*See* Answer 7.)

10. In one case we have placed a baulk of timber with projecting spurs at intervals, on a weir, and the salmon have been seen ascending by it; till this was done, none of the fish *heavy with spawn* could get up. There are many of these late fish running up now. Our rivers have, till lately, been very low, and fish could not ascend till the floods were out.

11. Yes; they are effective.

12. None happily exist.

13. It is the general opinion that, in this late district, *rod* fishing should be permitted till the middle of November, unless, as is anticipated, the habits of the fish change when they beome more numerous. Further legislation is required, but we are too inexperienced to presume to make suggestions just yet.

DOVEY MAWDACH AND GLASLYN.

1.—

Name of Instrument.	Number.	Rate at which Licensed.	Number of Men required to Work each.
Draft nets - - - - - - - -	19	5 *l.* each.	—
Coracle nets - - - - - - -	2	2 *l.* each -	2

2. One at 20 *l.*

3. About the average; certainly not increased; on the Dovey, the largest river of the Association, much diminished.

4. No.

5. A very few in July; none after that time until the last week of October; no main harvest, as the salmon do not run up until the fence months commence. The great majority spawn in December, and early in January, April, and May.

5. Yes.

6.—

6.—

Offences Charged.	Number for each Offence.	Convicted or Acquitted.	Penalty, if Convicted.
Angling without a license - - - - -	2	Convicted -	2 *l.* in each case.
Spearing salmon - - - - - - -	2	Ditto -	2 *l.* in each case.
Spearing salmon with blackened faces, and in disguise.	2	Ditto -	5 *l.* in each case.

7. No.

8. No.

9. No.

10. No.

11. No.

12. No. The Dovey is very much injured, as the Inspectors are aware, by the neglect of the mine owners to filter the water from their washing floors.

13. Unless the present fence months are altered, and the month of November allowed for angling, the preservation of *salmon* in any of the rivers running into Cardigan Bay must come to an end, as it is unreasonable to expect any set of people to spend their money to preserve fish which they are not allowed to catch, owing to there being no summer floods sufficient for salmon to run up the rivers, scarcely a fish is seen until the fence months begin; and I would request the serious attention of the inspectors to this point, as, unless an alteration of the fence time soon takes place, the patience of the subscribers to the fishery will come to an end; and, with no funds, there can be no preserving. If another month were added to the open season in the autumn, the Association would willingly give up the spring fishing: a memorial to the above effect will be brought before the next quarter sessions, in order to be forwarded to the Inspectors.

EAST AND WEST CLEDDY.

1.—

Name of Instrument.	Number.	Rate at which Licensed.	Number of Men required to Work each.
		£. s. d.	
Rod and line - - - - - - -	5	- 10 6	1

N.B.—In this district licenses were not issued before 1st September.

2. No.

3. The take of fish must undoubtedly be decreasing. Both on the East and West Cleddy there are several obstructions to the free passage of fish to the spawning grounds, so that fish do not reach them until the heavy autumn and winter floods, and when they do arrive there the greater part of them are speared. These facts, coupled with the extent to which netting has hitherto been carried on, both in season and out of season, must prevent any increase in salmon. Indeed it is almost a miracle that salmon are not extinct in these rivers, which naturally have wonderful capabilities for producing salmon.

4. With rod this year there have been two fish, one 14½ lbs., the other 8½ lbs. Both taken during the last week in November.

It is very difficult to obtain from the net fishermen any information as to the take of fish, but two men who work a coracle net at Llawhadden, on East Cleddy, have sold in Narberth this year upwards of 30 *l.* worth of salmon and sewin. It must be borne in mind that the coracles on this river work a very small portion *above* the mill-dam at Blackpool. This is the only reliable information we can give. The statements of the compass-net fishermen are very conflicting, and not to be depended on. But it is not an uncommon occurrence for one compass net to take three, four, or even five salmon the same tide.

5. A chance clean fish may be seen in April. The main harvest is taken in September and October, but these are all forward in spawn; in fact, the breeding stock. The restrictions as to close time have not been hitherto enforced; kelts have not all left the river before the end of April, and have been found even up to the middle of May. The smolts get to sea when they can.

It is to be observed that, in consequence of the obstructions to the ascent and descent of fish, and the consequent interference with the arrangements of nature, as well as from over-fishing at all times of the year, the habits of the salmon have been materially altered. Of course the usual nonsense about late rivers is talked here; but take away the obstructions and confine the fishing to proper limits, and we venture to prophesy that in five years there will be a very great alteration in the time fish run.

6. As yet no prosecutions have been instituted, but at the next petty sessions at Haverfordwest one, out of a gang of five, will be prosecuted for fishing with net for salmon on 24th December.

7. No.

8. No.

9. No.

10. At Llawhadden mill-dam the proprietor has, at his own cost, attached a straight run, but the experiment has proved an utter failure.

11. No.

12. No. The pollutions are very trifling and do not injure salmon.

13. If there should be any amendment of the Acts of 1861 and 1865, it is very desirable that the proceedings with regard to the appointment of a Board of Conservators should be simplified. Do away with the Joint Fisheries Committee; let the Inspectors or the Home Office determine the number of Conservators to be appointed by each county in a district. The members to be appointed at next quarter sessions, and their names to be forwarded to the Home Office, on receipt of which a certificate should be granted that the Board has been formed, and no objection to be made as to the legality of its construction afterwards.

A minimum license duty should be fixed, or, what would be better, let the Inspectors fix the license duty in each district.

All owners of mill-dams, erected within say 100 or 150 years, should be compelled to attach passes, to be approved of by the Home Office.

Where more than three men are caught together at night in the performance of any act in contravention of the Acts of 1861 and 1865, they should be liable to not less than the full penalty, and not more than double the penalty capable of being inflicted under those Acts; or, at the discretion of justices, not more than six or less than two months' hard labour. Any person assaulting a water-bailiff or conservator, to be liable to higher penalties than the Acts of 1861 or 1865 inflicts.

Act of 1865, sect. 31. It is meant that a justice shall have power to authorise only the Conservator or water-bailiff, who may make oath before him that he has reason to suspect the commission of an illegal act, to enter land where poaching is suspected. He would be a bold man who would, single-handed, face a body of Welshmen of perhaps 5 or 25, when spearing salmon.

Above all, give the upper proprietors every encouragement to preserve the spawning fish, and if it be not already clear that the Home Office has no power to curtail the extension in favour of angling during the fence months, let it be made perfectly clear that they will not be deprived of the privilege granted them. There can be no doubt as to the wisdom of this concession, but if it were made more clear that it could not be interfered with, Conservators would have a ready answer to the complaints of ignorant fishermen and popularity hunters, that it was a privilege conferred on gentlemen only; as if, forsooth, no poor man ever angled for salmon.

USK AND EBBW.

„ „ „	3	Convicted	1 *l.* 2 *s.* 6 *d.*, 10 *s.*, and 10 *s.*
Taking unseasonable salmon	3	Ditto	2 *l.*, 1 *l.*, & 4 *s.* 9 *d.*
Unlawfully fishing for salmon during the weekly fence hours.	1	Ditto	1 *s.*
Netting by night	3	Ditto	5 *l.*, 5 *l.*, and 3 *l.*
„ „	1	Acquitted	—
Catching trout out of season	1	Convicted	3 *s.*

These putts, though legalised by the special Commissioners as the only lawful engines for taking salmon, were pronounced by the justices at Newport petty sessions, not engines applicable to that purpose. An appeal at Court of Queen's Bench is pending.

7. The weir at Newton Brecon has been raised by the Monmouth Railway and Canal Company about two inches, which has caused an increased obstruction and a greater abstraction of water from the river. The matter has been reported to the Board of Conservators. There is an open pass in this weir, but not under the Salmon Fisheries Acts, having been made previously to 1861. A weir on Branbrook is also *said* to have been raised.

8. Only one. A naphtha work near Usk, to which no tanks have been made to receive the refuse.

9. No. An old ladder on Government plan approved by Home Secretary on the Branbrook has been altered to the Pool system, all the openings in the steps blocked up except that in the top one and across the pool below the dam.

10. An addition has been made to the pool plan at Cynrig Weir, adding nine inches to the height of the planks below the weir. The fish have no more difficulty in passing up this weir than up any other part of the river. The top part of the weir is not touched.

11. The gratings at Newton Weir at the entrance of the canal was fixed in 1866; it requires one or two alterations before it should receive the approval of the Inspectors, otherwise it continues to do its work well. An opening has been made in it to let the leaves through in the autumn, but from its having been closed on the 15th November no harm is believed to have been done.

12. Yes, in the Afon Llwyd the waste vitriol is now utilised. Near Crickhowel, an attempt has been made to prevent the paper refuse from flowing into the river, though not successful. At Abergavenny the gasworks now utilise their tar, and the Town Commissioners purify their sewage. Several works on the Clydach and Afon Llwyd still continue to deposit their cinders and refuse into these streams, causing thereby incalculable injury both to the Usk and Ebbw as fishery rivers.

13. The defects in the existing Acts of Parliament. The want of power to the Special Commissioners to inquire into all mill-dams, and to order, if such mill-dams are illegal, that passes be made at the expense of the miller; if legal, at the expense of the Board of Conservators, within a reasonable time. Regulations are needed as to the mesh to be used for salmon nets, and of other nets used in the tideway and fresh water fisheries of the river.

More stringent and definite enactments respecting the pollution of rivers, both by solid and liquid refuse, such as the tippings from mines and coal levels, lime works, scouring of ponds, sewage from towns and refuse from factories generally, the existing law upon which is manifestly defective. The use of gaff; power of water-bailiffs, &c. A clearer definition as to the meaning of fixed engines. To assimilate the powers for trout, during the fence months, to those applicable to salmon. An amendment in the law prohibiting the use of the trammel nets, should they now be illegal.

WYE.

7. None to the knowledge of the Board.
8. No.
9. No.
10. No.
11. No.
12. Yes.
13. The Board desire to call the attention of the Inspectors to the following suggestions for amending "The Salmon Fishery Acts, 1861 and 1865":—

(1.) The Home Office should be empowered to vary and extend the weekly close time.

(2.) All modes of fishing (angling excepted) should be prohibited within 100 yards of mill-dams and weirs.

(3.) Gratings, or some other protection, should be placed on mill sluices and artificial watercourses, to prevent salmon ascending or descending thereto.

(4.) Stringent measures should be granted to prevent the pollution of rivers.

(5.) All mill-dams should be made passable for fish.

(6.) Clause 2 of Section 34, 28 & 29 Vict., declares that the Secretary of State is to approve of scale of licenses, but omits to define what is evidence of such approval.

(7.) The powers of the conservators and water-bailiffs should be extended, viz.:—To go upon lands on banks of salmon and trout rivers in the execution of their duty during the close season. To secure all persons found and suspected of having in their possession forfeited fish, or illegal engines, and if such persons are found by night, disguised or committing a breach of the Fishery Laws, to apprehend and take them before a justice of the peace.

(8.) That the mesh of trout and coarse fish nets should be defined by the Legislature.

THE SEVERN.

1.—

2. No. There was one application, but the Board did not consider the applicant produced sufficient proof to authorise them to grant it.

 3. Increased

3. Increased. The cause of the increase arises from the improved protection of the district under the new laws.

4. I can give no idea of the number of fish caught with net, but with rod and line about 20 have been caught, as near as can be ascertained.

5. The first class fish are taken in the month of February. The main harvest occurs in the summer months, but the time materially depends on the state of the weather. The grilse usually begin to run in June, and continue throughout July and August, but their appearance, too, is influenced by the weather. The majority of fish are observed spawning in the month of December. The kelts are usually well out of the river by April, and the principal descent of the smolts to the sea is usually in the month of May.

6.—

Offences Charged.	Number for each Offence.	Convicted or Acquitted.	Penalty, if Convicted.
Causing liquid matter poisonous to fish to flow into the river.	2	Convicted -	Fined 1 *l.*, and 8 *s.* costs.

	33		

7. One weir has been re-erected on the Severn, and a new weir without a fish pass has been erected on the Turch, a tributary of the Tanat: in regard to the first, steps have been taken to secure the erection of a pass upon it, and in regard to the second, notice has been given to the Inspectors of fisheries of the erection of the weir without a pass.

8. The Board is only aware of one new lead mine having been opened, this is at the head of a small tributary of the Severn, near Llanidloes, but it does not appear to be injurious at present.

9. No new ladders have been built, but two old ladders have been altered; in the one instance the old ladder is successful, and the other is expected to be so, where an intended low dam is placed below it.

10. Several passes upon various designs suited to the formation of the weirs have been constructed upon the upper Severn and on the Virniew and other tributaries, and these in most instances have proved successful.

11. None in 1867.

12. Steps have been taken to prevent pollution from two lead mines entering the river by the erection of tanks for purifying the Turch from the mines, but it cannot be said that they are successful, although they have mitigated the evil.

Steps

Steps have also been taken to prevent pollution from ammonia works near Shrewsbury, by the enclosure of purifying tanks, which have to a certain extent been successful, but not wholly so.

Nothing has been done in regard to the pollution from towns.

13. The only other matter to which the Board desires to call the attention of the inspectors is the necessity for future legislation. They append to this Report particulars of the changes which in their opinion are required in the law, and which it is their intention immediately to petition Parliament in favour of.

"The Act of 1861.

"Sec. 5. Owing to the difficulties of proof that fish are poisoned by poisonous matter cast into rivers, this section is practically inoperative. It should be made unlawful to cast any liquid or solid matter into rivers that is poisonous to fish without requiring proof that such matter had actually poisoned fish. The original Bill was so drawn. The subject is one of vital importance to the salmon fisheries, but as it is understood to be the intention of Government to bring in a Bill on the subject of the pollution of rivers it will, perhaps, not be advisable to suggest any further amendment of the Fishery Act in this respect.

"10, 11. The Court of Queen's Bench on appeal has decided the use of the trammel net to be in contravention of clause 10; irrespective of this, from the manner in which the net is used in some places, it is clearly in contravention of clause 11. As to the policy of making the use of this net legal, there are many conflicting opinions. There can be no question that in those parts of rivers where the ordinary draft net can be used it ought not to be permitted, while in other parts it may be the only successful mode of using a net, hence the difficulty of providing for its use by a general enactment; and it is thought, therefore, that the question might be much more satisfactorily arranged by a bye-law. In clause 11, the words 'or facilitating the catching of salmon' should be added. A practice exists of fixing a single sheet net across a river below a draft or pool while it is being drawn, which prevents the escape of fish, and forces them back into the draft net, thereby facilitating their capture.

"12. Fishing of all kinds (except angling) should be prohibited both on and within 100 yards at least above and below dams whether with or without a pass, and a penalty should be imposed for wilfully disturbing fish there. There should also be a prohibition against fishing within a certain distance of the mouths of tributaries to salmon rivers.

"13. The provisions of this clause should extend as well to the ascent as the descent of fish, and should comprise mill sluices and all other artificial channels which convey water from or into a main stream, and the gratings should be required to be placed both at their exit from and entrance into the main stream.

"14. 'Unclean' and 'unseasonable' fish should be defined, and the provisions of this clause should be extended to attempting to take them. The difficulty lies in arriving at an intelligible definition of the words, but it is thought that the difficulty may be met by defining all fish caught during fence time, without regard to their condition to be 'unseasonable,' and all kelts caught in the open time to be 'unclean.'

"17. The close time for Scotland and Ireland should be assimilated to that of England and the import as well as the export of salmon prohibited during fence time. Netting of every description should be prohibited (except under the authority of Boards of Conservators) during close time, and a penalty should be imposed on all persons found with nets or other instruments of fishing on salmon rivers or lands adjoining thereto during fence time with intent to fish (except as aforesaid), and all such nets, &c., should be liable to seizure and forfeiture.

"19. The possession of salmon during fence time ought of itself to be deemed an offence without the necessity of proof that it is for sale; this is a great defect in the clause, which it is believed arose accidentally, and opens a wide door for poaching. If the fish were made by law unseasonable as suggested (*see* sec. 14.), there would then be no necessity for the enactment.

"20. The provisions of this clause should be expressly extended to putts and putchers; it is doubtful as the clause now stands whether it does extend to them.

"21. This clause omits to impose a penalty for neglecting to use the Home Office device.

"23. Compulsory powers should be given to Fishery Boards to erect passes where required for the free passage of salmon up and down rivers.

"25. This penalty ought to apply to owners or occupiers.

"34. Justices should be empowered to grant warrants to search suspected boats or vessels in salmon rivers as well as premises.

"The Act of 1865.

"30. The power of Conservators and water-bailiffs under this clause should be extended to authorise them to apprehend persons illegally fishing in the night time during fence time, and the power of search conferred upon them should be extended to persons found on or near to a salmon river whom there is reasonable ground to suspect of having in their possession forfeited fish or other articles.

"This section authorises a Conservator or water-bailiff to search all boats, nets, &c., and to seize all illegal nets, &c., but omits to attach a penalty to the owners thereof for refusing to allow such search, although it imposes a penalty for refusing to allow an examination of dams, fishing weirs, &c.

"Sec. 34, par. 2. A clear definition of the meaning of this section is required, and the maximum charge for the license duty should be increased.

"36. The words 'in cases where a license duty is fixed' should be inserted after the words 'requisite license' in this clause, as it is doubtful, in cases where a person used any other instrument than those to which the license schedule refers, whether the penalty applies.

"42. The powers of the Special Commissioners should be extended to inquire into the legality of all dams, weirs, and other fixed obstructions to the passage of fish in salmon rivers, whether in contravention of any statute now in force, or of those repealed by 'The Salmon Fishery Act, 1861.' This clause only gives them power to inquire into the legality of fishing weirs and fishing mill-dams.

"The Royal Commissioners use very strong and urgent language on the subject of dams and weirs; they say at pages 9 and 10 of their report: 'Of all the evils that affect the fisheries, artificial obstructions must, beyond all question, be regarded as the most pernicious. . . . The policy of the law of England universally condemns them. . . If effective means be not taken to obviate the evil, the gradual extinction in the breed of salmon in the rivers thus circumstanced must in no long time be anticipated.'

"Additional Powers required.

"Bye-Laws.

"The Home Office should have power, on the application, after due notice, of the Fishery Board of any district, to make bye-laws for certain purposes, consistent with the existent salmon fishery laws, viz.:

"1. To regulate the times and places and manner in which any nets or engines employed in fishing in salmon rivers may be used.

"2. To regulate the description and form of nets to be used in fishing in salmon rivers, and the size of the meshes.

"3. To prohibit any practice tending to impede the lawful taking of salmon or trout, or be otherwise detrimental to the fisheries of salmon or trout.

"4. To impose penalties for offences committed in contravention of the bye-laws.

"Close Season for Eel Fishing.

"A close season should be fixed for eel fishing, say from Christmas to Midsummer, and a penalty should be imposed on the owners or occupiers of all baskets, nets, iron gratings, or other contrivances for such purposes attached to any dam, or otherwise fixed to the soil, for not removing the same or rendering them incapable of taking fish during the period of eel close time."

TAW AND TORRIDGE.

Draft nets	28	5 – –	4 men.
Coracle net	1	2 – –	—
Hang net	1	1 – –	—
Rods	166	– 10 6	—
Ditto	34	– 5 –	—

2. One only, for which 7 *l.* has been paid by Sir William Williams.

3. The take of fish has decreased; this is attributable to no diminution of the supply of fish, but to very boisterous weather and heavy floods in the spring months, which entirely prevented the nets from fishing the estuary. In the latter part of the summer and autumn the rivers were so low that the salmon did not enter the rivers.

4. It is impossible to form any estimate.

5. In February a very few fish are taken by the rod in the rivers; in the estuary by the nets not till May. The harvest was last year in June; usually in July and August.

The

The grilse run all through the summer when there is fresh water. The fish spawn in November, December, and January. It depends on the period of the spring floods, but the kelts frequently remain in the rivers until the end of May. The smolts go down all through April and May.

6.—

7. At Clappery Mill on the Mole a temporary obstruction has been put, but nothing of a permanent character Nothing has as yet been done with respect to the erection of passes.

8. No.

9. A new pass has been placed in Umberleigh Weir on the Taw, but the alteration is of so recent a date, that it is impossible to come to any conclusion as to the probable result of the change.

10. See above.

11. None.

12. No steps of this kind have been taken by the Board, as the necessity of so doing has not been shown to the Board.

FOWEY.

1.—

Name of Instrument.	Number.	Rate at which Licensed.	Number of Men required to Work each.
Draft net - - - - - - - -	1	2 *l.*	6

2. No general licenses have been issued.

3. From all we can learn officially, the take of fish has diminished.

The foul state of the water from mines and clay works in the upper part of the river, whereby the fish are prevented from reaching their spawning beds. Added to which the deposit from the clay works must effectually destroy any spawn there deposited, supposing the fish ever got there.

4. No; as the Board has only been so lately constituted.

5. Before the passing of the Salmon Fisheries Act the fishing for Salmon commenced in September and ended about Christmas. Salmon in the river Fowey are in their prime in the months of October, November, and December, in which latter months the takes are greatest.

With regard to the remaining part of this question, we can obtain no reliable information.

6. The Board of Conservators have not instituted any prosecutions under the Salmon Acts.

7. There are no weirs on the river.

8. Yes; a clay work in the parish of St. Neots.

9. No; there are none on the river.

10. No; there are none on the river.

12. We have taken no steps to prevent pollution from mines, as under the present state of the law we should be unable to get a conviction, there being more than one mine on the river.

13. For corroboration of our answers to Question 5, we must draw your attentionto the result of Mr. R. Foster's fishing, at Mr. Walpole's request, during the close season of 1867–68.*

By an order of the Secretary of State, dated the 13th November 1863, the close season on the river Fowey and its tributaries is extended from the 1st February to the 1st April, both inclusive. May we therefore conclude that our licenses will hold good for the months of September and October?

TAMAR AND PLYM.

1.—

Name of Instrument.	Number.	Rate at which Licensed.	Number of Men required to Work each.
Nets - - - - - - - - -	2	3 *l.* 10 *s.* each.	—
Rod and line - - - - - -	150	7 *s.* 6 *d.* each.	—

2. No general licenses have been issued.

3. I think the take of fish has been about the same as in former years.

4. I cannot tell the number by net, but I believe not many. With rod, I have heard of but few salmon being taken, but *peal* and trout have been killed in great abundance.

5. In some parts of the district the latter part of July, others in August. The greatest number are generally taken in September by rod; in August with net. The fish spawn generally in November and December. The rivers in this district are very late, and great numbers of kelts do not return until May.

6. One prosecution was instituted under the 5th section of the Act, 1861; it resulted unsuccessfully.

7. No such erection or alteration.

8. No new mines, but the old ones are causing incalculable mischief.

9. No new ladders.

10. No passes.

11. No such gratings have been fixed, but the Board of Conservators intend to fix several shortly.

12. The mines do not take the required steps, and as in the case of the Plym being poisoned by the Devon Wheal Lopes Mine, the whole of these rivers in the district suffer more or less from this enemy.

13. The Board particularly wish to draw the notice of the Inspectors to the very great defect now existing in the law as regards the remedy against miners and others causing to flow deleterious matter into the rivers, as it is utterly impossible to obtain a conviction against the parties offending under the present wording of the 5th section of the Act, 1861. In most cases, it is utterly impossible to prove who actually turns the water from the mines into the rivers, and it is very difficult to prove that the parties had a guilty knowledge of its being poisonous.

It is suggested that in all cases where mines and factories are commenced, some definite preventive measures should be rendered obligatory to be taken by the proprietors, and heavy penalties enacted should such measures not be adopted.

* Mr. Foster fished on certain days, with Mr. Walpole's permission, during October and November last. The fish taken were sent up to the Inspectors for examination.

AVON AND ERME.

1.—

Name of Instrument.	Number.	Rate at which Licensed.	Number of Men required to Work each.
Draft and hand nets, and rods, viz.:			
Draft nets - - - - - - -	4	5 *l.* each	3
Hand net - - - - - - -	1	1 *l.* each	2
N.B.—Two of the above draft nets were licensed for the River Erme, and the other two draft nets and hand net were licensed for the River Avon, and all the following replies apply exclusively to the River Avon.			
Rods - - - - - - - - -	15	1 *l.* each	—

2. There has not been any general license issued.

3. The legitimate take of fish has diminished, but the illegitimate take has increased.

The general increase is occasioned by preservation, but the diminished legitimate take is caused by poaching in the higher parts of the river, where it is not protected for want of sufficient funds.

4. The Conservators have no means of ascertaining how many fish have been captured by nets in the River Erme, but they have ascertained that 155 salmon have been captured by nets in the River Avon; and it is considered about 100 salmon have been taken by rods.

5. A very few clean fish are taken in February and March, but the main harvest is in July and August, at which time the grilse also appear to run. The bulk of fish, however, ascend the river in October and November. The majority of fish are observed spawning between the middle of December and the middle of February. The kelts (fish that have spawned) are well out of the river in the latter end of April and beginning of May. The bulk of the smolts descend to the sea in the middle of April.

6.—

Offences Charged.	Number of each Offence.	Convicted or Acquitted.	Penalty, if Convicted.
Having possession of spear for catching salmon -	1	Convicted -	5 *l.*, and costs 11 *s.*
Using spear for catching salmon - - -	2	Acquittd -	—
Ditto - ditto - - - - -	3	Convicted -	4 *l.*, and costs 9 *s.*
Having possession of spear for catching salmon -	4	Ditto -	4 *l.*, and costs 9 *s.*

Having possession of gaff for catching salmon -	14	Ditto -	2 *l.*, and costs 9 *s.*
Using spear for catching salmon - - -	15	Ditto -	Third conviction; sent to gaol for three months' hard labour.

7. No new weirs have been erected in 1867, nor old weirs altered, so as to create increased obstruction to fish.

8. No.

9. No.

10. No.

11. No.

12. No.

13. It is considered that insufficient steps have been taken at the new sail-cloth manufactory at East Brent, belonging to Crossing, Phelps and Company, to prevent the escape of deleterious matter into the river.

An extension of the fishing time it is thought would be advantageous.

As the river passes through the land of so many small proprietors, who feel very little interest in the preservation of fish, and do not contribute to the funds of the Conservators there are not sufficient means to prevent the great amount of poaching which is carried on in the upper parts of the river.

A small annual grant from the Government would enable the Conservators to effectually, prevent the poaching in the upper parts of the river.

DART.

1.—

Name of Instrument.	Number	Rate at which Licensed.	Number of Men required to Work each.

Draft net - - - - - - - -	5	3 *l.* 10 *s.* each.	—
Rod and Line - - - - - - -	2	7 *s.* 6 *d.* each.	—

2. None have been granted.

3. Decreased, owing to the mill-dams keeping the fish by the city, where poison or chemicals are used in the manufacture of paper during the last 15 years, and the Government not providing means for making passes without consent of millers.

4. (*a.*)—With net, between 250 and 300.
(*b.*)—With rod, under 10.

5. March.

6. None.

7. No.

8. Paper manufacturers use chemicals in converting Spanish grass into paper.

9. None.

10. None.

11. No.

12. No.

13. *See* Report of Severn Conservators, by Mr. George, of Worcester, just issued, in February 1868.

OTTER.

1. None.

2. None.

3. Since the weirs have been accessible for fish a great many salmon have been seen during the close season spawning, but the riparian owners will not concur in or with any association, consequently the River Otter is as valueless now as before the Acts of 1861 and 1865, and is subject to every description of depredation.

4. The river was, as far as could be, cleared of every kind of fish the last year.

5. The River Otter is for salmon a breeding river. It is the earliest in the county of Devon. Fish are in good season, particularly trout, by the 1st February. The water is too low in summer to allow salmon to remain long at a time.

6. None.

7. None.

8. None.

9. None.

10. All the weirs are accessible for salmon.

11. None.

12. There are no pollutions that the Conservators are aware of. There is a new gas house on the banks of the river near the town of Ottery, but apparently nothing runs into the river from the works, although that might be done at night.

13. It is utterly useless to pass Act or Acts of Parliament for the preservation of salmon unless the public can, in some measure, partake of the benefits besides going to market to purchase fish. As soon as a beneficial property in a river is created (which before was worthless), the riparian owners keep the same strictly to themselves, and it is almost illegal to look at the stream, much more the enjoyment of a day's fishing, which cannot now be obtained as heretofore by the purchase of a season ticket, but by special favour, and that only by intermediate landowners' properties, as by some owners and occupiers fishermen are absolutely excluded from a rational and wholesome amusement, which they freely enjoyed for many years. In legislation, unless private rights can be made to yield a little to the great public benefit by paying a reasonable sum (which fishermen do not mind), no Act of Parliament will be of any use for the River "Otter." Our fishing association was broken up unceremoniously; it did not cost the owners or occupiers any expense whatever; the sale of season tickets paid every expense, and a free license was given to owners and occupiers the whole bounds of the association; still the feeling that the Acts of Parliament were likely to interfere with private rights, that no association can now be formed, and the River Otter is, during the summer, the resort of idlers illegally taking the fish, and early in the season nets by night are freely used, which has rendered a valuable stream almost worthless.

FROME.

13. The two ladders on the river are of no use. We cannot compel a miller to remove his eel racks when the eel fishery is over, or to keep the ladder full of water.

RIVER STOUR.

1. None. No licenses have been issued.

2. None.

3. No salmon at present.

6. No.

7. No.

8. No.

9. The ladder erected in 1866 at Sturry, on the Government plan, has not proved successful; another on the pool system has been erected, and fish have been seen passing through it.

10. *See* above.

11. No.

12. The city of Canterbury is now being drained by the Local Board, but it is not yet in operation.

13. Yes, the want of further legislation for enforcing a free passage for fish to the spawning grounds, the more speedy removal of existing obstructions, and prohibition of obstructions for the future.

The amendment of section 8 of Act of 1861, by the insertion of the words "noose, gun, and bludgeon."

Also the amendment of section 64 in the Act of 1865 by affixing a penalty to "fishing for, catching, or attempting to catch" trout during the close time. At present the penalty is only for killing.

Sections 14, 15, and 16 of the Act of 1861 should be extended to trout in salmon rivers.

TRENT.

1.—

Name of Instrument.	Number.	Rate at which Licensed.	Number of Men required to Work each.
		£. s.	
Draft nets - - - - - - - -	9	5 -	3
Stand or bow nets - - - - -	6	1 -	1
Rods and lines - - - - - -	4	- 10	1

2. None.

3. Has increased, and the increase attributable to the working of the Salmon Acts, especially the enforcement of close times.

4. Not less than 750, and probably considerably more. All with net, or with very few exceptions.

5. Sometimes as early as April, but the net fishermen do not work hard till the middle of June. The main harvest is during the last fortnight in August; grilse run about the beginning of July; the kelts do not leave the river till the end of May, when the water is low; but earlier, say in April, if the water is high.

6.—

Offences Charged.	Number for each Offence.	Convicted or Acquitted.	Penalty, if Convicted.
Taking salmon without a license - -	1	Convicted -	5 *s.*

7. No new weirs erected; alterations about to be made at Averham Weir, near Newark-on-Trent, which the Trent Navigation Commissioners allege to be a mere restoration of the old weir. *See* remarks to last of these queries.

8. None of which the Trent Fishery Board is aware.

9. The ladders on the Dove at Tutbury and Clay Mills have been altered; the former with considerable success, and an auxiliary ladder built at Tutbury, which answers. It is feared the Clay Mill ladder is still a failure. No other ladders were attempted to be either built or altered last year.

10. None.

11. None.

12. The Towns Commissioners at Burton-on-Trent have been to great expense in utilising their sewage, and, it is believed, with considerable advantage to the river. In other cases persons have been remonstrated with, and promises of amendment have been made, but, it is feared, no material good has been done.

13. It is desirable to call the special attention of the Fishery Inspectors to the fact that an increased obstruction will shortly be made at the weir near Newark-on-Trent, which, according to the opinion of a civil engineer, will only allow three inches of water to pass down the bed of the river, and which will be all the salmon will have to ascend through during dry seasons. Also that there are new factories about to be erected, which will, no doubt, turn their refuse into the river, and we have no power to stop this abuse. There ought surely to be amended legislation on this and other matters.

WHARFE AND DERWENT.

(In order to avoid repetition of reply, this Return embraces the *two* Salmon Fishery Districts of Yorkshire.)

1.—

Name of Instrument.	Number.	Rate at which Licensed.	Number of Men required to Work each.
In the Wharfe District:—			
		£.	
Draft nets - - - - - -	24	5	From 2 to 3.
Rods and lines - - - - -	3	1	
In the Derwent District:			
Draft nets - - - - - -	7	5	From 2 to 3.
Rods and lines - - - - -	None.		

2. None.

3. There are no data by which to ascertain correctly whether there is any increase or decrease of fish compared with previous years. Most of the Ouse fishermen represent the number of salmon in that river to be vastly augmented, and this is the prevailing opinion. The increase doubtless arises from the operation of the new law, the formation of Boards of Conservators, and the appointment of water-bailiffs. These wise provisions of the Acts of

of 1861 and 1865 tend greatly to the protection of gravid fish which were ruthlessly destroyed previous to the passing of these statutes.

4. In the Wharfe District:	
With Draft nets - - - - - - - - - -	2,521
„ Rods - - - - - - - - - -	not ascertained.
In the Derwent District:	
With Draft nets - - - - - - - - - -	683
„ Rods - - - - - - - - - -	None.
Total - - -	3,204

5. The early part of May, and the fish keep increasing in size and quantity until the close of the season.

A few kelts and grilse have been observed in the Ouse, but not to any great extent, so that the time of their appearance has not been accurately noted.

Smolts for the most part disappear from the upper rivers the early part of May.

"The first flood in May
Takes all the smolts away."

6. None.

7. None.

8. None; but there are several in existence, and to those may be added paper mills, tanneries, flax mills, &c., which are daily pouring their noxious substances into all our rivers, polluting them to a considerable extent, more especially the Wharfe, in the neighbourhood of Otley, and the Swale at Richmond, and we think it is absolutely necessary for Parliament to endeavour by some legislative measure to abate this growing evil, or the results may ultimately lead to a great destruction of life and property. In the meantime we consider that a watchful eye should be kept over the introduction of new causes of pollution, which it is impossible for this or any other Board to grapple with.

9. One has been erected by private subscription at Linton-upon-Ouse, but owing to its being unfortunately placed by the express desire of the Navigation Commissioners on the left bank of the river by the side of the existing sluices, *it is not so effective as it might have been,* if erected in the centre of the weir. The defect arises from the *toe* of the ladder stretching past the broken water at the foot of the weir, where it is well known salmon congregate. Notwithstanding these drawbacks some fish do ascend it, as has been proved by fixing a bag net at the upper end of the ladder.

10. None.

11. None. The law is very defective on this head. Millers should be compelled, at their own costs and charges, to attach and sustain gratings at the head and tail races of their mill-goits. It is at these places where immense mischief is frequently perpetrated, and which a whole staff of water-bailiffs are unable to prevent.

12. None. Here, again, the law is confused and uncertain. The magistrates are unable to arrive at any definite conclusions as to what the law is, and consequently decline to convict. As a rule, manufacturing interests are greatly paramount to those of fisheries, so that until Parliament shall investigate the whole question of river pollution, it is in vain for Boards of Conservators to involve themselves in expensive lawsuits which can only deal with isolated examples.

13. Yes. In any future legislation (and the Board trust that Government will be induced, during the present session of Parliament, to bring in an amended bill to remedy the defects of the existing Salmon Fishery Acts of 1861 and 1865, neither of which, as they now stand, give sufficient authority for enforcing a free passage of fish to their natural breeding grounds in the upper streams, where alone they can be safely bred) the Board would respectfully submit the following suggestions:—

That the first necessity in all rivers is that the fish should have a free passage up to their end; all dams and obstructions must have a free passage over or through them *at all times,* without which any operations in the matter of salmon preservation are practically useless, and that it should be made compulsory on all proprietors of dams to provide a proper pass.

That powers should be given to the special commissioners to investigate the titles of all fixed engines, dams, and weirs that in any way facilitate the capture of fish or obstruct their passage, whether in contravention of any statute now in force or of those repealed by "The Salmon Fishery Act, 1861."

That gratings should be provided by owners and occupiers of mills at the head and tail races of all mill-goits. A minimum penalty of 5 *l.* for each day's neglect.

No fish should be taken, under any circumstances, in a head or tail race under a penalty of 5 *l.* for each offence and forfeiture of fish.

Licensees lending their licenses, when not in use, to other persons, to be liable to a

penalty of 10*l.* for each offence, and those persons making use of such licenses, or personating themselves, to be liable to a similar penalty and forfeiture of fish, or, in default thereof to two months' imprisonment.

The present weekly close time should be *increased* 18 *hours*, viz., from Friday evening at six o'clock to Saturday noon at 12 o'clock, making the whole 60 successive hours instead of 42, as at present.

The use of nets within 150 *yards* of any dam should be prohibited, and no person should be allowed to beat, poke, drive, or scare the fish in any manner within the prohibited boundary. Penalty, 5 *l.* for each offence and forfeiture of fish.

Net-fishing should also be prohibited betwixt sunset and sunrise in non-tidal waters.

All fishermen should, on or before the 1st day of October in each year, transmit to the clerk of the Board of Conservators for the district in which they reside a return of the number and weight of all salmon caught during the open season. Penalty, for neglect or wilful mis-statement, a minimum penalty of 2 *l.* for each offence.

Justices should be empowered to grant warrants to search suspected persons as well as premises.

That water-bailiffs should be empowered to cross lands, when necessary, for the discharge of their duties, and the power of search conferred upon them should be extended to persons found on or near to a salmon river suspected of having in their possession forfeited fish or other articles.

To re-enact the 23rd Geo. 2, cap. 27, which was unfortunately repealed by "The Salmon Fishery Act, 1861," intituled "An Act to punish Persons who shall Take or Sell any Spawn, Brood, or Fry of Fish, unsaleable Fish, or Fish out of Season, or Smolts under the Size of Five Inches, and for other Purposes," this Act would enable the special commissioners to abate without further trouble that enormous destruction by "set-nets," in the Humber, of all kinds of small fish, including the smelt proper, as well as salmon smolts. At present the "set-net" fishermen evade the law in the most open manner.

The Act of Geo. 1, c. 18, ss. 11 to 16, which alludes to and has relation to a number of Yorkshire rivers, should also be re-enacted, or the spirit of it incorporated in any new Amendment Act.

The Board refrain from mentioning *Pollution of Rivers*, in the hopes that Government will bring in a Bill to deal with this important subject; they cannot, however, omit mentioning that it is an evil of frightful extent in Yorkshire, and is extending daily.

2. None.

3. The take of fish has increased very much; the fact is attributable to the removal of stake nets from the mouth of the river and the seashores adjacent, the vigilant watching of the river, at the instance of the Board of Conservators, and the protection of smolts in the river; to these may be added prompt prosecutions in all cases of poaching and other offences, and the influence and personal exertions of the members of the Board and their Secretary.

4. No records are kept, but, speaking generally, the supply is good if not abundant, having increased much since last season. Certainly not less than 10,000 fish were taken last season with nets; and probably 50 with rod.

5.—(1.) In the tidal part of the river in May, but earlier in the upper part, say the middle of February or March.
(2.) In July and August.
(3.) In the beginning of August.
(4.) In November and December.
(5.) By about the end of March.
(6.) The first flood in May.

6.—

6.—

Offences Charged.	Number for each Offence.	Convicted or Acquitted.	Penalty, if Convicted.
Illegal fishing	2	Dismissed.	—
Using a gaff	1	Convicted	5 *s.* and costs.
Fishing with roe	1	Ditto	5 *s.* and costs, or one month's imprisonment.
Using a gaff	2	Ditto	1 *l.* each and costs.
Roe in his possession	1	Ditto	5 *l.* and costs.
Ditto	—	Acquitted	—
Gaff in his possession for purpose of fishing	1	Convicted	5 *l.* and forfeit instrument or two months' imprisonment with hard labour.
Unlawfully attempting to catch salmon otherwise than by rod and line, with 50 yards below the Sendings mill-dam.	2	Convicted one only.	2 *l.*, or three months' imprisonment. 5 *s.* and costs.
Fishing during weekly close time	2	Convicted	5 *s.* each and costs.
For having used a certain net for catching salmon without a proper license.	5	All convicted.	10 *l.*, or three months' imprisonment. 10 *l.*, or two months' imprisonment. 10 *l.*, or three months' imprisonment. 10 *l.*, or three months' imprisonment. 10 *l.*, or three months' imprisonment.
For using an illegal armed or shackle net	3	All convicted.	5 *l.* each, including costs.
Unlawfully fishing for salmon otherwise than with a rod and line, to wit, with a salmon net.	2	Both convicted.	5 *l.* each, and 2 *l.* for each fish caught, viz. four or two months' imprisonment.

7.—(1.) No.

(2.) The construction of a weir named Dinsdale Mill-dam, was inquired into by the special commissioners for English Fisheries last year, and with their sanction alterations were made in it for the purpose of decreasing the obstruction; but the alteration is an entire and complete failure, and in point of fact is injurious.

8. A mine called Merrybent Mine has been opened within the last year or two, from which hush flows into Clowbeck, one of the tributaries of the Tees, which is very injurious. The "hush" from some of the old mines has increased considerably, and the river is injured to a most serious and increasing extent.

9. None.

10. Attempts have been made under the direction of the special commissioners to form a suitable pass through the Dinsdale Dam, but so far the openings formed in the rock have not been successful, but the reverse.

11. No.

12. No active steps have been taken, but urgent and repeated representations have been made by the Board to proprietors, which to some extent have been attended to, and every assistance promised; but no decided diminution of hush has yet been effected, and the pollution from the River Skerne, a tributary of the Tees, which receives all the sewage of Darlington, is very injurious.

13. The importance of having the Dimsdale Dam permanently removed as quickly as possible is paramount.

RIVER TYNE.

1.—

Name of Instrument.	Number.	Rate at which Licensed.	Number of Men required to Work each.
		£.	
Rod - - - - - - - - -	171	1	—
River fishing, drag net - - - -	43	5	Do not know.
Sea fishing - - - - - - - -	42	2	

2. Eight. £. 104 16 *s.* 1 *d.*

3. The take of fish has increased. The removal of Bywell Dam, and prevention of illegal modes of taking fish.

4. We cannot say accurately, but there has been a very large increase of salmon caught both by rod and net. It was currently reported and believed that as much as 700 *l.* worth was caught in one flood, which was unprecedented.

5. We have no information on these points.

6.—

Offences Charged.	Number for each Offence.	Convicted or Acquitted.	Penalty, if Convicted.
